gnomes. *Paroemiography*, or the making of collections of proverbs for specific purposes, may be said to have begun with Aristotle in a work entitled *Παροιμιαί* (Diog. Laert. 5. 26); he was followed in this by his pupil, the Peripatetic Clearchus of Soli, and later by the Stoic Chrysippus; Theophrastus also wrote *Περί παροιμιών*. So far such collections were made for the purposes of philosophy. In the Alexandrian age collections for literary purposes began to be made by such writers as the antiquarian Demon (*Περί παροιμιών*, of which a fragment has been recovered); Aristophanes of Byzantium, who made prose and metrical collections; Didymus (thirteen books); and Lucillus of Tarrha (in Crete). The later sophistic movement led to a great demand for the proverb as an ornament of style, as may be seen, for example, in the works of Lucian (W. Schmid, *Atticismus* i. 411) and Libanius. The origins of the existing *Corpus Paroemiographorum* go back to Zenobius, a sophist of the time of Hadrian; he made an Epitome in three books of the collections of Didymus and Lucillus of Tarrhaeus (*Suda*, *Ζηνοβίος*), obliterating their book-divisions in the process; they appear to have been already arranged according to literary genres. The *Corpus* in its original form, as constituted in the early Middle Ages, consisted of (i) the work of Zenobius, arranged alphabetically for scholastic purposes; (ii) a collection of *Proverbs of Plutarch* used by the Alexandrians, probably deriving from Seleucus of Alexandria (*Suda*, *Σέλευκος*); and (iii) an alphabetical list of *Popular Proverbs*, derived from the same sources as Zenobius, ascribed to the lexicographer Diogenianus (time of Hadrian), but probably the work of an anonymous writer. A new critical edition of the *Corpus* is much needed. From these were formed later the collections of Gregory of Cyprus (13th c.), Macarius (14th c.), and Apostolius (15th c.). There exist a number of smaller medieval collections of proverbs, published and unpublished, mostly prepared by and for teachers of rhetoric. Some contain proverbs not in the *Corpus*.

EDITIONS. T. Gaisford (1816), E. v. Leutsch and F. G. Schneidewin (1830).

CRITICISM. O. Crusius and L. Cohn, *Philol. Suppl.* 6 (1891-3) (sources and MS tradition); O. Crusius, *Analectica critica ad Paroem. gr.* (1881); *Paroemiographia*, *Sitz. Munch. Ak.* 1910, K. Rupprecht, *PhW* xlviii (1949), 1735 ff. W. M. L.; R. B.

PAROS, the second largest of the Cyclades, a centre of Aegean trade, and famous for its marble. Early in the seventh century the Parians colonized Thasos. In 490 the island furnished a trireme to the Persians under Datis, for which the Athenian Miltiades later besieged the town without success. In 480 the Parians played a double game, and after the battle of Salamis were compelled by Themistocles to pay an indemnity. Paros was a member of the Delian League, also of the second Athenian League, but later revolted, and lost importance before the establishment of Macedonian authority. Here was found the Marmor Parium (q.v.). The Delian sanctuary and a heroön of Archilochus have been excavated.

PARRHASIUS, painter, son and pupil of Evenor of Ephesus, later Athenian. Pliny dates Evenor 420 B.C. and Parrhasius 397 (with Zeuxis, q.v.); but he made designs for Mys' reliefs on the shield of the Athena Promachus (before 450). He was arrogant and wore a purple cloak and a gold wreath. He painted a 'rose fed' Theseus (i.e. in the rich style; Pliny *HN* 35. 67) attributes 'elegantiam capilli, uenustatem oris' to him), Demos, 'Healing of Telephus', Philoctetes, 'Feigned madness of Odysseus'. Such pictures displayed the details of expression, 'argutias uultus', which he discusses with Socrates in the *Memorabilia* of Xenophon. He wrote on painting. He

was famed for subtlety of outline (cf. white lecythi, e.g. Pfuhl, figs. 543, 552; Rumpf, pl. 37, 3 and 5); therefore perhaps did not use shading (contrast Apollodorus, q.v. 1). His gods and heroes became types for later artists; his drawings on parchment and wood were used by craftsmen (probably metal workers) in Pliny's time.

Overbeck, 637, 1130, 1640, 1680, 1692-730; A. Rumpf, *AArch.* 1955, 11; *Malerei u. Zeichn.* 115. T. B. L. W.

PARRICIDIUM. The word *paricidas* (whose original meaning is much disputed) first occurs in a law attributed to Numa (Festus, s.v. 'Parricidium') in which it denotes the intentional—*dolo sciens*—murderer of a free man. It was one of the earliest crimes, being placed in the time of the XII Tables in the jurisdiction of special *quaestores parricidii*. In later terminology *parricidium* meant the murder of near relations (e.g. in the *Lex Pompeia de parricidiis*, c. 70 B.C.); it retains this meaning in classical texts and in Justinian's codification, which defines precisely for this purpose the circle of persons considered as near relations (*Dig.* 48. 9). A wider general sense was given to the term *homicidium* (rarely used in earlier texts, but more frequent in the legislation of the later Empire). In ancient times the parricide was drowned in the sea, tied up in a sack (*cullens*). In the later legislation the penalty was differentiated according to the gravity of the act, but the death-penalty remained the normal sanction.

A. Pagliaro, *Studi in onore di L. Castiglioni* II (1960), 669 ff.; W. Kunkel, *Untersuchungen zur Entwicklung d. röm. Kriminalverfahren* (1961), 37 ff. A. B.; B. N.

PARTHENIUS of Nicaea (1st c. B.C.), Greek poet taken prisoner by the Romans during the Third Mithridatic War, was sent to Italy (73 B.C.), where he was freed. He exerted considerable influence on the *poetae novi*, and, according to Macrobius, *Sat.* v. 57, was Virgil's teacher in Naples. It has been said that he acted as 'the prophet of the Callimachean school' in Rome. He was highly esteemed in antiquity for his poetry, mostly elegiac (in *Anth. Pal.* 11. 130 he is placed by Pollianus alongside Callimachus), of which only a few fragments remain. Extant is a collection of prose outlines of love-stories (*Ἐρωτικά παθήματα*) culled from Greek poets, antiquarians, and historians. Such skeleton love-stories, which were intended for elaboration into elegies by Cornelius Gallus, the Roman poet, might be described as miniature novels, and are of notable importance for the study of the Greek novel: their relationship with the genre in question, already seen by Rohde, has been brought into focus by Lavagnini and Giangrande. Whereas Parthenius' style was impeccable in his poetic production, he did not eschew occasional colloquialisms in the prose of his *Ἐρωτικά παθήματα*.

TEXT. Martini, *Mythographi Graeci* II. 1 (Teubner, 1902); S. Gasele, with English translation (Loeb 1916, several reprints).

COMMENTARY. A. Meimke, *Analecta Alexandrina* (Berlin, 1843; repr. Hildesheim, 1965), 255 ff. (still fundamental for fragments).

CRITICISM. Christ-Schmid-Stählin II. 1^o, 322 ff.; A. Lesky, *Gesch. d. griech. Litt.* (1963), 808 (important for recent discoveries of fragments); E. Rohde, *Der griech. Roman* (1960), 121 ff.; B. Lavagnini, *Studi sul romanzo greco* (1950), 21 ff.; G. Giangrande, *Eranos* 1962, 148 ff.; R. Mayer-Göschy, *Parthenius Nic. quale in fabularum amatoriarum brevariū dicendi genus secutus sit* (Diss. Heidelberg, 1898); R. Reitzenstein, 'Zur Sprache der lateinischen Erotik' (*Sb. d. Heidelb. Akad. d. Wiss., Philol.-hist. Kl.* 1912): still valuable.

PARTHENON. The Parthenon was the temple of Athena Parthenos (Maiden) built on the highest part of the Acropolis at Athens south of the archaic temple (see ATHENS, TOPOGRAPHY). It was begun in 447 B.C.; the temple and cult statue were dedicated in 438, but work continued, notably on the pedimental sculptures, until 432. A temple had been begun on the site before the

Persian invasion of 480 B.C., and with modifications its foundations were used for the present building. The architect was Ictinus (q.v.) assisted by Callicrates (q.v. 1) and possibly one Carpron; but the temple formed the principal element of the great Periclean scheme over which the sculptor Phidias (q.v.) had general direction, and the architectural design was affected by the desire to house the great cult statue and exhibit the subordinate sculpture to the best advantage. In the Parthenon the Doric Order (see ARCHITECTURE) is seen at its most perfect in proportions and in refined details, though there are some unusual features. The material is fine marble brought at great expense from the quarries of Mt. Pentelicus a few miles north-east of Athens, as in most of the finest Athenian buildings of the Periclean period. The temple measures about 228 by 101 feet on the top step. It has eight columns instead of the more usual six at the ends, and seventeen on the sides. The inner structure has a porch of six columns at each end. The larger eastern room had a two-tiered inner colonnade running not only along the sides but round the western end, behind the great cult statue. The smaller western room opened off the back porch, and had its roof supported by four Ionic columns; it served as a treasury.

The sculpture was more elaborate, more unified in themes, and more relevant to the cult than in most temples. What part Phidias played, besides making the gold and ivory cult statue of the Parthenos, is not clearly defined. But one can see a master mind at work, and it is reasonable to assume that it was that of Phidias. The metopes must have been made first, and then the frieze. The pediments were the latest addition. They showed, in the east, Athena newly sprung from the head of Zeus, and in the west, the contest of Poseidon and Athena for the land of Attica. The figures are carved in the round. The metopes, in high relief, showed the usual mythical combats; on the south side, best preserved, Lapiths and Centaurs, on the east, Gods and Giants, on the west, probably, Greeks and Amazons, on the north—less certainly, since this side is very badly preserved—Trojan scenes. Some of these themes were echoed in the minor decoration of the cult statue. The frieze, in low relief, running high around the cella wall within the colonnade, is unique in showing a contemporary Athenian scene (unless it is some legendary counterpart), the procession at the great festival of the Panathenaea.

The Athenians employed their artistic and financial resources to the full in the Parthenon, and made it a symbol of their piety and strength.

The temple was subsequently converted into a church, of the Virgin, and then a mosque. It remained almost intact, though much defaced, until 1687, when a Turkish powder-magazine in it was exploded by the besieging Venetians. Lord Elgin bought and removed to London much of the sculpture in 1801-12. The outer colonnades have been rebuilt in modern times.

PARTHIA has recently assumed an increasingly important place in the story of Asia. The people whom Greeks and Romans called Parthians were traditionally Parni, members of the semi-nomad Dahae Confederacy north of Hyrcania. Their Greek name is derived from the Seleucid satrapy called Parthia (*Parthava*), which they occupied, traditionally in 247 B.C., the year with which the Parthian ('Arsacid') era begins; later they ruled from the Euphrates to the Indus, with Bcbatana as their capital. They were never more than a land-owning military aristocracy. The king was feudal superior of his nobles, including the seven great Pahlavi families who were almost kings in their territories, Seistan, Atropatene, etc. There were other vassal kingdoms, but Parthia never assimilated Persis (from which emerged a new dynasty, the Sassanids (q.v.), who were to overthrow her early in the third century A.D.), while before the Christian era the Surens (q.v.) in Seistan became independent and gradually created an Indo-Parthian kingdom.

The Parthians spoke Parthian Pahlavi, a north-Iranian dialect akin to Sogdian; they adopted popular Iranian Mazdaism, but tolerated every other religion. They were an easy-going race, fond of hunting, superb horsemen. Their cultural role was largely diffusionist, less creative than syncretistic. They assimilated and began the process of transforming their Seleucid heritage. They utilized Greek science, Greek secretaries, Greek methods of administration and Court titles, wrote on parchment, and had Greeks on their Council; they even flirted with Greek king-worship, and Seleucia struck their coins for them with Seleucid dating instead of their own Arsacid era. But their architecture reveals important innovations and they developed a 'Parthian' style in their art, which was gradually to merge with the art of the regions on the Parthian periphery as political control weakened at the centre. In warfare they were original and competent: before Carrhae they discarded Greek notions and employed cavalry only; the nobility fought as cataphracts, mailed knights with enormous spears, and their retainers as horse-archers, and they bred the Nesean horses into magnificent chargers for the cataphracts. Their Greek cities had perhaps no less autonomy than under the Seleucids, and there was an outburst of Greek literature in the East; but their Philhellenism was a veneer and they suffered from their inferiority to Rome in political cohesion, diplomatic initiative, and military power.

A change came in A.D. 10 when a collateral branch from Atropatene replaced the old Arsacid line. There was an Iranian reaction against the former Philhellenism; Mazdaism was emphasized; Seleucia revolted for seven years, whereupon the capital was shifted to Ctesiphon and subsequently Vologasia was founded (near Seleucia), in an attempt to divert from Seleucia the increasingly important trade between China, India, and Syria; Parthia realized her lucrative position as middleman and exploited overland communication between East and West. The influence of 'Parthian' art—a revived Iranian art of many branches, which absorbed both Mesopotamian and Greek elements—spread far and is historically interesting.

PASION (d. 370 B.C.) was the wealthiest banker and manufacturer of his time in Athens. He began his career as a slave with a banking firm, becoming a freedman and later an Athenian citizen. We learn much of his business activity from speeches of Demosthenes and the *Trape-*

ziticus of Isocrates. The revenue derived from his bank and a shield workshop amounted to 120–60 minae after his death, the bank alone bringing in 100 minae. He left real estate of 20 and a capital of almost 40 talents.

PASITELES, Greek sculptor, born in a Greek city of south Italy, became a Roman citizen in 90/89 B.C. (Pliny 36. 40). He was a contemporary of Pompey (106–48 B.C.: Pliny 33. 30, 156). He made an ivory statue of Jupiter for the temple of Metellus ('Jovem fecit eburnum in Metelli aede'), as well as other statues of which the names have not been transmitted (Pliny 36. 40). He also wrote a book in five volumes on 'the famous works throughout the world'. According to Varro, quoted by Pliny (35. 156), Pasiteles 'never executed any work without first making a model of it', 'qui . . . nihil unquam fecit antequam finxit'. Though no work of Pasiteles has survived, a statue of a youth in the Albani Collection in Rome bears the signature 'Stephanus, pupil of Pasiteles, made it'. It was evidently copied from an earlier work, for the style is that of c. 460 B.C., and replicas exist.

From these various records it may be surmised that Pasiteles was one of the sculptors who played a prominent part in the invention of exact copying by the use of casts and the pointing machine, which was introduced at this very period (cf. Furtwängler, *Statuenkopien im Altertum* (1896), 20 f.; Richter, *Three Critical Periods in Greek Sculpture* (1951), 44), and soon became widespread (cf. Lucian, *Iupp. Trag.* 33). That, however, Pasiteles also studied from nature is indicated by Pliny's anecdote that while sketching a lion he was almost killed by a panther.

G. M. A. R.

PASSENNUS PAULUS, a contemporary *eques* whom the Younger Pliny (*Ep.* 6. 15) praises for his *elegi* as being, like his actual descent, Propertian.

PASSIENUS (d. 9 B.C.), Augustan orator, a distinguished representative of the old style (Sen. *Controv.* 3 *pr.* 14, 10 *pr.* 11).

PASTORAL (or BUCOLIC) POETRY, GREEK (*Βουκολικά*). Ancient authorities (e.g. *Proleg. scholl. ad Theoc.*; Diomedes, 486 K.; Probus in *Verg. Ecl.* 2. 8 K.; Servius, *praef. in Ecl.*), who derive Bucolic from religious ritual, deserve little credence. Modern theories of the same sort (R. Reitzenstein, *Epigramm und Skolion* (1893), 193 ff.) are equally unconvincing. Pastoral song, accompanied by the flute, doubtless existed in all Greek lands from an early date (cf. *Il.* 18. 525–6), and especially (Diod. Sic. 4. 84) in Sicily, the home of Daphnis, the bucolic hero. This popular origin accounts for certain features, e.g. singing-match, refrain, strophic arrangement, which are found in later bucolic. But the intermediate steps are obscure. Aelian (*VH* 10. 18) makes Stesichorus the founder of bucolic, but probably Stesichorus merely described Daphnis' unhappy love and death. Athenaeus (14. 619 a, b) regards a Sicilian herd, Diomus, as the founder and says that Epicharmus (fr. 105 K.) mentioned him in two plays. Diomus is probably mythical, like Daphnis, but Epicharmus perhaps dramatized bucolic themes, and some of Sophron's *Mimes* dealt with the life of rustics and fishermen. In Greece itself legend (Hermesianax, frs. 2, 3) connects Daphnis and Menalcas, another bucolic figure, with Boeotia and Euboea, and the dimeter (*μακραί ὀνύες, ὦ Μενάλκα*), repeated by the despairing Eriphanis in search of Menalcas, is assigned by Athenaeus (14. 619 d) to a pastoral song. In literature bucolic matter was handled in satyr-

plays (Euripides, *Cyclops*—bucolic touches are even found in tragedy, e.g. Euripides, *Electra* 493 f.), in the dithyramb (Philoxenus, *Cyclops*), and by Peloponnesian epigrammatists (Anyte of Tegea, but this does not wholly explain Arcadia as the later bucolic paradise). The evidence for Philetas' writing bucolic is disputable, but Hermesianax' treatment of bucolic themes is certain. Bucolic love also finds expression in the lyric of Lycophronides (c. 350) (cf. Dichi, *Anth. Lyr. Graec.* 2. 1, 157). Whatever its origins, or whatever elements were used by other writers, it is in the rustic idylls of Theocritus that we first find full-blown bucolic or pastoral poetry. In a 'literary' form of the Doric dialect, which may be due to the accident of Theocritus' Syracusan birth, and in a peculiar variation of the epic hexameter (elegiacs are found only in 8. 33–60 and speak against its Theocritean authorship) the poet introduces his pastoral setting. This is on the whole a conventional, closed landscape—there are no sweeping vistas—where water peacefully flows, the foliage of the trees rustles, and the effigies of rustic gods—Priapus, the Nymphs, etc.—appear. There his rustics, cowherds, goatherds, or reapers, converse, quarrel, vie with one another in songs, relate folk-tales, and strive for the favour of their fair ones; for the erotic element is also preponderant in this type of Alexandrian poetry. The herdsmen of Theocritus, however contrived, are not drawing-room peasants. They have nothing in common with the dainty shepherds of the rococo period. They are lusty rustics, and their behaviour is often quite coarse. In some of the idylls (1, 6, 7, 11) the idealization of bucolic life is more pronounced, whereas in others a more realistic tone is adopted (4, 5, 10). Moreover, songs that originated in urban surroundings are transferred to the rustics (3), and the poet even masks himself and his friends as shepherds (7) in a playful *masquerade bucolique*. It is clear that this bucolic world fluctuates between the contemporary and the mythical. It was the big city life of the Alexandrian era which excited that longing for the tranquillity and the simplicity of country life we find in the bucolic idylls and the bucolic epigrams of the period. Their poets were the true precursors of the Roman *rurus amatores*. Theocritus' successors Moschus and Bion, to judge by the little of their work which has survived, added little to bucolic as such.

The word εἰδύλλιον (Idyll) is a diminutive of εἶδος, and Pindar's lyric odes were called εἶδη, according to some because the εἶδος ἀρμονία in which they were to be sung was written over each. Hence εἶδη came to mean separate poems (cf. *Suda*, s.v. Σωτάδης) and εἰδύλλια short separate poems (cp. Pliny, *Ep.* 4. 14. 9). The full description in Greek of a pastoral is εἰδύλλιον βοσκολικόν.

PASTORAL POETRY, LATIN. Latin Pastoral poetry, if viewed as extant bucolics on the Theocritean model, consists of Virgil's ten eclogues, Calpurnius Siculus' seven, two Einsiedeln eclogues, and four by Nemesianus (qq.v.). But this is not the full reckoning. Other pastorals, long since lost, were written; and pastoral motifs entered into other genres, especially amatory. Fragments of Roman epigrammatists early in the first century B.C. who introduced pastoral colour into their

short poems give cause for regretting their loss. Virgil claims to have been the first to adapt Theocritus to Latin (*Ecl.* 6. 1) but bucolic themes may have been previously used by Latin poets who did not follow the Theocritean norm.

2. The so-called *Elegia in Messallam* (*Catalepton* 9. 13–20), unless with Hubaux we date it as Neronian, indicates that M. Valerius Messalla was a pioneer in Greek imitations of Theocritus which the unknown author of the poem translated into Latin. Among four love-lyrics cited by Antonius Julianus (*Gell. NA* 19. 9) one from Porcius Licinus ('custodes ouium . . .') typically combines bucolic with erotic elements of a sort in favour with Roman literary circles about 90 B.C. The welcome by Lutatius Catulus to young Archias led to the composition of similarly erotico-bucolic epigrams. If the two poems *Dirae* and *Lydia* could be decisively credited to Valerius Cato, their blends of idyll and elegy might be regarded as parallel to Virgil's *Eclogues*. The *Culex*, *Moretum*, and *Copa* of the *Appendix Vergiliana* all contain pastoral ingredients, and the conclusion to be drawn from many pieces of evidence is that there was at Rome a group of bucolic poets of which Virgil was the chief but not the only representative. Fontanus' 'Naiads beloved by Satyrs' (*Ov. Pont.* 4. 16. 35) may or may not imply bucolic poetry. Pollio in his 'nova carmina' (*Ecl.* 3. 86) may have affected pastoral themes and recommended them to Virgil (*Ecl.* 8. 11); and the question how far pastoral themes appeared in the poems of Virgil's contemporaries Codrus, Helvius Cinna, Valgius Rufus, Varius, Bavius, Mevius, and others is discussed by Hubaux (*Les Thèmes bucoliques*, 66 ff.). It is likely that Domitius Marsus, continuing the epigrammatic tradition, wrote short poems at once erotic and pastoral.

3. Among extant Latin bucolic poets Virgil reigns supreme in literary power and influence. His debt to Theocritus is deep (see VIRGIL, § 7, 2). His shepherds are 'Arcades' (*Ecl.* 7. 4; 10. 31–3), but their Arcadia is mixed with north Italian scenery (*Ecl.* 7. 12–13). Here is an Arcady whose frontiers can be infinitely extended in imagination: from rural surroundings an escape may be made at will into themes of epic dignity, although the Sicilian muses are still invoked (*Ecl.* 4. 1; 6. 1). Or a break-away may be made when the poet's own sufferings from land-confiscations are transposed in the pastoral mode. Virgil's realism depends not merely on his knowledge of the countryside and country life, but on his allusions to contemporary events like the military expropriation of land and to contemporary figures, political or poetical, like Caesar (*Ecl.* 9. 47; but which Caesar? the dictator or Octavian? see Pliny, *HN* 2. 22–3 (89–94)), Pollio, Gallus. Theocritus had given the dignity of the hexameter to themes from Sophron's nymes, and Virgil's pastorals were performed on the stage as mimes (Donatus 27; Serv. on *Ecl.* 6. 11). The call to sing of themes 'paulo maiors' was Virgil's great transformation of bucolic poetry. Theocritus' poetry, perfect in form, had as a rule presented rustics busy with their loves or songs; but Virgil's famous 'Pollio' opened up a world of enchanted hopes; its Age of Gold remained a *locus communis* for subsequent bucolic writers and exerted influence outside the bucolic field on Tibullus and Ovid.

4. Except for the 'Messianic' presages of *Eclogue* 4 Virgil's bucolics turn partly on personal experience (1, 6, 9, and 10), partly on elegiac or erotic motifs, in which 'omnia vincit amor'. Propertius' welcome to the forthcoming *Aeneid* (3. 34. 65 ff.) specially mentions the love-melodies of Virgil's rustics. Their warm feeling and sweet cadences are suggestive now of rural peace, now of poetic learning. Horace (*Sat.* 1. 10. 44) significantly uses one of Virgil's frequent epithets when he stresses his impressionable vivacity ('molle atque facetum'),

implying his openness to beauty around him and his grace of expression.

5. In the Neronian age, Calpurnius Siculus and the Einsiedeln eclogues (qq.v.) have an eye not only for shepherds but also for the times. The Alexandrian notion of a beneficent ruler as a saving deity (σωτήρ, θεός ἐπιφανής) was familiar to Virgil, and this soteriological idea reappears in the Golden Age associated with the early part of Nero's reign. The Virgilian and Theocritean sources of Calpurnius are illustrated by E. Cesario (*La Poésie de Calpurnius Siculus*, 1931). Both influences acted on the pastorals by Nemesianus (q.v.); he was, besides, a sedulous pillager of the text of Calpurnius, but he deserves credit for restoring the music of the Theocritean refrain.

6. Even in Christian poems on pastoral subjects by St. Paulinus of Nola (A.D. 353/4-431) the classic forms of paganism kept their vitality. In Enderlechius' (c. A.D. 395) *De Moribus Boum*, where Tityrus has saved his herd from plague by the Sign of the Cross, the elegant asclepiads make an innovation, but the names Aegon and Tityrus and the manner of the dialogue descend from Virgil. The best known of such Christian pastorals, much used in medieval schools, was the so-called *Ecloga Theoduli* (rec. J. Osternacher, Linz, 1902) of 337 lines, probably of the ninth century, though that seems a late date for so elaborate a refutation of long-extinct Graeco-Roman paganism in an exchange of quatrains (like *Ecl.* 7) between the Christian virgin Aléthia and the pagan shepherd Pseustus with Frónésis (Phronesis) as umpire.

7. The pastoral allegory, attributed to Virgil by his commentators, was revived, or invented, by Dante Alighieri in his *Eclogue I* of 1319 (though its authenticity has been impugned: Boccaccio attributed the revival of pastoral allegory to Petrarch). The Latin pastorals of Petrarch and Boccaccio are often obscure and harsh. Only later in the Renaissance proper did the Italian poets recall the golden sweetness of Virgil and the charms of Arcadia, idealized as the nostalgic 'image of the Golden Age': e.g. Johannes Baptista Spagnuolo Mantuanus (1448-1516), called by Erasmus 'Christianus Maro', used as a school-book and so quoted by Shakespeare; and Jacopo Sannazzaro (1458-1530) whose *Arcadia* was an antecedent of Sir Philip Sidney's romance, *The Arcadia*. In English, Milton's *Lycidas* is the most famous example of the genre (cf. also his Latin *Damon*).

The phrase 'et in Arcadia ego' (spoken by Death to Arcadian shepherds: 'even in Arcadia there am I') is not classical, but appears first in a painting by Guercino of 1623. Goethe gave it a new turn as 'et ego in Arcadia' ('I too have been in the earthly paradise', i.e. Italy).

The pastoral drama was the invention of Torquato Tasso (*Aminta*, i.e. *Amyntas*, 1581).

For differences among Virgil's imitators see Calpurnius, Einsiedeln Eclogues, and Nemesianus in Duff, *Minor Lat. Poets*. Cf. J. Hulst, *Le Réalisme dans les bucoliques de Virgile* (1927); and *Les Thèmes bucoliques dans la poésie latine* (1930); G. Knaack, 'Bukolik', *PW* iii. 908 ff.; H. J. Rose, *The Eclogues of Virgil* (1942); W. Schmid, 'Tityrus Christianus', *Rh. Mus.* 1953, 101 ff.; G. Boccaccio, *Bucolicum Carmen* (16 eclogues) in *Opere Latine Minori*, ed. A. F. Massera (1928), 3 ff.; F. Petrarca, *Bucolicum Carmen* (12 eclogues), ed. A. Avena (Padua, 1906). Editions of Mantuanus, etc., by W. P. Mustard (U.S.A. 1911-).

For the idea of Arcadia, F. Panofsky in *Essays* . . . E. Cassirer (1936) and B. Snell in *The Discovery of the Mind* (1951); W. L. Grant, *Neo-Latin Pastoral* (U.S.A. 1965).

PASTURAGE. Cattle was the main source of wealth of the Greek and Roman peasants from earliest times. Horses were reared by the wealthier owners, horned cattle by the less well-to-do, and small cattle by the smaller peasants. Selection in cattle-breeding dates back to archaic Greece and Italy. Stall-feeding is mentioned in Homer (*Od.* 18. 367). The keeping of sheep for milk and wool dates from the earliest times. Poultry-breeding also

flourished during the Classical and Hellenistic periods, and in Italy under the Republic. The horses of Thessaly, the cattle of Epirus, and the Milesian sheep, famous throughout the world, were exported to all countries where scientific agriculture flourished during the period from Alexander to Augustus.

There was not enough natural pasturage for all the cattle of the Mediterranean world. Grazing-grounds were therefore sown by governments and private owners. Many States reserved pasture rights (*epinomia*) for their own citizens; for an alien to receive it was a great honour. Some States (e.g. Delos and Teos) introduced pasture taxes. The Ptolemaic government owned large herds and claimed the right to requisition all cattle in the country for agricultural purposes. For the use of the royal pastures as well as for protection while grazing high fees were imposed.

The Roman *latifundia* developed stock-breeding economy to its highest pitch, often converting grain lands to pasture and so diminishing the population of the countryside. The largest pasture estate mentioned in any ancient source (S.H.A., *Aurelian*, ch. 10) fed 2,000 cows, 1,000 horses, 10,000 sheep, and 15,000 goats, with 500 slaves to work it. Development ended with the breakdown of the ancient slave economy, but the strains developed in ancient times persisted throughout the Middle Ages and are in the main the ancestors of our modern stocks.

PATAVINITAS, the provincial smack of Livy's native Patavium declared by Asinius Pollio (Quint. *Inst.* 1. 5. 56; 8. 1. 3) to mark or mar the style of Livy (q.v.). Pollio, as governor of Cisalpine Gaul, might claim to recognize northern expressions in contrast with true Roman *urbanitas*. His charge against Livy excited the indignation of Morhof (1639-91) who retorted on Pollio's 'Asinity' in *De Patavinitate Liviana* (1685).

J. W. D.

PATAVIUM, a city situated near celebrated springs in a fertile part of Cisalpine Gaul (q.v.) (Strabo 5. 212 f.; Pliny, *HN* 2. 103); modern *Padua*. The Veneti (q.v.), but certainly not Antenor, probably founded Patavium. It became their capital, successfully resisting a Spartan attack in 301 B.C. (Livy 10. 2). By 174 it was subject to Rome, but retained local autonomy (Livy 41. 27). Asinius Pollio (q.v.) temporarily oppressed Patavium, probably because it opposed Antony, 43 B.C. (Macrob. 1. 11. 2; Cic. *Phil.* 12. 10). But in general it prospered. It was a road-centre, and canals connected it with the sea. Its flourishing woollen industries made Patavium the wealthiest north Italian city in Augustus' time. Later Mediolanum and Aquileia (qq.v.) outstripped it, but Patavium always remained important even after Huns (452) and Lombards (601) sacked it. Its most famous sons were Livy, Asconius, and Thrasea Pactus (qq.v.).

E. T. S.

PATER PATRIAE. After the execution of the Catilinarian conspirators in 63 B.C., Cicero was hailed in the Senate as *Parens Patriae* or *Pater Patriae*, and after Munda the title *Parens Patriae* was accepted by Julius

Caesar. Augustus was given the title *Pater Patriae* by 'the Senate, the equestrian order, and the whole Roman people' in 2 B.C. (*Res Gestae* 35. 1). Tiberius consistently refused the title; his successors (down to Pertinax, who accepted it on accession) refused the title at first, but accepted it later (so that short-lived emperors like Galba, Otho, and Vitellius did not hold it at all). J. P. U.

PATRAE (modern *Patras*), situated in Achaea outside the narrows of the Corinthian Gulf, had an unimportant early history though Mycenaean tombs have been found in the region. It supported Athens in the Peloponnesian War (Thuc. 5. 52), took the lead with Dyme in expelling the Macedonians and forming the Achaean Confederacy (c. 280 B.C.), but ceased to be inhabited as a city at some date before the Roman occupation. Augustus planted a Roman colony there, attaching to it the neighbouring Achaean towns (Paus. 10. 38. 9). The Roman Odeum is well preserved. As the port where travellers from Italy landed, it attained an importance which it still keeps. See ACHAEA.

PAUS. 7. 18 ff. W. M. Leake, *Travels in the Morea* (1830), ii. 123 ff.; U. Kahrstedt, 'Die Territorien von Patrai und Nikopolis in der Kaiserzeit', *Hist.* 1950, 549 ff. T. J. D., R. J. H.

PATRIA POTESTAS. In early Roman law, and to a considerable though diminishing extent throughout, the family was the legal unit and the head of the family (*paterfamilias*) was the only full legal person (*sui iuris*). The family was agnatic, i.e. it included any person, of whatever age, who was directly descended from the *paterfamilias* through the male line by birth *ex iustis nuptiis* (see MARRIAGE). It included also those artificially brought in by *adoptio* (q.v.), and likewise the wife if married with *manus* (q.v.), and excluded conversely those made independent by *emancipatio* (q.v.) and those given in adoption, or daughters married with *manus*. On the death of the *paterfamilias* or his *denuntio capitis* (q.v.) there came into existence as many new families as there had been male persons immediately under his *potestas* (e.g. sons, or grandsons whose fathers had died or been emancipated).

The *paterfamilias* had an absolute power (*patria potestas*) over the members of the family which was thought of by the Romans as peculiar to themselves (Gai. *Inst.* 1. 55). It extended to life and death (*ius vitae necisque*), limited only by the restraints of sacred law, by the habit of consulting a family council, and, in case of gross abuse, by the possibility of animadversion by the censors (q.v.). As late as the conspiracy of Catiline (q.v.) a son was put to death by the simple order of his father, and though the power otherwise went out of use in the course of the Principate, it survived in the form of the exposure of infants until well into the Christian Empire. (Exposure was made criminal in A.D. 374, but even then ineffectually.) *Patria potestas* was essentially proprietary in character (see DOMINIUM) and in early law differed little from the ownership of slaves (though of course in public law a son (*filiusfamilias*) was a full-citizen and could vote and hold office). Indeed in its widest sense '*familia*' includes all persons and property in the control of the *paterfamilias*. Thus the formalities for *emancipatio* and for the *adoptio* (q.v.) of another's *filiusfamilias* were essentially the same as those for the conveyance and claiming of property. For in early law the father could sell his children as he could sell other property. If sold *trans Tiberim* they became slaves; if sold to a citizen they were in *mancipio* (a status akin to slavery) to the purchaser and if manumitted by him would revert to the *potestas* of the father. The XII Tables, however, provided that if he sold a son three times the son became finally free of his *potestas* (though still of course in *mancipio* to the purchaser until manumission).

Persons in *patria potestate* could (like slaves) own nothing. Whatever they acquired (including rights arising out of contracts into which they entered) they acquired for the father. Likewise they could alienate nothing and could involve him in no liabilities. The praetorian law (see EDICTUM), however, allowed a suit against the father on the contracts of his sons (or slaves) in certain circumstances, e.g. when the father had authorized the plaintiff to deal with the son, or when he had allowed the son to have the free administration of a personal fund (*peculium*). The *peculium* remained, however, in law the property of the father, save that Augustus allowed a privilege to soldiers for property which they acquired on service (*peculium castrense*). In its developed form this *peculium* was fully owned by the son, except that if he died intestate it belonged to the father. From Constantine onwards the same privilege was extended to earnings in certain public employments and professions (*peculium quasi-castrense*). At the same time the son was allowed an interest of a different kind in other property—at first in what he inherited from his mother's side and eventually, under Justinian, in any property which he did not derive from his father. In these so-called *bona adventicia* the father's right was then limited to a life interest. In these ways the son's proprietary incapacity was largely removed.

If a son (or a slave) committed a delict the liability was in principle his own, but the action (*actio noxalis*) had to be brought against the father, who had the choice between paying the appropriate penalty and surrendering the wrongdoer to the plaintiff (*noxae deditio*). (The son would then be in *mancipio*—see above.) Since the liability was that of the son or slave, the plaintiff had to proceed against the person with *potestas* over the wrongdoer at the time that the action was brought (*noxae caput sequitur*). If, e.g., the son was given in adoption or the slave was sold after the commission of the delict, the action lay against the adoptive father or the purchaser. Similarly, if the son was emancipated he himself could be sued by the ordinary action. Noxal surrender was finally abolished by Justinian, but had already become obsolete in the fourth century. The principle of noxal liability applied also to animals.

PATRICIUS. Patricians were the privileged class of Roman citizens. Their name is probably connected with *pater*, meaning 'member of the Senate', as exemplified by certain technical phrases such as '*patrum auctoritas*', '*auspicia ad patres redierunt*'. There is no reason to believe that the patrician *gentes* were the whole citizen body of primitive Rome; indeed, it is a disputed point whether the distinction between patricians and plebeians existed during the monarchy. In the distinction between patrician '*gentes maiores*' and '*minores*' there is probably a trace of the gradual formation of the patriciate. We have furthermore some hints of the admission of new families in early times: e.g. of the *gens Claudia* at the beginning of the Republic. The same *gens* could probably develop plebeian and patrician branches; this would explain the apparently plebeian names of some of the kings (Hostilius, Marcius), if these kings are not antecedent to the creation of a patriciate (see PLEBS).

Until 445 B.C. *patricii* were not allowed to marry plebeians: we do not know when the prohibition, which is codified in the XII Tables, was first introduced.

Confarreatio (q.v.) was perhaps a special form of marriage for the patricians. The patricians were the holders of the magistracies and of the most important religious offices. It has been suggested by some modern scholars that they served in the cavalry, and that six centuries were probably reserved to them. The diminution of their political influence (see *PIRBS*) corresponded to a certain extent with the diminution, absolute and relative, of their numbers: about 50 patrician *gentes* are known in the fifth century, 22 (with 81 families) c. 367 B.C., only 14 (with 30 families) at the end of the Republic. Only a patrician could become *rex sacrorum*, *interrex*, and perhaps *princeps senatus*. The *patrum auctoritas* (q.v.) was confined to the patrician senators.

The patricians could renounce their status by a special public act (*transitio ad plebem*) or by simple *adoptio* or *adrogatio*. Caesar (by a *Lex Cassia*, 45 or 44 B.C.) and Octavian (by a *Lex Serna*, 30) were empowered to admit new members to the patriciate. The later Emperors conferred the rank on the strength of their censorial powers. In the senatorial *curtus* the patricians were *quaestores Augusti* in the quaestorship and passed directly from the quaestorship to the praetorship. The patriciate apparently disappeared in the third century A.D.

The new dignity of *patricius* created by Constantine was a personal title, conferred for faithful service to the Empire.

The chief patrician *gentes* in the mid and later Republic were the Aemilia, Aebutia, Claudia (the Claudii Marcelli were a plebeian branch), Cornelia, Fabia, Furia, Julia, Manlia, Postumia, Papiria, Quinctia, Quinctilia, Sergia, Servilia, Sulpicia, Valeria, Veturia: these 17 *gentes* are known to have had members in the Senate in 179 B.C., but the Aebutii, Furi, and Sergii were not represented in 55 B.C.

PATRIMONIUM and **RES PRIVATA** were divisions of the property of the Roman Emperors, whose precise nature remains obscure. Equestrian officials with the titles *a patrimoniū* or *procurator patrimoniū* (eventually of *ducentarius* rank), and slave and freedmen officials (*tabularii*, *a commentarius*, *custodes*) of the *patrimonium* are known from the first century onwards. A *ratio patrimoniū* is attested for Alexandria in the mid second century (*JLS* 1491) and a *procurator patrimoniū* of Narbonensis under Marcus Aurelius (*AE* 1962, 183). From the early third century we have some pottery fragments from the Monte Testaccio in Rome marked *fisci rationis patrimoniū provinciae Baeticae* or *Turraconensis*, and in the third century we have references to local officials of the *patrimonium* in Belgica and the Germanies, Bithynia and areas of Africa.

The *Historia Augusta* (*Sept. Sev.* 12, 4) states that Severus established the *privatarum rerum procuratio*. But a *procurator rationis privatae* is attested under Marcus Aurelius (*AE* 1961, 280). Very early in Severus' reign M. Aquilius Felix was procurator of both the *ratio privata* and the *patrimonium*; the fact that these posts are described in two inscriptions (*JLS* 1387; *AE* 1945, 80) in different terminology suggests that the distinction between them was not yet familiar. The statement in

Historia Augusta finds some justification in the fact that between 193 and 235 a considerable number of regional *procuratores rei privatae* appear, especially in areas of Italy, and in Africa and Asia Minor. In this period both terms are used in legal sources (*Dig.* 30. 39. 10; *Cod. Just.* 2. 1. 7) in referring to imperial properties. In the course of the third century the post of *procurator patrimoniū* ceases to be attested; the *procurator rationis privatae*, of *trecenarius* rank, develops into the *magister rationis summae privatae*, and in the fourth century into the *comes rei privatae*, head of one of the major financial departments of the Late Empire. In the fourth century *res privata* seems to be the standard term for all imperial property, though *patrimonium* and its cognates are still used (e.g. *Cod. Theod.* 4. 12. 2).

O. Hirschfeld, *Die kaiserlichen Verwaltungsbeamten* (1905), 18 ff., 40 ff.; Jones, *Later Rom. Emp.* 411 ff. F. G. B. M.

PATROCLES, Greek commander at Babylon after 312 B.C. under Seleucus I, whom he assisted against Demetrius. Under Seleucus and Antiochus I, he governed lands from the Caspian towards India, gathering reliable geographical material including north-west India. About 285 he was sent to explore the Caspian, voyaged up its western and then its eastern sides, learnt about Indian trade down the Oxus, but mistakenly asserted that the Oxus and Jaxartes flowed into the Caspian. His reports confirmed the belief that this sea opened into the supposedly near-by Northern Ocean; and Pliny even states that Patrocles himself sailed by this imaginary route from the Caspian to India.

Strabo 2. 68. 70, 74; 11. 508-9; 15. 680. Pliny 2. 167, 6. 36, 58. Cary Warrington, *Explorers*, 51 f.; (Pelican) 185 f.; Warrington, *Greek Geography* (1934), 67 ff.; W. W. Tarn, *JHS* 1901, 10 ff.; *Greeks in Bactria and India* (1951), 41, 112 f., 444, 488 ff.; Thomson, *Hist. Anc. Geog.* 127 ff. E. H. W.

PATROCLUS, in mythology, son of Menoetius (q.v.). Having accidentally killed a playfellow, the young Patroclus took refuge with Pelcus (q.v.; *Ilad* 23. 85 ff.). He and his father were kindly received, and Patroclus, who was somewhat older than Achilles (11. 787), was assigned to him as a personal attendant. For the rest see *ACHILLES*.

H. J. R.

PATRONS, LITERARY. I. IN GREECE. Literary patronage in Greece is associated chiefly with autocratic rulers. The tyrants of Corinth, Athens, Samos, and the Greek cities of Sicily were notable examples, patronizing such writers as Arion, Alcman, Anacreon, Pindar, Simonides, and Bacchylides. Later Archelaus of Macedonia collected at his court a literary coterie which included Agathon, Timotheus, and Euripides. Later still the Hellenistic monarchs were often literary patrons, especially the Ptolemies, who established and maintained at Alexandria the famous Museum (q.v.) and Library (see *LIBRARIES*). Similar patronage was exercised by the Attalids in Pergamum.

II. AT ROME. Literary patronage at Rome was an extension of the ordinary social relationship between *patronus* and *cliens*. Hence the relationship naturally varied in accordance with the social status of both parties and with changing conventions. It not only offered encouragement and economic assistance to writers who were not themselves wealthy, but often provided the main channel by which their work reached a public. Patronage was especially important in the development of poetry and drama, which in the early stages were largely the work of persons of humble origin, e.g. Livius Andronicus, Plautus, Naevius, Ennius, Terence, and Accius; Lucilius was of rather higher social status. Patronage was extended also to Greek writers and scholars, such as Panactius and Posidonius. In the Principate Augustus and many of his successors acted as patrons, as did Maccenas, the Younger

Pliny and many other wealthy persons. Among the beneficiaries were Virgil, Horace, Statius, and Martial.

See the separate articles on all persons mentioned.

A. E. A.

PATRONUS, at Rome, was a man who agreed to protect another person, Roman or non-Roman, by making him his client. Several types of *patroni* may be distinguished.

(1) In the early days of Rome the members of the ruling families attached to themselves a number of poorer citizens to whom they gave financial or legal assistance in return for political services or social deference. The bond between patron and client probably could not be enforced by legal sanctions, but by long custom it acquired a quasi-religious force.

(2) With the growth of slavery and the increasing frequency of emancipation, the relation between a slave-owner and his freedman developed into a special type of patronage which was clearly defined by law (see **FREEDMEN**). The patron retained a certain amount of domestic jurisdiction over his freedmen-clients. Patrons and freedmen were often buried together, and epigraphic evidence (especially since the 2nd c. A.D.) indicates that a genuine feeling of friendship often subsisted between them.

(3) Under the later Republic the function of legal assistance by *patroni* was extended to include cases where practised forensic speakers supported litigants in return for a fee. Though a *Lex Cincia* of 204 B.C. forbade the payment of *patroni*, this statute was frequently circumvented. The forensic *patronus* is to be held distinct from the technical legal adviser or *advocatus* (q.v.).

(4) Roman generals assumed a general patronage over peoples conquered by them, and this patronage was transmitted to their descendants. As early as 278 B.C. C. Fabricius took the Samnites as his clients, while the Claudii Marcelli undertook to look after the interests of the province of Sicily (conquered in 210 B.C. by Claudius Marcellus, q.v. 1). The patronage of Pompey extended widely over the Empire; in 83 B.C. he raised three legions of clients in Picenum and his son Sextus could still get help in Spain and Asia from the clients of his family. It is probable that a patronage of this type was one of the elements that went to make up the *autoritas* of the Emperors.

(5) A similar form of patronage, which became common under the Empire, originated in the action of Roman municipalities, which appointed one or more influential Romans to defend their interests in Rome and to serve as channels of communication between themselves and the Emperors (cf. the *tabula patronorum* of Canusium—*ILS* 6121).

(6) Under the Roman Emperors many *collegia* or clubs appointed *patroni* similar to those of the municipalities.

(7) Under the Emperors men of wealth kept large numbers of merely parasitic clients for the sake of ostentation. See **CLIENTS**.

(8) In the Late Empire powerful men offered protection to individual peasants against the tax-collector and other public obligations in return for money, services, or even the surrender of the ownership of the land. The Emperors' legislation against this type of patronage was hardly successful.

For the patronage over *liberti*, M. Kaser, *Sav. Zeitschr.* 1038, 136 ff.; C. Cosentini, *Studi sui liberti* (1948). For the political patronage, Fusell de Coulanges, *Histoire des institutions politiques de l'ancienne France* (1892), 205 ff.; M. Gelzer, *Die Nobilität der röm. (1895), 425 ff.; ii (1896), 367 ff. For the Empire, J. Gagé, *Les Classes sociales dans l'empire romain* (1964); L. Harmand, *Le Patronat sur les collectivités publiques* (1957); Jones, *Later Rom. Emp.* ii 775; R. Rémondon, *La Crise de l'empire romain* (1964), 178 ff. In general, J. Gaudemet, *Institutions de l'antiquité* (1967), 517, 561. A. M.

PATRUM AUCTORITAS was the consent given by the *patres* to the deliberations and to the elections of the popular assemblies in Rome. The conditions under which this consent was given are uncertain. It was probably the prerogative of the patrician senators, not of the whole Senate (Livy 6. 42. 10; Sall. *Hist.* 3. 48. 15; Cic. *Dom.* 14. 38; Gaius 1. 3). As the Senate became mostly plebeian, the *patrum auctoritas* was reduced to a matter of form. A *Lex Publilia* of 339 B.C. (Livy 8. 12) established that it must be given to new laws before the voting of the Comitia. The rule was extended by a *Lex Maenia* of the third century (Cic. *Brut.* 14. 55) to elections. The relevance of the *Lex Hortensia* of c. 287 B.C. to the evolution of the *patrum auctoritas* is a disputed point (cf. App. *BCiv.* 1. 59. 266 with E. Gabba's commentary). The *patrum auctoritas* affected the Comitia Curiata and Centuriata and (probably) the Comitia Tributa. There is no clear evidence that it affected also the *Concilium plebis*.

PAULINUS OF NOLA (MEROPHIUS PONTIUS PAULINUS) (A.D. 353/4–431), born at Bordeaux, and a favourite pupil of Ausonius (q.v.), after embarking on a promising State career, was baptized (c. 390) and subsequently, with his wife Therasia, dedicated himself to a monastic life at Nola, where he became bishop (409). A leading figure among the Christian poets, producing over thirty poems, mostly in hexameters, Paulinus did much for the christianization of Latin poetry. He further wrote over fifty letters (1–22 trans. P. G. Walsh, 1966) addressed to various Christian correspondents, including Augustine. The writings of this attractive figure throw an interesting light on contemporary religious life.

TEXT. W. Hartel, *CSEL* xxix and xxx. P. Fabre, *Essai sur la Chronologie de l'œuvre de Saint P. de N.* (1948); N. K. Chadwick, *Poetry and Letters in Early Christian Gaul* (1955), 63 ff. A. H.-W.

PAULLUS (1), LUCIUS AEMILIUS (PW 118) (cos. I 219 B.C.), brilliantly defeated Demetrius of Pharos in the Second Illyrian War. In 218 he was on the embassy to Carthage opening the Second Punic War. Consul again in 216 he shares, despite the senatorial tradition, in the strategic responsibility for the disaster of Cannae; he fell on the battlefield. Aemilius Paullus (2) Macedonicus was his son; his daughter, Aemilia Tertia, married Scipio Africanus. A distinguished figure, his memory was preserved in the Scipionic Circle and is glorified in Polybius.

J. van Antwerp Fine, *JRS* 1936, 30 ff.; Badian, *Stud. Gr. Rom.* 17 ff. A. H. McD.

PAULLUS (2) **MACEDONICUS**, LUCIUS AEMILIUS (PW 114) (cos. I 182 B.C.), curule aedile in 193 B.C., augur by 192, was praetor in 191 in Further Spain, where after initial failure he subdued the Lusitanians (190–189); note the decree for *turris Lascutana* (Dessau, *ILS* 15). On the commission for settling Asia, he opposed the triumph of Cn. Manlius Vulso. Consul in 182, he subjugated the Ligurian Ingauni in 181. In 171 he was patron in the inquiry into extortion in Spain. Consul again in 168, he ended the Third Macedonian War at Pydna; a monument remains at Delphi. His settlement of Greece,

including the sack of Epirus, carried out the Senate's policy. Of the spoil he kept only Perseus' library. His triumph was clouded by the death of his two younger sons. Censor in 164, he died in 160; the *elogium* is partly preserved (*CIL* ². 194). His elder sons, by Papiria, were Q. Fabius and P. Scipio Aemilianus; a daughter married Cato's son.

Aemilius symbolizes the union of Roman tradition with Hellenism. Cultured yet conservative, a fine soldier and just administrator, strict in religious observance, he played an honourable and authoritative part in public and private life in Rome.

Livy 37. 46 and 57; 38. 44 ff., 40. 25-8; 43. 2; 44-5; Polyb. 18. 35; 29-32; Plut. *Aem.* with historical commentary in Dutch by C. Liedmeier (1915). *De Sanctis, Stor. Rom.* iv. 1. 315, 419, 457, 613; Scullard, *Rom. Pol.* 207 ff.; P. Meloni, *Persio* (1953), 319 ff. A. H. McD.

PAULLUS (3), LUCIUS AEMILIUS (*PIV* 81), son of Lepidus (2) and elder brother of Lepidus the Triumvir, accused Catiline *de vi* in 63 B.C. While quaestor in Macedonia in 59 he was absurdly accused by the informer Vettius (q.v. 3) of conspiring to murder Pompey. In 55, as curule aedile, he began to rebuild the Basilica Aemilia. In 53 he was praetor and in 50 consul. Previously a consistent optimate, he was now bought by Caesar for 1,500 talents which he needed for the Basilica, gave him at least passive support in 50, and remained neutral during the ensuing civil war. During the war of Mutina, however, he negotiated for the Senate with Sextus Pompeius and later joined in declaring his brother a public enemy; he was named first in the proscriptions, but allowed to escape. He went to Brutus in Asia, and continued to live at Miletus, though pardoned after Philippi.

Syme, *Rom. Rev.*, see index.

A. M.; T. J. C.

PAULLUS (4), AEMILIUS (*PIV* 82) LEPIDUS, son of Paullus (3), was proscribed in 43 B.C. and in 42 won Crete for Brutus, but later joined Octavian, whom he accompanied to Sicily in 38. He was *consul suffectus* in 34, proconsul, and censor in 22. He completed the Basilica Aemilia begun by his father. His first wife was Cornelia, daughter of Scribonia (q.v.); her premature death is the subject of a consolatory elegy of Propertius (4. 11); their two sons, Paullus (5) and Lepidus (5), are also mentioned (l. 63). Later he seems to have married Marcella, daughter of Marcellus (5).

Syme, *Rom. Rev.*, see index.

T. J. C.

PAULLUS (5), LUCIUS AEMILIUS (*PIV* 115), son of Paullus (4) and Cornelia, and husband of Julia (3), was consul in A.D. 1. Towards A.D. 8 he conspired against Augustus and was executed; the engagement between his daughter Lepida and the youthful Claudius was broken off in consequence of this and of Julia's disgrace (later she married a M. Silanus, probably the consul of A.D. 19: for two of their children, 'abnepotes Augusti', see Tac. *Ann.* 13. 1). L. Paullus, replaced as an Arval brother in A.D. 14, may have been his son.

E. Hohl, *Klio* 1937, 339 ff.; Syme, *Rom. Rev.*, see index.

T. J. C.

PAULUS (1), JULIUS (*PW* 382) (fl. c. A.D. 210), one of the greatest Roman jurists. The place and date of his birth and of his death are unknown. A pupil of Cervidius Scaevola (q.v. 5), he began his juridical activity as a practising advocate, was, together with Ulpian (q.v. 1), assessor of Papinian (q.v.) when he was *praefectus praetorio*, then *magister memoriae*, and member of the imperial *consilium* of Severus and Caracalla. Banished by Elagabalus, he was recalled by Alexander Severus and nominated *praefectus praetorio*, an office which he perhaps held jointly with Ulpian. (It is a remarkable fact that in all their surviving writings they never cite each other.)

Paul was evidently in great demand as a respondent jurist; and he also taught, and wrote *Institutiones* and *Regulae* for students. But these formed only a very small part of his voluminous writings (nearly 320 books). His principal systematic works were a long commentary on the Edict (eighty books) and an exposition of *ius civile* (*Ad Sabinum*, sixteen books); casuistic works included *Quaestiones* (twenty-six books) and *Responsa* (twenty-three books); in addition there were commentaries on the works of older jurists (Plautius, Neratius, Vitellius, Labeo, and Alfenus), notes on Papinian, and a long series of monographs on *leges*, *senatusconsulta*, imperial constitutions, and on various topics in private, criminal, fiscal, and constitutional law. *Pauli Sententiae*, a work which was popular in later centuries and of which part is preserved in the *Lex Romana Visigothorum* and elsewhere, was probably a handy anthology of his writings, compiled about 300 and more than once re-edited.

Paul was highly esteemed in antiquity. His reputation in the nineteenth century was less favourable. He was written down as a clumsy and unoriginal compiler, even a plagiarist, self-importantly reluctant to acknowledge his debts. He is now judged differently (and some of the texts used to found accusations of clumsiness and lack of logic are acknowledged to be interpolated). He is indeed a compiler and a synthesizer, but neither uncritical nor unoriginal, and the width of his interests is remarkable. He is sometimes too doctrinaire, too given to rationalization at the expense of practical considerations, but these are the excesses of an incisive and logical mind. After Ulpian he is the author most frequently excerpted in the *Digest*, more than one sixth of which is taken from his works. But whereas Ulpian was generally taken as the basis, Paul was on the whole used in shorter extracts to amplify and qualify the main theme.

See generally bibliography s.v. JURISPRUDENCE. On *Pauli Sententiae*, see also bibliography s.v. LAW AND PROCEDURE, ROMAN, 1. Vulgar Law and Transmission of Texts. Also E. Levy, *Pauli Sententiae A Palingenesia* (1945).

A. B.; H. N.

PAULUS (2) (d. c. A.D. 575), epigrammatic poet, was chief *Silentiarius*, or usher at the courts of Justinian and Justin II. Eighty-one of his poems, doubtless collected by his friend Agathias (q.v.), are in the Greek Anthology. forty deal vividly with love, and twenty sensitively with works of art. He also wrote an elaborate poetical description (see EPIGRAMS) of the restored church of St. Sophia: Wilamowitz called this the last triumph of the style of Homeric epic poetry.

P. Friedländer, *Johannes v. Gaza und P. Silent* (1912); B. L. Gildersleeve, *APPhil.* 1917; A. Venier, *Paolo Silentiario* (1916); id. *P. S. Epigrammi* (1963); W. Stumpo, *Rend. Ist. Lomb.* 1924, 231 ff. G. H.

PAUSANIAS (1), son of the Spartan king Cleombrotus I (d. 480 B.C.), and nephew of Leonidas. In 479 he commanded the combined Greek forces at Plataea and was largely responsible for the Greek victory by meeting the Persian onset with a counter-attack. In 478 he captured Byzantium at the head of an allied Greek fleet, but provoked a mutiny by his arrogant behaviour and fell under suspicion of treasonable negotiations with the king of Persia; it was said that he offered to enslave Greece to Persia in return for the hand of a Persian princess. Recalled to Sparta for trial on this charge, he escaped conviction and returned to Byzantium, apparently still with Sparta's approval, since he had a *skytale* or cipher-stick. Expelled by Cimon (c. 475) he went to Colonae in the Troad and was believed to be continuing his negotiations with Persia. He was again recalled and tried c. 470, only to be once more acquitted. But he now came under further suspicion of fomenting a helot revolt; to escape arrest by the ephors he took sanctuary in a temple, where he was left to starve. At the last

moment he was taken out of the sanctuary to expire on unconsecrated ground. Whatever the truth about his earlier plots, it is probable that he finally planned a coup against the ephorate.

Hdt. bk. 9; Thuc. 1. 95, 131-4 and Gomme ad locc.; Arist. Pol. 1307^a. M. C.

PAUSANIAS (2), grandson of (1), Agiad king of Sparta 445-426 and 408-394 B.C. After reigning nominally (as a minor) during the temporary deposition of his father Pleistoanax, he resumed the kingship after his father's death. In 403 he was sent to replace Lysander (q.v.) at the head of the Spartan forces besieging Thrasybulus (q.v.) in the Piraeus. Reversing Lysander's policy, he procured the return of the democrats to Athens and the removal of the remnant of the Thirty Tyrants (q.v. 1). In 395 he was sent to co-operate with Lysander in an invasion of Boeotia, but failed to join hands with him and retired without a battle. For this he was sentenced to death, but fled to exile in Tegea where he wrote a tendentious pamphlet on the Lysurgan constitution (*FGGrH* 582).

Xen. *Hell.* 2. 4. 29 ff.; 3. 5. 6. 21 5. M. C., W. G. F.

PAUSANIAS (3) of Lydia (?) (fl. c. A.D. 150), Greek traveller and geographer, knew Palestine, Egypt, Italy, and Rome, but especially Greece, and wrote *Περὶ Ἑλλάδος*, 'Description of Greece'. I. Attica, Megara. II. Argolis, etc. III. Laconia. IV. Messenia. V-VI. Elis, Olympia. VII. Achaia. VIII. Arcadia. IX. Boeotia. X. Phocis, Delphi.

Generally, Pausanias sketches the history and then the topography of important cities, and of their surroundings, often including worships and superstitious customs, mythology, and the like. Descriptions of scenery are uncommon, but he dwells on natural phenomena, and in later books we get glimpses of products and social life. He loves all religious and historical remains, as at Olympia and Delphi, the older glories of Athens, and historic battlefields and memorials, but above all, artistic monuments, on which he writes plainly and honestly. His accuracy herein is confirmed by existing remains.

J. G. Frazer, *Pausanias' Description of Greece*, text, translation, and commentary, 6 vols., 1898, W. Gurlitt, *Über P.* (1890); R. Heberdey, *Die Reisen des P.* (1894) Text and transl. W. H. S. Jones (and R. Wycherley), 5 vols. (Loeb), F. Meyer, text, German transl. and notes, 1954, R. Wycherley on Athens in *GRHS* 1959, 21 ff., and 1963, 157 ff.; G. Roux, *Pausanias en Grèce* (1958); J. Hejnik on Arcadia (Prague, 1961), E. Meyer on Athens (1959), J. Kroymann on the sources for book IV (1943) A. Diller on the MSS., *TAPA* 1957, 169 ff., O. Regenbogen, *PW* Suppl. viii 1008 ff. E. H. W.

PAUSANIAS (4) and **AELIUS DIONYSIUS** (q.v. 3) were important Atticists at Rome in the second century A.D. From Aristophanes of Byzantium, Didymus, Pamphilus, and others they compiled Attic Lexica, used by Photius and Eustathius.

FRAGMENTS. H. Erbse, *Untersuchungen zu den attizistischen Lexika* (1950). P. B. R. F.

PAUSIAS (4th c. B.C.), painter, son and at first pupil of Bryes, then of Pamphilus, a Sicyonian. Restored painting by Polygnotus at Thespieae. According to Pliny was the first to paint ceiling-panels (some, however, survive from the fifth-century Nereid monument). He liked small pictures of boys and flowers (thereby influencing Gnathia vases and later decoration), but also painted a Sacrifice with a frontal view of an ox, painted in black without high light, and Methe (in the Tholos at Epidaurus, about 350 B.C.) drinking from a glass cup through which her face could be seen. Such subjects displayed the encaustic technique (q.v.) of which he was the first

great master. Echoes may be detected in the Pella mosaics and early Gnathia vases.

Overbeck, 1062, 1726, 1760-5; Rumpf, *Malerei u. Zeichn.* 132. T. B. L. W.

PAUSILYPUS MONS, named after Vedius Pollio's carc-dispelling villa (παύσων λύπη), separates Putcoli from Naples: nowadays *Posilipo*. Two ancient tunnels, one of them badly damaged in World War II, pierce the hill: the *Grotta di Sejano* built c. 37 B.C., and the *Grotta di Posilipo*, near Virgil's reputed tomb, probably built by Claudius.

R. T. Guenther, *Pausilypon* (1913).

E. T. S.

PAX, the personification of (political) peace, cf. *EIRENE*. Scarcely heard of before Augustus, she comes (as Pax Augusta) to represent one of the principal factors which made the imperial government both strong and popular, the maintenance of quiet at home and abroad (cf. Tac. *Ann.* 1. 2. 1: 'cunctos dulcedine otii pellexit'). The most famous, but not the only, monuments of the cult were the Ara Pacis Augustae (q.v.) and the Flavian Templum Pacis, dedicated A.D. 75 (see Platner-Ashby, 386; Nash, *Pict. Dict. Rome* 1. 439 ff.; see also FORUM PACIS).

Wissowa, *RK* 334 f.

H. J. R.

PECULIUM was property—money, goods, land, slaves (*vicarii*), or claims—assigned for use, management, and, within limits, disposal, by someone who in law lacked the right of property, i.e. either a *filius familias* (see PATRIA POTESTAS) or a slave. This device became increasingly important in Roman history (and a comparable one existed in Greek cities), in commercial, financial, and industrial activity. In law, a *peculium* was a purely voluntary grant by the *pater* or master, which involved him in legal responsibility to third parties up to the amount of the *peculium*, but which he was also free to withdraw at any time. In practice, however, the possessor normally had a free hand, and, if a slave, he could expect eventually to buy his freedom with the profits (Plaut. *Stich.* 751) or even to transmit it by a quasi-testament (Pliny, *Ep.* 8. 16). From Augustus on, by law anything a soldier acquired on military service was automatically his *peculium* (the so-called *peculium castrense*).

G. Micóher, *Pecule et capacité patrimoniale* (1932), and the bibliography under SLAVERY. M. I. F.

PEDIUS (1, *PW* 1), **QUINTUS**, perhaps of Campanian origin, son of an *eques* and of Julia, Caesar's elder sister (hardly her grandson as Suet. *Jul.* 83. 2 says), served as Caesar's *legatus* in Gaul (58-56 B.C.?) and supported him in 49. Praetor in 48, he suppressed the rising of Milo (q.v.). In 46 he and Q. Fabius Maximus commanded Caesar's forces in Spain; in 45 they took part in the campaign of Munda and were allowed to triumph. In 44 Pedius inherited one eighth of Caesar's estate but was induced by Octavian to place it at his disposal. In 43 he became consul with him (19 Aug.), carried a law providing for the trial of Caesar's murderers, and was left in charge of the city during Octavian's negotiations with Antony and Lepidus at Bononia. He died of exhaustion after trying to allay the panic caused by the news of the impending proscriptions (Nov.). He married a Valeria Messallina and left a son Quintus who was quaestor in 41.

1. Syme, *Rom. Rev.*, see index, T. P. Wiseman, *CQ* 1964, 129. G. W. K.; T. J. C.

PEDIUS (2, *PW* 3), **SEXTUS**, a Roman jurist who lived perhaps in the middle of the second century A.D. He wrote a commentary on the praetorian and aedilician Edict, which is often quoted by Paulus (q.v. 1) and Ulpian (q.v. 1), but which is not represented in the *Digest* by any direct excerpt. He was an original thinker who frequently

asserted his own doctrines. He wrote also a dissertation *De stipulationibus*.
A. B.; B. N.

PEGASUS (1), in mythology, winged horse who carries the thunderbolt of Zeus (Eur. fr. 312). The dying Medusa gave birth to him (Hes. *Theog.* 280). When Pegasus was drinking at the fountain Pirene he was caught and tamed by the hero Bellerophon, with the aid of Athena Chalinitis or of Poseidon (Paus. 2. 4. 1). He helped Bellerophon to fight the Chimaera, the Amazons, and the Solymi (Hes. *Th.* 325, Pind. *Ol.* 13. 86), but when Bellerophon attempted to fly to heaven Pegasus threw him. In another story Bellerophon flung Anteia or Sthenoboea from Pegasus (Eur. *Sthenoboea*). Pegasus was said to have stamped many famous sources out of the earth with his hoof.

The ending -αἶσος shows that Pegasus is of pre-Greek origin and his legend probably goes back to pre-Greek inhabitants of Asia Minor. Pegasus became early a favourite of Greek artists and poets; proto-Corinthian vases show him in action against the Chimaera (H. Payne, *Necrocorinthia* (1931), 133, cf. pl. 4, 1) and his birth is represented in the early archaic pediment of Corcyra. He also appears on early coins of Corinth, the city with which he is most closely connected by legends (E. Will, *Revue Numismatique* 1952, 239). Pegasus has no connexion with poets in ancient sources beyond the fact that he created Hippocrene (Paus. 9. 31. 3). In Roman times Pegasus becomes a symbol of immortality.

L. Maltén, *JDAI* 1925, 178 ff.; J. Aymard, *Mélanges École franç. Rome* 1935, 143 ff.; F. Cumont, *Études syriennes* (1917), 91 ff.; M. Launey, *Mon. Piot* (1935), 32, 47; T. Gericke, *Ath. Mitt.* 1956, 193; B. Shelton, *BCH* 1958, 27; H. Schürer, *Gymnasium* 1963, 573; G. M. A. H.

PEGASUS (2, *PW* 4), a Roman jurist, was *consul suffectus* (c. A.D. 73) and *praefectus urbi* probably under Domitian; successor of Proculus as head of the Proculian School. He was considered very erudite ('liber, non homo') and was cited by later jurists, but the title of none of his works is known. Whether he is the author of the *senatus consulta* mentioned by Gaius 1. 31 and 2. 254 f. (the latter being called *SC Pegasianum*) is unknown.

Syme, *Tacitus*, 761, 805

A. B.; B. N.

PEISANDER (Πείσανδρος) (1) of Cameirus in Rhodes (7th or 6th c. B.C.), epic poet, author of a *Heraclea*, perhaps the most important poem so named; the first to represent Heracles with a club; said to have plagiarized the *Heraclea* from Pisinnus; other poems attributed to him were spurious (*Suda*). See **QUINTUS** (2) **SMYRNAEUS**.

EGF 248-53.

W. F. J. K.

PEISANDER (2), Athenian politician, *floruit* between 430 and 411 B.C. Often attacked in comedy for corruption and cowardice, and ridiculed for extreme fatness. As a radical democrat he took a principal part in the investigation into the mutilation of the *Ilernae* (see **HERMS**) in 415, but in 412 he revealed himself as an oligarch and showed still more energy in supporting the revolution of 411: the motion in the *ekklesia* which set up the new *boule* of the Four Hundred (q.v.) was proposed by him. On the overthrow of the oligarchs he fled to the Spartans and was condemned for treason in his absence.

A. W. G.; A. A.

PEISANDER (3) of Laranda (early 3rd c. A.D.), epic poet, author of a long Greek poem on world history under the title *Ἡρωικαὶ θεογονίαι*.

PEITHO (Πειθώ), persuasion personified, Lat. *Suada*. Although, in the great majority of cases where she is mentioned, she is no more than a poetical or rhetorical

figure, she has a slight hold on cult and mythology. *Peitho* is a cult-title of Aphrodite in a few places (Farnell, *Cults* ii. 664; Fischer, *Nereiden und Okeaniden*, Diss. Halle 1934, 31); it is a curious fact that she is daughter of Ocean in Hesiod, *Theog.* 349 (attempted explanation, Fischer, 32). She is a marriage-goddess in the opinion of the theologians cited by Plut. *Quaest. Rom.* 2. As an attendant on Aphrodite she appears constantly in art and literature; see Weizsäcker in Roscher's *Lexikon*, s.v.

H. J. R.

PELAGIUS, d. after A.D. 419, either British or Irish, came to Rome as a monk c. 400, wrote a commentary on thirteen Pauline epistles and an exhortation to the patrician girl Demetrias which are the earliest extant British literature, and protested against Augustine's prayer *Da quod uides* (*Conf.* 10. 40) as undermining free will and moral effort. Alaric's invasion brought Pelagius as a refugee to Africa, then to Palestine where he found friends. Against Augustine's and Jerome's overwhelming polemic his cause was elaborated by Julian of Aclanum, who attacked original sin as Manichee pessimism, and by some seventy extant tracts by anonymous Pelagians. The best of these tracts (attributed without sufficient reason to Pelagius himself by Plinval) are a notable source for social history in a disturbed age.

Pauline commentary, ed. princeps by A. Souter (1922-31); *Ep. ad Demetriadem*, Migic, *PL* xxx. 15 ff. = xxxiii. 1090 ff. G. de Plinval, *Pelagius* (1943); J. Ferguson, *Pelagius* (1956); J. Morris, *JTS* 1965, 26 ff.; B. Altaner, *Patrology* (1960), 439; R. F. Evans, *Pelagius* (1968); H. C.

PELASGIANS (Πελασγοί = ? Πελαγ-σ-κοί, Sea-people?), a tribe mentioned by Homer (*Il.* 2. 840; 17. 301) as Trojan allies, 'from Larisa, afar' (apparently in Thrace). In Greece, Achilles' domain includes 'Pelasgian Argos' (*Il.* 2. 684), perhaps named after former inhabitants, and Achilles worships 'Pelasgian Zeus' of Dodona (16. 233). In *Od.* 19. 177 Pelasgi are among the native population of Crete. In historic times the district round Thessalian Larisa was still called Pelasgiotis. Herodotus (1. 57) records surviving Pelasgian villages east of Cyzicus, and 'beyond the Tyrseanians' at Creston in Chalcidice; they preserved a common non-Greek language.

The Pelasgi seem to have been primarily a North-Aegean people, uprooted (to judge from their scattered distribution) by Bronze Age migrations. The Greeks, however, came to use their name for 'aboriginal' Aegean populations generally (see **PELASGUS**); Herodotus (1. 57) thus uses it, in contrast to 'Hellenic', used of the northern, immigrant elements.

J. L. Myres, *JHS* 1907.

A. R. B.

PELASGUS, eponym of the Pelasgi (see **PELASGIANS**), the pre-Hellenic inhabitants of Greece. Hence the name is given to mythical ancient princes of various districts whose inhabitants claimed to be autochthonous, or at least of very long residence: Arcadia (Asius in Paus. 8. 1. 4; he was son of Earth); Argos (Aesch. *Supp.* 251; Hyg. *Fab.* 145. 2; contemporary with the rape of Persephone, Paus. 1. 14. 2); Thessaly (schol. *Il.* 2. 681; grandson of Thessalos, eponym of Thessaly). Generally speaking, he is either Peloponnesian (and if so, either Arcadian or Argive), or else Thessalian.

H. J. R.

PELEUS (Πηλεΐδης), in mythology, son of Aeacus (q.v.), and therefore an Aeginetan; but as his name seems to mean 'man of Pelion' and his chief adventures are in that neighbourhood, it is highly likely that there has been an early conflation of two genealogies (Achilles is already an Aeacid in Homer), for some reason quite unknown. His transference from one district to the other is explained by the story that he and Telamon killed their half-

brother Phocus (Apollod. 3. 160), whereat their father banished them both. Peleus then went to Phthia, was purified by Eurytion, and married his daughter Antigone; but at the Calydonian boar-hunt he accidentally killed Eurytion and was again exiled. This time he reached Iolcus, where Acastus son of Pelias purified him, and he took part in Pelias' funeral games. But Astydameia, Acastus' wife, fell in love with him. As he was unwilling, she sent word to Antigone that Peleus was to marry Sterope, Acastus' daughter, whereat Antigone hanged herself; Astydameia then lied to Acastus much as Phaedra did to Theseus (see HIPPOLYTUS 1). Acastus thereupon took him out hunting on Pelion, hid his sword as he slept (for the sword cf. Ar. *Nub.* 1063, and schol. there, who says Hephaestus made it and the gods brought it to Peleus when he was left defenceless), and left him to be attacked by the Centaurs; but Chiron brought him the sword again, he escaped, and took vengeance upon Astydameia, capturing Iolcus and cutting her to pieces (Apollod. 173, who says he led his army between the pieces, a ritual of purification, cf. Livy 40. 6. 1; Plut. *Quaest. Rom.* 290 d). Finally, for his virtue, he was given Thetis (q.v.) to wife; from the Chest of Cypselus on (Paus. 5. 18. 5) he had to win her by wrestling with her, while she took all kinds of shapes (Apollod. 170). She left him because he interfered, when she tried to make Achilles immortal by burning his mortality away in a fire (ibid. 171, cf. Lycophron, 178-9). Finally he was reunited to her and made immortal (Eur. *Andr.* 1253 ff.).

His wrestling-match with Atalanta at the funeral games of Pelias; his wrestling with Thetis to win her; his wedding to her; and his bringing the infant Achilles to Chiron, are favourite subjects in sixth- and fifth-century art (the last already in the mid seventh century). He also appears in pictures of the Calydonian boar-hunt (Brommer, *Vasenlisten*², 240 ff.). H. J. R., C. M. R.

PELION (τὸ Πήλιον ὄρος), a mountain of over 5,300 feet in Thessalian Magnesia. It was the reputed home of the centaur Chiron (see CENTAURS). The mountain system of Pelion with that of Ossa cut off the plain of Pelasgiotis from the Aegean. On the east the steeply rising coast was harbourless, but beneath its south-western slopes, which were fertile and enjoyed a mild climate, it sheltered good harbours on the Bay of Voio. H. D. W.

PELLA, capital of Macedonia c. 400-167 B.C., situated on a gentle slope beside the lake of the river Lydias, which was navigable from Pella to the sea (Livy 44. 46; Strabo 7. fr. 20), and at the crossroads where the route down the Axios valley meets the Via Egnatia. Known to Herodotus (7. 123) and Thucydides (2. 100. 4), it became the capital of Archelaus and the largest Macedonian city (Xen. *Hell.* 5. 2. 13), until replaced in importance by Thessalonica in 146 B.C. Pella was later a Roman colony.

A summary of the excavation reports is given in *Σύγγ. Δελτ.* 1960, 1. 72 ff. and *Balkan Studies* 1960, 113 ff. N. G. L. H.

PELOPIDAS was born about 410 B.C. of a distinguished Theban family. He must have attached himself prominently to the democratic party of Ismenias before the seizure of the Theban citadel by the Spartans (382), when he took refuge in Athens. He led the *coup d'état* by which the oligarchy was overthrown and the citadel recovered (winter 379/8), and became notable at once as a statesman and general. In 378 he was a Boeotarch, and in the war with Sparta won great fame by his leadership of the Sacred Band (q.v.), especially at Tegyra (375) and Leuctra (371). He accompanied Epaminondas on his first invasion of the Peloponnese (winter 370/69). But after that he turned his attention to Thebes' northern enemies, Alexander of Pherae and Macedon. On his

second expedition (368) he was made prisoner by Alexander, but was rescued by Epaminondas. On an embassy to the Great King he persuaded him to withdraw his diplomatic support from Sparta (367). He defeated Alexander of Pherae at Cynoscephalae, but died in action (364).

Pelopidas' energy and leadership were of great service in the advancement of Thebes. He showed less originality than Epaminondas, but equal capacity.

Nepos' and Plutarch's *Lives*, G. M. Bersanetti, *Athenaeum* 1940, 43 ff. H. W. P.

PELOPONNESIAN LEAGUE, the earliest known, and likewise the most long-lived and influential Greek *symmachia* (q.v.). The name is modern, the usual Greek term being 'the Lacedaemonians and their allies'. In the sixth century B.C. Sparta negotiated treaties of alliance with Peloponnesian States. Some hold that a period of separate treaties with individual States was followed shortly before 500 by the organization of the League as a permanent alliance; others date the organization earlier. Sparta held the command in war and summoned and presided over the assembly of allies. Only after the majority of this body, in which each allied State cast one vote, had ratified a proposal to go to war could Sparta demand the support of all members. She herself probably cast no vote in the Assembly but exercised great influence over its decisions by her power to refuse to call a meeting except to consider proposals that had her own approval. When no League war was in progress, the members were free to carry on separate wars even with other members. Thus the League could not support every allied State in war; even to secure defence against aggression from the League as such it was necessary to convince first Sparta and next the Assembly. Athens, at the time of her surrender in 404, and later other allies, were forced to accept treaties promising complete obedience on questions of peace and war. In other ways, too, a tendency to transform the League into an empire was shown. This process was not completed before the collapse of the power of Sparta and the dissolution of the League in 366 B.C.

ANCIENT SOURCES. Herodotus, Thucydides (especially bk. 1); Xen. *Hell.*

FOR MODERN LITERATURE see under SYMMACHIA. The origin and constitution of the League are discussed by Larsen in *CPhil.* 1932, 1933, and 1934. An interpretation differing on many points is given by U. Kahrstedt, *Griechisches Staatsrecht* (1922). In favour of an early date for the origin of the League are H. Bengtson, *Griechische Geschichte* (1960), 132, and L. Moretti, *Ricerche sulle leghe greche* (1962), ch. i. J. A. O. L.

PELOPONNESIAN WAR (431-404 B.C.). The cause of the war, according to Thucydides, was that the Athenian Empire had destroyed the autonomy of some Greek States and threatened many more. There was a general fear of Athens, particularly on the part of Corinth which was hemmed in on both east and west, and goodwill towards her enemies who were to be the 'liberators of Greece'. Nothing, however, in Thucydides' opinion, would have come of this if Sparta had not feared for her own position. Thucydides, well aware of the economic factor in the conduct of the war, does not consider it as a cause. Athens was morally the aggressor, but her enemies began the war. Military victory was therefore a necessity for the Peloponnesians; a draw meant victory for Athens.

2. The main lines of strategy were simple. A superior hoplite force was at that time irresistible on land, it could master an enemy's territory, depriving him of supplies, and if necessary besiege the city. But in the absence of effective siege-engines a besieged city could normally be reduced by famine only, and Athens had countered this risk by her Long Walls (q.v.), which provided a refuge space for her country population, and secured her connexion with the sea. On land she could not muster a force half as strong as her enemies (among whom the

Spartans and Boeotians were the finest soldiers in Greece); but she was overwhelmingly strong at sea, in numbers, skill, and morale. She could thus temporarily sacrifice her land without sacrificing her people, and she could neither be taken by assault nor reduced by starvation. At the same time she could harry her enemies' trade (the Peloponnesians depending partly on imported food, though not at all to the same extent as Athens) and their coasts. Pericles therefore persuaded his countrymen to transfer themselves and all their movable goods within their walls. The one advantage the Peloponnesians had at sea was that they could concentrate their forces to secure a local superiority; but this was neutralized by their lack of skill and confidence, and by their financial weakness. In available wealth, indispensable for the fleet and for overseas supplies, Athens had a decided advantage.

3. In autumn 433 a quarrel between Corinth and her colony Corcyra gave Athens the opportunity to secure in Corcyra an ally with a considerable fleet and Athenian intervention robbed Corinth of the fruits of a naval victory over Corcyra. In Naupactus she already possessed an important naval base in the Corinthian Gulf. Next year Potidaea revolted from Athens, and Corinth unofficially sent help. In the autumn the Peloponnesian League voted for war. In May 431 war was declared and the Peloponnesians invaded Attica, ravaged the deserted land for about a month, and retired. The first year went according to Pericles' plan: Athens was undamaged and the issue depended on Athenian patience and morale; and so it continued for six years. In 430 a devastating pestilence broke out among the crowded people within the walls (where no proper provision had been made for their housing), and Athens lost more than a quarter of her population, a blow from which she never fully recovered; and Pericles died (429), the one man with enough influence to carry out a consistent policy. But Potidaea was forced to capitulate, Phormion gained two brilliant naval victories over superior forces off Naupactus (429), a revolt in Lesbos was crushed, the Peloponnesian fleet failing to help the island (428-427), and Demosthenes gained a decisive victory over the Peloponnesians in Amphilochia (426). In 425 Pylos on the west coast of Messenia was captured, which gave Athens not only a permanent post in the enemy's country in a vulnerable spot—for helots could be encouraged to revolt—but a number of Spartan prisoners. Sparta was being hemmed in; fearful for her prisoners and of leaving her territory now, she gave up the annual invasions of Attica and sued for peace. Pericles' strategy had triumphed.

4. But the Athenians, at the instance of Cleon, a demagogue who had made capital out of the victory of Pylos, refused the peace. In 424 a brilliant Spartan, Brasidas, first saved Megara from capture by Athens, then slipped through Thessaly, and with support from Perdiccas II of Macedonia won over several Athenian dependencies in the Thracian region, including the important Amphipolis. At the same time an ambitious attempt by Athens to overthrow Boeotia was decisively defeated at Delium. A year's truce was concluded (423); in the autumn of 422 Cleon took a force to Thrace, but after some successes was decisively defeated at Amphipolis; both he and Brasidas fell. Brasidas had been unable to extend his successes; and peace was now made between Sparta and Athens, practically on the basis of the *status quo ante bellum*. This 'Peace of Nicias' was in effect a victory for Athens, the more so because her enemies were divided, Corinth and Boeotia refusing to sign the peace; the united forces of the rest of Greece had been unable seriously to weaken the Athenian Empire.

5. But again the ambition of a politician wrecked the peace and the Assembly failed to follow a consistent or

moderate policy. Alcibiades intrigued against Sparta in the Peloponnese, and a coalition was formed against her—Argos, Elis, Mantinea, and Athens; but Athens sent half-hearted help. Sparta recovered herself at Mantinea (418). Athens suddenly attacked and destroyed the unoffending Melos (416), because it was an island not subject to her. She then launched the grandiose expedition to Sicily (415-413), championed by Alcibiades and opposed by Nicias. The finest force that ever left Greek shores went to Sicily; but Alcibiades was soon recalled to answer charges to which his lawless private life had exposed him, and he promptly went over to the enemy; and the irresolute Nicias allowed initial successes to be turned into defeat. Large reinforcements under Demosthenes were sent; but finally the whole force was utterly destroyed (Oct. 413).

6. Meanwhile Sparta had renewed the war in Greece and occupied Decelia in Attica as a permanent base (spring 413). Athens had lost almost all her fleet, and though she began to rebuild she no longer had trained crews. Persia provided money for a Peloponnesian fleet, which crossed the Aegean, and Athens' subject States began to revolt; Athenian food-supplies from the Bosphorus and from Egypt were endangered. Further, there was political strife in Athens, ending in the revolution of the Four Hundred and the loss of Euboea (411). But the new fleet, led by Alcibiades, who had been recalled, gained several victories in the Hellespont, secured the food-supply, and recovered many revolted allies (411-408). However, Lysander with Persian help recreated the Peloponnesian fleet. Almost exhausted, Athens won the costly battle of Arginusae (406). But once more politics destroyed what the fleet had saved: a new peace offer was rejected and the victorious generals were tried and executed for failure to rescue the crews of waterlogged ships. In 405 the last Athenian fleet was surprised and destroyed at Aegospotami in the Hellespont. Besieged by sea and land, Athens capitulated in April 404.

7. The Peloponnesian War had been, as Thucydides says, the greatest 'disturbance' in Greek history. Methods of warfare, never gentle in Greece towards prisoners and non-combatants, became more cruel; the only hopeful attempt at Greek unity was defeated; and the old autonomy was not won back, but an incompetent imperialism substituted for an enlightened one. Greece hardly recovered from the war.

ANCIENT SOURCES. For the first twenty years Thucydides is our authority, for the last seven the less adequate Xenophon (*Hellenica*, 1-2, 2). Diodorus' history (12 30 13-107, probably only an epitome of Ephorus) covers the whole war, but contains little of value. Of the subsidiary sources, the 'Old Oligarch' (Ps.-Xen. *Constitution of Athens*) gives a right-wing view of the democracy at the beginning of the war, and Aristophanes gives incomparable pictures of Athens in wartime. Several speeches of Antiphon, Andocides, and Lysias throw light on contemporary feeling. Plutarch's *Lives of Pericles, Nicias, Alcibiades*, and Lysander add much biographical detail. For inscriptions see IG¹ (ed. minor, 1924); M. N. Tod, *Greek Historical Inscriptions* (1946), containing a valuable selection of indispensable official documents.

MODERN WORKS. Besides the general histories of Greece, see G. B. Grundy, *Thucydides and the History of his Age* (1948). See also the separate articles on most of the individuals mentioned above. A. W. G., N. G. L. H.

PELOPONNESUS, 'Isle of Pelops', the large peninsula of south Greece, connected with the mainland only by the Isthmus of Corinth. The name Peloponnesus, mentioned for the first time in the Cypria (fr. xi Allen) and the Homeric Hymn to Apollo, proves that the whole territory was considered an island, a separate part of Greece. Ancient geographers knew about its peculiar shape, comparing it to the leaf of a plane-tree; the medieval name Morca is said to have been taken from the mulberry. It was described, not inappropriately, by Strabo (8. 334), as ἀκρόπολις τῆς συμπαφῆς Ἑλλάδος.

The area of Peloponnese, including the islands except Aegina and Cythera, amounts to about 8,430 sq. miles (cf. Sicily 9,930, Cyprus 3,580 sq. miles). The number of the population can scarcely be estimated. The civic population may have been about 500,000 or 600,000 in 400 B.C. (1928: 1,053,300).

Although virtually an island, and indented by deep gulfs, Peloponnese had but little communication with the sea. Harbours are relatively few, and except in Argolis and Elis have little or no hinterland. Their lack no doubt made naval operations against the coasts more difficult: hence the importance of Haliëis for Athens and Argos when these cities were allied in the mid fifth century (see L. H. Jeffery, *BSA* 1966, 41 ff.) and of Methone (*Modon*) and Pylos (*Navarinon*). An 'isthmus' route from the Gulf of Argos to Corinth may account for the importance of Tiryns and Mycenae in Bronze Age Greece. Arcadia, the central, nearly inaccessible district, did not touch the sea at all; the surrounding divisions (Laconia, Messenia, Elis, Achaea, Isthmus, Argolis, qq.v.) were separated from one another by mountains, which also were a great hindrance to intercourse by land.

The parallel mountain chains of central Peloponnese running to south-south-east once formed part of the huge arc stretching from Albania through middle Greece and Crete to Asia Minor. This original system was destroyed by the subsidence which created the large gulfs and most of the plains in the interior. In the Isthmian province and Argolis the predominant direction of the ranges is west to east, as in the eastern parts of middle Greece. Seen across the Gulf of Corinth from Delphi the great mountains of the Peloponnese, Erymanthus, Panachaicum, Chelmos, and Cyllene (*Ziria*) seem to present an impenetrable barrier. The western and southern divisions of Peloponnese are characterized by larger plains, forming a kind of counterweight to the smaller closely enclosed plains, as around Tripolis, Mantinea, and Arcadian Orchomenus, Pheneus, and Stymphalus. And as the mountain ranges seem to radiate from Arcadia, the Peloponnese, in spite of its heterogeneous geological formation, gives the impression of a peculiar system, with a centre surrounded by other districts.

There are plains fit for agriculture presenting a certain flourishing aspect even now, and probably far greater in ancient times; by far the largest part of Peloponnese, however, is mountainous, uncultivable, and poor. About 50 per cent of the surface, consisting of chalk and limestone, provides only pasture for sheep and goats, the oak-woods also for swine. Flora and climate depend, of course, upon the geographical and geological conditions, which vary greatly. Arcadia and the east are almost entirely continental, while the western parts are subject to maritime influences.

On the exploration of the Mycenaean Peloponnese, see *BSA* 1957, 231 (south-west), 1960, 67 (Laconia), and W. A. McDonald, 'Overland Communications in Greece during L II III', *Mycenaean Studies* (U.S.A. 1964), 217. See also under sites and regions. V. E.; R. J. II.

PELOPS (*Πέλοψ*), in mythology, son of Tantalus (q.v.). His chief adventures are: (1) In childhood he was killed and cooked by his father, who served his flesh to the gods to see if they could tell that it was not that of a beast. Demeter inadvertently ate part of his shoulder; the other gods brought him to life again, replacing the lost part by ivory. See especially Pindar, *Ol.* 1. 46 ff. (controverts ordinary account); schol. *ibid.* 40; Apollod. *Epit.* 2. 3 ff. (2) By favour of his lover Poseidon he became possessed of wonderful horses and great skill in driving.

On reaching manhood he wooed Hippodameia daughter of Oenomaus of Pisa. This king had an incestuous love for his daughter, or had been warned that her husband would kill him (Apollod. *ibid.* 4). He therefore let it be known that anyone who wished might carry her off, on condition that he might pursue, and spear the suitor if he caught him. Thirteen suitors had already perished when Pelops appeared. He bribed Myrtilus, Oenomaus' charioteer, to take out the linchpins of his master's chariot (the details vary in different authors; see Roscher's *Lexikon*, arts. 'Myrtilos', 'Oenomaos'). Oenomaus was thus thrown and killed and Pelops carried off his bride. But, either because he was ashamed to owe his victory to Myrtilus (Hyg. *Fab.* 84. 5), or because Myrtilus loved Hippodameia and Pelops was jealous (Apollod. *ibid.* 8), he cast him into the sea which was afterwards called Myrtoan. Myrtilus, or Oenomaus, cursed Pelops in dying, and the curse was efficacious, the more so as they were both sons of gods, Hermes and Ares respectively; see, for the later fortunes of his family, *ATHEUS*, *AGAMEMNON*. However, for the time being Pelops prospered greatly and had six sons by his wife (various lists in schol. Pind. *ibid.* 144). But various stories of his offspring were current, see Bloch in Roscher *ib.*, 1872. He was supposed (falsely, for the 'barrow' contained no burial) to be buried at Olympia, where he was worshipped as a hero.

The preparations for the chariot-race are the subject of the East pediment of the Temple of Zeus at Olympia, and these and the race itself are found occasionally in fifth- and fourth-century vase-painting (Brommer, *Vasenisten*², 369 f.). H. J. R.; C. M. R.

PELTASTS (*πελτασταί*) were Greek soldiers, named from their small round shield (*πέλτη*). Originally they had no body-armour and their chief weapons were light throwing-spears (*ἀκόντια*). They are first recorded as derived from Thrace, and were imported into Greece in the later fifth century B.C. to act as skirmishers. Their style of equipment was adopted in Greek armies, and achieved numerous successes, especially under Iphicrates (q.v.) and Chabrias. To Iphicrates are attributed the changes whereby the length of their spears was increased by a half, and the size of their swords almost doubled. The object of these alterations was to enable the peltasts to act as regular troops and not mere skirmishers. After the rise of the Macedonian armies apparently they fell into disuse.

Arist. fr. 498 (Rose), and Diod. 15. 44 (on their equipment). O. Lippelt, *Die griechischen Leichtbewaffneten bis auf Alex. d. Gr.* (1910); J. Kriemayer and G. Veith, *Heerwesen und Kriegsführung* (1928), 88 ff.; H. W. Parke, *Greek Mercenary Soldiers* (1933), 17 ff. and 79 ff.; A. N. Snodgrass, *Arms and Armour of the Greeks* (1967), 78 f. H. W. P.

PELUSIUM, a city at the eastern mouth of the Nile. Renowned for its flax, it was especially important as a frontier fortress towards Palestine. Near it Cambyes defeated the Egyptians (525 B.C.). In 374 Pharnabazus and Iphicrates were balked here by floods; but the position was carried in 343 by Artaxerxes III, in 333 by Alexander, in 169 by Antiochus IV, in 55 by Gabinius and M. Antonius, and in 30 by Octavian (against Antonius). Under the Roman Empire it was a station on a route to the Red Sea. E. H. W.

PENATES, DI, 'the dwellers in the store-cupboard (*penus*)', cf. *Aquinas*, *Arpinas*. These guardian *numina* of the family larder were worshipped in close conjunction with Vesta (q.v.), also with the Lares (q.v.), properly the Lar Familiaris. It was the chief private cult of every Roman household, especially in early times. It would seem, however, that the royal *di penates*, like the royal Vesta, were reckoned of especial importance to the

community; this at least is the most reasonable explanation of the cult of the *Penates Publici*. This was attached to Vesta's temple (Tac. *Ann.* 15. 41. 1), but there was also a separate shrine, of unknown but fairly early date, on the Velia (see Platner-Ashby, 388). Speculation was rife as to who these Penates originally were, and it was generally supposed that they were the Dioscuri (q.v.). But, since the latter were commonly identified with the Samothracian gods also, and the Penates were called *di magni*, like the Cabiri (q.v.), it was held, not later than Cassius Hemina (see Servius on *Aen.* 3. 12; Cassius Hemina, fr. 5 Peter), that the Roman, and other Italian, *Penates Publici* owed their origin to Samothrace, having been brought by Aeneas (Klausen, *Aeneas und die Penaten*).

Wissowa, *RR* 161 ff.; Latte, *RR* 89; A. Alföldi, *Early Rome and the Latins* (1966), 258 ff. H. J. R.

PENELEOS (Πηνέλεως; also Πηνέλαος, *Etyim. Magn.* 670. 50 Sylburg, but reading uncertain; Peneleus, *Hyg. Fab.* 81, cf. Πηνέλεον, read by Aristophanes in *Iliad* 13. 92), son of Hippalcimus or Hippalcus (Diod. Sic. 4. 67. 7; *Hyg. Fab.* 97. 8); one of the Boeotian leaders (*Iliad* 2. 494); killed by Eurypylus (Quint. Smyrn. 7. 104); wooed Helen (Apollod. 3. 130); an Argonaut (*ibid.* 1. 113). H. J. R.

PENELOPE (Πηνελόπη, Epic Πηνελόπεια), in mythology, daughter of Icarus, brother of Tyndareos (qq.v.), and wife of Odysseus (q.v.). In the *Odyssey* she faithfully awaits his return, although pressed to remarry one of her numerous suitors, the local nobles. She puts them off for a while by pretending that she cannot marry until she has finished weaving a shroud for Laertes, Odysseus' father. This she unravels every night, so that the work is never finished, but after three years she is betrayed by one of her maids and compelled to complete it (*Od.* 2. 93 ff.; 19. 137 ff.; 24. 128 ff.). At last, ten years after the fall of Troy and twenty after the departure of her husband, she is at her wits' end and determines to give herself in marriage to whoever can bend Odysseus' bow. This is at Athena's prompting (*Od.* 21. 1) and is used by Odysseus to get hold of the weapon and kill the wooers with it. Later writers add very little, save some particulars concerning her father's adventures and the statement (in the *Telegonia*) that she married Telegonus after Odysseus' death.

There is, however, another story of Penelope so different from that of the epic tradition that it seems possible that we have here to do with a different figure (nymph or minor local goddess?) of the same name. This is that she was the mother of Pan. Tzetzes, who mentions the tale that she and Hermes were his parents, is already of this opinion (schol. Lycophron, 772, cf. Apollod. *Ept.* 7. 38). It of course produced sundry reconciliations and rationalizations, the most notorious, that of Duris of Samos in Tzetzes, *ibid.*, being simply an indecent pun. But possibly the whole legend is no more than an etymological fancy, a connexion of Πάν with Doric or Doricized Πανελόπεια.

Penelope receiving gifts from the suitors appears on a mid-fifth-century Attic vase. On another, with Telemachus, she sits at her loom, elbow on knee, head on hand. She is shown in the same pose in contemporary sculpture and the type is adapted for other characters.

J. Schmidt in Roscher's *Lexikon*, s.v. In art, Brommer, *Vasen-Istent*, 308, 328. H. J. R.; C. M. R.

PENIA (Πενία), poverty personified, a literary figure, perhaps also popular (see *Ildt.* 8. 111. 3), and so appearing in various allegorical contexts (pleads her cause against Wealth, Ar. *Plut.* 489 ff.; mates with Abundance to

produce Eros, Pl. *Symp.* 203 b f.; humorously said to guard a poor man's house, *Anth. Pal.* 9. 654), not in cult. H. J. R.

PENTADIUS (3rd c. A.D.) has left elegiac poems in 'echoic' verse on Fortune, Spring, Narcissus, besides several epigrams. Text and translation: Duff, *Minor Lat. Poets*.

PENTAKOSIOMEDIMNOI (πεντακοσιομέδιμνοι), i.e. 'five hundred bushel men', at Athens, members of the richest of the four census-classes devised by Solon (q.v.), with an estimated annual income of at least 500 *medimnoi* of corn or the equivalent in other produce or money. Under Solon's constitution the *tamiai* and perhaps also the *archontes* (q.v.) were chosen exclusively from this class, and this was still the case with the *tamiai* in Aristotle's time (*Ath. Pol.* 8. 1). A. W. G.; T. J. C.

PENTAPOLIS (African). The most fertile part of Cyrenaica and the area of intensive Greek colonization in this part of Africa. The five cities were Apollonia, Cyrene, Ptolemais, Arsinoe (Taucheira), and Berenice. In the fourth century A.D. it formed a separate province called *Libya superior* or *Libya Pentapolis*. Synesius was bishop of Ptolemais.

C. H. Kraeling, *Ptolemais* (U.S.A. 1962).

B. H. W.

PENTATHLON, a contest of five events (*ἀλμα, ποδωρικαν, δίσκος, ἄκοντα, πάλη*, Simonides, *Lyra Graeca* II, 182 (Loeb)) requiring all-round athletic ability. By some system of scoring or elimination unknown to us the two best competitors in the running, jumping, throwing the discus, and throwing the javelin were selected for the final event, the wrestling. It was one of the contests at the Olympian Games and at many other festivals. See ATHLETICS. R. L. H.

PENTECONTAETIA, the 'period of fifty years' between the Persian and Peloponnesian Wars, is treated with some surprising omissions by Thucydides, but not so called, in an excursus of his first book, chs. 89-118. It did not comprise exactly fifty years, being the period from autumn 479 (Sestos) until spring 431 (attack on Plataea). The detailed chronology of the Pentecontaetia is highly controversial.

A. W. Gomme, *A Historical Commentary on Thucydides* I (1945); V. Ehrenberg, *From Solon to Socrates* (1968), 187. V. E.

PENTHESILEA (Πενθεσίλεια), in mythology, queen of the Amazons who came to the aid of Troy after the death of Hector (q.v.), *Aethiopis*, fr. 1 Allen. According to this poem (see Proclus and cf. Quint. Smyrn. 1. 18 ff.) she was daughter of Ares (cf. AMAZONS) and did valiantly until finally overcome and slain by Achilles. She was buried by the Trojans, and Achilles, by a touch of un-Homeric sentimentality, grieved over her so that Thersites (q.v.) reviled him for being in love with her, whereat Achilles slew him and consequently quarrelled with Diomedes (q.v. 2), his kinsman in this version (Thersites was son of Agrius (see OENEUS) and so first-cousin once removed to Diomedes, Quint. Smyrn. 1. 770 ff.). The reason for her being willing to help Priam was that after Thescus married Phaedra, Hippolyte (see HIPPOLYTUS 1) roused the Amazons against him and in the ensuing battle was accidentally killed by her own comrade Penthesislea. The latter then obtained purification from her blood-guilt at the hands of Priam (Apollod. *Ept.* 5. 1). This is plainly a secondary addition to the story, and in fact Apollod. *ibid.* gives two other accounts of Hippolyte's death.

Her death at Achilles' hand is often shown in art from the mid sixth century, and was the subject of one of the

panels Panaenus painted round Pheidias' Zeus (Brommer, *Vasenlisten*², 262; D. von Bothmer, *Amazons in Greek Art* (1957), 4 f., 72, 145 ff.). H. J. R.; C. M. R.

PENTHEUS (*Περθεύς*), in mythology, son of Agave, daughter of Cadmus (q.v.), and her husband Echion. When Dionysus returned to Thebes from his conquests in the East, Pentheus denied his deity and refused to let him be worshipped. But the supernatural strength of the women who had gone out to worship Dionysus was too much for his soldiers, and he consequently (by advice of a mysterious stranger, the god in disguise or another) went out to spy upon them. He was detected and torn in pieces, his mother, who in her frenzy took him for a beast, leading the rest. It is possible that this goes back to some ritual killing, cf. *DIONYSUS*. See especially Euripides, *Bacchae* (with Dodds's commentary, 1960), whence Ovid, *Met.* 3. 511 ff., Nonnus, *Dion.* 44-6, chiefly derive.

Pentheus torn by maenads is found from time to time in Attic vase-painting from the late sixth century on (Brommer, *Vasenlisten*², 343). H. J. R.; C. M. R.

PERDICCAS (1) **I**, the first king of Macedon (II dt. 8. 130), who probably conquered the Macedonian coast c. 640 B.C.

PERDICCAS (2) **II**, king of Macedon c. 450-413 B.C. By astute diplomacy Perdiccas survived rebellions in Upper Macedonia, invasion by Sitalces (q.v.), and intervention by Athens and Sparta, and succeeded in uniting Macedonia and diminishing the Athenian control of his coast. In alliance with Athens until she founded Amphipolis in 436, he subsequently promoted the revolt of Potidaea and the Chalcidians, whom he advised to concentrate at Olynthus. The Athenians aided by Derdas, prince of Elimiotes, and by Philip, exiled brother of Perdiccas, captured Therme before they came to terms with Perdiccas in order to invest Potidaea. Perdiccas assisted Potidaea until Sitalces negotiated a treaty for him with Athens, who ceded Therme (431); probably Derdas also submitted to Perdiccas. In 429 the invasion of Sitalces was checked by the Macedonian cavalry, and a marriage-alliance was contracted; in 425 Perdiccas allied with Brasidas to oust Athens and to reduce the Lyncestian prince Arrabacus, but when the campaign in Lynceus failed, allied with Athens (422). Allying in 417 with Sparta and Argos, he allied again with Athens when attacked in 415, and died c. 413.

F. Geyer, *Historische Zeitschrift*, Beiheft 19 (1930). N. G. L. H.

PERDICCAS (3) (d. 321 B.C.), son of Orontes a Macedonian noble, accompanied Alexander to Asia as 'taxiarch' commanding a brigade of Macedonian infantry. He was promoted 'Bodyguard' (member of Alexander's personal staff; 330), and thereafter often held independent commands. Craterus' return to Europe and Hephaestion's death (324) made him Alexander's second-in-command, and when Alexander died he became in effect, if not in name, regent of the Empire (323-322), an arrangement which alarmed Antipater and Craterus in Europe, and the insubordinate satraps Antigonus (Phrygia, etc.) and Ptolemy (Egypt). In the ensuing war Perdiccas tried to invade Egypt, but Ptolemy's skilful defence and propaganda incited his Macedonians to mutiny, and they killed him. Able, brave, and loyal, but unpopular because of his arrogance, Perdiccas is the type of a Macedonian nobleman and general who just missed greatness.

Berve, *Alexanderreich*, no. 627; W. W. Tarn, *CAH* vi, ch. 15. G. F. G.

PERDUELLIO (from *perduellus* = *hostis*) denoted in early Roman law hostile activity against the State. It

should perhaps be distinguished from purely military offences of this kind (*proditio*), but it was probably not clearly defined. It was one of the earliest crimes, mentioned in the XII Tables, with the penalty of death, and in early times was subject to the jurisdiction of *duoviri perduellionis*. In the later Republic it was absorbed in the wider offence of *maiestas* (q.v.).

Besides the textbooks on criminal law (see *LAW AND PROCEDURE, ROMAN*, III), E. Pollock, *Der Maiestatsgedanke im röm. Recht* (1908); F. Vittinghoff, *Der Staatsfeind in der röm. Kaiserzeit* (1936), C. H. Brecht, *Perduellio* (1938), *Sav. Zeitschr.* 1944, 354. H. N.

PEREGRINI, meaning the citizens of any State other than Rome, implied membership of a definite community. Some non-Romans were distinguished from *peregrini*, notably the *Latini* (q.v.). The *socii Italici* remained *peregrini* till 89 B.C., and all provincial peoples enjoying any form of local autonomy were *peregrini* (see *CIVITAS, DEDITICII*). They sometimes enjoyed *conubium* or *commercium*, but could not receive the Roman citizenship unless they surrendered their own sovereignty. In practice, however, the grant of Roman status to an individual *peregrinus* meant, by the end of the Republic, that he was automatically freed from liability to the civic duties of his native *civitas*, while enjoying its amenities; for no Roman could be a citizen of two States. This led to abuses, as Roman citizenship spread abroad, which were rectified by a decree of Augustus affirming the liability of such Roman citizens to their local *municipia* (q.v.).

For bibliography see *SOCII; MUNICIPIUM; CITIZENSHIP, ROMAN*. A. N. S.-W.

PEREGRINUS (with the nickname *Proteus*) of Parium in Mysia (c. A.D. 100-65), Cynic. Our knowledge of him comes almost entirely from Lucian *Περὶ τῆς Περειρίνου τελευτῆς*. He was suspected of murdering his father, and to avoid the scandal travelled in Palestine, where he became a Christian. For his activities in this connexion he was imprisoned. On being released he returned to Parium, but soon resumed his travels. He quarrelled with the Christian community, and betook himself to Egypt, where he studied under the Cynic Agathobulus. From there he went to Italy, and then to Greece, as a wandering preacher. His reputation became such that by some he was classed with Epictetus, but Lucian has no high opinion of his character. In 165 he committed suicide by throwing himself on the flames at the Olympic Games. W. D. R.

PERGAMUM, a city of Mysia, in the fertile Caicus valley c. 15 miles from the sea, must have been inhabited from early times, though we hear nothing of it before 401 B.C. Its true history begins only in the third century B.C., when under the so-called Attalid dynasty it became the capital of a Hellenistic kingdom inferior in importance only to Macedonia, Egypt, and the Seleucid realm. For the political history of this development, see *PHILETAERUS* (2), *EUMENES* (1) and (2), *ATTALUS*, *ARISTONICUS* (1-3).

Although the original Greek population of the city cannot have been large, it possessed the constitution of a Greek city-state even under the Attalids, who assumed, however, wide powers of interference at will. They also ruled directly the native population in the surrounding country under their control, and with the expansion of the kingdom and broadening of their political aims, they became increasingly like the great Hellenistic kings, relying on a Greek bureaucracy and a semi-professional army also predominantly Greek, though less elaborate than the Seleucid and Ptolemaic systems based on permanent military settlements. The expansion of Pergamum was due to a skilful exploitation of its natural wealth, which included silver-mines, but also an annual

surplus from agriculture (corn) and stock-breeding, with its dependent industries of woollen textiles and parchment. The wealth of the country can perhaps be judged best from its unhappy fate later as the Roman province of Asia.

The Attalids were not founders of cities on the grandest scale, but they made Pergamum itself one of the greatest and most beautiful of all Greek cities. The public buildings, laid out in terraces on a hill-side and culminating in the palace and fortifications of the acropolis, were a splendid example of Hellenistic town-planning. With her famous school of sculpture, her library second only to that of Alexandria, and her kings who were philosophers at least in their spare time, Pergamum became a leader of the Greek world in culture even more than in politics and commerce.

ANCIENT SOURCES. Inscriptions: *Altertümer von Pergamon* viii (M. Fränkel, 1890-5); see also *C.A.H.* ix, bibliography to ch. 19, *Abh. Berliner Akademie*, 1932. For the period 220-168 B.C. Polybius and Livy (bks. 30 ff., using Polybius) are the most important.

PERGE (Πέργη), city of Pamphylia on the river Cestrus, founded according to tradition by the 'mixed multitude' of Greeks who wandered across Asia Minor after the Trojan War, led by Calchas, Mopsus, and Amphilocheus. Statues of Calchas and Mopsus, qualified by their inscriptions as 'founders', stood with others at the main gate of the city in Roman times. The Pergaeans welcomed Alexander and served him as guides. Later, under the Seleucids, the lower town was fortified with the walls which still stand; the original settlement was on the hill above. The city was famous for the Pergaeon Artemis, her chief deity, called Vanassa Perna in the local dialect; the cult-statue was shown on the coins in the form of a baetyl, originally no doubt a meteoritic stone. The temple, on a height outside the city, has not been found. Perge was visited by St. Paul, and was prosperous under the Empire; in the early second century much fine building was done, largely by the generosity of a certain Plancia Magna. Distinguished Pergaeans were the mathematician Apollonius, a successor of Euclid, and the philosopher Varus the Stork in the second century A.D. The ruins at Aksu have been partially excavated; they include a theatre, a stadium, and a handsome city-gateway. The Hellenistic walls are also well preserved.

Lanckoronsky, *Pamphylia* (1890).

G. E. B.

PERIANDER (Περίαςδρος), tyrant of Corinth c. 625-585 B.C., and son of Cypselus (q.v.). He recovered Coreyra, founded Apollonia, which together with Epidamnus exported the goods of southern Illyria, and Potidaea on the western prong of Chalcidice, which exported the goods of Macedonia. He deposed his father-in-law Procles of Epidaurus and seized his dominions; propitiated Delphi and Olympia, had dealings with Thrasybulus of Miletus and Alyattes of Lydia; and arbitrated between Athens and Mytilene in their dispute for Sigeum. Contacts on his part with Egypt are indicated by Egyptian objects found at Perachora and by the Egyptian name of his nephew Psammetichus. Arion the dithyrambic poet came to his court from Lesbos and sailed from it in a Corinthian ship to tour Italy and Sicily. The scene of Plutarch's *Septem Sapientum Convivium* is Periander's court. Arts and crafts, industry and commerce flourished exceedingly under him (witness the ruins of the Apollo temple and the Peirene fountain at Corinth and the Gorgon pediment at Coreyra), and he

laid the *diolkos* or roadway for transporting ships across the Isthmus. The famous Chest of Cypselus at Olympia was probably a dedication of Periander. The potteries increased their output. Periander is said to have built triremes and plied both seas, to have forbidden idleness and luxury, and to have continually found employment for his subjects. His vivid and passionate character left a deep impression, of which we have a picture in Herodotus' dramatic tale of his relations with his son Lycophron. His sons all predeceased him and he was succeeded by his nephew Psammetichus (Cypselus II), whose murder shortly after ended the seventy-three years of the tyranny of the house of Cypselus.

PERICLES (c. 495-429 B.C.), Athenian statesman, was the son of Xanthippus (q.v. 1) and of Agariste, niece of Cleisthenes (q.v. 1) and granddaughter of Agariste of Sicyon and Megacles (q.v.). He was *choregos* when Aeschylus' *Persae* was produced in 472; but first came into prominence as one of the State prosecutors of Cimon (q.v.) in 463. In 462/1 he joined with Ephialtes (q.v. 4) in the attack on the Areopagus. According to Plutarch he became popular leader and the most influential man in Athens after Ephialtes' death and the ostracism of Cimon. But little is recorded of him for some years, and we do not know his attitude to the Egyptian war (459-454) and to the campaigns of 457 which resulted in the Athenian domination of Boeotia, Phocis, and Locris. He perhaps initiated the building of the Long Walls (q.v.; 458-456). In domestic politics he proposed payment for the dicasts, and perhaps instituted the *theorika* (q.v.)—in rivalry with Cimon for the popular favour, we are told, and therefore probably after the latter's recall, which he proposed in person. In 451-450 he proposed the law restricting the citizenship to children both of whose parents were citizens. In 454 or 453 he was *strategos* and campaigned in the Corinthian Gulf against Sicyon and Oeniadae. After the truce with Sparta (451 or 450) he led an expedition which restored Delphi to the Phocians (448?). He is said to have opposed the rash expedition of Tolmides which ended in the defeat of Coronea (447) and to have bought off the invading Peloponnesians in 446. He reduced Euboea, which had revolted from the League, to submission; and in the winter of 446-445 he secured Sparta's recognition of the Athenian Empire in the Thirty Years' Peace. In 440-439 Pericles reduced the insurgent island of Samos after a nine months' siege.

Meanwhile his great influence had been shown in other directions. He initiated many cleruchies (q.v.) to strengthen the Empire, especially in the Hellespont, and he established an important colony at Thurii (q.v.) to spread Athenian influence in Italy. He called, perhaps in 448-447, a general congress of all Greek States to consider the rebuilding of the temples destroyed by the Persians, the freedom of the seas for all, and peace—but nothing came of it, owing to the opposition of Sparta. He was building commissioner for the Parthenon (begun in 447) and the other great buildings of this time. His bitter enemy at home in this imperial policy was Thucydides (q.v. 1), son of Melesias, who was at last ostracized in 443; henceforth Pericles had no eminent opponent, and he was elected *strategos* every year till his death. In 437 he founded a colony at Amphipolis (q.v.), and about this time he led an expedition to establish Athenian influence in the Black Sea.

When war with the Peloponnesians threatened, Pericles determined to resist their demands. He doubtless counselled the alliance with Coreyra in 433, and

he was the author of the decree against Megara in 432. When war broke out the whole of the Athenian strategy was devised by him (see PELOPONNESIAN WAR). The invasion of Attica provoked indignation and excitement in the city, but he remained supreme till the ravages of the pestilence in 430 momentarily broke Athenian morale. He was now driven from office, tried for embezzlement, and fined. Soon after (probably spring 429) he was again elected *strategos*; but he too had been attacked by the pestilence, and he survived only another six months.

Pericles' long eminence was due to his incorruptible character, a consistently intelligent policy, and remarkable powers as an orator. He was reserved and even haughty in demeanour, with nothing democratic about him (unlike Pisistratus, with whom he was often compared). He was intimate with many of the leading philosophers and artists, especially Anaxagoras, Sophocles, and Phidias. His first marriage was unhappy and ended in divorce; but c. 450-445 he formed a lasting union with Aspasia (q.v.). Commonplace minds resented his distant superiority; scandalous and ridiculous stories were spread about him; and finally prosecutions were begun against his friends, Phidias and Anaxagoras (qq.v.), and against Aspasia, who was acquitted. These attacks, however, did not affect Pericles' ascendancy.

We have comparatively good and contrasted sources for Pericles' life—Thucydides' detailed account of political events from 433 to 429 and summary of his character and policy (1. 24 to 2. 65), and Plutarch, who adds much biographical detail, mostly from contemporary sources.

PERICLYMENUS, in mythology, (1) son of Poseidon (and Chloris daughter of Tiresias, schol. Pind. *Nem.* 9. 57, but cf. (2)). Defended Thebes against the Seven, killing Parthenopaeus (q.v.; Eur. *Phoen.* 1157); pursued Ampharaus (q.v.; Pind. *Nem.* 9. 26). (2) Son of Nereus (or Poseidon, Sen. *Med.* 635) and Chloris daughter of Amphion; Argonaut; killed by Heracles (q.v.) while in the form of a fly, Poseidon having given him power to assume any shape when fighting (Ap. Rhod. 1. 156 ff., and schol.). H. J. K.

PERINTHUS, a Greek city on the shore of the Propontis, founded by the Samians, c. 600 B.C. The site lay on a high peninsula, the houses were built along the slopes of a hill, and the city assumed the appearance of an amphitheatre. Perinthus soon encountered the hostility of Megara, whose daughter cities Byzantium and Chalcedon had already been founded in the area, but a Megarian expedition directed against her was defeated by the Samians. Incorporated for a time in the Persian Empire, she became a tributary member of the Delian League, and at the end of the Peloponnesian War became subject to the Spartan harmost of Byzantium. In the fourth century she joined the Second Athenian League, but in 357 revolted along with Byzantium and participated in the Social War. In 355 she was granted autonomy. In 352 she and Byzantium concluded an alliance with Philip II of Macedonia, but refusing in 341/40 to be drawn into hostilities with Athens, she was besieged by Philip. Perinthus was assisted by Byzantium, Athens, and Persia, and Philip, baffled by the natural strength of the place, was obliged to withdraw. In the third century she entered into close relations with Byzantium, and the two cities formed a federation, but in 202 became subject to Philip V of Macedonia. Her freedom was restored by Rome in 196. In 189 she became part of the Attalid kingdom, and at the end of the century

she was subject to the authority of the Roman governor of Macedonia. By the end of the third century A.D. the name Perinthus was changed to Heracleia, preserved today as Ereklî. With the foundation of Constantinople, Perinthus-Heracleia declined in importance, but was restored to something of her former splendour by Justinian.

PERIOCHAE, the summaries in the Roman epitomizing treatment of long, usually chronographical, works, represent in particular the abridgement of Livy, an epitome of whose history is mentioned by Martial (14. 190). The epitomized Livian tradition appears in the *Periochae* (for all 142 books except 136-7, with two *periochae* of book 1) and in the Oxyrhynchus Epitome (for books 37-40, 48-55), 'contaminated' with further chronological, anecdotal, and antiquarian data, perhaps including *exempla* and reference to Livy's full text.

PERIOIKOI (περίοικοι, 'those that dwell round about', was the name used to describe neighbouring people frequently constituting groups of subjects or half-citizens, normally with local self-government. They formed parts of or were subject to various Greek States without having a share in their government. *Perioikoi* were found in Argolis, Crete, Elis, Thessaly, and elsewhere, but those of Sparta are best known. These, like the Spartiates, were counted as Lacedaemonians, served in the Lacedaemonian army, were on a par with Spartiates in the payment of taxes, and so were citizens with lesser rights. Nevertheless, though such government never is described, they clearly formed communities with local self-government. Thus the entire complex resembled a federal State with the federal government delegated to the Spartiates, though the emphasis on military service caused it also to resemble an alliance. In Laconia the perioecic towns along the coast and in the mountains roughly formed a circle around the Spartiate land; in Messenia they were less numerous, particularly on the west coast. To them must have fallen what industry and commerce there was, but it seems that the *perioikoi* that served in the army and controlled their communities were landholders. The proportion of Dorians and pre-Dorians among them is unknown and cannot be determined by their dialect, for Spartiates, *perioikoi*, and helots spoke the same language. As in Sparta, so in Crete and Elis, the *perioikoi* appear as citizens with lesser rights, while in Thessaly they are described as subject allies.

PERIPATETIC SCHOOL. The Aristotelian school of philosophy in Athens was called after the covered walk (περίπατος) in the buildings which Theophrastus provided for the school. (There was a legend, perhaps invented by Hermippus, Diogenes Laertius 5. 2, that it was so called because Aristotle walked while lecturing.) Aristotle began teaching in the Lyceum about 335/4 B.C., but as a foreigner he could not own real estate, and during his lifetime there was no 'school' in the material sense. Under Theophrastus' leadership, through the influence of Demetrius of Phalerum, the school acquired buildings which were bequeathed in Theophrastus' will

to a named group of fellow scholars, including Strato, who succeeded him as Head (c. 287–269). Strato bequeathed the school with its books and furniture to Lyco (Head from c. 269 to 226/4), who in turn left it to a named group, who were to choose a Head from among themselves. (All these wills are preserved in Diogenes Laertius, Bk. 5.) The chosen successor was Ariston of Ceos, who was Head until c. 190. The succession in the second century is obscure; Critolaus was the only Head of any distinction.

During this period the school's achievements became less impressive. In the time of Aristotle and Theophrastus the foundations were laid for systematic, co-operative research into nearly all the branches of contemporary learning. After 'Theophrastus' death, however, Aristotle's written works were neglected; they may even have been lost, if the story in Strabo 13. 1. 54 is true, according to which Neleus of Scepsis inherited the library from Theophrastus and took it all to his home, where it remained hidden from the world for a century and a half. During this time, Aristotle was known for his 'exoteric' works, mainly dialogues (now lost except for a few fragments), and the Peripatetics narrowed their interests very greatly compared with the immense range of Aristotle and Theophrastus. Strato was the last Head in the great tradition; later members of the school devoted themselves to literary criticism, gossip biography, and unimportant moralizing.

There was a revival in the first century B.C., under the leadership of Andronicus of Rhodes. The treatises of Aristotle had been rediscovered (they had been sold to Apellicon of Teos and brought by him to Athens, thence taken to Rome by Sulla, passed on to Tyrannion the grammarian and friend of Cicero, and from him to Andronicus; see Strabo 13. 1. 54 and Plutarch, *Sulla* 26), and Andronicus published an edition of them and wrote some kind of critical commentary. The date of this is uncertain, but since Cicero does not mention it, it was probably after his time. In this period the Peripatos was not sharply distinguished doctrinally from the Academy and the Stoa; the Epicureans were opposed to them all.

In the first two centuries A.D. Aristotle's works were much studied in the school and many commentaries were written, especially on his logic and philosophy of nature. Aristocles of Messana was a member who wrote a history of philosophy; Aspasius wrote several commentaries, of which part of his *Nicomachean Ethics* survives. Alexander of Aphrodisias is the most important figure. After the third century, very little or nothing is known of the Peripatos itself; the Neoplatonists took over the work of writing commentaries on Aristotle.

Fragments of Dicaearchus, Aristoxenus, Clearchus, Demetrius, Strato, Lycon, Ariston, Heraclides, Eudemus, Phainias, Chamaeleon, Praxiphanes, Hieronymus, and Critolaus in F. Wehrli, *Die Schule des Aristoteles* (1944–59; 2nd ed. 1967–). K. O. Brink, s.v. 'Peripatos', *PW* Suppl. vii; Döring, *Aristotle in the Ancient Biographical Tradition* (Studia Graeca et Latina Gothoburgensia 1957). D. J. F.

PERIPHETES (Περύφης, 'famous', 'notorious'), name of several minor mythological figures, see Höfer in Roscher s.v., and especially of a brigand, also called Corynetes (Κορινήτης, 'club-wielder'), killed by Theseus (q.v.) on his way to Athens. He was son of Hephaestus and Anticleia, Apollod. 3. 217, who adds that he lived in Epidaurus, was weak in the legs (or feet, πόδας) and killed all passers-by with an iron club. This Theseus took from him and afterwards carried (another resemblance between Theseus and Hercules). Hyginus (*Fab.* 38. 1) says he was son of Poseidon; no other author mentions his mother. See further Höfer, op. cit., and literature of THESEUS. H. J. R.

PERIPOI (περίπολοι, 'circumnavigations') were (a)

reports of navigations by pioneers along unexplored coasts, (b) manuals for the use of navigators, which collected and systematized the information of previous travellers. The term primarily referred to sailings round an enclosed basin like the Mediterranean and Black Seas, but was also applied to continuous navigations along any kind of coast, even a straight coast (thus partially replacing the more appropriate terms παράπλοι, ἀνάπλοι). Some Periploi contained, in addition, descriptions of the adjacent lands and peoples.

Periploi of the former class include (1) an account of the outer coast of Spain, with references to Britain and Ireland, by a Massilian captain (c. 525 B.C.?), quoted by Avienus. (2) A description (extant in Greek) of the west African coast by Hanno (c. 490?). (3) The narrative of Nearchus' cruise from Indus to Euphrates (325–324), reproduced by Arrian. (4) Pytheas' account of his Atlantic voyage (late 4th c.), quoted by Strabo and others. (5) Arrian's extant *Periplus of the Euxine Sea* (c. A.D. 132).

The Periploi of the latter class comprise (1) the survey of the Mediterranean and Black Seas compiled c. 325 B.C. (?) under the name of Scylax. (2) Agatharchides' description of both Red Sea coasts (c. 110 B.C.), partly reproduced in Diodorus and Photius. (3) The *Periplus of the Erythraean Sea* (1st c. A.D.), describing the coastal routes from Egypt to India and along E. Africa, with copious information for navigators and traders. (4) The *Stadiasmus Maris Magni* (4th c. A.D.?), an excellent sailing direction, with details of harbourage and water-spots, and of distances from point to point. (5) Marcianus' description of the 'Outer Sea' (Indian and Atlantic Oceans; c. A.D. 400?), a poor compilation from Ptolemy.

Texts in GGM. Text of the *Periplus of the Erythraean Sea* by Frisk; translation and notes by W. H. Schoff (1912). On this *Periplus* see also Hyde, *Greek Mariners*, 208 ff.; Thomson, *Hist. Anc. Geog.* 228, 274, 296 f., 301 ff.; J. A. B. Palmer, *CQ* 1947, 137 ff. (possibly it is a compilation of the 2nd c. A.D.); 1949, 61 ff. 1951, 156 ff. It may even belong to the 3rd c. A.D.; J. E. H. W.

PERPERNA (1, *PW* 4), MARCUS, of an Etruscan—but long romanized and probably municipal—family, was the first bearer of a *nomen* of non-Latin type to become consul (130 B.C.). He succeeded Crassus (q.v. 1) in Asia and captured Aristonicus (q.v. 1), but died soon after and was succeeded by Aquilius (q.v. 2). E. B.

PERPERNA (2, *PW* 5), MARCUS, son of (1), born c. 148 B.C., was consul in 92 B.C. As censor (86) with Marcus Philippus (q.v. 4), he enrolled the first of the enfranchised Italians. Although he lived on until 49, surviving all but seven of those whom he had put on the Senate list (Pliny, *HN* 7. 156), he is hardly ever heard of and lacked any known influence. E. B.

PERPERNA (3, *PW* 6) VEIENTO, MARCUS, son of (2), as praetor c. 82 B.C. was sent to Sicily; he refused to join Sulla, but abandoned Sicily to Pompey. He joined the rebellion of Lepidus (q.v. 2) and, after its failure, fled to Sardinia, whence he joined Sertorius (q.v.) in Spain. Resenting Sertorius' ascendancy and his own lack of success, he finally murdered Sertorius at a banquet. Disastrously defeated by Pompey, he offered to surrender Sertorius' correspondence to him; but Pompey refused to read it and executed him (72). E. B.

PERRHAEBI, a tribe occupying a district on the northern border of Thessaly and commanding passes from

Macedonia. Although most of their country was mountainous and sparsely inhabited, their principal towns, Oloosson, the tribal capital, and Phalanna were situated in fertile plains. Neither, however, played any significant role in history. The Perrhaebi, who had been thrust northwards by the invading Thessalians, were reduced to the status of *perioikoi*. Though liable to a war-tax, they enjoyed some degree of autonomy whenever the Thessalian *koinon* was weak, and they held two votes on the Amphictionic Council. With the growth of Thessalian cities in the fifth century they found themselves increasingly dominated by Larissa (q.v.). Philip of Macedon severed Perrhaebia from Thessaly, and it remained under Macedonian control until liberated by Flamininus in 196.

PERSAEUS (c. 306–c. 243 B.C.), son of Demetrius of Citium in Cyprus. He was brought up at Athens in the house of his fellow countryman Zeno, founder of the Stoic school, became his disciple, and later taught philosophy under his guidance. In 277, when Zeno declined the invitation of Antigonos Gonatas to come to his court at Pella, Persaeus was sent in his stead. He became the educator of Antigonos' son Halyconius and acquired great political influence. In 244 he was made commander of Acrocorinthus, but lost the town and citadel to Aratus in 243, whereupon he committed suicide. He defended orthodox Stoicism against the heretics Ariston and Herillus, and elaborated on the doctrine of the philosopher king.

WORKS: *On Kingship, Polity of the Lacedaemonians, Dialogues*, and others (cf. Diog. Laert. 7. 1. 36).

K. VON I

PERSEPOLIS, in Persis, residence of the Achaemenid kings. Alexander in 331 B.C. took and looted Persepolis and set fire to the palaces (Diod. 17. 71–2). The royal quarters, built on a hill-terrace, contained two palaces, consisting in either case of a forecourt, a large colonnaded reception-hall which apparently had no outer wall, and a storehouse and armoury.

Excavations on the site have revealed that Darius I levelled the rock-terrace and built the great *apadana* (audience-hall), the main palace-buildings, and the harem. These were completed by Xerxes; Artaxerxes finished the Hall of a Hundred Pillars and built his own palace. Around the whole complex was a fortification wall, and a great gate and stairway led up to the terrace. The bas-reliefs of these palaces are among the finest extant examples of Achaemenid art. The graves of the Achaemenid kings are near by.

PERSES of Thebes, a poet of the later fourth century B.C., has a few sepulchral and dedicatory epigrams in the Greek Anthology, apparently written as real inscriptions (e.g. *Anth. Pal.* 7. 445) but more emotional than similar poems in the classical era (e.g. 7. 730).

Gow and Page, 2859 ff.

G. H.

PERSEUS (1), a mythological hero. The following, founded on Apollod. 2. 34 ff., is the usual legend; for variants, etc., see the larger works on mythology. Acrisius, brother of Proetus (q.v.), being warned by an oracle that his daughter Danaë's son would kill him, shut her in a bronze chamber. Zeus visited her there in a shower of gold. Acrisius, learning that she had borne a son, whom she called Perseus, put both in a chest and set it afloat. It drifted to Seriphus, where mother and

child were received by the king Polydectes. When Perseus was grown the king contrived to send him to fetch the head of the Gorgon Medusa. Thus he did by the help of Athena (cf. GRAIAE). After rescuing and marrying Andromeda (q.v.) he returned to Seriphus, where he used the Gorgon's head to turn Polydectes and his followers into stone for persecuting Danaë. He now gave the head to Athena and returned his flying shoes and the wallet in which he had carried the head, also the Cap of Darkness which had made him invisible, to Hermes. With his wife and mother he then came to Argos to see his grandfather, whom he at length found in the Pelasgiotis. Here he contended in some funeral games and, throwing the discus, accidentally struck and killed Acrisius, thus fulfilling the oracle. Leaving Argos to the son of Proetus, he became king of Tiryns and founder of the dynasty of the Perseidae.

The beheading of Medusa and the pursuit by her sisters are favourite themes in art from the seventh century. Perseus is garbed like Hermes and carries a *harpe* and a satchel for the head. From the fifth century the Graine, the deliverance of Andromeda, and the punishment of Polydectes are found, and he is shown with Danaë.

PERSEUS (2), king of Macedon 179–168 B.C., the elder son of Philip V and legitimate heir despite the tradition of slave birth, was born about 213/12. He fought against Rome (199) and the Aetolians (189). Representing his father's Antigonid imperialism against the Roman sympathies and royal aspirations, with Roman favour, of his brother Demetrius, he intrigued against him from 183 until Philip ordered Demetrius' death in 181. Polybius' description, reproducing a partisan version (cf. Livy 41. 23–4), does scant justice to the realities of the political struggle.

Succeeding Philip in 179, he renewed his treaty with Rome, and continued consolidating Macedon, declaring an amnesty. He extended influence in Thrace, Dardania, and Illyria, the northern field of Macedonian imperialism. In Greek diplomacy he married Laodice, daughter of Seleucus IV, gave his sister to Prusias, and was honoured by Rhodes; he influenced the social struggles in Thessaly and Aetolia, subdued Dolopia, and visited Delphi with his army. This challenge to the predominance of Pergamum sent Eumenes to Rome and brought on the Third Macedonian War (171–168). Yet the tradition of his warlike designs against Rome may be discounted; his policy, based on the north, aimed at prestige, not war, in Greece.

His military strategy of defence on the Macedonian frontiers was at first successful. But Roman reinforcements and the collapse of his ally Genthius, opening up Macedonia from the west, forced a decision at Pydna. The charge of the phalanx was his last stroke, failing before Aemilius Paullus' experienced generalship. He was captured at Samothrace, and adorned Paullus' triumph, dying two years later at Alba Fucens.

Vigorous in campaigning, he lacked tactical initiative. His alleged miserliness often rather reflects caution in policy. The charge of cowardice at Pydna is to be rejected. Sound in diplomacy and generalship, he yet lacked in both the virtuosity necessary to reconcile Antigonid aims with the Roman protectorate over Greece.

PERSEUS (3) (2nd c. B.C.), mathematician. Proclus describes him as the discoverer of the sections of the *σνείπα* (tore or anchor-ring).

PERSIA, in its widest geographical sense, includes all the great Iranian plateau bounded on west and east by the valleys of Tigris and Indus, and on the north by the Armenian mountains, the Caspian Sea, and the steppes of south Russia—an area of c. 1,000,000 sq. miles. The high mountain ranges lie at the edges of the plateau, so that it resembles a basin. These mountains abound in mineral wealth, gold, silver, copper, lapis-lazuli and other prized stones; the numerous rivers carry down silt and cultivation is possible in the valleys. The interior of the plateau is a waste of salty lakes and marshes, with wide tracts of desert. In spite of this Persia has always had importance as the bridge between east and west Asia, and the ancient trade-routes are still used.

The Aryan Persians probably entered Iran from the north-east; the date at which they reached their final home is unknown. In the ninth century the Assyrians mention Parsua, a northern country adjoining Median territory. If this was for a time their home, they moved southward, for Teispes the Achaemenid was king of Anshan and Parsa, the country later to be known as Persia proper (Persis, modern *Fars*). It was from this southerly kingdom that Cyrus II (or III) set out to conquer western Asia; Susa remained the administrative capital of the Persian Empire.

The organization of this Empire was begun by Cyrus, and completed by Darius. It was a great advance on any previous imperial system, combining local autonomy with the centralization of authority in a supreme controlling power. The country was divided into provinces, each governed by a satrap (q.v.), who might be the local ruler, or a Persian, particularly from one of the six privileged noble families. Within his province the satrap had absolute authority, but the presence of military and civil officials responsible only to the king, and of travelling inspectors, constituted a check on his power. Each satrapy had to contribute a fixed amount to the royal treasury and furnish levies for the army. Local forms of government were preserved as far as possible, e.g. in the Phoenician and Greek city-states religion, language, and local custom were not interfered with. Royal inscriptions are written in the three official languages, Persian, Elamitic, and Babylonian. A universal gold coinage, introduced by Darius, and the building of highways facilitated trade, and a royal messenger post linked the furthest corners of the Empire with Susa.

Religion played an essential part in the life of the Persians. The Achaemenid kings were worshippers of Ahura Mazda, whose vicegerents they regarded themselves (see ZOROASTER). The Magian sect, who specialized in ritual observances, acted as the priests of Mazdism. Popular religion was syncretistic, including the worship of the elements, especially fire, and that of more ancient deities.

Achaemenid art owes much to Babylonia and Assyria, and something to Greece and even Egypt, but it is by no means merely derivative, as the palaces at Persepolis (q.v.) and elsewhere, with their delicate bas-reliefs and impressive architecture, show.

PERSIAN WARS. (1) CAUSES. King Darius' (q.v. 1)

Behistun and other inscriptions, and his reputation as a 'shop-keeper' (Hdt. 3. 89), reveal the character of a born administrator, who also believed that he had a mission from God to impose peace and good order upon the world. To the Persian nation, empire meant increased wealth and, for many, opportunities for a life less laborious than that of upland farmers. Though Cyrus (q.v. 1) is said to have rejected a proposal that the whole people should migrate to a land more opulent than that which they had occupied for the last century, it is evident that many did migrate to enjoy the positions of satraps, soldiers, lesser officials, and landowners. The failures of Cyrus in central Asia, of Cambyses west and south of Egypt, and of Darius himself beyond the Danube had shown that the Empire had reached limits in those directions, beyond which campaigning was unprofitable. But there remained the Greek world, in which Mardonius (q.v.) is said to have dreamed of a princely future as satrap in Europe. The Phoenicians (q.v.), a sea-power in willing symbiosis with the land empire, were also willing to serve against the Greeks, who were aggressive against their trade and colonies in the west; and any chance that Persia might have stopped short at the Aegean was negated by the fact that a frontier at the coast left some Greeks within the Empire, but most outside. Ionia by 500 B.C. was restive under Persian rule, especially because it was exercised through Greek 'tyrants' in the cities; it was a Greek commonplace that such 'bosses' normally abused their power.

(2) THE IONIAN REVOLT. Its immediate author was the Milesian Aristagoras (q.v. 1), who laid down his 'tyranny' and brought about a general expulsion of tyrants among the cities of Ionia (499 B.C.). The rebel cities formed a league which directed the war and issued a federal coinage. Aristagoras secured a reinforcement of twenty ships from Athens and of five from Eretria, but for one campaigning season only, and he obtained no assistance from Sparta, which shrunk from overseas expeditions and was preoccupied with an impending war against Argos; yet success in the revolt depended on support from Greece. In 498 the insurgent army captured and burnt Sardes (thus giving the Persians a good pretext for retaliating upon Greek cities); the fleet spread the rebellion along the coast from Byzantium to Cyprus, and in 497 defeated a Phoenician squadron off Cyprus. But disunion and insubordination among the Greeks allowed the Persians to recover Cyprus despite a naval defeat, and Aristagoras withdrew from the scene of war. Ionia was now invaded and the Greek fleet, weakened by rivalries and treason, was crushed at Lade (494). Miletus and other cities were sacked, but democratic local government was thereafter permitted.

(3) THE CAMPAIGN OF MARATHON. In 492 Mardonius (q.v.) prepared the way for Xerxes' later expedition by the definite reduction of Thrace and Macedonia. In 490 Datis and Artaphernes conducted a punitive expedition by sea against Athens and Eretria. Obtaining the surrender of the Cyclades *en route*, they carried Eretria by treachery and made a landing on Attica at Marathon (probably on the advice of Hippias). An appeal to Sparta for help was conveyed by Pheidippides (q.v.) in record time, but the Spartan forces arrived too late, and the Athenians, some 10,000 strong, with the Plataeans only to assist them, had to encounter the far stronger Persian army. Under the leadership of Miltiades (q.v.) the Athenians routed the Persians with heavy loss (c. 6,400 men) and by a prompt return march to Athens they thwarted an attempt by the Persian fleet to take the city unguarded. The battle of Marathon made Athens safe for democracy and strengthened her alliance with Sparta—and only by a united front could the Greeks hope to resist the main Persian attack, which befell ten years later.

(4) THE EXPEDITION OF XERXES (480). This was planned as a co-ordinated invasion by land (c. 100,000 soldiers?) and sea (1,000 ships?) and, despite the obiter dictum of Aristotle (*Poet.* 23), probably concerted with the simultaneous Carthaginian attack upon the Greeks of Sicily. By a preliminary diplomatic offensive Xerxes won over Thessaly, most of central Greece, Argos, and the oracle of Delphi. But meantime the Athenians had acquired a powerful fleet (see THEMISTOCLES), and at a Panhellenic congress held at the Isthmus (autumn 481) they combined with Sparta to resolve internal feuds in Greece and to organize a national league of common defence. Sparta held the chief command, but the plan of campaign was mainly by Themistocles. The Greeks abandoned the Thessalian frontier after a mere inspection, and posted their army and fleet at the interdependent positions of Thermopylae and Artemisium (qq.v.). The Persian fleet, compelled to advance in force down the dangerous coast of Thessaly, lost heavily in late-summer gales but, after three days' fighting, forced the Greeks to withdraw from Artemisium; while the force at Thermopylae was outflanked and its rearguard under Leonidas (q.v. 1) destroyed. All central Greece was now lost, Athens was hastily evacuated, and the Greek fleet withdrew to Salamis. The Peloponnesians now advocated passive defence on the Isthmus of Corinth, but Themistocles, supported by the Spartan commander Eurybiades (q.v.), forced a naval decision in the narrows of Salamis, by which the Greeks gained definite command of the sea. Xerxes now retired to Asia with the remnant of his fleet, but Mardonius was left to winter in Thessaly and to carry on the campaign by land.

(5) THE CAMPAIGN OF 479. After two vain attempts in the next spring to detach Athens with the offer of a separate peace Mardonius fell back to Boeotia, where his superior cavalry forces severely harassed an oncoming army of c. 38,000 Peloponnesian and Athenian hoplites. During a retreat to higher ground near Plataea the Spartan commander Pausanias (q.v. 1) was set upon by the Persians, but repelled and routed them; Mardonius fell, and the remnant of his army evacuated Greece. Meanwhile a Greek fleet under the Spartan king Leotychides (q.v.) cut out and destroyed the remains of the Persian fleet in a land battle off C. Mycale. This victory started a new revolt by the islanders and the Asiatic Greeks.

(6) THE GREEK COUNTER-ATTACK. In support of this rebellion the Greeks cleared the entrance to the Black Sea, and in 478 a fleet under Pausanias started a revolt in Cyprus and captured Byzantium. Friction between Pausanias and the Spartan government led to the recall of the Spartan and Peloponnesian contingents; but the Athenians, assuming command of the liberated Greeks in the Aegean islands and Asia Minor, and enrolling them in the Delian League (q.v.), carried on the war. Their operations (of which little is known) were probably not continuous, but c. 467 Cimon (q.v.) made a bold advance to Pamphylia and Cyprus, and destroyed a Persian army and fleet at the river Eurymedon. He did not follow up this success, but c. 459 Athens sent 200 ships to support a rebellion in Egypt. Difficulties of communication and the outbreak of war in home waters prevented the timely dispatch of reinforcements, and after some early successes, in which the Persians were driven up the Nile, the Greek fleet succumbed to a strong counter-attack and was destroyed near Memphis (c. 454). Another expedition was sent c. 450 to resuscitate the Egyptian rebellion and to safeguard Cyprus against a Persian counter-attack; but in spite of a victory off Cyprian Salamis it abandoned the island, and the death of its commander Cimon left Pericles a free hand to come to terms with Persia. In 449/8 an agreement (whether

a formal treaty or simply a non-aggression pact) was negotiated by Callias (q.v. 1), which secured the independence of the Asiatic Greeks (save those of Cyprus) and closed the Aegean to Persian warships.

(7) RESULTS OF THE WARS. Persia had learned to respect Greek military strength. From c. 457 onwards, she used her gold and diplomacy to avert, till Alexander, the threat of Greek attacks; later, increasingly, she employed Greek mercenaries. Greece gained an enhanced consciousness of nationality and conviction of superiority to orientals; Athens rejected Mardonius' terms in the name of 'Greek community of blood and language and religion and ways of life'. Greek internal divisions cut short the golden age; Athenian imperialism was a poor substitute for a Greek common peace. Ionia in the fifth century remained impoverished, and in the fourth fell back under Persian rule. Nevertheless, Athens revealed what Greece could be; the use made of the manpower released by the peace of 449 was in the buildings of Pericles.

SOURCES. By far the most important is Herodotus. For the operations after 479 see Thuc. 1. 93-112. The chief other ancient sources are Diod. bk. 11 (reproducing Ephorus), and Plut., *Themistocles*, *Aristides*, *Cimon*, and *De malignitate Herodoti*. These use sources of uneven value. On source-criticism see G. Husolt, *Gräechische Geschichte* 12 (1895), 600 ff.

MODERN WORKS. G. B. Grundy, *The Great Persian War* (1901); A. R. Burn, *Persia and the Greeks* (1962); C. Hignett, *Xerxes' Invasion of Greece* (1963); and cf. reviews of these in classical journals, and N. Whatley in *JHS* 1964. See also general histories.

P. T.; A. R. B.

PERSIUS FLACCUS, AULUS (A.D. 34-62), the Stoic satirist, was an Etruscan knight, rich and well connected. He knew Lucan (who admired his work), Thrasya Pactus, and other members of what became the Stoic opposition to Nero's rule. The strongest influence on his character was exercised by the Stoic philosopher Cornutus (see *Sat.* 5), who edited Persius' poems for publication after his early death.

His satires form one *libellus* of 650 hexameters and a brief ironic preface in scazons. They are well described as Horatian diatribes transformed by Stoic rhetoric (Villeneuve). (1), the introduction, derides the fashionable admiration for elegant unrealistic poetry and calls for readers with robust taste. (2) attacks the popular conception of prayer, mocking those who ask heaven for external goods rather than virtue. (3) is a quasi-medical diagnosis of the damage done to sick souls by chronic sloth and vice. (4) urges a young statesman to disregard public admiration and examine his own character. (5), eulogizing Cornutus, develops into a pitying indictment of mankind, slaves to vice who could be freed by virtue. (6) is a Horatian preaching on the wisdom of living comfortably, not covetously. Contemporary references are few; but the young statesman of (5) is not unlike Nero, the poetry derided in (1) is in Nero's own vein, and the biographer says the reference to Midas in 1. 119-21 was aimed at Nero and toned down by Cornutus.

Much read in antiquity and the Middle Ages, Persius is now little admired, because his thought, though sincere, is contorted, and his language, though vigorous, is obscure. He strains and even breaks the thread of his argument by digressions, shifts in viewpoint, and abrupt bursts of conversation. Always striving to impress, he writes in a bizarre mixture of cryptic allusions, brash colloquialisms, and forced imagery (e.g. 3. 52-7, 5. 102-4); and he translates his abstract trains of thought into groups of inharmonious pictures like a surrealist montage (1. 126-33, 6. 57-63), so that his work has what he calls 'the taste of bitter nails' (1. 106, cf. *Vita* 41). Yet his effects of sound and rhythm are outstandingly skilful (1. 119-23, 3. 34, 5. 132-9); he uses the language of the common people almost as boldly as Petronius (2. 37-8, 3. 16-18, 3. 94-7); he draws vivid pictures of human

predicaments (3. 88–102); and he has many touches of deep sympathy (3. 39–43, 5. 66–9). Donne emulated him, and admirers of Auden might savour his keenly spiced satires.

PERTINAX, PUBLIUS HELVIUS (PW, Suppl. iii. 895), born A.D. 126. A man of humble origin, he had a long equestrian military career before being elected to the Senate by Marcus Aurelius; he distinguished himself as a general under Marcus in Raetia and under Commodus in Britain, becoming *cos.* II and city prefect in 192. The Praetorian Guard under its prefect Laetus proclaimed him emperor on 1 Jan. 193 following the assassination of Commodus. During his rule of three months he attempted to restore the principles of government observed by Marcus Aurelius and revived for himself the title of *princeps senatus*, while refusing the titles of Augustus and Caesar for his wife and son. An excessive eagerness for reform, however, caused discontent in the Senate, and the sale of State offices undermined confidence in his economic policy. His strict discipline aroused the resentment of the Praetorians who now regretted the removal of Commodus, and after an abortive conspiracy to make the consul Falco Emperor, Laetus urged the Praetorians to invade the Palatine. Pertinax, deserted by all his retinue except Eclectus, fell a victim to the spear of a Tungrian soldier (28 Mar. A.D. 193). He was subsequently enrolled among the *divi* by Septimius Severus.

PERUSIA, modern *Perugia*, an ancient Italian hill city with interesting walls and Etruscan tombs. Originally perhaps Umbrian, Perugia first appears in history as an Etruscan city. In 295 B.C., despite a treaty, it fought against Rome, then submitted and signed a lengthy truce (Serv. ad *Aen.* 10. 201; Diod. 20. 35; Livy 10. 30, 31, 37). Thereafter it remained loyal, e.g. against Hannibal (Livy 23. 17; 28. 45). When Perugia sheltered L. Antonius in 41 Octavian besieged, captured, and plundered it (Perusine War: App. *BCiv.* 5. 32–49). Subsequently called *Augusta Perusia*, Perugia always flourished but is rarely mentioned before the sixth century.

W. Heywood, *History of Perugia* (1910); I. A. Richmond, *JRS* 1933, 161 ff.; C. Slaw, *Etruscan Perugia* (U.S.A. 1939); Scullard, *Etr. Cities*, 159 ff. E. T. S.

PERVIGILIUM VENERIS is a poem of ninety-three trochaic verses of unknown date and authorship, but written not earlier than the second century A.D. and perhaps nearer to the fifth than the second. The poet, who was a man of culture and learning, combines material for a hymn to Venus with a description of spring; the latter is interrupted with explanation why the coming festival is appropriate at that time, and the festival itself, set in Sicily, is the theme of thirty lines in the middle of the poem which ends on a mysterious

and unexpected note of private sadness introduced by the line: 'illa [the nightingale] cantat, nos tacemus: quando uer uenit meum?' Detailed interpretation is a little difficult because of uncertainty about the proper order of the verses. Whatever may be the exact date of this bright and lively poem, which has as a refrain 'cras amet qui numquam amauit, quicquid amauit cras amet', the warmth of its description and its delight in passion set it between two worlds and make it the prologue of the Middle Ages.

Edition with introd., text, transl., facsimiles, commentary, full bibliography by Sir Cecil Clementi (1936). The poem has been edited with introd., French translation, and notes by R. Schilling (1944) and is included in I. Cazzaniga's *Carmine Ludera Romanorum* (1959). D. S. Robertson, *CR* 1938, 109 ff., argues on historical grounds that it was written about A.D. 307 by a poet belonging to the circle of Romula, mother of Galerius. On the poem see also J. Hergon, *Mélanges . . . offerts à A. Ernout* (1940), 177 ff., and I. Cazzaniga, *Studi Classici e Orientali* 1952, 47 ff. and 1957, 134 ff. G. B. A. F.

PESCENNIUS (PW 2) NIGER JUSTUS, GAIUS, came of an equestrian family. After a military career, he was enrolled by Commodus into the Senate, becoming consul and governor of Syria in A.D. 191, where after the murder of Pertinax he was proclaimed Emperor by his legions (April 193). Unable to forestall Septimius' advance upon Rome, he attempted to secure his position from Byzantium, which voluntarily surrendered to him. Although his cause was popular in the East, his troops and his own personal qualities were inferior to those of his rival. Defeated at Perinthus, Cyzicus, and Nicaea (winter of 193/4), he withdrew to Antioch and was routed at Issus. Fleeing towards the Euphrates he was overtaken and executed.

PETILLIUS (PW 4, 11). Two cousins named Q. Petilius, *tribuni plebis* in 187 B.C., initiated the attack on L. Scipio (q.v. 7). Livy, following Valerius Antias, wrongly states that they accused Africanus also. One is probably Q. Petillius Spurius, the praetor who burnt the forged writings of Pythagoras discovered in 181 (Livy 40. 29) and campaigned in Liguria as consul (176).

Scullard, *Rom. Pol.* 142 ff., 171 f., 291 ff.

H. H. S.

PETRA (Aramaic *Selah*, 'the Rock') was the capital of the Nabataeans (q.v.) by 312 B.C. After A.D. 105 it ceased to be the administrative centre but remained the religious metropolis of Arabia. The town lies in a hollow surrounded by mountains; the only access is by narrow gorges. The ruins of the town itself, though extensive, comprising several temples, two theatres, baths, markets, gymnasium, etc., are not impressive. The rock-hewn temples and tombs in the surrounding hills are most magnificent, ranging in style from a primitive blend of Egyptian, Assyrian, and Greek motifs to a highly developed Hellenistic with strong baroque tendencies.

A. Kammerer, *Petra et la Nabatène* (1920–30); G. Dalman, *Petra und seine Felsheiligtümer* (1908); T. Wiegand, *Petra* (1921); Sir A. Kennedy, *Petra* (1925); J. Starcky, *Suppl. au dict. de la Bible* vii (1964), col. 886 ff. A. H. M. J.

PETREIUS (PW 3), MARCUS, probably son of Cn. Petreius Atinas, a Marian *primipilaris*, was already 'uir militaris' of thirty years' service in 63 B.C. (Sall. *Cat.* 59. 6), when as propraetor in Northern Italy he defeated Catiline at Pistoria. From 55 he governed Hispania Ulterior as Pompey's legate, and in 49 brought his two legions to the Ebro, where he proved more stubborn than Afranius (q.v. 2) in the retreat from Ilerda. In 48 he was in Peloponnesus, but he joined the Pompeians in Africa, where early in 46 he won a success over Caesar.

After Thapsus, by compact with King Juba, he killed the king and then himself. G. E. F. C.

PETRONIUS (1, *PW* 24), PUBLIUS, of senatorial family, was *consul suffectus* in A.D. 19 with M. Junius Silanus: they passed the *Lex Iunia Petronia* (q.v.). Petronius was proconsul of Asia (29–35?) and *legatus* of Syria (39–42). Commanded to erect a statue of Gaius in the Temple at Jerusalem, he demurred, pleading Jewish opposition. Gaius replied with an order to commit suicide, but the news of the Emperor's death arrived first. T. J. C.

PETRONIUS (2). Courtier of Nero. His praenomen is uncertain (at Tac. *Ann.* 16. 17 *Gaius* is supplied from 16. 18, but it is more likely that a cognomen has fallen out; Pliny, *HN* 37. 20, and Plut. *Mor.* 60 d seem to give the praenomen Titus to the same man, and a T. Petronius Niger is known to have been *cos. suff.* c. A.D. 61). According to Tacitus he had been outstanding for his indolence, though this did not prevent him from being energetic as proconsul in Bithynia and later as consul. For a time he was influential enough to guide Nero in his choice of pleasures, and even when forced by Tigellinus' intrigues to commit suicide he showed himself not merely fearless but also contemptuous of Stoic posturings. Instead of a will full of flattery of Nero or his current favourites Petronius left a document denouncing him in embarrassing detail. Scholars have long ago discarded the notion that this denunciation has anything to do with the *Satyricon*, but it lives on in the attempts to see a significant resemblance between Nero and Trimalchio. M. S. S.

PETRONIUS (3) **ARBITER**. Writer (1st c. A.D.). The main problem about Petronius Arbiter is whether the author of the fragmentary novel is identical with Petronius (2) above, the *arbiter elegantiae* at Nero's court. The style and language of the novel are consonant with the second half of the first century A.D., and arguments designed to bring him to the second or third century, whether linguistic or historical, are unconvincing. (See Browning in bibliography.) Tacitus' description suggests a witty, sophisticated person such as we must suppose the writer of the *Satyricon* (sc. *libri*) to have been, though he fails to mention that his Petronius had any literary ability beyond what was required to write the scurrilous document (*Ann.* 16. 18). The argument on the identity of the author rests largely, however, on the name Arbiter: the courtier acts as *arbiter elegantiae* for Nero, while the author is given the name Arbiter or Petronius Arbiter in the MSS. of the *Satyricon* and even as early as Terentianus Maurus. The name Petronius was quite common by the first century A.D., but the name Arbiter is very rare indeed. Many have therefore concluded that the author Petronius Arbiter must be the *arbiter elegantiae*. Now the phrase *arbiter elegantiae* in itself looks sufficiently Tacitean, but if it is applied to a man already known as Petronius Arbiter it is reduced to a somewhat feeble play on words. Tacitus might more readily have coined the phrase if Arbiter was merely a nickname, but we cannot rule out the possibility that it was a name given to the author after his death when he was, not necessarily correctly, identified with the *arbiter elegantiae*.

Of his literary work we have fragments of books 14, 15, and 16 of a romance of which we do not know the whole extent, though the *Cena Trimalchionis* is almost intact. The book recounts the adventures, mostly in southern Italy, of the disreputable pair Encolpius (the narrator) and his boy-friend Giton. The choice of Encolpius, a far from admirable character, as his mouthpiece contributes to our uncertainty as to Petronius' main purpose. In view of the fragmentary state of the text it is impossible to reconstruct the plot in any detail. The

absurdity of the love-affairs of the three heroes suggests that the work may be in part a parody of the kind of romantic novel known to us from later Greek novels. Literary criticism also finds a place, and a satirical intent is detected by some, particularly in the finest and most complete episode now extant, *Trimalchio's Feast* (this provides valuable evidence on 'Vulgar Latin' (q.v., though Petronius has been highly selective in his reproduction of actual lower-class speech). The form of the work is Menippean, i.e. prose interlarded with occasional verse, and it contains some anecdotes of the type of the Milesian Fables (see NOVEL), among which is the famous *Widow of Ephesus* (chs. 111–12). Our remains include two longer poems, a *Troiae Halosis* and a poem on the Civil War. (This latter is not a simple parody of Lucan's *Bellum Civile* since it includes a divine machinery specifically excluded by Lucan.) Apart from the *Satyricon* Petronius has also left to us a small collection of lyric and elegiac poems, but these are inferior to his prose writings.

Petronius' novel seems to have been little known in antiquity: we have bare references to it in Terentianus Maurus and Sidonius Apollinaris. In the Middle Ages he was mainly known from the *Florilegia*, but John of Salisbury (d. 1180) shows an acquaintance with parts of the novel unknown until the discovery of the Codex *Traguriensis* in the mid seventeenth century. Formerly it was thought that the text of the *Satyricon* was excerpted in the time of Theodosius, but recently Müller (see bibliography) has argued much more convincingly that disoriented remains of the novel were arranged by some Carolingian scholar. He also detects a larger number of interpolations than previous editors, which he ascribes to the Carolingian period.

S. Gaselee, *Trans. of Bibliograph. Soc.* 1910; *Bursian*, vols. 175, 204, 260, 282; *Ans. J. Altertumsw.* 1956, 1 fl.; *Class. Weekly* 1957, 133 fl. and 141 fl.; *Lustrum* 1956 (for verse).

TEXTS. The standard critical text is by K. Müller (1961 revised 1965), but Huetler (1862) should still be consulted. Few commentaries have been published on the whole work surviving to us, the Variorum editions of Burman (1709, 1743?) remain useful. For the *Cena Trimalchionis*: Friedländer (1891, 1906), Perrotat (1919, 1962), Marmore (1947, 1961?), helpful even if his arguments in favour of a 2nd c. date for it are rejected, W. B. Sedgwick (1925, 1950?). Poems: *PLM* iv, H. E. Butler in Loeb Petronius, *Emout in Bibliothèque*.

PETRONIUS (4, *PW* 75) **TURPILIANUS**, PUBLIUS (*cos.* A.D. 61), succeeded Suetonius Paulinus as governor of Britain. His policy was one of peace. In 63 he was *curator aquarum* in Rome. He contributed to the repression of the Pisonian conspiracy. In 68 Nero entrusted to him the command against the rebels. His conduct is uncertain (Dio 63. 27. 1; Plut. *Galba* 15, 17). He was killed by Galba. A. M.

PETS. Animals were kept, inside and outside the house, as pets and for show, from early times. Dogs that fed from their master's table are mentioned by Homer (*Od.* 17. 309) and Penelope found pleasure in watching her flock of geese (*Od.* 19. 536–7).

The commonest pet was the small white long-coated Maltese dog, represented on fifth-century B.C. Attic vases and gravestones. In Aristotle (*HA* 9. 6. 612^b10–11), it is used as a comparative standard of size for the marten. Athenaeus says that this dog was especially popular among the Sybarites, accompanying its owner even to the gymnasia (12. 518 f; 519 b). Publius' dog, Issa, was probably a Maltese (Mart. 1. 109). Epitaphs show the affection felt for pet dogs by their owners (*Anth. Lat.* 1176; 1512).

Tamed birds, especially starlings, magpies, ravens, and crows, which could be taught to talk, were popular (Stat. *Silv.* 2. 4. 18–19; Pliny, *HN* 10. 42. 120). Lesbia's 'sparrow' (Catull. 2; 3) was possibly a bullfinch. The more exotic parrot, introduced from India, was rarer (Varro, *Rust.* 3. 9. 17; Pliny, *HN* 10. 42. 117; Ov. *Am.* 2. 6; Mart. 14. 73). Nightingales and blackbirds were kept for their song (Pliny, *HN* 10. 29. 81 ff.; Pliny, *Ep.* 4. 2. 3). Monkeys amused the household with tricks they had been taught (Plaut. *Mil. Glor.* 102; Pliny, *HN* 8. 80. 215). Harmless snakes and the *lagalopex* (long-eared fox) and ichneumon mentioned by Martial (7. 87) were less usual pets. The cat was a late introduction into the Roman house, probably because, being a sacred animal in Egypt, its export from that country was forbidden. But Seneca (*Ep.* 121. 19) and Pliny (*HN* 10. 73. 202) assume their readers' acquaintance with it as a household animal. In earlier times, its function in controlling vermin was performed by the ferret.

Other animals were kept outside the house, more as a hobby and for showing off to visitors. The fishponds of the wealthy contained murenas and bearded mullet which might be trained to eat from their masters' hands (Cic. *Att.* 2. 1. 7; Pliny, *HN* 9. 81. 171). Aviaries and vivaria were fairly common from the late Republic onwards. Here were kept singing birds, doves, pigeons, peacocks, flamingoes, boars, hares, deer, and antelopes (Varro, *Rust.* 3. 3; 12–13; Columella 8. 9. 1; 9. 1. 1). See DOGS.

PEUCESTAS (b. c. 360 B.C.), son of an Alexander, a Macedonian noble, accompanied Alexander the Great to Asia, but held no high command till after the Indian expedition, on which he saved Alexander's life (325). He was then promoted to Alexander's personal staff ('Body-guard'), and to the important satrapy of Persis (325–324). Alone of the important Macedonians he learned Persian and adopted Persian dress, which pleased Alexander and the Persians greatly, and in equal measure displeased the Macedonian soldiers. In the disorders after Alexander's death he probably took the lead among the eastern satraps, but in the war of Antigonus and Eumenes he chose the losing side, and though his life was spared by Antigonus he disappears from history thereafter (316).

Berve, *Alexanderreich*, no. 634; W. W. Tarn, *CAH* vi, ch. 15; A. Vezin, *Eumenes von Kardis* (1907), 88 ff. G. T. G.

PEUTINGER TABLE, a world-'map' of the third or fourth century A.D., copied from a lost original by a monk of Colmar (A.D. 1265) and acquired in A.D. 1508 by a scholar named Peutinger. It is a long narrow strip of parchment, more than 21 feet long, 1 foot wide, in twelve sections, and was intended to serve as a portable road-guide. All distances are greatly elongated (from east to west), and the only features systematically marked on it are rectilinear roads, towns, and the chief mountains and rivers. It extends from Britain to the Ganges mouth, but most of Britain, all Spain, and west Mauretania are missing.

PHAEA (Φαῖα, Φαία), the name, according to Plut. *Thes.* 9, and other authors, of a monstrous sow (a boar, *Hyg. Fab.* 38. 6, with some support from art, see Höfer in Roscher, iii. 2203, 20), killed by Theseus (q.v.) at Crommyon in Attica (Bacchylides 17. 23 and later writers). Apollod. *Epit.* 1. 1 says that Phaea was the name of the old woman who kept the sow. H. J. R.

PHAEAX (Φαίαι), Athenian politician of noble birth

and opponent of Alcibiades (Plut. *Alc.* 13). As ambassador to Italy and Sicily in 422 B.C. he tried to stir up anti-Syracusan feeling (Thuc. 5. 4). According to Theophrastus (Plut. *Nic.* 11) Phaeax, not Nicias, joined Alcibiades in promoting Hyperbolus' ostracism. His oratory is mentioned by Eupolis (fr. 95) and Aristophanes (*Eq.* 1377 ff.). The attribution of the speech *Against Alcibiades* (see ANDOCIDES I, § 4) to Phaeax is improbable (Jebb, *Attic Orators* (1875), 1. 136).

Proseph. Att. n. 13921.

H. H. S.

PHAEDON (Φαῖδων) of Elis (b. c. 417 B.C.), founder of the philosophical school of Elis. He was brought as a slave to Athens but later set free. He became one of Socrates' most devoted pupils, and Plato named after him the dialogue in which Socrates' last hours are depicted. His own teaching seems to have been confined to ethics. Of the dialogues ascribed to him *Zopyrus* and *Simon* were probably genuine. W. D. R.

PHAEDRUS (1) of Athens (c. 450–400), Socratic philosopher, a character in Plato's *Prt.* and *Symp.* as well as in the *Phdr.* He was a member of the Socratic circle though not precisely a pupil. His personality appears in Plato's dialogues as enthusiastic and rather naïve.

W. D. R.

PHAEDRUS (2) (fl. early 3rd c. B.C.), of the deme Sphettus, Athenian statesman, joint leader of the moderate, anti-democratic party after Ipsus (301). He served as general in 296/5 under Lachares, and during the next few years, when Demetrius Poliorcetes held Athens, he occupied various posts including home defence and command of the mercenaries; he also visited Egypt and obtained supplies from Ptolemy I. In Cimon's archonship, as hoplite general, he saved Athens from some unspecified danger. In that of Xenophon he held the same post *πρώτος*—which perhaps means first after some suspension of the constitution. The evidence for his life rests on the decree passed in his honour (*IG* ii². 682 = *SIG*³ 409); the later excision of references to Macedonia and the uncertain dates of the archonships mentioned render the reconstruction of his later career uncertain.

W. S. Ferguson, *Hellenistic Athens* (1911); *Athenian Tribal Cycles* (1932); W. B. Dinsmoor, *The Athenian Archon List* (1939). F. W. W.

PHAEDRUS (3) (c. 140–70 B.C.), Epicurean philosopher, perhaps an Athenian by birth, was in Rome, where Cicero heard him lecture, before 88. He was head of the Epicurean school in Rome for a short time. He appears in Cicero as one of the most respected Epicureans of the time, but perhaps more for his character than for his philosophic ability. Cicero refers to his work *Περὶ θεῶν*. He is hardly mentioned except by Cicero, and does not seem to have been an independent philosopher.

A. E. Raubitschek, 'Phaedrus and his Roman Pupils', *Herp.* 1949. W. D. R.

PHAEDRUS (4) (c. 15 B.C.–c. A.D. 50), a slave of Thracian birth, received a good schooling perhaps in Italy, became a freedman of Augustus, and composed five books of verse fables. Under Tiberius, through suspected allusions in his fables he offended Sejanus and suffered some unknown punishment. Scarcely noticed by Roman writers (he is not mentioned by either Seneca or Quintilian in their references to fable), he is first named (though identification is uncertain) by Martial (3. 20. 5 'improbi iocos Phaedri') and next by Avianus (*praefat.*). Prose paraphrases of his and of other fables were made in later centuries, in particular the collection entitled 'Romulus', and in the Middle Ages enjoyed a great vogue. The five books are clearly incomplete and thirty further fables

(*Appendix Perottina*), included in N. Perotti's epitome of fables (c. 1465) drawn from a MS. now lost, have been shown to belong to them; additional fables deriving from Phaedrus are contained in the prose paraphrases.

Phaedrus' achievement, on which he greatly prides himself, lies in his elevation of the fable, hitherto utilized in literature only as an adjunct, e.g. in satire, into an independent genre. His fables, written in iambic senarii, consist of beast-tales based largely on 'Aesop' as well as jokes and instructive stories taken not only from Hellenistic collections but also from his own personal experience. Philosophic weight is sought by borrowings, sometimes clumsily introduced, from the chreia and diatribe (q.v.). Besides his professed purpose of providing amusement and counsel, Phaedrus sometimes satirizes contemporary conditions both social and also, to an extent difficult to determine, political. His work evidently evoked considerable criticism and retorts to his detractors are frequent. The presentation is, in general, animated and marked by a brevity of which Phaedrus is rightly proud, but which sometimes leads to obscurity; it is not without charm and humour. Eagerness, however, to emphasize the moral, which he sometimes misunderstands, often mars the effect. Departures from his originals are seldom happy. In his outlook he displays a patient resignation rather than the gloomy pessimism sometimes ascribed to him, but offers no profound philosophy. In language he stands in the tradition of Terence: skilfully adapting the *sermo urbanus*, he shows a classical purity (apart from a frequent use of abstract nouns and occasional vulgarisms or other unorthodoxies), clearness, and a simplicity that is in refreshing contrast to the turgid rhetoric of his day. His iambic senarius goes back to the early metre of Comedy and is very regular. Phaedrus is no creative artist; his slight talent does not bear comparison with La Fontaine; yet in the history of fable he occupies an important place. See also FAHL.

PHAENIAS of Eresus (fl. 320 B.C.), a pupil of Aristotle who inherited the Peripatetic interest in literary and historical research. Amongst various writings may be noted *Τυράννων ἀναίρεσις ἐκ τυραννίας*, an expansion of Aristotle, *Pol.* 1311^a25, marked by moral judgements characteristic of the period, and *Περὶ τῶν ἐν Συκεῖα τυράννων*. References in Plutarch's 'Lives' of Solon and Themistocles suggest that Phaenias was a valuable addition to Plutarch's sources.

FGH III B. 493 and 658.

G. L. B.

PHAETHON (Φαέθων), in mythology, son of Helios (q.v.) and the heroine Clymene. Learning who his father was, he set out for the East to find him, and arriving at his palace, asked him a boon. The Sun granting him in advance anything he liked, he asked to guide the solar chariot for a day. But he was too weak to manage the immortal horses, which bolted with him and were likely to set the world on fire till Zeus killed Phaethon with a thunderbolt. He fell into the Eridanus, and his sisters, mourning for him, turned into amber-dropping trees. See Euripides, fragments of *Phaethon*, with Nauck's notes.

Eur. *Hipp.* 735 ff.; Ovid, *Mét.* 1. 750 ff.

H. J. R.

PHALANX, infantry in order of battle. It was used of the common soldiers by Homer, and in the classical period of Greek hoplites generally; but modern usage applies it particularly to the Macedonian infantry after

the reform ascribed to Philip II (Diod. 16. 3. 1 ff., under the year 359 B.C.; it may really have been earlier). The new phalanx owed its great successes under Philip, and later under Alexander, to its numbers (Macedonia could produce at least 25,000 men for this service), to its unusually long pike (*sarissa*; about 13 feet), to its superior training which made it comparatively mobile and flexible when disposed in depth (up to sixteen deep), and to the splendid cavalry which guarded its flanks and rear, where every phalanx was vulnerable. Inside it the tactical unit was the brigade (*taxis*: about 1,500 men), subdivided into companies (*lochoi*) and sections (*dekades*).

Alexander's conquests made this phalanx, or imitations of it, a primary instrument of Hellenistic strategy, and the problem of manpower became acute. Alexander had planned a mixed phalanx of Macedonians and Asiatics. The 'Successors', unable to get enough Macedonians, used Greeks. The Ptolemies and Seleucids in particular based their army-systems upon military settlers, mostly Greek mercenaries by origin, who received land and became a hereditary soldier class. The Seleucid phalanx lasted well (numerically), mustering 20,000 at a review in 166. Technically, however, the phalanx deteriorated, even in Macedonia, mobility and individual skill being sacrificed to depth and weight and a longer *sarissa* (up to 21 feet). When it met Roman legions it was long past its best (Cynoscephalae, 196; Magnesia, 189; Pydna, 168); and Pyrrhus in Italy (280-275) had few Macedonians.

Launey, *Recherches sur les armées hellénistiques* 1 (1949), ch. 5.

G. T. G.

PHALARIS, tyrant of Agragis (c. 570/65-554/49 B.C.), established his autocracy a decade or so after the city's foundation, when there was Sicilian and Phoenician pressure. He conducted successful warfare against the Sicilians and by establishing his rule in Himera anticipated the coast-to-coast realm of Theron (q.v.). He became legendary for ingenious cruelty, especially for the hollow brazen bull in which his victims were roasted alive; this practice need not be ascribed to a Phoenician origin. An oligarchy apparently succeeded his overthrow. The letters bearing his name were written by a sophist, perhaps of the second century A.D. (proved by R. Bentley in 1697/9).

E. A. Freeman, *History of Sicily* II (1891), 64 ff.; Dunbabin, *Western Greeks*, 314 ff.; H. Berve, *Die Tyrannis bei den Griechen* 1 (1967), 129 ff.

A. G. W.

PHALERON, the harbour of Athens until the early fifth century (see PIRAEUS) was the nearest point to Athens on the coast, at or near the modern Old Phaleron. There is little shelter here; the early port was an open beach. A cemetery of the seventh century on the marshy ground west of Old Phaleron has been excavated.

Σ Πελοπόννησος, 'Ανασκαφή Φαλήρου', *Αρχ. Δελτ.* 2. 13 ff.; J. Day, 'Cape Colias, Phaleron and the Phaleron Wall', *AJArch.* 1032. 1 ff.; R. S. Young, 'Graves from the Phaleron Cemetery', *AJArch.* 1042. 23 ff.

T. J. D.

PHALLUS, a model or image of the male organ of generation, used (a) in certain rites connected with fertility, e.g. at the rural Dionysia, *Ar. Ach.* 243 (see DIONYSIA), cf. 265 ff., for a song in honour of a daemon Phales, a sort of personification of the symbol (Herter, *de dis Atticis Priapi similibus*, 42 ff.); (b) as an attribute of some gods, notably Hermes (q.v.) on herms and Priapus (q.v.).

Cf. Nilsson, *GGR* 2. 118 ff. and 590 ff.

H. J. R.

PHANES, a god of the Orphic cosmogony, born from an egg fashioned by Chronos in the Aether, also called Protogonos, the Firstborn. He is the creator of all, bisexual, radiant with light, gold-winged, and has the heads of various animals. His daughter is Night, who bore Gaea and Uranus to him. He is also called Eros, Metis, and Erikapaios. See ORPHIC LITERATURE, ORPHISM.

W. K. C. Guthrie, *Orpheus and Greek Religion* (1952), 80 and 95.
M. P. N.

PHANOCLES, Greek poet (place and date of birth unknown). The six fragments from his verse seem all to come from one elegiac poem, the title of which is given by Clement of Alexandria as *Ἐρωτες ἢ Καλολ*. This was a catalogue-poem and dealt with the affection of gods (e.g. Dionysus) and heroes (e.g. Orpheus, Tantalus, Agamemnon) for beautiful boys. Probably each episode began with a stereotyped *ἦ οὐς* in the Hesiodic manner, cf. frs. 1 and 3. The longest fragment, in which Phanocles describes the death of Orpheus and its sequel, proves that the author possessed considerable skill in narration. The language is simple and well chosen and the versification melodious, though, like Hermesianax, Phanocles is too prone to the arrangement of the pentameter by which an adjective closes the first half and the noun with which it agrees the second. It is possible that the *Erotes* was intended as a male counterpart to the *Leontion* of Hermesianax, but Phanocles is more interested in aetiology than Hermesianax, cf. frs. 1, 5, 6. A rationalistic interpretation of myth appears in fr. 4. Apollonius Rhodius (*Argon.* 4. 903) seems to imitate an unusual scansion found in Phanocles, fr. 1. 1. If this is correct, Phanocles lived in the first half of the third century B.C. He was perhaps a younger contemporary of Hermesianax.

E. A. B.

PHANODEMUS of Athens, born in the first quarter of the fourth century B.C. and probably father of the historian Dryllus. Since his identification by Ad. Wilhelm (*Anz. d. Wien. Akad.* 1895, 45) with the Phanodemus who played a prominent part in the public life of Athens after the Peace of Philocrates (346), we have inscriptional evidence for his activities in four decrees. Three of these (*SIG*³ 227, 287, 298) record the granting of civic crowns as a reward for his services to the *boule* and Demos between 343 and 329, and show his strong interest in the festivals of Dionysus and Amphiarus. In 329 he was elected to assist in conducting the latter's festival, and a fourth decree (*ibid.* 296) mentions his appointment as *iepomoids* to Delphi in 330. He collaborated with Lycurgus, the most important politician in Athens (338-326) and supported the latter's vigorous policy to restore the city's fortunes after Chaeronea. His interest in Attic cults and myths found expression in an *Atthis* of at least nine books. Whether this account of Athenian history reached his own time is not known; the latest certain date belongs to the period of Cimon. He also wrote an account of the island of Icus of which he may have been commander in the war against Philip. This book was probably one of Callimachus' sources for his *Aitia*.

FGH iii B. 325.

G. L. B.

PHAON, a legendary ferryman in Lesbos, made so handsome or given such a potent charm by Aphrodite, that Sappho among others fell desperately in love with him, finally jumping off the Leucadian rock for his sake. The story apparently is a comedian's invention (see *Ov. Her.* 15, with Palmer's notes).
H. J. R.

PHARMAKOS, a kind of human scapegoat or embodiment of ill-luck. In Ionia a *pharmakos* was used when

some disaster (as famine) befell a community. He was chosen for his ugliness, led to a certain place (presumably outside the city), and there burned in pretence or reality (Tzetzes, *Chil.* 5. 726 ff., with Hipponax, frs. 6 ff. Diehl, quoted there). A like custom existed at Massilia (Petrinus in Servius on *Aen.* 3. 57). In Athens, at the Thargelia (q.v.), there were annually two *pharmakoi*, one for the men and one for the women, called also *sybakchoi*; they were sent out of the city, but no one says they were killed (Harpocration and Photius, s.v.). Details are obscure.

See L. Deubner, *Attische Feste* (1932), 179 ff.; V. Gebhard, *Die Pharmakoi in Ionien* (Munich Diss. 1926); Nilsson, *GGR* i⁴, 107 ff.
H. J. R.

PHARNABAZUS, satrap of Dascylium c. 413-370 B.C. He co-operated with Sparta against Athens at Abydos, Cyzicus, and Chalcedon, but in 408 encouraged the Athenians to open negotiations with Darius, though these broke down through the pro-Spartan sympathies of Cyrus. In 404, at Lysander's request, he caused the refugee Alcibiades to be assassinated. In the war with Sparta which followed Cyrus' downfall Dascylium was ravaged by Dercyllidas (398) and again by Agesilaus, whose famous meeting with Pharnabazus (*Xen. Hell.* 4. 1. 29 ff.) occurred in 395. He strongly supported the revival of Persian sea-power, and shared the command with Conon at Cnidus and in the later naval operations. Recalled to Susa in 392, he was entrusted with the reconquest of Egypt, but failed in two attempts (385-383 and 374), and died shortly afterwards.

J. M. Cook, *Greek Archaeology in Western Asia Minor* (*Arch. Rep.* for 1950-60), 34 ff. describes excavations at Dascylium. For coin-portrait, C. M. Kraay, *Greek Coins* (1966), nos. 623, 718.
D. E. W. W.

PHARNACES (1) I, king of Pontus, succeeded Mithridates III c. 185 B.C. He captured Sinope (c. 183) and made war on Eumenes II of Pergamum. He refused to come to terms at the instance of a Roman commission (181), but he was defeated by a combination of kingdoms and cities against him and compelled to surrender most of his conquests (179). However, he kept Sinope and united her colonies Cerasus and Cotyora to form the city of Pharnacia. His diplomatic relations with cities and principalities of south Russia show that he anticipated Mithridates Eupator's dream of a Pontic empire (*IPE* i², 402); and an Attic decree attests his gifts to Athens. He died between 159 and 156.

For bibliography see MITHRIDATES. For coin-portrait, C. M. Kraay, *Greek Coins* (1966), no. 770.
T. R. S. B.

PHARNACES (2) II (63-47 B.C.), son of Mithridates VI Eupator, led the revolt that drove his father to death, and was granted the Bosporan kingdom by Pompey. This he reduced to order and enlarged. During the war between Caesar and Pompey he seized Colchis, Lesser Armenia, and some of Cappadocia, defeated Calvinus, Caesar's lieutenant (48), and overran much of Pontus, but was defeated at Zela by Caesar himself (47), who announced his victory with the words 'Veni, vidi, vici'. He escaped to his kingdom but was killed in battle with the Bosporan rebel Asander.

T. R. S. B.

PHARSALUS, a city of Thessaly, situated on the main road from Larissa to central Greece. It dominated the tetrad Phthiotis (q.v.) and for long periods Achaia Phthiotis as well. A hill overlooking the well-watered plain supplied an impressive acropolis. Apparently several leading families competed for control of Pharsalus, and their rivalries proved a source of weakness. In the struggle between the Phersean tyranny and the rest of Thessaly,

Pharsalus was several times occupied by a garrison; but thanks to its policy of furthering intrigues of Philip, it became the strongest city of Thessaly under the Macedonian regime, and Pharsalian cavalry served Alexander well in Asia. In the Lamian War, however, the Pharsalians attempted to throw off the yoke of Macedon and paid dearly for their failure.

In the neighbourhood were fought three important battles, the victories of Pelopidas (364 B.C.) and Flamininus (197) at Cynoscephalae, and that of Caesar over Pompey (48).

F. Stählin, *Das hellenische Thessalien* (1924), 135 ff. H. D. W.

PHASELIS (modern *Tekirova*), on the east coast of Lycia, was a Greek colony founded from Rhodes; the traditional date is 690 B.C. Its three harbours, on a coast where good harbours are scarce, gave it an important place in commerce; Phaselis shared in the foundation of the Hellenium at Naucratis. Following Cimon's campaign of c. 468 B.C. Phaselis was included in the Delian League, with a tribute similar to that of Cnidos. In the fourth century the city, still independent, entered into a pact with Mausolus, of which a part is extant (*TAM* II. 3. 1183). Phaselis welcomed Alexander, who treated it well. Later it came under the Ptolemies, and from 197 B.C. for a short while under Antiochus III. When the Lycian Confederacy was formed (see *LYCIA*) Phaselis was included, though with a lower standing than its less-known neighbour Olympus. In the first century B.C. it ceased to be a member and became instead a headquarters for the pirate chief Zenicetes; for this it was sacked by Servilius Isauricus. Under the Empire it was again a member of the Lycian Confederacy, and was twice visited by Hadrian (A.D. 129, 131).

TAM II. 3. 411 ff.; G. E. Bean, *Turkey's Southern Shore* (1968), ch. 10. For its judicial treaty with Athens c. 450 B.C., see *Tod*, n. 32. Cf. H. T. Wade-Gery, *Essays in Greek History* (1958), 180 ff.; G. E. de Ste Croix, *CQ* 1961, 100 ff. G. E. B.

PHASIS (modern *Rion*), main river of ancient Colchis (q.v.), flows westward into the south-eastern corner of the Euxine on the south side of the Caucasus mountains, and was often regarded in antiquity as the frontier between Europe and Asia. The pheasant ('phasianus') was brought from the area to Europe.

In the sixth century B.C. the Milesians established a colony of the same name at the mouth of the river. Its exact site has not yet been found. It seems to have been important at first, but had declined to insignificance by the Roman period.

Hippocrates, *On Airs* 15; Arr. *Peripl. M. Eux* 8-9. D. J. B.

PHAYLLUS (1), an athlete from Crotona in south Italy who gained three victories in the Pythian Games and also fought at Salamis (480 B.C.) in a ship which he fitted out at his own expense. He is presumed to be the athlete of this name who is said in an epigram (*Anth. Pal.*, appendix 297) to have jumped 55 feet. F. A. W.

PHAYLLUS (2), brother of Onomarchus (q.v.) and Phocian commander in the Third Sacred War (q.v.). He was defeated by Philip II of Macedon in Thessaly (353 B.C.), but succeeded Onomarchus upon his death in 352. Realizing Philip's intention to march south, Phayllus united the Phocian people, occupied Thermopylae with a Phocian and mercenary army, and received assistance from Sparta, Achaea, and Athens. After Philip's withdrawal, Phayllus was able to concentrate on the war with Thebes. In 351 he invaded the Peloponnese

to assist Sparta against Thebes. He died of illness, and was succeeded in his command by Phalaecus.

N. G. L. II.

PHEGEUS (*Φηγεύς*), in mythology, father of Arsinoë, wife of Alcmaeon (q.v. 1); his sons murdered Alcmaeon when he remarried (cf. *CALLIRHOE*; Apollod. 3. 87 ff.). An undatable but probably late story (*Certam. Hom. et Hes.* 249 Rzsch) says Hesiod stayed for some time at his court and was put to death by his sons, who suspected him of seducing their sister.

H. J. R.

PHEIDIPPIDES (so the best MSS. of Herodotus) or **Philippides** was the Athenian courier dispatched to solicit Spartan help upon the news of the Persian landing at Marathon (490 B.C.). He is credited with the exploit (which need not be regarded as fictitious) of having covered the distance (c. 150 miles) in two days. Legend connected him with the establishment of the Athenian cult of Pan.

P. T.

PHEIDON, king of Argos, changed the kingship into a tyranny (Arist. *Pol.* 1310^b). He made their measures (*metra*) for the Peloponnesians and interfered at Olympia (Hdt. 6. 127). Later writers add that he struck in Aegina the first Greek coins and dedicated to Hera the spits previously current, and recovered the 'lot of Temenus', the Dorian conqueror of north-east Peloponnesus, from whom they make him variously sixth, seventh, or tenth in descent (i.e. between 900 and 700 B.C.). Pausanias (6. 22. 2) dates the interference at Olympia Olympiad VIII (748), but a plausible emendation proposes XXVIII (668). An earlier date is scarcely possible, and some date him to the sixth century. Herodotus mentions a 'son' of Pheidon c. 575, and even if 'son' is loosely used it favours a date for Pheidon not earlier than early seventh century, the period of the first Aeginetan coins. The statements about Pheidon's striking them are probably genuine tradition, preserved perhaps in the Argive Heraeum, where a bundle of spits has been discovered which may be Pheidon's dedication. For a later date for the introduction of coinage see *COINAGE, GREEK*. Herodotus' story of an occupation of Aegina by Argos that resulted in both adopting the distinctive standard of Aeginetan coins (5. 82-9) may be a distorted version of Pheidon's achievements. He would thus be the immediate predecessor of the tyrant dynasties of Corinth and Sicyon, whose rise c. 660-650 meant his own collapse.

Strabo 8. 358, 376, 355, *Marmor Parium*, 10; *Etyim. Magn.* s.v. *Φειδωνος*. P. N. Ure, *Origin of Tyranny* (1922), 154 f.; *FCRII* 90 (Nic. Dam.) F 41; A. Andrewes, *The Greek Tyrants* (1956); E. Will, *Korinthiaka* (1955), 344 ff., and for Pheidon's date N. G. L. Hammond, 'An early inscription at Argos', *CQ* 1960, 31 ff.

P. N. U., N. G. L. H.

PHEME (*φήμη*), a rumour of unknown origin which springs up among the people at large; unprovoked and unguided popular opinion. It is a god (*Hes. Op.* 763-4) and is never quite in vain (*οὐ . . . πάμπαν ἀπώλλυται*).

PHERAE, a city of Thessaly situated on a hill commanding a fertile district near the southern verge of the plain of Pelasgiotis. It lay close to important land-routes and, alone among Thessalian cities, enjoyed easy access to the sea. When in possession of Pagasae (q.v.), it controlled the export of Thessalian corn. Though prominent in mythology as the home of Admetus, it remained politically insignificant except during the half-century (c. 406-352 B.C.) when it was ruled by the family of Jason (see *LYCOPHRON* (1), *JASON* (2), *ALEXANDER* (5)). Philip of Macedon expelled the tyrant-house and established a Macedonian garrison. He also effectively ended the prosperity of Pherae by depriving it of Pagasae.

The walls of the city date probably from the period of the tyrants. A temple, built in the sixth century but reconstructed in the fourth, may be that of Artemis Ennodia, whose head appears on the local coinage.

E. Kirsten, *PW Suppl.* vii 984 ff.

H. D. W.

PHEREKRATES, Athenian comic poet, won his first victories at the City Dionysia and the Lenaea between 440 and 430 B.C. (*IG* ii². 2325. 56, 122) and produced *Ἀγριοί* at the Lenaea in 420 B.C. (*Pl. Prt.* 327 d, *Ath.* 218 d), depicting the fortunes of men who have left civilization (cf. *Ar. Av.*) to live among savages. We have nineteen titles and 250 fragments, which bear out the judgement of Anon. *De Com.* 8 that Pherekrates was εὐρητικός μύθων. In *Deserter* the parabasis appears to have been uttered by a chorus of deities (fr. 23; cf. *Ar. Nub.* 607 ff.). In *Miners* the underworld is depicted (fr. 108) as a land of fantastic abundance, and a similar theme appears (fr. 130) in *Persians* (see also *CRATES* 1 and *METAGENES*). *Μυρμηκάνθρωποι* contained the story of Deucalion's flood and Zeus' repopulation of the earth by turning ants into men—a conflation of the Flood myth with a story of the origin of the Myrmidons (*Hes. fr.* 76 Rzsch). *Τυραννίς* may possibly have had a plot similar to that of *Ar. Eccl.* The long and interesting fr. 157 (from what play is not known) is a speech by Music, complaining of her treatment by contemporary musicians.

FCG ii. 252 ff.; *CAF* i. 145 ff., *FAC* i. 206 ff.

K. J. D.

PHERECYDES (1) of Syros (fl. c. 550 B.C.), early prose-writer and author of a cosmogonic myth. His book *Ἐπτάμυχοι* described the origination of the world by one or more of a triad of eternal deities, *Zas* (sc. Zeus), *Chronos* or *Kronos*, and *Chthonic* or *Ge* the earth-goddess. Aristotle puts him in a 'mixed' class of theologians who 'do not say everything in the form of myth' (*Met.* N 4), and some scholars discern signs of Ionian rationalism in the scanty reports of his views. Wilamowitz thought 'Pherecydes' a collective name for all anonymous early Ionian prose-writing: see, *contra*, Jacoby, *Mnemos.* 1947.

*Diels, Vorschr.*¹¹ i. 43–51. Kirk–Raven, *Presocratic Philosophers* 48 ff.

G. E. L. O.

PHERECYDES (2) of Athens, 'the genealogist' (later confused with (1)), wrote copious *Histories* mythical and genealogical, commended by Dion. Hal. *Ant. Rom.* 1. 13. 1. Eusebius' date is 456 B.C. (*Ol.* 81. 1).

FGH i. 3; cf. iii. 333.

P[H]ERSEPHONE, PERSEPHASSA or **-ATTA** (*Περσεφόνη, Περσ-, Περσέφασσα, -αττα*) or **KORE** (*Κόρη*); in Latin *Proserpina*, a simple mispronunciation, to which a false etymology from *proserpere* came to be attached (Augustine, *De civ. D.* 4. 8, from Varro), with the absurd explanation that she was the deity who made food-plants germinate. The varying forms of the name and the presence in one of the well-known pre-Hellenic suffix -ss- suggest that she is a very old native goddess of the Greek peninsula, taken over by the invaders and identified with the 'virgin daughter' (Kore) of their own corn-goddess. For the story of her carrying off by Hades see *DEMETER*.

Another and very remarkable story in which she bears a part is the Orphic myth of Zagreus (cf. *ORPHISM* and Nilsson, *GGR* i². 686 n., for ancient references). The earliest reasonably certain mention of this is in Pindar (fr. 133 Bergk, 127 Bowra), where the poet states that those in the other world 'at whose hands Phersephona accepts satisfaction for her ancient grief' return in the ninth year to this world and become kings or otherwise distinguished men, later passing to the status of heroes.

The 'grief' seems to mean the death of her child Zagreus (Rose in *Greek Poetry and Life* (1936), 79 ff.). For the story itself see Kern, *Orph. frag.*, nos. 209 ff.; it is fully told only in late authors, as Firmicus Maternus, *De Errore*, 6; Nonnus, *Dionys.* 6. 155 ff. Zeus, in serpent form, approached Persephone and begat Zagreus, to whom he intended to give all power in the universe. But the Titans, incited by the jealous Hera, attracted the child's attention with toys, set upon him, tore him in pieces, and devoured him. Athena saved his heart, which Zeus swallowed, being thus enabled later to beget Dionysus. He destroyed the Titans with thunderbolts, and from their ashes sprang mankind.

In cult Persephone has little place save with her mother, when she is more commonly called Kore (e.g. at Eleusis). For a list of places where the two goddesses are worshipped together see Bloch in Roscher's *Lexikon* ii. 1288 ff. It does not appear (see Paus. 6. 25. 2) that she shared the unique cult of Hades (q.v.) at Elis, although they are continually associated in literature and art (see *ELFUSIS, MYSTERIES*).

In art she often appears with her mother, with or without Triptolemus. Like Demeter she often carries a sceptre or torches, and when alone cannot easily be distinguished from Demeter or Hecate. Her *Anodos* is shown on fifth-century Attic vases, her abduction by Hades and her wedding on terracotta plaques of the first half of the fifth century from Italian Locri. She is also shown enthroned with Hades.

H. J. R.; C. M. R.

PHIDIAS, Athenian sculptor, born c. 490 B.C. Reputed pupil of Hegias and Hageladas. Among his early works was the so-called Athena Promachos, which, according to a preserved inscription, was erected c. 456 B.C. It was about 30 feet high, and the point of its spear and the crest of its helmet were said to have been visible to mariners from Sunium (Paus. 1. 28. 2)—no doubt the golden bronze gleaming in the sunlight. Part of the base survives on the Acropolis. Another statue of Phidias' early period was the so-called Lemnian Athena, a thank-offering by the people of Lemnos (Paus. 1. 28. 2), probably Athenian colonists between 451 and 448 B.C. It has been identified with great probability in a head in Bologna and two statues in Dresden. But the most famous works of Phidias were two cult statues of gold and ivory. The first was the colossal Athena made for the Parthenon. Pausanias (1. 24. 5) gives a long description of it and from it a number of Roman copies have been identified. They consist of statuettes of various sizes, heads, reliefs of the ornaments on the shield, and representations on Roman coins as well as on engraved gems (cf. *Hesp.* 1966, pl. 54). It was finished and in place in 438 B.C. The other colossal chryselephantine statue—the seated Zeus which Phidias made for the temple of Zeus at Olympia—was considered his masterpiece. For its visualization there remain only representations of the head and of the figure on coins of Elis of the time of Hadrian; what seem to be adaptations of it occur on many other coins, for its fame spread throughout the Greek and Roman world. Recently there have been found in Phidias' 'workroom' at Olympia a number of terracotta moulds used for the gold drapery of the statue, in a style suggesting a date around 430 B.C. They have finally shown that the Zeus must have been made after the Athena, that is, after he was exiled by the Athenians for political reasons. It had long been thought by some that the Zeus anteceded the Athena.

Of the other works ascribed by ancient writers to Phidias it has been possible to identify Roman copies of the Amazon which he made for Ephesus in competition with other sculptors; and, with considerable probability, an Anadumenus made at Olympia. More tentatively, based only on style, there have been attributed the Cassel

Apollo, the Athena Medici, the Dioscuri of Monte Cavallo, etc.

Apart from these pale reflections of Phidias' style, there are, however, the sculptures of the Parthenon—the metopes, frieze, and the pedimental figures—for which he must have been responsible (cf. *Plut. Per.* 13. 4). So, though naturally Phidias will not have himself carved these architectural sculptures, he doubtless was the originator of their designs. We have here, therefore, precious originals by which to judge the Phidian style, which had an abiding influence on all Greek sculpture.

The diversity of Phidias' genius is attested by the fact that he was not only a sculptor of colossal and life-size figures, but was also a painter, an engraver, and, in the words of Pliny, opened up new possibilities in metal-work (*torcutive*).

For the indictment of Phidias in connexion with the statue of Athena Parthenos see F. E. Adcock in *CAH* v. 477 ff. and F. J. Frost, *JHS* 1964, 69 ff. G. M. A. R.

PHILADELPHIA (1) (*Φιλαδέλφεια*), in the north-east of the Fayûm, was founded by Ptolemy II Philadelphus in connexion with the reclamation of the Moeris basin. The site, now *Darb Gerze*, was partly excavated for the Berlin Museum in 1908/9; the plan showed the normal Ptolemaic scheme of rectangular *insulae*, mainly of private houses, with a temple and possibly an official bureau. Considerable finds of papyrus and small objects were secured by the excavators; others, before and after them, by native diggers, among these being the papers of Zenon (see *APOLLONIUS* 3). The cemetery, lying to the east, has produced many mummy-portraits: one was found in a house. The town seems to have been abandoned in the fourth century.

P. Viereck, *Philadelpheia* (1928), gives a full description and bibliography. J. G. M.

PHILADELPHIA (2) of Lydia, founded in the Cogamis valley by Attalus II Philadelphus (159–138 B.C.). The site is fertile but lies on the edge of the Catacecaumene, and was so constantly troubled by earthquakes that according to Strabo (13. 628) few of the citizens lived actually in the city. Philadelphia struck coins almost from its foundation, and celebrated games in honour of Zeus-Helios and Anacitis. Wrecked by the disastrous earthquake of A.D. 17, it quickly recovered; under Caligula it added to its name the title of Neocaesarea, and under Vespasian that of Flavia. In the third century it acquired the dignity of a neocorate and the style of metropolis. It was one of the Seven Churches of Asia in Revelation. The ruins at *Alâshêr* are insignificant. G. E. B.

PHILAMMON (*Φιλάμμων*), a musician, either wholly fabulous or so ancient as to be much overlaid with mythical details. Son of Apollo (Hes. fr. 111 Rzsch + Pherecr. in schol. *Od.* 19. 432); invented maiden choirs (ibid.), first to celebrate the birth of Leto's twins and institute choruses at Delphi ([Plut.] *De mus.* 1132 a), founded the mysteries at Lerna (Paus. 2. 37. 2). H. J. R.

PHILARGYRIUS, JUNIUS (5th c. A.D.), a commentator on Virgil; but there is some doubt about his real name (Filargius?). His *Explanatio in Bucolica* is extant (ed. H. Hagen in Thilo's Servius, III. ii) in a longer and a shorter version, both of which contain Celtic glosses. The Berne scholia to the *Eclogues* and *Georgics* (ed. H. Hagen, *Jahrb. für class. Phil.* Suppl. 4, 1867, 749 ff.) which mention 'Iunilius Flargius' as one of their sources, and the *Brevis expostio Georgicorum* (ed. H. Hagen in Thilo's Servius, III. ii) probably owe a great deal of their material to Philargyrius.

Cf. G. Funnioli, *Essegi Virgiliana antica* (1930). Schanz-Hosius, § 248. 6. J. F. M.

PHILEMON (1) (*Φιλήμων*), in mythology, a good old countryman, who lived with his wife Baucis in Phrygia. Zeus and Hermes, coming to earth to test men's piety, were refused hospitality elsewhere but received by them. The gods revealed their deity and warned them to climb a mountain. On arrival near the summit, they saw the district covered by a flood. They then became priest and priestess and finally were turned into trees.

Ov. Met. 8. 618 ff.; cf. W. M. Calder, *Discoveries* 1922, 207 ff.; J. E. Fontenrose, *Univ. of Cal. Pub. in Class. Phil.* 1945, 93 f. H. J. R.

PHILEMON (2) (b. 368/60 B.C., d. 267/63 B.C.), New Comedy poet from Syracuse (*Suda*) or Soli in Cilicia (Strabo 14. 671), but granted Athenian citizenship before 307/6 (*IG* II². 3073). In a long life (97 or 99 or 101 years: sources differ) he wrote ninety-seven comedies, of which over sixty titles are known (including *Ἰθαγάλφος*, not in Meineke or Kock); he won three Lenaeon victories, coming immediately after Menander in the victors' inscription (*IG* II². 2325. 161), while his first victory at the Dionysia is dated to 327 (*Mar. Par.* B 7). Alephron (4. 18) suggests that Philemon received an invitation to the court of Ptolemy; it is not certain that this was accepted, although another anecdote (*Plut. Mor.* 449 e, 458 a) brings him before King Magas of Cyrene. Accounts of Philemon's death differ, but all agree that he was physically and mentally active to the end.

Most of the titles seem typical of New Comedy; only two (*Μυμηδόνες*, *Παλαμήδης*) sound like mythological burlesque. Contemporary judgement awarded Philemon frequent victories over Menander, though this verdict was reversed by posterity (Quint. *Inst.* 10. 1. 72; *Apul. Flor.* 16; Gell. *NA* 4. 17. 1). Well over 200 fragments survive, emphasizing the moralizing aspect of Philemon's thought: e.g. fr. 22 (cf. fr. 95), a slave is a human being; fr. 71, peace the only true 'good'; fr. 94, real justice. There are many gnomic lines and couplets, often lacking Menander's terse precision, and Jachmann's attack (*Plautin. und Attisches*, 226 f.) on Philemon's flat-footed, repetitive, and platitudinous verbosity is not altogether unjustified. Of greater interest perhaps are the pompous cook who parodies the *Medea* (fr. 79; see Dohm, *Mageiros* (1964), 122 ff.) and part of a (long-winded?) prologue spoken by Aer (fr. 91).

Of Philemon's technique in complete plays Plautine adaptations furnish some evidence—*Mercator* (from *Ἐμπορος*), *Trinummus* (from *Θησαυρός*), and possibly *Mostellaria* (from *Φόσμα*). Here the fondness for surprises is probably the most interesting common factor; there is little, however, to make one quarrel with Apuleius' judgement (loc. cit.) that Philemon's plays contained much wit, plots neatly turned, recognitions (or solutions?) lucidly arranged, characters corresponding to reality, maxims agreeing with life, and few seductions.

In Athens Philemon's comedies were revived after his death (*IG* II². 2323. 101); in the second century A.D. a statue was erected there in his honour (*IG* II². 4266). But as an index of diminished popularity as compared with Menander, there are far fewer quotations from Philemon, and no papyrus certainly assigned to Philemon has been recovered in Egypt, although several attributions have been made (Page, *GLP*, nos. 61, 64, 69; ostraca in *JHS* 1923, 40 ff., cf. *Hermes* 1924, 362 ff.); of these perhaps the first is the most plausible, in view of the long-windedness of part of the fragment.

FRAGMENTS. FCG iv. 3 ff.; *CAF* II. 478 ff., III. 740 f.; Demianczuk, *Suppl. Com.* 71 f.; Page, *GLP*, no. 50. INTERPRETATION AND CRITICISM. C. A. Dietze, *De Philemone Comico* (1901); E. Rapisarda, *Philemone Comico* (1939); B. Kryaniell-Józefowicz, *De Quidam Plauti Exemplaribus Graecis* (1949); Webster, *Later Greek Comedy*, 125 ff. W. G. A.

PHILEMON (3) the Younger, son of the celebrated Philemon (2), and himself a New Comedy poet; wrote fifty-four plays (none known to us by name) and won six victories.

FCG iv. 68; CAF ii. 540.

PHILEMON (4). A fourth Philemon, whether of the same family as (2) and (3) or not, is known from didascalic inscriptions as author of *Μολογία* (CAF ii. 540), 183 B.C.

PHILEMON (5). In the middle of the fourth century B.C. lived a fifth Philemon, an actor, mentioned by Aeschines (I. 115) and Aristotle (see ANAXANDRIDES).

PHILEMON (6) of Aixonae (an Attic deme) (probably early 2nd c. B.C.), grammarian, edited Homer and compiled *Ἀπτικά γλῶσσαι*.

PHILEMON (7) of Athens (c. A.D. 200), an Atticist grammarian, wrote *Σύμμικτα* and *Περὶ Ἀπτικῆς ἀντιλογίας* (?ἀναλογίας) τῆς ἐν ταῖς λέξεσιν.

PHILETAERUS (1), Middle Comedy poet, said by Dicaearchus to be the son of Aristophanes, but this was disputed; however, allusions assign him to the earlier period of Middle Comedy. He won first prize twice at the Lenaea (IG ii². 2325. 143). Of twenty-one comedies (*Suda*) thirteen titles are preserved; four or five are mythological burlesques, but there are many topical references.

FCG iii. 292 ff.; CAF ii. 230 ff.; FAG ii. 18 ff.
W G W.; K. J. D.

PHILETAERUS (2) (c. 343–263 B.C.), son of Attalus (a Macedonian?) and a Paphlagonian mother. First an officer of Antigonos (before 302), and next commander of Pergamum for Lysimachus, who kept a large treasure there, he deserted opportunely to Seleucus (282), and henceforth was ruler of Pergamum under Seleucid suzerainty. He may have enlarged his territories somewhat in his last years, but his best work was in defending Pergamum from the Galatian invaders of Asia Minor (278–276), and in founding the Attalid dynasty, which he did by adopting his nephews, one of whom (Eumenes) succeeded him. He was himself said to be a cunuch.

Hansen, *Attalids*, 15 ff. Coin-portrait, C. M. Kraay, *Greek Coins* (1966), nos. 737–9. G. T. G.

PHILETAS (rather than **Philitas**) of Cos, son of Telephus, born not later than 320 B.C., became tutor of Ptolemy II Philadelphus (born in Cos 309/8). Other pupils of Philetas were Zenodotus, Hermesianax, and (probably 275–271) Theocritus. His grave seems to have been in Cos, where the Coans put up a bronze statue of him (Hermesianax, fr. 7. 75–8 Powell).

WORKS. (1) *Verse*. According to the *Suda* (s.v.) Philetas wrote 'Epigrams and Elegies and other works'. The sources cite five titles: *Demeter*, *Hermes*, *Telephus*, *Epigrammata*, *Paegnía*. The *Demeter* was a narrative elegy, recounting the goddess's wanderings, among them perhaps her visit to Cos (cf. schol. Theoc. 7. 5–9 f.). The *Hermes* was an epyllion, in which Philetas narrated the intrigue of Odysseus with the Aeoloid Polymele (Parth. 2). The emotions of Polymele formed the central theme, but Odysseus told Aeolus the tale of his wanderings, though not in the Homeric order. The *Telephus* included a reference to the marriage of Jason and Medea. It is uncertain whether *Paegnía* (frs. 10 and 11) and *Epigrammata* (frs. 12 and 13) were separate works or alternative titles for one collection. Among the unassigned fragments fr. 22, a reference to the *Bougonia* of bees, has been thought to prove that Philetas anticipated Theocritus' treatment

(7. 78–89) of the Cornatas legend. In any case Theocritus acknowledged Philetas as his master (7. 39–41).

(2) *Prose*. Thirty fragments survive from a work entitled *Miscellaneous Glosses* or *Miscellanea* (*Ἀπτικοὶ Γλῶσσαι*, *Ἀπτικά*). This was a lexical compilation explaining rare words drawn from Homer (Aristarchus wrote a brochure 'Against Philetas') and various dialects, and also technical terms. The book became famous almost at once, being referred to in the *Phoenicides* of Straton (Ath. 9. 382 c). This passage already figures in a school anthology of c. 220, cf. Guéraud and Jouguet, *Un Livre d'écolier du III^e siècle avant J.-C.* (1938). [Strabo] 3. 168 assigns to Philetas a work with the title *Ἑρμηνεία* (?*Interpretation*) and quotes from it an elegiac couplet (fr. 17). If this was a prose work, the lines were cited by Philetas as an illustration and need not be by him.

Though Aelian (*VH* 10. 6) calls Philetas 'the poet of hexameters', it was as an Elegist that he won lasting fame. He was included in the Canon of Elegists and, according to Quintilian (*Inst.* 10. 1. 58), in the opinion of most came second to Callimachus. Propertius and Ovid several times allude to him as their model in Elegy. In two passages (*Tr.* 1. 6. 2; *Pont.* 3. 1. 57–8) the latter refers to one Bittis or Bittis as having been sung by Philetas. This is confirmed by Hermesianax, fr. 7. 77–8, where the name is Bittis. It is uncertain whether this lady was Philetas' wife or mistress, and in what kind of verse he celebrated her charms. It is unlikely that Philetas wrote subjective love-elegies in the Roman manner, but tributes to Bittis may have been included in the *Epigrams* or *Paegnía*. His great reputation as a poet among his younger contemporaries—besides Hermesianax and Theocritus, Callimachus too mentioned him in the preface to his *Aetia*, fr. 1 Pf., and probably in fr. 532 Pf.—may have been influenced by his position as the inaugurator of the scholar-poet tradition which the Alexandrians continued. He was also considered by the Callimachean school as a master of the short and highly finished poem (cf. *Schol. Flor. Callim.* fr. 1. 12–15 P¹).

TEXTS. Powell, *Coll. Alex.* 90–6; Diehl, *Anth. Lyr. Graec.* vi². 40–55, A. Nowacki, *Philitae Cosi fragmenta poetica* (1927), G. Kuchenmüller, *Philetas Cosi Reliquiae* (1928). The last includes the prose fragments.

GENERAL LITERATURE. H. E. Butler and E. A. Barber, *The Elegies of Propertius* (1933), xxxix ff. xlv, ff. A. A. Day, *The Origins of Latin Love-Elegy* (1938), 14 ff. E. A. B.

PHILICUS (not *Philiscus*), of Corcyra, was one of the 'Tragic Pleiad' under Ptolemy II Philadelphus, also Priest of Dionysus at Alexandria and possibly Eponymous Priest of Alexander (Schubart from *PHib.* 30. 23). In the procession of 275/4 he marched at the head of the *technitai* (Ath. 5. 198 c, from Callixenus). The *Suda* credits Philicus with forty-two tragedies but no certain title or fragment survives (cf. *TGF* 819). As a lyric poet Philicus claimed in his *Hymn to Demeter* (Diehl, *Anth. Lyr. Graec.* vi. 296) to have invented the *metrum Philicum* (catalectic choriambic hexameters) used in that poem. Fragments from a *Hymn to Demeter* written in this metre have been published (by M. Norsa in *Stud. Ital. N.S.* v (1927), 87 ff.) from a papyrus and plausibly identified as belonging to Philicus' poem. The fragments testify to the author's skilful craftsmanship and power of realistic description.

PHILINUS (1) of Cos (fl. c. 250 B.C.), a pupil of Hierophilus, was called, perhaps on insufficient grounds (see SERAPION 1), the founder of the Empirical School of Medicine. He wrote about difficult words in Hippocratic

books and rejected any diagnosis based on the pulse—that is all the information which the fragments yield, except a few pharmacological precepts. If Philinus' doctrine is identical with that of his school—and the Empirical system, according to ancient sources, remained essentially unchanged—he must have denounced inquiry into hidden causes, explanation of physiological processes, systematic study of anatomy in dead or living bodies, and general theories concerning diseases. Relying only on his own experience and that of others, and on the conclusions resulting therefrom by analogy, he must have paid attention to factors which evidently influence illness and to the individual differences of people and localities.

PHILINUS (2) of Acragas, pro-Carthaginian historian of the First Punic War, writing probably in monograph form, was used by Polybius (1. 13–4) with Fabius Pictor, and perhaps by Diodorus (23–24).

FGH u. 174. F. W. Walbank, *CQ* 1945, 1 ff.

PHILIP (1) **II**, king of Macedon 359–336 B.C., laid the foundations of Macedonia's greatness. Internally, he unified Macedonia by removing the semi-independent principalities of upper Macedonia and incorporating territorial divisions in the army system, by favouring Greek culture, and by promoting urbanization and trade. The capture of Pydna, Methone, and Amphipolis, the exploitation of the Pangaeum mines (yielding 1,000 talents annually), and the alliance with the Chalcidian League favoured the economic growth of Macedonia; by incorporating Thrace, Chalcidice, and Thessaly under the royal mint he created an economic power capable of supporting a standing army and launching the expedition of Alexander. Under the stress of long warfare Philip forged a professional army with national spirit, which became the Grande Armée of Alexander; he developed siegecraft, trained the Macedonian infantry in the novel phalanx formation, employed the tactic of offensive and defensive wings, and bequeathed an able staff to Alexander. At Chaeronea the Macedonian power created by Philip overwhelmed Greece as decisively as it later overwhelmed Persia.

In the rise of Macedon Philip displayed diplomatic genius by exploiting the enmity between Athens and Chalcidice, the Social and Sacred Wars, and the dissension in Thrace and Thessaly. By making peace with Athens in 358 he covered his attack on Amphipolis and Pydna, and by allying with the Chalcidic Confederacy in 356 he captured Potidaea and defeated a Balkan coalition organized by Athens. By marriage alliances with the Molossian royal house and the Aleuadae of Larissa, and by annexing western Thrace he acquired sufficient strength to intervene in the Sacred War. He defeated Onomarchus, organized Thessaly, and penetrated to Thermopylae (352). He invaded and annexed Chalcidice, instigating a revolt against Athens in Euboea to synchronize with it (349–348). After these successes he concluded peace and alliance with Athens, and terminated the Sacred War (346). Invited by Isocrates to lead Greece against Persia, Philip endeavoured to conciliate Athens, until the opposition hardened under Demosthenes' leadership; frustrated at Perinthus and Byzantium by Athenian and Persian help, he used a diplomatic opening offered by the Delphic Amphictiony to force the issue at Chaeronea. He used his victory to give Greece a federal constitution under his leadership as elective Hegemon (the League of Corinth), and to ally it with Macedonia. He was assassin-

ated at the age of 46, when about to lead the forces of Macedonia and Greece against Persia.

Of his contemporaries the nationalist Demosthenes saw in Philip a perfidious despot, the Panhellenist Isocrates and Ephorus a leader of Greece, and the individualist Theopompus the greatest man Europe had known. Modern scholarship, while divided in interpretation of his personality, is unanimous in appreciating his statesmanship, diplomacy, and generalship.

ANCIENT SOURCES. Diod. bk. 16, following Ephorus and Timaeus (A. Momigliano, *Rend. Ist. Lomb.* 1932), or Ephorus and Dyllus (N. G. L. PHILIP (2) **ARRHIDAEUS** (c. 358–317 B.C.), son of Philip II of Macedonia and Philinna of Larissa; became Philip III of Macedonia. Little is known of his life under Philip and Alexander, except that he was feeble-minded, that he married his cousin Adea (Eurydice, q.v.), and that he was at Babylon when Alexander died; presumably Alexander had taken him to Asia in 334 as a precautionary measure. His election as king, jointly with Alexander's posthumous son Alexander IV (323), gave him no real power, but he was steered skilfully through the early struggles of the 'Successors' by Eurydice, his name and authority being used by (successively) Perdiccas, Antipater, Polyperchon, and Cassander. He was ultimately captured and killed by Olympias, who desired the sole succession for Alexander's son.

Heine, *Alexanderreich* ii, no. 781.

G. T. G.

PHILIP (3) **V** (238–179 B.C.), king of Macedon, son of Demetrius II and Phthia (Chryseis), was adopted by Antigonus III, and succeeded in summer 221. The Social War (220–217), in which the Hellenic League opposed Aetolia, Sparta, and Elis, brought him considerable renown, notwithstanding the intrigues of his ministers, headed by Apelles (executed 218), against Achaea. After the Peace of Naupactus (217), instigated by Demetrius of Pharos, he took up arms against Rome in Illyria, first by sea, later, after losing his fleet (214), by land; his treaty with Hannibal (215) defined spheres of operation. His brutal attacks on Messene in 215/14 alienated Achaea. An Aetolian alliance (211) and Attalus of Pergamum's collaboration now gave Roman forces in Greece an advantage; but Philip held out, and when they retired in 207, he sacked Thermum and forced terms on Aetolia (206). The war concluded with the favourable Peace of Phoenice (205). Philip then turned eastward: he employed a pirate, Dicaearchus, to obtain resources, and in 203/2 combined with Antiochus of Syria to plunder the possessions of the infant Ptolemy V. His terroristic methods, however, aroused Rhodes and Pergamum, who in 201 defeated him by sea off Chios, and by alarmist reports persuaded the Senate to declare war on him. This declaration Philip received at Abydos (200), after a campaign against Athens and the Thracian Chersonese; by September a Roman army was in Illyria. After two campaigns in Macedonia (199) and Thessaly (198) the Romans under Flamininus defeated him decisively at Cynoscephalae in Thessaly (197); and the subsequent peace settlement confined him to Macedonia, and exacted 1,000 talents indemnity, almost his whole fleet, and hostages, including his younger son, Demetrius.

Until 189 Philip collaborated with Rome, and having sent help against Nabis (195) and Antiochus and Aetolia (192–189), made acquisitions in Thessaly. For facilitating the Scipios' advance through Macedon and Thrace he had his tribute remitted and Demetrius restored (190). Henceforward he concentrated on consolidating Macedon: finance was reorganized, populations were transplanted, mines reopened, central and local currencies issued. Accusations from his neighbours, however, led to constant Roman interference; and in 185 adverse decisions convinced him that his destruction was intended. In three campaigns (184, 183, 181), therefore, he extended his influence in the Balkans; meanwhile Demetrius' pro-Roman policy led to a quarrel with the crown-prince Perseus, and his own execution for treason (180). In 179, amidst an ambitious scheme for directing the Bastarnae against the Dardani, Philip died at Amphipolis.

A brilliant soldier, Philip was handicapped in politics by his unbalanced temperament. He maintained popular loyalty while combining the protection of his northern frontiers with expansionist programmes elsewhere; but he lacked a consistent constructive policy, hence his main significance is as a figure in the history of Roman expansion.

ANCIENT SOURCES. Polybius, *Livy*, bks. 23–40, otherwise scattered. MODERN LITERATURE. M. Holleaux, *Rome, la Grèce et les monarchies hellénistiques* (1921); A. H. McDonald and F. W. Walbank, *JRS* 1937, F. W. Walbank, *Philip V of Macedon* (1940), id. *Polybius* i and ii (1957–). F. W. W.

PHILIP (4), on the death of his father Herod (q.v. 1) the Great, became tetrarch of the northern part of his kingdom—Auranitis, Trachonitis, Batanaea, Gaulanitis, and Paneas. When he died in A.D. 34 after an apparently peaceful reign, his territory was administered with the province of Syria until it was put under Agrippa I (q.v.) in 37. E. M. S.

PHILIPPI, a city in eastern Macedonia on the Via Egnatia (q.v.), overlooking the inland plain east of Mt. Pangaeus (q.v.). The site, known to the Greeks as Crenides ('springs'), was apparently inhabited by Thracians till 360 B.C., when the Thasians founded a city which they called 'Daton', till then the name for the whole surrounding district. In 356 Philip II of Macedon refounded it under the name of Philippi, and made it the centre for the gold-mines of the region. In 42 it was the scene of the two battles (the second on 23 Oct.) in which Antony defeated Cassius and Brutus. Antony founded a colony for veterans there, and after Actium Octavian added more veterans as well as partisans of Antony evicted from Italy. Philippi was the first European town to hear Christian missionaries (Paul and Silas, c. A.D. 50). It survived at least till late medieval times. There are extensive remains.

App. *BCiv.* 4. 105–31; Cass. Dio 47. 35–49. P. Collart, *Philippes* (1937); P. Lemerle, *Philippes et la Macédoine orientale à l'époque chrétienne et Byzantine* (1945). T. J. C.

PHILIPPIDES of Athens, New Comedy poet, who won a victory in 311 B.C. (*IG* ii². 2323a. 41; cf. 2325. 164). Of forty-five comedies (*Suda*) we know fifteen titles. As a friend of Lysimachus, king of Thrace, Philipides possessed great influence; an honorific decree of 285, which records his services to Athens, is still extant (Dittenberg, *SIG* 374, where the inscription is misdated). Fr. 6, Plato's 'good'; fr. 9, the ways of *nouveaux riches*; fr. 18, Euripides quoted for consolation in trouble; fr. 25, a denunciation of the sacrilegious behaviour of Demetrius Poliorcetes.

FCG i. 470 ff., iv. 467 ff.; *CAF* iii. 301 ff.

W. G. A.

PHILIPPOPOLIS, a city of Thrace, commanding the main road from Macedonia to the Black Sea. It was founded by Philip II of Macedon in 342 B.C., and

reoccupied by Philip V in 183, as a military outpost beyond Mt. Rhodope; but in either case it soon reverted to native rule. Under Roman rule it served as the meeting-place of the provincial parliament of Thrace and as a stronghold against Gothic invaders (A.D. 250–70). From the mixed character of the population which Philip II settled there it obtained the nickname of 'Poneropolis' ('Crookham').

INSCRIPTIONS AND BIBLIOGRAPHY. G. Mihailov, *Inscriptiones Graecae in Bulgaria repertae* III. 1 (Sofia, 1961), 19 ff. M. C.

PHILIPPUS (1), JULIUS (*PIV* 386) VFRUS, Roman Emperor A.D. 244–9, a native of Arabia, succeeded Timesitheus as Praetorian Prefect and connived at Gordian's assassination (*see* GORDIAN III). After concluding peace with Persia he reached Rome with his son in 244, where he established good relations with the Senate. A great victory over the Carpi in 247 was followed by the elevation of his son to the rank of Augustus and by the celebrations in the ensuing April of the thousandth birthday of Rome. But in the summer the Goths invaded Moesia and pretenders arose in the Balkans and the East. Decius was appointed to the Danubian command and his popularity with the troops led to his acclamation as Emperor. Despite assurances of loyalty Philip mistrusted Decius' sincerity. He and his son were killed in a battle at Verona.

Later tradition honoured Philip as the first Christian Emperor, but this was certainly false.

Zosimus I. 19–22; Zonaras 12. 19. A. T. Olmstead, *CPhil* 1942, 241 ff., P. J. Parsons, *JRS* 1967, 134 ff. (Philip and Egypt). H. M. D. P., B. H. W.

PHILIPPUS (2) of Opus (fl. c. 350 B.C.), mathematician and astronomer, pupil of Plato. An ancient tradition (*D.L.* 3. 37) describes him as having transcribed Plato's *Laws* from the wax tablets and written the *Epinomis*. It is still in doubt whether the latter was the work of Plato or of a pupil.

H. C. G. Friedrich, *Stylistische Untersuchung d. Epinomis d. Philoppos von Opus* (1927), answered by A. L. Taylor, *Plato and the Authorship of the 'Epinomis'* (1929). W. D. R.

PHILIPPUS (3), QUINTUS MARCIUS (*PIV* 79), praetor in Sicily in 188 B.C., as consul in 186 suppressed the Bacchanalian 'conspiracy' and suffered defeat in Liguria in the *salus Marcus*. In 183 he was envoy in the Peloponnese, checking the Achaean Confederacy. He influenced the preliminaries of the Third Macedonian War, persuading Perseus in 171 to accept a truce which allowed Rome more time for preparations. Consul in 169, he penetrated into Pieria, clearing the way for Aemilius Paullus' Pydna campaign. He was censor with Paullus in 164.

Scollard, *Rom. Pol.* 147, 198 ff.; I. van Ooteghem, *Lucius Marcus Philippus et sa famille* (1961), 58 ff.; J. Briscow, *JRS* 1963, 66 ff. A. H. McD.

PHILIPPUS (4), LUCIUS MARCIUS (*PIV* 75), grandson of (3) and of Claudius (q.v. 9), after a demagogic tribunate (c. 104 B.C.) omitted the aedileship, hence failed to gain the consulship of 93, but succeeded for 91. An enemy of Drusus (q.v. 2) and his faction, and suspicious of his plans to enlarge the Senate and enfranchise the Italians, he led the opposition to him, with the support of Caepio (q.v. 2), the political *equites*, and probably Marius and his Italian clients; after the death of Crassus (q.v. 3), he succeeded in rescinding the laws passed. Not heard of from the Social War to the victory of Cinna (q.v. 1), he perhaps governed a province. Unmolested by Cinna and Marius (who remembered his hostility to the faction of Drusus), he collaborated with the government: as censor in 86 (with Perperna, q.v. 2), he enrolled the Italians—whose enfranchisement he had resisted—according to

the restrictive laws then in force and struck his uncle Ap. Claudius (q.v. 10)—who had been banished—off the Senate list. He also joined Carbo (q.v. 2) and Hortensius (q.v. 2) in defending Pompey. Leaving Rome in time, he joined Sulla, conquered Sardinia for him and, as the oldest surviving senator (except for Perperna), became a pillar of the Sullan establishment, leading the opposition to Lepidus (q.v. 2) and proposing Pompey's special *imperium* against Sertorius (q.v.) (as he said) '*pro consulibus*'. Cicero still heard him in the Senate (urging, it seems, the annexation of Egypt) and greatly admired him.

J. van Ooteghem, *Lucius Marcius Philippus* (1961).

F. B.

PHILIPPUS (5), LUCIUS MARCIUS (PW 76), son of (4), was governor of Syria (61–59 B.C.) and consul (56). He took no part in the civil wars. As second husband of Atia (1) he was stepfather to Octavian: in Mar. 44 they both tried to dissuade him from accepting the inheritance of Caesar. In Jan. 43 he went as an emissary of the Senate to Antony. He was still alive in Aug. 43. Philippus (6) was no doubt his son by a marriage previous to that with Atia.

Syme, *Rom. Rev.*, see index; J. van Ooteghem, *Lucius Marcius Philippus et sa famille* (1961), 173 ff.

A. M.; T. J. C.

PHILIPPUS (6), LUCIUS MARCIUS (PW 77), son of (5), was tribune in 49 B.C., consul *suffectus* in 38, and governor of Spain (34–33?), whence he triumphed. It was probably he rather than his father who built the Porticus Philippi in Rome. He married Atia (2), younger sister of his father's second wife.

Syme, *Rom. Rev.*, see index; F. W. Shipley, *Amer. Acad. Rome* 1931, T. J. C.

PHILIPPUS (7) of Thessalonica, who lived in Rome and may have been a rhetor, published about A.D. 40 a *Garland* of Greek poetic epigrams written since Meleager (q.v. 2). This became one of the sources of the later Greek Anthology (q.v.), in which some eighty of his own poems survive. Most are adaptations of earlier Greek epigrams; a few are interesting for their strangeness, such as a description of Thessalian cowboys 'bulldogging' (*Anth. Pal.* 9. 543).

G. H.

PHILISCUS (1) (c. 400–325 B.C.), rhetorician from Miletus, who came to Athens and studied under Isocrates. His works included a *Μηθησιακός* and an *Ἀμφικτυονικός* (probably political brochures) and a life of the orator Lycurgus.

FGH iii. 496 F 9.

PHILISCUS (2), Middle Comedy poet, to whom the *Suda* assigns six plays (five being mythological burlesques; fourteen lines in a papyrus, *PSI* x. 1175, are doubtfully attributed to Διὸς γοναί).

FGC iii. 579 L.; CAF ii. 443 f.

PHILISCUS (3) of Aegina (4th c. B.C.) came under the teaching of Diogenes of Sinope at Athens and joined the Cynic school. He is said to have taught Alexander the Great, but this is doubtful. Seven tragedies were ascribed to him in antiquity, and the ascriptions may well be correct.

W. D. R.

PHILISCUS (4) of Thessaly (c. A.D. 190–220), rhetorician, professor of rhetoric at Athens under Caracalla.

PHILISTION of Locri, physician, a contemporary of Plato (c. 427–347), according to Callimachus the teacher of Eudoxus, illustrious in his art according to Plutarch, was the main representative of the Sicilian School of

medicine. Like Empedocles he assumed four elements, fire, air, water, earth, which he equated with the qualities hot, cold, moist, dry, and considered responsible for all bodily processes. Respiration he regarded as the cooling of innate heat. His interest in anatomy may be inferred from the fact that the name *ἀέρσι* for certain veins was attributed to him. In the physiology of drinking he agreed with Plato, as Plutarch relates (2. 1047 c). Diseases he explained by the excess or deficiency of the four elements, by external causes like wounds, climate, nourishment, or by changes in the bodily constitution, especially by difficulties of breathing, which he believed to occur all over the body. His book on dietetics must have been famous (half of the fragments preserved come from it, 9–16).

FRAGMENTS. M. Wellmann, *Die Fragmente d. Sikilischen Ärzte* (1901). Influence of P. Wellmann, *Hermes* 1900. An influence on Plato is often assumed, A. E. Taylor, *A Commentary on Plato's Tim.* (1928), 9. 599, n. 1; F. M. Cornford, *Plato's Cosmology* (1937), 334; W. Jaeger, *Diokles v. Karystos* (1938), 91; 212, n. 1 (1. identical with the Philistion mentioned in the second Platonic Letter?), see also H. Cherniss, *Plato* (1950–7), *Lustrum* 1950, no. 986, 1021, the scarcity of the material makes judgement difficult. The Platonic element in the aetiology of disease in Plato's *Timaeus* is emphasized by H. W. Miller, *TAPA* 1962. For Philistion, as contemporary of Plato in consequence of the new dating of Diocles, see H. Diller, *PW* xix. 2405.

L. E.

PHILISTUS of Syracuse (c. 430–356 B.C.), Sicilian historian who in his youth saw Gylippus rescue Syracuse (414) and took a prominent part for about forty years in supporting Dionysius I and II. He assisted the former to become general and tyrant (405) and served as his counsellor and governor of Syracuse, but later quarrelled with him and was banished for an unknown period. Recalled by Dionysius II he expelled Dion (366) and was appointed admiral. He failed to intercept Dion's expedition from Greece (357) and committed suicide after a naval defeat by Dion (356).

The history (*Σικελικά*) in thirteen books was written during his exile. The first seven books dealt with Sicilian affairs from the earliest times until 406, a period previously covered by Antiochus of Syracuse; the remainder dealt with contemporary events from Dionysius I onwards. This may explain the classification of the work in two parts by Alexandrine scholars under the titles *Περὶ Σικελίας* and *Περὶ Διονυσίου*. Philistus was a competent historian and was regarded by Cicero, Dionysius of Halicarnassus, and Quintilian as an imitator of Thucydides, particularly on grounds of style, though criticized by Dionysius for lack of co-ordination in the arrangement of the work. Philistus became the chief authority for the history of the West in the fourth century. He was sharply attacked by Timaeus on political grounds, but was the latter's main source for the fifth century and the tyrants; and the extensive use of his work by Ephorus is reflected in Diodorus Siculus. The history was popular with Cicero's contemporaries at a time of reaction in favour of Thucydides against the prose style of the Hellenistic period, and was used by Plutarch for his lives of Nicias and Dion.

FGH iii B. 556.

G. L. B.

PHILOCHORUS of Athens, the most famous and best known of the attidographers. Born before 340 B.C. of a distinguished family, he held the official positions of *μάγιστρος* and *ἱεροσκόπος* in 306. The list of his works contains twenty-seven titles and illustrates his extensive reading and capacity for research. The most important was the *Atthis* in seventeen books which reached 261/60. Philochorus seems to have been executed shortly afterwards by Antigonus Gonatas as a partisan of Ptolemy II Philadelphus.

Philochorus' religious duties implied a close knowledge

of Athenian festivals and cults, and this was linked with an interest in the myths and history of Attica. His large literary output was mostly concerned with books on religious antiquities and customs. These are sparsely represented in the extant fragments almost all of which relate to the *Atthis*. This was mainly based on the *Atthis* of Androtion enlarged by his own knowledge and research, and was arranged on an annalistic framework. Unlike most attidographers, and perhaps because the material had already appeared in other works, Philochorus dealt summarily with early Athenian history (books 1-2), passed on to the constitutional problems of Solon and Cleisthenes (book 3) and the fifth century (book 4), and with increasing detail devoted some two-thirds of his narrative to a survey of contemporary politics. He took eleven books to record the fifty-five years from the government of Demetrius of Phaleron to the Chremonidean War. The last seven books are almost entirely lost, probably because they had little interest for Alexandrine scholars, who used Philochorus chiefly in explanation of the Attic orators.

The style of the *Atthis* is plain and unattractive, but its chronological arrangement by kings and archons and the evidence of an eyewitness who was also interested in genuine research established Philochorus' position as an historian. His sources included Herodotus, Thucydides, Theopompus, and Ephorus, but his frequent references to authorities are balanced by an independent judgement. His 'Atthis against Demon', a treatise criticizing his predecessor's *Atthis*, should probably be regarded as an earlier work rather than an abridged version of his own *Atthis*.

FGH iii B, 328, and see s.v. *ATTHIS*.

G. L. B.

PHILOCTES, nephew of Aeschylus, wrote 100 plays and defeated Sophocles on the occasion when the latter produced the *Oedipus Tyrannus* (*Suda* s.v., *Arg. Soph. OT*), but is frequently attacked by the comic poets (e.g. *Ar. Vesp.* 462; *Thesm.* 168; *Cratin.* fr. 292). His unpleasant style earned him the nicknames *Χολή* (Gall) and *Ἀλμύων* (son of Brine). His plays included a tetralogy, the *Πανδιονίς*, on the story of Tereus (schol. *Ar. Av.* 281).

TGF 750-60. U. von Wilamowitz, *Aeschylus-Interpretationen* (1914), 238. A. W. P.-C.

PHILOCRATES, an Athenian statesman who initiated the peace negotiations with Philip II of Macedonia after the fall of Olynthus (348 B.C.). He headed the first peace embassy and secured a place on it for Demosthenes, who had defended him in court (347-346). On the embassy's return Philocrates proposed, and finally carried, a peace and alliance with Philip. He headed a second embassy to obtain Philip's signature, returned to carry a proposal to implement the alliance, despite Demosthenes' opposition, and served on two more embassies to Philip. Prosecuted in 343 for corruption in the peace negotiations, Philocrates absconded and was condemned to death; his prudent policy had become unpopular.

G. L. Cawkwell, *Rev. Ét. Gréc.* 1960, 416 ff.

N. G. L. H.

PHILOCTETES, in mythology, son of Pocus (*Od.* 3. 190) and leader of the seven ships from Methone and other towns of that region (*Il.* 2. 718), but left behind in Lemnos suffering from a snake-bite (*ibid.* 722-3). Homer says no more of him but that he returned safely from Troy (*Od.* *ibid.*); the *Cypria* (in Proclus) add that while the Greeks were on their way to Troy they sacrificed in Tenedos and there Philoctetes was bitten and left behind because of the stench of his wound. The *Little Iliad* continues the story. Odysseus captured Helenus, the Trojan prophet, and learned from him that Troy could not be taken unless Philoctetes was present; he therefore

went to Lemnos with Diomedes and brought him. Tragedy (the *Philoctetes* of Sophocles survives, and plays on the subject were written also by Aeschylus and Euripides) gives further details. Philoctetes had the bow and arrows of Heracles (q.v.) given him (*Soph. op. cit.* 801 ff.) or his father (Apollod. 2. 160) for lighting the pyre on Mt. Oeta. Without these Troy could not fall. He was therefore persuaded or tricked into coming (in *Soph.* Odysseus' companion is Neoptolemus (q.v. 1), whose honesty produces complications in the Plot), healed on arrival by Machaon (q.v.; *Little Iliad*), and there killed Paris. Since he had hero-cults in more than one place (near Sybaris and at Macella, Lycophron 919 ff., cf. [Aristotle], *Mir. Ausc.* 107) it was naturally said that he had wandered to Magna Graecia after leaving Troy and founded cities there; cf. Apollodorus in Strabo 6. 254.

H. J. R.

PHILODAMUS, of Scarphaea, author of a Paean to Dionysus discovered at Delphi. The poem, of some 150 lines in Aeolic metres, describes the birth and early travels of Dionysus and gives directions for his cult. Date 335-334 B.C.

TEXT. Diehl, *Anth. Lyr. Graec.* ii. 252-7; Powell, *Coll. Alex.* 165-71.

CRITICISM. H. W. Smyth, *Greek Melic Poets*, 525 ff.; Powell and Barber, *New Chapters* 1. 42 f. C. M. H.

PHILODEMUS (c. 110-c. 40/35 B.C.), born at Gadara, died probably at Herculaneum; he came to Rome c. 75 B.C. as a consequence of the First Mithridatic War and enjoyed there the favour and powerful friendship of the Pisones. One of them, L. Calpurnius Piso (q.v. 5) Caesoninus (*cos.* 58), who was probably his disciple, presented him with a magnificent villa at Herculaneum. Cicero's somewhat ironical praise of Philodemus (*Pis.* 28. 68 ff.) shows that he was already well known in 55 B.C. His connections with Piso brought Philodemus the opportunity of influencing the brilliant young student of Greek literature and philosophy who gathered around him and Siron at Herculaneum and Naples. In 44/3 B.C. he strongly opposed the policy of Antony, and aroused republican feelings in several of his disciples, as is shown by Varius' *De morte*, Virgil's *Appendix*, and the military career of Horace. Although his prose work was dull and colourless, Philodemus greatly surpassed the average literary standard of the Epicureans. In his elegant but often indecent love epigrams, some twenty-five of which are preserved in the *Anthologia Palatina*, he displays taste and ingenuity worthy of his fellow citizen Melaeus. The success of these poems is proved by the allusions to, and imitations of, them in several passages of Horace and Ovid. Although Cicero seems to imply that Philodemus' main activity was poetry, he devoted himself chiefly to the task of popularizing Greek philosophy, which he dealt with systematically and historically (in his treatise *σύνταξις τῶν φιλοσόφων*, comprising an outline of the doctrines of Greek thinkers viewed from the standpoint of Epicureanism, in ten or more books). His work covered a wide field, including psychology, theology, logic, ethics, aesthetics, and rhetoric. Particularly remarkable was his theory of art, which he conceived as an autonomous activity of the mind, independent of morals and logic, and determined not by its content, but by its aesthetic value. Though scarcely original as a philosopher, Philodemus achieved his great ambition of influencing the most learned and distinguished Romans of his age. No prose work of Philodemus was known until several rolls of papyrus, charred but partly legible, containing fragments of his writings, were discovered among the ruins of Piso's villa at Herculaneum.

TEXTS. No complete edition of Philodemus has hitherto been published. His epigrams were edited with a commentary by

G. Kaibel (1885). His prose works, apart from the general editions of the Herculanum papyri, in part appeared in the Teubner series (Sudhaus, Olivieri, Jensen, Kemke, Wilke), and in part were edited elsewhere by Gomperz (*Herk. Stud.* 1-11, 1865-6), Cronert (*Kolotes u. Menodemos*, 1906), Diels (*Abh. Berl. Akad.* 1915-16), Jensen (1923, Weidmann series), and A. Vogliano in *Epicuri et Epicureorum Scripta* (1928). A lexicon Philodemum was published by C. J. Voys (2 vols., 1934).

GENERAL LITERATURE. Suessmühl, *Gesch. Griech. Litt. Alex.* ii. 267 ff.; Ueberweg, *Präeceptor, Grundriss* 1912. 439 ff.; R. Philippson, *PW* xix. 2444 ff.; W. Cronert, *Memoria Graeca Philodemus* (1903); Cichorius, *Röm. Stud.* For Philodemus' life and villa, D. Comparetti, *Mélanges Chatelet* (1910), 118 ff.; for his theory of art, A. Rostagni, *Scritti minori* (1955), 356 ff. and the introductions to Rostagni's (1930) and C. O. Brink's (1963) commentaries on Horace's *Ars Poetica*.

P. T.

PHILOLAUS of Croton or Tarentum (b. c. 470 B.C.), a Pythagorean, contemporary with Socrates. The authenticity of the 'fragments' is still debated, but there is independent evidence for crediting Philolaus with either the invention or the first published statement of the Pythagorean astronomy which displaced the earth from the centre of the universe in favour of a fire. The legend that Plato's *Timaeus* was plagiarized from a book of Philolaus is probably as early as Aristoxenus (q.v.) but no earlier.

Diels, *Vorsokr.* 1. 398. On the fragments, E. Frank, *Plato und die sogenannten Pythagoreer* (1923), 263 ff.; contra, Zeller-Mondolfo, *Filosofia dei Greci* (1938), 1. 2. 304 ff., 367 ff. W. Burkert, *Weisheit und Wissenschaft* (1962).

G. E. L. O.

PHILOLOGY, COMPARATIVE, in British English, denotes that branch of the study of language which, by comparison of different languages, strives to elucidate their (pre)history. The languages thus compared are said to be cognate and descended from a common ancestor, either known from records or unrecorded. The former is the case with the Romance languages whose ancestor is Latin; the latter is the case with most European languages (with the exception of, e.g., Basque, and the Finno-Ugric languages, e.g. Finnish, Hungarian) and such Asiatic languages as Sanskrit, Persian, and Armenian, whose prehistoric ancestor is the reconstructed Indo-European language (IE).

Considerations of method demand that the comparative study be preceded by the historical study of language; it is essential that the history of a given language, in the case of a classical scholar that of Latin or Greek, should be followed up as far back as possible before any attempt is made to draw comparisons with other languages. In Greek, in particular, there is ample room for a historical study, on account of the wealth of dialect material as well as the exceptionally long period of almost uninterrupted documentation. Such Attic forms as, e.g., *γένη*, *φιλῶν* are shown by Homeric Greek to be from *γενεα*, *φιλῶν*, while *τιμῶν* is from *τιμῶν*, and dialect evidence reveals that Attic *τιμῶσι* is from an early *τιμῶνσι*, which itself derives from *τιμῶντι*. The last form is not directly attested, and philologists indicate the fact that a form is reconstructed, and not actually found, by an asterisk: **τιμῶντι*. The beginning of the history of Greek, the earliest document of which had for millennia been Homer, was pushed back by about half a millennium in 1952 when M. Ventris showed that the Linear B tablets were written in a very early form of Greek (see MINOAN SCRIPTS). The history of Latin begins about a thousand years later, in the latter half of the third century B.C., although philologists can learn a good deal from the few epigraphic remains scattered over the centuries; but even the earliest, the so-called Praenestine fibula, does not take us back beyond c. 600 B.C.

The comparative study and the historical study both require a familiarity with the general characteristics of language, which can only be studied on living languages. Excellent introductions to this study, descriptive linguistics, have been given by Bloomfield, Gleason, Hockett, Robins. They also deal with historical and comparative

linguistics, but for a more specialized treatment see Lehmann, Palmer (1), and Szemerényi (1) in the bibliography below.

2. Of these three branches of linguistic study—descriptive, historical, and comparative—only the first was to some extent discovered and practised by the ancients; the results of their studies are still with us in our Greek and Latin grammars. But it is undeniable that the ancients had no *penchant* for a comparative study—although the Greeks could have drawn on such languages as Persian, and even Indian—nor, what is more surprising, for a historical study. Thus when Aristotle (*Poetics* 21. 10) says that Homeric *πόλλος Πηληϊάδων* are lengthened from (his) *πόλεως Πηλειδων*, or that *κρί, δῶ, and ὄψ* are shortened (from *κριθή, δῶμα, ὄψις*), he reveals a false, because thoroughly unhistorical, attitude, which persisted down to the last century. A glimmer of a truly historical approach can be seen in Cicero's discussion of *hostis* (*Off.* 1. 37), while 'comparison' leads to the (false) derivation of Latin from Greek in the first century A.C.

But modern historical and comparative linguistics owes its being to a closer study of Sanskrit, the literary and scholarly language of India almost down to our own day. After some tentative statements by earlier scholars, and especially after Sir William Jones's paper (1786) asserting the affinity of Sanskrit to the Classical languages, it was Franz Bopp who in his work on the *Verbal Inflection of Sanskrit compared with Greek, Latin, Persian and Germanic* (1816, re-edited in English in 1820) proved by a close comparison of the various verbal forms that the languages mentioned inherited their system from a common ancestor. From this foundation-year of comparative philology almost to the end of the last century research concentrated on comparison, and, after a revolutionary upheaval initiated in the late seventies, found its codification in the still unsurpassed work of Brugmann (1). As a result it was established that the IE group embraced Indian and Iranian (forming Aryan), and Armenian in Asia, Greek, Latin (with Oscan and Umbrian), Celtic, Germanic, Balto-Slavic, and Albanian in Europe; less important and poorly known members are Phrygian, Thracian, Illyrian (with Messapic), and Venetic. The twentieth century brought to light two further groups, unknown before: Anatolian in Asia Minor (Hittite and Luwian being especially important), and Tokharian in Central Asia. The detailed study of all these languages has led to spectacular results in all fields of linguistic study, and the following survey attempts to outline the variety of problems encountered, special regard being had to the classical languages.

3. **PHONOLOGY.** A close study of the word-shapes throughout the centuries has revealed that the ultimate components of words, the sounds, show a regularity in their behaviour which is unparalleled in any other branch of the humanities. If a sound in a given word changes between two points of time, then, as a rule, the sound changes in the same way in all the words in which it appeared. 'Sound laws are without exceptions' was the slogan of the 1870s, and, in spite of the great theoretical and practical misgivings voiced ever since, the thesis has been found correct and indispensable, although the conditions must be stated very carefully. Thus an IE *bh*, preserved in Sanskrit only, invariably appears in Greek as *φ* (i.e. *p+h* in the Classical Period), while in Latin in initial position we find *f*- but internally *-b-*. Cf. Skt. *bhrātar-* 'brother': Gk. *φράτηρ*: Latin *frāter*, but Skt. *lubh-yati* 'desires': Lat. *lubet*. Even more complex is the development of IE *dh*: Greek always presents *θ* (= *t+h*) while Latin has initially *f*- but internally *-d-* and *-b-*, the latter before or after an *r*, after *u* and before *l*. Cf. Skt. *dhitma-* 'smoke': Gk. *θυμός*: Lat. *fūmus*; Skt. *madhyas* 'middle': Lat. *medius*; but Gk. *ἐρυθρός*: Lat. *ruber*; Skt

ūdhār 'udder': Lat. *ūber*, etc. Conversely, Greek shows a bewildering variety in the representation of the so-called IE labiovelars (velar sounds of the English *k g* type with lip-rounding). In historical Greek they merged with the well-known labial, dental, and velar sounds, but in the Linear B script they still have distinct signs, so that the development must have taken place after the Mycenaean period. To take a simple case, Latin *quis quid* obviously corresponds to Gk. *τίς τί*, that is to say while Latin preserves an IE *kʷasqu*, Greek changed it to *τ*. But this occurred only before *i* or *e* (cf. Lat. *-que* : Gk. *τε*). Before *a* or *o* Gk. shows *π*, cf. the interrogative forms *πόθεν* *πότε* *πότερος*, etc., from IE **kʷoi-*. This explains the connexion between *τίνω* and *ποινή*, so obvious semantically (pay—payment, fine), and so disconcerting when the sounds are compared; yet *τ*-/*π*-*ο* represent the regular developments from IE **kʷi-* and **kʷoi-*.

Whereas the consonants, apart from the fairly stable liquids (*l r*) and nasals (*m n*), show a lesser or greater degree of variability, the basic vowels of IE (*a e i o u*, short and long) are fairly faithfully preserved in the classical languages, in Latin in first syllables at least. Cp.

a	IE <i>*agō</i>	'I drive'	Gk. <i>ἄγω</i>	Lat. <i>agō</i>
ā	<i>*mātēr</i>	'mother'	<i>μάτηρ</i>	<i>māter</i>
e	<i>*bherō</i>	'I carry'	<i>φέρω</i>	<i>ferō</i>
ē	<i>*plē-</i>	'full'	<i>πλήρης</i>	<i>plē-nus</i>
o	<i>*oktō</i>	'eight'	<i>οκτώ</i>	<i>octō</i>
ō	<i>*dō-</i>	'give'	<i>δῶρον</i>	<i>dō-num</i> , etc.

Particularly interesting are the so-called sonants of the IE parent language, which in the classical languages develop differently and at first sight show no similarity. In IE, the liquids and nasals could (like the vowels) form the centre of a syllable (could be syllabic or sonant) if they were placed between the consonants; the sounds were similar to the English *-on* in *button*, or *-le* in *bubble*, etc. The IE sonant liquids are preserved in one language, in Sanskrit, where we often find syllabic or sonant *r* (transcribed as *ṛ*); cp. *mṛta-* 'dead', *kṛp-* 'body', etc. In the classical languages the sonant liquids of IE (*l r*) always develop a vowel, either in front of them (Lat. *ul* or *ol* or; Gk. *αλ* *ap*) or after them (Gk. *λα* *pa*). Thus Skt. *ṛkṣa-* 'bear' corresponds with Gk. *ἄρκτος* but Lat. *ur(c)us*. The sonant nasals are preserved in no language; their discovery is due to Brugmann (2), and is of particular importance for the classical languages. The Grecian knows that *τεῖνω* (*τεν-*) : *τα-τός*, *κτείνω* (*κτεν-*) : *ἐκτα-το*, etc., are frequent interrelations but he can find no rational explanation for them. The Sanskritist will find similar alternatives in Skt. *tan-* 'stretch' : *ta-tás*, *han-* 'kill' : *ha-tás*, etc. Brugmann pointed out that the relation of *εἰ-μι* : (*πρός*)-*ι-τος*, *φειν-* : *φικ-τός*, showed that the verbal adjective was formed from the weak root which lost its *e* (nil-grade); that *τεν-* *κτεν-* were therefore expected to form *tn-tos*, *ktn-tos*, with a syllabic nasal (*ṇ*) which obviously developed into *a* in Greek (and Sanskrit) but *en* in Latin. This at once explained why the aorist of *πενθ-* 'suffer' was *ἐπαθ-ον* (cf. *ἐφύγον*). Similarly, the aorist of *δέρκομαι* was *ἔδρακον* (from *-drk-*), that of *πέρθω*, *ἐπάρθον* (from *-pṛth-*), etc. In contrast to *ἀγομαι* *ἄγοντο*, the athematic *κείμαι* forms *κείται* *κείατο* whose *-ατο* represents *-ṇται*, *-ṇτο*. In IE, the acc. sg. had the ending *-m*, cf. *rosa-m*. But after a consonantal stem, *-m* had to become syllabic (*-m̥*) which in Greek gave *-a*, in Latin *-em*; hence, *πόδ-a*, but *ped-em*, in contrast to *νόμο-v* with *-v* from *-m* and *ερυ-m*. The same applies to *δέκ-a* : *dec-em*, *ἐπτ-ά* : *sept-em*, etc.

The most remarkable achievement of research over the last century has been to show that such exact phonetic correspondences can be found between all IE languages. They are often at their clearest between the classical languages.

4. MORPHOLOGY. The same detailed agreement obtains between inflectional patterns of the classical languages, and their cognates. The declension of *familia*, with the old gen. *familiās* (retained in class. *pater familiās*), closely corresponds to that of *οἰκία* *-ᾱν* *-ās* *-ᾱι*. A most striking agreement exists between *familiārum* and early *οἰκιάων* (Ionic *-ῶν*, Attic *-ῶν*), in which *-ārum* and *-ᾱων* both represent *-āsōm*. Equally close parallels can be observed in the other declensions, the pronouns, the verbal inflections, etc.

Inflectional patterns also reveal another great force at work in the history of languages: side by side with, and often against, the sound laws work formal patterns, which may produce unexpected results. As we have just seen, the old gen. sg. of Latin *-ā-stems* was in *-ās*. But already in Old Latin, the norm is *-ā-i* (later *-ai*, *-ae*), obviously on the model of the *o-stem* gen. (*dominī*). Conversely, the original *o-stem* gen. plural in *-um* which survives into classical times in the prosaic *triumvirum liberum talentum* and poetic *deum diuom*, etc., was replaced on the analogy of the *-ā-stems* by *-ōrum*: *deōrum sociōrum* after *deūrum*, etc. Analogy is also a potent force in the manifold transformations of the inherited system of numerals. One interesting example is the gradual spread of the ending of *decimus* to all the subsequent ordinals, such as *vicēns-imus* (instead of **vicēnsus*) *tricēs-imus* down to *millesimus*; see Szemerényi (2).

For a detailed study of the phonology and morphology of the classical languages, excellent guides are Buck, Meillet-Vendryès; for Latin, Kent (1, 2); for Greek, Lejeune, Chantraine (1); for Homeric Greek in particular, Chantraine (2), Palmer (2). The more ambitious student will have to turn to Leumann-Hofmann and Schwyzler-Debrunner.

5. SYNTAX. The case-system of the classical languages represents a gradual reduction of an earlier richer system of (at least) eight cases, found as such in Sanskrit only. The contraction means that some cases now combine functions that earlier had distinct expressions (syncretism); hence the apparently contradictory functions performed by, e.g., the Latin ablative. One of the exciting discoveries of direct relevance to Greek syntax cleared up the curious Greek rule that after a neuter plural subject the verb is in the singular: *φύλλα καὶ ἄνθεα γίνονται*. Although unknown to Latin, the rule was inherited from IE as is clear from its observance in early Indian and Iranian. J. Schmidt showed that its basis was the fact that the neuter plurals were originally collective singulars. The curious rule that unemphatic words (e.g. particles, pronouns) take the second place in the sentence was shown to be a general IE feature in a brilliant paper by Wackernagel (1). Many aspects of the use of moods can only be cleared up by the comparatist, cf. e.g. Gonda.

The elaborate sentence construction of the classical languages, in which hypotaxis seems the dominant feature, can in many cases be shown to be based on a shift of earlier paratactic constructions. Earlier juxtapositions such as *timeo—ne veniat* 'I am afraid—may he not come', *timeo—ut veniat* 'how could he come', were shifted in meaning, rather illogically to our feeling, to 'I am afraid that he might (not) come'; the same explanation applies to *φοβοῦμαι μὴ (οὐκ) ἔλθῃ*. Similar shifts occur with words clearly indicating dependence, usually from a concrete meaning towards a more abstract one. Gk. *ἵνα* originally meant 'where' and, depending on the meaning to be conveyed, its verb could be in various moods. With the indicative, *ἵνα* always retained the original meaning: *ἐν ἀγορᾷ . . . ἵνα ὅμων πολλοὶ ἀκηκόασι* (Pl. *Ap.* 17 c). But with the subjunctive or optative *ἵνα* assumed a final nuance, which became its main function in classical times. The transition can be seen in, e.g., *Iliad* 3. 130: *δεῦρ' ἴθι . . . ἵνα θέσκελα ἔργα ἴδῃαι* 'come here where you

might see . . . ' i.e. 'so that you . . . '. Both *iva* and especially final *ut* are elegantly illuminated by Leumann (1).

For a systematic exposition of the syntax of the classical languages on a historico-comparative basis see Meillet-Vendryès, Wackernagel (2), for both classical languages; Schwyzler-Debrunner ii, Humbert for Greek; Palmer (3, ch. 10), Ernout-Thomas, for Latin.

6. ETYMOLOGY. The origin of words has always exercised some speakers at any rate. Greek philosophers at one time hoped to get to the essence of things by a linguistic analysis; Plato's *Cratylus* both illustrates the method and shows its futility. But, even though philosophers felt disappointed, philologists went on for centuries seeking the original, true meaning of any given expression. 'The ancients' willful interpretations (e.g. Aelius' derivation of *vulpes* from *volat pedibus*, or *lepus* from *leui-pēs* 'light-foot') are of course useless today but only because from the beginning of the last century plentiful material has become available from cognate languages. To be sure, comparatists of the early nineteenth century still hoped to recover the original meaning: thus *pater* was interpreted either as 'protector' (cf. Skt. *pā-* 'protect') or as 'provider, nourisher'. Gradually, however, etymology came to assume its modern meaning: we now strive to recover the earliest form and meaning of a given word, without hoping always to be able to recover the 'original' meaning. 'Today we know our limitations and are ready to stop when we cannot legitimately go further.

This does not mean that comparative philology has not cleared up many problems which would have remained insoluble within Latin or Greek. The word *πρωή*, mentioned above, would hardly be analysable in Greek. The comparatist can show that it derives from IE **kwoi-nā*, represented also by Lithuanian *kaina* 'price', Slavic *čena* 'id.', Iranian *kainā* 'punishment'; what is more, he can show that this noun derives from a verbal root **kwi-* 'to pay' which survives in *τίω*. The research of a century has succeeded in amassing a vast corpus of firmly established etymologies, conveniently listed in etymological dictionaries (Ernout-Meillet, Walde-Hofmann; Boisacq, Frisk).

It is by paying close attention to phonetic laws, to the implied change of meaning, and to the morphological problems, especially the problems of word-formation that the modern etymologist can hope to get beyond his precursors; see Szemerényi (3-4). Here again, it would be futile to look to cognate languages before clearing up the history of a word or a word-group within the language concerned: historical study must precede the comparative study. In Greek in particular much useful work has been done in this field (e.g. 'the history of *κλέος*' or 'the verbs of seeing in Greek', etc.), but much remains to be done, especially in Latin.

7. HISTORY OF THE LANGUAGE. The prehistory and the history of the phonology and grammar by no means exhaust the problems confronting the student. The study of the lexicon, sketched out in (6), also remains incomplete if it is directed solely to the vocabulary inherited from IE. Every language, of necessity, is exposed to the influence of its environment. This manifests itself most clearly in a number of borrowings. These loan-words are taken over either from an autochthonous population with a high civilization, conquered by the invaders (the Greeks borrowed many words from the Aegean population), or by the autochthonous population from the conquerors whom they manage to absorb (French is Latin with a good many Germanic elements), or from neighbouring populations. The latter is often the case with Latin which absorbed many Greek (Ernout) but also Oscan and Umbrian dialect words. Less easy to pin down is foreign influence affecting the phonology and grammar, although it must be postulated.

Since the classical languages are descended from IE,

and IE certainly was not spoken either in the Balkan peninsula or in Italy, it follows that the classical languages were brought there by invaders. This is the first lesson taught by comparative philology, and it is of fundamental importance. Further, since Latin and Greek were brought, in an embryonic state at any rate, from the IE homeland, one might ask whether they had been closely related there. The classicist would be inclined to assume that this must have been the case. But the comparatist can show that Greek has hardly any real agreements with Latin—beyond sharing a common inheritance—while it has many striking features in common with Indian and Iranian, such as the augment, the prohibitive **mē*, the more recent comparative formation (-*τερο-*, Skt. *-lara-*), etc. Latin, on the other hand, shows clear connections with Celtic and Germanic, but hardly any special agreements with Greek, except perhaps the quite unusual change of the IE mediae aspiratae (*bh dh gh*) to voiceless aspirates (*ph th kh*); see Szemerényi (5, p. 11 f.).

The prehistoric influences between various IE, and perhaps non-IE, groups [Porzig; Palmer (3), ch. i] are merely a prelude to the environmental exposures in the historical habitats. But the internal history of the classical languages, in particular the development of the literary languages in Greece and Rome were just as, if not more, important factors, especially in Greece where the local dialect, in which a genre first took shape, had a lasting hold on that genre. The problems have been given masterly presentations by Meillet (1, 2) and Palmer (3).

The works indicated in the text by the authors' names are here listed in alphabetical order; different works by the same author are distinguished by numbers in brackets.

PHILOMELA (Φιλομήλα). Pandion, king of Athens, had two daughters, Procne (Πρόκνη) and Philomela, of whom the former was married to his ally, Tereus, king of Thrace, son of Ares. Tereus, pretending that Procne was dead, asked that Philomela might be sent to him, and on her arrival raped or seduced her and then cut out her tongue to prevent her telling. She contrived to send her sister a piece of embroidery on which she had woven her story. Procne found her and took revenge on Tereus by serving

him at a meal with the flesh of his and her child Itys. Finding this out, he pursued the women, but the gods turned him into a hoopoe, Procne into a nightingale, and Philomela into a swallow (a later tradition, represented in Latin authors, reverses these last two).

Apollocl. 3. 193 ff.; Ov. Met. 6. 424 ff.

H. J. R.

PHILOMELUS, Phocian commander in the Third Sacred War (q.v.). Elected *strategos autokrator* of Phocis at the threat of war, he seized Delphi (summer 356 B.C.), raised 5,000 mercenaries, defeated the Locrians and Boeotians in the winter, and allied Phocis with Athens and Sparta. In autumn 355, when the Amphictiony declared a Sacred War on Phocis, Philomelus used temple funds to raise 10,000 men; in 354 he defeated the Thessalians and defended southern Phocis until he was defeated and committed suicide near Neon (late autumn 354). An able diplomatist and general, he based Phocian power on mercenaries and the Delphic monies.

N. G. L. H.

PHILON (1) of Eleusis (4th c. B.C.), architect. He designed the arsenal at Piraeus, and added a porch to the Telesterion at Eleusis. The former building was destroyed by Sulla, and no vestiges of it have been identified; but we possess a detailed specification (*IG* II². 1668). His books on the arsenal, and on the proportions of sacred buildings (Vitr. 7 praef.), have not survived.

II. W. R.

PHILON (2) of Byzantium (*PW* 48), writer on technology (probably late 3rd century B.C.), was an imitator of Ctesibius (q.v.), and was himself used by Heron (q.v.). He wrote a compendium of technology (*μηχανική σύνταξις*) in nine (?) books. Of this there are preserved: book 4, *βελοναϊκά*, on the construction of war-catapults; book 5, *πνευματικά* (in Arabic translation), on the construction of siphons and other devices worked by the action of air and fluids; parts of book 7, *παρασκευαστικά*, and of book 8, *πολιορκητικά*, on the construction of offensive and defensive works and other measures to be taken in case of a siege. The lost book 6, on automata-making, is referred to by Heron (*Opera Omnia*, ed. Schmidt, 1. 404 ff.). Though not uninterested in theory (see the introduction to the *Pneumatica*), his primary concern is the construction of devices for use or amusement.

Eutocius (*Comm. in Arch. de Sph. et Cyl.* 60–2 Heiberg²) informs us of a solution by Philon to the problem of finding two mean proportionals ('doubling the cube'). It is essentially the same as the solutions by Apollonius and Heron. Philon refers to this (*Beloporica* 7) as coming from book 1.

EDITIONS. *Belopoeica*, ed. H. Diels and E. Schramm (with German transl.), *Abh. Berl. Akad.* 1918, Phil.-hist. Kl. Nr. 16. *Pneumatica*, ed. Carré de Vaux (with French transl.), in *Notices et extraits des manuscrits* xxxviii, 1 (1903), 27 ff. A medieval Latin partial translation was published by V. Rose, *Anecdota Graeca et Graecolatina* 2 (Berlin, 1870, repr. Amsterdam, 1963), 297 ff., and in *Heron's Opera Omnia* i. 458 ff. *Paraskeustica* and *Polioretica*, ed. H. Diels and E. Schramm (with German transl.), *Abh. Berl. Akad.* 1919, Phil.-hist. Kl. Nr. 12.

LIFF AND WORKS. De Rochas and Graux in *Rev. Phil.* 1879, 91 ff. COMMENT. *Pneumatica*: A. G. Drachmann, *Ktesibios, Philon and Heron* (Copenhagen, 1948), 41 ff. Doubling the cube: Heath, *Hist. of Greek Maths* 1. 262 ff. G. J. 1.

PHILON (3, *PW* 40) **OF LARISSA** (160/59–c. 80 B.C.), the last undisputed head of the Academy. The term 'New Academy' was applied to the sceptical Academy first by Antiochus of Ascalon. 'Middle' and 'Fourth' Academy are later doxographical terms.) Philon studied for eight or nine years in his home town under Callicles, a pupil of Carneades, before he went to Athens at the age of 24 to study under Clitomachus, whom he succeeded as head of the Academy in 110/109 B.C. In 88,

during the Mithridatic wars, he left for Rome, where he numbered among his pupils Catulus, father and son, and Cicero, who became his most devoted pupil and follower. About this time, his controversy with Antiochus of Ascalon led to a break within the school and to Antiochus' assuming the leadership. Philo probably remained in Rome, where he died some time before 79 B.C.

Although Philon published many books, none of them, or their titles, have survived, and we know nothing about their form. Some of his teachings are represented in a long passage in Stobaeus and in Cicero's own speeches in the *Academicus Primus* and *Lucullus*. It is possible that he is the source of book III of Cicero's *De Natura Deorum* and of book IV and part of book V of his *De Finibus*. The attempt to claim him as the source of Cicero's *Tusculans* is unconvincing.

Like his predecessors, Philon was a representative of the sceptical Academy of Arcesilaus in the somewhat milder version of Carneades. Against the Stoic theory of truth he maintained the sceptical principle of *ἀκαταληψία* (the impossibility of certain knowledge), admitting also the Carneadean modification that some things, though still not certain, are more convincing (*πιθανά, probabília*) than others. The concept of *ἐνσυνεία* (perspicuity), which he is probably the first to use, is perhaps only a variant on the Carneadean term.

Philon divided moral philosophy into four main parts: (1) *προτρεπτικός (λόγος)*—exhortation to philosophical activities; (2) *περί ἀγαθῶν καὶ κακῶν*—the general nature of good and evil; (3) *περί τελῶν*—on the various philosophical doctrines of the highest good; (4) *περί βίων*—on the various sorts of happy life—the latter subdivided into *ἰδίας* and *πολιτικός*—what Aristotle called Ethics and Politics. This, however, is probably not so much a positive doctrine as a general typological study of the various ethical doctrines in existence, not unlike the famous division of Carneades (*Cic. Fin.* 5. 16 ff.).

In Rome, Philon taught some rhetoric (*Cic. Tusc.* 2. 9), but probably concentrated on the philosophical part, the 'topics' rather than on rhetorical techniques (*Cic. De Or.* 3. 110).

Despite modern tendencies to see him as an eclectic with some positive doctrines to teach, there is no clear evidence that Philon was ever anything but a sceptic, who firmly believed in the continuity of scepticism in the Academy ever since Plato himself—though he was probably prepared to admit that some dogmatic teachings are more consistent and 'probable' than others.

PHILON (4), commonly known as **Philo Judaeus** (c. 30 B.C.–A.D. 45), spent all his life in his native city of Alexandria and became head of its Jewish community, which he represented on the delegation sent to Rome in A.D. 39–40 to ask exemption from the duty of worshipping the Emperor. This is the only incident from the life of Philo of which anything is known; it is related at length in his pamphlet *Legatio ad Gaium*. Here and in his *In Flaccum*, a similar treatise of earlier date, Philo tries to show that God is mindful of His people and punishes with death their persecutors (i.e. the Roman prefect of Egypt and the Emperor). These works exerted a lasting influence upon early Christian literature, e.g. upon the *De mortibus persecutorum*; the latter took over from Philo the idea that persecutors themselves are responsible for evoking the inevitable punishment which, by God's judgement, eventually overwhelms them. Philo cannot, however, be considered as an enemy of Hellenistic and

Roman civilization merely because he was opposed to the worship of the Emperor Gaius; for besides speaking of Augustus and Tiberius in very high terms of praise, and adapting formulas of the Hellenistic ruler-cult to the praise of the Jewish patriarchs, he casts the traditions of Judaism into the literary forms of Greek allegory. Modern scholars have often overestimated the extent of Philo's indebtedness to Judaism, especially to the Alexandrian school. In fact, he owes far more to Greek philosophy, and his very efforts to demonstrate a substantial similarity between Hellenic and Jewish doctrines are a proof of his Hellenistic character. His main sources were indisputably Plato, Aristotle, and the Stoics, above all Posidonius; the extent of his indebtedness to Neopythagoreanism, although great, is now difficult to estimate. Despite his scanty originality as a philosopher, Philo played a very important role in the history of ancient thought as a mediator between Hellenistic philosophy and both Christianity and Neoplatonism. Not only did the author of the *De moribus persecutorum* and Plotinus borrow from him, but St. Augustine probably derived from Philo his theory of the two cities, which is merely an application of Philo's dualism to the realm of politics. Nevertheless, Philo did not bridge the gulf between the world of God and the world of matter, since, had matter been created by God, the existence of evil would be inexplicable. To establish an artificial connexion between the two worlds Philo introduced intermediary beings representing the different aspects of God's existence and thought. With these God communicates only through an intermediary, which Philo calls Logos and is careful to distinguish from God himself: the word Logos refers to God in so far as His existence is conceived as pure thought, while the word God merely indicates His essence as pure Being. Man's duty is to conform to the will of God, not only by living according to His law, but by 'seeing' Him. This supreme achievement, the discovery of the essence of God, can be reached only by means of 'ecstasy', which Philo thinks of as an act of grace. But worship and purity of life and mind enable man to succeed in achieving communion with God in His existence as thought. In Philo's system the soul of man is ultimately dependent on the grace of God and cannot enjoy communion with Him by a spontaneous activity of love unassisted by grace.

TEXTS. Best complete edition: Cohn, Wendland, Reiter (ed. *major*, 7 vols., 1896-1930; ed. *minor*, 6 vols., 1896-1915). Ed. T. Munke (London, 2 vols., 1742). *Œuvres*, ed. R. Arnaldez, C. Mondésert, and J. Pouilloux (1961 ff.). English Translation. Loeb (10 vols., 1929 ff.). Fragments, ed. J. Rendel Harris (1886). The *In Placum* edited with an historical commentary by H. Box (1939), *Legatio ad Gaium*, by E. M. Smallwood (1961).

PHILON (5) of Byblos (A.D. 64-141) composed in Greek a learned work of euhemeristic character in which for the Phoenician religion he cites at length, as he alleges, from the Phoenician Sanchuniathon, who had devoted a treatise in his own language to theogony, cosmogony, and the origins of civilization. Extensive fragments of Philo have been preserved by Eusebius in his *Præparatio evangelica* (1. 9. 22 ff.) with a parallel in Theodoret. These fragments have now been critically republished, along with translation, extensive essays, and full bibliography, by C. Clemens, 'Die phönikische Religion nach Philo von Byblos', *Mitteilungen d.*

vorderasiatisch-ägyptischen Gesellschaft xlii, pt. 3 (1939). Over Philo's alleged translation there has been long dispute, distinguished scholars like Baudissin regarding it as a fraud. But the extraordinary recent discoveries at Ras Shamra, ancient Ugarit, on the Syrian coast north of Laodicea-Latakia, of fourteenth-century B.C. documents, in alphabetic cuneiform script, and of Hebrew language, containing lengthy mythological texts, epic, choric, etc. (published for the most part in Syria since 1929), have proved conclusively that Sanchuniathon is doubtless a verity in view of the many correspondences between him and these fresh texts and of the picture of the lush development of Phoenician mythology by the middle of the second millennium.

Philo also wrote a *Ῥηματικόν* (paradigm of verb-flexions), and a dictionary of synonyms (the probable source of the Byzantine Pseudo-Ammonius). He was much used by Hesychius of Miletus. See also SANCHUNIATHON.

PHILONIDES, Athenian comic poet, produced Aristophanes' *Wasps*, *Amphiarus*, and *Frogs*; we have three titles of his own plays, and he may be the Φιλ[who won first prize at the City Dionysia c. 410 B.C. (*IG* ii². 2325. 64). It is stated by hyp. 1 Ar. *Vesp.* that he won first prize with *Ἰππογῶν* at the Lenaia in 422 B.C., but *Ἰππογῶν* is everywhere else attributed to Aristophanes.

FCG ii. 421 ff.; CAF i. 254 ff.; FAC i. 564 ff.

K. J. D.

PHILOPAPPUS, Syrian prince, Roman consul (A.D. 109), and Athenian archon. His sepulchral monument, erected between 114 and 116, stands at Athens on the top of the Museum Hill. His full name was C. Julius Antiochus Epiphanes Philopappus, his grandfather being Antiochus IV, the last king of Commagene.

OGI 409-13. PIR ii¹. 166, 99; ii². 262, 1086.

V. E.

PHILOPATOR, Stoic, probably of the time of Hadrian (A.D. 117-38). See Zeller, *Phil. d. Griechen* iii. 1⁴. 169, 714.

PHILOPOEMEN of Megalopolis (c. 253-182 B.C.), the Achaean soldier and statesman, was trained from his youth in arms and taught by the patriotic Megalopolitan philosophers, Ecdemus and Demophanes. He resisted Cleomenes (223) and won praise from Antigonus Doson at Sellasia. After ten years' mercenary soldiering in Crete, he became hipparch of the Achaean Confederacy in 210/09 and general in 208/7, reforming the army, and in 207 defeated Machanidas of Sparta at Mantinea. General again in 206/5 and 201/200, he repelled Nabis in 202-200. In the Second Macedonian War, favouring neutrality, he lost influence and returned to Crete (199/8). Reappearing after the Roman evacuation to find war with Nabis, he became general (193/2) and blockaded Sparta. Flaminius made a settlement, but on Nabis' assassination (192) Philopoemen incorporated Sparta in the Achaean Confederacy. In annexing Messene and Elis (191) and as general in 191/90 or 190/89 and in 189/8 he dominated policy; finally, in 188, on an ambiguous ruling of the Senate, he demilitarized Sparta and abolished the Lycurgan institutions. General again in 187/6 and 183/2, he was captured during the revolt of Messene and given poison (182). A great soldier and patriot, 'the last of the Greeks', he remained in politics the Megalopolitan, narrow and rancorous, pressing Flaminius' and the Senate's acquiescence in Achaean rights to dominate the Peloponnese, when wider statesmanship was needed to strike a balance with Roman power in Greece.

Polyb. 2. 40; 2. 67-9; bks. 10-11, 16, and 20-4; Livy, bks. 35-9, *Plut. Phil.*; *Flam. D. Sanctis, Stor. Rom.* iii. 2. 427, 443; iv. 1. 57, 133, 169, 220, 238, 402 ff.; A. Aymard, *Les Premiers Rapports de Rome et de la confédération achéennienne* (1938). F. W. Walbank, *Philip V of Macedon* (1940); R. M. Errington, *Philopoemen* (1968). A. H. McD.

PHILOPONUS, JOHN, c. A.D. 490-c. 570, a Christian 'grammarian' who became pupil and virtually literary executor of Ammonius, son of Hermias. From 517, mainly from notes of Ammonius' lectures, he published commentaries on Aristotle's *Categories*, *Analytica*, *Meteorologica*, *de Generatione*, *de Anima*, and *Metaphysics* (the last is unprinted). With Philoponus the Alexandrian school thenceforth became Christian. In 529, the year in which Justinian closed the rival school at Athens under Damascius, he published 'On the eternity of the world against Proclus', arguing that Plato's *Timaeus* implies that the world was created in time, though by God's will it continues for ever, and also a (lost) work against Aristotle's doctrine that the circular movement of the heaven is eternal and that the heaven is of a fifth essence. The latter was angrily attacked in Simplicius' commentaries on *de Caelo* and *Physics*. As theologian he applied Aristotelian ideas to defend monophysite Christology and, in a dialogue entitled 'Arbiter' preserved in Syriac (damaging Greek fragments in John of Damascus, Migne, *PG* xciv. 743), he developed the doctrine of the Trinity in a manner open to charges of tritheism. He dedicated to Sergius, monophysite patriarch of Antioch c. 546 (?), his *de Opificio Mundi*, attacking Theodore of Mopsuestia's naive use of scripture as a scientific authority and harmonizing Genesis with Greek cosmology; this work provoked confused polemic from Cosmas (q.v.) Indicopleustes. An attack on the 'two-nature' Christology of the council of Chalcedon, written after 553, is partly preserved in the twelfth-century chronicle of Michael the Syrian; it was known to Photius (q.v.) (*cod.* 55), who also reviewed works now lost on the Resurrection, the Trinity, and against Iamblichus (q.v. 2) on idolatrous images (21, 75, 215). He was not the theologian attacked by Severus of Antioch, *contra impium grammaticum* (as was argued by Gudeman, *PW*, s.v. Ioannes 21).

Commentaria in Aristotelem Graeca, 13-17 (1887-1909); *de Aeternitate Mundi*, ed. H. Rabus (1899); *de Opificio Mundi*, ed. G. Reishard (1897); *Opuscula Monophysitica*, ed. A. Sanda (1930). B. Altaner, *Patrology* (1960), 612 f. H. G.

PHILOSOPHY, HISTORY OF. Aristotle often gives in the introductions to his works a survey of the history of the problem he is going to treat. The scope is more systematic than historical; the treatment is rather polemical. He advised his pupils, however, to write similar works of their own, not as introductions but as separate and autonomous books. Thus Theophrastus wrote a history of Physics and Metaphysics (the fragments and the later history of which are treated in a masterly way by H. Diels, *Doxographi Graeci*, 1879). Eudemos histories of Theology, Astronomy, Geometry, and Arithmetic. In these works history prevails over systematic philosophy, although they follow the order of problems, not of time, and contain some criticism. They are the basis of all later work in this field. In the same generation another Aristotelian, Aristoxenus, became the first writer of philosophical biography.

Scholars in Alexandria found an external principle of unification by arranging the extensive material under 'successors' (*διδάσχοι*). They made up lineages of teachers, pupils, and pupils of the pupils, many of whom became presidents and successors of their respective schools. This also is the scheme of the only complete ancient history of philosophy which has been preserved,

that of Diogenes Laertius. In this work, as was often the case, biography and doxography are combined.

The standard general work (which takes account of Roman as well as of Greek philosophers) is E. Zeller, *Philosophie der Griechen*: 1st (1919-20), the Pre-Socratics (1881); 2. 1st (1889) (Socrates and the Socratics, 1868, Plato and the Older Academy, 1888); 2. 2^d (1921), Aristotle and the Earlier Peripatetics (1897); 3. 1st (1909), Stoics, Epicureans, and Sceptics (1886); 3. 2^d (1903), Eclectics (1883). An Italian transl., with extensive additions, by R. Mondolfo (1932-8), comes down to the Pythagoreans (inclusive). There is a shorter work by Zeller, *Grundriss der Geschichte der griechischen Philosophie*¹¹ (1928) (E.T. 1892).

A shorter but still fairly full treatment and an excellent bibliography will be found in F. Ueberweg, M. Heinze, and K. Praechter, *Grundriss*¹² (1926). See too Guthrie, *Hist. Gk. Phil.* (1962-).

The chief collections of fragments are: Mullach, *FPG*; Diels, *Fragmenta*¹³; von Arnim, *SVF*. C. J. de Vogel, *Greek Philosophy I-III* (1950-9), is a useful collection of leading passages, with notes. H. Diels, *Doxographi Graeci* (1879), is the standard edition of the Doxographers.

Other books are mentioned under the various schools and philosophers. W. D. R.

PHILOSTEPHANUS of Cyrene (3rd c. B.C.), pupil or friend of Callimachus, wrote: (1) geographical works, full of marvels and fables (*Ath.* 7. 297 f, 8. 331 d; *Aul. Gell.* 9. 4. 2; *Harpocr.* s.vv. *Βοήχρη*, *Στρώμν*; *schol. Pind.* *Ol.* 6. 77); (2) a mythological and antiquarian treatise *Notebooks* (*ὑπομνήματα*) (*schol. Ap. Rhod.* 2. 124); (3) *On Discoveries* (*Clem. Al. Strom.* 1. 308 a). J. F. L.

PHILOSTORGIUS (c. A.D. 368-430/40), a Cappadocian resident in Constantinople, composed a *Church History* continuing Eusebius to A.D. 425. This is not extant, but Photius epitomized it and fragments survive elsewhere. He writes as a layman and an Arian of the Eunomian school. Though essentially apologetic, his work is a useful corrective and supplement to the orthodox historians, Socrates, etc.

Ed. J. Bidez (Berlin, 1913); further fragments in *Byzantion* 1914-5. S. L. G.

PHILOSTRATI. Four members of this family, which was of Lemnian origin, are probably to be distinguished. (1) Verus, a sophistic writer of the second century A.D., none of whose works survives. (2) Flavius Philostratus, son of Verus, born c. A.D. 170. He studied at Athens, and later joined the philosophical circle patronized by Septimius Severus and his wife Julia Domna. At her instance he wrote the *Life of Apollonius of Tyana*, a philosophizing mystic of the first century A.D.; the *Ἡρωικός*, a dialogue concerned with the cult of Protesilaus, probably belongs to the same period. After returning to Athens he wrote *Βίοι σοφιστῶν*, chiefly interesting for notices of his contemporaries. He is probably also the author of a few of the Philostratan *Ἐπιστολαὶ ἑρωτικαί*, of the protreptic *ὑμνωστικός*, of the second of the two *Διαλέξεις*, and of the dialogue *Νέρων*, wrongly attributed to Lucian. He died in the reign of Philip the Arab (A.D. 244-9) (*Suda*). (3) Philostratus Lemnius (*Βίοι σοφ.* 2. 27), born c. A.D. 191; a great-nephew of Philostratus (1), and son-in-law of Philostratus (2). He wrote the earlier *Εἰκόνες*, purported descriptions of pictures in a Neapolitan collection; probably also the second *Διάλεκσις* (see LITERARY CRITICISM IN ANTIQUITY, 1. 6). (4) A grandson of Philostratus (3) (*Eik. B. proem.*), who wrote the later *Εἰκόνες*.

The *Life of Apollonius* is not uninteresting on account of the mystical and orientatizing tendencies which it illustrates; some have seen in it a counterblast to Christian propaganda: the *Ἡρ.* shows similar characteristics. But Philostratus (2) finds his happier vein in the *Βίοι σοφ.*, a work which throws valuable light on the habits and personalities of the Second Sophistic. It is written in the affectedly simple and unmethodical style. The earlier *Eik.*, though they add to our knowledge of Hellenistic

art, are hardly, in spite of their subsequent popularity, to be accepted as a serious contribution to criticism; they are exemplary exercises in the art of rhetorical description. It is not certain that the pictures which they purport to describe actually existed. The later *Elc.* are distinctly inferior to them.

The *Suda* (confused notice).

EDITIONS. C. L. Kayser (1844-53; comment.) (1870-1, Teubner); J. Juthner (1909, *Typh.*); O. Henschel and C. Schenkl (1893; *Elc. A*); C. Schenkl and A. Reisch (1902, *Elc. B*).

TEXT AND TRANSLATION. *Life of Apollonius*, F. C. Conybeare (Loeb, 1912); *Bios ophiostōn*, W. C. Wright (Loeb, 1922); *Εὐδοκῆς*, A. Fairbanks (Loeb, 1931). *Letters*, A. R. Benner and F. H. Fobes (Loeb, 1949). Translation, *Life of Apollonius*, J. S. Phillimore, 1912.

CRITICISM. K. Munscher, *Philol. Suppl.* 2 (1907); F. Solmsen, *PW* xx, 124 ff. (authorship, etc.). W. Schmid, *Atticorum* iv (1896) (P. II, language). See also G. W. Bowersock, *Greek Sophists in the Roman Empire* (1969), ch. 1. W. M. E.; R. B.

PHILOTAS (c. 360-330 B.C.), a Macedonian noble, son of Parmenion (q.v.), and the commander of the *εἰρηνοὶ* or Guards Corps in the early campaigns of Alexander the Great. He was distinguished among Alexander's marshals by his gallant bearing and liberality, but gradually became alienated from the king himself. This estrangement may have been due to Philotas' resentment of the disfavour shown by the king to Parmenion, or of Alexander's tendency to disregard Macedonian custom and to adopt oriental habits. In 330 he was accused of conspiracy by Alexander before the Macedonian army, which found him guilty and executed him with a volley of javelins. Philotas was clearly convicted of connivance at a plot against Alexander, but it is uncertain whether he was an active conspirator. The story that under torture he incriminated his father may be dismissed as a later embroidery, perhaps intended to justify Parmenion's execution without trial.

Art. *Anab.* 3. 26, *Plut. Alex.* 48-9; Curtius Rufus, *Hist. Alex.* vi, passim; Berve, *Alexanderreich*, no. 802; E. Badian, *TAPA* 1960, 324 ff. M. C.

PHILOXENUS (1) of Cythera (436/5-380/79 B.C., *Marm. Par.* 82), dithyrambic poet. He lived at the court of Dionysius of Syracuse, who sent him to the quarries (Ael. *VII* 12-44). His most famous work was his *Cyclops*, in which the Cyclops sang a solo to the lyre—a great innovation (schol. Ar. *Plut.* 290). The work is parodied in *Plut.* 290 ff. See MUSIC, § 10.

TEXT. Page, *Poet. Mel. Gr.* 421-32.

CRITICISM. Pickard-Cambridge-Webster, *Dithyramb*, 45 ff.

C. M. B.

PHILOXENUS (2), author of poem *The Banquet* quoted by Plato *Comicus* (ap. Ath. 6 d), which described a feast in full dithyrambic language (Ath. 146 f). He may be the same as Philoxenus son of Eryx (Ar. *Ran.* 932 ff.).

TEXT. Page, *Poet. Mel. Gr.* 433-41.

CRITICISM. U. von Wilamowitz-Moellendorf, *Textgesch. d. griech. Lyr.* (1900), 85 ff. C. M. B.

PHILOXENUS (3), painter, of Eretria, pupil of Nicomachus (dated by Pliny 330 B.C.). Painted for Cassander (after 306?) a 'Battle of Alexander and Darius'. A mosaic in Pompeii (Pfuhl, fig. 648; Rumpf, pl. 49), probably of the third century, is proved by likeness to the Alexander sarcophagus (Winter, *KB* 336-7) to represent faithfully a fourth-century original; Philoxenus has been suggested as the artist but more recently Apelles' name has been put forward (q.v.).

Overbeck, 1775, 1777; H. Fuhrmann, *Philoxenos von Eretria* (1931); Rumpf, *Malerei u. Zeichen* 149. T. B. L. W.

PHILOXENUS (4) of Alexandria (1st c. B.C.) wrote on the text of Homer, accents, metre, verbs, and Atticism, and compiled important (lost) lexica of Homeric and other dialects. See ETYMOLOGY.

Funaioli, *Gramm. Rom. Frag.* 1. 443 ff.

PHILUMENUS of Alexandria, member of the eclectic school of medicine, c. A.D. 180. An excerpt from his work *De Veneratis Animalibus* (on poisonous animals), the basis of the thirteenth book of Aelian, has been edited by M. Wellmann in *CMG* (1908). He also wrote a book on diseases of the bowels (only part extant, in a Latin tr., ed. Michaelcanu, 1910), and one *Περὶ γυναικείων* (on gynaecology, not extant). W. D. R.

PHILYLLIUS, Athenian comic poet, won the first prize once at the Lenaea at the beginning of the fourth century B.C. (*IG* ii². 2325. 137). We have ten titles, mostly implying mythological burlesque, and thirty-four fragments.

FCG ii. 857 ff.; *CAF* i. 781 ff.; *FAC* i. 900 ff.

K. J. D.

PHILYRA, i.e. linden-tree; in mythology an Oceanid loved by Kronos (q.v.), who, being surprised by Rhea while with her, turned himself and Philyra into horses. Her child was the centaur (q.v.) Chiron, and she was so horrified at his monstrous shape that she prayed to change her own form, and so became the tree called after her.

Hyg. Fab. 138.

H. J. R.

PHINEUS. The best known of several mythological persons so named was a Thracian king. For some offence, he was plagued by the Harpies (q.v.); since they stole or defiled all his food, he was nearly starved to death by the time the Argonauts arrived at his land (Salmydessus, Soph. *Ant.* 970). He made a compact with them; if they would deliver him from the Harpies, he would prophesy to them the further course of their adventures. The sons of Boreas therefore (see CALAIS) attacked them, followed them through the air, and finally meeting Iris, received a pledge through her that Phineus should no longer be troubled. They then turned back from the islands afterwards known as the Strophades (Islands of Turning); Ap. Rhod. 2. 178 ff.

What the offence was is a question variously answered. The best-known account, which does not in all versions lead up to the story of his rescue, and so probably is not originally connected with it, is the following. He married Cleopatra, daughter of Boreas (q.v.), and had sons by her. The marriage coming to an end, by her death or otherwise, he remarried, and the stepmother so slandered her stepsons that Phineus either blinded them himself or let her do so (Soph. loc. cit. and schol. there); the latter records a variant that Cleopatra herself blinded them, in anger at being cast off by Phineus. The name of the second wife, those of the sons, and the reason for their ill-treatment all vary in different sources. Another sin attributed to Phineus was betrayal of divine secrets which he had learned through his prophetic powers (Ap. Rhod. loc. cit. 180 ff.); this obviously suits his delivery by the Boreadae much better. For more details and authorities see Jessen in Roscher's *Lexikon*, s.v.

Phineus' banquet, interrupted by Harpies, Boreads driving them off, is found in vase-painting from the later sixth century on (Brommer, *Vasenlisten*, 351). H. J. R.

PHLEGON of Tralles, a freedman of Hadrian, author of *Olympiades* (a history reaching from the first Olympiad to A.D. 140), *II. θαυμασιών*, and *II. μακροβίων*.

A. Westermann, *Paradoxographi* (1839), 107-212; O. Keller, *Rerum natural. script. graec. min.* (1877), 57-105; *FGI* ii. 257.

PHLEGYAS, eponym of the Phlegyaec, a Thessalian people, son of Ares (Apollod. 3. 41 and elsewhere; his mother's name varies). He is also represented as living near Lake Bocheis (Pind. *Pyth.* 3. 34), or in Orchomenus (Paus. 9. 36. 1), while the Epidaurian legend (Paus. 2. 26. 4) brings him to the Peloponnesus. He was

father of Coronis, the mother of Asclepius (q.v.; Pind. *ibid.* and elsewhere); of Ixion (q.v.; Eur. fr. 424 Nauck). Verg. *Aen.* 6. 618, whereon see Servius, puts him in Tartarus.

J. Fontenrose, *Python* (1959), 25 ff., 477 ff.

II. J. R.

PHLYAKES. Farces (also called *λαροτραγωδία*) which were performed by 'phlyakes' in south Italy and also perhaps at Alexandria in the fourth and third centuries B.C. The chief authors of these ludicrous scenes from daily life or from mythology are Rhinthon, Sciras, and Sopater of Paphos (qq.v.); vase pictures illustrate an earlier (pre-literary?) stage of the development.

Fragments collected in *GGF* 181-97. Olivieri, *PCGM* 112 (excluding Sopater). See also A. D. Trendall, *The Phlyax Vases, RICS Supp. Paper 8* (with full bibliography). W. G. W.; W. G. A.

PHOCAEA, the most northerly of the Ionian cities in Asia Minor, occupying a site with twin harbours midway between the Elaitic and Hermacan Gulls. She pioneered in the exploration and colonization of the western Mediterranean, though Lampsacus was almost her only contribution to the opening-up of the Euxine. In the sixth century B.C. her trading stations were strung along the route linking Magna Graecia with Spain, where Arganthonius, king of Tartessus, was her friend; and the foundation of Massilia gave the Greeks access to southern Gaul. In 510, when Phocaea was besieged by a Persian army, most of the citizens preferred emigration to submission, and finally found refuge at Elea in Italy. Phocaea never recovered from their loss. Dionysius, the generalissimo of the Greek fleet in the Ionian Revolt, was a Phocaean, but his city contributed only three ships.

Cary-Warrington, *Explorers*, 22; J. M. Cook, *The Greeks in Ionia and the East* (1962), G. E. Bean, *Aegian Turkey* (1966), 117 ff. D. E. W. W.

PHOCAS (5th c. A.D.), grammarian, author of an *Ars de nomine et verbo* (ed. Keil, *Gramm. Lat.* v. 410-39) and a *Vita Vergilii* in hexameters (often published, e.g. in Bachrens, *PLM* v. 85). A *De aspiratione* attributed to him (ed. Keil, *Gramm. Lat.* v. 439-41) is apocryphal.

Schanz-Hosius, § 1106.

J. F. M.

PHOCION (4th c. B.C.), Athenian general and statesman. Although contemptuous of the people's fickleness and of popular leaders, Phocion commanded constant respect and was elected general forty-five times. Making his military reputation in the service of Persia (350 and 344 B.C.), he distinguished himself by campaigns in Euboea (348 and 341), by defending Megara (343) and Byzantium (339), and by repelling a Macedonian attack on Attica in the Lamian War (322). In politics Phocion supported Eubulus, Aeschines, and Demades against Demosthenes and Hyperides. Realizing the military strength of Macedonia, Phocion advised Athens to treat for terms when outnumbered before the battle of Chaeronea. After her defeat he assisted Demades in preserving peace with Philip and Alexander, opposed Harpalus, and sought to prevent Athens from joining in the Lamian War, after which he acted as envoy to Antipater and sponsored with Demades the limitation of the franchise at Athens. By an error of judgement he allowed Cassander's general Nicanor to seize the Piraeus. When the democracy was restored, Phocion was condemned to death (318). Prudent, patriotic, and responsible, he controlled Athens by a force of character which is portrayed in Plutarch's *Life of Phocion*. N. G. L. H.

PHOCIS, a country of central Greece comprising the middle Cephissus valley and the valley of Crisa, which are linked loosely by passes over the southern spurs of Mt. Parnassus. Both areas were fertile, the former possessing

pasture and agricultural land, and the latter olives, vines, and corn. In the sixth century B.C. Phocis was organized in a strong federation, issuing federal coinage and levying a federal army. Her internal unity enabled her to resist the aggression of her neighbours, who coveted the control of Delphi and of the route to northern Greece via the Cephissus valley and the pass of Elateia to Thermopylae, and she showed skill in her diplomacy. Deprived of Delphi and the Crisaean plain in the first Sacred War (c. 596) and overrun by Thessaly, her ambition was to regain her outlet to the sea; checked from expanding at the expense of Doris by Sparta, the Phocians allied with Athens (457), seized Delphi, and were confirmed in their control by an expedition under Pericles (448), to whom a Phocian alliance was valuable for encircling Boeotia. After the battle of Coronea (447) Phocis joined Sparta, was loyal to her during the Peloponnesian War and in the early fourth century, until Boeotia impressed her into her Central Greek Confederacy. Her bid for independence in the Third Sacred War broke Theban power but exhausted Phocis. See PHILOMELUS, ONOMARCHIUS.

I¹-K, *Gl.* 1. 2. 422 ff.

N. G. L. H.

PHOCUS (Φῶκος), in mythology, son of Aeacus (q.v.) by the nymph Psamathe, who took the shape of a seal, *φώκη*; hence the name of her son (Apollod. 3. 158). He proved a distinguished athlete, thus arousing the jealousy of the legitimate sons, Peleus and Telamon (qq.v.); they drew lots to see which should kill him, and Telamon, to whom the task fell, murdered him while they were exercising; Aeacus found out and banished them both (*ibid.* 160).

II. J. R.

PHOCYLIDES (fl. 544-541 B.C., *Suda*), elegiac and hexameter poet of Miletus. His work is of a gnomic character. He sometimes begins his lines with the formula *καὶ τὰδε Φωκυλίδου*, writes about traditional matters such as the virtues of husbandry (fr. 7), the badness of women (fr. 2), the Mean (fr. 12), protecting spirits (fr. 16); he disbelieved in noble birth (fr. 3) and liked club-life (fr. 14).

Trist. Diehl, *Anth. Lyr. Graec.* i. 1. 58-62.

C. M. B.

PHOEBE (Φοίβη), a Titaness, daughter of Heaven and Earth (Hes. *Theog.* 136); wife of Coeus and mother of Ieto (q.v.; *ibid.* 404 ff.). She is thus grandmother of Apollo (Phoebus) and Artemis. But her name, 'the bright one', is not infrequently used for the Moon (e.g. Stat. *Theb.* 1. 105), though never in an early author; and therefore also for Artemis and Diana, as identical with the Moon (e.g. Stat. *Silv.* 1. 3. 76). Of several other mythological figures who bear this name, the only well-known one is a daughter of Leucippus, see DIOSCURI. The schol. Stroziana on Germanicus, *Aratea*, 175, 3 Breysig, says Hesiod called one of the Heliades Phoebe.

II. J. R.

PHOENICIANS (Φοίνικες, *Poeni*) are said by Herodotus (1. 1; 2. 44; 7. 89) to have migrated from the Persian Gulf 2,300 years before his time; probably a tradition of the real movements of Mesopotamian conquerors and metal-traders to the north-west. Byblos (*Gabal, Jebail*) was a port known to early dynastic Egypt.

Phoenician sea-faring, however, begins only later. The only Mediterranean sea-traders mentioned on Eighteenth Dynasty monuments (15th c.) are the Keftiu, apparently Minoans. The name 'Phoenix' ('Red'; cf. *φῶνις, φωνός*) is Greek, and may first have been applied to any copper-skinned Mediterraneans. But the discovery in 1964 of a cache of Babylonian seals among Mycenaean remains at Thebes sheds an unexpected light on the legend that Cadmus (q.v.) was an oriental.

Minoans traded with Syria, notably at Alalakh (*Atchana*)

and Ugarit (*Ras Shamra*). After the disturbances of the Philistine migration (about 1200), the main ports are at island sites, Arvad (*Aradus, Ruad*.) and Tyre, or protected inland, like Tyre again and Sidon, by Mt. Lebanon. Here arose a new, cosmopolitan Phoenicia, its art a mixture of Egyptian, Mesopotamian, and local elements, its hieratic literature, best known in texts from Ugarit, written at first in cuneiform. Probably before 1000, these Phoenicians—Canaanites, Kinahu, Chna (Ikecataeus, ap. Steph. Byz. s.v.), as they called themselves—produced their greatest invention, the Alphabet (q.v.). Also, stimulated by the collapse of Aegean carrying-trade and perhaps by Aegean immigrants, they took to the sea.

Homer thus knows Phoenicians well, both as craftsmen and as traders. Sidon is their great city; Tyre is not mentioned (*Il.* 6. 290 f.; *Od.* 13. 272 ff., 14. 288 ff., etc.). Tyre had in fact taken the lead by about 750; but in a Phoenician inscription too (*CISem.* 1. 5, from Cyprus) a king of Tyre about 740 is still called 'King of the Sidonians'.

The Phoenicians traded with Tartessus in southern Spain; probably 'Tharshish', though this word in earlier contexts may have meant Tarsus. That they reached Cornwall, there is no evidence. The dates, 1100 for Cadiz (Gaddir, 'Walled Place', Avienius 265 f.) and 1087 for Utica, accepted by Roman writers (e.g. Velleius 1. 2), may be too early; but archaeology shows them widespread in the West before 900. Most of their settlements were very small, simple trading posts; Carthage (q.v.), founded by political refugees under Dido-Elissa (a historical character; grand-niece of Jezebel) about 814, was exceptional in being from the first a considerable city. The Phoenicians took no land, but were purely traders; hence, unlike the Greeks, they remained on good terms with the natives. Even Carthage paid rent, until after 550, for the very site of the city (Justin 19. 1). They also sailed the Red Sea, by arrangement with Solomon or, much later, with Pharaoh Necho, for whom about 600 they circumnavigated Africa (Hdt. 4. 42). They were attacked at home by Assyria and then by Babylon; Esarhaddon sacked Sidon about 680; but Tyre remained impregnable and the trade continued. Ezekiel, ch. xxvii, a splendid poem, shows Tyre trading in Asian manufactures for Western tin, silver, etc.; with the hinterland for food (cf. 1 Kings v. 9); and in slaves in both directions (cf. also Amos i. 6; Joel iii. 4 f.).

With the *pax Persica* the Phoenicians came to terms willingly, and their fleets, serving under their own kings, formed the backbone of the imperial navy. The Persian Wars (q.v.) never lastingly interrupted trade even with Greece, as imports of Attic red-figure pottery show. But in the fourth century there were also revolts. Sidon again suffered severely. Except Tyre, the cities surrendered easily to Alexander (q.v. 3); and with their incorporation in the Hellenistic world, the separate history and culture of Phoenicia come to an end.

SOURCES. In addition to the Greek and Biblical writers, see summary of Phoenician annals from c. 970 to 772 in Josephus (*AJ* 8. 5. 3, *Ap.* 1. 17, 18).

MODERN WRITERS. G. Contenau, *La Civilisation phénicienne* (1949), D. Harden, *The Phoenicians* (1962, with bibliography), S. Moscati, *The World of the Phoenicians* (1968). See also CARTHAGE, SIDON, TYRE.

A. R. B.

PHOENICIDES, New Comedy poet. Fr. 1 refers to a peace made in 287 B.C. In fr. 4 a *εραίπα* bids farewell to the gay life, describing her experiences with various lovers.

FCG iv. 509 ff.; *CAF* iii. 333 ff.

PHOENIX, in mythology, (1) son of Amyntor king of Hellas (in the old sense of the word), who left home when young on account of a quarrel with his father. The latter had a concubine of whom his wife, Phoenix's mother, was jealous; she induced her son to corrupt the woman

and thus make her lose Amyntor's favour. The old man, finding this out, cursed his son with childlessness, and Phoenix, despite his relations' attempts to stop him, escaped and went to Phthia, where Peleus (q.v.) received him kindly and made him a sort of tutor to the young Achilles (q.v.). He accompanied his charge to the Trojan War, where he was one of the ambassadors sent to bring Agamemnon's offers of reconciliation (*Iliad* 9. 168 ff.); Euripides, in his lost *Phoenix*, followed a version in which Amyntor blinded Phoenix and the latter was finally healed by Chiron (see Nauck, *TGF* 621 ff.).

(2) Son of Agenor and brother of Cadmus (q.v.); like Cadmus, he was sent to look for Europa, did not return home, and founded a people, the Phoenicians, who were named after him (Eur. fr. 819, etc.). He is a shadowy figure whose story, such as it is, varies in different authors, see Türk in Roscher's *Lexikon* iii. 2401 ff.

H. J. R.

PHOENIX (3) of Colophon, iambic poet of third century B.C., author of moralizing choliambics and of a poem *Coronistae* based on a Rhodian beggars' song. See IAMBIC POETRY (GREEK).

TEXT. Diehl, *Anth. Lyr. Graec.* i. 3. 104-10; Powell, *Coll. Alex.* 231-6.

TEXT AND TRANSLATION. A. D. Knox, *Herodes, Cercidas, and the Greek Choliambic Poets* (Loeb, 1929), 242 ff.

PHOENIX, 170 lines (elegiac) on the fabulous bird whose resurrection to life through death made appeal to both pagan and Christian thought. It has sometimes been ascribed to Lactantius (q.v.).

TEXT AND TRANSLATION (with bibliog.). Duff, *Minor Lat. Poets*.

PHORBAS, name of several mythological persons, all obscure. (1) A Thessalian (Lapith), son of Lapithes, the eponym of the Lapiths, or of his son Triopas (Paus. 5. 1. 11; *Hymn. Hom.* Ap. 211). His home, according to various accounts, is Thessaly, Elis, Argos, or Rhodes; see Höfer in Roscher's *Lexikon* iii. 2424 ff. This may be the Phorbas who takes part in the fight of the Lapiths and Centaurs (*Ov. Met.* 12. 322). (2) A Phlegyan, living at Panopeus, who challenged pilgrims on their way to Delphi to box with him and so killed them, till he was killed by Apollo in human disguise (schol. *Il.* 23. 660, cf. *Ov. Met.* 11. 414, Philostr. *Imag.* 2. 19; Fontenrose, *Python* (1959), 24 ff.). (3) An Athenian hero, said to have been an attendant on Theseus, schol. *Pind. Nem.* 5. 89. A shrine, the Phorbanteion, belonged either to him or to (4), an ally of Eumolpus (q.v.), killed by Erechtheus (Iarpocraton, s.v. *Φορβαντεῖον*).

H. J. R.

PHORCYS, in mythology, son of Nereus and Earth (Hes. *Theog.* 237). Marrying his sister Ceto, he became father of the Graiae and Gorgons (qq.v.; *ibid.* 270 ff.). Other children are ascribed to him in various sources, as Thoosa, mother of the Cyclops, Polyphemus (*Od.* 1. 71); the Sirens (q.v.); Sophocles in *Plut. Quaest. conv.* 745 f.). In general he is the father or leader of sea-monsters, such as the Tritons (q.v.; Verg. *Aen.* 5. 824).

H. J. R.

PHORMION, Athenian admiral, *strategos* of the *phyle* Pandionis, first mentioned in 440 B.C. before Samos. In the next years he proved an excellent military leader in Acarnania, at Potidaea, and in Chalcidice. In 430 he blockaded Corinth from Naupactus; and next summer, by brilliant tactics, he defeated two superior Peloponnesian fleets, thus restoring Athenian influence in Acarnania. After his return (428), he is said to have been sentenced for peculation (schol. *Ar. Pax* 347). Probably he died at this time.

Thuc. bks. 1 and 2; *Prosop. Att.* 14958. V. Ehrenberg, *A7Phl.* 1945, 119. V. E.

PHORMIS (or **PHORMUS**), Syracusan writer of comedy. Aristotle (*Poet.* 5. 1440^b6) seems to treat him as a contemporary of Epicharmus. The *Suda* adds that he was tutor to the sons of Gelon (d. 478 B.C.), and attributes to Phormis the invention of long cloaks for his actors and (?) a new form of *skene*. Paus. 5. 27. 1 mentions a notable Arcadian soldier Phormus who fought for Hieron and Gelon; possibly the biographical tradition of the poet Phormis is contaminated.

CGF 148; Pickard-Cambridge-Webster, *Drithyramb*¹, 289. K. J. D.

PHORONEUS (Φορωναῖος), a very ancient ancestral figure of Argive tradition. He was older than Deucalion's flood (Pl. *Ti.* 22 a), husband of the Argive Niobe, the first earthly love of Zeus, cf. Hyg. *Fab.* 145. 1, who makes her his daughter. He was son of Inachus (q.v.; *ibid.* 124, cf. Apollod. 2. 1, where his descendants are given). He has no legend, except that he was one of the judges between Hera and Poseidon for possession of the country (Paus. 2. 15. 5), but he had a cult (*ibid.* 20. 3). H. J. R.

PHOSPHORUS (Φωσφόρος = 'Εωσφόρος; Lucifer), the morning star, personified son of Eos and Astraeus (Hes. *Th.* 381) or Cephalus (Hyg. *Poet. Astr.* 2. 42; cf. Hes. *Th.* 986-91), sometimes represented as a youth bearing a torch. As a cult name Phosphorus was applied to Hecate, Artemis (cf. Diana Lucifera), and, more rarely, to other divinities. The *deus bonus puer Phosphorus* is the Syrian god, Aziz. F. R. W.

PHOTIUS, the best of the Byzantine scholars and Patriarch of Constantinople in A.D. 858-67 and 878-86. 'At the pressing intreaty of the Caesar (Bardas), the celebrated Photius renounced the freedom of a secular and studious life, ascended the patriarchal throne, and was alternately excommunicated and absolved by the synods of the East and West. By the confession even of priestly hatred, no art or science, except poetry, was foreign to this universal scholar, who was deep in thought, indefatigable in reading, and eloquent in diction' (Gibbon, ch. 53). His most important work is the *Bibliotheca* (or *Myriobiblion*), 'a living monument of erudition and criticism' (Gibbon, loc. cit.). It is a hastily compiled, ill-arranged critical account (in 280 chapters, with numerous extracts) of 280 prose works read by Photius in the absence of his brother, Tarasius, for whose information, and at whose request, the work was composed, at some date before A.D. 858. Theology and history predominate; oratory, romance, philosophy, science, medicine, and lexicography also come within its scope. Besides its intrinsic value (the criticisms are often felicitous and acute), it has a considerable adventitious importance as the best or sole source of our information about many notable lost works; it mentions some sixty non-theological works not now surviving. The *Lexicon*, which is an earlier work, is a glossary based ostensibly and in fact indirectly upon Aelius Dionysius, Pausanias, and Diogenianus, but immediately drawn from such later compilations as Timaeus' Platonic lexicon, and chiefly from the *Συναγωγή* (see LEXICA SEQUELARIANA). The *Lexicon* was long known only from the *Codex Galeanus* at Cambridge, defective at the beginning. Part of the missing portion was supplied by MSS. in Athens and Berlin (R. Reitzenstein, *Der Anfang d. Lexikons d. Photios* (1907)). In 1959 a MS. containing the complete *Lexicon* was found at Zavorda in Macedonia, and an edition is in preparation (L. Politis, *Philol.* 1961, 136 ff.).

EDITIONS. *Bibl.*: Bekker, 1824-5; Migne, *PG* (1860), vol. 103; R. Henry, in progress (1959-). *Lexicon*: Naber, 1864-5.

CRITICISM. E. Orth, *Photiana* (1928), *Stilkritik d. P.* (1929); K. Ziegler, *PW* xx (1941), 662 ff.; F. Dvornik, *Berichte zum XI. Int. Byzantinisten-Kongress* (1960), iii. 2. P. H. R. F.; R. B.

PHRAATES (1) IV (c. 38-2 B.C.), king of Parthia. He secured the succession by murdering his father Orodes II (q.v.) and many Parthian princes and nobles (Plut. *Ant.* 37, Dio Cass. 49. 23). He soon had to face a Roman invasion, when Antony penetrated into Media Atropatene, but Phraates' general Monaeses forced him to retire with great loss. From 31 to 25 B.C. Phraates had to contest his throne with the rebel Tiridates (q.v. II). His embassies to Augustus led to better relations between Rome and Parthia, and the standards captured from Crassus and Antony along with surviving captives were restored to Rome in 20 B.C. A few years later he even consigned four of his sons to Augustus for safe keeping. He was assassinated in a harem intrigue. For the other kings named Phraates, see ARSACIDS.

Coin portraits: Wroth, *B.M.C. Parthia*. M. S. D.; E. W. G.

PHRAATES (2) V (**PHRAATACES**) (2 B.C.-A.D. 4), king of Parthia. He was the son of Phraates IV by an Italian slave-girl; Augustus had sent her to the king who later made her his legitimate queen as Thea Urania Musa. She and her son secured the murder of Phraates IV in 2 B.C., and Phraataces succeeded. He drove a certain Artavasdes, who was the nominee of Augustus, out of Armenia in favour of Tigranes III, and tried to take a strong line with Augustus. He soon changed his tune, promised not to interfere in Armenia, and met Gaius Caesar (q.v. 6) on the Euphrates (A.D. 1) where a concordat between Rome and Parthia was reached: Velleius, who was present, called Phraataces *iuvenis excelsissimus* (2. 101. 1). In A.D. 4 Phraataces, who had married his mother Musa in A.D. 2, was deposed by the Parthian nobles who chose Orodes III. The latter survived only until c. 6/7, and his successor Vonones I only till 12 (though the latter held the Armenian throne from 12 to 16). Greater stability came with Artabanus II (III) (q.v.). H. H. S.

PHRATRIAI (φρατρίαί, with dialectal variations), 'brotherhoods', kinship-groups in Greek cities whose members were *φράτερες*. They are attested in several of the Greek *ἔθνη*, and this fact, along with the early replacement of *φράτηρ* in the sense of 'brother' in all dialects and the existence of similar institutions among other Indo-European peoples (e.g. the *bratstva* of the South Slavs), bespeaks their high antiquity. They are often found as divisions of *phylai* (q.v.) and were themselves composed—at least in theory—of related families (see GENOS). Thus they worshipped a common ancestor, and more often than not were called by a patronymic name formed from his. Membership was in principle open only to legitimate sons of *phrateres*, but since in any State the phratrises normally covered the whole citizen-body (cf. *Iliad* 9. 63 f.) it became possible for new citizens to be admitted without any hereditary title. The members of any one phratry would long be found in the particular district where their ancestors had settled, and this remained their centre even after many of them had moved away. A phratry was a corporation with a definite constitution. It held regular meetings at least once a year (in Ionian cities, at the Apaturia, q.v.), elected annual officers such as a phratrarch and priest, passed decrees which became part of its 'law' (if conformable to the law of the State), and admitted new *phrateres* after appropriate scrutiny. It could possess property (such as houses and cemeteries) and funds (derived from rent, fines, etc.). Its principal activity was the worship of its tutelary gods, who varied from phratry to phratry and city to city, but usually included Zeus Phratrion (or Patroos). With the growth of democracy phratrises tended to be reorganized (cf. Arist. *Pol.* 1319^a23) and were sometimes replaced by more artificial divisions, e.g. the *συννομαί* of Rhodes, the

χλιαστῆς of Chios, etc., which preserved some of their characteristic features. Under whatever name, they tend to disappear in Hellenistic times, though the phratricies of Neapolis survived into the Christian era.

At Argos there were upwards of thirty phratricies, at Sparta twenty-seven (perhaps nine to each of the three Dorian tribes). Little is known about them. A long inscription (*SIG³ 438*) gives valuable details of the organization of the Labyadae at Delphi.

Aristotle (*Ath. Pol.* fr. 3) equated the Athenian phratricies with the twelve old *trittyes* (q.v.); but although only a handful of names of phratricies are known, it is probable that there were far more than twelve. In Draco's time every Athenian belonged to a phratry, and nobles and plebeians might be *phrateres* to one another (*SIG³ 111*, 18 f.). But the noble γένη (see *GENOS*) were doubtless powerful within the phratricies and may have tried to make them more exclusive; at all events a law, of uncertain date, obliged *phrateres* to admit both *gennetai* and *orgeones* (q.v.). Down to the time of Cleisthenes (q.v. 1) membership of a phratry was the sole test of citizenship. Cleisthenes introduced a new criterion, that of deme-membership (see *DEMOI*, *PHYLAI*), but did not disturb the phratricies (*Arist. Ath. Pol.* 21, 6), and they continued to register new members as before; though it is not clear whether membership of a phratry remained a necessary feature of citizenship, or became merely normal. Certainly the orators attest the frequent appearance of *phrateres* in the courts as witnesses to status, and foreigners admitted to citizenship were registered in a phratry as well as a deme. Membership of demes and phratricies overlapped, though a fair proportion of the members of a phratry would belong to the deme where it had its centre, or to neighbouring demes. Considerable details of admission-procedure in the fourth century are preserved in an inscription of the phratry centred at Decelea (*SIG³ 921*). By this time this and other phratricies were divided into small groups called *thiasoi* (see *THIASOS*) which apparently cut across the distinction between nobles and commoners.

Greek writers on Roman affairs used the word *phratría* to translate *curia* (q.v. 1).

PHRYGIA, a country comprising part of the central plateau and the western flank of Asia Minor. The conquest of central and western Asia Minor by the European Phryges took place towards the end of the second millennium B.C., and was still remembered when the Trojan saga was taking shape (*Iliad* 3, 184 ff.); it extended further to the north and west than the Phrygia of the Greek and Roman periods. The limits of the original Phrygian conquest were driven in on the west by the emergence of the Lydian Kingdom, and in the north by subsequent invasions from Europe of Mysians and Bithynians, and, much later, Galatians; in the Roman period the northern boundary of Phrygia lay well south of the northern mountain parapet and far from its early maritime base on the Sea of Marmara. On the east and south the later boundaries still represent the extreme limit of the original Phrygian permanent settlement, which appears not to have crossed the Halys or penetrated beyond Iconium or Pisidian Antioch or south of the Maeander basin.

In Phrygia the European invaders absorbed the older

population and founded a kingdom, associated in Greek legend with the names of Midas and Gordius, whose memorials survive in the rock-cities and sculptured façades, some of them inscribed, of the 'Phrygian Monument Country' south of Dorylaeum. After its conquest by Lydia Phrygia never again appears as an independent State; the old warrior stock was merged in the peasant population, and to the classical Greeks 'Phrygian' was equivalent to 'slave'. Phrygia was subject in turn to the Persians, Seleucids, and Attalids; in 116 B.C. the greater part of it was absorbed in the province Asia (q.v.), and in 25 B.C. the remaining eastern portion became a region of the province Galatia. The Phrygian religion, whose male god Papas took his place beside the old Anatolian Mother goddess, and the Phrygian language survived until the early Byzantine period. Diocletian made Asian Phrygia a separate province, which Constantine subdivided into two, Pruna or Pacatiana and Secunda or Salutaris, administered from Laodicea and Synnada respectively.

PHRYNICHUS (1), Athenian tragic poet, coupled by some ([Plato], *Minos* 320 c) with Thespis as one of the originators of tragedy. His first victory was between 511 and 508 B.C. (*Suda*, s.v.). He produced, probably in 492, with Themistocles as choregus, a play dealing with the taking of Miletus by the Persians in 494, and was fined for reminding the Athenians too vividly of the misfortunes of their friends (*Hdt.* 6, 21). Another historical play, the *Phoenissae* (probably identical with his *Ἠέροι*), related to the Persian War just ended; the scene was laid in Persia and opened with a servant setting seats for the Persian nobles (*Arg. Aesch. Persae*). In 476 Themistocles was again his choregus at the Great Dionysia (*Plut. Them.* 5), and this may have been the date of the *Phoenissae*. Among his mythological plays were the *Pleuromae* (from the story of Meleager and Oeneus); the *Aegyptu* and *Danaides*; the *Antaeus* and the *Alcestis* (possibly a satyr play) which was not without influence on Euripides' play (*Schol. Dan. Aen.* 4, 694, fr. 2), and the *Actaeon*. He was remembered for the beauty of his lyrics (*Ar. Vesp.* 220, *Ar.* 748 ff.) and the many varieties of diction which he invented (*Plut. Quaest. conv.* 8, 8, 3); Aristophanes admired him greatly (see also *Thesm.* 165 ff., *Ran.* 1298 f.). He was said (*Suda*, s.v.) to have been the first tragic poet to employ a feminine mask, i.e. to introduce a female character. The few fragments suggest that he employed metaphors freely.

TGF 720-5. Pickard-Cambridge-Wechter, *Dithyrambs*, 63 ff. A. W. P.-C.

PHRYNICHUS (2), Athenian comic poet, produced his first play in 434 (*Suda*) or 429 (*Anon. De Com.* 10); the latter statement probably refers to his first victory—at the Lenaea, where he won two victories (*IG* ii², 2325, 125), his first victory at the City Dionysia being some time after 420 (*ibid.* 61). He produced *Μονόσπονδος* in 414 (hyp. 1 *Ar. Av.*) and *Muses* in 405 (hyp. 1 *Ar. Ran.*). We have eleven titles and 100 fragments; two of the titles, *Connus* and *Revellers*, are also attributed to Amipsias (q.v.), and this attribution is to be preferred, since it is given by hyp. 5 *Ar. Nub.* and hyp. 1 *Ar. Av.*, the composers of which will have derived their information direct from the *διδασκαλῆαι*. Fr. 58 (play unnamed) refers humorously to the mutilation of the herms (q.v.) in 415.

FCG ii, 580 ff.; CAF i, 369 ff., FAC i, 451 ff.

K. J. D.

PHRYNICHUS (3) **ARABIOS**, of Bithynia, Atticist, rhetorician, and lexicographer under M. Aurelius and

Commodus. He compiled *Σοφιστικὴ προπαρασκευή*, a lexicon of 'Attic' words in thirty-seven books, preserved only in a summary by Photius and in fragments; also *Ἀττικιστής* (*περὶ κρίσεως καλῶν καὶ δοκιμῶν ὀνομάτων*), extant in an abridgement, our *Ἐκλογή*. They were based on Eirenaeus and Aelius Dionysius. Phrynichus criticizes Pollux (q.v.), his successful rival for the chair of rhetoric at Athens, for his laxity in the choice of words, and, with Moeris, ranks among the strictest of the 'Atticists'. He recognizes different levels of style within 'Atticism'. His models are Plato, the Ten Orators, Thucydides, Aeschines Socraticus, Critias, Antisthenes, Aristophanes, Aeschylus, Sophocles, and Euripides. Nor would he accept the usage of even the best of these without cavil. In the letter to the Imperial Secretary, Attidius Cornelianus, which introduces the *Ἐκλογή*, he reprobrates those who try to justify their diction by citing the impeached words from classical authors: *ἡμεῖς δὲ οὐ πρὸς τὰ διημαρτημένα ἀφορῶμεν, ἀλλὰ πρὸς τὰ δοκιμώτατα τῶν ἀρχαίων*. Such critical scrutiny, however, if at all possible, would demand a clearer perception than the Atticists ever had of the nature and relations of spoken and literary Attic, and of the diverse sources from which the language of the poets was drawn. Nevertheless, Phrynichus' work contains many acute and accurate observations.

PHTHIOTIS, a district of Thessaly. In mythology, when it was the realm of Achilles, and in Roman times it included Achaea Phthiotis and extended from Cynoscephalae to the border of Malis. In the intervening period, however, Pthiotis denoted only the neighbourhood of Pharsalus (q.v.) and formed one of the tetrads of Thessaly proper, whereas Achaea Phthiotis belonged to the Perioecis and owed allegiance to Thessaly, particularly to Pharsalus.

Achaea, a mountainous district including the Othrys range, has a coastal plain on the Bay of Volo. Halus, its chief port, seems to have declined when Pagasae (q.v.) was developed by Pherae (q.v.). The other towns were Phthiotic Thebes, Larissa Cremaste, and Melitaea. The Achaeans rarely enjoyed freedom from external intervention. When liberated from Alexander of Pherae they were forced to join the Boeotian Confederacy, and when Philip detached the Perioecis from Thessaly they became subjects of Macedonia. An Achaean Confederacy apparently existed in the third century B.C.

G. Kip, *Thessalische Studien* (1910), 51 ff.; F. Stählin, *Das hellenische Thessalien* (1924), 135 ff. and 150 ff. H. D. W.

PHYLACUS, in mythology, (1) father of Iphiclus, for whose story see MELAMPUS (1), son of Deion and so grandson of Aeolus (q.v.; Apollod. 1. 86). (2) Son of Iphiclus and grandson of (1) (Eust. *Il.* 323, 42). (3) A local hero of Delphi (Hdt. 8. 39. 1). He appeared with Autonous, another local hero, and helped to drive off the Persian raiders in 480 B.C. (ibid. 38). H. J. R.

PHYLAI (*φυλαί*) or 'tribes' were in origin large divisions, based on real or supposed ties of kin, of Greek *ἔθνη*. They are often found subdivided into the smaller kinship-groups known as *phratritai* (q.v.). The best-known *phylai* are those of the Dorians and Ionians (qq.v.): they appear only as components of their cities, and should therefore be older than their settlement of the oldest of these. The three Dorian *phylai*, called Hylleis, Pamphyloi, and Dymaneis, are found in practically all Dorian cities; where a non-Dorian element existed, in Argos (q.v. 2) and Sicyon (q.v.) and some other cities, it was accommodated in a separate *phyle* or *phylai* of its own. The

original four *phylai* of Athens—Geleontes, Hopletes, Argadeis, and Aigikoreis—recur in some other Ionian cities, together with other *phylai* for non-Ionians. The territorial divisions of the Aetolians and Arcadians (qq.v.), though usually themselves called *ἔθνη* rather than *φυλαί*, were probably in origin kinship-groups which occupied separate districts. We know little or nothing of similar divisions in other *ἔθνη*.

Phylai were corporate bodies with a hereditary membership and with their own priests and officials (*φυλοβασιλεῖς* at Athens); they were also administrative and military divisions of the State. For this purpose the old Attic tribes were subdivided into *trittyes* and *nauphratriai* (qq.v.) as well as *phratritai*. Colonies were normally equipped with the *phylai* of the mother-city, with modifications to suit local conditions. When *phylai* of the ancient type had become politically objectionable, as assisting the continuance of aristocratic rule and the exclusion of new aspirants to citizenship, they were liable to be set aside in favour of new artificial tribes, which took over their administrative and military functions. Artificial *phylai* were also sometimes devised for new cities formed by synoecism (q.v.), or colonies of mixed origin. The principle of division was usually territorial, but sometimes according to origin.

In Sparta, the three Dorian tribes had, at latest by 600 B.C., been replaced for secular purposes by five local tribes based on the *obai* or constituent villages of the city; hence the five ephors (q.v.) and five *lochoi* of the early fifth century army (see ARMIES, GREEK AND HELLENISTIC, § 3). A similar change was made by Cleisthenes (q.v. 1) at Athens. There the old *phylai*, which had been dominated by the nobles, did not include many of the new citizens admitted under the legislation of Solon (q.v. § 3) and by the tyrants. Cleisthenes created ten new local *phylai*, allowing the old ones to survive for a few sacred purposes only. To break up not only the old ascendancy of the nobles, but also the more recent division of the people into Pedieis, Paralioi, and Diakrioi (see MEGACLES, PISISTRATUS), he formed each new *phyle* from three *trittyes* (q.v.), one from each of three new territorial divisions of Attica, corresponding only partially with the three older regions. These were 'the town' (*τὸ ἄστυ*), including Piraeus and Phaleron (qq.v.) and part of the plain of Athens; the Paralia, including most of the old Paralia with the remaining coastal regions; and the 'interior' (*μεσούγειος*), composed from parts of all the old regions. Each *trittys* was in its turn divided into demes (see DEMOI). Membership of the demes, carrying with it membership of the new *phylai* and of the citizen-body, was extended to all free men living in them at the time of the reform. It was not altered by subsequent changes of residence, and was transmitted by descent in the male line. The *phylai* were not units of local government; each had its headquarters in the city. The new State administration was based on them: most of the magistrates, including the *archontes* and *strategoi* (qq.v.) and various committees of the *boule* (q.v. §§ 4, 5) formed boards of ten, and selection of these, one from each tribe, is in some cases attested and may be generally presumed. Each group of fifty *prytaneis* (q.v.) within the *boule* consisted of the councillors from a single tribe. The ten regiments of hoplites and ten squadrons of cavalry (see HIPPEIS), together with their commanders the *phylarchoi* and *taxiarchoi*, were likewise drawn from the separate *phylai*. The *phylai* were also represented as such by choruses and *choregoi* in the dithyrambic contests at festivals (see CHOREGIA).

Cleisthenes named his ten tribes after nine Attic heroes and one Salaminian hero; in the official order, they were Erechtheis, Aigeis, Pandionis, Leontis, Akamantis, Oineis, Kekropis, Hippothontis, Aiantis, Antiochis. In Hellenistic and Roman tribes the number was raised by

one, two, or three, and the citizens redistributed accordingly, as additional *phylai*, named after powerful princes (Antigonis, Demetrias, Ptolemais, Attalis, Hadrianis), were created and abolished.

Greek writers on Roman affairs used the word *φύλη* to translate *tribus*.

A. W. G., T. J. C.

PHYLARCHUS of Athens, the most important historian of the period between Pyrrhus' death, 272, and the defeat of Cleomenes by Antigonos Doson, 220 B.C. His history (*Ἱστορίαι*), one of a number of works, ran to twenty-eight books and drew largely on the history of Duris of Samos. Its arrangement cannot be ascertained, but it was not based on a chronological scheme. The few definite facts of books 6-14 all refer to the East, the remainder to Greece. Phylarchus was Plutarch's chief authority for the lives of Agis and Cleomenes and was one of his sources for the lives of Aratus and Pyrrhus. His moralizing digressions and bias against Macedon throw suspicion on his reliability.

FGH in A. 81. *PW* Suppl. viii, 471 ff.; xi, 1067 ff. G. L. B.

PHYLAS, name of four minor mythological persons, the least unknown being a king of the Dryopes. He sinned against the shrine at Delphi, and consequently Heracles (q.v.) overthrew him and gave his people to Apollo as serfs. Many of them, either escaping or being sent by Apollo's command, went to the Peloponnesus, where they settled at Asine and other places. Heracles had by Phylas' daughter a son Antiochus, after whom the Attic tribe Antiochis was named (Diod. Sic. 4. 37; Paus. 1. 5. 2; 4. 34. 9-10).

H. J. R.

PHYLE, an Attic deme and fortress situated on Mt. Parnes astride one of the routes between Athens and Boeotia. Its rocky, isolated character is well brought out in Menander's *Dyscolus*, particularly by Pan, worshipped in a nearby cave. Late in 404, Thrasybulus (q.v.) came from Thebes, seized Phyle, and with a greatly increased following moved on Piraeus early in 403, where he defeated the Thirty Tyrants (q.v. 1). In the fourth century Phyle became a regular frontier post, and the remains of the fortress date from that time.

PHYSICS. Until the time of Plato and Aristotle physics was a part of philosophy. Occupied with the study of nature and cosmogony, the first philosophers knew only a few isolated facts in physics discovered by experience (cf. Thales on the property of the lode-stone, and Pythagoras' discovery of the musical intervals); they had few general theories, such as those which accounted for change in material substances by rarefaction and condensation (cf. the upward and downward courses in Heraclitus) or by the eternal mixing and unmixing of different elements, combined with the indestructibility of matter. Perhaps the first attempt to state a law was Heraclitus' πάντα ῥεῖ. On the other hand, centrifugal force is postulated by Anaxagoras, and we have Empedocles' declaration that light travels and takes time to pass from one place to another. Anaxagoras and Empedocles both realized the corporeal quality of air; Empedocles, by an experiment with a water-clock, showed that water can enter a vessel only as air escapes. But it

is nevertheless only on rare occasions that we hear of experiments. It is a most important characteristic of Greek physical science that it is axiomatic and deductive and that its procedures are modelled on those of mathematics. Experiments, on the whole, are used not to establish a theory but to illustrate it. Even Democritus whose atomism is so suggestive and so prophetic of modern views did not base his theory on systematic experimentation but on *a priori* reasoning. 'That we hear of experiments associated with the names of some of the early scientific thinkers is in this context almost irrelevant. On the other hand, another important feature of the scientific attitude, the belief in the uniformity of nature and the inevitability of natural law, is very prominent in Greek physical science. Thus we read the declaration of Leucippus that 'nothing comes into being for nothing; everything happens on a rational ground and by the pressure of necessity'. The earlier monistic thinkers (for whom matter was essentially of one kind) were followed by pluralists who postulated the existence of more than one kind of matter; cf. the four elements of Empedocles, the homoiomerics of Anaxagoras, the atoms of Democritus. The latter was the first to postulate the existence of a void. Atomistic physical doctrines survived in the Epicurean school but were denied by the Stoics whose physics was based on the continuum concept, a concept diametrically opposed to the fundamental teachings of atomism. Atomic theory is based on the atom and the void; the continuum theory on unformed matter and the *pneuma*. The atoms, discrete and solid, move in the void without mixing with it; the Stoics, on the other hand, postulate a total mixture of *hyle* and *pneuma* (cf. on this Sambursky, *Physics of the Stoics*). Both atomistic and Stoic physical doctrines have been influential in the formation of modern physical concepts.

2. Aristotle made a point, in his treatises, of summarizing all that was so far known in each subject, with a view to adapting it to his own philosophical system. His views on physical subjects are spread over the *Physics*, *De Caelo*, *De Generatione et Corruptione*, and the *Meteorologica*. Physics is for him one of the theoretical sciences; it deals with natural bodies having in them a source of movement or rest. Aristotle discusses such things as matter and form, the four causes, three kinds of 'motion' (increase and decrease, change, and locomotion), 'place', and space, the void, the continuous, the infinite, the laws of motion, e.g. the dependence of speed on the weight of the object moved and on the density of the medium through which it moves, natural and forced movement and the prime mover, the application of the theory to the heavenly sphere, the movement of the elements (including the 'aether') to their 'natural places'. Among the things bearing on mechanics we find the germ of the principle of 'virtual velocities' and a statement very like Newton's 'First Law of Motion'; in a void, if a thing is in motion, 'no one can say why it should stop anywhere; for why here rather than there? hence it will either remain at rest or it must move *ad infinitum* unless something stronger prevents it' (*Phys.* 4. 8. 215^a20-2). The *Mechanica*, containing mechanical problems, is not by Aristotle, but it retains many ideas which are found in Aristotle's works. It contains the 'parallelogram of velocities' (ch. 2) and the principle of the lever (ch. 3), which it applies extensively to the explanation of many mechanical devices, e.g. the balance, interacting pulleys, etc.

3. But, for mechanics, the scientific foundation was laid by Archimedes in his proof of the principle of the lever and his investigation of the position of the centre of gravity in a number of bodies (*Plane Equilibria* I, II, and the *Method*, in which he makes full use of the 'moment' about a fixed point)—to say nothing of his

machines for moving a great weight by a small force (*ὁὺς μοι ποῦ στῶ, καὶ κινῶ τὰν γὰρ*), his water-screw, etc.

4. Archimedes further initiated the whole science of *hydrostatics* (*Περὶ ὀρυζιμένων*, *On Floating Bodies*), laying down the principles that a body floating in a fluid will take a position in which its weight is equal to that of the portion of the fluid which it displaces, and that a body weighed in a fluid will be lighter than its true weight by the weight of the displaced portion of the fluid. He further lays it down that the upward force exerted by the fluid on the floating solid will act along the line perpendicular to the surface of the fluid which passes through the centre of gravity of the displaced portion of the fluid. With these principles, Archimedes works out fully the positions of rest and stability of (1) any segment of a sphere and (2) a right segment of a paraboloid of revolution floating in a fluid either way up.

5. On the mechanical side Archimedes' work was continued by Ctesibius, Philon, and Heron. Only Heron's works survive in any completeness, but we find there the recognition of the elasticity of air and the force of steam; his engines include a thermoscope, a forcing air-pump, siphons, a fire-engine, and the first steam-engine, in which the recoil of steam issuing in jets from four tubes, the open ends of which are perpendicular to the tubes, while the tubes issue from a centre, forming a cross (like the *swastika*), makes a ball or a wheel revolve.

6. *Optics*. Until the time of the Atomists it was supposed that sight resulted from visual rays proceeding in straight lines from the eye and impinging on the object seen. The Atomists postulated atoms constantly proceeding from the object and carrying, as it were, copies of it to the eye. Aristotle, too, regards the eye as a receptive organ only; the object acts on the eye through a transparent medium (*De Anima* 2. 7, *De Sensu*, ch. 2). Aristotle gave an explanation of the rainbow and the halo in the *Meteorology* (3. 2-6). The first systematic treatise on geometrical *Optics* was by Euclid and survives in a version by Theon. The law of reflection was known before Euclid. Heron (*Catoptrica*) bases it on the assumption of a *minimum path*. Ptolemy wrote *Optica*, in which occurs the first attempt to discover a law of *refraction*. The hypothesis of atmospheric refraction appears in Cleomedes (*De motu circulari*, ch. 6).

7. *Acoustics*. The dependence of the musical intervals on numerical ratios was discovered by Pythagoras. There were many writers on harmonics, e.g. Archytas, Aristoxenus, Euclid, Nicomachus, Ptolemy. The *καταρτητὸν κανόνα* included in the *Musici Scriptores* may be partly based on the *Elements of Music* by Euclid.

8. *Electricity and Magnetism*. Thales is said to have known of the attractive power of the lode-stone (Arist. *De An.* 1. 2). Theophrastus mentions the *Lyncurion* as having still stronger force, and notes the necessity of rubbing the lode-stone (*Περὶ λίθων*, §§ 28-9).

In the Platonic *Ion* 533 we are told that the lode-stone not only attracts bits of iron, but communicates to them the same power: apparently the first hint of magnetic induction.

PHYSIOGNOMONICI, writers who try to divine the true character of man by comparing him to certain types of animals or races, the moral nature of which they suppose to be known ([Aristotle], *Phgn.* 805 '20), or by inferring a person's idiosyncrasy from movements, gestures of the body, colour, characteristic facial expressions, the growth of the hair, the smoothness of the skin, the voice, conditions of the flesh, the parts of the body, and the body as a whole (ibid. 806'26). Such observations of necessity result from any social and political contact; they are, therefore, already contained in early Greek literature (Simon. fr. 7); later, after physiognomy, based on the theory of the interdependence of body and soul (Arist. *An. Pr.* 70^b7), had been developed by philosophers, especially by Socratics and Stoics (Posidonius), the results influenced in ever-increasing measure painters, writers, orators, and actors. In medicine physiognomical signs had been valued from the beginning. They were particularly emphasized by the gymnasts of the second century A.D., probably in connexion with the codification of physiognomical studies by Polemon. But at no time in antiquity does physiognomy seem to have been nearly as important as during the Middle Ages and the Renaissance.

PHYSIOLOGUS ('the Naturalist'), a collection of some fifty fabulous anecdotes from natural, mostly animal, history, of a moralizing and symbolical character. The date and place of its production are uncertain; Christian writers towards the end of the fourth century A.D. (more doubtfully Origen and Clement of Alexandria in the third century) knew and used it; in MSS. it is often attributed to Epiphanius of Salamis (d. 403); it was translated into Latin about this time. The subject-matter is largely drawn from traditional allegorizing Christian commentary on Scriptural passages; in general spirit the work may be said to belong to the class of popular descriptions of the marvels of nature, real or imaginary, which tended increasingly to usurp the place of legitimate natural science after Theophrastus. It has much in common with the *Historia Animalium* of Aelian (q.v. 1). The work as it stands appears from internal evidence to have taken shape in Egypt. The *Physiologus* enjoyed great subsequent popularity; it was translated into the principal languages of Europe and the Near East; its material continued to be reproduced in the medieval Bestiaries and to be embodied in medieval art, from sculpture to illuminated initials. Many traditional religious symbols, such as the Pelican and the Phoenix, derive from it.

PHYTALUS, eponym of the Phytalidae, an Attic clan having certain duties in the worship of Theseus (q.v.);

Plut. *Thes.* 23). According to what is no doubt the clan-legend, Phytalus received Demeter in his house when she visited Attica, and she gave him the fig-tree, whereof he is apparently the presiding hero or daemon, hence his name, 'planter', and his descendants welcomed Theseus. Paus. 1. 37. 2 and 4. H. J. R.

PIAZZA ARMERINA, a hill-town of south-central Sicily, notable for the remains of a large Roman villa of the fourth century A.D. some 4 miles to the south-west, near the ancient *Philosophiana*. This consists of a vast complex of rooms, many of considerable size, grouped around a large peristyle court. The majority of the floors are paved with rich mosaics of superb workmanship, of which the finest is the 'Great Hunt', extending the length of a 70-yard corridor between peristyle and trichinium. The owner, evidently a magnate concerned with the import of animals for the Roman arenas, is apparently depicted in it. That the villa was an imperial residence of Maximianus, co-Augustus with Diocletian, seems a less likely hypothesis.

Ragone, *Il proprietario della villa romana di Piazza Armerina* (1962), A. Carandini, *Ricerche sullo stile e la cronologia dei mosaici della villa di Piazza Armerina* (1964). A. G. W.

PICENUM is situated east of the Apennines between Ancona and the river Sangro. Unlike the Villanovans (q.v.), the warlike Iron-Age inhabitants of the general area of the Marche and the Abruzzi practised inhumation. The inscriptions in the area fall into two groups: northern, from Novilara, Fano, and Pesaro, and southern (the so-called 'Old Sabellian'), which, like the material culture of the region, has strong affinities with the opposite shores of the Adriatic. The extensive use of amber (q.v.) from the Orientalizing period onwards points in addition to commercial contact with the head of the Adriatic. The area was conquered by Rome in the early third century B.C.

D. Randall-MacIver, *The Iron Age in Italy* (1927); J. Whatmough, *The Foundations of Roman Italy* (1957); *Att. II Conv. Stud. Eur.* 1958, *Suppl. Stud. Eur.* xxv (1959); A. M. Radnóti (ed.) *Piccola guida alla preistoria italiana* (1965), s.v. 'Marche', 'Abruzzo'. D. W. R. R.

PICUS, properly the woodpecker, sacred to Mars (q.v.), but rationalized into an early king of the Italians (for his identification with Zeus in Diod. Sic. 6, fr. 5, see W. R. Halliday, *GR* 1922, 110 ff.). Ovid (*Met.* 14, 320 ff.) gives an explanation, perhaps his own, of how he came to be changed into bird-form. H. J. R.

PIETAS is the typical Roman attitude of dutiful respect toward gods, fatherland, and parents and other kinsmen (Cic. *Nat. D.* 1, 116: 'est enim pietas iustitia aduersum deos'; Cic. *Inu. Rhet.* 2, 66: 'religionem eam quae in metu et caerimonia deorum sit appellant, pietatem quae erga patriam aut parentes aut alios sanguine coniunctos officium conseruare moneat'). Pietas, personified, received a temple in Rome (vowed 191 B.C., dedicated 181; see Platner-Ashby, 389 f.; Nash, *Pict. Dict. Rome* ii, 418). She is often represented in human form, sometimes attended by a stork, symbol of filial piety; during the Empire, Pietas Augusta appears on coins and in inscriptions. Some Romans adopted as cognomen the term *Pius*; Virgil's 'pius Aeneas' significantly expresses the Roman ideal in his religious attitude, in his patriotic mission, and in his relations with father, son, and comrades.

Latte, *RR* 238.

W. C. G.

PIGRES, Carian poet; brother of Artemisia wife of Mausolus; said to have interpolated pentameters into the *Iliad*, and to have written the *Margites*.

EGF 65.

PILUMNUS and **PICUMNUS**. By Roman custom, when a woman was delivered, three persons kept off *Silvanus* (q.v.) from her by chopping, sweeping, and pounding with a pestle; the deities *Intercedona*, *Deverra*, and *Pilumnus* were supposed to preside over these actions (Varro in Aug. *De civ. D.* 6, 9). More puzzling is the statement of Varro in Nonius (528 M), which associates *Picumnus* with *Pilumnus* as marriage-gods. H. J. R.

PINDAR (Πίνδαρος) (518-438 B.C.), lyric poet, of Cynoscephalae in Boeotia, born in the Pythian year of the 65th Olympiad, i.e. 518 B.C. (*Suda*, s.v. Πίνδαρος, fr. 183). Nothing is known of his parents, Daiphantus and Cleodice, but they must have belonged to an aristocratic family, since Pindar himself claims to be a member of the Aegeidae, an international clan with high connexions in Sparta, Thera, and Cyrene (*Pyth.* 5, 75, with scholl., cf. *Ildt.* 4, 149). He learned his craft first from his uncle Scopelinos, later at Athens from Apollodorus and Agathocles, who was also the teacher of Damon (*Pl. Ia.* 180 d). His earliest known poem is *Pyth.* 10, written in 498 for a young protégé of the powerful Thessalian Aleuadar. In 490 he made the acquaintance of Theron's brother, Xenocrates, and celebrated his chariot-victory with *Pyth.* 6, while *Pyth.* 12, written in the same year for a Sicilian flute-player, is probably due to the same connexion. In 488 he wrote *Ol.* 14, and in 486 *Pyth.* 7 for the ostracized Alcmaeonid Megacles. In the Persian Wars of 480-479 Pindar seems to have accepted the Theban policy of neutrality (fr. 99), but without satisfaction, as *Isthm.* 8, written soon after, shows, while *Isthm.* 5 shows his appreciation of Aeginetan courage at Salamis. In 476 he went to Sicily, where he produced *Ol.* 1 in honour of Hieron's victory in the horse-race and *Ol.* 2 and 3 in honour of Theron's in the chariot-race. *Ol.* 2 is an important and intimate document about life after death, and shows the influence of Orphic ideas, which were prevalent in Sicily. *Nem.* 1 and 9, also written for Sicilian patrons, may belong to the same period. On his return Pindar probably wrote his famous Dithyramb for Athens (frs. 64-5), and it is possible that in *Pyth.* 9 (474 B.C.) he defends himself before a Theban audience against the charge of undue partiality for Athens. *Pyth.* 11 may belong to the same year, but the alternative date of 454 seems on the whole preferable. Though he did not return to Sicily, he maintained his connexion with Hieron. *Pyth.* 3 is a poetical letter, sent probably about 474 as a consolation to the suffering tyrant; it refers to the cult of Pan, for which Pindar wrote a Hymn (frs. 85-90). *Pyth.* 1 celebrates both Hieron's chariot-victory of 470 and the official foundation of his new town of Aetna under his son Demomenes. *Pyth.* 2, a dark and unhappy poem, may have been written in 468, when Hieron won the chariot-race at Olympia, but asked Bacchylides instead of Pindar to celebrate his victory for him. At the same time Pindar sent a *Hyporchema* (fr. 94) to Hieron. *Ol.* 6, written for a friend of Hieron's, probably belongs to the same year. At this period Pindar numbered patrons in many different parts of Greece. He wrote an Encomium for Alexander of Macedon (fr. 106), a Paean for Abdera (fr. 36), poems for Sparta (frs. 101, 189), *Ol.* 7 for a Rhodian in 464, and *Ol.* 13 and fr. 107 for a Corinthian in the same year. The height of his achievement in these years were *Pyth.* 4 and 5, written for the King of Cyrene in 462-461. In the first of these Pindar enters high politics and appeals to the king to recall his exiled kinsman Damophilus. Before 460 Pindar shows no hostility to Athens, but after it he seems to have been shocked and pained by the policy of the Athenian imperialists. At first he maintained his personal loyalties to Athenians such as Melesias (*Ol.* 8 in 460), but in *Isthm.* 7, which seems to have been composed after Oenophyta (c. 456

B.C.), he combines a quietist attitude in himself with a conviction that the gods punish the presumptuous. His latest known poems are *Pyth.* 8, written in 446 for a young Aeginetan at a time when it seemed possible that Aegina might free herself from Athens, and *Nem.* 11 and fr. 108 for the boy Aristagoras of Tenedos, whose brother Theoxenus is said to have been with Pindar at his death. He died at the age of 80 in 438.

Pindar's works were collected in seventeen books, Hymns, Paean, Dithyrambs (2), Processional Songs (2), Maiden-Songs (2), other Maiden-Songs Hyporchemata (2), Encomia, Dirges, and Epinicians (4). The Epinicians have by an accident survived almost complete; despite their peculiar character they are probably typical of all Pindar's work, and new fragments of Paean and Dithyrambs show little difference of style and thought. Pindar seems to have made the rejoicing over victory a religious occasion on which he demonstrated the power of men to find, temporarily, a happiness like that of the gods by displaying their *ἀρετή*. This *ἀρετή* was itself partly inborn and due to men's having divine blood in their veins. His Epinicians are usually choral hymns in which the victor is presented to some god, and they have the traditional characteristics of such hymns—moral maxims, a myth, and praise of the gods. Into this frame the victor's own achievements are fitted, not always easily. In his maxims Pindar sometimes achieves a great beauty and insight. His myths, inserted for varying reasons, tend to stress elements in a story rather than to tell a straight tale. In them Pindar often improves on his originals in the interests of morality, notably in *Ol.* 1, where he rejects the story that Pelops' shoulder was eaten. Sometimes, as in the great Argonautic saga of *Pyth.* 4, the myth is told for its own sake; more often it has a moral, as in *Pyth.* 3 and *Ol.* 1. Some of the shorter Epinicians were sung at the place of victory, notably *Ol.* 11 and *Pyth.* 7, but more usually a longer poem was sung when the victor came home. The other types of poem show a similar high style and temper, though the Maiden-Songs may have been more simple. Pindar's language is an elaborate poetical creation, made of several dialects, with many echoes and variations from Homer. His poems are written in regular stanzas, either in a series of strophes on the same plan or in a series of triads, each consisting of strophe, antistrophe, and epode. Except for *Isthm.* 3 and 4, which may form a single poem, no two poems are the same metrically. Pindar uses three main classes of metre, Dorian or 'dactylo-epitrite', Aeolian built up from such elements as the glyconic, choriambic dimeter, etc., and paeonic as in *Ol.* 2. Pindar was a true conservative in politics, morals, and religion, but the glory of his poetry lies largely in his sense of joy and honour. He was capable of deep emotion and, at times, of a sublimity to which there is no parallel.

PINDARUS, a name in medieval MSS. for Homer's Latinus (see *ILIAS LATINA*), due perhaps to the possible use of 'Thebanus' as an epithet for Homer.

PIRACY, in early antiquity, was not clearly distinguished from trade on the one hand and war on the other. Unless a treaty guaranteed safety and arrangements for legal process had been laid down, owners of ships seized

at sea had no easy redress. In Homer (describing conditions after the breakdown of the Cretan thalassocracy) we find piracy accepted as natural; and early Greek cities, having to beware of surprise landings, were usually built away from the coast. Piracy, like brigandage on land, was an easy resource for the hungry, familiar with local tides, currents, and places of concealment. The social conditions of the ancient world, in which (in most periods) starvation and exile were common, provided a constant incentive; and travellers kidnapped could easily be sold as slaves to purchasers who would ask no questions.

Civilized Greek States naturally encouraged orderly trade, and many depended on it. Those claiming thalassocracy (from the legendary Minos—i.e. Minoan Crete—through classical Athens to Alexander the Great) tried to protect at least their own interests at sea, and this would lead to a general decrease in piracy. Yet even their actions, especially in times of war or scarcity, or for political reasons, were sometimes not far removed from semi-legal piracy (see *SYLLE*). Polycrates (q.v. 1) used his thalassocracy for open plundering; fifth-century Athens regarded the freedom of the seas as a favour to be conferred on loyal allies (Tod 1², 61, 32 ff.); and the tribute of the Athenian Empire might to many (e.g. Melos) appear indistinguishable from ransom, both in principle and frequently in methods of collection. Ensuring the freedom of the sea, for Athens as for Demetrius (q.v. 4) Poliorcetes (*SEG* 1. 75, 22 ff.), meant ensuring it for oneself and—at a price—for one's allies. War provided constant opportunities for pirates, who would be sought as allies at least by one power and could add profitable blockade-running. This can be seen in the Peloponnesian War, the fourth-century wars, and those of the Successors. On the other hand, since fleets were expensive to maintain, peace (after the end of the Athenian thalassocracy, paid for by reluctant allies) usually led to a running down of naval establishments, to a point where they could not keep the seas safe.

In the western Mediterranean the lack of firm demarcations between trade, piracy, and war appears even more clearly. Etruscans and Carthaginians, on the one hand, and Greeks, on the other, pursued their trade rivalries by methods that often appeared piratical to the other side. The rising Roman State showed little interest in the sea, and the small fleet of the *duoviri navales* (q.v.), combined with the spread of Roman power on land and the establishment of coastal colonies (see *COLONIZATION, ROMAN*), barely sufficed to keep the Italian coasts safe. The people of Antium (q.v.), conquered and colonized (338 B.C.) and ordered off the seas, were engaged in piracy—safely away from the Italian coasts—a generation later, in the time of Demetrius Poliorcetes. The fleets of the Punic Wars were not maintained after the need had passed, and in any case were never used for the general protection of peaceful shipping. The Illyrian Wars led only to the temporary safety of the Ionian Sea—not even (it seems) the Adriatic. In the Aegean, the island power of Rhodes (q.v.), after the decline of the kings' fleets, had tried to police the seas, and did so quite efficiently after 186 B.C., when general peace was secured by Rome and the pirates could find no allies. After the war with Perseus (q.v. 2) the Romans brought about the decline of Rhodian power, and police action at sea—especially in Crete, a favourite pirate base—became too difficult and had to be given up; while the Romans, with no enemy on land, gave little thought to the safety of sea trade and, in the free port at Delos (q.v.), in fact provided an emporium where no questions were asked about the provenance of goods or slaves.

By c. 100 B.C., under pressure from Italian traders, the Senate realized that a serious problem existed; especially as Italy's basic food supplies, increasingly imported, were

threatened. Efforts were now made to deal with the pirates (see Riccobono, *FIRA* 9—not mentioned in the literary sources and difficult to explain). But these were defeated by two factors: the civil and foreign wars (Mithridates and Sertorius co-operated with the pirates) and the traditional unwillingness to keep a large fleet in being. On the whole, Rome pursued her old-established policy of trying to conquer pirate fleets on land (see ANTONIUS 1, SERVILIUS 1, METELLUS 8), concentrating her efforts on Cilicia and Crete, the chief pirate bases, and demanding naval assistance *ad hoc* from provincials and allies. This policy was defeated by the sheer size of the coastline concerned and the difficulty of the terrain: by the 70s, pirates were boldly raiding Italian coasts and coast roads. Constant food shortages, and pressure from Equestrian trading interests (reinforced after Italian enfranchisement) finally led to the law of Gabinus (q.v. 2), for the first time attacking the problem as a whole; and Pompey's success, followed by his defeat of Mithridates, settled the problem for the time being. The civil wars naturally led to a revival of privateering (see POMPEIUS 6), and it was Augustus who finally shouldered the burden of a permanent fleet, with provincial detachments that multiplied during the early Empire. In the third century A.D., with the decline of these fleets and the beginning of the barbarian invasions, piracy (like brigandage on land) gained the upper hand and was not again subdued in antiquity.

PW, s.v. 'Seeraub'; H. A. Ormerod, *Piracy in the Ancient World* (1924). And see NAVIUS. E. B.

PIRAEUS (*Πειραιεύς*) is a promontory 4 miles south-west of Athens, which Themistocles fortified from the time of his archonship (493/2 B.C.) in order to provide the growing Athenian fleet with a strong base instead of the open roadstead of Phaleron (q.v.). It had three harbours, Zea and Munichia (q.v.) on the east, both used for warships, the first having sheds for 196 and storage for gear in the famous Arsenal of Philo, and Kantharos or μέγας λιμὴν on the west. This last was the biggest, and quickly grew, not only as a naval station, with docks and ship-houses, but also as a thriving emporium, with quays and warehouses. Moles guarded and narrowed the entrances to all three, which could be closed by chains. The city was laid out on a rectangular plan by Hippodamus (q.v.) of Miletus c. 450. In the same decade it was joined to Athens by the Long Walls (q.v.). The fortifications were destroyed in 404 by Lysander but rebuilt by Conon in 393. The chief event in its later history was its siege and destruction by Sulla (87–86); the large bronze statues unearthed in 1959 were probably buried then. Considerable parts of the walls remain; also ship-houses in the two small harbours, and the traces of an important Hellenistic theatre near Zea. During the fifth and fourth centuries the inhabitants, many attracted by interest to navy and empire, proved the staunch supporters of radical democracy at Athens; they also included many foreigners (e.g. Lysias), who introduced strange cults (e.g. Bendis).

W. Judeich, *Topographie von Athen* (1931), 144 ff., 430 ff.; E. Fechter, *Das Theater im Piraeus* (1950); E. Vanderpool, 'News Letter from Greece', *AJArch.* 1960, 205 ff. C. W. J. E.

PIRITHOUS (*Π[ε]ρίθουος* or *-θους*), in mythology, a Lapith, son by Zeus of Ixion's wife Dia (*Il.* 14. 317–18; Pherecydes in schol. Ap. Rhod. 3. 62). Homer knows of him as fighting the Centaurs (*Il.* 1. 263 ff.), presumably in the quarrel mentioned in *Od.* 21. 295 ff., and a doubtfully genuine verse (*Od.* 11. 631) mentions him in Hades. In the first and last of these passages he is associated with Theseus (q.v.), whose close friend he is in later authors. Hence, as our mythological tradition is largely Attic, he tends to appear as little more than the pendant of his friend. He is actually an Athenian in schol. *Il.* 1. 263.

One of the few adventures which are his rather than Theseus' is his wedding-feast. Marrying Hippodamia, daughter of Butes (*Il.* 2. 742 and schol. on 1. 263), he forgot, according to one account, to include Ares among his guests (Servius on *Aen.* 7. 304). For that or some other reason (the simplest is that they were very drunk, cf. *Od.* 21. 295, where one Centaur is responsible for the disturbance) the Centaurs abused his hospitality by offering violence to Hippodamia, and a great fight began (*Ov. Met.* 12. 210 ff.; the earlier accounts of a story which the Olympia pediments and Parthenon metopes show to have been well known in the fifth century, if not before, have not survived), ending in the victory of the Lapithae.

For the rest, Pirithous took his share in the carrying off of Helen, the war against the Amazons, and finally Theseus' descent to Hades, which, indeed, in one account (*Hyg. Fab.* 79. 2) was undertaken to get Persephone as wife for Pirithous, in return for his services in the matter of Helen. Theseus in most accounts escapes; Pirithous generally does not (but cf. *Hyg. ibid.* 3).

The fight of Lapiths and Centaurs appears in early archaic art (François vase and elsewhere) as a pitched battle in armour. The brawl at the feast first appears in the early classical period, in Attic vase-painting, and the West pediment of the Temple of Zeus at Olympia; no doubt also in the picture in the Theseum at Athens probably by Micon. Pirithous is also shown aiding Theseus to abduct Helen, pictured from the mid sixth century. Theseus and Pirithous were shown in the Underworld by Polygnotus, and in a few surviving works from the mid fifth century on.

Weizsäcker in Roscher's *Lexikon*, s.v. In art, Brommer, *Vasenlisten*, 168 ff., see also THESEUS. H. J. R.; C. M. R.

PISA was the district round Olympia. Opinions are divided whether there was ever a town of this name; some have suggested that it is represented by a site at Frangonisi (*BSA, Arch. Rep.* 1959–60, 11). The Pisatans were in early times a power independent of the Eleans. After Pheidon's usurpation of the Olympic Games (668 B.C.) they held the presidency until c. 580, under the tyranny of the house of Pantaleon. Their claim was revived by the Arcadians in 364 (*Xen. Hell.* 7. 4. 28).

A. Andrewes, *The Greek Tyrants* (1956), 62 f.; H. Berve, *Die Tyrannen bei den Griechen* (1967), i. 35. T. J. D.; R. J. H.

PISAE, modern *Pisa* on the Arno, an Etruscan, possibly originally a Ligurian, town (it was certainly not founded from Pisa in Elis: Serv. ad *Aen.* 10. 179; Dion. Hal. 1. 20). Although presumably important earlier, it is first mentioned in 225 B.C. when the Romans used its harbour (Polyb. 2. 16 f.; Livy 21. 39). Pisae served as a frontier fortress for Rome against the Ligurians and in 180 offered territory for a Latin colony (Livy 33. 43, etc.; 40. 43). Apparently this colony never materialized, although in 177 neighbouring Luna (q.v.) received a citizen colony. Later Pisae became a prosperous Augustan *colonia* but, despite its importance, is seldom mentioned (Strabo 5. 222; Dessau, *ILS* 139 f.).

N. Toscanelli, *Pisa nell'antichità*, 3 vols. (1933–4); L. Danti, *Mem. Accad. Pont.* 6, fasc. 4 (1943), 63 ff. E. T. S.

PISIDIA. A mountainous region of Asia Minor, between Pamphylia and Phrygia. As it lay off the main routes, its wild and warlike inhabitants were able to maintain their independence of the Lydians and Persians. They submitted to Alexander, but were never effectively controlled by any of the Hellenistic kings. Civilization came late to Pisidia; Selge and Ettena struck silver coins in the fourth century, but otherwise no coinage is known before the first century B.C. Termessus and Sagalassus too were places of some account in Alexander's time.

Nominally included in the province of Cilicia (q.v.), Pisidia was given in 36 B.C. to Amyntas and partially pacified by him; finally (c. 6 B.C.?) it was reduced by Sulpicius Quirinius (q.v.) and included in the province of Galatia. To maintain security Augustus established a number of colonies, notably Cremna, Olbasa, and Comama; and under the *pax Romana* the country at last attained a fair degree of civilized prosperity. Of the Pisidian language, mentioned by Strabo (13. 631) as spoken at Cibyra, there are some scanty epigraphical traces.

Jones, *Cities of Rom. Prov.*, ch. 5; Magic, *Rom. Rule Asia Min.*, chs 12, 19, G. E. Bean in *Anatolian Studies* 1959, 1960; B. Levick, *Roman Colonies in S. Asia Minor* (1967). G. E. H.

PISISTRATUS (Πεισιστρατος), tyrant of Athens, claimed descent from the Neleids of Pylos and Pisistratus, archon 669/8 B.C. His mother was related to Solon. As polemarch (c. 565) he distinguished himself in war against Megara. During a period of faction he led a third party called *Hyperakrioi*, *Diakrioi*, or *Epakrioi* (drawn probably from the hill-country of northern Attica) and added to it citizens who had been recently enfranchised or recently impoverished, and in 561 made himself tyrant with a bodyguard granted him by the Athenian people (CAH Plates I. 284). After five years he was expelled by a coalition of the Plain and Coast parties, but an understanding with the Alcmaeonids soon led to his peaceful restoration. (On the story of his restoration by Athena see *PIW* xix. 163.) The new *entente* soon broke down. Pisistratus withdrew to Macedonia and the Mt. Pangaeus mining district, where he made money, raised mercenaries, and fostered alliances with Thessaly, Thebes, Eretria, Naxos, and Argos. In 546 he landed near Marathon, defeated his opponents at Pallene, and firmly based his tyranny on mercenaries and money derived partly from the Strymon district, partly from Attica. He remained in power until he died of sickness in 527.

Pisistratus retained the forms of the Solonian constitution, remaining to the end affable and benevolent. He encouraged cultivators of poor land by granting loans and aimed at full employment in the countryside: hence the district judges instituted by him and his frequent journeys about the country. He succeeded in placating many of the nobles. He did not annex or split up their family estates of arable land, and only his bitterest enemies left Attica. Even with these Pisistratus and his sons obtained a temporary reconciliation, as Cimon returned from exile, his son Miltiades was archon in 524/3, and Cleisthenes the Alcmaeonid was archon in 525/4. During the rule of his sons the reconciliation broke down, and the Alcmaeonids at Delphi became the leaders of a powerful group of *émigrés*. The revenues which enabled him to maintain his position were based on a tithe of all produce, which his sons reduced to a twentieth, and on taxes on trade which increased rapidly. Attic black-figured pottery became the foremost fabric in the Greek world, and Attic coinage one of its foremost currencies. His building programme included the Enneakrounos fountain and the temple of Olympian Zeus. At the great festivals of the Panathenaea and Dionysia all Athenians assembled to celebrate the glory of their city.

He fired Athens' ambition by his successful foreign policy, occupying Rhacalus on the Thermaic Gulf and Sigeum in the Troad, maintaining close alliances with Naxos and Samos, and purifying Delos as the centre of Ionian religion. His long rule weakened the grip of the aristocrats upon their followers, encouraged individualism in many circles, and brought the cultural enlightenment and financial prosperity in which a movement towards democracy became feasible.

problems, N. G. L. Hammond, *CQ* 1956, 49 f. and G. Sanders *Nouvelle Clio* 1955-7, 161 f.; A. Andrewes, *The Greek Tyrants* (1956). P. N. U.; N. G. L. H.

PISO (1) **FRUGI**, LUCIUS CALPURNIUS (*PIW* 96) (cos. 133 B.C.), the Roman annalist, was tribune in 149, carrying his *Lex de pecumis repetundis* (which established a *quaestio* (q.v.) for cases of extortion), consul in 133, and censor in 120. His *Annales* covered from the origins of Rome to his own times in at least seven books, the year 158 in book 7, the latest date 146; antiquarian and mythological fragments are also attributed to him. He rationalized the legends and, presumably under Cato's influence, set the ancient virtues against contemporary vices. Plain in style, although with lively anecdotes, he did not elaborate his material, and his authority was recognized by Cicero, Varro, Livy, Dionysius, and Pliny; Gellius quoted him for his archaism.

Peter, *HRRel.* ii. clxxxii, 120; W. Soltan, *Livius' Geschichtswerk* (1807), K. Latte, *Sitz. Berlin*, no. 7, 1960; Ogilvie, *Comm. Livy* 7-5, 14 ff. A. H. McD.

PISO (2), GAIUS CALPURNIUS (*PIW* 63), consul in 67 B.C. with Glabrio (q.v. 3), passed a law against bribery. As an enemy of Pompey, he opposed Cornelius (q.v. 1) and Gabinius (q.v. 2) and prevented Lollius (q.v. 1) from being elected consul. Assigned both Gauls as consul and proconsul, he impeded Pompey's recruitment, conquered the Allobroges, and repressed trouble in the Transpadana. (For this he was later prosecuted by Caesar and successfully defended by Cicero.) In 61 he was asked (by his kinsman (4)) to speak first in the Senate, to Cicero's chagrin. He died in the early 50s. E. B.

PISO (3), GNAEUS CALPURNIUS (*PIW* 60), suspected of complicity in Catiline's 'first conspiracy', was sent to Spain as *quaestor pro praetore*, perhaps during a shortage of commanders, on the motion of Crassus (q.v. 4). Crassus no doubt hoped he would counter the entrenched influence of Pompey there, but he was killed by adherents of Pompey (64 B.C.). E. B.

PISO (4) **FRUGI**, MARCUS PUPPIUS (*PIW* 10), born c. 115 B.C., a Calpurnius Piso by birth, was in his youth a promising orator and older friend of Cicero (*Brut.* 236, 240, 310). Marrying the widow of Cinna (q.v. 1), he became *quaestor* (83), but soon deserted to Sulla and divorced his wife. He failed to become aedile, but was praetor (72 or 71), then governed a Spanish province, triumphing in 69. Giving up oratory (as too strenuous for his health), he took up soldiering, served Pompey as a legate (67-62), and was rewarded by him with the consulship of 61. He supported Clodius (q.v. 1) and opposed Cicero, who in return prevented his obtaining the province of Syria. He failed to secure the ratification of Pompey's *acta* and probably died soon after. E. B.

PISO (5) **CAESONINUS**, LUCIUS CALPURNIUS (*PIW* 90), in his youth probably served in Greece and rapidly rose to the consulate, which he held in 58 B.C. (with Gabinius, q.v. 2) after marrying his daughter to Caesar (cos. 59). He refused to support Cicero against Clodius (q.v. 1), and as a reward was given the province of Macedonia by a law of Clodius. His administration there (57-55) was attacked by Cicero in two speeches (*De prov. cons.* and, after his return, *In Pisonem*). He was censor (50) and remained neutral in the Civil War, which he did his best to prevent. After Caesar's death he again tried to prevent civil war (against Antonius, 4), but died soon after.

An Epicurean and friend of Philodemus (q.v.), he was open to conventional attack as a voluptuary; but he was (at least) no worse than many of his contemporaries, and his political influence was on the side of peace. He was

perhaps the owner of a villa in Herculaneum, where Epicurean papyri were discovered in the eighteenth century.

Cic. *Pis.*, ed. R. G. M. Nisbet (1961); Syme, *Rom. Rev.*, see index. E. B.

PISO (6), LUCIUS CALPURNIUS (*PW* 99) (cos. 15 B.C.), was called 'the *pontifex*' to distinguish him from the *augur* (8). Born in 48, son of (5) Piso inherited a prudent nature and philhellenic tastes: he was the patron of the poet Antipater of Thessalonica. According to Porphyrio on Horace, *Ars P.* 1, that poem was dedicated to the sons of this Piso. The cognomen 'Frugi' often attached to this Piso derives from two errors in the ancient evidence; and, as concerns the *Ars Poetica*, it is not possible to verify two sons (cf. *JRS* 1960, 20). Attested in Pamphylia in 13 B.C. (Dio 54. 34. 6), presumably as consular legate of the province of Galatia, he was summoned to Thrace to put down a serious insurrection, which task took three years and earned him the *ornamenta triumphalia* (Dio 54. 34. 6 ff.; Vell. Pat. 2. 98). Soon after this he may have been appointed proconsul of Asia (cf. *Anth. Pal.* 10. 25. 3 f.). Piso died in A.D. 32, after having been *praefectus urbi* for twenty years (Tac. *Ann.* 6. 11, if correct). He had enjoyed the unbroken confidence of Tiberius; and his notorious convivial habits impaired neither his efficiency nor his reliability (Sen. *Ep.* 83. 14).

Syme, *Rom. Rev.*, see index; *JRS* 1960, 12 ff.

R. S.

PISO (7), GNAEUS CALPURNIUS (*PW* 70) (cos. 7 B.C.), who inherited from his father (cos. suff. 23 B.C.) a republican independence of temper, was appointed governor of Syria in A.D. 17, for the avowed purpose of lending counsel and assistance to Germanicus Caesar when he journeyed to the East. His previous experience had lain in other lands: proconsul of Africa and legate of Hispania Tarraconensis. After reciprocal bickering and open quarrel, Germanicus broke off his 'amicitia' with Piso. Germanicus' death (19) was attributed by his friends to magical devices or poisoning by Piso and his wife Plancina. Returning to Rome, Piso was prosecuted in the Senate, but took his own life before the trial was terminated, protesting his innocence and his loyalty to Tiberius.

R. S.

PISO (8), LUCIUS CALPURNIUS (*PW* 74), younger brother of (7), and known as *augur* to distinguish him from (6), was consul in 1 B.C. and proconsul of Asia. Like his father and brother a strong-minded man (Tac. *Ann.* 4. 21), in A.D. 16 he spoke out openly in the Senate against the corruption of public life, and brought a suit against Urigulania, a favourite of Livia's; in 20 he defended his brother. He was accused of *maiestas* in 24, but died before trial.

R. Syme, *JRS* 1956, 17 ff.

T. J. C.

PISO (9), GAIUS CALPURNIUS (*PW* 65), the figurehead of the great conspiracy against Nero (q.v. § 7) in A.D. 65, had been exiled by Gaius, who compelled his wife Livia Orestilla to leave her husband in favour of himself and then accused the pair of adultery (probably A.D. 40). Under Claudius Piso became *consul suffectus*, but he showed no real ambition. He lived in magnificent style and was one of the most popular figures in Rome, with his charming manners and oratorical gifts, which he put at the service of rich and poor alike. Already in 62 he was suspect to Nero's advisers (Tac. *Ann.* 14. 65), but in the actual conspiracy he proved a futile leader and after its betrayal had no thought for any action other than suicide.

His precise relationship to other members of his family is unknown, but his son Calpurnius Galerianus, who was executed in 70, is described as cousin as well as son-in-law of L. Piso (10) (Tac. *Hist.* 4. 49).

R. L. J.; G. E. F. C.

PISO (10), LUCIUS CALPURNIUS (*PW* 79), grandson of Piso (7) and son of L. Piso, cos. A.D. 27 (Pliny, *Epp.* 3. 7. 12), was consul in A.D. 57 with Nero. In 62 he was made member of an important financial commission; in 69 he was proconsul of Africa. Suspected in 70 of aspiring to the throne, he was murdered by Valerius (q.v. 10) Festus, who was in touch with Mucianus (q.v.) in Rome.

G. E. F. C.

PISO (11) LICINIANUS, LUCIUS CALPURNIUS (*PW* 100), was adopted by the Emperor Galba (q.v. 1) on 10 January 69 and killed with him in the Forum five days later. Born in A.D. 38, he was son to M. Crassus Frugi (cos. A.D. 27), and to Scribonia, daughter of L. Scribonius Libo (cos. A.D. 16) and great-granddaughter of Sextus Pompeius: his sister married L. Piso (q.v. 10), the son of her father's consular colleague. This illustrious family had already met disasters under the later Julio-Claudians. Piso's eldest brother, Pompeius Magnus, was married to Claudius' daughter Antonia, but was executed along with both his parents in A.D. 46; a second brother, M. Crassus (cos. 64), was forced to suicide during Nero's last years; and Piso himself had been in exile for some time when Galba recalled him in 68. He was perhaps connected with a doctrinaire group in the Senate, and as such was backed for the adoption by Laco the praetorian prefect; but his critics found his personality forbidding, and he was totally unacceptable to the soldiers in the guard. His wife, daughter of Q. Veranius (cos. 49), survived him for many years (Pliny, *Epp.* ii. 20).

Tac. *Hist.* 1, esp. 14 and 48. The stemma in *PIR* 1 in part corrected by R. Syme, *JRS* 1960, 12 ff.

G. E. F. C.

PISO (12), CALPURNIUS (*PW* 59), a contemporary of the Younger Pliny (*Ep.* 5. 17), chose a Greek title *καταστεργητοῦ* for his elegiac poem on Constellations. His identification by Mommsen with the consul of A.D. 111 C. Calpurnius Piso (perhaps a grandson of no. 9 above) is possible.

PITS, CULT. Apart from a *mundus* (q.v.), pits were dug in ritual for two principal reasons. (a) In rites of invocation of the dead, and in their tendance generally, liquid offerings were often poured into a pit, *βοθρος*, apparently by way of getting them underground into their realm; e.g. *Od.* 11. 517; Lucian, *Charon*, 22. (b) Consecrated objects, when worn out or useless (e.g. broken ornaments, bones and ashes of sacrifice, etc.), being still sacred, were often buried in a pit (Lat. *fauissa*) in the temple precincts.

H. J. R.

PITTACUS of Mytilene (c. 650–570 B.C.), statesman and sage. He commanded in the war against Athens for Sigeum, on which Periander of Corinth later arbitrated; helped to overthrow the tyrant Melanchrus, and after further party struggles in Mytilene was elected *acyrmetes* (q.v.) for ten years. He died ten years after laying down office. His best remembered law doubled the penalty for all offences if committed under the influence of drink. A moderate democratic reformer like his contemporary Solon, Pittacus was violently attacked by his younger fellow citizen Alcaeus, whose family had helped to overthrow tyranny but wished to restore the old aristocracy.

Strabo 13. 617; Diog. Laert. 1. 4; *Suda*, s.v. 'Pittacus'; Pl. *Prot.* 26 ff.; Plut. *Conv. sept. sap.* C. M. Bowra, *Greek Lyric Poetry* (1961), ch. 4. P. N. U.

PLACENTIA, a north Italian town near the confluence of Trebia and Padus (q.v.), modern *Piacenza*. Placentia is first mentioned as a Latin colony successfully established despite Boian opposition (218 B.C.). Military mention of Placentia is frequent: it harboured Romans after the

Trebia battle, resisted Hasdrubal, survived Gallic and Ligurian devastations (200-190), and witnessed Civil War battles and Aurelian's Marcomannic defeat (Polyb. 3. 40. 66; Livy 27. 39. 43; 31. 10. 21; 34. 22. 56; 37. 46 f.; App. *Ann.* 7; *BCiv.* 1. 92; Suet. *Otho* 9; S.H.A. *Aurel.* 21). Otherwise, although always a prosperous *municipium* or *colonia* on the Via Aemilia, it is seldom mentioned (Cic. ap. Asc. 3 Cl.; Tac. *Hist.* 2. 19). E. T. S.

PLACIDIA, GALLA, daughter of Theodosius I, was born c. A.D. 390. Captured by the Visigoths in Rome in 410, she married a Visigothic chieftain called Athaulf. After Athaulf's death she was restored to the Romans (416), and in 417 married Constantius, who later reigned as Constantius III. Her son by this marriage became Valentinian III. She adorned Ravenna (q.v.) and died at Rome in 450. E. A. T.

PLACIDUS (1), grammarian of fifth or sixth century A.D. The glossary extant (in several versions) under his name is a compilation from two separate works, one of which (now called Pseudo-Placidus) was based on marginal notes in copies of republican poets. The ed. of J. W. Pirie and W. M. Lindsay (*Glossaria Lat.* iv. 12-70) supersedes that of G. Goetz (*Corp. Gloss. Lat.* v. 3-158). Schanz-Hosius, § 1120. J. F. M.

PLACIDUS (2), LACTANTIUS (6th c. A.D.?), a grammarian under whose name is extant a collection of scholia on the *Thebais* of Statius (ed. R. Jahnke, 1898). He is not identical with the glossographer (1). Schanz-Hosius, § 408. J. F. M.

PLAGIARISM. The charge of plagiarism was freely bandied about by Greek authors. Aristophanes accused Eupolis of 'vilely turning his *Knights* inside-out in the *Maricas*' (*Nub.* 553-4) and other comic poets of stealing his 'images' (ibid. 559), and Phrynichus Comicus was similarly accused (Scholl. *Ar. Av.* 750, *Ran.* 13). Isocrates said that some of his rivals made a living out of copying his writings (12. 16, cf. 5. 94). Among philosophers, Democritus is reputed (Favorinus ap. Diog. Laert. 9. 34) to have charged Anaxagoras with 'filching' (ὀφειρῆσθαι) astronomical theories from someone else. Plato was said to have taken the idea of the *Republic* from Protagoras (Diog. Laert. 3. 37), and Epicurus to have plagiarized from his teacher Nausiphanes (id. 10. 7 and 14). Heraclides accused Apollonius of Perge of appropriating Archimedes' unpublished work on conic sections.

Investigation of plagiarism formed a part of Alexandrian scholarship. Aristophanes of Byzantium wrote *Παράλληλοι Μενάνδρου τε καὶ ἀπ' ὧν ἐκλεψεν ἐκλογαί*. Such studies enjoyed a great vogue in the first century A.D. *Mimesis*, conscious imitation of good models, was recommended by the Atticists of that period to the aspiring writer, who was urged to say to himself, 'How would Homer, Plato, Demosthenes, or Thucydides have expressed this?' ([Longin.] *Subl.* 14). Such imitation may lead to direct plagiarism, and Longinus (ibid. 13) is careful to distinguish between *μῆμις* and *κλοπή*. How freely plagiarism was discussed in the first century A.D. is shown by the list of authors who wrote, mainly in that century, *Περὶ κλοπῆς*, preserved by Porphyry (ap. Euseb. *Præp. Evang.* 10. 3. 12).

So much Greek literature has been lost that it is seldom possible to say whether the charge is strictly maintainable in a particular case. But it must be remembered that the Greeks laid less stress than we do on originality of material. Originality of style was what mattered in their eyes. Further, in so far as historical works are concerned, writers were unwilling to break the flow of their style by constant references to author-

ities, until the conscientious Aristotle set the precedent, followed by Alexandrian writers, for extensive documentation. Herodotus often uses Hecataeus, but never names him except to disagree. Ephorus uses Herodotus, Plutarch (in his life of Coriolanus) Dionysius of Halicarnassus, without mentioning their sources. But the absence of an acknowledgement is not, of itself, sufficient ground for a charge of plagiarism. The concept of plagiarism, as opposed to originality or imitation, has little relevance to Latin literature.

E. Stemplinger, *Das Plagiat in der griechischen Literatur* (1912).

J. D. D.

PLANCINA, MUNATIA, was in Syria with her husband, Cn. Calpurnius Piso (q.v. 7), governor of the province, when Germanicus and Agrippina were in the East (A.D. 18-19). By temperament no less domineering than Agrippina, she was, moreover, a friend of Livia. It was inevitable, therefore, that she should quarrel with Agrippina, and when Germanicus died in 19 Agrippina accused her of murder. Livia's intercession saved her life when Piso was condemned in 20. Accused again in 33, she committed suicide. J. P. B.

PLANCIUS (PW 4), GNAEUS, *eques* from Atina, protégé of the Sentii Saturnini (cf. Saturninus, q.v. 2) of that town, served in Africa, Crete, and (as *trib. mil.*) in Macedonia. As quaestor in 58 B.C. (under a Saturninus) he visited Cicero in his exile. He was tribune (56) and aedile (55?). His election to this office led to a prosecution for *ambitus* by Juventius (q.v.), against which Hortensius (q.v. 2) and Cicero successfully defended him. He fought for Pompey in the Civil War.

Cic. *Planc.*

E. B.

PLANCUS (1), LUCIUS MUNATIUS (PW 30), of senatorial family, served under Caesar in the Gallic and Civil Wars. He was one of the six *praefecti urbi* of 45 B.C., and subsequently proconsul of Gallia Comata (44/3), where he mounted an expedition into Raetia and founded colonies at Lugdunum (q.v.) and Raetia (*August.*). After frequently protesting to Cicero his loyalty to the Republic, he eventually deserted D. Brutus (q.v. 6) and joined Antony and Lepidus (late summer 43). He procured (or permitted) the proscription of his brother L. Plotius Plancus, and after triumphing 'ex Gallia' became consul with Lepidus (42) and restored the temple of Saturn. In the Perusine War he commanded an Antonian force, escaping with Fulvia (q.v.) to Greece in 40; and governed Asia (40-38?) and Syria (35) for Antony. Opposing Cleopatra's intended participation in the war against Octavian, he went over to him with his nephew M. Titius (q.v. 2) in 32. In 27 he proposed the name Augustus for Octavian; and was censor in 22. He was buried in a monumental tomb at Caieta (see *ILS* 886) and left a son Lucius (*cos.* A.D. 13) and a daughter Plancina (q.v.).

Cic. *Letters* (esp. *Fam.* 10. 1-24); Tyrrell and Purser, *Correspondence of Cicero vi* (1913), lxxv ff. Syme, *Rom. Rev.*, see index, G. Walser, *Der Briefwechsel des L. Munatius Plancus mit Cicero* (1957), P. Perrochat, *Rev. Ét. Lat.* 1957, 172 ff.; R. Fellmann, *Das Grab des L. Munatius Plancus bei Gaeta* (1957); *ORF* 446 f.; Platner-Ashby, 463 ff. G. W. R., T. J. C.

PLANCUS (2) BURSA, TITUS MUNATIUS (PW 32), brother of (1), was tribune in 52. He helped Pompey to delay the appointment of an *interrex*, was prominent in the disorders which followed the murder of Clodius, and worked hard for Milo's condemnation. On quitting office he was accused by Cicero *de vi* and, despite Pompey's support, condemned. Caesar provided for him in exile, and restored him in 49, but he held no further office. In 43 he fought for Antony in the war of Mutina and was driven out of Pollentia by Aquila (q.v. 1).

ORF 447 ff.

T. J. C.

PLANTA, POMPEIUS (*PW* 103), in A.D. 69 fought in the war between Otho and Vitellius. He was procurator of Lycia (c. 75 or 76), an *amicus* of Trajan, and Prefect of Egypt (98-100). He wrote an account of the civil war, which Tacitus may have used for his *Histories*.

PLANTS, SACRED. Plants are associated with many deities, the reason being sometimes quite clear. Thus, corn is sacred to Demeter and Ceres alike, it being their province (mythologically the gift of the former; of the latter we have no legends). Similarly, vines belong to Dionysus (q.v.), since he is among other things a wine-god. In other instances we may reasonably conjecture that the plant is associated with the deity because used for some medical or magical purpose which falls within his or her province. Thus, wormwood is called Artemis' herb (*artemisia*), hence in some sense sacred to her; but she is a woman's goddess, and the herb was used to cure some diseases of women (Pliny, *HN* 25. 73), apparently those arising out of childbirth or pregnancy, for it is especially Artemis Eileithyia whom Pliny mentions in this connexion. Laurel had a reputation for purging from other than bodily ills (Festus, 104. 23 Lindsay); hence it is natural enough that Apollo, the divine specialist in purification, should be its patron. It should not, however, be assumed without further examination that the medical or magical use of the plant comes first and the association with the god is secondary, for the reverse may be true. Often the reason for the association is quite unknown and the ancients invented fantastic explanations; thus, no one can tell why the wreaths in Britomart's festival must be of pine or mastic, and why myrtle (Aphrodite's especial plant) must not be used (Callim. *Dian.* 200 f.).

II. J. R.

PLATAEA, a city in southern Boeotia between Cithaeron and the river Asopos, appealed for and received Athenian protection when threatened by Thebes about 519 B.C. Plataeans joined the Athenian army at Marathon and even Athens' fleet in 480, when the town, like Athens, was sacked. Near it in 479 was won the great victory over Mardonius (q.v.). In 431, after an attack by Thebes, Athens evacuated civilians; the garrison, after a brave defence (429-427) was starved out by the Peloponnesians and its members put to death, except those who had escaped in a daring sortie. Athens granted isopolity to its people until their restoration by Sparta in 386. Destroyed again by Thebes in 373 and restored by the Macedonians, Plataea survived in Roman times, when Plutarch describes the Persian War memorial festival, the Eleutheria, as still celebrated (*Aristides* 21).

Hdt. 6. 108; 8. 1, 41, 50; 9. 25-85, Thuc. 2. 2-6, 71-8, 3. 20-4, 52-68, 110c. *Plataeans*; Diod. Sic. 15. 46; Paus. 9. 1. W. K. Pritchett, *Studies in Ancient Greek Topography* (1965), 1. 103 ff. A. R. B.

PLATO (Πλάτων) (1) (c. 429-347 B.C.), son of Ariston and Perictione, both Athenians of distinguished lineage. His writings show the enormous influence that Socrates had upon him both by his life and by his death. He relates in his *Seventh Letter* that the spectacle of contemporary politics, during the ascendancy of his own associates as well as under the democracy, gradually weakened his original intention to become a statesman and drove him to the paradox that there was no hope for cities until philosophers became rulers or rulers philosophers. After the execution of Socrates in 399 he retired for a time to Megara with other Socratics. In the next twelve years he perhaps travelled to many places, including Egypt. At any rate he visited Italy and Sicily

in 387, where he met Dionysius I and initiated lifelong friendships with Dion of Syracuse and the Pythagorean Archytas of Tarentum. On his return he was perhaps captured and ransomed at Aegina. It was probably only a few months later that he began formal and continuous teaching at a place near the grove of Academus about a mile outside the wall of Athens (see *ACADEMY*). This was his chief occupation almost without interruption for the remaining forty years of his life; but he made two more visits to Syracuse. Dionysius I died in 367; and Dion thereupon summoned Plato to try to realize the philosopher-king in the person of Dionysius II, and also to strengthen Dion's declining influence at court. Plato felt bound to try; but the new ruler's suspicion of Dion was soon reinforced by jealousy of his friendship with Plato. He banished Dion and sought to retain Plato. Some years later Plato was obliged to visit Syracuse for the third and last time, because Dionysius had promised to 'do as you wish about Dion' if he came, and to do nothing of the sort if he did not. Dionysius not merely broke his promise, but practically confiscated Dion's money and kept Plato a prisoner until the influence of Archytas procured his release. In 357 Dion re-entered Syracuse by force and expelled Dionysius. A few years later Dion was assassinated by persons who seem to have had something to do with Plato. The *Seventh Letter* was written to Dion's party after his death, ostensibly to urge moderation and constitutional procedure, but more to explain and justify Plato's own part in the whole miserable affair.

2. His **PUBLICATIONS**, which are all preserved, consist of some twenty-five dialogues and the *Apology*. There are also thirteen letters whose genuineness is much debated; but even those who reject them appear to think the *Seventh* reliable in its history. The precise order of these works is unknown; but stylometric and other inferences permit a rough division into three periods, of which the early certainly includes *Apology*, *Laches*, *Charmides*, *Euthyphro*, *Crito*, *Hippias Minor*, the middle certainly includes *Phaedo*, *Symposium*, *Republic*, and the late certainly includes *Sophist*, *Statesman*, *Philebus*, *Timaeus*, *Laws*. (For Plato's poetry see *ELEGIAC POETRY*, GREEK.)

3. **THE EARLY DIALOGUES** aim primarily at portraying a character. Plato's Socrates is ugly in body but magnetic in mind; convivial and erotic, yet Spartan in habits and of enormous physical endurance. The most striking thing about him is his conversation, to which he devotes his whole life. At first appearing absurdly simple and homely, it soon becomes intensely impressive. Its main tone is great moral earnestness, often paradoxically strict; but this is seasoned with paradoxes of another sort (as that pleasure is the only good in *Protagoras*) and with an apparently mischievous treatment of his interlocutor. The main doctrine to which he tends is that virtue is knowledge. He usually does not specify what it is knowledge of, but on the whole seems to mean: of the individual's happiness or good. Hence, since real knowledge is supremely effective in practice, no one willingly does wrong; and so-called incontinence is ignorance. Hence, also, virtue should be teachable; and Socrates wonders why great statesmen have not taught it to their sons. Hence, lastly, Socrates holds it his duty to shatter the false conceit of knowledge wherever it occurs. He asks questions to which there is only one answer; and when these admissions are put together they entail the contradictory of the answerer's original assertion. He explains in Plato's *Apology* that this bewildering elenchus is an essential preliminary to the acquisition of real knowledge and virtue; but neither there nor elsewhere does he justify his sly and mischievous manner of conducting it. The search for knowledge appears to him

mostly as a question in the form: 'What is *X*?' When offered examples he says he wants 'not many *X*s but the one *X*', '*X* itself', the 'form' or 'idea' or 'essence'. He regards this question as prior to all others, and even as answerable apart from any examples of *X*. Yet he cannot himself produce any answer, and all those proffered by others are dissolved by his elenchus. The typical form of an early Platonic work is therefore a dialogue which raises the question 'What is so and so?', refutes all suggested answers, and ends in ignorance.

4. The typical work of THE MIDDLE PERIOD is a narration of an earlier conversation, and Plato makes magnificent use of the opportunity to describe the external scene. The elenchus now yields to a blaze of positive doctrine; and the combination of artistic and philosophic excellence thus achieved makes the *Republic* a very great book. Instead of pursuing some particular 'form', Socrates is now represented as concerned about the nature of a 'form' as such, about the whole collection of 'forms' as such, and about the consequences of the hypothesis that there are such entities. 'We are accustomed to posit some one form concerning each set of things to which we apply the same name', *Resp.* 596 a. This form is the very thing itself meant by the name. Being invisible, it is grasped by thought and not by sense. It is absolutely and perfectly what it is, independent of all else, changeless, divine. The 'forms' constitute a second class of existences, more real than the changing animals and things around us. The 'form' of the Good has a unique status among them, being 'even beyond essence'; it has some of the characteristics the Christian ascribes to God, but Plato distinguishes it from God and regards all the 'forms' as quite independent of Him. He leaves the relations between 'forms' and things somewhat vague; but the 'forms' are certainly causes of things, both in that each 'form' causes the things named after it and, apparently, in that the 'form' of the Good helps to cause all things. The relation of a 'form' to its namesake is represented as that of the original to the copy, but also as that of what is shared in to what shares; and Plato apparently thought the two accounts compatible. Modern interpretations of these 'forms' as 'concepts' or 'hypotheses' are wholly mistaken; and even the terms 'substances', 'universals', and 'ideals' can be applied only with careful distinctions and reservations. The 'forms' were 'separate' in that they were independent and self-sufficient and not parts or elements of things; but they were 'unseparated' in that Plato meant his spatial language about them to be taken metaphorically, and in that he really believed that things 'shared' in them and could not have been what they are if there had been no 'forms'.

5. As the 'forms' are absolutely distinct from things, so our apprehension of them, which is knowledge, is absolutely distinct from opinion, which is a faculty set over things. There can be no true knowledge of the changing. Opinion is changeable, fallible, irrational, and the result of persuasion; knowledge is enduring, infallible, rational, exact, clear. Knowledge comes from teaching rather than persuasion, but from recollection rather than teaching; it is our recollection of the 'forms' we saw with the mind's eye before the body imprisoned and confused us. The things we see now remind us of the 'forms' they imitate (*Phd.*); and the love of a beautiful person can lead us to the love of wisdom and of the 'form' of beauty itself (*Symp.*). In other places Plato seems to allow no part at all to sense in the creation of knowledge. Knowledge is by nature practical and commanding; for *ἐπιστήμη* and *τέχνη* are identical. For the method by which it advances see DIALECTIC.

6. The hypothesis that there are 'forms' has among its consequences that soul is immortal; and this is elaborately argued in the *Phaedo*. Within the human soul

Plato finds three parts, the natural appetites, the spirit or resolution by which we can if we will resist the appetites, and the reason that determines when we should resist (*Resp.* book 4). Virtue is the proper functioning of these three. The man is wise if his reason decides rightly, brave if his spirit carries out the decision firmly, temperate and just if the better part rules the worse and each confines itself to its own business. Vice is necessarily unhappy because it is disorder and anarchy among these parts. Analogously, the ideal city will separate from the mass a small class of soldiers, living together without private property or family, and rendered by their education completely devoted to the protection of the city. They will perpetuate themselves mostly by procreation, but occasionally by enlisting a common citizen of superior metal. Within this 'spirit' of the city a higher education in mathematics and dialectic, and a series of examinations, will gradually elevate a few philosophic souls to an understanding of the 'form' of the good; and this will give them the duty though not the desire to rule. Plato's main political principle is that government is a science and requires expert knowledge. To this he adds a constitutional love of neatness and order. Both lead him to the strongest condemnations of democracy.

7. With the *Parmenides* and the *Theaetetus* Plato's late period approaches. In the latter he explicitly abandons narrated dialogue as cumbersome (143); in the former Socrates is for the first time a subordinate character. The *Parmenides* consists first of an apparently extremely damaging critique of the 'forms', and secondly of a sustained piece of abstract and self-contradictory dialectic. Undoubtedly Burnet and Taylor are mistaken in believing that the first part is really directed against the existence not of the 'forms' but of the sensibles. Undoubtedly also the 'forms' here attacked are those of Plato's own middle dialogues. But beyond this all is uncertain; and interpretations of the second part range from finding it a parody of some fallacious kind of reasoning to finding it an exposition of superrational truth.

8. The *Theaetetus*, applying the Socratic question to the concept of *ἐπιστήμη*, examines three likely answers with great thoroughness and insight. The first, that knowing is perceiving, is developed into an elaborate relativist theory of perception and knowledge, based on Protagorean and Heraclitean notions, before being abandoned because (1) it cannot deal with the undeniable difference between the layman and the expert, and (2) being or *ὄντα* is grasped by 'the soul herself by herself' and not through the senses. The second, that knowledge is true opinion, is quickly dismissed, but gives occasion for a digression on false opinion, in which Plato compares the mind to a waxen tablet and to an aviary. The third, that knowledge is true opinion with *λόγος*, allows him to examine the meaning of *λόγος*, and to consider the theory that knowledge is the analysis of compounds into their unknowable elements.

9. The *Sophist*, where the leader is an unnamed Eleatic, is Plato's most intense study in metaphysics. Sophistry entails falsehood, which entails 'not-being', which seems self-contradictory. 'Being' is not better; it raises difficulties alike for pluralists, monists, materialists, and immaterialists; it is neither rest nor motion, yet everything must either rest or move. The solution is the doctrine of 'communication'. Some things communicate with each other, so that we can sometimes truly say '*A* is *B*'. Some things do not communicate with each other. Some things communicate with everything else; e.g. otherness, for each thing is other than each other thing. Not-being therefore exists and has being as otherness; while being itself 'is not' myriads of things. Using this discovery, Plato finds an explanation for falsehood and error.

10. Inquiring about the *Statesman*, Plato reiterates that government like medicine is a job for experts, and infers that the perfect ruler should be completely irresponsible to the people and unfettered by any inviolable constitution. Law is a second-best, useful only when science is lacking. The best constitution is simply the rule of the expert; but, failing that, we have, in order of diminishing goodness, law-abiding monarchy and aristocracy and democracy, and then lawless democracy and oligarchy and tyranny. In this dialogue, and in *Phaedrus*, *Sophist*, *Philebus*, much space goes to the method of *διαίρεσις* and *συναγωγή*. *Διαίρεσις* is occasionally analysis into elements (*Phdr.* 270-1), but oftener distinction, and especially the 'carving' of a 'form' into component 'forms', which seems to be an ancestor of Aristotle's 'genus and species'. By repeated carving until we reach an 'atomic form', Plato expects to reach a definition for any 'form', and also, apparently, to 'demonstrate' its truth. By *συναγωγή* he understands 'seeing the one in the many', which probably includes both our 'universal in the particulars' and our 'genus in the species' (*Philb.* 16-18).

11. The *Philebus*, weighing the claims of pleasure and knowledge to be the good, and undertaking a close analysis of the former, rejects both, but sets knowledge nearer to that unity of 'beauty and symmetry and truth' which makes a thing good. It is hard to say whether Plato considered this a termination of the *Republic's* quest for the 'form' of the good.

12. The *Timaeus*, devoted to natural science, describes how the creator made the world a single spherical living thing, having both soul and body, modelled upon 'the living creature that truly is', peopled with gods visible and invisible and with men. Tradition declares that this creator is only a mythical device for exhibiting the rationality inhering in the world, which has always existed and always will. Plato goes on to exhibit the complementary element, *necessity*. Besides the world and its model there is a third thing, the receptacle in which the copy becomes. The four elements can be analysed into the regular solids. The dialogue then deals at length with man, his various perceptions, the irrational part of his soul, his body, his diseases, and his health. This study, being directed towards things and not 'forms', cannot achieve infallible or even perfectly consistent results (29 c); but it will be as good as possible if we take care always to pursue both kinds of cause, reason and necessity (48 a).

13. The *Lysis*, Plato's longest and perhaps last dialogue, takes up again the question of the best constitution for a city. Though reaffirming the *Republic's* doctrine that the ideal is perfect unity achieved through communism (739), Plato now writes in a different temper and plans a different city. Extremes are bad, whether of despotism or of freedom; so let us have a mixed constitution. The citizens shall be 5,040 persons, each supporting his family by the cultivation of two inalienable parcels of land. Trading and teaching shall be practised exclusively by resident foreigners. There shall be an 'Assembly' and 'Council'. A long panel of officers culminates in the thirty-seven 'lawguards', for whom Plato gradually accumulates a multifarious set of duties; their authority, constitutional from the beginning, is further limited in the last book by the institution of 'Examiners' and of a 'Nocturnal Council' to revise the laws. Contrary to the *Republic* and the *Statesman*, this work values law very highly, institutes 'preambles' to the laws by which the legislator adds persuasion to command, and is chiefly remarkable for its immense wealth of detailed enactments, regulating every part of public and private life. Furthermore, dialectic and philosophy, which the *Republic* emphasized as the coping-stones of

the constitution here yield almost entirely to religion. The reality of the divine can be proved both from the soul and from the stars, which are gods. Plato infers that everyone should be taught astronomy, and that atheists should be converted or killed.

14. Aristotle in his *Metaphysics* attributes to Plato doctrines not stated in the dialogues, especially that (1) there is a class of entities intermediate between 'forms' and things, immutable like 'forms' but plural like things, and these are what mathematics studies; (2) the 'forms' are numbers, composed of 'inassociable' units; (3) these number-forms are not ultimate, but result from the action of 'the One' upon 'the indefinite Dyad of the Great and Small'; thus produced, they in turn act upon this Dyad to produce the world of changing things. This report of Aristotle's cannot be wholly mistaken or fictitious; and something of these doctrines was probably delivered in Plato's famous lecture on the Good, for the Good and the One were apparently identical. Plato's view on the inefficiency of writing (*Phdr.* and *Letter 7*) is sufficient explanation of their not being found in the dialogues.

15. Burnet's edition of the *Phaedo* (1911) urged that Plato must have meant this dialogue to be essentially a true account of what was said on Socrates' last day. It would follow that Socrates had studied physics in his youth, that he believed in immortality and the 'forms', and that Plato was not the inventor of the 'forms'. Burnet and Taylor subsequently developed this theory into the general principle that Plato aimed at historical accuracy, ascribed to famous persons only the sort of view they had really held, and expressed himself only through such characters as the 'Eleatic stranger'. The extreme consequence, that the *Timaeus* is a minute reconstruction of the state of science several decades earlier, is brilliantly drawn in Taylor's commentary; and it constitutes an adequate disproof of Burnet's hypothesis by reduction to impossibility.

R. R.

16. Plato's style possesses infinite variety. He can write easy, graceful, charming narrative, lit up with flashes of humour (openings of *Protagoras* and *Republic*, *Symp.* 217 a-21 c) or infused with the noblest pathos (end of *Phaedo*). In another vein he is capable of the gorgeous pageantry of the *Phaedrus* myth (245 c ff.), the passionate religious fervour of the address to the young atheist (*Leg.* 904 c-6 c), and the solemnity of the last paragraph of the *Republic*. Once or twice he recalls the statuesque grandeur of the pre-Socratics (*Phdr.* 245 c-e, *Resp.* 617 d-e), perhaps the only literary influence definitely traceable in him.

His language has a lavish fullness, sometimes amounting to redundancy. In structure he ranges from the simplest *λέξις εἰρημένη* (*Resp.* 328 b-c) to very long periods, often straggling and anacoluthic (*Resp.* 488 a-e), but sometimes even more powerful than those of Demosthenes, though quite different from them (*Criti.* 120 b-c and the tremendous period at *Leg.* 865 d-e). He fully appreciated the potentialities of a very short clause, closing a period or immediately following it (*Leg.* 727 c *βλᾶπτει γάρ*: *Phdr.* 238 c *ἔως ἐκλήθη*). His language, as the ancient critics noted, is often deeply tinged with poetry. It is packed with metaphors (sometimes dead metaphors revived), especially from music. He will go back to a metaphor when one thinks he has done with it. Much of the *Sophist* is cast in the form of an extensive metaphor, the elusive Sophist, so hard to define, being represented as a hunted animal eluding chase. In his later years Plato's style shows traces of mannerism—a trick of interlacing the order of words, and some affectations of assonance (*Leg.* 657 d *ἡμῶν ἡμᾶς*, cf. 659 c; *figura etymologiae*, *Leg.* 868 c), including the pun, which fascinated Plato, though he laughed at it in others. But all in all, from the earliest works to the latest, no other author

reveals as Plato does the power, the beauty, and the flexibility of Greek prose.

Dion. Hal. *Comp.* 18, *Pomp. passim*: [Longin] *Subl.* 12-13, 32. For an admirable discussion of P.'s style and ancient criticisms of it see Norden, *Ant. Kunstpr.* 1. 104 ff. J. D. D.

The following works, arranged in a probable chronological order, may be confidently accepted as genuine: *Hippias Minor*; *Laches*; *Charmides*; *Ion*; *Protagoras*; *Euthyphro*, *Apology*, *Crito* (comm. J. Burnet, 1924); *Gorgias* (comm. E. R. Dodds, 1959); *Meno* (comm. R. S. Bluck, 1961); *Lysis*; *Menexenus* (c. 386); *Euthydemus*; *Cratylus*; *Symposium* (c. 384); *Phaedo* (comm. J. Burnet, 1911, R. S. Bluck, 1955, R. Hackforth, 1955); *Republic* (comm. J. Adam, 1902, etc.; tr. A. D. Lindsay, 1908, etc.); *Parmenides* (c. 370, tr. A. E. Taylor, 1934, F. M. Cornford, 1939); *Theaetetus* (c. 368, comm. L. Campbell, 2nd ed. 1883, F. M. Cornford, 1935); *Phaedrus* (comm. W. H. Thompson, 1868); *Sophist* (360 or later) and *Statesman* (comm. L. Campbell, 1867); *Philebus* (comm. R. G. Bury, 1897); *Timaeus* (A. E. Taylor comm. 1928, tr. 1929; F. M. Cornford, 1937); *Critias*; *Laus* (comm. E. B. England, 1921; tr. A. E. Taylor, 1934; see also G. R. Morrow, *Plato's Cretan City*, 1960).

The following are doubtfully genuine: *Hippias Major* (comm. D. Tarrant, 1928); *Clitophro*; *Epinomis* (comm. F. Novotny, 1960); *Letters* (comm. F. Novotny, 1930; tr. L. A. Post, 1925, G. R. Morrow, 1962).

The following may be confidently rejected as spurious: *Letter 1*; *Alcibiades 1* and 2; *Hippiarchus*; *Amatores*; *Theages*; *Mimos*; *De Justo*; *De Virtute*; *Demodocus*; *Sisyphus*; *Eryxias*; *Asiochus*; *Definitions*.

PLATO (2), Athenian comic poet, won his first victory at the City Dionysia c. 410 B.C. (*IG* ii. 2325. 63). He produced *Hyperbolus* at some date during 420-416 B.C., *Victories* after 421 (it referred to Ar. *Pax*), *Cleophon* in 405 and *Phaon* (probably) in 391. We have thirty titles and 270 fragments. Many of the fragments refer to people active at various times between 425 and 390 B.C. and known to us from Aristophanes (especially *Av.*) and from historians. The titles show that many of his plays were strongly political, and at least one of them, *Envoys*, belongs to the fourth century, since it mentions an embassy of Epicrates and Phormisius to Persia (fr. 119). Other titles, e.g. *Zeús kakóvmevos*, point to mythological burlesque; *Sophists* ridiculed contemporary artistic (and possibly, though not certainly, philosophical) innovations.

K. J. D.

PLATONIUS (of uncertain date) wrote a work on Old,

Middle, and New Comedy, in which he discussed the characteristics of individual comic poets. The two extant fragments, *On the Difference between Comedies* and *On the Difference between Types*, are brief but valuable.

CGF i. 3-6.

J. F. L.

PLATORIUS (PW 2) **NEPOS**, AULUS, consul in A.D. 119 and governor of Lower Germany, was legate of Britain from July 122 (*JRS* 1922, 65; 1930, 21) until after Sept. 124 (*CIL* vii. 1195 = xvi. 64 no. 70). He was a personal friend of and possible successor to Hadrian (S.H.A. *Hadr.* 4. 2; 15. 2) whom he apparently accompanied to Britain (122), bringing Legio VI Victrix from Lower Germany. He built the milecastles (*RIB* 1634, 1637-8, 1666, 1935) and forts (*RIB* 1340, 1427) of Hadrian's Wall (q.v.). I. A. R.

PLAUTIANUS, GAIUS FULVIUS (PW 101) (*cos.* A.D. 203), was probably a native of Lepcis Magna and for this reason favoured by his fellow townsman Septimius Severus. He was appointed Praetorian Prefect in A.D. 197 and came to exercise an almost autocratic power. In A.D. 202 his daughter Plautilla married Caracalla and in 203 he was consul with Geta. His downfall was due to Caracalla, who was disappointed in his marriage and induced his father to believe that the prefect was plotting his assassination (205).

See SEVERUS (1). F. Grosso, *Rend. Linc.* 1968, 7 ff.

H. M. D. P.; B. H. W.

PLAUTIUS (1) **SILVANUS**, MARCUS, a moderate Popularis of obscure origin, as tribune in 89 B.C. was responsible with C. Papirius Carbo for the *Lex Plautia Papiria* which, supplementing the *Lex Iulia* of 90, offered the citizenship to insurgents who withdrew straightway from the revolt, and to folk not covered by the previous law, in particular to certain persons who, though attached to the *municipia* incorporated in 90 as *adscripti*, were then resident not in their municipality but at Rome or elsewhere in but not outside Italy. Such persons were to apply to the *praetor urbanus* within sixty days.

Plautius also modified the *quaestio Variiana*, which was trying the friends of Livius Drusus and other sympathizers with the insurgents, by a *lex iudiciaria* which introduced mixed instead of equestrian juries.

Asc. *Corn.* 70; Cic. *Arch.* 4. 7. A. N. Sherwin-White, *The Roman Citizenship* (1939), 132 ff.; Badian, *Stud. Gr. Rom. Hist.* 75 ff.

A. N. S.-W.

PLAUTIUS (2, PW 23) **HYPSSAEUS**, PUBLIUS, of consular family, was quaestor and proquaestor under Pompey in the East and in 56 B.C. supported his pretensions to an Egyptian command. In 53 he was a candidate for the consulship with Metellus (q.v. 11) Scipio and Milo (q.v.). The campaign, in which he and Scipio were supported by Pompey and Clodius, was corrupt and violent and the elections were repeatedly postponed. After Clodius' death (Jan. 52) the partisans of Plautius and Scipio attacked the *interrex* Lepidus (q.v. 3) in his house in order to force him to fix the election-day. When Pompey had been made sole consul he abandoned Plautius, who was condemned *de ambitu*. He was probably restored by Caesar, since he was in the Senate in Apr. 44.

T. J. C.

PLAUTIUS (3, PW 43) **SILVANUS**, MARCUS, grandson of a praetor, was consul in 2 B.C., proconsul of Asia, and *legatus* of Augustus probably in Galatia, in which capacity he may have fought the mountaineers of Isauria in A.D. 6. He served with distinction in the Pannonian War under Tiberius and received *ornamenta triumphalia* in 9. He has been identified with the subject of the *elogium ILS* 918 (see QUIRINIUS). His mother Urgulania was a

friend of Livia's, his daughter Urgulanilla married the future Emperor Claudius.

E. Groug, *JOAI* 1922-4, Beibl. 445 ff.; R. Syme, *Klio* 1934, 139 ff., *Anat. Stud. Buckler* (1939), 332, and *Rom. Rev.* (see index), L. R. Taylor, *Amer. Acad. Rome* 1956, 7 ff., K. M. T. Atkinson, *Iust.* 1958, 315 f., 328 f. A. M.; T. J. C.

PLAUTIUS (4, *PW* 39), **AULUS** (*cos. suff.* A.D. 29), governor of Pannonia in 43, when he was appointed by Claudius to command the British expedition. He defeated the sons of Cunobellinus in battle (probably at the Medway and at the Thames), and took the Belgic capital, Camulodunum. Before his departure (47) he seems to have pacified the areas belonging to a wide suzerainty of the Cunobellinus kingdom. On his return he received the honour of an ovation. In 57, 'according to ancient custom', he himself conducted an inquiry into charges of 'externa superstitio' against his wife—and acquitted her.

Dio Cass. 60, 19-21; Tac. *Ann.* 13, 12. Collingwood-Myres, *Roman Britain*, 78 91; E. M. Clifford, *Illegion* (1961), 57 ff., D. R. Dudley and G. Webster, *The Roman Conquest of Britain*, A.D. 43-57 (1965), ch. 4, Freire, *Britannia* 61 ff. C. E. S.

PLAUTIUS (5, *PW* 47) **SILVANUS AELIANUS**, **TIBERIUS** (*cos. suff.* A.D. 45, *cos.* II 74), is barely known to history save for the long inscription recording his career and exploits, still extant at the Mausoleum of the Plauti near Tibur (*ILS* 986). The precise degree of his relationship to M. Plautius (3) Silvanus is uncertain. Plautius served as a legate in the conquest of Britain, clearly enjoying the favour of the Emperor Claudius (whose first wife, Plautia Urgulanilla (see **PLAUTIUS** 3), belonged to his family). After being proconsul of Asia (c. A.D. 57) Plautius was appointed legate of Moesia, in which function he conducted diverse operations, and made the frontier safe, though his army was weakened by the dispatch of troops to the East for Corbulo's campaigns. He prevented a disturbance among the Sarmatians, relieved the siege of Chersonesus, transplanted more than 100,000 natives to the southern bank of the Danube, and sent a copious supply of corn to Rome. For these services, however, he got no honour from Nero; Vespasian subsequently granted him the *ornamenta triumphalia*. After governing the province of Hispania Tarraconensis (70-3?), he was appointed *praefectus urbi* by Vespasian.

L. Halket, *Ant. Class.* 1934, 121, A. Stein, *Die Legaten von Moesien* (1940), 29 ff. R. S.

PLAUTIUS (6, *PW* 42) **LATERANUS**, a Roman senator, deprived of his rank in A.D. 48 as a lover of Messalina, was restored by Nero (55). Consul designate (65), he took part in the Pisonian conspiracy and was executed.

For his great palace on the Caelian see Juvenal 10, 15-18; but the Lateranus of Juvenal 8, 146 ff. is not modelled on the real person, who is credited with genuine patriotism by Tacitus, *Ann.* 15, 49. G. E. F. C.

PLAUTIUS (7, *PW* 60), a Roman jurist of the later first century A.D., not directly excerpted in the *Digest* and known only through commentaries entitled *ad Plautum* and written by Neratius, Javolenus (q.v.), Pomponius (q.v. 6) and Paulus (q.v. 1). The existence of these commentaries is evidence of his high reputation. His book seems to have treated of the *ius honorarium* (see *IUS CIVILE*), and to have occupied a position in the literature on that branch of the law similar to that occupied by the work of Sabinus (q.v. 2) in the literature on the *ius civile*.

A. B.; B. N.

PLAUTUS, **TITUS MACCIUS** (so in the *Ambrosianus*, but in *Merc.* 10 ambiguously *Macci Titi*, in *Asin.* 11 *Maccius*). Born at Sarsina in Umbria (surprisingly backward region, and perhaps this was a later inference from the joke in

Mostell. 769 f.). The biographical details in Gellius (3, 3, 14 f.) are probably later fiction. His death Cicero places in 184 B.C. (*Brut.* 60), but, as always, this probably means the last record of the production of a new play. His work was very popular and 130 plays were attributed to him in the first century B.C. Varro drew up a list of twenty-one plays which were by general agreement by Plautus (before going on to prove others to be Plautine by stylistic analysis—Gell. 3, 3, 3); it seems certain that the corpus of twenty-one plays (the last, the *Vidularia*, fragmentary) which has come down was based on this list and represents a selected edition produced in the second century A.D. The manuscript tradition, consisting of the sixth-century *Ambrosianus* on the one hand, and the Carolingian and later Palatine group on the other, cannot with any certainty be traced beyond the fourth century A.D. (traces of yet a third stem of the tradition can be found in the quotations of Nonius Marcellus).

It is impossible to date the plays absolutely except in two instances: the *didascalae* have been preserved in *A* for *Stichus* (200 n.c.) and *Pseudolus* (191 n.c.). Otherwise: *Cistellaria* was produced before the end of the Second Punic War (197 ff.); *Miles* c. 204 B.C. (211 f.), if the details of the imprisonment of Naevius (q.v.) and the dating can be trusted; *Truculentus* was a product of his old age (Cic. *Sen.* 50); *Epidicus* was earlier than *Bacchides* (214 f.); *Bacchides* was earlier than *Pseudolus* (which borrows themes from it); *Rudens* was earlier than *Mercator* (225 ff.—see below). No attempt to date the plays on a general hypothesis about development has succeeded: it has been thought, for instance, that Plautus progressed from a stage of few *cantica* to many—but this is based on the early dating of *Miles* which has no *cantica*, and yet *Cist.*, which must be near *Miles* in time, has several very complicated *cantica*.

The poets of the originals are known for some plays: from Menander's *Ἀδελφοί* came the *Stichus* (*didascalae*: Menander wrote two plays of that name—see *TERENCE*); *Bacchides* from Menander's *Δις ἐξαπατῶν* (cf. 816 f. with Men. fr. 125 K.); *Cistellaria* from Menander's *Συναριστῶσαι* (cf. 89 ff. with Men. fr. 558 K. and title from quotation in Festus—see *Philologus* 1932, 117 ff.); *Aulularia* from unknown play of Menander (300 f. listed as a trait of Menander's miser Smikrines). From Philemon were 'translated' *Mercator* (9 f.) and *Trinummus* (18 f.) and probably *Mostellaria* (1149); from Diphilus *Casina* (31 ff.) and *Rudens* (32); and from the unknown Demophilus came *Asinaria* (11). None can be proved to be 'translated' from a Middle Comedy original. In a number of the plays can be demonstrated the technique of incorporating material drawn from another play (or else actually invented by Plautus), which Terence's critics condemned as *contaminare* (see *TERENCE* and *CONTAMINATIO*). The technique of Plautus differs sharply from that of Terence who had careful regard for the plot as a whole: Plautus was interested in each scene as it came and inserted material without regard for any resultant incoherence in the plot viewed as a whole: so, e.g., the dream in *Merc.* 225 ff. has been imitated from that in *Rud.* 593 ff.; in *Trin.* iv. 3, lines 1008-27 concern a ring which has nothing to do with the plot of the play. Sometimes Plautus seems to have used material from another part of the same play to construct a new scene of his own, as in *Curculio* 1, sc. 1 and 2, and *Miles* (*passim*: see *Hermes* 1958, 79 ff. and *CQ* 1965, 84 ff.). In other places—these by far the majority—Plautus has used material of his own invention and so imported Roman material into Greek scenes: so, e.g., in *Pseud.* 1, 2 and 3, II, 1; *Bacch.* IV, 9, etc. In *Mostell.* 1, 3 he expanded the Greek scene with Roman material and a later producer seems to have made provision for drastic shortening of the whole scene (see *JRS* 1958, 22 ff.). The scene *Pseud.* 1, 2, the show of the

meretrices, where the refined Greek *hetaera* is suddenly displayed as the coarse denizen of a low Roman brothel, shows well how Plautus' imagination seized on separate scenes and worked within each one as a unit, not the play as a whole (see Fraenkel, *Plautinisches im Plautus*, 146 ff. = Ital. trans. 136 ff.). This was only one way in which Plautus gave rein to his own imagination, regardless of the Greek play: he also grossly expanded the role of slaves and the part allotted to them, so too that of the parasite as seems clear in *Capt.*, *Curc.*, and *Persa*, and that of the pimp Ballio in *Pseud.* (it is significant that this was the part which the great comic actor of Cicero's time, Roscius, chose for himself). It was of equally little interest to Plautus to preserve coherent characterization and, while he has based his characters on the Greek models, he has felt free to add touches of his own as suited him: what results is usually a person not completely Greek, nor really Roman, but an amalgam of both. He disregarded carefully preserved Greek stage-conventions: e.g. Greek playwrights kept comments made by a speaker concealed from those taking part in the main action on the stage within severe limits; but, when it suited him, Plautus expanded these remarks for their comic effect, cf. e.g. *Capt.* 260 ff. or *Pseud.* 229 ff., 1285 ff. On many occasions he gave a speech a completely new form and tone by parodying some Roman custom: e.g. the custom of the praetorian edict is parodied in *Mil.* 156 ff., *Pseud.* 125 ff., 133 ff.; or the slave in *Bacch.* 925 ff. speaks as if he were a triumphant army commander. For the greatest formal change, Plautus was indebted to his predecessors Livius Andronicus and Naevius (qq.v.): this was to produce great polymetric *cantica* from what will have been trimeter monologues in the Greek originals (the process is quite clear, e.g. in *Most.* 1. 2). These *cantica* were probably high points of the performances (like the great *arias* in Mozartian opera) and will have required highly skilled performers. All the plays contain splendid examples, except *Miles* (and here the reason for their absence may have been a lack of suitable performers). Similar in invention are opera-type duets in lyric metres, of minimum dramatic content, but enjoyable in terms of music, rhythm and language: e.g. *Persa*, 1. 1, *Pseud.* 243-64, *Rud.* 279 ff., *Stich.* 316 ff., *Trin.* 1059 ff. (The nearest approach Terence makes to such composition is, e.g., *An.* 344 f.—a drastic contrast.) In all of this Plautus shows himself a most versatile and sophisticated master of metrical technique (in Greek and Latin literature perhaps only Aristophanes is in the same class). The prologues of Plautus are curious: five of the plays (*Curc.*, *Epid.*, *Mostell.*, *Persa*, *Stich.*) have no prologue (the opening of *Bacch.* is lost) and of the rest the prologues of *Asin.* and *Trin.* are purely formal and say nothing of the action (the fragment of the prologue of *Pseud.* is similar). The prologues of *Cist.* and *Miles* are postponed (like the prologue, e.g., of Menander's *Heros* or *Perikeiromene*). The most likely hypothesis is that Plautus was moving in the same direction as Terence and dispensed with the Greek prologue as far as possible, consistently with the audience's understanding the action (some parts of the prologues, e.g. *Cas.* 1-20, were clearly written for revival performances after Plautus' death and later compositions may be far more extensive than can now be demonstrated).

The style of Plautus owed much to that of his predecessors (see NAEVIUS), but it was nevertheless an original creation. Formally, a Plautine play has three elements: *senarii* (representing ordinary conversation or prose—see *Persa*, IV. 3 which is in trochaic long verse but each time a section of a letter is read out, 501 ff. and 520 ff., the metre shifts to *senarii*), long verse (mainly trochaic *septenarii* and iambic *octonarii*), and *canticum*. The last was sung, the long verse was accompanied by the flute while *senarii* had no music (nothing can now be known

about this music): theoretically the style corresponds to this division—*cantica* have every resource of language lavished on them, while at the opposite extreme *senarii* are in the plainest style. But Plautus could not for long write in a plain style; so the language of the *senarii* varies considerably, and it is essential to note stylistic variations since they are the best clue to the tone of a passage. All the characteristics of artistic composition in Latin can be found in Plautus: dicolon, tricolon, and tricolon crescendo structures, with and without anaphora, structures dependent on the piling-up of synonyms, alliteration, assonance, archaisms, echoes of the language of Roman institutions, *figura etymologica*, etc., and with this a riotous imagination in the creation of metaphors (e.g. *Mil.* 607-8) and their selection from all aspects of human life (military, institutional, legal, religious, slave-punishment), a fantastic application and misapplication of Greek mythology (cf. e.g. *Pseud.* 190 ff., 198 ff.), and an otherwise unparalleled use of personification (cf. e.g. *Amph.* 673, *Asin.* 386, *Curc.* 147 ff., *Mostell.* 266). There is an endless flow of witticism that often totally destroys the pathos of a scene (cf. e.g. *Pseud.* 1-40) and these witticisms sometimes have a characteristic form—a riddling phrase, then an explanation in asyndeton (cf. e.g. *Pseud.* 747 *anguilla est: elabitur* or *Merc.* 361). There is no attempt either in the action of Plautus or in the language at realism: he and Terence stand at opposite extremes—where Terence strives for the natural, the humanly explicable, Plautus gives free rein to fantasy and imagination.

Act-division. The act-divisions in editions of Plautus are modern and arbitrary inventions of the sixteenth century. It seems clear that Greek New Comedy relied on a structure of five acts (i.e. four act-divisions), but it is clear that Plautus often ignored this in his adaptation (e.g. the act-division at *Pseud.* 573^a is probably about 200 lines too late). It is somewhat easier to discover the act-division of Terence's plays (Donatus says that they went back to the time of Varro), but he also seems to have written for a different, less sharply divided, performance than his Greek models. (On this complicated question see G. Burckhardt, *Die Aktenabteilung in der neuen griech. und in der röm. Komödie* (Diss. Basel, 1927); and a summary with bibliography in G. E. Duckworth, *The Nature of Roman Comedy* (1952), 98 ff.)

Metre and Prosody. See METRE, LATIN, 1. The metre and prosody of Plautus are too complex and difficult for summary here: the best detailed account in English is given by W. M. Lindsay in the introduction to his edition of Plautus, *Captivi* (1900), 12 ff.

TEXT. Apograph of *Ambrosianus* by W. Studemund (1889), F. Ritschl-Loewe-Goetz Scholl, 4 vols. (1879-1902)—still indispensable for full information about MSS.; F. Leo, 2 vols. (1895-6, repr. 1958)—the best and most useful text; W. M. Lindsay, 2 vols. (1904); A. Ernout, 7 vols. Budé (1932)—with trans.; P. Nixon, 5 vols. Loeb (1928—Leo's text with trans.). PLEBISCITUM, as opposed to *lex* (q.v.), was in theory a resolution carried by any Roman assembly in which no

patrician cast his vote. In practice, except perhaps on a few occasions in the late Republic, it was a resolution of a plebeian tribal assembly (*concilium plebis*: see COMMITIA (c)) presided over by a plebeian magistrate. At first the plebiscite was no more than a recommendation, and it attained the force of law only if re-enacted at the instance of a consul in the full assembly of the *populus*; but from an early date—possibly 449 B.C.—all plebiscites were recognized as universally binding which received the prior sanction of the patrician senators (*patrum auctoritas*, q.v.). By the *lex Hortensia* of 287 B.C. they were afforded unconditional validity, and, with plebeian tribunes being drawn increasingly from within the governing class in the years which followed, they embodied much of the official routine legislation of the middle Republic. In the post-Gracchan period they again became instruments of challenge to senatorial authority. Sulla therefore required in 88, and again in 81 B.C., that all tribunician proposals should be approved by the Senate before being put to the vote. This restriction was removed in 70 B.C.

Mommsen, *Röm. Forsch.* i. 177 ff.; *Röm. Staatsr.* iii. 150 ff.; H. Siler, *Die plebejischen Magistraturen* (1936), 39 ff.; A. Roos, *Comitia Tributa-Concilium plebis, Leges-Plebiscita* (1940); E. S. Staveley, *Athenaeum* 1955, 3 ff. E. S. S.

PLEBS was the name given to the general body of Roman citizens, as distinct from the privileged *patricii*; it is perhaps related to *πληθος*. The contrast between it and the *patricii* no doubt arose through the differentiation of certain wealthier and more influential families into a separate class. The modern hypothesis that the *plebs* was racially distinct from the *patricii* is not supported by ancient evidence; and the view of some ancient writers (Cic. *Rep.* 2. 16; Dion. Hal. 2. 9; Plut. *Rom.* 13) that the plebeians were all clients of the patricians in origin can be true only in the sense that the clients were plebeians. The plebeians were originally excluded from religious colleges, magistracies, and perhaps also from the Senate, and by a law of the XII Tables they were debarred from intermarriage with patricians. But they were enrolled in the *gentes*, *curiae*, and *tribus*; they served at all times in the army and could hold the office of *tribunus militum*. It is very doubtful whether it is legitimate to speak of *plebs* for the period of monarchy. A sharp distinction between the two classes seems to have developed only in early Republican times.

The 'Conflict of the Orders', by which the *plebs* achieved political equality with the patricians, forms part of the general history of Rome. The victory of the *plebs* was essentially due to the fact that it organized itself into a separate corporation, which held its own assemblies (*concilia plebis*), appointed its own officers, the *tribuni* and *aediles plebis* (usually selected from the wealthier members of their order), and instituted its own Record Office (in the temples of Diana on the Aventine and of Ceres). It secured inviolability for the persons of its officers by a collective undertaking to protect them, and at times of special crisis it withdrew *en masse* from Rome (see *SECESSIO*). After two centuries of struggle the *plebs* attained all its political objects by 287 B.C. Under the later Republic the name 'plebeian' acquired in ordinary parlance its modern sense of a member of the lower social orders. In imperial times those who did not belong to the senatorial and equestrian orders, or to the *ordo* of the *municipia*, were often called plebeians.

PLEMINIUS (*PW* 2), QUINTUS, *legatus pro praetore* in 205 B.C., under Scipio Africanus recaptured Locri from Hannibal. Left in charge of a garrison Pleminius plundered Locri, including the treasury of Persephone. After an inquiry by Scipio he retained his command and continued to oppress the Locrians until they appealed to the Senate. He was arrested by a senatorial commission of inquiry and perhaps held in prison until his death (195?).

A. Toynbee, *Hannibal's Legacy* (1965), ii. 613 ff.

H. H. S.

PLINY (1) **THE ELDER** (GAIUS PLINIUS (*PW* 5) SECUNDUS) (A.D. 23/24–79) was born at Comum and probably educated at Rome. His father is not known to have been distinguished, but he had means, and Pliny at the age of about 23 entered upon an equestrian career. He spent the next twelve years mostly with the armies of the Rhine, one of his appointments being the command of a cavalry squadron. One aspect of cavalry tactics was treated by him in a monograph written at this period, but characteristically he found time also to begin a history of the Roman campaigns against the Germans and to write a biography of his patron Pomponius Secundus, a scholar and a writer as well as a man of action, who thus foreshadowed Pliny's own aspirations.

In 57 or 58 Pliny completed his military service and returned to Italy. For the next ten years his official career was interrupted, perhaps because of lack of patronage, but possibly because of his distaste for Nero's regime. He devoted himself to rhetorical and grammatical studies, although these may not have been his only occupation. This may have been the period mentioned by his nephew Pliny the Younger (*Ep.* 3. 5) in which he was active at the bar.

With the accession of Vespasian, Pliny's fortunes changed for the better. He had served in Germany with Titus, a connexion which no doubt helped to bring him the series of procuratorships that he held 'summa integritate' (Suetonius). One of these is known to have taken him to Hispania Tarraconensis (c. 73). At this time he was also writing a history in thirty-one books, completed by 77 but published posthumously, and the *Naturalis Historia*, dedicated to Titus in 77. Towards the end of his life Pliny became a counsellor ('amicus') of Vespasian and then of Titus, and was appointed commander of the fleet at Misenum. It was from Misenum that he sailed on 24 Aug. 79 to observe the eruption of Vesuvius from the neighbourhood of Stabiae. There he was overcome by fumes from the eruption and died.

The titles and a rough chronology of Pliny's works are given by the Younger Pliny (*Ep.* 3. 5). Of these only the *Naturalis Historia* survives. The others were:

1. **De iaculatione equestri**, concerning the use of javelins on horseback: see above.
2. **De vita Pomponii Secundi**, in two books: see above.
3. **Bella Germaniae**, in twenty books, a history of all the Roman campaigns fought against the Germans, perhaps extending to A.D. 47. Tacitus made considerable use of this work in the *Germania* and the *Annals*.
4. **Studiosi**, in three books but six rolls, a training manual for students of oratory, containing copious instances of pointed *sententiae* from *controversiae* (Gell. 9. 16. 1) and thus showing tendencies that Quintilian was to render obsolete.
5. **Dubius Sermo**, on doubtful diction or linguistic forms, in eight books, completed in 67 and chosen because it was a safe topic to pursue in dangerous times. It appears that Pliny tried to reconcile the claims of analogy and anomaly (q.v.).

6. **A fine Aufidii Bassi**, a continuation in thirty-one books of Bassus's Roman history. It was written between 71 and 77. The period covered is uncertain (possibly

A.D. 44-71), and attempts to prove that it was extensively used by Tacitus have perhaps been pressed too far.

The *Naturalis Historia*, in thirty-seven books, consists of a Preface and Book 1, which provides an index of topics and authors, followed by: 2, the Universe; 3-6, geography; 7, man; 8-11, other animals; 12-19, botany; 20-7, botany in medicine; 28-32, zoology in medicine; 33-7, metals and stones, including their use in medicine, art, and architecture.

Pliny himself states (*pref.* 17) that the work contains 20,000 important facts obtained from 100 principal authors, but the total of authors and of 'facts, histories and observations' recorded in the index is far higher. Such a compilation was unique in its comprehensiveness, a virtue which is also a vice. And yet, without condoning cases of carelessness in his use of sources, it is all too easy to criticize Pliny for failing to exercise scientific methods for which he had neither training nor time. It is easy also to censure him for his lack of discrimination, for including much that was obsolete or absurd along with so much that was up-to-date and enlightening. Nevertheless, he made good use of his best qualities, his curiosity and his energy, both of which were inexhaustible. A simple example (19. 81-4) will serve to show Pliny at his best and worst: here personal research and personal observation are followed by a gross misreading of a source. His best accounts, for example that of amber (37. 30-46), supersede all others. Being what he was, he was wise to include too much rather than too little. Not the least of his merits is his capacity for making useful mistakes. He may have thought that the *anthracitis* (37. 99) was a precious stone, but his conscientious refusal to suppress material has resulted in an interesting note on coal. To the ancients Pliny's disadvantage lay not in his lack of reliability, but in his diffuseness, his mannered and often tortuous style, and perhaps his forced but powerful imagery, as is shown by the naive abridgements of Solinus, Isidore (q.v. 2) of Seville, and others. If with all these drawbacks Pliny's work failed to provide the practical benefits for which he hoped, it succeeded—partly in spite of them and partly because of them—in winning a unique place in the tradition of Western culture.

PLINY (2) THE YOUNGER (c. A.D. 61-c. 112), GAIUS PLINIUS CAECILIUS SECUNDUS, is known from his writings and from inscriptions (e.g. *ILS* 2027). Son of a landowner of Comum (q.v.), he was later brought up by his uncle and adoptive father, the literary equestrian Pliny the Elder (q.v.). He studied advocacy in the schools of Quintilian (q.v.) and Nicetes at Rome. After a year's service on the staff of a Syrian legion (c. 81) he entered the Senate (c. 90) through the influence of highly placed family friends such as Julius Frontinus and Verginius Rufus (qq.v.). He practised successfully in the civil courts

all his life, and conducted several State prosecutions of provincial governors charged with extortion. He held the usual annual offices, becoming praetor in 93 (or less probably 95) and consul in 100, and secured a series of longer administrative appointments as *praefectus aerarii militaris* (c. 94-6), *praefectus aerarii Saturni* (c. 98-100), and *curator alvei Tiberis* (c. 104-6). He thrice sat as judicial adviser in the cabinet of Trajan (c. 104-7), who sent him as *legatus Augusti* to reorganize the disorderly province of Bithynia-Pontus (c. 110), where he apparently died in office (c. 112). His career, very similar to that of his friend Cornelius Tacitus (q.v.), is the best documented example of the life of a civilian administrator of the Principate, promoted by and loyal to tyrannical and liberal emperors alike, whom he criticized only after their deaths.

Pliny published nine books of literary letters (*epistulae curatae scriptae*, *Ep.* 1. 1) between 100 and 109 at irregular intervals, singly and in groups of two or three. He and his friends regularly exchanged such letters (*Ep.* 9. 28). They are elegant news-letters about social, domestic, judicial, and political events, or letters of advice, personal introductions, and commendations, interspersed with very short courtesy notes. They resemble short essays, character sketches, miniature histories, and topographies, written with great attention to formal style, and limited either to a single subject treated at appropriate length, or to a single theme illustrated by three examples (cf. *Ep.* 2. 5. 13; 20. 6. 31; 7. 27). But many of the letters, notably those about business affairs (e.g. 3. 19. 8. 2), originated as practical correspondence later edited and expanded for literary publication. Pliny developed the literary letter into something new in Latin literature, akin to the occasional verses of Statius and Martial, whose themes and language he sometimes echoes. In style he uses the devices of contemporary rhetoric, with intricate arrangement and balance of words and clauses in sentences and paragraphs. Intellectually he reveals a scientific accuracy of observation and logicity of argument, especially when discussing natural phenomena—intermittent springs, floating islands, volcanic eruptions. Superstitious and mythological explanations are notably absent.

The letters paint the high society of Rome, both at the capital and in its provincial retreats, observed with a somewhat complacent eye. But Pliny's social origins in the municipal bourgeoisie rendered him easily shocked by the sophisticated vices of the capital, and he censures the cruelty of slave masters, the dodges of legacy hunters, and the meanness of the wealthy. He dwells preferably on pleasanter themes, the considerate treatment of wives, friends, and dependants, education, schools, his own forensic activities, and the literary life of Rome. Other letters describe the public life of senatorial debates, elections, and trials, without concealing the weaknesses of senators, and recount, in a manner anticipating Tacitus, heroic episodes of the political opposition to Domitian with which Pliny misleadingly claimed some connexion.

Pliny also dabbled enthusiastically in versification, publishing two volumes in the manner of his protégé Martial, of which he quotes a few indifferent specimens. His surviving speech, the *Panegyricus*, is an expanded version of the original which he delivered in the Senate as consul, using all the tricks of technical rhetoric to contrast the actions of Trajan with the misdeeds of Domitian. The tenth book of letters, written in simpler style than the rest, contains Pliny's official correspondence with Trajan about the administration of Bithynia, and is the only such dossier surviving entire. Each letter concerns a particular problem. Pliny, though fettered by directives that limited his freedom of action, shows, just as in his private letters, a sensible judgement of practical

affairs, a quick eye for abuses, and much humanity towards repressed classes such as the Christians. In *Ep.* 10. 96 he gives the earliest external account of their teaching, behaviour, and official repression.

PLOTINA, POMPEIA (PW, s.v. Pompeius 131), had married Trajan (q.v.) before his accession, but never bore children. She was admired for her simplicity, dignity, fidelity, and virtue. Though she had refused the title *Augusta* in A.D. 100, she finally accepted it in 105. From 112, she was honoured on coins; in particular the type of *Vesta* emphasized the purity of her family life. She was present at Trajan's death in Cilicia in 117 and probably facilitated his adoption (probably genuine rather than pretended by her) of Hadrian (q.v.) as his successor. She had long favoured Hadrian, who later honoured her on coins of 117-18, and at her death c. 121/2 consecrated her. She was commemorated by at least two temples, in that of Trajan in his Forum at Rome and independently at Nîmes.

PLOTINUS (Πλωτίνος) (A.D. 205-269/70). The main facts of his life are known from Porphyry's memoir (prefixed to editions of the *Enneads*). His birthplace, on which Porphyry is silent, is said by Eunapius and the *Suda* to have been Lyco or Lycopoli in Egypt, but his name is Roman, while his native language was almost certainly Greek. He turned to philosophy in his 28th year and worked for the next eleven years under Ammonius (q.v.) Saccas at Alexandria. In 242-3 he joined Gordian's unsuccessful expedition against Persia, hoping for an opportunity to learn something of eastern thought. The attempt was abortive, and at the age of 40 he settled in Rome as a teacher of philosophy, and remained there until his last illness, when he retired to Campania to die. At Rome he became the centre of an influential circle of intellectuals, which included men of the world and men of letters, besides professional philosophers like Amelius and Porphyry. He interested himself also in social problems, and tried to enlist the support of the Emperor Gallienus for a scheme to found a Platonic community on the site of a ruined Pythagorean settlement in Campania.

WRITINGS. Plotinus wrote nothing until he was 50. He then began to produce a series of philosophical essays arising directly out of discussions in his seminars (*συνουσίαι*), and intended primarily for circulation among his pupils. These were collected by Porphyry, who classified them roughly according to subject, arranged them rather artificially in six *Enneads* or groups of nine, and eventually published them c. 300-5. From this edition our manuscripts are descended. An edition by another pupil, the physician Eustochius, is known to have existed (schol. *Enn.* 4. 4. 30); and it has been argued by some scholars (Henry, *Recherches*, etc., see Bibliography) that the extracts from Plotinus in Eus. *Præp. Evang.* are derived from this Eustochian recension. Save for the omission of politics, Plotinus' essays range over the whole field of ancient philosophy: ethics and aesthetics are dealt with mainly in *Enn.* 1, physics and cosmology in *Enns.* 2 and 3; psychology in *Enn.* 4; metaphysics, logic, and epistemology in *Enns.* 5 and 6. Though not systematic in intention, the *Enneads* form in fact a more complete body of philosophical teaching than any other which has come down to

us from antiquity outside the Aristotelian corpus. Plotinus' favourite method is to raise and solve a series of *ἀπορίας*; many of the essays give the impression of a man thinking aloud or discussing difficulties with a pupil. Owing to bad eyesight, Plotinus never revised what he wrote (*Porph. Vita Plot.* 8), and his highly individual style often reflects the irregular structure of oral statement. Its allusiveness, rapid transitions, and extreme condensation render him one of the most difficult of Greek authors; but when deeply moved he can write magnificently.

PHILOSOPHICAL DOCTRINE. In the nineteenth century Plotinus' philosophy was often dismissed as an arbitrary and illogical syncretism of Greek and oriental ideas. Recent writers, on the other hand, see in him the most powerful philosophical mind between Aristotle and Aquinas or Descartes; and in his work a logical development from earlier Greek thought, whose elements he organized in a new synthesis designed to meet the needs of a new age. These needs influenced the direction rather than the methods of his thinking: its direction is determined by the same forces which resulted in the triumph of the eastern religions of salvation, but its methods are those of traditional Greek rationalism. Plotinus attached small value to ritual, and the religious ideas of the Near East seem to have had little direct influence on the *Enneads*, though Bréhier would explain certain parallels with Indian thought by postulating contact with Indian travellers in Alexandria. To Christianity Plotinus makes no explicit reference; but *Enn.* 2. 9 is an eloquent defence of Hellenism against Gnostic superstition.

Plotinus holds that all modes of being, whether material or mental, temporal or eternal, are constituted by the expansion or 'overflow' of a single immaterial and impersonal force, which he identifies with the 'One' of the *Parmenides* and the 'Good' of the *Republic*, though it is strictly insusceptible of any predicate or description. As 'the One', it is the ground of all existence; as 'the Good', it is the source of all values. There is exact correspondence between degrees of reality and degrees of value, both being determined by the degree of unity, or approximation to the One, which any existence achieves. Reality, though at its higher levels it is non-spatial and non-temporal, may thus be pictured figuratively as a series of concentric circles resulting from the expansion of the One. Each of these circles stands in a relation of timeless dependence to that immediately within it, which is in this sense its 'cause'; the term describes a logical relationship, not an historical event. Bare Matter (*ύλη*) is represented by the circumference of the outermost circle: it is the limiting case of reality, the last consequence of the expansion of the One, and so possesses only the ideal existence of a boundary.

Between the One and Matter lie three descending grades of reality—the World-mind (*νοῦς*), the World-soul (*ψυχή*), and Nature (*φύσις*). The descent is marked by increasing individuation and diminishing unity. The World-mind resembles Aristotle's Unmoved Mover: it is thought-thinking-itself, an eternal lucidity in which the knower and the known are distinguishable only logically; within it lie the Platonic Forms, which are conceived not as inert types or models but as a system of interrelated forces, differentiations of the one Mind which holds them together in a single timeless apprehension (*νόησις*). The dualism of subject and object, implicit in the self-intuition of Mind, is carried a stage further in the discursive thinking characteristic of Soul: because of its weaker unity, Soul must apprehend its objects successively and severally. In doing so it creates time and space; but the World-soul is itself eternal and transcends the spatio-temporal world which arises from its activity. The lowest creative principle is Nature, which corresponds to the immanent World-soul of the Stoics: its consciousness

is faint and dreamlike, and the physical world is its projected dream.

Man is a microcosm, containing all these principles actually or potentially within himself. His consciousness is normally occupied with the discursive thinking proper to Soul: but he has at all times a subconscious activity on the dreamlike level of Nature and a superconscious activity on the intuitive level of Mind; and his conscious life may lapse by habituation to the former level or be lifted by an intellectual discipline to the latter. Beyond the life of Mind lies the possibility of unification (*ἐνωσις*), an experience in which the Self by achieving complete inward unity is momentarily identified with the supreme unity of the One. This is the Plotinian doctrine of ecstasy. The essays in which he expounds it, on the basis of personal experience, show extraordinary introspective power and are among the classics of mysticism. It should be observed that for Plotinus unification is independent of divine grace; is attainable very rarely, as the result of a prolonged effort of the will and understanding; and is not properly a mode of cognition, so that no inference can be based on it.

Plotinus also made important contributions to psychology, particularly in his discussion of problems of perception, consciousness, and memory; and to aesthetic, where for Plato's doctrine that Art 'imitates' natural objects he substitutes the view that Art and Nature alike impose a structure on Matter in accordance with an inward vision of archetypal Forms. His most original work in ethics is concerned with the question of the nature and origin of evil, which in some passages he attempts to solve by treating evil as the limiting case of good, and correlating it with Matter, the limiting case of reality.

PLOTIUS TUCCA, a friend of Virgil (*Catal.* 1) and Horace (*Sat.* 1. 5. 40) and a member of Maecenas' literary circle. He assisted Varius (q.v. 2) Rufus as literary executor to Virgil, whose initial instructions to burn the *Aeneid* were rejected, the poem being published at Augustus' command without additions after merely superficial revision (Donat. *Vita Verg.* 39; Serv. *Praef.* 2. 12 Th.). G. C. W.

PLOUGHING is designed (1) to aerate the soil, and to provide crops with a suitable seed-bed; (2) to enable moisture to penetrate the surface. Ploughs vary greatly. The asymmetrical mouldboard ploughs, which cut a slice of earth, invert it in the furrow, and throw it to one side, are post-classical. All classical ploughs belong to the family of *ards*, which are symmetrical in design, and throw up the earth on either side of the furrow.

Hesiod's 'built' plough (*Op.* 427 ff.) is a *sole-ard* (Fr. *aire dental*), which comprises three distinct parts: (1) the

sole or share-beam (*ἐλμα, dentale*), a horizontal beam shaped to a point, over which could be drawn a share, usually of iron (*ἄννις, vomis*); (2) the plough-beam (*γῆς, bura, buris*), a curved pole of strong timber, one end of which was mortised into the front portion of the share-beam, the other end being connected with the pole (*ιστοβοεύς, temo*), by means of a pegged joint; to the other end of the pole, which is often represented as continuous with the plough-beam, was attached the yoke (*ζυγόν, iugum*); (3) the stilt or ploughtail (*ἐχέταλ, stiva*), a straight piece of wood, mortised into the rear portion of the share-beam, and usually set vertically and at right angles with it. This type of plough, well suited to breaking and stirring the surface of light soils, is still in use in many parts of the Mediterranean region. The operation, which is perfectly illustrated on a well known black-figured *kylix* of the sixth century, now in the Louvre (see Dar.-Sag. s.v. *Rustica Res*, fig. 5968), is quite simple: a pair of oxen, yoked to the pole, draws the share-beam steadily through the ground, the strain being taken by the strong curved plough-beam, while the ploughman keeps the implement on an even keel by pressing down on the handle (Columella, *Rust.* 1. 9. 3) or, if necessary, on the share-beam with his foot. The only surviving description of a Roman plough, that given by Virgil (*G.* 1. 169 ff.), is unfortunately vague. It may be a variety of the beam-ard, a type designed for heavy soils, and common in ancient Scandinavia, but the references to ploughing methods in the Roman agricultural writers presuppose a sole-ard of the type described above. Several ploughings of the fallow between crops were required to retain vital moisture, to keep down weeds, and to provide a suitable seed-bed. The removable ploughshares were of varying sizes and weights to suit different conditions, ranging from mere tips (Columella, *Rust.* 2. 2. 25) to long 'sleeves' covering the entire share-beam (Pliny, *IIN* 18. 171). The result of these ploughings and cross-ploughings was a smooth even surface, needing little or no harrowing (Columella, *Rust.* 2. 4. 2). To prepare ridges for sowing on, or to cover the seed, detachable wooden boards (Virgil's *aures* (loc. cit.), Varro's *tabellae* (*Rust.* 1. 29. 2)) were employed. Palladius' *aratrum auritum* (*Rust.* 1. 43. 1) evidently had fixed ridging-boards. Ploughs equipped with a wheeled fore-carriage to enable heavier soil to be worked more easily are mentioned by Pliny (loc. cit.) as a recent innovation in what is now Switzerland: Virgil's *currus* (*G.* 1. 174) is, however, a poetic reference to the whole implement, not to a wheeled plough.

PLUTARCH (L. (?) MESTRIUS PLUTARCHUS) of Chaeronea; born before A.D. 50, died after A.D. 120; philosopher and biographer. The family had long been established in Chaeronea, and most of Plutarch's life was spent in his home town, to which he was devoted. He knew Athens well, and visited both Egypt and Italy, lecturing and teaching at Rome. His father, Autobulus, his grandfather, Lamprias, and other members of his family figure often in his works; his wide circle of influential friends included the consulars L. Mestrius Florus, whose gentile name he took, Q. Sosius (q.v. 2) Senecio, to whom the *Parallel Lives* and other works are dedicated, and C. Minicius Fundanus, as well as Greek men of letters like Favonius (q.v.) and magnates like the exiled Syrian prince Antiochus Philopappus (see COMMAGENE). For the last thirty years of his life, Plutarch was a priest at Delphi. A devout

believer in its ancient pieties and a profound student of its antiquities, he played a notable part in the revival of the shrine in Trajanic and Hadrianic times. A late and uncertain story (*Suda*, Eusebius) tells us that Trajan and Hadrian gave Plutarch some office (procuratorship?) in Achaea; whatever exactly lies behind this, he was a man of some influence in governing circles, as he was in his writings an active exponent of the concept of a partnership between Greece, the educator, and Rome, the great power and of the compatibility of the two patriotisms.

The 'Catalogue of Lamprias' (an ancient list of works attributed to Plutarch) contains 227 items. Extant are seventy-eight miscellaneous works (including some not in the 'catalogue') and fifty biographies. Among the collections of minor works made in medieval times was one of 'moral pieces' (*Ἠθικά*, *Moralia*), and this name is now used to cover everything apart from the *Lives*. Plutarch was clearly very prolific in late middle age, but no convincing account of his literary development has been given. In the following list of the most important works, the conventional Latin titles are used: for a complete list of titles (Greek and Latin), see (e.g.) any volume of the Loeb *Moralia*.

(i) The group of *rhetorical* works—a sophist's *epideixeis* and declamations—includes *de gloria Atheniensium*, *de fortuna Romanorum* and (slighter) *de Alexandri fortuna aut virtute et aquane an ignis sit utilior*. Plutarch's richly metaphorical and grandly periodic style contrasts with Dio Chrysostom's elegance and clarity and the ingenuity of later sophists; it is a reasonable conjecture that he did not have much success as a rhetorical performer, and that most of these productions belong to an early stage of his career.

(ii) The numerous short treatises on themes of popular *moral philosophy* are derivative in content (Plato, Aristotle, Stoics, Epicureans, 'diatribe') but homogeneous and characteristic in style. Noteworthy examples are *de virtute morali* (Aristotelian, anti-Stoic), *de profectibus in virtute*, *de superstitione* (piety the mean between superstition and atheism), *de colubenda ira*, *de curiositate*, *de garrulitate*, *de tranquillitate animi*, *de vitioso pudore*. In *praecepta gerendae rei publicae* Plutarch draws both on his historical reading and on his own experience to give advice to a young man entering politics. The warm and sympathetic personality never far beneath the surface appears particularly in *coniugalia praecepta* and *consolatio ad uxorem* (to his wife on the death of their infant daughter).

(iii) Plutarch used the *dialogue* form extensively and ambitiously. *De sollertia animalium* is a simple school debate—'are water-animals more intelligent than land-animals?'—and the nine books of *quaestiones conviviales* are in the same vein of learned table-talk as A. Gellius. *De genio Socratis* is quite different: exciting narrative (liberation of Thebes) combined with philosophical conversation about *μαντική*, and an elaborate Platonic myth of the fate of the soul after death (for this feature, cf. *de sera numinis vindicta* and *de facie in orbe lunae*). *Amatorius* similarly makes a contemporary love-story the background to a discussion of *ἔρως*. The Pythian dialogues (*de E apud Delphos*, *de Pythiae oraculis*, *de defectu oraculorum*; with these should be coupled *de sera numinis vindicta*) have Delphi as their scene, and divination, *daimones*, and divine providence as their subjects. These major dialogues (together with the treatise *de Iside et Osiride*) contain the greater part of Plutarch's philosophical and religious speculation, rightly regarded by recent scholarship as the most significant part of his many-sided activity.

(iv) *Technical philosophy*—Plutarch was a Platonist—is represented both by interpretations of Plato (*quaestiones Platonicae*, *de animae procreatione in Timaeo*) and by

polemical treatises against Stoics (e.g. *de communibus notitiis*) and Epicureans (e.g. *adversus Colotem*).

(v) We possess also important *antiquarian* works (*Quaestiones Graecae*, *Quaestiones Romanae*: a mine of information about religious antiquities) and some on *literary themes* (*de malignitate Herodoti*, *comparatio Aristophanis et Menandri*, *de audiendis poetis*).

(vi) Among the *spuria* which have infiltrated the Plutarchean corpus, several are of historical importance. *de pueris educandis*, influential in the Renaissance; *Consolatio ad Apollonium* (see CONSOLATIO); *de fato* (ed. E. Valgiglio, 1964), valuable as a document of Middle Platonism; *vitae X oratorum*; *placita philosophorum* (see Diels, *Dox. Graec.*); and *de musica* (ed. F. Lasserre, 1954), one of the principal sources of our knowledge of the history of Greek music and lyric poetry.

(vii) Finally, the *Lives*. Of the Caesars, only *Galba* and *Otho* survive; of 'parallel Lives' we have twenty-three pairs, nineteen of them with comparisons (*συγκρίσεις*) attached. Plutarch clearly distinguished writing *βίαι* from writing history (*Alexander* 1); his object was to exemplify private virtue (and sometimes vice) in the careers of great men; hence his careful treatment of the education and *ἦθος* of his heroes, the space given to significant anecdotes, and the frequent omissions and distortions in the historical narrative. Although Plutarch naturally owed much to earlier biographers as well as historians, his work has a scope and form all its own. Much depends on the sources available to him (e.g. *Alcibiades* is full of attested personal detail, *Publicola* is thin and padded out, *Phaeton* and *Cato Maior* are unusually apophthegmatic), but the general pattern (family, education, début, climaxes, *μεταβολαί* of fortune) is maintained wherever possible. Tantalizing and treacherous to the historian, Plutarch has won the affection of the many generations to whom he has been a main source of understanding of the ancient world by his unerring choice of detail, his vivid and memorable narrative, and his flexible and controlled style, varying in complexity and richness between the reflective passages (which are like the *Moralia*) and the narrative, variously coloured as it is by his various sources.

Influence. Plutarch was a popular educational writer in medieval times, and the preservation of so many of his works is due to the efforts of Byzantine scholars (especially Maximus Planudes (see ANTHOLOGY, § 5)) to collect them; his influence on the Renaissance, however, was far greater. In France, it dates from Amyot's translation (*Lives* 1559, *Moralia* 1572); in England from Sir T. North's version of Amyot's *Lives* (1579) and Philemon Holland's *Moralia* (1603). Montaigne, Shakespeare, Dryden, Rousseau are among Plutarch's debtors; the *Lives* (especially *Dion*, *Brutus*, *Timoleon*) made their contribution to the intellectual climate of revolutionary France. Since 1800, his influence has receded; his lack of historical perspective and his unsophisticated moral attitudes have not recommended him to an age suspicious of anything like *naïveté* in history or morals. He remains a writer of great charm, a mine of information, and a significant figure in the intellectual history of the first century A.D.

See BURMAN *Jahresb.* 1921, 1936.

GENERAL WORKS. R. Volkmarin, *Leben, Schriften und Philosophir des P.'s von Chaeronea* (1869); R. C. Trench, *Plutarch* (1873); K. Hirzel, P. (1912); R. H. Barrow, *Plutarch and his Times* (1967).

TEXTS. D. Wyttienbach (1795-1830), with commentary on part of *Moralia* and *Lexicon Plutarchicum* (not yet replaced); F. Duchner (Didot, 1846 and later), valuable for Index Rerum. *Moralia*, H. Wegehaupt and others (Teubner, 1925-), now nearly complete, vol. vii, *Fragmenta*, by F. H. Sandbach, 1967; F. C. Habicht and others (Loeb, 1922-), also nearly complete, recent vols.—vii, ix, xi, xii—particularly valuable. *Vitae*, K. Ziegler and others (Teubner, 1914-25, revision in progress); B. Perrin (Loeb, 1914-26); R. Flacelière (Budé, 1957-), in progress, important.

SEPARATE WORKS. *Comitum VII Sapientium*, J. Defradas (1954); *Quaestiones Romanae* (trans. and comm.), H. J. Rose (1924);

Quaestiones Graecae (trans. and comm.), W. R. Halliday (1928); *de Inde et Ossidae*, Th. Hopfner, 1940-1 (incomplete); *de E. apud Delphos*, *de Pythiae oraculis*, *de defectu oraculorum*, R. Flacelière (1941, 1937 (1962 in *Collection Erasme*, 1947); *de sera numinis vindicta*, G. Méautis (1935); *de tranquillitate animi*, H. Broecker, 1954 (comm. only); *Amatorius*, R. Flacelière (1953); *de facie in orbe lunae*, P. Ramegeard (1935, see H. Cherniss, Loeb vol. xii); *adversus Colotem*, see R. Westman, *Actia Philosphica Femica* 1955. PLUTUS (Πλούτος), Wealth, originally and properly abundance of crops, hence associated with Demeter (q.v.) at Eleusis (see Deubner, *Attische Feste* (1932), 85 f.); he is son of Demeter (q.v.) and Iasion (Iles. *Theog.* 969 ff.). He is thus closely connected in idea with Pluton (cf. HADES), and presumably with the nymph Pluto, mother of Tantalus. Cf. Hesychius s.vv. *εὐπλουτον*, *πλούτος*. Demeter and Kore send him to those whom they favour (*Hymn. Hom. Cer.* 486 ff.). He appears mostly as a figure in popular, not merely literary, tradition, see especially the *Eiresione* (Ps.-Hdt. *Vit. Hom.* 465), in which he comes with Mirth and Peace to the house which the bearers of the *eiresione* visit. In art he is shown with Demeter in more than one connexion. He is consigned to Tartarus by Timocreon (fr. 5 Diehl), because his blindness makes so much trouble. Aristophanes' *Plutus* takes up this theme, which may very well have been a popular proverb, and describes the curing of his blindness, after which, knowing where he goes, he visits honest men only. Here he is wealth in general, not only agricultural prosperity. See BIRENE.

Nilsson, *GGR* i². 421 ff.

H. J. R.

POETELIUS (PW 7) **LIBO VISOLUS**, GAIUS, was consul in 360, 346 and 326 B.C. In 326 he is reputed, with his fellow consul L. Papirius, to have carried a law during the troubled period of the Second Samnite War, as a measure of social appeasement. It prohibited imprisonment for debt, and enacted that loans should henceforward be based on the security of the borrower's property, not on his personal liberty. If the right of personal execution was not abolished until much later in spite of the *Lex Poetelia de nexis*, at least it was mitigated and made dependent on judgement. Varro (*Ling.* 7. 105) placed the *Lex Poetelia* in 313, when a son of Poetelius was dictator.

P. T.

POETOVIO, modern *Ptuj* on the Drave, was a Roman military station and city in Pannonia. From Augustus until A.D. 43-5 it was occupied by Legio VIII Augusta, followed by XIII Gemina which remained until 98. In place of the legion Trajan established a *colonia* (*Ulpia Traiana Poetovio*) of legionary veterans, probably the last settlement of this type made in the Empire. J. J. W.

POLA, at the southern end of the Istrian peninsula in the northern Adriatic, has always owed its importance to its fine land-locked harbour. This ancient town was

probably founded by Illyrians, certainly not by Colchians in pursuit of Argonauts (reject Strabo 1. 46; 5. 215). Presumably it came under the Romans' control when they conquered the head of the Adriatic (178 B.C.: Livy 41. 13). Destroyed in the Civil Wars, Pola was rebuilt by Augustus as the colony *Pietas Iulia* and became a flourishing town whose magnificent Antonine amphitheatre still survives (Pliny, *IIN* 3. 129).

E. T. S.

POLEMARCHOS (πολέμαρχος) in Athens was one of the nine *archontes* (q.v.), appointed annually. The name indicates that his original duty was to command the army; presumably the office was created to take over this function from the king. The *polemarchos* Callimachus seems to have been the Athenian commander-in-chief at Marathon (though the account in Hdt. 6 is obscure, and its interpretation has been disputed), but after 487/6 B.C., when the *archontes* began to be appointed by lot, it could not be expected that every *polemarchos* would make a competent military commander, and so this function was handed over to the *strategoi* (q.v.).

The other functions of the *polemarchos* were mainly religious and legal. He conducted certain sacrifices, and he arranged the funeral ceremony for men killed in war (see EPITAPHIOS). His legal functions concerned cases involving persons who were not Athenian citizens: in some types of case he was the magistrate responsible for the trial (see DIKASTERION), and in other cases he had duties in connexion with arbitration and bail.

Arist. *Ath. Pol.* 58.

D. M. M.

POLEMON (1, PW 2) I of Pontus was the son of a wealthy rhetorician, Zeno of Laodicea. With his father he won Roman favour and probably Roman citizenship by defending his city against the Parthians in 40-39 B.C. Antony first made him ruler of Lycania and part of Cilicia Tracheia (38), then when he gave Tracheia to Cleopatra (37/6) compensated him with Pontus and later with Lesser Armenia. He accompanied Antony's Parthian expedition, was captured, and held to ransom (36). After Actium Augustus confirmed his title but withdrew Lesser Armenia from him. In 15 B.C. Agrippa awarded him the Bosporan kingdom and assisted him to occupy it. He was killed by Bosporan rebels in 8 B.C. His widow, Pythodoris, succeeded him in Pontus.

Strabo 12. 499, 556, 559. Magie, *Rom. Rule Asia Min.*, see index. T. R. S. B.

POLEMON (2) of Athens, head of the Academy from the death of Xenocrates (314-313 B.C.), who converted him from a dissolute life and whose zealous follower he was, to his own death in 270, when he was succeeded by his pupil Crates. He seems to have been impressive by his force of character, but nothing is known of any original contribution by him to philosophy, and Diogenes Laertius 4. 17 says he attached more importance to conduct than to dialectic.

Zeller, *Phil. d. Griechen* ii. 1^a. 993 f.; K. von Fritz, *PW* xxi. 2. 2524 ff. W. D. R.

POLEMON (3), a Greek of Ilium (fl. c. 190 B.C.), Stoic geographer who collected geographical, epigraphic, and artistic material in Greece, published in *Περὶ τῶν κατὰ πόλεις ἐπιγραμμάτων*, including especially dedications and monuments at Delphi, Sparta, Athens. In another work Polemon attacked Eratosthenes (Ath. 6. 234 d; 10. 436 d; 442 e etc.).

FGH iii. 108-48.

E. H. W.

POLEMON (4, PW 10), MARCUS ANTONIUS, c. A.D. 88-144, born at Laodicea in Caria but a citizen and benefactor of Smyrna, was a prominent sophist who enjoyed the friendship of Trajan, Hadrian, and Antoninus.

It was he who was chosen to deliver an oration at the inauguration of Hadrian's Olympieion at Athens (A.D. 130). His oratory was in the grand manner, his delivery passionate and excited. Extant are two short declamations, in which the fathers of two Marathon heroes, Callinachus and Cynegeirus, present their sons' claims for the prize of valour. Besides his speeches, he wrote history and on physiognomy (see *PHYSIOGNOMONICI*).

Philostr. *VS* 1. 25; extant declamations ed. H. Hinck, 1873; see also A. Boulanger, *Aelius Aristide* (1923), 87 ff.; W. Schmid, *Der Atticismus* 1 (1887), 46 ff.; H. Jüttner, *De Polemonis rhetoris vita operibus arte* (Breslau, 1898, repr. 1967); G. W. Bowersock, *Greek Sophists in the Roman Empire* (1969), see index. D. A. R.

POLETAI (πωληται), or 'sellers', were Athenian officials. The date of their institution is not known, but they already existed in the time of Solon. In Aristotle's time there were ten, appointed annually by lot from the ten *phylai* (q.v.). They conducted the selling or letting of property belonging to the State, including not only land and buildings, but also non-citizens enslaved as a penalty, and goods confiscated from convicted offenders. They also let rights to work mines, to collect taxes, and the like. The method generally used was an auction held in the presence of the *boule* (q.v.). The *poletai* then made out lists of the payments due from purchasers and tenants, for the use of the *apodektai* (q.v.).

Arist. *Ath. Pol.* 7. 3, 47. 2-3.

D. M. M.

POLICE. The ancient city-state never developed a proper police system. Athens in the fifth century had a corps of Scythian archers (public slaves), probably more decorative than useful, except for keeping order in law-courts and assemblies. (This task was later taken over by *ephebes*.) *Ἀστυνόμοι*, whose assortment of duties included what we might call police action, are found in Athens and elsewhere. Secret police (the notorious *κρυπτεία*) are recorded in Sparta, but only for use against the helots.

We have little information about Hellenistic police outside Egypt. The army of the king could suppress brigandage, and the royal garrison commander or governor (where there was one) could call on troops to restore order and enforce his own judgements and those of the city courts, and so often developed judicial and police powers. Rudimentary city police forces (*φυλακῖται* of various sorts and perhaps also mounted men) appear sporadically, but are chiefly attested in the Roman period. It is only in the second century A.D. that we regularly find an *eirenarch* (a *LITURGY*, q.v.), in command of small local forces. Secret police had been freely used in the Persian Empire and were probably available to Hellenistic kings.

In Ptolemaic Egypt there were regular forces of native *φυλακῖται*, given *kleroi* and commanded by officers (usually Greeks). There was a desert patrol and Alexandria (at least) had a Head of the Night Watch. (In the *metropoleis* he and his force are not attested till well into the Roman era.) Under the Roman Empire, *stationes* of Roman soldiers, as elsewhere, came to play a major part in keeping public order.

In the Roman Republic every magistrate had *coercitio* (q.v.), to enforce obedience through his attendants. Consuls and praetors had *imperium* and lictors (q.v.); but this, in classical times, gave little additional power over citizens, especially in Rome. Roman soldiers kept down brigandage in Italy and the provinces; but they could not be used in the city (except perhaps under a '*senatus consultum ultimum*', q.v.): there only the aediles and the *tresviri capitales* (see *TRIUMVIRI*), with their small personal staffs, were normally available for keeping order. Rome at night was not a safe place; and it was perhaps not only for display that important people never went out without

a crowd of slaves and clients. In the late Republic, armed gangs, used by *populares* for political purposes, were difficult to suppress except—as Milo and Sestius finally did against Clodius (qq.v.)—by arming other gangs against them. When Pompey was asked to move troops in (52), this was a bold step, disapproved of (e.g.) by Cicero.

Augustus made the first serious attempt to arrange for a force to keep order: this became possible only after the loss of *libertas*. It was and remained part of the duties of the *vigiles* (q.v.). Later, the *praefectus urbi* (q.v.)—regularly appointed after Augustus—had wide powers over the lower classes in Rome and much of Italy. He could call on the three (later nine) *cohortes urbanae* (q.v.) of 1,000 men each, and in emergencies on the *vigiles* (q.v.) as well. In major riots in the city the Praetorian Guard was available for decisive action; but it was sparingly used. All these forces were dissolved in the fourth century.

Urban cohorts were for a time stationed at Ostia and Puteoli; later they were succeeded by *vigiles*. One urban cohort was stationed at Lugdunum by Augustus and a cohort of this type remained there until Septimius Severus. Vespasian also placed an urban cohort at Carthage, and it seems to have been called on for police duties in many parts of the African provinces. But no such cohorts appear in other provincial cities. Centurions or *beneficiarii* (q.v.) with detachments could be sent to cities to keep order, or perhaps stationed (often reluctantly) in important places. In some (e.g. Utica) even praetorians are found. In times of political trouble, these forces often got out of hand. Local police is rarely mentioned in the Western provinces. In the country, the army was generally used for keeping order, and particularly for keeping the main roads clear: *stationes* of legionary detachments, under *beneficiarii* or centurions, were set up at key points along roads, acting as a kind of *gendarmérie*. *Beneficiarii* were particularly convenient to use for police duties in the widest sense, from secret police activities to keeping records of known undesirables. Brigandage remained a constant challenge, especially in the wilder parts, away from main roads; and in the third century it began to gain the upper hand. By then the *stationarii* were probably too busy exacting taxes from reluctant provincials—which, even in the second century, had proved an (originally) unexpected use for them.

In Italy, particularly, the *stationes* came to be taken over by *frumentarii*—a special corps that, at least from the early second century, concealed police duties (including secret ones) under its innocent name, combining them with courier duties in the postal service (q.v.). Dreaded for their abuse of their irresponsible power, they were abolished by Diocletian (q.v.), but soon reappeared under the equally harmless name of *agentes in rebus* (q.v.), and acquired more power than ever. From the third century, Italian *stationes* also were manned by legionaries.

O. Hirschfeld, *Kl. Schr.* (1913), 576 ff.; E. Echols, *CJ* 1957/8, 377 ff., 1961/2, 25 ff.; R. MacMullen, *Soldier and Civilian in the Later Roman Empire* (1963), 50 ff.; *Enemies of the Roman Order* (1967), 163 ff. E. B.

POLIS (πόλις), the Greek city-state. Its origin reaches back to the times of Homer and Hesiod, when the old monarchy was disappearing. The Polis arose as an anti-monarchic State, and it remained so, in spite of tyranny (q.v.). It was a State of small size, there being several reasons for political particularism in the Greek world—firstly, the natural division of the country into many separate districts, islands, peninsulas, etc.; further, the division of the Greek people into many larger or smaller tribes, and accordingly of the Greek religion into numerous local cults. Several hundreds of city-states

existed, most of them extremely small, many of them colonies founded by mother cities. It seems almost impossible (and this not only for lack of information) to write a general history of all these States. We can only describe the most characteristic features of the type which was to become the Greek State *par excellence*.

The territory of a Polis (in contrast with the 'ethnos', or tribal State) included both town and country (hinterland). There always was only one town, mostly walled round, with the citadel, the original *pólis* (later: 'acropolis'), and the agora or market-place. The citizens resided alike in town and country, but the government of the State was entirely concentrated in the town. Membership of the citizen body would depend upon the constitution of each Polis, but in every case the Polis was identical with the totality of its citizens. Therefore the name of the State was taken from the citizens, not from the town or territory: *οἱ Ἀθηναῖοι* etc.; "ἄνδρες γὰρ πόλις", says Thucydides (7. 77. 7). The citizens were a ruling class, not only in aristocracies and oligarchies (q.v.), but even in democracies (q.v.); for class differences were never entirely removed; moreover, besides the slaves there always was a population not belonging to the State, e.g. dependent lower classes, resident strangers (metics), inhabitants of surrounding districts (*perioeci*), etc. Even in citizenship (q.v.) there were different degrees, and for a long time the internal development of the Polis was a struggle, especially among oligarchs and democrats, for equality in citizenship and political rights, as well as in social and economic conditions. Civil war (*στάσις*) was all too frequent, and concord (*ὁμόνοια*) an ideal rarely achieved.

The State consisted of its citizens, considered less as individuals than as forming smaller communities of kinship, of cult, of locality. Each individual was tied to the life of these communities and of the State. Moreover, the State was not only a political community. To be a citizen meant adherence to the cults of the gods of the Polis, as well as military and economic service to the State, and obedience to its laws. The perfect Greek citizen was Aristotle's *ζῶον πολιτικόν*, at the same time attached to his Polis, and a free man.

Liberty, autonomy, autarky were the ideals of the Polis, and its chief claim was to be ruled by law (*nomos*). In actual fact government remained a question of power, but the sacred 'nomos' always directed and regulated actual politics. Government was carried on mainly by three institutions: Assembly, Council, magistracies, all derived from earlier times. Each of these preponderated according to the various types of constitution. The Council held the chief political power in aristocracy and oligarchy, the Assembly in democracy. Jurisdiction was performed partly by the Council, partly by special officials, the final court being mostly the people, i.e. the Assembly. In democracies the dicasteries (q.v.) gathered almost all jurisdiction into their hands.

Remembering always that it is wrong to generalize from the institutions of any single Polis, all of which differed in many ways, we may consider the Athenian democracy as having reached (and gone beyond) the highest standard of a Polis; its organization strongly influenced other States. In fifth- and fourth-century Athens democracy as the rule of the people became a reality. The Assembly, although in fact consisting of only part of the people, especially those living in town, was open to any citizen, and was the true sovereign (*τὸ κύριον*). All foreign policy, all military and naval questions, all legislation, and the control of all executive officials were treated and decided by the Assembly. Its functions and its power were really unlimited. But all matters presented to the Assembly were prepared by a *probouleuma* of the Council. Therefore the decrees (*ψηφίσματα*) were finally

resolved by Council and people in common (*ἔδοξε τῇ βουλῇ καὶ τῷ δήμῳ*). But the Assembly could always reject, add, or amend. In addition to its main task of *probouleusis* the Council collaborated authoritatively with the magistracies and controlled public finance. The councillors were elected by lot and not allowed to be re-elected more than once. Thus the majority of those citizens who attended the Assembly were councillors once in their life. The Council formed a committee of the people, its membership changing yearly. It was not a restraining power, as the Areopagus formerly used to be. The magistracies had to execute the people's decrees, but some rights of initiative and command were given to the higher of them. There was no real political power connected with any magistracy, although some of them carried a certain measure of influence.

The great number of independent and self-centred States was the chief reason for the endless wars between the Greek States, and for the weakness of any form of Panhellenism. Attempts at creating either the hegemony of one Polis over another as in the Athenian Empire, or federations of several States, never succeeded in overcoming the ultimate isolation of each Polis. If trade helped to break this isolation, the only real bond was that of common religion, language, and civilization.

The Polis lost its power and function of leadership in Greek politics partly through the corruption of democracy, but more so through the overwhelming power of Alexander's empire and the Hellenistic monarchies. However, it did not vanish, nor even cease to appear politically autonomous. There were still political and economic struggles between the parties of the Polis, and oligarchy was often renewed. Some of the city-states remained centres of cultural or economic life, and in the monarchies of Asia newly founded cities, many of them originally military colonies, became the agents of hellenization of the East. The Hellenistic age owed much of its intellectual life to the traditions of the Polis, not least to the part it played in Greek philosophy. In the fourth century, when the Polis began to decline, Plato designed his immortal picture of the ideal State, and Aristotle created political science. For both of them political theory was theory of the Polis, and even the Stoics considered the world as the unity of 'cosmo-polis'.

G. Glotz, *The Greek City* (1929); A. H. M. Jones, *The Greek City from Alexander to Justinian* (1940); V. Ehrenberg, *JHS* 1937, 147 ff.; *The Greek State* (1960); W. G. Forrest, *The Emergence of Greek Democracy* (1966). V. E.

POLITES, in mythology, son of Priam (q.v.) by Hecuba (q.v.), a swift runner and consequently employed as a scout (*Iliad* 2. 791 ff., cf. 24. 250). He takes a minor part in the fighting (13. 533; 15. 339). In Verg. *Aen.* 2. 526 ff. he is killed by Neoptolemus (q.v. 1); cf. Quint. Smyrn. 13. 214; source unknown. H. J. R.

POLLIO, GAIUS ASINIUS (*PW* 25) (76 B.C.–A.D. 4), supported Caesar, as praetor in 45, commanding in Spain in 44, and then joined Antony; in Cisalpine Gaul in 41 he saved Virgil's property from confiscation. Consul in 40, he celebrated a triumph over the Parthini of Illyria in 39; from the booty he built the first public library in Rome. Then, with full honours, he retired from politics to devote himself to literature, organizing the first public recitations.

In youth an associate of Catullus, he later enjoyed the friendship of Horace (*Carm.* 2. 1) and Virgil (*Ecl.* 4). His own work included poetry, tragedy, and oratory in Atticist style, but he was above all an historian. The *Historiae* treated the period from 60 B.C. to the battle of Philippi in 42, analytical, critical, and serious; they were used by Plutarch and Appian. A sharp critic, he corrected Cicero and Caesar, Sallust for archaism, and Livy for

provincialism (*Patavinitas*); and he maintained his republican independence even against Augustus.

J. André, *La Vie et l'œuvre d'Asinius Pollio* (1949); F. Gabba, *Appiano* (1956); Syme, *Tacitus*, 136, 569 ff. A. H. McD.

POLLUX, JULIUS, of Naucratis (2nd c. A.D.), scholar and rhetorician. His *Onomasticon* was composed in the lifetime of Commodus, to whom are addressed epistles prefixed to each of its ten books: that introducing book 8 indicates that the author's appointment to a Chair of rhetoric at Athens (not before A.D. 178) preceded the completion of the work. In books 8–10 he replies to Phrynichus' criticism of points in 1–7. As an example of Atticism and other profitable vices of the age he comes under Lucian's lash in *Ῥητόρων Διδάσκαλος*: cf. ch. 24—*οὐκέτι Ποσειδῶνος ὀνομάζονται ἀλλ' ἤδη τοῖς Διὸς καὶ Ἀθήδης παῖσιν ὀνόμαμος γυγνέτηται*. Like his other works, the *Onomasticon* in its original form has perished: the extant manuscripts from which it is now known are derived from four incomplete, abridged, and interpolated copies from an early epitome possessed (and interpolated) by Arethas, archbishop of Caesarea, c. A.D. 900. The arrangement is topical, not alphabetical. The work partly resembles a rhetorical handbook, e.g. in its collections of synonyms and of subject-vocabularies, in collections of compounds (*ὁμο-* and some others), in the fifty-two terms for use in praising a king, or the thirty-three terms of abuse to apply to a tax-collector. The story of Heracles' discovery of purple is added expressly as a light relief for the student. Wider philological and encyclopedic interests appear in the citations from literature and in the treatment of music and the theatre. Besides these, his subjects include religion, private and public law, human anatomy and ethics, war, the sciences, arts, crafts and trades, houses, ships, husbandry, cookery, children's games, and a host of other matters. The sections on stage antiquities (book 4) and on the Athenian constitution (book 8) are of especial interest to scholars. But the work is predominantly a thesaurus of terms, not of information.

EDITIONS. Bekker, 1846; Bethé, in Teubner's *Lexicog. Gr.* IX, i–iii, 1900–31. P. B. R. F.; R. B.

POLUS of Agrigentum, Sophist, younger than Socrates (Pl. *Grg.* 463 e), pupil of Gorgias; like his teacher he confined himself in later years to teaching rhetoric. He wrote a rhetorical *Τέχνη*, the beginning of which may perhaps be seen in Pl. *Grg.* 448 c. He is mentioned often by Plato and once by Aristotle.

Zeller, *Phil. d. Griechen* i⁶, 1321.

W. D. R.

POLYAENUS (1) of Lampsacus, one of the chief direct disciples of Epicurus, who turned Polyaenus' attention from mathematics to philosophy. He died before his master.

WORKS. *Περὶ φιλοσοφίας: Τὰ πρὸς τὸν Ἀρίστων: Περὶ ὁπῶν*.

Zeller, *Phil. d. Griechen* iii. 4, 379–80; W. Crönert, *Kolntes und Menedemos* (1906). W. D. R.

POLYAENUS (2), a Macedonian rhetorician, in his later years dedicated his collection of *Stratagems*, in eight books, to the Emperors Marcus and Verus, to aid them in Verus' Parthian War (A.D. 162). His examples, true or false, are taken from every people of the known world, gods included. Similar collections of extracts, called *hypomnemata*, on every subject and from all sorts of sources, had been common in Hellenistic literature, and Polyaenus, who produced his book very quickly, did not make his own extracts but utilized earlier compilations; theories about his sources are useless. Some

items are historically valuable, others worthless; each one must be judged separately.

TEXT. E. Wolfflin and J. Melber (1887); *FGH* 619. W. W. T.

POLYBIUS (1) (c. 200–after 118 B.C.), the Greek historian of the rise of Rome to world power, son of the Achaean statesman Lycortas (q.v.), was born at Megalopolis, and after a liberal education entered politics. He bore Philopoemen's (q.v.) ashes to burial in 182, was appointed in 180 as envoy to Egypt (the mission was cancelled on Ptolemy V's death), and in 170/69 served as Hipparch of the Achaean Confederation. After Pydna he was among 1,000 eminent Achaeans deported to Rome for political investigation and detained without trial in Italy. He now became friend and mentor to Scipio Aemilianus, remaining in Rome as a member of his circle (see SCIPIONIC CIRCLE). He probably accompanied Scipio to Spain (151) and to Africa (meeting Masinissa) and, returning to Italy, crossed the Alps in Hannibal's footsteps. In 150 the Achaean detainees were released. Polybius witnessed the destruction of Carthage in Scipio's company (146), afterwards undertaking an exploratory voyage in the Atlantic. After the sack of Corinth (see CORINTH) he helped organize Greece and acted as mediator (146–145). Later he visited Alexandria and Sardes and may have been at Numantia (q.v.) in 133. He died, some time after 118, through a fall from a horse.

His early panegyric on Philopoemen, his *Tactics*, his history of the Numantine War, and a treatise on the habitability of the equatorial region are all lost. Of his *Histories*, containing forty books, books 1–5 are extant, and from the rest excerpts, some substantial, from various collections. His original purpose was to narrate the history of the fifty-three years (220–168), from the Hannibalic War to Pydna, which left Rome mistress of the world. Books 1–2 contain an introduction (*προκατασκευή*, 1. 3. 10) covering the years from the First Punic War (264) to 220, following on Timaeus. Later, perhaps after 146, he revised his plan to show how the Romans exercised their supremacy and extended the work down to 146. These later events, which are increasingly assessed from the Roman point of view, are related in books 30–9; book 34 dealt with geography; and book 40 contained a recapitulation and chronological survey. Books 1–6 seem to have been published by about 150; when the rest appeared is unknown.

Polybius conceived a double purpose for history, to train the statesman and to teach the general reader how to face disaster; though he did not exclude pleasure, the main aim was didactic. His subject-matter consisted of political and military events (*πραγματική ιστορία*) analysed to bring out their causes. From this standpoint he attacks the sensationalism and tragic colouring characteristic of most contemporary historians and exemplified in Phylarchus (2. 56. 7 ff.); here he aimed at new standards. Writers of monographs tended to magnify and write up insignificant material for self-glorification (29. 12. 3). Universal history was preferable, and not only on general grounds; for since the affairs of the whole world had developed into an organic whole, it had become the only historical form adequate to treat Rome's rise to power. The synoptic view reflected the character of history itself. This development Polybius saw as the work of Fortune (*Tyche*), which since 220 had guided all the world's affairs in one direction (1. 4. 1–2). Normally his references to *Tyche* merely echo conventionally the Hellenistic phraseology common to several philosophical schools and in general use. But the rise of Rome to world power was envisaged as the handiwork of a real power directing events; and this led him to attribute to the Romans a greater single-mindedness in their imperial expansion and to that expansion an inevitability which

are not confirmed by his conscientious narrative of detailed events. Rome was raised up by Fortune because of her merit; this assumption allowed him to maintain the emphasis on causality essential to his didactic purpose. Important factors in Roman success, he believed, were the constitution, the army, and the city's early development. All these were discussed in book 6. His analysis of the mixed constitution, which put a brake on the cycle of political change to which simple constitutional forms are subject, presents many problems but was to exercise noteworthy influence from Cicero down to Montesquieu and the founders of the American Constitution.

Polybius saw the historian's task as the study of documents, acquaintance with the scene of historical events, and personal political experience (12. 25 c)—the last two being the more important. But he used written sources critically, for instance Aratus (q.v. 2) and Phylarchus (q.v.) for Achaean affairs before 220, and Fabius (q.v. 6) Pictor and Philinus (q.v. 2) for the First Punic War. For the main period he employed a variety of writers whom he rarely names—an exception being Zeno (q.v. 4) of Rhodes. He also used private sources such as letters. He consulted the Achaean record office and some Roman official sources, as well as inscriptions (cf. 3. 33. 18). But above all interrogation of eyewitnesses formed a vital part of his technique (12. 4 c. 2-5) and at Rome he could meet men from all over the world.

'Truth is to history,' he wrote (1. 14. 6), 'what eyesight is to the living creature.' Despite this he betrays some prejudice, especially against Aetolia and Boeotia; and he concedes the historian's right to slight patriotic bias (16. 14. 6-10). In particular, his polemic against former historians, exemplified in the long digression on Timaeus and others in book 12, though professing to discuss points of literary or historical interest, sprang partly from personal or political considerations never explicitly stated; similar bias lay behind many of his judgements on individuals and explains the prominence accorded to Scipio Aemilianus. In general, however, he attained a high standard of honesty, and even his speeches (traditionally a field for improvisation) were as accurate as he could make them.

Following Timaeus, he used a chronological system based on a modified 'Olympiad year'. His narrative is lucid and informed; but his style, that of the Hellenistic chanceries, is cumbersome and inelegant and proved unattractive to his successors: no one, said Dionysius, could bear to read him to the end—which may explain why so much of his work failed to survive. This loss is unfortunate, for he brought honesty and illumination to a great theme and to a period for which he remains the main substantial source. See HISTORIOGRAPHY, GREEK, § 7.

EDITIO PRINCIPES. V. Opsopaeus (1530, bks. 1-5: Lat. translation, N. Perotti, 1473).

CHIEF EDITIONS. Casaubon (1609); Ernesti (1763 4); Schweighaeuser (1780-95); Juitsch (1867-72, 1888-92); Buttner-Wobst (1889-1904, 1905); Strachan-Davidson, *Selections* (1888).

TRANSLATIONS. E. S. Shuckburgh (1889; U.S.A. repr. 1962); W. R. Paton (1922-7; Loeb).

F. W. W.

POLYBIUS (2, *PW* 5), a freedman, one of Claudius' secretaries, particularly concerned with literary matters (*a studiis*) and perhaps also with petitions about lawsuits (*a libellis*; see LIBELLUS). He translated Homer into Latin and Virgil into Greek. In A.D. 42 or 43 Seneca (q.v. 2) addressed to him from exile a *Consolatio* (for the death of

a brother), hoping that it would be construed as a petition for recall. He was killed in 47 by the contrivance of Messallina.

Sen. *Consolatio ad Polybium* (ed. J. D. Duff, 1915). A. Momigliano, *Claudius* (1961), 43, 75; V. Sramuzza, *The Emperor Claudius* (1940), 5 f., 84 f.; F. Giancotti, *Rend. Linc.* 1953, 59 ff. A. M.; T. J. C.

POLYBOEA, (1) name of several mythological heroines; (2) a goddess, sister of Hyacinthus (q.v.), identified with Artemis and Kore (Paus. 3. 19. 4; Hesych. s.v.).

POLYBUS, in mythology, king of Corinth or Sicyon, a figure of some importance in the legends of Oedipus and Adrastus (qq.v.). Being childless, or at all events without sons, he and his wife adopt the infant Oedipus and rear him as their own (Soph. *OT* 1016 ff.). He is sonless again in the version preserved by schol. Pind. *Nem.* 9. 30, cf. *Ildt.* 5. 67. 4. In this tradition Adrastus is his daughter's son and inherits his kingdom. But he is either an extremely vague figure or a conflation of several persons, for we hear of him also as in Tenea (Strabo 8. 6. 22, 380), Bocotia (schol. Eur. *Phoen.* 28), and Argos (*Etym. Magn.* 207. 41 ff.).

See further Höfer in Roscher, s.v.

H. J. R.

POLYCARP (2nd c. A.D.), bishop of Smyrna, disciple of St. John, and correspondent of Ignatius of Antioch. The only extant letter warns the Philippian church against apostasy. In the controversy about celebrating Easter (c. A.D. 154-5) he visited Rome to defend the old Asian tradition of keeping the feast with the Jewish passover. His martyrdom at the age of 86 is described in a letter from the Smyranean church to the church of Philomelum, Phrygia; that the MSS. preserve an interpolated text is probable from Eusebius of Caesarea's quotations (*Hist. Eccl.* 4. 15). The date of the martyrdom can be decided only by a choice between conflicting evidence. Eusebius' *Chronicle* dates it under Marcus Aurelius, 167-8. But a (post-Eusebian) addition to the Smyranean letter (ch. 21) dates it on 23 Feb. 'in the high priesthood of Philip of Tralles, in the proconsulship of Statius Quadratus'. Quadratus was consul in 142; his proconsulship of Asia, attested in inscriptions and Aelius Aristides (q.v.), can hardly fall later than 155-6. This date makes it easier to accept Irenaeus' evidence of his contact with St. John and to fit in his correspondence with Ignatius, martyred before 117. But the later, Eusebian date remains possible. The fifth-century Life of Polycarp by 'Pionius' is valueless legend.

Ed. J. B. Lightfoot, *Apostolic Fathers* ii² (1889). B. Altaner, *Patrology* (1960), 110 ff. II C.

POLYCLITUS (1) of Larisa, used by Eratosthenes as a geographical source. See ALEXANDER (3), bibliography, ancient sources.

POLYCLITUS (2), native of Argos, a leading sculptor of the second half of the fifth century B.C., said to have been a pupil of Ageladas. He worked chiefly in bronze, but also in marble, gold, and ivory, and in embossed metalwork. Ancient authors mention a number of his statues of athletes set up at Olympia and elsewhere, and several of their inscribed bases have come to light in the excavations at Olympia. Through Pliny's detailed description (34. 55) it has proved possible to identify in Roman copies his famous Doryphorus, 'youth holding a spear', which became a model for other sculptors. The most complete copy was found at Pompeii and is in the Naples Museum. From it can be sensed in some measure the harmony of the proportions and the careful finish of details, for which Polyclitus was famous. We are told that he wrote a book on rhythm and proportion and embodied his theories in this statue (Pliny 34. 55). Also reliably

identified is his Diadumenus, 'youth binding a fillet round his head', of which a number of copies exist. Furthermore, some of his other athletes have been tentatively recognized in various extant statues of Roman date, for instance, the Cyniscus in the Westmacott Youth of the British Museum. The Amazon, which he is said to have made for Ephesus in competition with Phidias and Cresilas (qq.v.), is probably preserved in a type of which several Roman copies have survived—in Berlin, New York, and elsewhere. His most celebrated work, however, was the chryselephantine statue of Hera which he made for the Heraeum at Argos. It is described by Pausanias (2. 17. 4) as colossal, seated on a throne, holding a sceptre in one hand, a pomegranate in the other, and was said to have been comparable to Phidias' Olympian Zeus. Strabo (8. 372) considered Polyclitus' work more beautiful in workmanship (τέχνη) than the Zeus, but second in size and magnificence (πολυτέλεια). The only copies that have survived of it are the little reliefs on coins of Argos, both of the head and of the figure.

G. M. A. R.

POLYCRATES (1) seized Samos c. 540 B.C. with his brothers Pantagnotus and Syloson, but soon made himself sole tyrant. He made Samos a great naval power, annexed neighbouring islands (including Rheneia near Delos), and celebrated Delian Games. He formed alliances with Egypt and Cyrene, but later sent a force of disaffected Samians to help Cambyses against Egypt. These sailed back and attacked the tyrant unsuccessfully, though supported by a Spartan force, which Polycrates bought off with a bribe of specially struck false coins. C. 522 Polycrates was lured to the mainland by the satrap Oroetes, who pretended to be plotting against Darius, and there crucified. His piratical thalassocracy suggests a consistent effort, tempered by opportunism, to maintain an unconquered Samos as successor to Miletus (then under Persian rule). Polycrates imported sheep and other animals to improve Samian stock. He attracted craftsmen from other States and patronized artists and poets (Theodorus, Anacreon); but the two most famous public works in Samos, the great temple of Hera and the tunnelled aqueduct bringing water into the city, sometimes attributed to him, were probably begun earlier.

POLYCRATES (2) (4th c. B.C.), Athenian teacher of rhetoric; author of an encomium on Busiris, criticized in Isocrates' *Busiris*, a *Κατηγορία Σωκράτους* (see E. R. Dodds, *Plato: Gorgias*, 28 f.) and other epideictic pieces.

L. Radermacher, *Artium Scriptores* (1951), 128 ff.; J. Humbert, *Polycrates* (1930); A.-H. Chroust, *Socrates, Man and Myth* (1957), ch. 4. D. A. R.

POLYDAMAS (Πολύδαμας), in mythology, son of Panthoos (Homer, loc. cit. *infra*). In the *Iliad* he takes some part in the fighting, but is chiefly noteworthy for his sage advice, which Hector rejects to his cost (18. 249 ff.). His death is nowhere recorded and he seems to be thought of as surviving the war.

H. J. R.

POLYDORUS (Πολύδορος). There are some ten mythological persons bearing this name, the only ones of any importance being: (1) son of Cadmus (q.v.) and Harmonia, a purely genealogical figure, ignored by Euripides (*Bacch.* 43–4), but mentioned, e.g., by Herodotus (5. 59). (2) Youngest son of Priam and Hecuba (qq.v.). When the Trojan War was raging, Priam sent him with much gold to Polymestor, a Thracian king, who murdered him for the gold after the fall of Troy. His ghost speaks the prologue of Euripides, *Hecuba*, and an important part of the

plot is Hecuba's discovery and avenging of the murder. Cf. Verg. *Aen.* 3. 22 ff.

H. J. R.

POLYEIDUS (1), a seer, one of the Melampodidae, a Corinthian. When Glaucus, son of Minos (q.v.), was drowned in a honey-jar, Polyeidus, after passing a test imposed by Minos, found the body and afterwards restored it to life by using a herb revealed by a snake.

See Hyg. *Fab.* 136, Roscher's *Lexicon*, s.v.

H. J. R.

POLYEIDUS (2) 'the Sophist' is known only from Aristotle (*Poet.* 16, 17), who refers to the recognition scene in his *Iphigeneia* (if that was the title).

POLYGNOTUS (fl. c. 475–447 B.C.), painter, son and pupil of Aglaophon of Thasos; later an Athenian citizen. Friend of Cimon and probably of Sophocles. Pliny dates before 420 B.C. He painted the 'Iliupersis' in the Stoa Poikile soon after 460, the 'Iliupersis' and 'Nekyia' in the Cnidian Lesche at Delphi probably between 458 and 447; according to a very probable emendation he painted in the Theseum soon after 475. The 'Rape of the Leucippidae' in the Anakeion, the 'Suitor-Slaying' in Plataea, the 'Achilles in Scyros' and the 'Nausicaa' (both later in the Pinakothek) are undated. Contemporary and later vases, particularly the Niobid painter's Argonaut crater (Pfehl, fig. 492; Rumpf, pl. 28/1 and 2), illustrate Polygnotan grouping and postures, as described by Pausanias, and the transparent drapery and freer treatment of the face, noted by Pliny. Many of the elements of his art had appeared sporadically before, but he combined them to represent men of high moral purpose (ἦθος) and 'better than ourselves', often either taking a decision or in the reaction after the event. For Theophrastus and others he was a primitive (he did not use shading), but still the first great painter.

Overbeck, 380, 614, 1042–79; C. Dugas, *Rev. Ét. Gr.* 1938, 51; Rumpf, *Malerei u. Zeichn.* 91; E. Simon, *AJArch.* 1963, 43 ff.; L. H. Jeffery, *BSA* 1965, 41 ff. T. B. L. W.

POLYPERCHON (b. c. 380 B.C.), son of Simmias a Macedonian noble, first appears when promoted 'taxiarch' to command a brigade of Alexander's Macedonian infantry after Issus (333). Under Alexander he rose no higher, and his first independent command was in the Lamian War (321), when he showed some skill. This, with his seniority and want of personal ambition, inspired the regent Antipater to recommend the army to elect him his successor (319); but, lacking Antipater's prestige, he had no chance of controlling the 'separatist' generals. He failed even to hold Macedonia and retain possession of the two kings, and degenerated into a mere general of mercenaries in Greece, employed alternately by Antigonus and Cassander against each other. The date and circumstances of his death are unknown.

Berve, *Alexanderreich*, no. 654; W. W. Tarn, *CAH* vi, ch. 15; Bengtson, *Strategie* i. 81 ff. G. T. G.

POLYPHRASMON (so spelt *IG* ii². 2325), son of the tragic poet Phrynichus, wrote a tetralogy on the subject of Lycurgus, presented in 467 B.C., but defeated by Aeschylus' Theban tetralogy and by Aristias (Arg. Aesch. *Sept.*).

POLYSTRATUS, perhaps a direct disciple of Epicurus, followed Hermarchus (successor of Epicurus) as head of the school.

WORKS: *Περὶ ἀλόγου καταφρονήσεως*, frs. ed. C. Wilke, 1905; *Περὶ φιλοσοφίας*, frs. ed. Crönert, *Kolotes u. Menedemos*, 36.

See Zeller, *Phil. d. Griechen* iii. 1⁴, 318 f.; A. Vogliano, *Epicureorum Scripta* (1928).

POLYXENA (Πολυξένη), in mythology, daughter of Priam and Hecuba (qq.v.); not in Homer. In the *Cypria* she is mortally wounded at the fall of Troy and buried by Neoptolemus (fr. 26 Allen). In the *Iliu Persu* and later she is sacrificed to the ghost of Achilles (Proclus); cf. e.g. Eur. *Hec.* 220 ff. Hence the story that Achilles in life was in love with her, e.g. Hyg. *Fab.* 110.

H. J. K.

POLYZELUS, Athenian comic poet, won four victories at the Lenaea, the first in the last decade of the fifth century B.C. (*IG* II². 2325. 130). We have six titles and a dozen fragments; four of the titles indicate theogonic burlesque; a fifth, *Δημοσυνδάρεως*, is clearly political, but its occasion and point are not known.

FCG II. 367 ff.; *CAF* I. 789 ff.; *FAC* I. 878 ff.

K. J. D.

POMERIUM was the line demarcating an augurally constituted city, the point beyond which the *auspicio urbana* could not be taken; it was essentially a religious boundary, marked by *cippi* (Varro, *Ling.* 5. 143), and was distinct both from the city-wall and from the limit of actual occupation, though it might coincide with the former and was often understood as the strip inside or outside the wall (cf. Livy I. 44; Plut. *Rom.* 11). Almost every aspect of the history of the *pomerium* of Rome is debatable; our sources refer to an original Palatine *pomerium*, later extended by Servius Tullius and then unchanged until Sulla's day (sources in Lugli, *Fontes* II. 125 ff.); but none of the descriptions is reliable (e.g. Tac. *Ann.* 12. 24, seems to describe the Lupercal circuit), although Varro's account (*Ling.* 5. 46-54) of the city of the Four Regions may correspond to the *pomerium* at some early date. Our best evidence for its history from the first century B.C. is probably Gellius, *N.A.* 13. 14. 4-7, quoting the *augur* Valerius Messalla Rufus (cos. 53 B.C.); Gellius mentions extensions by Sulla (cf. Tac. *Ann.* 12. 23-*auctus p. R. finibus*) and also by Caesar (cf. Cic. *Att.* 13. 20; Dio 43. 50. 1). On the other hand, Augustus' silence in the *Res Gestae* suggests that he did not extend it, despite the explicit statement of Tacitus (loc. cit.). Later extensions were made by Claudius, who was the first to include the Aventine (Tac. loc. cit., Gell. loc. cit., *CIL* VI. 31537 a-d; 37023-4; *Not. Scav.* 1912, 197; 1913, 68) and by Vespasian (*CIL* VI. 31538 a-c; *Not. Scav.* 1933, 241; cf. *CIL* VI. 930. 14-16). The *cippi* dating from Hadrian (*CIL* VI. 31539 a-c; *Not. Scav.* 1933, 241) seem only to be restorations. Aurelian's claim (S.H.A. *Aurelian* 21) is doubtful. The imperial *pomerium*, as loosely defined by the *cippi*, is thought to have coincided on the east with the republican wall, breaking away to include the Aventine and Emporium, the southern half of the Campus Martius and all the Pincian hill, at the last point extending beyond Aurelian's Wall. See also **AUSPICIUM**.

M. Labrousse, *Mélanges d'arch.* 1937, 165 ff.; P. Grimal, *ibid.* 1959, 43 ff. I. A. R.; J. N.

POMETIA (near modern *Cisterna*?), also known as *Suessa*, gave its name to the Pomptine Marshes (q.v.). Volsci and Romans often disputed its possession in primitive Latium (q.v.). About 495 B.C. Rome obliterated it. It was never rebuilt. Spoils from Pometia enabled Tarquin to found the Capitoline temple at Rome (Livy I. 53).

E. T. S.

POMONA, Roman goddess of *poma*, i.e. fruits, especially such as grow on trees, apples, etc. Her flamen (q.v.) was lowest in rank of all, corresponding apparently to the small importance of her province. She had a sacred place, *pomonial*, 12 miles out of Rome (Festus, 296, 15 ff. Lindsay), but no known festival. Ovid (*Met.* 14. 623 ff.)

has a story (unconnected with facts of cult and clearly his own or another comparatively late author's invention) that Vertumnus (q.v.) loved her, pled his own cause in disguised shape, and finally won her.

H. J. K.

POMPEIA (PW, 'Pompeius' 52), granddaughter of Pompeius (q.v. 2) and of Sulla, married Caesar (1) in 67 B.C. and, after the Bona Dea scandal (see **CLODIUS**, 1), was divorced as not above suspicion.

E. B.

POMPEII, situated on a small volcanic hill, 5½ miles south-east of Vesuvius, was not a small town by ancient standards (c. 160 acres). Its sudden end in the eruption of A.D. 79, described by the Younger Pliny (*Epp.* 16 and 20), struck the imagination of the ancient world as well as the modern. The site, forgotten in the Middle Ages, was rediscovered in 1748, since when intermittent excavation has proceeded. About four-fifths have now been uncovered.

Pompeii served in Strabo's time as a port of Nola, Nuceria, and Acerra (5. 4. 8). Its commercial and strategic position near the mouth of the Sarnus, one of the gateways of Campania, explains its history. Strabo (*ibid.*) states that it was occupied successively by Oscans, Etruscans and Pelasgians, Samnites, and Romans.

The Oscans were the descendants of the Neolithic inhabitants of Campania, as appears from their pottery. The town-plan of Pompeii seems to contain an older portion in the south-west (24 acres), and a newer portion added later to north and east. From the eighth century B.C. the inhabitants came under the influence of the Greek colonies of the coast (Cumae), and Greek pottery (geometric, proto-Corinthian, Corinthian) and bronzes appear in their graves. In the seventh century Etruscan influence becomes apparent, issuing perhaps from Capua and Nola, and from this time Greek and Etruscan influence alternated—first, the Greeks of Cumae; then the Etruscans, from c. 530 B.C., when they occupied Campania, to their defeat at sea by Hieron of Syracuse in 474 B.C.; finally, the Greeks again, from 474 B.C. to the Samnite invasion c. 420 B.C. Traces of all three phases are found in the Doric Temple of the Foro Triangolare and in the Temple of Apollo.

The Samnites invaded Campania in the fifth century, occupying Capua in 432 and Cumae in 420, and their penetration south of Vesuvius must have followed soon. When was Pompeii enlarged from 24 to 160 acres, and by whom? The fortifications of the enlarged town suggest a date in the fifth century B.C., and since the enlargement argues a not inconsiderable increase of population, the Samnites are the most likely candidates, though the influence of Greek or Etruscan town-planning is obvious.

From the end of the fifth century B.C. till the age of Sulla, Pompeii was a Samnite town. Its language was Oscan. Coinage suggests that it belonged to a league of which Nuceria was the head. Its chief magistrate was a *meddix tuticus*, and under him were quaestors and aediles. An assembly (*kombennion*) appears in inscriptions, though it is not known whether it was an assembly of all citizens or a town-council. The period was one of great prosperity, based on agriculture and commerce. Culturally the town passed through two phases, the line between them falling about the middle of the third century B.C. The first (in which local limestone was the chief building material) may be called Italian in the sense that it is a reflection of a more or less homogeneous civilization which was spread widely in south Italy at the time (cf. the Oscan and Lucanian tomb-paintings in the Naples and Capua museums), and had strong Etruscan reminiscences. The second phase (in which a handsome dark tufa was imported from Nuceria) was Hellenistic and received a great impetus from the ever-widening trade

connexions of Campania during the second century B.C. Increasing prosperity is reflected in the dignified monuments which date from the third and second centuries B.C. The main Forum, hitherto a rough and unsystematic market-place, was converted into a dignified civic centre. The region of the Foro Triangolare was rebuilt after the manner of a Greek gymnasium, with a large open-air theatre adjoining, to be a centre of the town's cultural life. Bronzes, marble tables, terracottas, and mosaics were imported in large quantities from Hellenistic factories or made by local workmen after Hellenistic designs. A Hellenistic public bath was built and the cult of Isis was introduced. In houses wall-decoration became markedly Hellenistic, and the Greek peristyle was added to the Italian atrium.

In the Social War Pompeii joined the Italians (App. *BCiv.* 1. 39) and in 89 B.C. was attacked by L. Sulla. The outcome of the siege is unknown, but the war as a whole completely changed the position of Pompeii. With the rest of Italy it received Roman franchise and the citizens were enrolled in the *tribus Menenia*. As a punishment for resistance to Sulla's army a colony of Roman veterans was planted on the town under the leadership of P. Sulla, the Dictator's nephew (c. 80 B.C., Cic. *Sull.* 60. 2). At this time, except for the incipient use of Latin in place of Oscan as the language of official life, the romanization of Pompeii had not gone far, but hereafter it made rapid strides. The names and functions of the magistrates were brought into line with those of other Roman colonies. The Oscan language was replaced by Latin, and Oscan weights and measures by Roman standards. Houses, wall-paintings, metal-work, and pavements all took on a Roman tinge. Romanization in architecture was indirectly assisted by an earthquake in A.D. 62. Seneca (*QNat.* 6. 1. 1-2) and Tacitus (*Ann.* 15. 22) say that it left much of the city in ruins, and this is confirmed by the remains. In the parts that were rebuilt before the eruption the influence of Rome was strong.

Local families and traditions were not, however, entirely swamped by the Roman colonists. Indeed, inscriptions suggest that after initial difficulties the two groups lived amicably side by side. Municipal elections continued to be contested with vigour, and except to deal with irregularities and disorder (e.g. the riot in the amphitheatre of A.D. 59; Tac. *Ann.* 14. 17) there was little interference from the central government. The remains of the last half-century before the eruption present the picture of a prosperous town—a market for the produce of a rich countryside, a port with wide connexions in the Mediterranean, and an industrial centre producing certain specialties (wines, millstones, fish-sauce, perfumes) for which the demand was more than local.

ANCIENT SOURCES. (a) Inscriptions. *CIL* iv and x, 787-1079, 8143-57, 8348-61, *Iph. Epigr.* viii 86-90, 202, *Not. Scav.* 1927 ff. *passim*. (b) Authors. scattered references of which the most important are: Cic. *Pro Sulla* 60. 2; Strabo 5. 4. 3-8, Sen. *QNat.* 6. 1. 1-2; Tac. *Ann.* 14. 17 and 15. 22; Hist. 1. 2; Pliny, *Ep.* 6. 16 and 20; Suet. *Tit.* 8. 3 ff., Dio Cass. 66. 21. 4.

Tanner, *The Common People of Pompeii: a Study of the Graffiti* (U.S.A. 1939); A. Mau, *Pompeian Wall Paintings* (1906), id., *Pompeii* (1906); F. Ciprotti, *Pompeii* (Universale Studium, Rome, 1962). R. C. C.

POMPEIUS (1, *PW* 12), **QUINTUS**, a *novus homo* attached to Scipio Aemilianus, became consul in 141 B.C. by trickery and against Scipio's will (it was said), and succeeded Metellus (q.v. 3) Macedonicus in the Numanine command, blaming his lack of success on his predecessor. In 140 he was forced to negotiate a treaty, but

repudiated it on his successor's arrival and gained the Senate's approval for this action. Prosecuted *repetundarum*, in a *cause célèbre*, by Metellus and other distinguished men, he was acquitted, and in 136 he and Metellus served together as legates in Spain under Furius (q.v. 2). A prominent opponent of T. Gracchus, he became censor (131) with Metellus (the first pair of plebeian censors).

H. Simon, *Roms Krüge in Spanien* (1962), see index; A. E. Austin, *Scipio Aemilianus* (1967), see index.

POMPEIUS (2, *PW* 39) **RUFUS**, **QUINTUS**, son or grandson of (1), as tribune (100 B.C.) unsuccessfully worked for the recall of Metellus (q.v. 6) Numidicus and remained closely attached to his family. He was *praetor urbanus* in 91, and consul in 88 with Sulla, whose daughter married his son. He opposed Sulpicius (q.v. 1) Rufus, his former friend, and was driven from Rome, but then occupied it with Sulla. Sent (by a *SC* whose validity could be impugned) to supersede his distant relative Pompeius Strabo, he was killed by the latter's soldiers with the commander's acquiescence.

For a coin-portrait see Sydenham, *CRR*, Pl. 25, no. 908. E. B.

POMPEIUS (3, *PW* 45) **STRABO**, father of Pompey, after his quaestorship tried to prosecute his commander. In the Social War he fought in the northern sector, as legate (90 B.C.) and—after a victory over T. Labienus—as consul (89). Pompey, Cicero, and Catiline, among others, served under him (Cichorius, *Rom. Stud.* 144). Capturing Asculum, he ended the northern war and triumphed late in 89, but was perhaps prosecuted in 88 and (if so) contumaciously resumed his command. His distant relative Pompeius (2) was sent to supersede him and was killed, not without Strabo's acquiescence. In 87, asked to defend Rome against Cinna, he behaved ambiguously; he negotiated with Cinna (he probably had connexions with Carbo, q.v. 2) over a joint consulship, excluding both Marius and the Optimates. His death in an epidemic was thought fit punishment and his body was dragged through the streets. He was one of the first, in the light of Sulla's march on Rome, to see the possibilities offered to unscrupulous leaders by the new army (see **MARIUS** 1, **SULLA** 1) and the spread of citizenship. As consul, he had given Latin rights to Transpadana and enfranchised some Spaniards on the battlefield (*JLLRP* 515). In those regions and in Picenum he built up the following later inherited and exploited by his son.

M. Gelzer, *Kl. Schr.* (1962 3), ii 106.

E. B.

POMPEIUS (4, *PW* 31), **GNAEUS**, called **MAGNUS** after 81, (**POMPEY**) (106-48 B.C.), served with his father Pompeius (q.v. 3) at Asculum, and brought three legions from his father's veterans and clients in Picenum to win victories for Sulla in 83. He was then sent to Sicily, where he defeated and killed Carbo (q.v. 2), and thence to Africa, where he destroyed Cn. Domitius and King Iarbas. Though he was still an *eques*, Sulla grudgingly allowed him to triumph (80 or possibly 81); and in 80, after the death of his wife Aemilia, Sulla's stepdaughter, he married Mucia (q.v.), a close connexion of the Metelli, who perhaps accepted him as an ally against Sulla's autocracy. He supported Lepidus (q.v. 2) for the consulship of 78, but assisted Catulus (q.v. 3) to overcome him next year; later in 77 he obtained proconsular *imperium* to reinforce Metellus (q.v. 7) Pius against Sertorius (q.v.) in Spain. Thence he returned in 71 and co-operated with the reluctant Crassus (q.v. 4) in finishing off the Servile War. Again he triumphed, and extorted from the Senate the consulate, emphasizing the illegality by surrendering his horse with great ceremony to the censors, whose office he now restored; in this year, too, the tribunes

recovered their rights, and L. Cotta reduced senatorial representation on the courts to one-third (70 B.C.).

Though now a senator, Pompey took no normal consular province. But from both tribunes and *equites* he reaped his reward: in 67 the *Lex Gabinia* created for him an *imperium* with unprecedented powers against the pirates, whom he destroyed in three months; and Manilius next year added Lucullus' Asiatic provinces and conduct of the Mithridatic War. His eastern campaigns were his greatest achievement. Mithridates was defeated immediately, and though attempts to pursue him over the Caucasus failed, he committed suicide in the Crimea in 63. Further, Pompey founded colonies, annexed Syria, settled Judaea, and laid the foundation of subsequent Roman organization of the East (though he reached no agreement with Parthia).

In 62 he returned, disbanded his army, and triumphed, a *popularis* no longer (Cic. *Att.* 2. 1. 6). He made two requests: settlement of his veterans and ratification of his eastern *acta*. But he had divorced Mucia, allegedly for adultery with Caesar (q.v. 1); and the Metelli, aided by Lucullus and Cato (q.v. 5), frustrated him until in 60 he allied with Crassus and Caesar; he married the latter's daughter Julia (q.v. 1) in 59. His demands were satisfied by Caesar as consul; but his popularity waned, and in 58-57 Clodius (q.v. 1) deliberately flouted him. In 57, after backing Cicero's recall, he received control of the corn-supply for five years; but no military power was attached, nor could he secure the commission to restore Ptolemy Auletes in Egypt next year. In Apr. 56 the 'Triumvirate' was renewed at Luca. Pompey became consul with Crassus for 55, and received Spain for five years; but he governed his province by proxy. After Julia's death in 54 he declined a further marriage alliance with Caesar; and in 52 after Clodius' murder he was appointed sole consul, with backing from extreme *optimates*. His immediate actions—the trial of Milo (q.v.) and his legislation *de vi*, *de ambitu*, and *de iure magistratum*—were designed only to restore order in Rome, rather than to injure Caesar; but the prolongation of his *imperium* for five years from this date destroyed the balance of power; and he took as his colleague Metellus (q.v. 11) Scipio, whose daughter Cornelia he had married. Gradually his new alliance led him to support demands that Caesar be recalled before he was sure of the consulate of 48; and in 50, when negotiations with Caesar were breaking down, he accepted from the consul C. Marcellus the command of the Republic's forces in Italy. In 49 he transported his army from Brundisium to Greece and spent the year mobilizing in Macedonia. He met Caesar on his arrival in 48 with a force powerful in every arm, and inflicted a serious reverse when Caesar attempted to blockade him at Dyrrhachium. But later (9 Aug.), perhaps under pressure from his senatorial friends, he joined in a pitched battle at Pharsalus, and was irretrievably defeated. He fled to Egypt, but was stabbed to death as he landed (28 Sept. 48).

The violence and unconstitutional character of Pompey's early career invites comparison with Augustus, whom in his constitutional position he so often resembled: in 67 he had twenty-four *legati*; from 55 he governed Spain through *legati*, and while doing so was made consul in 52. But still more significant was his unofficial power: by 62 in Spain, Gaul, Africa, the East, and parts of Italy, there were colonists and clients bound to him by the relationship of *fides* and surrounding him with a magnificence unsurpassed by a Roman senator hitherto; the climax was reached with the dedication of his theatre in the Campus Martius in 55. He owed much to his military genius, which must have been of the highest order even though other commanders, Metellus, Crassus, Lucullus, often paved the way to his successes. But in politics he

showed a mastery which it was easy for clever men to underrate (e.g., for all its brilliance, the epigram of Caelius in Cic. *Fam.* 8. 1. 3). 'Modestus ad alia omnia nisi ad dominationem' (Sall. *H.* 2. 14), by superb skill and timing he rose from his lawless beginnings to a constitutional pre-eminence in which he could discard the use of naked force; and even his final miscalculation was a narrow one. Whether he had disinterested aims in government must remain uncertain, but there are signs that he tried to restore dignity and order in the city, and perhaps also in Rome's relations with her provinces. His private life, too, was of a high standard for such an age, and two women, Julia and Cornelia, married to him for dynastic ends, became deeply attached to him. Cicero, though he never understood Pompey's subtleties (see esp. *Att.* 1. 13-14), remained a devoted admirer; and despite the disappointments of the war years Pompey's death brought from him a heartfelt tribute: 'hominem enim integrum et castum et grauem cognoui' (*Att.* 11. 6. 5).

For the sources see CAESAR (1). Various lives by Plutarch (e.g., *Sertorius*, *Lucullus*) add much information when carefully criticized: Plutarch's *Pompey* is based probably on Nepos. M. Gelzer, *Pompeius* (Munich, 1949); J. van Ooteghem, *Pompee le Grand* (1954); E. Badian, *Foreign Clientelae* (1958), ch. 11. G. E. F. C.

POMPEIUS (5, *PW* 17), GNAEUS, elder son of Pompey and Mucia (qq.v.), was born 79 B.C. About 54 he married a daughter of Ap. Claudius (q.v. 12). In 49 he secured an Egyptian fleet, with which before the battle of Dyrrhachium he destroyed Caesar's transports. Early in the African War he occupied the Balearics and crossed to Spain, where he was joined after Thapsus by his brother and Labienus, raised thirteen legions, and won most of the southern province. But after manoeuvres which drove him south from Corduba he was defeated by Caesar in 45 in the hard-fought battle of Munda, and later captured and executed. G. E. F. C.

POMPEIUS (6, *PW* 33) **MAGNUS PIUS**, SEXTUS, younger son of Pompey and Mucia, was born probably c. 67 B.C. Left in Lesbos with Cornelia (q.v. 2) during the campaign of Pharsalus (48), he accompanied his father to Egypt and after his murder went to Africa; after Thapsus (46) he joined his brother Gnaeus in Spain, and during the campaign of Munda (45) commanded the garrison of Corduba (q.v.). Subsequently he contrived to raise an army, partly of fugitive Pompeians, and won appreciable successes against Caesar's governors in Further Spain, C. Carrinas (*cos. suff.* 43) and after him C. Asinius Pollio (q.v.). In the summer of 44 Lepidus (q.v. 3) arranged a settlement between him and the Senate, under the terms of which he left Spain; but instead of returning to Rome, he waited on events in Massilia with his army and fleet. In Apr. 43 the Senate made him its naval commander, with the title *praefectus classis et orae maritimae*; but in August he was outlawed under the *lex Pedia* (see PEDIUS 1), and presently employed his fleet to rescue fugitives from the proscription and to occupy Sicily, at first sharing authority with the governor Pompeius Bithynicus, but later putting him to death; and using the island as a base for raiding and blockading Italy. He repelled an attack by Octavian's general Salvidienus (q.v.) in 42, supported Antony against Octavian in 40 (when his lieutenant Menodorus, q.v., occupied Sardinia) and in 39 concluded the Pact of Misenum (q.v.) with the triumvirs, who conceded to him the governorship of Sicily, Sardinia and Corsica, and Achaëa in return for the suspension of his blockade. In 38 Octavian accused him of breaking the pact and again attacked him, but was defeated in sea-fights off Cumae and Messana. In 36 the attack was renewed, and after Agrippa's victory off Mylae, Octavian's defeat off Tauromenium, and Lepidus' occupation of southern and western Sicily, the war was decided

by the battle of Naucluchus (3 Sept.). Sextus escaped with a few ships to Asia, where he attempted to establish himself, but was forced to surrender to M. Titius (q.v. 2), who put him to death.

Sextus was like his father an able and energetic commander. His brief career was spent entirely in the continuation—symbolized by his adoption of the surname Pius—of an inherited struggle, and left him no time for cultivation of the arts of peace. Despite his long absence from and blockade of Italy, he seems to have been popular in Rome. His wife was Scribonia, daughter of L. Scribonius (q.v. 1) Libo. It was apparently through a daughter of this marriage that M. Scribonius (q.v. 2) Libo Drusus and Cn. Pompeius Magnus, Claudius' son-in-law, traced their descent from Pompey.

M. Hadas, *Sextus Pompey* (U.S.A. 1930); Syme, *Rom. Rev.*, see index. G. W. R., T. J. C.

POMPEIUS (7) SILO, rhetor, some of whose arguments are cited by the Elder Seneca.

POMPEIUS (8) SATURNINUS, orator, historian, poet whose verse, in the manner of Catullus and Calvus, Pliny greatly admired (*Ep.* 1. 8 and 16). Pliny sent him for criticism his speech at the opening of the Como library.

POMPEIUS (9) (5th c. A.D.), grammarian, author of a *Commentum artis Donati* (ed. Keil, *Gramm. Lat.* v. 95–312).

Schanz–Hosius, § 1102.

POMPILIUS (c. 100 B.C.), epigrammatist quoted by Varro.

Baehr *FPR* 274.

POMPONIUS (1), LUCIUS, of Bononia (fl. c. 100–85 B.C.), Latin poet, older contemporary of Novius (q.v.), from Cisalpine Gaul. These two made *fabulae Atellanae* literary and tended to fuse them with *palliatae*. Seventy known titles show the stock Atellan characters, various occupations, political satire, religious and mythological themes and burlesque of tragedy; in popular language, with coarseness and farcical scenes. See ATELLANA.

FRAGMENTS. O. Ribbeck, *CRF* 225 (3rd ed. Teubner, 1807). P. Frassinetti, *Fab. Atell. Prag.* (1955), 1 ff. E. H. W.

POMPONIUS (2) RUFUS wrote *Collecta* from which Valerius Maximus (4. 4 *ad int.*) quotes 'maxima ornamenta matronis liberos'.

POMPONIUS (3, PW 103) SECUNDUS, [?PUBLIUS CALV]ISIUS SABINUS (Quint. *Inst.* 8. 3. 31; 10. 1. 98), was *cos. suff.* A.D. 44, and a friend of the Elder Pliny who wrote his biography (Pliny, *Ep.* 3. 5) and calls him 'consularem poetam' and 'uatem cuenique clarissimum' (*HN* 7. 80; 13. 83). Endangered by prosecution under Tiberius, he survived (Tac. *Ann.* 5. 8). He wrote *Aeneas*, a *praetexta*. Under Claudius his verses on the stage drew insults from the mob (*ibid.* 11. 13). Legate of Upper Germany, he victoriously checked the Chatti in 50 (*ibid.* 12. 28). Pliny (*HN* 13. 83) mentions having seen the handwriting of the Gracchi, about two centuries old, in his possession. He died either between 51 and 57 (so Otto) or in the late 60s (so Cichorius).

He was stepbrother of Caesonia, Gaius' wife. His brother Quintus (*cos. suff.* A.D. 41) favoured the restoration of the Republic after Gaius' death; as an accomplice of Camillus Scribonianus in 42, he committed suicide or was killed.

Cichorius, *Röm. Stud.* 423 ff.; W. Otto, *Philol.* 1935, 483 ff.; Schanz–Hosius u^o. 475; E. Rutterling, *Festi des röm. Deutschlands* (1932), 15. J. W. D.

POMPONIUS (4) BASSULUS, MARCUS (? 1st c. A.D.), recorded in an inscription of Aeclanum (*CHL* ix. 1164) as a translator of Menander and writer of original comedies (probably not for performance).

POMPONIUS (5) PROCULUS VITRASIIUS POLLIO, TITUS (*PW*, s.v. Pomponius 67 and Vitrasius 8), a patrician, entered upon a senatorial career under Hadrian. He became *cos. I suff.* before A.D. 157 (perhaps c. 150) and thereafter successively governor of Hispania Citerior (*ILS* 1113–1114), of Lower Moesia in 157 (*Ann. Épigr.* 1937, 408, no. 247), and proconsul of Asia at an uncertain date thereafter. He served on the staff of Marcus and Verus in the German campaign (c. 168) and of Marcus and Commodus in the Sarmatian (c. 174). He became *cos. II ord.* in 176. He married Annia Fundania Faustina, daughter of M. Annii Libo, himself the son of a M. Annii Verus who was also father of Faustina the Elder (q.v.) and of Annii Verus, the father of M. Aurelius (q.v.). Hence Annia was a first-cousin of the Emperor. For his career see *ILS* 1112.

Lambrechts, *Sénat*, no. 462; A. Degraisi, *I Fasti cons. dell'imp. rom.* (1952), 44 n.; A. Stein, *Die Legaten von Moesien* (1940), 72 ff. C. H. V. S.; M. H.

POMPONIUS (6, PW 107), SEXTUS, a Roman jurist of the time of Hadrian and the Antonines. He held no official post nor (probably) had he the *ius respondendi* (see JURISPRUDENCE); he seems to have given his time to literary activity and probably to teaching. He was one of the most productive legal writers (more than 300 *libri*). But though not without critical ability, he is rather a compiler. Roman legal literature owed to him its biggest work: his commentary on the Edict, composed at Hadrian's order, seems to have had over 150 books, as a passage of the 83rd book, preserved in the *Digest*, deals with a subject treated little more than half-way through the Edict. It is curious that the work was not excerpted directly for the *Digest* and is known only from quotations in later commentaries on the Edict (of Paulus, q.v. 1, and Ulpian, q.v. 1). His otherworks are also extensive: two textbooks of *ius civile*, *Ad Sabinum* (36 books) and *Ad. Q. Mucium* (39 books); two (or one?) works of predominantly casuistic character, *Variae Lectiones* (41 books) and *Epistulae* (20 books). In addition, an epitome *Ex Plautio* and monographs on *Senatus consulta*, *Fideicommissa*, and *Stipulationes*. Especially notable is the booklet *Liber singularis enchiridii*, a unique compendium of the history of Roman legal sources, magistrates, and legal science up to the time of Julian (q.v. 2), Pomponius' contemporary; a long extract from it is preserved in *Dig.* 1. 2. 2. It contains a good many mistakes and corruptions, and has no doubt been shortened and deformed by Justinian's compilers or by an intervening epitomator, but it is nevertheless of value, as it gives information preserved nowhere else. Pomponius had a good knowledge of the older legal literature, and he himself is often quoted by later writers. The *Digest* drew extensively on his works; his contribution to it is, after those of Paulus and Ulpian, one of the largest.

A. M. Honoré, *Gaius* (1962), ch. 3. See also under JURISPRUDENCE. A. B.; B. N.

POMPTINE MARSHES, a malaria-stricken region, formed by the stagnation of the Ufens and other streams, lying south-east of Rome between Volscian mountains and Tyrrhenian Sea. Pliny's statement that twenty-four cities once flourished here (*HN* 3. 59) is an exaggeration: Succsa Pometia (q.v.), like the lands later assigned to citizens of the Pomptina and Oufentina tribes, lay outside the marshes proper (Livy 6. 21; 7. 15; 9. 20). The Via Appia crossed the marshes, but travellers apparently preferred to use the parallel, 19-mile-long ship-canal,

since the marshes included highwaymen among other perils (Strabo 5. 233; Hor. *Sat.* 1. 5. 10 f.; Juv. 3. 307). From 160 B.C. or earlier numerous attempts were made by Cethegus, Trajan, and others to drain them—a task successfully accomplished in the twentieth century.

M. Hofmann, *PW*, Suppl. viii. 1135 ff.

E. T. S.

PONS MULVIUS carried the Via Flaminia across the Tiber north of Rome; it is first mentioned in 207 B.C. The existing bridge, the modern *Ponte Milvio*, was first built by Aemilius Scaurus in 109 B.C. and there has been much later rebuilding. Of the four main 60-foot arches, only the southern pair are ancient. Above the pointed cutwaters, both up- and downstream, there are arched flood-passages. The road makes a sloping approach on either side. The Allobroges were trapped here during the Catilinarian conspiracy in 63 B.C. and Maxentius was defeated by Constantine in A.D. 312.

R. Delbrück, *Hellenistische Bauten in Latium* i (1907); T. Frank, *Roman Buildings of the Republic* (1924), 141; M. H. Ballance, *PBSR* 1951, 79 ff.; Nash, *Pict. Dict. Rome* ii. 191 ff. I. A. R., D. E. S.

PONTIFEX, PONTIFICES. The word (cf. *artifex, aurifex*) means one skilled in the important magic of bridge-making (see Giuffrida-Ruggeri, *Journ. Roy. Anthropol. Inst.* 1918, 100; Birt, *Rh. Mus.* 1926, 115 ff., but Latte (*RR* 196, n. 1) argues that *pōns* originally meant 'way'), and by extension a priest acquainted with the increasingly elaborate ceremonial of public cult (cf. Cic. *Har. Resp.* 18). At Rome, and with local differences no doubt elsewhere, the *pontifices* were originally an advisory board (*collegium*) whose business it was to assist the chief magistrate in his sacral functions; this is strongly indicated by the fact that their normal meeting-place was the Regia (Pliny, *Ep.* 4. 11. 6). Their number seems to have been primitively three (this was the number at Colonia Genetiva Iulia, see *Lex Ursonensis* [Bruns, *Fontes* 27], 67, and colonies were constituted on the model of Rome), but was successively increased to six, nine, fifteen, and finally (under Caesar) sixteen (Livy, *Periocha* 89; Dio Cass. 42. 51. 4). In historical times the original meaning of their name was quite unheeded, and they presided over the State cult generally. Like all the State priesthood, the *pontifices* were originally patricians; but by the *Lex Ogulnia* of 300 B.C. (Livy 10. 6. 6; see Mommsen, *Staatsr.* iii. 22) half the college was chosen from the plebeians. Their position as an advisory body remained unaltered, at least in theory, and their decisions were *decreta*, i.e. pronouncements on points submitted to them or coming within their competence; they were not laws and had in themselves no executive effect. In practice it does not seem that they were disregarded, but the magistracy, not the pontiffs themselves, must enforce them.

The head of the college was the *Pontifex Maximus*, whose official residence under the later Republic was in the Regia. He appears to have ousted the *Rex Sacrorum* from his control of the State religion. The original manner of his appointment was presumably by choice either of the king or of the other pontiffs; in historical times (before 212 B.C., but the date is uncertain, see Mommsen, *ibid.* 27) he was elected by vote of seventeen of the thirty-five tribes, chosen by lot, and thus, by a curious compromise, never by a majority of the people, like secular magistrates. He was head of the whole State clergy, exercising disciplinary functions over some at least of them as well as over the Vestal Virgins (Wissowa, *RK* 509 ff.).

The *collegium pontificum* included, besides the pontiffs themselves, the *flamines*, Vestals, and *rex sacrorum*, but not the augurs nor the minor colleges. In imperial times the post of *pontifex maximus* was held by the reigning

Emperor, Gratian being the first to refuse it, c. A.D. 375 (Zosimus 4. 36).

Mommsen and Wissowa, *loc. cit.*; Latte, *RR* 105 ff. and 400 ff. H. J. R.

PONTIUS (1), GAVIUS, Samnite general who trapped a Roman army in the Caudine Forks, 321 B.C., and imposed his own peace terms. Patriotic annalists invented the story that Rome immediately repudiated the peace and defeated Pontius (Livy 9. 2 f.; F. E. Adcock, *CAH* vii. 599). Pontius himself is probably no mere annalists' figment modelled on Pontius Telesinus, Sulla's Samnite opponent. But the story that in 292 he defeated Fabius Gurgus, whose father Fabius Rullianus then proceeded to defeat, capture, and execute him, is fiction suggested by events of 213, when Fabius Cunctator was his own son's legate (Livy, *Epit.* 11; 24. 4).

E. T. Salmon, *Samnium and the Samnites* (1967).

E. T. S.

PONTIUS (2, *PW* 21) **TELESINUS**, descendant of (1), Samnite 'practor' in the Social War, in 82 B.C. tried to relieve Marius (q.v. 2) at Praeneste and, when prevented, marched on Rome. After a fierce day-and-night battle, he was defeated by Sulla outside the Colline Gate and was killed with most of his army.

E. B.

PONTIUS (3) **PILATUS** (*PW* s.v.), prefect of Judaea (A.D. 26–36). On arrival he offended the Jews by bringing images of the Emperor into Jerusalem, and showed himself unsympathetic to their religious scruples on other occasions; they thought him 'inflexible, merciless, obstinate' (Philo, *Leg. ad Gaium* 38). On the other hand, his condemnation of Jesus, probably on a charge of sedition, seems to have been by way of a concession to them. Summoned to Rome by Tiberius, probably late in 36, upon a complaint of the Samaritans to L. Vitellius (q.v. 2), governor of Syria, he arrived shortly after the Emperor's death. Therewith he disappears from authentic history. Eusebius relates that he committed suicide. Christian opinion was not always hostile. Tertullian (*Apol.* 21. 24) estimated him 'pro sua conscientia Christianus', and he is canonized with his wife in the Coptic Church. The large apocryphal literature on him includes several versions of his presumed report to the Emperor on the condemnation of Jesus.

Winter, *Novum Testamentum* 1964, 37 ff. A. M., T. J. C.

PONTUS (Πόντος), the sea mythologically personified; he is son of Earth (Hes. *Theog.* 131–2); father of Nereus, Ceto, and Eurybia (233 ff.); husband of Mare, i.e. Thallassa (Hyg. *Fab., praef.* 5).

PONTUS, a region of northern Asia Minor including the south coast of the Euxine between the Halys and Colchis and extending southward to Cappadocia and Lesser Armenia. A series of mountain ranges with deep valleys runs parallel to the coast. Two small coastal plains are formed by the deltas of the Halys and the Iris, which break through the mountains and provide the main lines of drainage and communication. It has but one convenient cross-road, from Amisus to Sebasteia. Pontus is well watered and fertile, with a mild climate at the coast and in the valleys. Olives and other fruits, nuts, pasture,

and grain abound near the coast. The coastal range supplies abundant timber for ships, and the mountains are rich in iron (*see* CHALYBES), copper, silver, salt, and alum.

The social and political structure of Pontus resembled that of Cappadocia; the same village population organized in territorial units, the same large temple territories with numerous sacred slaves ruled by priests, and the same feudal iranized nobility. Some mountainous regions in eastern Pontus remained for long uncivilized tribal territories. The Greek colonies on the coast were simply trading stations with little or no territory.

The centre and strength of the Pontic kingdom was the Pontic territory proper, but the kings continually added to it until it reached its greatest extent under Mithridates VI (*see* MITHRIDATES I-VI, PHARNACES I). They apparently brought the priests and nobility under control, and established a regional administration, but they did little to develop cities. Pompey gave much of the kingdom to princes, Diodotus of Galatia and the priest of Comana, and divided the rest among various centres, chosen with an excellent eye for natural advantages, which he raised to municipal status and included in the province of Bithynia and Pontus. Besides the coast cities these were Magnopolis, Amaseia, Cabeira-Diospolis, Zela, Megalopolis, Neapolis, Pompeiopolis, and probably Nicopolis. Practically all of these reverted to native rulers under Antony, but in the early Empire they gradually returned, often under new names, to the Roman provincial regime. The western part was known as Pontus Galaticus, with Amaseia as its metropolis. The eastern part remained under the rule of Polemon's (q.v. 1) dynasty, until it was annexed in A.D. 64, and retained the name of Pontus Polemoniacus, with the former royal capital Neocaesarea (Cabeira-Diospolis) as metropolis. Thus Pontus became part of the Galatian-Cappadocian province, and it remained joined with Cappadocia (q.v.) from Trajan until Diocletian, who divided it between his two provinces of Diospontus and Polemoniacus. To the end Pontus kept much of its native character; the cities remained regional and artificial, the feudal aristocracy important, and in the eastern portion the native tribes were only slightly touched by Hellenic civilization.

T. R. S. B.

POPILLIUS (1, *PW* 18) **LAENAS**, GAIUS, consul in 172 B.C., when he defended M. Popilius, whose high-handed conduct in Liguria had incurred the Senate's disapproval, was envoy in Greece in 170, and in 168 led the embassy to Egypt which after Pydna forced Antiochus Epiphanes to withdraw his army immediately from Egypt: he demanded a decision before the king stepped outside a circle drawn by Popilius.

Scullard, *Rom. Pol.* 195, 210 ff.

A. H. McD.

POPILLIUS (2, *PW* 28) **LAENAS**, PUBLIUS, son of (1), praetor c. 135 B.C.; as consul (132) he severely punished supporters of T. Gracchus and, under a law of C. Gracchus, had to go into exile, but returned under a law of Bestia (q.v.) after the judicial vindication of Opimius. He built a road in north-east Italy (*see* VIA POPILLIA). If *ILS* 23 refers to him (the name is lost), he was praetor in Sicily, built a road from Rhegium to Capua with a *forum* named after himself, and as consul furthered agrarian reform on behalf of the Optimates. But it seems better to refer the inscription to T. Annius Rufus, *cos.* 128 B.C. (*see* VIA ANNIA 2).

T. P. Wiseman, *PBSR* 1964, 27.

E. B.

POPLIFUGIA. A mystery festival recorded in the Roman calendar under 5 July. The form of the name resembles that of the equally puzzling Regifugium (q.v.). As an aetiological legend, it was explained by the flight of the people on the occasion of the death of Romulus (Dion. Hal. 2. 56. 5, Plut. *Rom.* 29). Wissowa (*RE* 102) does not seem to have proved that Jupiter was the deity of the festival. Latte (*RR* 128) may be right in his conjecture that at this ceremony and at the Regifugium some ritual was performed which was supposed to evoke terrible powers whose presence must be avoided.

H. W. P.

POPFAEA (*PW* 4) **SABINA**, daughter of T. Ollius (d. A.D. 31), and named after her maternal grandfather C. Poppaeus Sabinus (*cos.* A.D. 9, governor of Moesia 12-35), was married first to Rufius Crispinus, prefect of the praetorians under Claudius. During her second marriage, to the future Emperor Otho (q.v.), she became (by 58) mistress of Nero (so Tac. *Ann.* 13. 45 f.; another version in *Hist.* 1. 13). It was allegedly at her instigation that Nero murdered Agrippina (q.v. 3) in 59 and in 62 divorced, banished, and executed Octavia (q.v. 3). Nero now married Poppaea, who bore a daughter Claudia (63); both mother and child received the surname Augusta, but the child died within four months. In 65, pregnant again, she died from a kick which Nero gave her in a fit of temper, and was accorded a public funeral and divine honours. The supposition that she was interested in Judaism is dubious.

Syme, *Tacitus*, *see* index, E. M. Smallwood, *JTS* 1959, 329 ff.; O. Schonberger, *Hist.* 1963, 500 ff. Iconography: *see* *PW*.

T. J. C.

POPFAEDIIUS SILO, QUINTUS, friend of Drusus (q.v. 2), then *imperator* of the northern group of rebels in the Social War (*see* RAPIUS). He defeated and killed Caecio (q.v. 2) in 90 B.C. and the consul Cato (q.v. 3) in 89; but, after withdrawing southward and recovering Bovianum, was himself defeated and killed (88), probably by Metellus (q.v. 7) Pius.

E. T. Salmon, *Samnium and the Samnites* (1967), *see* index E. B.

POPULARES were Roman political leaders who, working through the People (*populus*) rather than the Senate, challenged the predominance of the ruling oligarchy of nobles, the Optimates. The resultant struggle was a main feature of domestic politics from 133 B.C. onwards. Populares are discussed s.v. OPTIMATES (q.v.).

H. H. S.

POPULATION (GREEK). Most Greek States from at least the sixth century (and the development of the common use of writing) kept records of population, it must be assumed, which were generally concerned with citizen status and duties or with financial obligations and benefits: therefore of the free rather than of slaves and of adult men rather than of women and children except in so far as these latter were involved in matters of citizenship. The multiplication of inscriptions from the fourth century onwards shows an increasing stress on records, but these are generally religious, social, or honorific, and it is uncertain how far local figures of population and levies were consolidated and recorded in any permanent fashion. The ultimate preoccupation being with *effectives* the relation of these to over-all totals is often obscure. In general (because of the principal concern of records with duties) there is the difficulty of passing from figures for male citizens to those for total citizen and free population, and from the citizen population of a *polis* to the total population of a geographical area. Calculations based on land areas are highly speculative, like all observations, also, based on the present aspect of Greece; for its character, fertility, and capacity to bear population have undergone

extensive changes since antiquity, and indeed in quite recent times (compare the development of the Vardar-Haliakmon region of Macedonia in recent years; or of Lake Copais). Reputations for fertility and for the production of food surpluses have to be conditioned by a consideration of social and political organization (as in Thessaly, with large estates and serfs contrasted with the situation in classical Attica). Air photographs are less likely to yield indications of economic development and settlement than in the case of south Italy. Even in Attica a good deal remains to be done on the interpretation of settlement remains and cemeteries. Bound up with problems of population are questions of birth-rates, infant mortality (natural and artificial), and death-rates, important for the judgement of numbers in age-groups. Ultimately the study of skeletal remains and cemeteries will give more reliable information than comparisons with other times and regions supposedly comparable. It is much to be regretted that before the spread of Christianity grave-inscriptions rarely give ages or causes of death (apart from death in war or at sea). Greek antiquity lacked the factual and statistical studies (even if writers, and especially orators, had been convinced of the value of facts) which are the necessary basis of demographical conclusions.

Apart from calculations based on land areas, the general character of settlement, and the scattered references to military effectives in certain battles between Greek States (for a recent and very superficial account resting mainly on Cavaignac and Jardé, and giving some references to modern literature, see P. Salmon, 'La Population de la Grèce antique', *Bulletin de l'association Guillaume Budé* 1959, 448 ff.), the main body of information is for Athens. As noted above, contemporary documents are limited in numbers and scope, and such promising sources of material as lists of *epheboi* (in effect the 19- and 20-year age classes), *bouleutai* (see S. Dow, *Prytaneis*, *Hesp. Suppl.* i, 1937), and *diatetai* (in effect the 60-year age group) are defective in almost every case and therefore ambiguous (see Gomme, *JHS* 1959, 65 f.). The excavation of the Athenian Agora has not yielded as much as was hoped. At Athens every boy at 18 was registered in his deme, and the total of deme registers formed the list of those entitled to attend the Ecclesia. Every boy of 18 of zeugite census or over (see ZEUGITAI) was also entered in the hoplite ranks of the army, and a list was kept of *thetes* (q.v.) liable for service in the fleet; boys and girls were entered in their phratries (q.v.) also. Metics (q.v.) were registered in their deme of residence; and there was perhaps a poll-tax on slaves. Even so this information has come down to modern times in a fragmentary and garbled form. Other statistics on which population calculations might be based are in worse case: cereal production (figures for one year); cereal imports (also for one year). Calculations based on State payments are too uncertain to be of value. Scope for guesses and conjecture is therefore large (especially when concerned with naval levies and triremes), and even in texts of agreed dependability, such as Thucydides, there are serious problems of interpretation (such as possible liability or exemption in the case of certain duties). Apart from the useful recent account of A. French, *The Growth of the Athenian Economy* (1964), 135 ff., the problems involved are well illustrated in A. H. M. Jones's Appendix (161 ff.) to his *Athenian Democracy* (1957) and Gomme's rejoinder, 'The Population of Athens again', *JHS* 1959, 61 ff. A particularly vexed problem is presented by slave numbers, especially the immense figures given in sources of varying reliability for Corinth, Aegina, and Athens. For a sceptical view of them and for other problems (again of interpretation in some cases, as of the *χειροτέχναι* of Thuc. 7. 27. 5) see Gomme, 'The Slave Population of Athens', *JHS* 1946,

127 ff. Equally disputed must be questions of increase or decrease of population at various periods, with the complication that an increase of population may be attended by a decline in citizen numbers. Thus it is difficult to say whether the colonizing activity of the archaic period was carried out with or without a lasting reduction of population in Greece. It is commonly asserted that overpopulation was a feature of the fifth century, but it is quite unclear what effect military losses and the establishment of cleruchies had on Athens. What were the effects of mercenary service and Alexander's conquests in the fourth century? Certainly from the time of Alexander decline of citizen numbers and of the *polis* unit did not necessarily mean a decline in the numbers of Greeks (though 'Greek' was now to a considerable extent a cultural rather than an ethnic term) and in the influence of Hellenism. Few of the matters of controversy are likely to be settled, and with this in mind the following should be regarded as reasonable deductions from inadequate information.

2. *Separate States.* From the meagre evidence the following rough figures have been estimated for Attica (area, c. 2,500 sq. km):

Date B.C.	Citizens Men 18-59		Citizens Total	Metics*		Slaves Total	Total population of Attica
	Hoplites and cavalry	Thetes		Men 18-59	Total		
480	15,000?	20,000?	140,000?	?	?	?	?
431	25,000	18,000	172,000	9,500	28,500	110,000	310,000
425	16,500	12,500	116,000	7,000	21,000	80,000	217,000
400	11,000?	11,000?	90,000	?	?	?	?
323	14,500	13,500	112,000	12,000?	42,000?	106,000?	260,000
313	12,000	9,000	84,000	10,000	35,000	?	?

*There must have been far fewer metics and slaves in 480, and again in 400 than in 431; but we have no figures even for a rough estimate. There was considerable emigration to colonies between 480 and 431, less between 400 and 323. Of the total population in 431 perhaps half lived in Athens, Piraeus, and environs (not entirely urban in character)—one-third of the citizens, nearly all the metics, and about two-thirds of the slaves; a hundred years later perhaps three-quarters of the total.

3. For other States we have only figures for their hoplite forces and their approximate areas. Argos (1,400 sq. km) had in 400 a citizen population equal to that of Athens, but not as many metics and slaves; Corinth (880 sq. km) in the fifth and fourth centuries less than half the hoplites of Athens in 400, so less than half the population—perhaps 80,000. Arcadia (4,700 sq. km), a poor country from which men were always emigrating, had 6,000-7,000 hoplites in the fourth and third centuries; by comparison with Attica this would mean about 80,000-90,000 citizen population—two-thirds only of its population today—with but few slaves to add; there were probably far more men below the hoplite census. Elis, a much richer land, but rural in character, may have had a population of 80,000. The population of Laconia (8,500 sq. km, of which Messenia had nearly 3,000) is much more difficult to estimate. It had much of the richest land in Greece, but it was thinly populated. The Spartiates of 21-50 years numbered some 3,000, so perhaps 4,000 in all (i.e. c. 12,000 total population); the *perioeci* in the army were also about 3,000, but in what proportion to the total of *perioikoi* we do not know. Still less do we know the number of helots, except that they were more numerous relatively to the free population than in any other State with serfs.

4. Boeotia (2,600 sq. km) was prosperous and agricultural, with few foreigners and slaves; it put 7,000 hoplites and 1,000 horse in the field in 424, and similar numbers in the fourth century; it had about 10,000 of

hoplite rank in all the third century. In 424 there were 10,000 light-armed. This yields c. 25,000–30,000 adult males, 90,000–100,000 citizen population (rather larger than today). Of the islands Corcyra (720 sq. km), parts of Euboea, Thasos (300), Lesbos (1,750), Chios (820), Samos (470), Naxos (450), Andros (400), Paros (200), and Rhodes (1460) were highly developed, and their density of population approached that of Athens in 323; Coreycra probably and Chios perhaps exceeded it, each with large numbers of slaves. Aegina (100 sq. km), before its conquest by Athens, was exceptionally well populated (perhaps 25,000–30,000 persons, nearly half of them slaves). The cities of the Hellespont and Bosphorus and those in the Euxine were very prosperous, but we have no figures. Ionia and especially Miletus had declined since their conquest by Persia; Erythrae and Ephesus were the richest of the Ionian cities in the fifth century, but neither half so rich as Byzantium.

5. In the West Syracuse (4,700 sq. km) rivalled Athens in population, and in the early fourth century easily out-distanced it. Acragas (4,300 sq. km) was not far behind, and Selinus, Gela, Himera, Messene were all populous. In all the Greek cities of Sicily (25,500 sq. km) there may have been 700,000–800,000 persons (including numerous slaves). In south and south-west Italy Tarentum became in the fourth century the most populous, not much behind contemporary Athens; Sybaris and Croton had surpassed it in the sixth and fifth centuries. The total Italiote population may have equalled that of the Greeks in Sicily.

K. J. Beloch, *Bevölkerung der griechisch-römischen Welt* (1886), and 'Griechische Aufgebote' (*Klio* 1905–6), A. W. Gomme, *Population of Athens* (1933) A. W. G., R. J. H.

POPULATION (ROMAN WORLD). The earliest information of value for the demographic history of the Roman world comes from surviving census figures. In its original form the Roman census (q.v.) was a survey made for military and fiscal purposes, which seems to have included all male adult citizens. The republican period has left thirty-seven census figures which, although derived from a number of different authors, are sufficiently self-consistent to appear authentic for the most part. The figures for the fifth century B.C. indicate an average of approximately 120,000 male adult citizens at Rome. In the fourth century the number rose above 160,000, almost reaching 300,000 in the mid third century. But the census was not always a thorough record of actual citizen numbers. Under normal practice returns could apparently be made only in Rome itself; and the heavy penalties for failure to register were not enforced consistently enough to ensure that all citizens living at a distance travelled to Rome to make their declarations. As the area under Roman rule grew, the geographical source of omission certainly increased, especially after the abolition of the citizen tribute in 167 B.C., which removed the main fiscal reason for making a thorough count of citizen numbers. Natural demographic trends within the citizen population were further obscured by losses due to war casualties and the removal of Roman citizens to Latin colonies, and by additions to the citizen number through the manumission of slaves and the incorporation of new citizens from other communities.

The effect of external circumstances on the census figures is especially apparent in the sudden jump from the total of 318,823 citizens recorded in 131/30 to the number of 394,736 in 125/4. This rise of 24 per cent in six years, which is too great to be explained by natural increase, has been plausibly attributed to the registration of holdings recently acquired under the Gracchan land-laws by citizens who had neglected to register in any previous census. The increase was sustained in the census of 115/14

B.C., whose total was 394,336. Although Roman citizenship was extended to the whole of Italy south of the Po in 89 B.C., the next census failed to show any commensurate increase in citizen numbers (463,000 in 86/5). The census of 70/69 produced a much higher total (900,000), but returns were apparently still made only in Rome. When in 28 B.C. a full and systematic survey was at last carried out, using the local machinery set up by Caesar, a total of a different order of size emerged: 4,063,000. Because it is so large, this figure has been interpreted by Beloch and others as including women and children; but the terminology of the *Res Gestae* and other considerations imply that the total was one of adult male citizens, as in previous censuses. The discrepancy was probably due mainly to the much greater efficiency with which the new census was carried out. The extension of Roman citizenship to Cisalpine Gaul in 49 B.C. also meant the inclusion of a large number of new citizens of recent date. The geographical implications of the figure are imprecise, because by 28 B.C. Roman colonization overseas was already extensive, and a certain number of the citizens recorded then must have lived outside Italy. Nevertheless, the population of Italy was probably very much higher now than it had been two centuries earlier, when Polybius' figures for fighting strength (225 B.C.) suggest a total free population for the peninsula of about 3 million.

The last three Roman census figures that survive continue to show increase in citizen numbers: 4,233,000 in 8 B.C.; 4,937,000 in A.D. 14; the total in A.D. 47 is given as 5,984,072 by Tacitus but as approximately 6,900,000 by three later writers. Some absolute rise in population under the early Principate is almost certainly indicated; but the concern about the citizen birth-rate shown by Augustus and some of his successors suggests that further enfranchisements of provincials and freedmen may have made an important contribution to the apparent buoyancy of these figures.

The very fragmentary evidence for regional population under the Empire includes statistics for some of the most important cities of the East. A Roman city normally possessed rural territory whose free inhabitants were combined in the local census figure with those who lived in the town proper. Thus the population of the urban nucleus must as a rule have been substantially less than the total figure reported in ancient sources. According to Diodorus, Alexandria (second or third city of the Empire in size) numbered over 300,000 free inhabitants at the end of the Republic. Antioch was not much smaller than this when Strabo wrote under Augustus. A free population of about 140,000 at Pergamum is suggested by Galen in the mid second century A.D. This number was at least equalled at Ephesus, to judge from an inscription of the late second century. A total free population of 117,000 was recorded at Syrian Apamea in the census of A.D. 6/7. Although very large cities were fewer in the West than in the East, Roman Carthage vied with Alexandria for the place of second city of the Empire, and thus can hardly have had less than 300,000/400,000 inhabitants at its height. Direct evidence for imperial Rome is lacking, but most modern estimates place its total population at roughly 1 million. None of the ancient figures so far cited includes slaves (q.v.), though they undoubtedly formed a substantial part of the labour force of the Empire as a whole. Galen suggests that there were as many slaves at Pergamum in his day as there were male citizens of the town.

Any estimate of the over-all population of the Empire is bound to be speculative, as there are no sound statistics for substantial areas which can be used as a basis for general inference. Nevertheless, Beloch's estimated total for the whole Empire of 54 million at the death of Augustus is a plausible indication of the order of size likely at that

date. The population of many areas was probably higher by the 1600s, when the first of a series of plagues struck the Empire. A general fall in population by the fourth century A.D. is indicated by contractions in the area of cultivated land and in the occupied area of cities.

R. P. D.-J.

POPULONIA (Etr. *Pupluna*), on a promontory overlooking the harbour of Porto Baratti, was the port of the metal-rich (copper, iron, lead, tin) zone of north-west Tuscany, and the smelting-centre for the iron of Elba; in due course it became one of the twelve cities of Etruria in its own right, and the only one to be established directly on the sea. Little is known of the Etruscan town, apart from its polygonal walls; attention has been concentrated rather on the characteristic series of late orientalizing domed chamber tombs, constructed of stone blocks and covered with tumuli surrounded by stone kerbs.

D. W. R. R.

POPULUS, a citizen-body: thus *populus Romanus* meant the whole Roman community, independent of classes and social distinctions (excluding minors, women, and slaves). Probably the original meaning was the citizens as a military body, as is shown by the title *magister populi* (see **DICTATOR**). During the struggle of the Orders *populus* indicated the community as distinguished from the *plebs*, and in legal parlance the word continued to be used to denote an electoral or legislative body in which patricians were present. At the time of the crisis of the nobility, *populus* designated the classes supporting the *populares* in their opposition to the Senate. In phrases as *senatus populusque Romanus* and *amicus populi Romani* it represented the people as the sovereign body. It exercised its powers, electoral, legislative, and judicial, through *comitia*, *curiae*, *tribus*, and *centuriae* (qq.v.).

Mommsen, *Rom. Forsch.* i. 168 ff., *Röm. Staatsr.* iii. 3 ff. P. T.

PORCIA (*PW* 28) was daughter of Cato (5) and wife first of Bibulus (1) and from 45 B.C. of Brutus (5). She shared the political ideals of her father and her husbands, insisted on being let into the secret of the plot to murder Caesar, and took part with her mother-in-law Servilia in the conference of Republicans at Antium on 8 June 44. When Brutus sailed for the East she returned to Rome, where she became ill and in the early summer of 43 took her life, perhaps by inhaling fumes from a brazier (Plut. *Brut.* 53, Cic. *ad Brut.* 1. 9. 2, 17. 7). The less good tradition makes her do this on the news of Brutus' death in 42.

T. J. C.

PORCIUS (1, *PW* 48) **LICINUS** (fl. probably at the end of the 2nd c. B.C.) wrote a literary history of Rome in trochaic septenarii: we possess two lines which date the coming of the Muse to Latium in the Second Punic War and eleven on Terence and his relations with the Scipionic circle. An elegiac epigram clearly based on a Hellenistic original which Gellius quotes from him represents the beginnings of the influence of Alexandrian poetry in Rome.

Fragments in Morel, *FPL*.

C. J. F.

PORCIUS (2, *PW* 47) **LATRO**, MARCUS, Augustan rhetor; born in Spain, contemporary and intimate friend

of the Elder Seneca. He was the most distinguished representative of the new rhetoric at Rome, more at home in the schools than in the courts, but critical of its Asianic excesses, and combined a vigorous and natural style with a vast capacity for work (Sen. *Controv.* 1 pr. 13-24); among his many admirers was Ovid, who borrowed ideas from him in his verse (*Controv.* 2. 2. 8). He died A.D. 4.

C. J. F.

PORPHYRION, POMPONIUS (early 3rd c. A.D.), scholar, whose commentary on Horace is still extant (ed. A. Holder, 1894), though not in its original form. Porphyrius's exposition, intended for school pupils, includes subject-matter, grammar, and style. He incorporated the work of earlier commentators, including Acron (q.v.).

Schanz-Hosius, § 602.

J. F. M.

PORPHYRY (Πορφύριος) (A.D. 232/3-c. 305), scholar, philosopher, and student of religions. He was born at Tyre (or Batanea in Palestine); originally bore the Syrian name *Malchus*; studied under Longinus at Athens; became devoted personal disciple of Plotinus at Rome, 262-3; edited Plotinus' *Enneads*, after A.D. 300. His extremely numerous and varied writings (seventy-seven titles are listed by Bidez) fall into the following classes. (1) Early philosophico-religious works, written before his conversion to Plotinism: *Περὶ τῆς ἐκ λογίων φιλοσοφίας* (extensive fragments preserved, containing curious information about theurgic practices); *Περὶ ἀγαλμάτων* (fragments extant); perhaps *Φιλόσοφος ιστορία*, a history of philosophy down to Plato, from which the extant *Πυθαγόρου βίος* is an excerpt. (2) Later works on philosophy and religion, written from the Plotinian standpoint. The following are completely or partially extant: *Ἀπορροαὶ πρὸς τὰ νοητά*, a disjointed collection of edifying thoughts, borrowed or adapted from Plotinus; *Περὶ ἀποχῆς ἐμψύχων*, a treatise on vegetarianism in four books, drawing on Theophrastus, etc.; *Πρὸς Ἀνεβώ*, a letter on theurgy, strikingly sceptical in tone; *Πρὸς Μαρκέλλαν*, an *epistola moralis* addressed to his wife. An essay *De regressu animae* is known from quotations in Augustine; the *Σύμμεκτα ζητήματα* mainly from Nemesius. The important treatise *Κατὰ Χριστιανῶν*, in fifteen books, was condemned to be burnt in 448, but interesting fragments survive, from which we learn that Porphyry used the modern weapon of historical criticism, e.g. to establish the lateness of the Book of Daniel. Elsewhere he similarly proved the 'Book of Zoroaster' to be a forgery. (3) *Περὶ Πλωτίνου βίου καὶ τῆς τάξεως τῶν βιβλίων αὐτοῦ*: this has the double character of a biography of Plotinus and a preface to Plotinus' edition of the *Enneads*. (4) Numerous philosophical commentaries on Plato, Aristotle, Theophrastus, Plotinus, of which only a school-commentary on Aristotle's *Categories* survives complete. Here belongs also the *Εἰσαγωγή εἰς τὰς Ἀριστ. Κατηγορίας* or *Περὶ τῶν πέντε φωνῶν*, which became a standard medieval textbook of logic. (5) Philological works include *Ὅμηρικά ζητήματα*, a landmark in the history of Homeric scholarship which Schrader has reconstructed; and the extant *Περὶ τοῦ ἐν Ὀδυσσεύϊ τῶν νυμφῶν ἀντροῦ*, a specimen of allegorizing interpretation. Porphyry wrote also on grammar, rhetoric, and the history of scholarship. The *Bios Ὁμήρου* falsely included in Plutarch's *Moralia* is sometimes attributed to Porphyry. (6) Extant works on technical subjects are a commentary (incomplete) on Ptolemy's *Harmonica*; an introduction to Ptolemy's *Tetrabiblos*; and a treatise on embryology, *Πρὸς Γαῖον περὶ τοῦ πῶς ἐμψυχοῦνται τὰ ἔμβρυα* (formerly attributed to Galen but probably by Porphyry).

Though unoriginal and often uncritical, Porphyry is a remarkable polymath, and has the good habit of quoting his authorities by name; he has thus preserved many

fragments of older learning. As a thinker he is unimportant: 'in the whole extant work of Porphyry there is not a thought or an image which one can confidently affirm to be his own' (Bidez).

LIFF AND WORKS. J. Bidez, *Vie de Porphyre* (1913; includes collection of ancient sources and full bibliography).

A complete edition of the fragments by H. Dorrie is in preparation. E. R. D.

PORSEN(N)A, probably an Etruscan title misinterpreted by Roman annalistic tradition as the name of a chieftain. The story went that, summoned by the exiled Tarquinius (q.v. 2) Superbus, Lars Porsenna of Clusium vainly laid siege to Rome. Another (and obviously more reliable) version, however, whether deriving from the Etruscan legend of Mastarna (q.v.) or independently of it, asserts that Porsenna conquered the Capitol and ruled over Rome, imposing harsh terms on her citizens. Porsenna and Mastarna are therefore to be considered most probably as the Roman and Etruscan name respectively of the same Etruscan king (either a friend or, more likely, an enemy of his fellow Etruscan Tarquinius), who attained power at Rome towards the end of the sixth century. Later speculation fitted him into the list of the traditional seven kings of Rome by equating Mastarna with Servius Tullius or by connecting the story of Porsenna with the fall and the attempted restoration of the Tarquins. It is a fact, however, that Porsenna belongs to (and represents) the epoch of mutually friendly relations between (Etruscan) Rome and Cumae as well as of the rivalry between Rome and the Latin League, whether the latter arose in self-defence against Porsenna, then Etruscan lord of Rome, or at a later stage, namely after the overthrow (or as the cause of the overthrow) of the monarchy.

PORTICO. In Roman Italy and the western provinces the functions of the Greek Stoa (q.v. 2) were largely taken over by the Basilica (q.v.), but from at least 193 B.C. (the Porticus Aemilia) colonnaded porticoes (*porticus*) of similar architectural form were a commonplace of Roman public architecture, passing thence also into domestic use. Some were long streetside galleries (e.g. the Porticus Vipsania, and commonly at Ostia). Many more were enclosed rectangular open areas, with or without buildings in the middle (Porticus Metelli, Octaviae, Philippi, Pompei, at Rome; the Piazzale of the Corporations at Ostia; the Forum at Pompeii; the Palaestra at Herculaneum). The colonnaded streets (*viae porticatae*) of the eastern provinces represent a distinctive and widespread development of the idea. J. H. W.-P.

PORTORIA were in origin duties on goods entering or leaving harbours, the upkeep of which was a charge on public funds. Such levies were made in Italian harbours under the Republic, though they were temporarily abolished between 60 B.C. and Caesar's dictatorship, and in provincial harbours such as Syracuse (Cic. *Verr.* 2. 185; cf. *ILS* 38. 2. 32 ff.). In the Principate a customs-duty was levied in the provinces on the major traffic-

routes and for this purpose several provinces might form a single unit (e.g. the Gallic and the Danubian provinces) in the sense that duty was raised at a uniform rate (often, as in Gaul, 2½ per cent) within the area. There is some evidence that a higher charge was made at the frontiers of the Empire—25 per cent at Iseue Come on the Red Sea, and, probably, at Palmyra (*AE* 1947, 179 f.). Otherwise the *portoria* were levied solely for revenue purposes and were not protective. Their collection was let out to *publicani* (q.v.) during the Republic and the first century of the Principate (Tac. *Ann.* 13. 50-1). In the early second century these were gradually replaced by individual *conductores* (q.v.) and in the late second and early third century these in their turn by imperial *procuratores* (q.v.).

S. J. de Laet, *Portorium* (1949), *Ant. Class.* 1953, 98 ff.; R. Etienne, *Rev. Ét. Anc.* 1951, 62 ff. G. H. S.; F. G. B. M.

PORTRAITURE (GREEK). The Greeks were the first to attempt realistic representations of individuals instead of the 'types' that had been current for thousands of years. At first—during the whole of the archaic period—they too made generalized figures of the people they commemorated on tombs and in sanctuaries. But in the first half of the fifth century B.C., when naturalism in the rendering of the human form had been attained, one can note the beginning of an interest in individuality. The famous head of Themistocles found at Ostia in 1938 is a notable example. This interest in realism, observable also in some figures in the vase-paintings of the time, was apparently diverted during the second half of the fifth century B.C. into the more idealistic trend introduced by Phidias and Polyclitus (qq.v.). The portrait of Pericles, which survives in several Roman copies (see CRESILAS), shows the mingling of a typical statesman and of the individual Pericles. This generalization, combined with progressive naturalism, continued through the fourth century, until during the Hellenistic period admirably realistic portraits were achieved. The various stages are exemplified by the portraits first of Thucydides, Plato, Aristotle, and Alexander (4th c.), then by those of Demosthenes, Epicurus, Philaetorus, Euthydemus I (3rd c.), and finally by the portraits of the blind Homer and of Pseudo-Seneca, as well as many a small portrait of a Hellenistic ruler on the coinage of the second and first centuries B.C. They form the immediate precursors of the 'veristic' portraits of republican Rome. It is also noteworthy that throughout the Greek period not only were portraits of contemporaries produced, but likenesses were invented of the great personalities of the epochs before real portraiture was practised. A notable example is the portrait of Homer, of whom we have invented likenesses made during the fifth century, the fourth, and the Hellenistic period, all different from one another.

Practically all these Greek portraits survive only in Roman copies, and we owe to the Roman interest in the great Greek personalities the survival of Greek portraiture. In most cases these Roman copies, however, consist only of herms and busts instead of the statues produced in Greek times.

In addition to sculptured portraits the Greeks also had painted ones. One hears of Apelles as a famous portraitist at the time of Alexander the Great. But of these paintings no trace survives, except perhaps for some adaptations in later Roman mosaics.

G. M. A. Richter, *The Portraiture of the Greeks*, 3 vols. (1965). G. M. A. R.

PORTRAITURE (ROMAN). The true Roman portrait, that is, the realistic, unidealized likeness of a specific individual as he or she actually appeared, was a legacy during the second century B.C. from late Hellenistic art. But in Rome and Italy immigrant Greek portraitists of

the time found a particularly favourable milieu for their craft in the ancient ritual practice of preserving in the home and parading at family funerals *imagines* (q.v.) or masks of ancestors and the newly dead. These *imagines*, originally not death-masks cast from the faces of the deceased, but very generalized representations, now became under Hellenistic stimulus highly individualized and realistic (Polyb. 6. 53). And it was the marriage of these two traditions, that of the late Hellenistic portrait style with that of Roman religious practice, which produced, from the beginning of the first century B.C. onwards, the great array of heads, busts, and statues of Roman subjects, in marble, stone, or bronze, that have come down to us. The outstanding feature of most of these late republican portraits is their 'verism', that is, the faithful, relentless chronicling of all facial details such as lines, wrinkles, creases, and folds of flesh, and even warts and moles. Old age is a favourite subject.

Under the Empire the labelled and often precisely dated coin portraits of emperors, empresses, etc., provide a firm basis for the dating of private portraits, since court fashions in hair- and beard-styles were swiftly adopted throughout the Roman world. Other criteria are changes in general sculptural style and in the bust forms. The bust, which under the late Republic had included little more than head and neck, incorporated the shoulders by Flavian times, and in the early third century had grown into a half-length figure, after which it shrank again. Stylistically, the portraits of Augustus show a strongly idealizing and dignified character, which turns frigid with 'Tiberius' likenesses, while greater naturalism and an emotional tendency mark the portraits of Claudius and Nero respectively. Republican realism persisted meanwhile in some private portraits and became the official style under the Flavians. Trajanic portraits continue this tradition. Hadrianic iconography combines classical idealism with a more 'baroque' manner: the hair is curled, a beard is worn, and the irises and pupils of the eyes are plastically marked, as they are in all portraits from now onwards. The Antonine Emperors show a distinctive pictorial style, the abundant hair and rich beard being drilled and the marble surfaces polished or left rough to secure effects of light and shade. Under the military Emperors of the third century this picturesque style gave way to simpler treatment. The hair and beard are close-cut and rendered by pitted surfaces; and this manner, after a brief reversion under Gallienus to a more florid type of portraiture, leads to the schematized, non-naturalistic, mainly beardless portraits of the fourth century.

PORTUNUS, originally the Roman deity protecting doors (*portus*, e.g. XII tables, 2, 3). Later when the meaning of the noun changed to 'harbour', he was thought of as the protector of havens, and was equated with Palaemon, for whom see ATHAMAS, LEUCOTHEA (Ov. *Fast.* 6. 547). His festival, the Portunalia, fell on 17 Aug. Either of the two surviving temples (so called Fortuna Virilis and Vesta) in the Forum Boarium in Rome may have been dedicated to Portunus (Nash, *Pict. Dict.* Rome i. 411).

L. A. Holland, *Hommages à A. Grenier* (1962), 817 ff. H. W. P.

PORTUS is the name given to the town which grew up round Rome's harbour. Originally Rome had used the Tiber mouth at Ostia (q.v.), but by the end of the Republic the silt carried down by the Tiber was endangering

shipping. Caesar's project of building a new harbour was carried out by Claudius some 2 miles north of Ostia. Part of this harbour was dug out from the land and two moles were built out to sea, enclosing c. 160 acres. At the end of the left mole a giant lighthouse was built on a concrete-laden merchantman sunk for the purpose. Owing to the wide expanse of shallow water this harbour did not give complete security against sudden storms; but when Trajan had added a new land-locked inner basin of hexagonal shape (each side measuring nearly 360 metres), even the largest Egyptian corn ships could anchor in safety. The harbours were linked by canal with the Tiber and so with Rome, but while warehouses were built for the storage of goods the bulk of the harbour workers continued to live at Ostia which in the following generation reached the peak of her prosperity. When in the third century Rome's trade sharply declined it was logical that emphasis should shift and that the harbour area should develop its own living-quarters, temples, guilds, and other amenities. By A.D. 300 Portus had her own Christian bishop as well as temples for pagan cults, Roman and foreign. A small town had grown up to the south and east of Trajan's harbour and the main cemetery flanking the road to Ostia covered a considerable area. Constantine recognized realities and made Portus, hitherto controlled from Ostia, an independent town.

During the Late Empire Portus remained vital to Rome, whose corn-supply depended on the effective maintenance and security of the harbours. Strong walls were built, probably early in the fourth century, but the town was captured by Alaric in 410 and sacked by the Vandals in 455. Portus, however, unlike Ostia, recovered and was still busy with shipping in the sixth century, but by the eighth century sand had choked the Claudian harbour. A survey of the diocese of Portus in 1019 mentions six churches, probably dating from the fourth and fifth centuries. Their congregations must have been very small.

G. Lugin and G. Filibeck, *Il Porto di Roma imperiale e l'Agro Portuense*, R. Meiggs, *Roman Ostia* (1960), 149 ff., O. Testaguzza, *Archaeology* 1964, 173 ff. R. M.

PORTUS ITIUS, a harbour of the Morini, used by Caesar (*B.Gall.* 5. 2 and 5) in the second British expedition (54 B.C.). The words seem to mean 'Channel Harbour', so that Boulogne, the port normally used, is the obvious identification, though there are arguments for Wissant.

T. Rice Holmes, *Ancient Britain*, 552 ff.; *CR* 1909, 77 ff.; J. Hurgon, *Rev. Ét. Anc.* 1948, 101 ff. C. E. S.

PORUS (probably Parvataka or Parvatesha of the Indian sources), a contemporary of Alexander, ruled the country between the Jhelum and the Chenab. A brave and powerful king of imposing personality, 'over five cubits in height', Porus fought a heroic battle with Alexander, who was so much impressed by him that he made him an ally and not only reinstated his kingdom but added some more territories to his care. When Alexander left the Panjab, Porus probably joined Chandragupta (Sandracottus, q.v.) in overthrowing the Macedonian yoke.

Tarn, *Alexander*; R. K. Mookerji, *Chandragupta Maurya and his Times* (1943). A. K. N.

POSEIDON (Ποσειδών, Doric Ποτειδών), Greek god of earthquakes and of water, secondarily of the sea, since he appears to be native Greek, not pre-Hellenic, and it is fairly certain that their former habitat was inland, cf. the paucity of Greek names for fishes (examples of non-Greek fish-names in J. Huber, *De lingua antiquissimorum Graeciae incolarum* (1921), 8 ff.). The name is of doubtful etymology, but almost certainly Greek. Some associate the first two syllables with ποταμός, πόσις (drink), etc.,

but mostly it is interpreted as 'Husband of earth' or 'Lord of earth'. His most significant titles are *ἐνοσίχθων* or *ἐννοσίχθων*, 'earthshaker', and *γαμήλος*, 'holder or possessor of earth', meaning probably husband of the earth-goddess. The latter is an appropriate name enough for a deity who, whatever his exact origins, certainly is closely connected with water, which fertilizes the earth; it need not be rain-water, though that is perhaps the most commonly spoken of in such a context (cf., e.g., Aesch. fr. 44 and Eur. fr. 898, Nauck²). In general, the theory (Cook, *Zeus* ii. 582 ff.) that he is 'a specialized form of Zeus', or a sky-god of any kind, has the balance of evidence against it. Being a great god, he has functions not unlike those of his celestial brother, but the Greeks themselves consistently differentiate them. That he causes earthquakes is an idea which possibly reflects some early and crude attempt to explain that phenomenon, cf. the later quasi-scientific theory (Seneca, *QNat.* 6. 6 ff.) that it was due to the action of water in some way.

Mythologically, Poseidon is one of the three sons of Kronos; in Homer he is younger than Zeus (*Iliad* 15. 204); in Hesiod and most later writers (*Theog.* 453 ff.), Zeus is the youngest son. He has but little mythology of his own; he was one of those swallowed by Kronos and afterwards spewed up (ibid. 459), although obscure legends say that Kronos was tricked into swallowing a foal instead (a young horse instead of the young Lord of Horses, see below; Paus. 8. 8. 2, from Arcadia), or that he threw Poseidon into the sea (Hyg. *Fab.* 139. 1). When the three brothers, after the defeat of their father, drew lots for the universe the sea fell to his share (*Il.* loc. cit. 100). It is to be noticed that at least one probably more ancient god, Nereus (q.v.), is thus displaced from the position which it would seem that he once held. His consort is the unimportant Amphitrite, and some legends of little significance are told of his wooing (see Rose, *Handb. Gk. Myth.* 63 f.). Of his various amours, the most interesting is that with Medusa the Gorgon, who became by him mother of Pegasus (q.v.). With Apollo (q.v.) he built the walls of Troy for Laomedon, was cheated of his pay, and in revenge sent a sea-monster to ravage the land (*Il.* 21. 441 ff., where Poseidon alone builds the walls, Apollo herding Laomedon's cattle; cf. *AEACUS*, *HERACLES*). For his quarrel with Odysseus, see *ODYSSEUS*. He is commonly the father of strong but rough and brutal men, or monsters such as the giant Antaeus, his son by Earth (Apollod. 2. 115). There are also several tales of his begetting horses, besides Pegasus; for one see *ARCADIAN CULTS*, *DEMETER*.

In cult he is, of course, prominent as sea-god and worshipped on all occasions connected with the sea and navigation. In addition, as already suggested, he is worshipped as a god of fresh water (Krenouchos, Nymphagetus; see Farnell, 5), and sporadically as god of earthquakes (Strabo 1. 3. 16, 57, the Rhodians found a temple to him on the volcanic island of Thera with the title *Asphalios*, a by-form of which—*Asphalion*—is rightly interpreted by Macrobius, *Sat.* 1. 17. 22, as *terram stabilens*). It is quite natural that a god of water should occasionally be a god of vegetation, Phytalmos, Plut. *Quaest. conv.* 675 f., which says the cult is practically universal in Greece. But it is less obvious why he should be Hippios, Lord of Horses. This cannot arise from a metaphor like Engl. 'white horses' for waves, since no such metaphor is known in Greek, and it is noteworthy that Cornutus (*Theolog. Graec.* 22, 44, 1 Lang) suggests only that it is because we use ships 'like horses', i.e. as means of transport. This is of course absurd, for cult-titles like this do not grow out of poetical figures. The real reason is most probably that he was brought in by the first wave of Indo-European invaders who also brought the first horses. The cult of Poseidon Hippios is

especially Thessalian (Farnell, 23). In general, Poseidon is closely connected with the Minyans in mythical times, the Ionians in historical, though his cult spreads far wider than these parts of the Greek race.

Though popular and held in much reverence (partly because of his worship, as an ancestral god or otherwise, by many noble families; cf. the comparatively respectful handling of him by Aristophanes, whose conservatism is well known), he did not develop with the evolution of higher theological and ethical ideas, thus contrasting with Zeus and even with Hades. One reason for this may be the fact that these ideas were accompanied by a tendency towards monotheism, and hence Zeus hardly left room for another great god, even Hades being on occasion merely identified with him.

Poseidon is frequently shown in archaic and classical art, alone or with other deities. He is bearded, in archaic art robed, later often naked. He carries a trident and often a fish or dolphin. Without attributes he is hard to distinguish from Zeus (the early classical bronze god from the wreck off Cape Artemisium may be either). In the Gigantomachy he shoulders the island of Nisyros to drop it on Polybotes. His strife with Athena for the land of Attica was the subject of the West pediment of the Parthenon.

Farnell, *Cults* iv. 1 ff., and the relevant arts in the larger dictionaries; F. Schuchermeyer, *Poseidon und die Entstehung des griechischen Götterglaubens* (1950), Nilsson, *GGR* i². 444 ff.

H. J. R.; C. M. R.

POSIDIPPUS (*Ποσειδιππος*) (1), New Comedy poet, born in Macedonia; he won four victories from 289/8 onwards. Fr. 12, a version of the famous story of Phryne's acquittal; fr. 26, a cook instructs his pupils; fr. 28, a Thessalian claims that his dialect is not inferior to Attic.

Posidippus' importance is clear: he is alleged to have introduced slave *μάγειροι* on to the stage (Ath. 14. 658 f); his *Ἀποκλειομένη* (which ended with the formula now known to be typical in New Comedy: see E. Vogt, *Rh. Mus.* 1959, 192) was re-acted c. 180 B.C.; his work was imitated on the Roman stage (Gell. 2. 23. 1); and his statue (with a reworked head: see H. von Heintze, *Röm. Mitt.* 1961, 80 ff.) is extant.

FCG i. 482 ff., iv 513 ff., CAF iii. 335 ff.; PHed. 184.

W. G. A.

POSIDIPPUS (2) (fl. 270 B.C.) was an epigrammatic poet who lived in Samos, working with Asclepiades and Hedylus (q.v.), and later in Alexandria. About twenty of his poems are in the Greek Anthology, some others in Athenaeus. His chief theme is sex, treated with brisk ironic realism. A pathetic elegy, apparently written in his declining years, has been preserved on wooden tablets.

Gow and Page, 3054 ff.; Page, *GLP* 444-9 and 470-5; A. Rostagni, *Poeti alexandrini* (1916), ch. 4, P. Schott, *Pis epigrammata* (1905); W. Schubart, *Symbolae* ... Danielsson (1932), C. A. Trypanis, *GR* 1952; W. and M. Wallace, *TAPA* 1910, 11. Lloyd-Jones, *JHS* 1961, 75 ff.; T. B. L. Webster, *Hellenistic Poetry and Art* (1964), ch. 2. G. II.

POSIDONIUS (*Ποσειδώνιος*) (1) of Olbiopolis, sophist and historian, author of a work on the Dniester region, *Ἰσχυραὶ ἱστορίαι* and *Λιβυκά*, has been identified, though this is uncertain, with the Posidonius who, according to Plutarch (*Aem.* 19), was contemporary with Perseus of Macedonia (179-168 B.C.) and described his reign, including the battle of Pydna.

FGH ii. B, 893; BD, 596.

A. H. McD.

POSIDONIUS (2) (c. 135 to c. 51-50 B.C.), born at Apamea on the Orontes, after studying philosophy at Athens under Panaetius devoted several years of his life to scientific research in the western Mediterranean provinces and in North Africa. He then settled down at Rhodes, which became his adoptive country. Towards the

end of 87 Posidonius was sent to Rome on behalf of the Rhodians to appease Marius, and he conceived for him an intense dislike, to which he later gave vent in his historical works. In 78 Cicero attended the school of Posidonius, to whom he often pays tribute in his writings, although the philosopher declined to patronize and edit Cicero's Greek account of the conspiracy of Catiline. Another famous visitor of Posidonius was Pompey, who met him twice, after defeating the pirates and on his return from the East. Posidonius was such an enthusiastic supporter of Pompey that he devoted a separate treatise to the narrative of Pompey's eastern campaigns; it was from this that Strabo drew his strongly rationalistic explanation of the work of Moses as a Jewish lawgiver. The wars of Pompey seem to have been dealt with by Posidonius as an appendix to his *Histories*, the fifty-two books of which started from the point where Polybius left off, and included the history of the Eastern and Western peoples with whom Rome had come into contact, from about 146 B.C. to the dictatorship of Sulla. The meagreness of the fragments, which we owe chiefly to the learned curiosity of Athenaeus, makes a reconstruction impossible. But the fact that his work exercised a widespread and lasting influence is sufficient to give us an idea of Posidonius' literary skill as well as of his accuracy and matter-of-factness. Sallust, Caesar, Tacitus, and Plutarch were respectively dependent on Posidonius for the conception of history, for the ethnology of the Gauls and of the Germans (whom Posidonius probably did not distinguish from the Celts), and for the history of Marius and Marcellus; while the so-called universal historians (e.g. Timagenes, Trogus, Diodorus) did not hesitate to borrow even his doctrine of the unity of history, symbolized by the 'cosmopolis', or city of God, in which, ruled over as it is by His providence, all human beings have a share (see HISTORIOGRAPHY, GREEK, § 7). In his *Histories*, which were biased in favour of the *nobilitas*, and consequently strongly opposed to the Gracchi and the equestrian party, let alone the 'independent' Greeks, and their supporter Mithridates, Posidonius aimed at showing that the Roman Empire, embracing as it did all the peoples of the world, embodied the commonwealth of mankind and reflected the commonwealth of God, to which deserving statesmen and philosophers were to be admitted after the fulfilment of their earthly task. This theory Cicero expounds in his *Somnium Scipionis*, which is indisputably based upon the ideas of Posidonius or cognate thinkers. The *Histories* of Posidonius must therefore be considered as the complement and the practical application of his philosophical system. He thus vindicated Roman imperialism, which less civilized peoples were forced to accept, or rather to welcome, for the sake of their own improvement, while at the same time he gave a practical illustration of the doctrine of continual communion and mutual sympathy between the world of God and the world of man. According to Posidonius the end and destiny of the human race are exactly reflected in the vicissitudes of history. Political virtue, therefore, consists in turning humanity back to its state of prehistoric innocence, in which philosophers were the lawgivers and instructors of their fellow men and acted as intermediaries between the world of matter, in which men are compelled to live, and the world of God, from which alone law-abiding morality can spring. Thus politics and ethics are one, and any form of moral or political activity becomes a religious duty, by fulfilling which man frees himself and acquires knowledge of the gifts of the spirit, which enable him to enjoy a superior form of existence after death. Since the God of Posidonius is the creator neither of matter nor of soul, the latter cannot be considered immortal in itself. But since it is composed of the same substance as the heavenly bodies, it escapes from the human prison and returns to the sub-

lime abode whence it originally came. Posidonius, moreover, introduced heroes and daemons as intermediary beings between man and God, in whose eternity they have a share. Their power and influence over earthly creatures is manifested in visions, divination, and oracles. The harmony which Posidonius observed in the world of man he discovered no less in nature. To prove that the same laws and processes were at work in both worlds, he devoted himself to scientific research. His study of primitive cultures led him to establish the principle that the present condition of semi-civilized peoples reflects the original stage of culture among those now civilized. His travels and observations enabled him to prove the connexion between tides and the phases of the moon, and to give an accurate description of the life and currents of the ocean. Nor was he merely a theorist; some important achievements witness his practical skill. For instance, he calculated the circumference of the earth, constructed a sphere, and drew a map. He showed also a lively interest in poetry, rhetoric, lexicography, geometry, etc. See also METEOROLOGY.

The contemporaries of Posidonius were more impressed by his personality and the width of his interests than by his system. His influence has often been over-emphasized, but it ought by no means to be underestimated. Although it is uselessly dangerous to attempt to rebuild his system by a mere mechanical spoliation of Lucretius, Cicero, Manilius, Seneca, and Pliny the Elder, it cannot be seriously doubted that they as well as Virgil and the historians were largely dependent upon Posidonius. In the history of ancient thought he can be compared to no one but Aristotle. As Aristotle forms the epilogue of the culture of classical Greece, so Posidonius collected the heritage of the Graeco-Roman civilization, or shaped it afresh, bequeathing to the Renaissance the legacy of the Hellenistic age.

TEXTS. Apart from I. Bake's antiquated edition, no collection of the fragments of Posidonius is available, except for the passages from his historical works, which have been edited, with an exhaustive commentary, by F. Jacoby, *FGH* II, no. 87.

Rudberg, *Forsch. z. P.* (1918); M. Laffanque, *La Philosophie de Posidonius d'Apamée* (1964); M. Pohlenz, *Kl. Schr.* (1965), I, 140 ff.; H. Strasburger, *JRS* 1965, 40 ff. A detailed bibliography is given in K. Praechter's appendix to Ueberweg's *Grundriss* 11², 150 ff. and in *PW* s.v. (1953), 559 ff.

P. 1.

POSSESSIO. Classical Roman law made a sharp distinction between ownership (see DOMINIUM) and possession. Ownership is the right to a thing, irrespective of whether the owner has any control or enjoyment of it; possession is, essentially, the control of a thing irrespective of whether the possessor has any right to it. A thief therefore has possession. Possession is a 'fact' in the sense that, in principle (though the principle was increasingly stretched), it lasts only so long as the control continues, whereas ownership, which is a right and not a 'fact', may come into existence or continue without any physical control. Possession is a fact, however, to which the *praetor* affords protection by interdicts (see LAW AND PROCEDURE, ROMAN, II, 11), though only within narrow limits. The possessor can (broadly) recover or retain his possession against any person interfering with it, provided that he has not himself obtained possession from that person by force, secretly, or by grant at will (*vi, clam, precario*). If therefore a thing is taken from a thief, the thief can recover possession, provided that the taker is not the person from whom the thief himself took it (irrespective of whether that person is the owner or not). If the thing passes from the dispossessor into the hands of a third party, the thief cannot recover possession. For possession is protected only against the immediate dispossessor: against any

subsequent holder the claim must be by *vindicatio* (q.v.). (In classical law this is subject to a limited exception in the case of movables.) While possession is essentially the control of a thing, it must (usually) be an exclusive control in the manner of an owner. A tenant (*conductor, colonus*), a borrower, a depositee (see CONTRACT, ROMAN LAW OF), did not have possession; nor did a usufructuary (see SERVITUDES).

The possession considered above (interdict-possession) is usually termed in legal writings simply '*possessio*'. Control not amounting to *possessio* (as by a tenant) is sometimes called '*possessio naturalis*' (more commonly '*possessio*' is avoided by the use of '*tenere*', '*morari in fundo*', etc.). '*Possessio civilis*' (by contrast with interdict-possession which is a product of the *ius honorarium*: see EDICTUM, IUS CIVILE) is that possession which has the other qualities necessary for *usucapio* (see DOMINIUM), though occasionally *possessio civilis* may be in one person and interdict-possession in another (e.g. pledgor and pledgee: see SECURITY).

The interdictal protection of possession probably originated in the case of holding of land, and perhaps of *ager publicus* (q.v.) (cf. Festus, s.v. '*possessiones*') or of the land of a great landowner held by grant at will (*precarium*) by a *clens* (q.v.). Here ownership was impossible or inappropriate, and yet it would be inconvenient to deny to the holder (as to an ordinary tenant) any direct protection against an interloper. (See also EMPHYTEUSIS.)

In the post-classical law the distinction between ownership and possession was blurred, but it was restored in the law of Justinian.

P. Bonfante, *Corso di diritto romano* ii. 2 (1928), iii (1931); M. Kaser, *Eigentum u. Besitz im alt. röm. Recht* (1956); M. Lauria, *Possessions* (1953); E. Levy, *West Roman Vulgar Law. The Law of Property* (1951), and see under LAW AND PROCEDURE, ROMAN, I. B. N.

POSSESSION. That a human being might become possessed by a supernatural power was a fairly common ancient belief. The effect might be a prophetic frenzy, as in the case of the Pythia (cf. APOLLO); such a person was *ἰσθες*. It might also be some terrifying disease, as epilepsy (Hippoc. *De morbo sacro*, especially 592 f. Kühn). Or it might be insanity, the victim was then commonly said *δαίμονι*, as Aesch. *Sept. 1001*, or *κακοδαίμονι*, as Dinarchus, i. 91. Latin called him *larvatus* or *cerritus*, possessed respectively by the Larvae or Ceres, e.g. Plaut *Men.* 890. Later, under oriental influence (cf., e.g., the numerous references to demoniacs in the N.T.), the belief grew stronger and commoner, and mentions of magical cures and the activity of exorcists, pagan and Christian, are extremely frequent.

Julius Tamborino, 'De antiquorum daemonismo' (1909; *RGV* vii. 1); T. K. Oestereich, *Possession* (1910), 150 ff. H. J. R.

POSTAL SERVICE. Classical Greece knew no organized postal system. Cities maintained their own ships and messengers (*ἡμεροδρομοί*) for official mail. These men (the best known is Pheidippides) were highly trained and probably formed associations. In the Persian Empire (probably following Assyrian precedents) the State maintained a relay service, with couriers and horses stationed at intervals along the royal roads. The system (called by Greeks *ἀγγανήιον*) seems also to have been used for the transport of the King and officials, and costs had to be borne, and services provided, by the population (see Rostowzew [= Rostovtzeff], *Klio* 1906, 249). Reorganized by Antigonos I, it continued under the Seleucids and (in the East) under the Romans. The Ptolemies retained the transport system for officials and improved that for mail (Preisigke, *Klio* 1907, 241). There was an express post, arranged in a chain of stations and transporting mail by means of horses provided (as a liturgy, commutable for a tax) by colonists liable for mounted service. For

slower mail there were stations employing large numbers of runners, under a postmaster, and a camel service for parcels. All these—maintained by the population—were strictly for public use. Private mail went by private messengers; but officials of the public system tended (despite official fulminations) to entrust their private items to it, and they were not above being 'persuaded' to accept other people's.

2. Under the Roman Republic *tabellarii* (q.v.) were employed, and those of the State and of the *publicam* (q.v.) might carry mail for important men. Augustus (see Suet. *Aug.* 49. 3) found a system for the transport of both persons and mail (the two were never clearly separated) in existence in the eastern provinces, particularly in Egypt. In Italy and the West he first organized a relay system of messengers (*iuvenes* of military age), then apparently changed the whole system into one of relay stations providing horses and carriages, no doubt modelled on what he found in the East: in this way a single messenger could cover the whole distance (adding supplementary news by word of mouth). Though the main purpose and organization of the *cursus publicus* was military, it could now also be used for official transport. The population had to bear the cost and provide services. This *vehiculatio* soon proved a major burden (*ILS* 214: Claudius), from which Nerva freed Italy. Trajan (at the latest) created a post *vehiculis* (later *praefectus vehiculorum*) and Hadrian (S.H.A. i. 7. 5) relieved local magistrates of personal responsibility for requisitions, of which—under central control—a *manceps* (q.v.) took charge. Under the Severi, with the development of the *annona* (q.v.—a tax in kind), the system was reorganized: the postal service was extended to transport its proceeds, but (at some time, and at least in some provinces) the *vehiculatio* was discontinued. Henceforth the service quickly expanded and officials multiplied. It was used for troop movements, which took advantage of the *mansiones* along the roads, and these were joined to storehouses for the *annona*. The burden on the population on the whole increased, and a postal tax seems to have spread again later. A slower system of heavy transport by ox-drawn vehicles (the *cursus clabularis*) took its place beside the *cursus velox*, and in the Late Empire there was further reorganization.

Diplomata (licences) to use the service were strictly controlled. Governors had to justify the use they made of them (cf. Pliny, *Ep.* 10. 120) and equestrian officers were not allowed to take liberties (as young Pertinax found out: S.H.A. 8. 1. 6). But abuses were difficult to prevent, as Claudius (see above) complained. Messages were at first carried by imperial *tabellarii* (organized in military fashion), but in important cases by trusted soldiers, especially the Emperor's *speculatores*. In the second century a related corps, the *frumentarii* (and after Diocletian their successors, the *agentes in rebus*, q.v.), took over the service, combining the carrying of confidential messages with the work of a secret police (q.v.). The *mansiones* were amalgamated with the army guardposts (*stationes*) that had from an early time existed at important points along the roads, and soldiers took over their management from the *manceps*.

Couriers travelled, on an average, about 50 miles a day; but urgent news could be carried at high speeds: that of the revolt of the Rhine army was carried to Galba in about nine days, i.e. at a rate of over 150 miles a day, over the Alps in mid winter.

E. B.

POSTLIMINIUM. The legal position of a Roman citizen captured by the enemy was similar to that of a slave, but his rights remained in suspense. By virtue of the

ius postliminii, which was said to be *moribus constitutum*, the captive after his return recovered with his freedom all his former rights just as if he had never been captured by the enemy. The principle applied to rights, but not to 'facts', i.e. to legal relationships which required for their existence some physical manifestation. Such relationships did not revive automatically, but had to be physically resumed. Thus *dominium* (q.v.) revived automatically, *possessio* (q.v.) did not; nor did marriage (but this rule was altered by Justinian). If the *captivus* died in captivity, he died a slave; but a *Lex Cornelia* (of the dictator Sulla) preserved the validity of his will by the fiction that he died a citizen. This so-called *factio legis Corneliae* was applied to successions on intestacy and further extended in the post-classical law.

The *ius postliminii* was applied also to certain things important in war (slaves, ships, horses used in military service, etc.) and land, which fell into the enemy's hand during war and were subsequently recovered by their owner.

L. Mitteis, *Röm. Privatrecht* (1908), 192 ff.; J. Imbert, *Postliminium* (1944); L. Ambrante, *Captivitas et postliminium* (1950); H. Krüger, 'Captivus redemptus', *Sav. Zeitschr.* li (1931), 203 ff.; E. Levy, 'Captivus redemptus', *CPhil.* 1943, 159 ff. (- *Bull. Ist. dir. rom.* 1951). A. II.; B. N.

POSTUMIUS (1, *PW* 63) **TUBERTUS**, AULUS, perhaps *magister equitum* in 434, he was appointed dictator in 431 by his son-in-law Cincinnatus, and won a notable and undoubtedly historical victory over the Aequi on the Algidus (traditionally on 19 June), but details of the campaign, which closely resembles that of Cincinnatus in 458, must be rejected. O. Hirschfeld (*Kl. Schr.* 1913, 246 f.) has wrongly assumed that the legend of Cincinnatus grew out of the story of Postumius.

Ogilvie, *Comm. Livy* 1-5, 571 f., 576 f.

P. T.

POSTUMIUS (2, *PW* 55) **MEGELLUS**, LUCIUS (cos. I, 305 B.C.; II, 294; III, 291). The victories over the Samnites, which tradition assigns to his two first consulships, were probably reverses. His alleged triumph 'de Samnitibus Etruscisque' in 294 is an anticipation of that of 291; he was not in Etruria. In 291 he helped to end the Third Samnite War by storming Venusia. He is said to have 'triumphed' and to have been fined for using military labour on his own land. When sent to Tarentum in 282 to demand restitution, he was insulted.

E. T. Salmon, *Samnum and the Samnites* (1967), 249 ff. H. H. S.

POSTUMIUS (3, *PW* 31) **ALBINUS**, AULUS, Roman senator and historian, praetor in 155 B.C., consul in 151, commissioner for the settlement of Achaea in 146, and an enthusiastic philhellene, wrote a history of Rome from its origins, in Greek. Pragmatic in treatment, it belongs to the senatorial tradition. Cato mocked his apology for his Greek (Gell. 11. 8. 2), but Polybius, if grudgingly, recognized his culture and influence (Polyb. 39. 1) and, though his excessive philhellenism and wordiness offended the older Romans, Cicero praises him as 'disertus' (*Brut.* 81). References to a poem and to his *de aduentu Aeneae* may point to one work; Macrobius' reference (3. 20. 5) may, but not necessarily, indicate a Latin version of his history.

Peter, *HRRel.* i. cxxiv, 53, *FGH* iii C, 881 ff. Scullard, *Rom. Pol.* 238, 249. A. II. McD.

POSTUMIUS (4, *PW* 45) **ALBINUS**, SPURIUS, as consul in 110 B.C. renewed the war with Jugurtha (q.v.) after Bestia's treaty and left his brother Aulus in charge when he went to Rome to hold elections. Aulus was defeated and his army was sent under the yoke (early 109). Spurius, returning as proconsul, failed to repair the

disaster, was superseded by Metellus (q.v. 6) and convicted by the tribunal set up by Mamilius (q.v. 3).

E. B.

POSTUMUS, MARCUS CASSIANUS (*PW* 1) **LATINIUS**, left in military command on the Rhine by Gallienus, when he set out to crush Ingenuus in Moesia, quarrelled with Silvanus, Praetorian Prefect and guardian of the young prince, Saloninus, in Cologne (A.D. 259). He put both guardian and prince to death, and established himself as independent emperor in Gaul; both Spain and Britain adhered to him. He abetted the revolt of Aureolus in 268, but had himself to meet the revolt of Laelianus in Moguntiacum (*Mainz*). He took the city, but was murdered by his own troops when he forbade the sack.

Postumus successfully defended the Rhine frontier against German invasion. His usurpation weakened central authority, but saved the West.

H. M.

POTAMON (1), a rhetor of Mytilene (c. 75 B.C.-A.D. 15), undertook embassies on behalf of his city to Rome to Caesar (47 and 45) and Augustus (26), and was much honoured at Mytilene. He wrote on Alexander, on Samian Iloroi, and a *Περί τελείων πρόποσις* which was perhaps a counterpart to Cicero's *Orator*.

FGH 147. M. Rostovtzeff, *JRS* 1917, 30 ff.; Pearson, *Lost Histories of Alexander*, 248 ff. H. H. S.

POTAMON (2) of Alexandria, probably of the time of Augustus (31 B.C.-A.D. 14), founder of the Eclectic school. He attempted without much originality or consistency to combine Platonic and Peripatetic tenets with the Stoic creed (Diog. Laert. *prooem.* 21). The school had little influence.

Zeller, *Phil. d. Griechen* iii. 14. 630-41.

W. D. R.

POTIDAEA, a Corinthian colony, founded c. 600 B.C. for trade with Macedonia and along the line of the later Via Egnatia. It struck coins from c. 550 B.C. A strongly fortified port, it withstood a siege by Artabazus (480-479). It joined the Delian League; but its connexion with Corinth, which supplied its annual chief magistrate, rendered it subject to Athens. After an increase of its tribute to fifteen talents (434 B.C.) it revolted (432), but although it received help from Peloponnesus it was reduced in 430. Athenian cleruchs occupied the site until 404, when it passed to the Chalcidians. It was recovered by Athens in 363 and received another cleruchy in 361; but in 356 it fell into the hands of Philip II of Macedon. It was perhaps destroyed in the Olynthian War (348); but it was refounded by Cassander under the name of Cassandreia (c. 316).

J. A. Alexander, *Potidaea* (U.S.A. 1963).

N. G. L. H.

POTTERY. Neolithic pottery, the earliest in Greece, may go back before 5000 B.C., and varieties of it have been found in many parts of Greece, including the Cyclades. The pottery is hand-made, its surface burnished and the colour black or red-brown. On the mainland, painted ware has been found, and in later Neolithic, linear and spiral patterns on white are known. The main Neolithic sites are in northern Greece.

2. In the early Bronze Age the dark clay ware is followed by painted fabrics, dull dark on light ground. In Crete there is a change (c. 2300 B.C.) to light-on-dark painted ware, which continues throughout the Middle Minoan period. The potter's slow wheel is introduced, probably from Asia (c. 2100 B.C.), soon followed by the quick wheel. In the Late Minoan Age the dark-on-light technique returns, with a naturalistic style embracing floral and marine subjects. The Cyclades and Mainland favour the dark-on-light style throughout. On the Main-

land an intrusive 'Minyan ware' appears c. 2000 B.C. of grey clay, wheel-made, the shapes recalling metal work. After 1400 B.C. 'Mycenaean pottery' predominates, with lustrous brown ornament on buff, based mainly on Late Minoan; the pottery, found over a wide area, is remarkably uniform, the main shapes being the kylix, stirrup-jar, and 'Palace style' jar. Later the designs grow stylized, and in the sub-Mycenaean age are reduced to geometric elements.

3. In the twelfth century, Protogeometric pottery, developing from sub-Mycenaean, is made in Athens, austere and precise with concentric circles balanced by areas of black. About 900 B.C. the Geometric style emerges with meander and zigzag pattern in horizontal bands, the shapes well proportioned. Of the local schools which produced this ware, Athens was the most important, and towards the end of the period figured scenes, conventionally drawn, became the focus of the artists' interest.

4. In the late eighth century the Geometric style passes into the Orientalizing, as the result of closer acquaintance with Eastern art. The decorative repertory is enriched by floral patterns, animals, winged monsters, etc., which replace the Geometric patterns in the horizontal bands. Experiments in technique—outline drawing, incised lines, polychromy—are found, the human figure is drawn with increasing naturalism, and mythological representations begin. The local styles are again clearly distinguished; the seventh century sees the high-water mark of the Island and East Greek schools; the chief Mainland fabrics are the Athenian (proto-Attic), proto-Corinthian, and Laconian.

5. By 600 Athenian potters had substantially evolved the Attic black-figured style, and the sixth century sees the gradual assimilation of other local styles to this. The chief shapes are the kylix and the amphora, both syntactically effective. In black-figure the design is laid in dark paint, improved to the brilliant black Attic glaze, on the reddish buff clay, inner markings are made by incised lines; white is used for the flesh of women, red for men's beards and hair, etc. The decorative patterns are reduced, and the field of the vase occupied by a mythological or other subject.

6. About 530 Athens introduces a new technique, the red-figured, in which the decoration is left in the ground-colour and the background filled with black; inner details are rendered in thin glazed lines; accessory colours are sparingly used in the fifth century. In this style greater freedom of drawing was possible, and the artists pass from archaic stiffness to the classic style of the mid fifth and to the free style of the late fifth century. The vases of the fourth century are characterized technically by greater use of accessory colours and gilding. A subsidiary Attic fabric of the fifth century is the 'white-ground' ware, in which the background is white, with designs in black glaze at first, later in matt polychrome; these vases were mainly used for sepulchral purposes.

7. Throughout the Archaic and Classical periods, black and banded vases were produced side by side with figured ware, mainly the same shapes but in different volume. Coarser clay is used for the kettles, ovens, and braziers of Greek homes. Two other classes of pottery are the large jars for transporting wine, and the *pthoi* for storage.

8. By 300 B.C. Attic red-figured vases are no longer made, but the small black vases continue into Hellenistic times as cheap substitutes for metal vases. Painted vases are mainly secondary to those with relief decoration. Sometimes moulded reliefs are added to wheel-made vases; in other fabrics the vase is thrown in a mould, as in the hemispherical 'Megarian bowls', the most widespread Hellenistic fabric. In this period the black ground-colour inherited from Athens is modified in East Greece into

red or bronze, and from this develops the *terra sigillata* (q.v.), the standardized fine pottery of Roman times.

9. Italian pottery of the Neolithic and Bronze Ages is mainly of the dark-clay Mediterranean type; painted wares, dark on light, occur sporadically in the south and have been compared with the wares of the Balkan peninsula. In the early Iron Age the hand-made dark-clay ware ('*impasto*') continues in several local styles; among them the Latin, characterized by its funerary 'hut-urns', and the Villanovan of Tuscany and Bologna, with biconical urns and incised geometric decoration. The 'bucchero' of Etruria (700-500) is also dark-clay ware, but wheel-made, with polished black surface; early decoration is incised, later decoration is in relief. Painted wares imitating the contemporary styles of Greece appear on the west coast about 700, and by 525 the native pottery is largely displaced by Greek (mainly Attic) imported vases and local copies. There are independent schools of pottery in Apulia which, while borrowing the painted technique from Greece, remain barbaric in style. The Italian red-figured style begins in south Italy about 440, perhaps introduced by immigrant Athenian potters. There are five main schools in the fourth century: Apulian, Lucanian, Campanian, Paestan, and Sicilian. Size and elaboration are hallmarks, and production continues into the third century. Etruria gains its main inspiration from Attic models.

10. In the Hellenistic period Apulia and Campania are the chief areas of production. Light-on-dark painted ware and vases with applied reliefs are the main fabrics. Alexandria was the principal source of inspiration, and Italy long remained untouched by the East Greek experiments in red glazes and moulded wares; after 30 B.C., however, it took the lead in these with the appearance of Arretine ware (see *TERRA SIGILLATA*).

11. Apart from *terra sigillata*, the pottery of the Roman East is mainly plain earthenware, though moulded vases of the second to third century are not unknown. There is much variety over the Roman Empire, in shape, technique, and decoration, reflecting the intermixture of Roman and native.

PRAEFECTURA means an assize-town in Roman territory. When Capua became a semi-citizen *municipium* (q.v.), prefects delegated by the *praetor urbanus* were occasionally sent there to assist in judicial rearrangements consequent upon the grant of *civitas sine suffragio*. The practice spread later to all other *municipia* and also to *oppida* and *conciabula* in the areas of full-citizens (see *CITIZENSHIP*, *OPPIDUM*), and became annual. The *praefecti* did not replace but assisted the local authorities of *municipia*; in *oppida civium Romanorum* they were sometimes the only senior judicial authority. In Campania after the abolition of local autonomy following the revolt of 215-211 B.C. a new set of annual *praefecti*, minor magistrates elected at Rome, were instituted to take sole charge

of local jurisdiction. Elsewhere the old system prevailed down to the Social War, but was not extended to the municipalities then incorporated. Between 89 and 44 B.C. the surviving *praefecti* were abolished and the *praefecturae* assimilated to *municipia*, though the ancient title sometimes remained in use.

See the bibliography under SOCII, MUNICIPIUM. A. N. S.-W.

PRAEFECTUS. Before the Social War each *ala sociorum* had six *praefecti*, three of whom were Roman officers. In Caesar's armies *praefecti* were the commanders of cavalry contingents. Under the Principate *praefecti* were officers of equestrian rank. From the time of Nero onwards the regular equestrian career was that of the *tres militiae*—*praefectus cohortis*, *tribunus militum*, *praefectus alae*.

Praefecti also commanded the Praetorians, *vigiles*, and the imperial fleets of Ravenna and Misenum; the urban cohorts were under the *praefectus urbi*, a senator of consular standing.

The legions in Egypt were commanded by equestrian *praefecti* instead of the normal senatorial *legati*, and Septimius Severus followed this precedent when he raised Legiones Parthicae I–III. Gallienus extended the appointment of *praefecti*.

The post of legionary camp commandant, *praefectus castrorum* (later *praefectus (castrorum) legionis*), was from Claudius onwards regularly held by an ex-centurion who had reached the rank of *primus pilus* and was unlikely to have further promotion. His duties were purely administrative.

Praefecti also held extraordinary appointments, e.g. *praefectus levis armaturae*; *praefectus orae maritimae*.

In the Late Empire *praefecti* were commanders in the *limitanei* of legions and detachments of legions, vexillations, *alae*, *numeri*, and fleets.

PRAEFECTUS PRAETORIO. The first praetorian prefects were appointed by Augustus in 2 B.C. to command the Praetorians (q.v.). They were regularly two in number (occasionally one or three), and in most cases of equestrian rank (invariably so during the second century). During their term of office, however, they could receive the *ornamenta praetoria*, or, after 69, the *ornamenta consularia* (see ORNAMENTA). Though a few were well-known jurists (see PAPINIANUS, ULPIANUS I, PAULUS I), the great majority remained military men until the Guard was disbanded by Constantine in 312 and the nature of the office changed. Their positions sometimes gave them great personal influence over the Emperors (see SEJANUS, BURRUS, TIGELLINUS, PLAUTIANUS), and occasionally they were able to play a decisive role at a change of Emperor. During the second and third centuries they acquired extensive judicial powers; from the time of the Severi these included appellate jurisdiction from senatorial as well as imperial provinces. In Italy, they had general jurisdiction over cases which arose more than 100 miles from Rome and were beyond the purview of the *Praefectus Urbi* (q.v.). Praetorian prefects helped to shape imperial legislation as regular members of the *Consilium Principis* (q.v.). They developed financial functions also, since as chief of staff the praetorian prefect was responsible for the supply of the armed forces. With the growth of the system of requisition in kind the prefects under Diocletian became the most important finance ministers of the Empire. This was the high-water mark

of their power, for under Constantine they lost their military functions. Their areas of responsibility became localized, and these eventually became established as the four territorial prefectures of the Gauls, Italy, Illyricum, and the East.

J.-R. Palanque, *Essai sur la préfecture du prétoire du Bas-Empire* (1933); M. Durry, *Les Cohortes prétoriennes* (1938); A. Passerini, *La coorti pretoriae* (1939); L. L. Howe, *The Praetorian Prefect from Commodus to Diocletian* (U.S.A. 1942); Jones, *Later Rom. Emp.* G. R. W.

PRAEFECTUS URBI. (1) The temporary deputy in Rome of the absent king or consuls, not often needed after the institution of praetors, except once a year when all regular magistrates attended the Latin festival on the Mons Albanus (q.v.), and so after the institution of (2) known as *praefectus urbi feriarum Latinarum*. The prefect had the *imperium* (q.v.) and was competent to perform all consular functions appropriate to the sphere *domi*. In early times when he had real responsibility he was usually of consular rank; later, men at the beginning of their public career were chosen. L. Caesar (q.v. 4) represents a reversion to the earlier practice. The six prefects of 45 B.C. were unique.

(2) A magistrate instituted by Augustus. After a false start with Messulla (q.v. 3) c. 25 B.C., the regular series seems to have begun with L. Piso (q.v. 6) in A.D. 13. The prefect was always a senator, usually of consular rank, and served for a number of years. He was nominally an independent magistrate, with the duty of keeping order in the city, and for this purpose had *imperium* and the command of a standing police force (see COHORTES URBANAE). He also presided in his own court of justice which encroached progressively upon, and by the third century practically superseded, those of the regular magistrates, attracting cases originating both inside and outside Rome (excluding, after c. 200, those originating beyond the hundredth milestone: see PRAEFECTUS PRAETORIO). The office persisted into the later Empire, a separate prefect for Constantinople being added in 359.

PRAENESTE, modern *Palestrina* with interesting polygonal walls, occupied a cool, lofty spur of the Apennines (q.v.), 23 miles east-south-east of Rome. Traditionally founded in the mythical period (Verg. *Aen.* 7. 678), it enjoyed by 700 B.C. an advanced, etruscanized civilization. It first appears in history in the fifth century B.C. as a powerful Latin city whose strategic site facing the Alban Hills was inevitably attacked by Aequi (q.v.). In the fourth century it frequently fought Rome and, after participating in the Latin War, was deprived of territory and became a *civitas foederata* which still possessed *ius exilii* 200 years later (Polyb. 6. 14) and apparently preferred its own to Roman citizenship (Livy 23. 19 f.). After 90 B.C. Praeneste became a Roman *municipium* devoted to Marius' cause, which Sulla sacked (82), transferred to lower ground, and colonized with veterans. It remained a *colonia* in imperial times, famed chiefly as a fashionable villa resort and seat of the ancient and oracular *sortes Praenestinae* which Roman Emperors, foreign potentates, and others consulted in the huge temple of Fortuna Primigenia, perhaps Italy's largest sanctuary (Polyb. 6. 11). Its impressive remains belong perhaps to the first century B.C.: sweeping ramps carry the edifice up the hillside in a series of terraces.

Praeneste has yielded the earliest specimen of Latin, whose peculiarities confirm Festus' statement (157, 488 L.) that Praenestine Latin was abnormal, a spectacular marine mosaic (cf. Pliny, *HN* 36. 25), and Verrius Flaccus' calendar; Flaccus probably, and the Greek writer Aelian certainly, were natives of Praeneste. The Aenii were also prominent Praenestines.

Dessau, *PIV* Suppl. viii (1956), s.v. 'Praeneste'; F. Fasolo and G. Gullini, *Il Santuario della Fortuna Primenia a Palestrina* (1956); G. Gullini, *Giuda del Santuario*, etc. (1956); F. L. MacKendrick, *The Mute Stones Speak* (U.S.A. 1960), 110 ff. E. T. S.

PRAEROGATIVA was the *centuria* in the *comitia centuriata* (q.v.) of the Roman people which had the right of voting first. In early times the eighteen *centuriae* of the knights voted first *en bloc*; but not later than 215 B.C. the right was conferred upon one of the seventy *centuriae* of the first class chosen on each occasion by lot. Even after the introduction of the ballot (see *VOTING*) the decision of the *centuria praerogativa* was made known before the rest of the assembly recorded its vote. According to Cicero its influence upon the final outcome of the voting was very considerable.

Mommsen, *Rom. Staatsr.* iii¹, 290 ff., 198.

E. S. S.

PRAETEXTATUS (PW¹), VETTIUS AGORIUS (c. A.D. 320-84), a resolute opponent of Christianity and friend of Symmachus (q.v. 2), who held many high State offices and various priesthoods. His epitaph with accompanying poem (*CIL* vi. 1779 = Dessau 1259; *Carm. eptgr.* 111) is of interest in showing how a synthesis of pagan cults was attempted in face of the common enemy, Christianity. Like other antichristians, he was attached both to philosophy (cf. Macrobius, *Sat.* 1. 24. 21) and to the ancient writers: he produced a Latin version of Theophrastus' adaptation of Aristotle's *Analytics* and assisted in the purification of the texts of Latin authors.

Th. W. J. Nicolaas, *Praetextatus* (Dutch diss., 1940); P. Lambrechts, *Op de Grenzen van Heidendom en Christendom. Het Grafchrift van Vettius A. P. en Fabia Iconia Paulina* (1955); A. Momigliano, *Conflict between Paganism and Christianity in the 4th Cent.* (1960), 104 ff. A. H.-W.

PRAETOR (etymologically connected with *prae-ire*, 'to lead', 'to precede') was originally the name borne by the two eponymous Roman magistrates who later (possibly towards the end of the fourth century) officially assumed the name of consul (q.v.). The praetor's close connexion with military affairs is shown by the use of the adjective *praetorius* in such expressions as *praetorium*, *cohors praetoria*, and *porta praetoria*, and by the Greek translation of praetor as ἀρχηγός. In 366 B.C., however, a further praetor (*praetor urbanus*) was first elected who was not eponymous and who was given special responsibility for the administration of justice in Rome. He enjoyed and sometimes exercised the right of military command and he had the authority to summon *comitia* and initiate legislation; but he was attended by only six lictors, as opposed to the consuls' twelve, was forbidden to leave Rome for more than ten days at a time, and performed the consuls' functions of summoning the Senate and supervising the defence of Rome merely during their absence. The tradition that this new office was one from which plebeians were officially excluded until 337 is unreliable.

Rome's closer relations with foreign Powers led to the creation (c. 242 B.C.) of a second praetor, called *praetor qui inter peregrinos ius dicit* (abbreviated to *praetor peregrinus*), who dealt with lawsuits in which either one or both parties were foreigners. The acquisition of overseas provinces greatly enlarged the sphere of the praetors'

activities, so that in 227 B.C. their number was increased from two to four, to provide for the government of Sicily and Sardinia, and to six in 197 B.C., to administer Spain. By exercising the supreme provincial authority, the praetors became once again military magistrates, and in fact the difference of rank and power between them and the consuls decreased progressively, although the *praetor urbanus* was still subordinate to the consuls. In the second century the *praetor urbanus* and *peregrinus* dealt chiefly with the administration of justice. Sulla, who increased the praetors' number to eight, prescribed that all of them should remain in Rome as judges, or presidents of *quaestiones* (q.v.), and should proceed to the governorship of provinces in the following year by prorogation of their office. Sulla's reform, however, was abolished in the Augustan age.

Although the beneficent influence of the praetorship in the domain of law continued to make itself felt under the Emperors (thanks to the edicts in which it was customary for praetors to outline, on entering their office, the main principles of their jurisdiction), the praetorship nevertheless declined rapidly, and its functions were soon reduced to minor jurisdiction, e.g. in matters relating to guardianship, the status of liberty, etc., or financial duties, performed by the *praetores aevarii* from 23 B.C. to A.D. 44. It eventually became a merely honorary appointment, the main feature of which was that the *praetor urbanus* had to superintend the games provided by him on entering his office, to win the favour of the Roman populace.

Mommsen, *Rom. Staatsr.* iii¹, 103 ff. For the origins of praetorship see G. De Sanctis, *Riv. Fil.* 1929, 1933; E. S. Staveley, *Hist.* 1956, 90 ff.; Ogilvie, *Comm. Livy* 1. 5, 210 f.; A. Momigliano, *Quanto contributo alla storia degli studi classici* (1969), 403 ff. P. T., E. S. S.

PRAETORIANS. During the last two centuries of the Republic generals commonly had a bodyguard or *cohors praetoria*. A permanent corps of nine cohorts was created by Augustus in 27 B.C. Three of these were billeted about the city, the remainder were quartered in near-by Italian towns. For a time Augustus kept them under direct control, and it was not until 2 B.C. that command was entrusted to two *praefecti praetorio*.

In a sense Sejanus may be called the real founder of the Praetorians. He was made first joint Prefect with his father on the accession of Tiberius, and then sole Prefect (A.D. 16 or 17). By A.D. 23 he had succeeded in concentrating the Guard in one large barracks near the Porta Viminalis. From this event dates the political importance of the Guard and its commanders.

The number of cohorts was raised by Caligula to twelve. In A.D. 69 Vitellius cashiered the soldiers who had supported Otho, and constituted sixteen cohorts, each 1,000 strong, from the German legions. Vespasian, however, reverted to the Augustan figure; a tenth cohort was added, perhaps by Domitian, and this number, apart from a possible reduction by Diocletian, remained unchanged till the Praetorians were disbanded by Constantine in A.D. 312.

The cohorts have generally been thought to have been each 1,000 strong, but Dury argues that they were only half this size, except under Vitellius, till their establishment was increased to 1,000 by Septimius Severus. Each cohort was commanded by a tribune, who from the time of Claudius onwards had regularly been a legionary *primipilus*, *tribunus vigilum*, *tribunus cohortis urbanae*. He might next be appointed *primipilus iterum*. The centurions of the Guard were of roughly equal rank, apart from the two senior, who were the *trecentarius* and the *princeps castrorum*.

During the first two centuries, apart from the Vitellian episode, the praetorians were recruited from Italy and the more romanized provinces. A change was made

by Septimius Severus, who substituted a new guard recruited mainly from the Illyrian legions.

The Praetorians attended the Emperor and members of his family at home and abroad. Their length of service was fixed in 13 B.C. at twelve years, which was increased in 5 B.C. to sixteen years, but since discharges were made every other year, many soldiers served for seventeen years. Their pay was at first perhaps 375 *denarii* a year, which was increased to 750 c. A.D. 13, and to 1,000 by Domitian, and they received large and frequent donatives. On discharge they were granted *diploma*. (See DIPLOMA, DONATIVUM, SIGNA MILITARIA, STIPENDIUM.)

M. Durry, *Les Cohortes prétorienne* (1938); A. Passerini, *Le coorte pretoria* (1939). H. M. D. P., G. R. W.

PRAETORIUM denoted a general's tent (Livy 7. 12, 10. 32; Caes. *BCiv.* 1. 76) or his staff or council (Livy 26. 13. 6). Hence comes the *porta praetoria* of Roman castrametation (see CAMPS). By an extension of meaning *praetorium* signified the residence of a provincial governor (e.g. *ILS* 2298), a pleasure villa (e.g. Suet. *Tib.* 39), an official road-side rest-house (*CIL* iii. 6123), or an emperor's residence (*CIL* iii. 5050). It is also regularly used for the forces or services of the Praetorian Prefect (*CIL* v. 2837, viii. 9391, etc.). In permanent fortresses or forts it is distinguished from the *principia*, or headquarters building, and clearly refers to the commandant's house, a separate structural entity (Livy 28. 25; Tac. *Ann.* 1. 44; *RIB* 1092, 1685-6, 1912).

Mommsen, *Hermes* 1900, 437 ff.

I. A. R.

PRASUTAGUS, client king of the Iceni (q.v.) of East Anglia, was renowned for his wealth (Tac. *Ann.* 14. 31). His death in A.D. 60 precipitated the rebellion of his wife Boudicca, for the king's will dividing his property between his daughters and Nero in the hope of preserving the kingdom was disregarded.

S. S. F.

PRATINAS of Phlius (see TRAGEDY § 3) is stated by the *Suda* (s.v.) to have been the first to compose satyric plays; and of his fifty plays thirty-two were satyric. He competed at Athens about the beginning of the fifth century B.C., though the abundance of satyrs on Attic vases after c. 520 B.C. might suggest an earlier date. A fragment of one of his satyric plays (Ath. 14. 617 b) attacks the growing predominance of the flute accompaniment over the words of the dithyramb. His son Aristias won second prize with a production of his father's plays in 467 B.C. (Arg. Aesch. *Sept.*).

PRAXAGORAS of Cos (second half of 4th c. B.C.), the teacher of Hierophilus, was numbered by Galen among the greatest physicians; the few data preserved do not give a clear picture of his achievements. Praxagoras' anatomy was a strange mixture of correct and false notions. He recognized the connexion of the brain with the spinal cord; on the other hand, he believed that the arteries, coming from the heart, taper away and finally turn into nerves. Respiration he called, though not the cause, yet the re-creating source of the soul, and he considered the arteries as air-channels. The discovery of the arterial pulse was ascribed to him. Diseases he explained by the (eleven) humours, also emphasizing the importance of the *pneuma* (see Steckerl, op. cit. *infra*); he was particularly interested in fevers. His therapy is almost unknown; his operation on the ileus is mentioned.

Jaeger, *Diokles v. Karystos* (1938), following from later date of Diocles. Cf. Steckerl, op. cit.; Dardong, 1735. 18 ff. An older and a younger P. (H. Schöne, *Rh. Mus.* 1903, 64), not yet clearly distinguished.

L. E.

PRAXIDIKAI, 'the exactors of justice'; goddesses worshipped at Haliartus (Paus. 9. 33. 3). Their temple was roofless (it is common for oaths to be taken in the open air) and they were sworn by, but not lightly. They were daughters of Ogygus, i.e. ancient Boeotian (Dionysius of Chalcis in Photius, s.v.). In the singular an epithet of Persephone (q.v.; *Hymn. Orph.* 29. 5).

H. J. R.

PRAXILLA (fl. 451 B.C. (Eusebius-Jerome)), poetess, of Sicyon, wrote dithyrambs (fr. 1), drinking-songs (Schol. Ar. *Vesp.* 1239), and hymns, including one to Adonis, in which a line was proverbial for its silliness (fr. 2, cf. Zenob. 4. 21).

C. M. B.

PRAXIPHANES, Peripatetic philosopher (end of 4th-mid 3rd century B.C.). Probably he was born in Mytilene and worked in Rhodes. At some time he was publicly honoured in Delos (*IG* xi. 613). The few traces of his work remaining suggest that he concentrated on γραμματική and literary criticism. He was involved in controversy with the Epicurean Carneiscus on the subject of friendship, and also with Callimachus, who wrote a book *Against Praxiphanes*.

F. Wehrli, *Die Schüdes Aristoteles* ix (1957, fr. and comm.); K. O. Brink, 'Callimachus and Aristotle', *CQ* 1949, 11 ff.; W. Aly, *PW* xxii. 1769.

D. J. F.

PRAXITELES, sculptor, probably son of Cephisodotus (q.v. 1), Athenian. Pliny dates 364 B.C., probably by Aphrodite of Cnidos. Selected works, (i) *dated*: 1. Altar of Artemis at Ephesus, after 356. 2. Work on Mausoleum, after 351 (doubtful). 3. Artemis at Brauron, 346. According to Studniczka the bronze original of the Artemis of Gabu (Winter, *KB* 297. 6). 4. Signature from Leuctra, about 330. (ii) *Undated*: 5. Aphrodite of Cnidos. Marble; Lucian describes particularly the face and eyes and the setting which showed the front and back view (cf. copy in open round temple in Hadrian's Villa at Tivoli). Recognized from coins in many copies (ibid. 295. 3-5); fragment in the British Museum is contemporary. Other Aphrodites, including draped Aphrodite of Cos, are recorded. A draped Aphrodite in the Louvre is ascribed by the copyist to Praxiteles; the Aphrodite of Arles (ibid. 312. 2) is attributed on style. 6. Hermes with infant Dionysus in Heraeum at Olympia (ibid. 294. 1-2; 295. 1). Marble; original, not copy as recently suggested. Later than Cnidian Aphrodite, perhaps 343. 7. Apollo Saurontonus (lizard-slayer). Bronze, known from several copies (ibid. 294. 3). Early, the head nearer Cephisodotus than no. 5. 8. Group of Apollo, Artemis, and Leto with Muses and Marsyas on the base, at Mantinea. Pausanias dates to third generation after Alcamenes. The base has been discovered (ibid. 296. 1-3); dated by parallels on vases not long after 350. 9. Dionysus, Inebriation, and 'the famous satyr'. Bronze, later in Rome. The Dresden satyr (ibid. 297. 7), stylistically near no. 7, may reproduce the satyr. The leaning satyr (ibid. 295. 2) reflects a later original, perhaps Praxiteles' satyr in the street of Tripod. 10. Eros of Thespieae, later in Rome. 11. Eros of Parium, Leto in Argos, Artemis in Anticyra are reproduced on

coins. 12. Phryne, Praxiteles' mistress, at Delphi (and Thespiac), gilded or golden. 13. Soldier and horse on grave at Athens. 14. Niobid group, see under Scopas. (iii) *Attributed*. 15. Head from Chios in Boston, original (ibid. 297. 3; attributed from likeness to no. 5 above). 16. Hermes Farnese, copy (ibid. 294. 4; attributed from likeness to no. 6 above). 17. Aberdeen head in British Museum, original; later and heavier than Hermes. 18. Bronze boy from Marathon (Lippold, pl. 96, 3). 19. (Doubtful) Apollo Lyceus, described by Lucian (*Anach.* 7). 20. Women from Herculaneum, copies (Winter, *KB* 394. 1; probably Demeter and Persephone; attributed from likeness to no. 8 above). 21. 'Eubouleus' head (ibid. 207. 2), often considered a Praxitelean original, is probably a copy of Leochares' Alexander (E. B. Harrison, *Hesp.* 1960, 382).

Praxiteles was thought most successful in marble and to excel in representing emotion; he preferred those statues which Nicias (q.v. 2) painted. Intimate feeling can be appreciated in the surviving originals, nos. 6, 15, 17, 18. Nos. 5, 6, 7, 9, 16, 19 are skilfully composed for a single view (no. 5 also for back view). Contrast the tridimensionalism of Lysippus. The assumption of an earlier Praxiteles is uncertain; for Praxiteles' sons see CEPHISODOTUS (2).

Overbeck, 525, 1165, 1178, 1180-1, 1188-1190, G. E. Rizzo, *Praxitele* (1932), C. Blinkenberg, *Knidia* (1932), R. Carpenter, etc., *Arch.* 1931, 249, Lippold, *Griech. Plastik*, 234. T. B. L. W.

PRAYER. Prayer was quite as prominent in ancient as in modern religions, and, then as now, could be formal or informal, accompanied by other acts of worship (in this case generally sacrifice) or used by itself. For the latter our earliest instance is *Iliad* 1. 37 ff., where Chryses prays to Apollo with no more ceremony than going away by himself to a retired place on the sea-shore, thus probably for the practical reason that he did not want to be overheard by the men he was asking Apollo to injure. His prayer is formal and contains all the characteristic parts. First he addresses the god by complimentary phrases ('thou of the silver bow', 'thou who protectest Chryse and holy Cilla, mighty lord of Tenedos'), ending with his local title Smintheus. He then reminds Apollo of his own acts of piety and finally makes his petition, that the god shall avenge him on the Greeks. But informal prayers are common also in and after Homer; for instance, in *Iliad* 7. 179 f., all the Greeks pray to Zeus that the lot may fall on one of three leading champions to fight Hector; they say simply *Zeῦ πάτερ* and then state their request, using the imperative infinitive, common in prayers (cf. e.g. *Ar. Ran.* 886 ff.; here the prayer is accompanied by an offering of incense). Even liturgies seem to have contained such informal petitions, for example the famous Eleusinian *ὦ κεί* (Hippol. *Ilaer.* 5. 7. 34, 87 Wendland), though this might be said to be artificial, even rhetorical brachylogy; cf. Schwenn, op. cit. *infra*, 7 f. Of elaborate formulae belonging to classical liturgies we have none left, the surviving specimens, when not literary or fragmentary, being late and magical; the most famous is that in the great Paris papyrus, *PGM* iv. 486 ff.; cf. A. Dieterich, *Mithrasliturgie* (ed. 3, with addenda by O. Weinreich, 1923); A. D. Nock, *JEGArch.* 1929, 231.

For Italy we have a considerable amount of material; that concerning Rome is handsily collected by Appel. Perhaps the most outstanding feature of the official prayers is the elaborate accuracy, like that of a legal document, with which they are phrased. Thus, the formula for the *consecratio* of a hostile city (Macrob. *Sat.* 3. 9. 10-11; Appel, op. cit. *infra*, 14) not only invokes the appropriate gods but adds 'or by whatever other name it is lawful to name (you)', and is not content with mentioning the city which is to be destroyed by their help but

goes on with 'which I feel that I am mentioning', lest there should be some other place with the same name. This savours on the one hand of the meticulousness of developed magical formulae, on the other of the exact and legalistic spirit of Roman public institutions generally; like precautions are taken in other prayers. The rest of Italy is represented, in this respect, by the famous *Tabulae Iguvinae* (q.v.; R. S. Conway, *Italic Dialects* (1897), 356 ff.; C. D. Buck, *Oscan and Umbrian Grammar* (1928), 260 ff.). They are hardly less exact and particular as to detail than the Roman formulae. Prayers for individual use were similarly formulaic (Cato, *Rust.* 134. 2).

PRECATIO TERRAE, PRECATIO OMNIUM HERBARUM, two short iambic litanies to Mother Earth and to All Herbs, probably post-Augustan.

Text with transl., Duff, *Minor Lat. Poets*.

PRIAM (*Πρίαμος*), in mythology, son of Laomedon, (q.v.) and king of Troy at the time of its destruction by Agamemnon. In Homer he is already an old man, father of fifty sons, some by Hecuba (q.v.), the rest by other wives or concubines (*Iliad* 24. 495-7). His non-Greek name (for the popular but absurd etymology see *HECUBA*) and his harem both suggest that some memory at least of a real Oriental prince survives into Epic. He is an amiable character, tender and considerate to Helen, although he disapproves of the war and its cause (*Il.* 3. 162 ff.), respected even by his enemies for his faith and wisdom (ibid. 105 ff., 20. 183), and esteemed by most of the gods, including Zeus (though Hera implacably hates him (4. 20 ff.) and Athena is hardly less hostile), because of his piety. He takes part in the treaty (3. 259 ff.) and has returned to the city before it is broken (305 ff.). He tries to induce Hector to come within the walls after the rout of the Trojans (22. 38 ff.) and after his death goes, encouraged by Iris, to ransom his body (24. 159 ff.), succeeding by help of Hermes (360 ff.) and by the impression which his appearance and words produce upon Achilles.

He did not survive the fall of Troy. The account in the *Iliu Persis*, that he took refuge at the altar of Zeus Herkeios in his own palace and was there killed by Neoptolemus (q.v. 1), remained classical; its best-known telling in surviving literature is Virgil's (*Aen.* 2. 506 ff.). Apart from the above incidents he has no story of any account. His name became almost proverbial for a man who had known the extreme of contrasting fortunes (*Arist. Eth. Nic.* 11018^a, Juvenal, 10. 258 ff.).

Neoptolemus killing Priam at the altar is frequent in art from the Corfu pediment of the early sixth century on, as a separate scene or as the centre of a Sack of Troy. It is often associated with the death of Astyanax (Brommer, *Vasenlisten*², 330 ff.). Priam is also shown coming to ransom Hector's body from Achilles. H. J. R.; C. M. R.

PRIAPE(IA), poems in honour of Priapus (q.v.). There are Greek poems addressed to him, but the chief Latin collection contains eighty-five poems: two attributed to Tibullus, probably wrongly (Hiller, *Hermes* 1883, 343); three from the *Catalepton* (see APPENDIX VERGILIANA); a series of eighty pieces (principally hendecasyllabic and elegiac) composed under Augustus and collected in the first century A.D. The two first of these eighty introduce the collection; the third is by Ovid (*Sen. Controv.* 1. 2. 22), the rest by unknown authors who show signs of Ovid's influence.

The subjects are mainly the shameful chastisements awaiting thieves, the phallus of the god, the offerings presented to him. Clever in versification, lively and sometimes witty in style, they are, with rare exceptions, marked by extreme obscenity.

Other *Priapea*: Catull. fr. 2; Hor. Sat. 1. 8; Tib. 1. 4; Mart. 6. 16, 49, 72, 73; Buecheler, *Carm. Epigr.* 193, 1504.

EDITIONS. E. Baehrens, *Poet. Lat. min.* 1, 54 ff.; F. Buecheler, ed. minor of Petronius', 1904 (86 poems, no. 80 being divided into two). See F. Buecheler, *Rh. Mus.* 1863, C. Cuh. *Studi letterari* (1898); R. S. Radford, 'Priapea and Virgilian Appendix' *TAPA* 1921; R. F. Thomason, *The Priapea and Ovid* (U.S.A. 1931); M. Coulon, *La Poésie priapique dans l'antiquité et au moyen âge* (1932); A. E. Housman, 'Practanda', *Hermes* 1931, 402 ff. C. F., transl. J. W. D.

PRIAPUS (Πρίapos, Πρίημος), a god of fertility, originally worshipped at Lampsacus on the Hellespont and in that neighbourhood. His symbol was the phallus (q.v.) and indeed he himself may almost be said to have been a phallus provided with a grotesque body. It is clear that his original cult was important, and his local mythology connected him with great deities, for the Greek version of the story is that he was the son of Dionysus, his mother being either a local nymph or Aphrodite (i.e. the Oriental Great Mother) herself (Strabo 13. 1. 12; Paus. 9. 31. 2, who also testifies that he was the god most worshipped at Lampsacus). His local sacrifice was the ass; since this creature was thought of as the embodiment of lust quite as much as stupidity in antiquity, we may suppose that the purpose of the offering was to maintain the god's power of generation (aetiological account of the origin of the sacrifice, Ovid, *Fasti* 1. 391 ff.; an ass once brayed and woke a nymph, Lotis, who in *Met.* 9. 348-9 turns into a lotus-flower to escape him. It thus saved her from his attentions. He therefore hates asses). In any case, the victim is non-Greek, see Frazer on Ovid, *Fasti*, loc. cit.

His cult spread to Greece after Alexander, when interchange of ideas, religious and other, between East and West was common, though Nilsson, *GGR* 1². 594 and pl. 33. 1, tries to find evidence for him on a late fifth-century Boeotian vase. It was popular also in the great Hellenistic cities, such as Alexandria, and made its way in due course to Italy. Greece had by that time outgrown most of the more crudely naturalistic worships, and Priapus seems to have been found broadly funny rather than impressive. He was adopted as a god of gardens, where his statue (a misshapen little man with enormous genitals) was a sort of combined scarecrow and guardian deity. For poems in his honour see *PRIAPE(1)A*.

H. J. R.

PRIENE, an Ionic city with original Theban connexions, situated by the ancient mouth of the Maeander. It controlled the common sanctuary of the Ionic cities at Panionion; but otherwise it was unimportant and it suffered disastrously in the seventh-sixth centuries at the hands of the Cimmerians, Lydians, and Persians. The city was refounded in the mid fourth century at the foot of Mt. Mycale facing Miletus, on a site dominated by a precipitous spur (the Teloneia) which formed its citadel. The German excavations of 1895-8 were uniquely successful in revealing the layout of a planned city with almost all its essential public buildings, and civic activity there in the Hellenistic age is further illuminated by the archive of inscriptions that came to light; only the harbours remain to be discovered under the accumulation of river silt. Inside the wall circuit, which was skilfully draped round the citadel and town, a grid pattern was laid out to the points of the compass, with level main streets running east-west. The open agora, with the market, was centrally placed; and most of the public buildings were also set in the central panel of the grid, with residential blocks to either flank. Among the interest-

ing buildings fitted into the grid are the theatre, old gymnasium, and indoor council chamber; irregularly sited along the bottom edge of the town was the Hellenistic palaestra (with stadium) which reflects the growing importance of the gymnasium as a civic institution.

J. M. C.

PRIESTS (ιερείς, sacerdotes). In no ancient Greek or Italian State was there such a thing as a class or caste of priests, and none was under priestly dominance, as was often the case, for instance, in Egypt. This does not mean that priests had no influence or were not treated with great respect, nor that their office could not be hereditary; it results rather from the absence of any cleavage between the religious and secular life of the community, under normal circumstances at least. Whereas a priest, despite his office, was not generally interdicted from secular activities,* a magistrate was usually a priest as a part of his official functions, which is why, in Greek cities, they often wore wreaths, a very common mark of one engaged in religious duties, and in Rome all curule magistrates wore the *praetexta*. The gods were, during the classical epoch, a sort of superior class of citizens, and their servants were not normally cut off from the life of the State as a whole, any more than any other class of persons whose duties were chiefly directed towards some one part of the population, e.g. magistrates who, like Roman aediles and Greek *agoranomoi*, had to do mostly with traders.

Furthermore, the executive powers of a priest were as a rule narrowly defined. He was active chiefly as an expert adviser (cf. *PONTIFEX*), and was, for example, in sole charge of the conduct of a sacrifice or other piece of ritual which fell within his province. Thus, the priestess of Athena and no one else superintended the annual ritual of the Arrhephoroi (Paus. 1. 27. 3). But the clergy, in spite of responsibilities for sanctuaries, did not draw upon the public funds for the expenses of ritual; the revenues of a temple, usually not very large, were another matter. We have abundant records of the governing body of a State voting the money for sacral purposes, as it might for any other; for instance, in Athens, *IG*¹ 1 *suppl.* 66, no. 53 a (*SIG* 93) shows us the Council and People, not any sacral body, making the arrangements for some necessary work on a chapel sacred to Codrus and other worthies. *IG* 1. 1 (*SIG* 42), though very fragmentary, is enough to show that innumerable details of the Eleusinian Mysteries, though of course not the secret ritual itself, were in the hands of the Athenian Government. At Rome Livy (22. 10. 1) gives the important evidence that according to the highest priestly authority of the day, the then pontifex maximus, a *ver sacrum* (q.v.) could not be vowed save by act of the popular Assembly ('inussu populi uoueri non posse'); accordingly, the vow was made in the form of a bill proposed to and passed by the Assembly. The chief pontiff did not even give his advice of his own motion, but after consulting his colleagues at the request of a secular magistrate. Even the possessions of a temple, though sacred, were not the absolute property of the deity, in fact at least, though in law they seem always to have been. Thucydides (2. 13. 3-4) represents Pericles as counting among the resources of the Athenian State the treasures of the various temples and even the golden ornaments of the cult-statue of Athena, and there is good inscriptional evidence (e.g. *IG* 1. 32, *SIG* 91) that even in times of less stress than those of the Peloponnesian War the State felt at liberty to

* In Rome, for example, the flamen Dialis very seldom held a magistracy, cf. Plut. *Quaest. Rom.* 113 and Rose ad loc., but there was no definite prohibition against his doing so; for the pontificate of the Emperors see *PONTIFEX*.

'borrow' from the gods and, if able, to repay, thus re-establishing a reserve fund for emergencies. Since, then, the clergy of a State had neither executive nor economic independence, it is easy to see why they never were supreme.

In private life it seems to have been much the same. The average ancient did, indeed, commingle his religion with his daily occupations to a considerable extent, and hence must on occasion have needed priestly guidance in matters of ritual, for instance that of a professional diviner to tell him the best day for a marriage, or of a priest of some sort to perform the religious rites needed on that and sundry other occasions. But we have only to look at 'Licophrastus' sketch of the pietistic man (*Charact.* 16, especially §§ 7 and 12) to see that priestly interference in the normal household was slight. This man, whose foible is gross exaggeration of the religious practices in which his more sensible neighbours are moderate, consults the *exegetes* (q.v.) and goes monthly to the Orphic specialists to undergo their rites; we may conclude that the ordinary person did such things far less often.

As to the appointment of priests, in some cases the office was in the hands of a clan or family, as the Eumolpidae at Eleusis, or the Potitii and Pinarii in the cult of Hercules at the Ara Maxima. This presumably is the result of the rites' having been originally domestic or clan-worships. Some priests served for life, while others were chosen to serve for a single year. Normally, a State priest was appointed in some way by the State, often by actual election; in Hellenistic times many priesthoods were publicly sold, e.g. *SIG* 1012 (cf. Nilsson, *GGR* II. 74). Some were lucrative, but in later times priesthoods were often an expense. The tendency was towards abolishing rules which confined eligible candidates to any one class of citizens, although the restrictions remained in the case of some particularly venerable offices (see *HIROPHANTES*); thus, the greater flamens at Rome remained patricians. Generally, no ethical tests were imposed, although some few positions were so hedged about with restrictions as to enforce at least an outward respectability of conduct.

Private religious organizations, permitted or tolerated by the State, and cults confined to a family, clan, or other group within the community, had their own rules, but these fall outside the scope of this article. For Roman priesthoods, Latte, *RR* 394 ff.

PRIMPILUS. Under the Principate the centurions of the first cohort were, in order of seniority, *primus pilus* (*primipilus*), *princeps*, *hastatus*, *princeps posterior*, *hastatus posterior*. The *primipilus* commanded the leading century, and for many there was no further promotion except to *praefectus castrorum*; but a *primipilus* who was marked out for higher office could subsequently hold tribunates at Rome, in the order *tribunus vigiliæ*, *tribunus cohortis urbanae*, *tribunus cohortis praetoriae*, and then be appointed *primipilus aeternum*. As such he served on the staff of the *legatus*, ranking immediately below the *tribunus laticlavius*, and was qualified to receive command of the Egyptian legions or a senior procuratorship. See *CENTURIO*.

Domaszewski-Dobson, *Die Rangordnung des römischen Herres* (1907), 112 ff.

H. M. D. P.; G. R. W.

PRIMUS, MARCUS ANTONIUS (*PIV* 89), born at Tolosa in Gallia Narbonensis c. A.D. 20, was a turbulent and ambitious character—'strenuus manu, sermone promptus, serendae in alios inuidiae artifex, discordiis et seditionibus potens, raptor, largitor, pace pessimus, bello non spernendus' (Tac. *Hist.* 2. 86). Exiled for his share in the forgery of a will (61), he was restored by Galba and put in charge of Legio VII in Pannonia. In the summer of 69 he declared

openly for Vespasian, won over the other Danubian armies and, spurning a cautious strategy, invaded Italy across the Julian Alps. His dash and vigour carried all before him to victory at the second battle of Bedriacum. He pressed on to Rome, but came too late to save Flavius Sabinus. For a short time he was in supreme control, but after the arrival of Mucianus he was gradually thrust aside. Lapsing into private life, he enjoyed a quiet and happy old age in the city of his birth (Mart. 9. 99; 10. 23).

R. S.

PRINCEPS. When Augustus selected 'Principes' as the word which indicated most satisfactorily his own constitutional position, he chose, typically, a word which had good republican associations.

It was not an abbreviation of 'Principes Senatus', though that, also, was a republican title and one which Augustus held. The 'Principes Senatus', or First Senator, was before the time of Sulla the man who had been placed by censors at the head of the list of members of the Senate, and ranked as the senior member of that body. Augustus in the census of 28 B.C. enrolled himself as 'Principes Senatus' (Dio Cass. 53. 1; *Res Gest.*, c. 7), and succeeding Emperors held the same position.

'Principes' in the plural, meaning the 'chief men of the State', was a phrase commonly employed by late republican writers, as Cicero, and it continued to be used in the Empire (Suet. *Aug.* 66; *Res Gest.*, c. 12).

It was the singular 'Principes', however, applied to one prominent statesman, especially Pompey, in republican times, which supplied Augustus with something of a precedent (e.g. Sall. *H.* 3. 48. 23 M.; Cic. *Har. Resp.* 46. *Piv.* 25, *Dom.* 66, *Sest.* 84, *Red. Sen.* 5 and 29, *Red. Pop.* 16). Early in 49 B.C. Cornelius Balbus wrote to Cicero (*Att.* 8. 9. 4): 'nihil malle Caesarem quam principem Pompeio sine metu uiuere.' Cicero used this designation of other statesmen besides Pompey. In 46 B.C. he used it of Julius Caesar (*Fam.* 9. 17. 3). He used it also of himself in connexion with the renown that he won by his action against the Catilinarian conspirators (*Phil.* 14. 17) and by his rallying of the Senate against Antony at the end of 44 B.C. (*Fam.* 12. 24. 2). The phrase 'Principes Civitatis' is also used of the 'Moderator Reipublicae' in Cicero's *De Republica* (5. 7. 9, where the reading is probably sound in spite of the doubts of Dessau, *Gesch. der röm. Kaiserzeit* I. 61, n. 2), though here, almost certainly, he was not thinking of Pompey. In this work Cicero foreshadows a Principate of the Augustan type, a revived Republic, with a statesman in the background strong enough to ensure that it should function properly. Augustus' choice of the word 'Principes' to designate his position was typical of his 'civilis animus'; it contrasted strongly with the 'Dictatura' and the suspected monarchical intentions of Julius Caesar and, in indicating an unquestioned but not a narrowly defined or clearly determined primacy, the word suited perfectly Augustus' definition of his own authority in the *Res Gest.*, c. 34: 'Auctoritate omnibus praestiti, potestatis autem nihil amplius habui quam qui fuerunt mihi quoque in magistratu conlegae.' *Principatus* was in sharp opposition to *dominatio*, 'Principes' to 'Dominus', and both Augustus and Tiberius took pains to suppress the use of the title 'Dominus', though it was a conventional form of polite address within the Roman family (Ov. *Fasti* 2. 142; Suet. *Aug.* 53; Dio Cass. 57. 8). The importance of this choice of title was appreciated by Roman historians; cf. Tac. *Ann.* 1. 1: 'cuncta discordiis civilibus fessa natione principis sub imperium accepit'; 1. 9: 'Non regno tamen neque dictatura, sed principis nomine constitutam rem publicam' (cf. 3. 28).

'Principes' was not an official title (like, for example, *Pater Patriae*). It was assumed by Roman Emperors at

their accession and not conferred upon them by definite grant of the Senate; nor does it appear in the list of official titles in documents and inscriptions. On the other hand, by itself it might be used in inscriptions (e.g. on the funerary urn of Agrippina: 'Ossa Agrippinae . . . matris C. Caesaris Aug. Germanici principis', Dessau, *ILS* 180). Claudius, in his edict de *Anaunorum civitate*, wrote: 'Gai principatu' (Dessau, *ILS* 206). The Greek form of the word, ἡγεμών, appears in the fifth Cyrene Edict of Augustus (line 86, *JRS* 1927, 36): Αὐτοκρατῶρ Καίσαρ Σεβαστός, ἡγεμῶν ἡμέτερος.

The nuance of the word, chosen by Augustus for its inoffensive character, was soon lost (though the use of the word itself persisted) as the government of the Roman Emperors became more autocratic. It may be doubted whether the Greeks ever appreciated its subtlety; Dio Cassius, for instance, in recording Tiberius' very typical remark (57. 8. 2), 'I am dominus of my slaves, imperator of my troops, and princeps of the rest', loses the point by using, for 'Principes', not ἡγεμῶν, but πρόκριτος, which means 'Principes Senatus'. The title 'Principes' in Latin survived the reorganization of Diocletian, though such phrases as 'Gloriosissimus Principes' show that its original significance had been lost.

Further light is thrown on the significance of the word 'Principes' by the title 'Principes Iuventutis', meaning Leader of the Equestrian Order, or, more probably, of the 'Iuventus' of that Order (see PRINCEPS IUVENTUTIS), which was given in certain cases in the early Empire to princes of the imperial house who might be considered as 'Heirs apparent', the relation of the 'Principes Iuventutis' to the 'Principes' being well illustrated by Ovid's words (*Ars Am.* 1. 194): 'Nunc iuucnum princeps, deinde future senum.'

M. Hammond, *The Augustan Principate* (U.S.A. 1933), Mommsen, *Röm. Staatsr.* ii. 2. 3; A. Gwosdz, *Der Begriff des römischen Principes* (1933); A. von Premerstein, *Vom Werden und Wesen des Prinzipats* (1937); Syme, *Röm. Rev.* Full bibliography in *PW*, s.v., xxii. 1998. J. P. B.

PRINCEPS IUVENTUTIS or **PRINCEPS IUVENUM**. The phrase occurs in the Roman Republic (Cicero, *Vatin.* 24, applies it to the younger Curio), but first appears with constitutional significance after the reorganization of the *Iuventus* by Augustus (see *IUVENES*). Probably in 5 and 2 B.C. respectively the *ordo equester* gave silver shields and spears to Augustus' grandsons, Gaius and Lucius, and hailed them as *Principes Iuventutis*. The same honour was paid possibly to Germanicus and Drusus, son of Tiberius; certainly to Tiberius Gemellus, adopted son of Gaius, in A.D. 37; to Nero, after his adoption by Claudius and, much later, to Commodus. The title was retained by these princes when they were no longer *Iuvenes*, and had something of the significance of 'Crown Prince'. This was lost when, occasionally after Domitian, and regularly in the third century, reigning Emperors used the title; its connexion with the *ordo equester* also disappeared in the third century.

J. P. B.

PRISCIANUS (early 6th c. A.D.), grammarian, born at Caesarea in Mauretania, taught in Constantinople. His *Institutiones grammaticae* in eighteen books (ed. M. Hertz in Keil's *Gramm. Lat.*, vols. ii and iii) is the most voluminous work of any Latin grammarian. The first sixteen books deal with the parts of speech in great detail, the last two with points of syntax; but there are no sections devoted specifically to the *vitia et virtutes orationis* or to metre. Priscian made use of Greek grammars, and appears to have been well acquainted with all the more important of his Latin predecessors. His expositions are liberally illustrated by quotations from the standard school authors such as Cicero, Virgil, and

Horace; he also drew, especially for books 5 to 10, on sources which afforded him many quotations from Republican writers; and his Greek authorities provided him with Greek examples. During the Middle Ages this work was widely read and commentaries were written upon it. Besides the long treatise, we possess the following shorter works: (a) *De figuris numerorum*, (b) *De metris fabularum Terentii*, (c) *Praeexercitamina rhetorica*, (d) *Institutio de nomine et pronomine et verbo*, (e) *Partitiones XII versuum Aeneidos*, (f) *De accentibus* (of doubtful authenticity), (g) *De laude imperatoris Anastasii* (312 hexameters), (h) *Periegesis e Dionysio* (1087 hexameters). Of these, (a), (b), and (c) were dedicated to Symmachus (consul 485); (a)-(f) are in Keil, *Gramm. Lat.* iii. 406-528, (g) and (h) in Baehrens, *PLM* v. 264-312. See also SCHOLARSHIP, LATIN.

Schanz-Hosius, §§ 1111-15.

J. F. M.

PRISCILLIANISTS. An ascetic sect holding doctrines seemingly derived from Gnosticism and Sabellianism. Its founder, Priscillian, a Spanish layman, was a Christian of noble birth and well educated. His preaching of a mystical and ascetic form of Christianity (c. A.D. 375) attracted the support of bishops Instantius and Salvian, but the opposition of Ithacius of Osseoba and Idatius of Emerita. However, a Church Council convened at Saragossa (380) failed to condemn the Priscillianists by name, and soon after Priscillian was consecrated bishop of Avila by his friends. Their opponents appealed to Gratian (q.v.) in 381, and forced them to leave Spain and settle in Aquitaine. They failed to win a hearing from Pope Damasus in Rome, but secured a rescript authorizing them to resume possession of their sees from Macedonius, *Magister Officiorum* to Gratian. With Gratian's murder in 383 by Magnus (q.v. 2) Maximus their situation worsened. Maximus wishing to conciliate the Gallic and Spanish clergy convened a new council at Bordeaux at which Priscillian and Instantius were condemned (384). These now foolishly appealed to Magnus Maximus himself. Their enemies Ithacius and Hydatius denounced them as practitioners of magic. Evodius, *Praefectus Praetorio* to Maximus, tried the case and found the accused guilty. Despite the protests of Martin of Tours, Priscillian was executed, while Instantius was banished to the Isles of Scilly (385). The condemnation of clerics by a lay tribunal shocked contemporaries, and Ithacius and Hydatius were forced to resign their sees. Priscillianism now developed into something of a mass movement in Spain. The Council of Toledo (400), however, reconciled the more moderate Priscillianists, but it remained strong in the province of Galicia until c. 600.

The difficulty of discovering precisely what Priscillian believed has even been heightened by the publication of eleven treatises found in a MS. under Priscillian's name at Würzburg in 1880. These documents, undoubtedly Priscillianist in origin, show the sectaries denouncing current heresies, Manichaeism and Patripassianism included, but maintaining a sort of Panchristism by which the Trinity would be merged in the person of Christ. This, coupled with vegetarianism, extreme ascetic practices, a reverence for apocryphal gospels, and a secrecy of rite and teaching, suggests that their views stemmed from a tradition of Gnosticism in the West which can be traced back to the late second century (cf. Jerome, *De Viris Illustribus* 121). The movement showed the existence of anti-ecclesiastical as well as non-orthodox trends in the ascetic movement in the West which were to be demonstrated in the Middle Ages by the Albigensians and Adamites.

PRISCUS, Eastern Roman politician and Greek historian of the fifth century A.D. Born in Panium (Thrace) and probably a professional rhetorician (see the article in *Suda*), he accompanied Maximinus in the embassy sent by Theodosius II to Attila in 449. He therefore had the opportunity of observing the court of the king of the Huns at first hand. In 452 he followed the same Maximinus to Arabia and Egypt. Later he became an *adessor* of the *magister equitum* Euphemius under the Emperor Marcianus. He was in Rome at least once, perhaps in 450. It is uncertain whether he was a Pagan or a Christian. He wrote a *Byzantine History* in seven books, perhaps starting where Olympiodorus (q.v. 3) ended. It included events from at least A.D. 433 to 472: it was probably published after Basilicus' fall (476). The history is lost, but long excerpts of it are preserved in Constantine Porphyrogenitus' *De legationibus* and other Byzantine sources. It was a principal authority for the account of the Huns in Cassiodorus (q.v.) and consequently in Jordanes (q.v.). He wrote as a defender of the interests of the senatorial class and as a critic of the policy of appeasing the barbarians. But he was above all an extremely acute observer of contemporary customs and conflicts both within and without the Roman Empire. His style owed much to Herodotus and something to Thucydides.

Fragments in *FHG* iv. 69; I. Dindorf, *Hist. Gr. Min.* i (1870), 275, and partially, in a better edition, C. De Boor, *Excerpta de Legationibus* (1901), 121 and 575. E. A. Thompson, *A History of Attila* (1948), 9 ff., 103 ff., 184 ff.; G. Moravcsik, *Byzantinoturcica* i (1958), 479; F. Altheim, *Geschichte der Hunnen* iv (1962), 300 ff. A. M.

PRISON. Roman criminal law did not recognize the imprisonment of free persons as a form of punishment. The public prison (*carcer, publica vincula*) served only for a short incarceration applied as a coercive measure (*coercitio*, q.v.) by magistrates for disobedience or recalcitrance to their orders. During inquiry in a criminal trial the accused person could be detained (*custodia reorum*) so as to be at the disposal of the authorities; condemned persons could be imprisoned so as to ensure the execution of the sentence, but as the rules were very lax and no term for such a detention was fixed, the magistrates postponed the arrest of the malefactors in order to give them the chance of going into voluntary exile (see *EXSILIUM*). Private, domestic prisons existed in larger households for the imprisonment of slaves. See also *TULLIANUM*. A. B.

PROAGON, a kind of dress-parade in the Odeum of *choregoi*, poets, actors, and choruses a few days before the Great Dionysia and the Lenaea at Athens. Probably the names and subjects of the plays were announced. At the *proagon* next after the death of Euripides, Sophocles appeared in mourning and his actors and chorus did not wear the usual crowns (Aeschin. 3. 66–7 with schol.; Pl. *Symp.* 194 a; *Vit. Eurip.* and schol. on *Ar. Vesp.* 1109). A. W. P.-C.

PROBA (4th c. A.D.), poetess, besides an epic on the civil war between Constantius and Magnentius, composed out of Virgilian scraps a cento (q.v.) on parts of the Old and New Testaments.

TEXT. K. Schenkl, *CSEL* xvi (1887).

PROBOULOI (πρόβουλοι) was the ordinary word for 'committee', used in many Greek States. The best-known committee with this title is the one appointed in Athens in 413 B.C. It consisted of ten men over 40 years of age;

one of them was Sophocles the tragedian. It was appointed immediately after the failure of the Sicilian expedition, evidently because it was felt that the democratic *ekklelesia* (q.v.) and *boule* (q.v.) could not conduct the war efficiently and responsibly. It had some executive powers, but their precise extent is not known; it probably took over some of the functions of the *prytaneis* (q.v.). In 411 the *probouloi* were included in a commission appointed to draft a new constitution; this led to the revolution of the Four Hundred (q.v.), after which they are not heard of again.

Hignett, *Hist. Athen Const.* 269.

D. M. M.

PROBUS (1), MARCUS AURELIUS (*PW* 194), born at Sirmium in A.D. 232. His earlier career has become confused with that of Tetricus; Probus is little known. Set up as rival to Florian (q.v.) after the death of Tacitus, he outmanoeuvred Florian at Tarsus and became sole Emperor (autumn 276).

The main task of Probus was to consolidate the work of Aurelian which had been interrupted by his death. In Gaul from 277 to 279 he dealt with raids by Alamanni, Franks, and Burgundians and strengthened the Rhine frontier. Then, moving eastward, he defeated the Vandals on the Danube and put down the insurrection of Lydius at Cremna in Pisidia. In Egypt the Blemmyes captured Ptolemais and Coptos, but were defeated by Probus' generals. In 280 he settled the Bastarnae in Thrace. He celebrated a splendid triumph in Rome in 281. In 282 he was at Sirmium, when the troops in Raetia proclaimed Carus, the Praetorian Prefect, Emperor. A corps, sent by Probus, deserted to Carus, and Probus was killed by his own troops.

The rebellions of Saturninus in the East (277–8) and of Proculus and Bonosus in Gaul (280), and an attempt at revolt in Britain, though all successfully quelled, point to serious discontent in the army. The stern discipline of Probus and his employment of troops on the planting of vineyards were both unpopular. The danger of settling barbarians in the Empire was revealed by the exploit of a band of Franks, who made their way home after extensive ravages in the Mediterranean. Probus sought the co-operation of the Senate in government, but did not take the decisive step of putting senators back into military commands.

G. Vitucci, *L'imperatore Probo* (1952).

H. M.; B. H. W.

PROBUS (2), VALERIUS (late 1st c. A.D.), of Berytus, scholar. He interested himself in republican authors and somewhat in the fashion of Aristarchus worked over the texts of Terence, Lucretius, Virgil, and Horace, indicating his views by critical signs. He himself published little (cf. Suet. *Gram.* 24), but communicated his learning in conversation with friends. It is improbable that he wrote full commentaries, but some information about his work on Terence and Virgil is found in scholia to those authors. He is not mentioned in the scholia to Horace. Aulus Gellius and later grammarians quote him with some frequency on points of grammar. The *Libri iuris notarum* (ed. Th. Mommsen in Keil's *Gramm. Lat.* iv. 271–6) attributed to him is not the original work. Other treatises: *Ars catholica, Instituta artium, Appendix Probi, De nomine, and De ultimis syllabis* (ed. Keil, *Gramm. Lat.* iv. 3–43, 47–192, 193–204, 207–16, 219–64) are neither genuine notes of Probus nor based on his writings; apocryphal also is the extant commentary on the *Eclogues* and *Georgics* of Virgil (ed. H. Hagen in Thilo's *Servius* iii. ii). As early as the fifteenth century a 'Younger Probus' was conjured up to account for the false ascription of these works. See *SCHOLARSHIP, LATIN*.

Schanz-Hosius, §§ 477–9.

J. F. M.

PROCESSION. Processions were very prominent features of Greek festivals. There are various kinds. Best known is that in which people who take part in a festival go in an orderly procession to the temple of the god; so, for instance, in the Panathenaic procession as represented on the Parthenon frieze (cf. PANATHENAEA). The gods are waiting for the procession; certain men look after its order; virgins carry sacred implements, elderly men green branches; youths conduct the sacrificial animals; chariots, which are to partake in the following contest, and the cavalry follow. Later the *peplos* brought to the goddess was hoisted on a ship set on wheels. Everyone's place in the procession was fixed and there was a special building, the Pompeion near the Dipylon gate, where the procession was arranged and from which it started. An inscription from Andania prescribes arrangements in detail (*SIG* 736). Sometimes a procession went to a mountain-top in order to perform a weather ceremony or fire-ritual, e.g. the Daidala to Mt. Cithaeron. Another kind of procession is due to a connexion between two cult-places. The outstanding example is the Iacchus procession, in which the people went to Eleusis in order to celebrate the mysteries. First the sacred things were brought to Athens, on the 14th Boedromion they were taken back to Eleusis together with the image of Iacchus, conducted by the priests, the magistrates, the ephebi, and the great mass of *mystae*. Sometimes a god was brought to visit another temple, e.g. Artemis from the suburb of Mesoa to Patrae; Dionysus was brought from his temple into the orchestra of the theatre in order to be present at the performances. Processions in which a god made his epiphany are peculiar to Dionysus. At the Anthesteria in Athens he was brought into the city on a ship set on wheels. Sometimes the image of a god was brought out to be cleansed; so that of Athena Polias in Athens was taken to the shore of Phaleron. The carrying of the image of a god in procession has always a special reason. In Greece, unlike many other countries, the god was not carried about in procession in order to give blessings and to be venerated. Blessings were distributed by carrying round sacred or rather magical things—the phallus, which was absent from hardly any Dionysiac procession, the 'may' (*εiresione*), the swallow, etc.; the last are rural processions, sometimes conducted by children collecting contributions.

E. Pfuhl, *De Atheniensium pompis sacris* (1900), M. P. Nilsson, *Opusc.* i. 166 ff. M. P. N.

PROCLUS (Πρόκλος), Neoplatonist philosopher, A.D. 410 or 412–485. Born in Lycia of wealthy parents, he came as a young man to Athens where, save for a brief period of exile occasioned by his fervent paganism, he spent the rest of his life, at first as the pupil of Syrianus and later as Head of the Academy (whence his title 'Diodochus'). His importance as a creative thinker has sometimes been exaggerated: most of the new features which distinguish his Neoplatonism from that of Plotinus are traceable, at least in germ, to Iamblichus or Syrianus. But he is the last great systematizer of the Greek philosophical inheritance, and as such exerted a powerful influence on medieval and Renaissance thought. His learning was encyclopedic and his output vast. Extant works include the following.

(a) Philosophical treatises: *Elements of Theology* (Στοιχειώσις θεολογική, ed. E. R. Dodds² with transl. and comm., 1963), a concise summary of Neoplatonist metaphysics; *Platonic Theology* (ed. A. Portus, 1618; new edition by H. D. Saffrey and L. G. Westerink in preparation), a more elaborate account in six books; *Elements of Physics* (Στοιχ. φυσική, ed. A. Ritzenfeld with Germ. transl., 1912), based on Aristotle's theory of motion; *Opus-*

cula (ed. H. Roese, 1960), essays on Providence, Fate and Evil, long known only in William of Moerbeke's Latin version but now partially available in the original Greek.

(b) Commentaries on Plato's *Timaeus* (ed. E. Diehl, 1903–6); *Republic* (ed. W. Kroll, 1899–1901); *Parmenides* (ed. V. Cousin, *Procli Opera Inedita*², 1864, now supplemented by R. Klibansky and C. Labowsky, *Plato Latinus* iii, 1953); *Alcibiades I* (ed. L. G. Westerink, 1954); *Cratylus* (excerpts, ed. G. Pasquali, 1908).

(c) Scientific works: *Outline of Astronomical Theories* (Ἑποτάμωσις τῶν ἀστρονομικῶν ὑποθέσεων, ed. C. Manitius with Germ. transl., 1909); commentaries on Euclid, Nicomachus, and Ptolemy.

(d) Literary works: *Hymns* (ed. E. Vogt, 1957); *Chrestomathia* (ed. A. Severyns, 1938–, with Fr. transl. and comm.), a handbook of literature extant in epitome only, authorship disputed (see *ERIC CYCLE*); *Scholia on Hesiod, Works and Days* (in Gausford, *Poet. min. Graec.*, 1823).

LIEF. MARIUS, *Vita Procli* (ed. J. F. Boissonade, 1814, repr. in Cousin, *Procli Opera Inedita*², 1864).

DISCUSSION. A. E. Taylor, *Philosophical Studies* (1913), 151 ff.; L. J. Rosan, *The Philosophy of Proclus* (1940); E. R. Dodds, introduction to his edition of *Elements of Theology*, see also bibliography to NEOPLATONISM E. R. D.

PRO CONSULE, PRO PRAETORE. In 326 B.C. Publius (q.v. 2) was about to take Naples when his consulate ran out. The people voted that he should retain his *imperium* in place of a consul (*pro consule*). He later triumphed as such. *Prorogatio imperii* (as this was called) was henceforth voted for both consuls and praetors whenever necessary for military purposes and became a routine measure passed by the Senate alone, which relieved the shortage of holders of *imperium* endemic in the original republican system. Quaestors, similarly, could be continued *pro quaestore*.

In 295 B.C., four private men held command *pro praetore*, in at least two (and probably in all four) cases delegated by a consul on his own authority. Such promagistracy by delegation sporadically occurs later; but in the classical Republic it was, on the whole, superseded by the system of *legati* (q.v.) under the Senate's control. *Imperium pro magistratu* was exercised in a *provincia* normally defined by the Senate, and the holder was not allowed to go beyond it. During the Hannibalic War *prorogatio* for long periods became common and several *privati* were given *imperium pro magistratu* by the people (but not, at this stage, allowed to triumph). The former practice became rare and the latter was abandoned at the height of the Senate's authority in the second century, but both were revived (and *privati* like Pompey even triumphed) in the troubles and the shortage of commanders of the last century of the Republic. Quaestors and legates could always be given *imperium pro praetore* if necessary.

After 146 B.C., with the multiplication of provinces, *prorogatio* became an integral part of the administrative system. With the development of the *quaestiones* (q.v.), praetors normally and consuls, if at all, went to a province after their year of office. Sulla made this practice law, except in emergencies. The increase in the number of provinces in the 60s, and the unwillingness of some men (like Cicero) to serve abroad, led to a great increase in long tenures, and this trend was accelerated by the series of emergencies characterizing that period.

Consuls were always prorogued *pro consule*, praetors at first usually *pro praetore*; but both during and after their year of office their *imperium* might be raised to rank *pro consule* (with twelve lictors) when the size of their armies or the importance of their tasks required it. After Sulla, all governors seem to have ranked *pro consule*. Legates of proconsuls holding large commands (e.g. of Pompey and

Caesar) now received *imperium pro praetore* on appointment. The number of their lictors is not certain.

Pompey, in 52 B.C., fixed a compulsory interval between magistracy and provincial government and seems to have tried to limit tenure of pro-magisterial command, in principle, to a year (as had been Sulla's intention), in order to prevent dangerous accumulation of power. This detached the magistracy from the pro-magistracy and regularly bestowed the latter on *privati* chosen by the Senate—a move that Caesar branded as unconstitutional and himself at once abandoned. But Augustus embodied Pompey's idea in his settlement of the 'public provinces' administered by (praetorian or consular) proconsuls with six lictors. After 23 B.C., the Emperor had proconsular *imperium* (defined as *maius* with respect to that of others) and his governors thus ranked as *legati pro praetore* (with five lictors). They would be either ex-praetors or ex-consuls, according to the importance of their command. The Emperor's proconsular *imperium* was probably the original basis of the Emperor's right of coinage and judicial powers. (See also *PROVINCIA*.)

Mommsen, *Röm. Staatsr.*, see index, s.v.; W. F. Jashemski, *Origin and History of Proconsular and Propraetorian Imperium to 27 B.C.* (1950). E. II.

PROCOPIUS, Greek historian, born in Caesarea in Palestine c. A.D. 500. After a thorough rhetorical and legal education—where he studied we do not know—he obtained by 527 a post as counsellor (*ἐμβούλος*) and later became assessor (*πρωεὶδης*) on the staff of Justinian's great marshal Belisarius. He accompanied Belisarius on his Persian (527–31), African (533–6), and Italian (536–40) campaigns. By 540/42 he was back in Constantinople, where he probably continued his official career and became Prefect of the City in 562. The date of his death is unknown.

His principal work is his *History of the Wars of Justinian* in eight books. Books 1–2 deal with the first Persian War, 3–4 the war against the Vandals in Africa, and 5–7 that against the Goths; these were probably published in 551. Book 8 contains supplementary material and a short history of the period 551–3. The *History* deals primarily with Justinian's campaigns, but there are many digressions on the political scene in Constantinople and on events elsewhere in the Empire. Procopius, as Belisarius' confidant, had direct and comprehensive acquaintance with military affairs and was favourably placed to interrogate eyewitnesses of what he had not himself seen. These are the main sources upon which his history relies. But he also made use of documents and other written sources in Greek and Latin, and probably also in Syriac. Procopius was a careful and intelligent man, of balanced judgement and sincere in his desire to establish the truth. He has a slight prejudice in favour of his hero Belisarius, and a coolness towards Justinian, Theodora, and the central government. His general attitude is somewhat old-fashioned and backward-looking. The *History* is a most reliable source for the matters of which it treats; but little can be inferred from Procopius' silence.

The *Secret History* (*Ανέκδοτα*), the authenticity of which has often been doubted, but is now generally accepted, covers the same period as Books 1–7 of the *History of the Wars*, but in a very different spirit. It is a virulent, scurrilous, and often scabrous attack upon the whole policy of Justinian, who is blamed for everything from barbarian invasions and financial insolvency to floods and earthquakes. The work rests mainly upon court scandal, and where it conflicts on matters of fact with the *History* it is generally to be rejected. Written about 550, it cannot have been published so long as Justinian was alive. Procopius evidently embodied in it, from private motives and in grossly exaggerated and uncritical form, many of the criticisms of Justinian only adumbrated in his main work.

On Justinian's Buildings was composed (c. 553–5) at the Emperor's behest, and is panegyric in tone. It is a first-class source for the geography, topography, and art of the period; and Procopius displays an unexpected talent for lucid architectural description.

All the works are written in a classicizing, but generally clear, Greek, with many echoes and reminiscences of earlier historians, particularly Thucydides. Procopius, however, is no imitative epigone, but a historian of the first rank, helped rather than hindered by the literary tradition within which he wrote.

Ed. J. Haury, 3 vols. (1914–40; repr. 1963 4). B. Rubin, *Procopius von Kaisarica* (1954). R. II.

PROCRIUS (*Προκρίης*), wife of the Attic hero Cephalus (q.v.). After sundry adventures, which have come down to us in late forms (Ov. *Met.* 7. 794 ff.; Hyg. *Fab.* 189), she was accidentally killed by him.

PROCRUSTES (*Προκρούστης*; also called **Damastes**, *Δαμάστης*, Apollod. *Epit.* 1. 4, Plut. *Thes.* 11, or **Poly-pemon**, *Πολυπήμεον*, Paus. 1. 38. 5, or **Procratas**, *Προκράτης*, Bacchylides 17. 28). All these names refer to his activities. He lived in some part of Attica (see Jebb on Bacchyl. loc. cit.), and having 'overcome' (*δαμάσσειν*) strangers would force them to lie down on one of his two beds. Here he caused them 'much woe' by hammering them out (*προκρούειν*) to a sufficient length to fit the longer bed (so Bacchyl. and Apollod.) or racking them out with weights (Hyg. *Fab.* 38. 3). If they were longer than the shorter bed he lopped them (*προκόπτειν*). Theseus (q.v.) killed him in like manner. His father was Poseidon (Hyginus), or is called by one of the names elsewhere given to Procrustes himself (see e.g. Bacchyl.).

See further Höfer in Roscher, *Lex.*, art. 'Polypemonides', and refs. there. II J. R.

PROCLUS (PW 9a), a prominent Roman jurist of the first half of the first century A.D., of whom little, however, is known. The Proculian School took its name from him (see SABINUS 2). Author of *Epistulae*, a collection of opinions and discussions taken from his practice, and of *Notae* to Labco (q.v. 1), the precursor of the School. He was frequently cited by later jurists.

A. M. Honoré, *Tydschrift voor Rechtsgeschiedenis* 1962, 472. And see under JURISPRUDENCE. A. II, B. N.

PROCURATOR signified an agent or, in legal proceedings, representative, and under the Principate came to be the distinctive term for the employees of the Emperor in civil administration. They might be freedmen from the imperial *familia*, but the majority, especially of the holders of the more important posts, were always *equites* (q.v.).

The principal types of procuratorial post were:

(1) The government of minor provinces, such as Judaea, Noricum, Thrace, and the Mauretania. Such equestrian governors were originally called *Praefecti* (a new inscription, *AE* 1963, 104, shows that Pontius Pilate was called *Praefectus Judaeae*). They were, with very rare exceptions, always *equites*, not freedmen, commanded auxiliary units in their provinces, and exercised full civil and criminal jurisdiction. In the later first and second centuries these provinces tended to be transferred to senatorial *legati pro praetore*, but the Mauretania, Epirus, and the small Alpine provinces remained under procurators.

(2) Procurators of imperial provinces governed by *legati* performed functions equivalent to those of a provincial quaestor in the senatorial provinces, collecting revenues (Cass. Dio 53. 15) and paying the troops (Strabo 167). *Equites* were more common in these posts, but

Licinus who was exacting excessive tribute from the Gauls in 15 B.C. (Cass. Dio 54. 21) is an early example of a freedman.

(3) Procurators of senatorial provinces were in charge of the properties of the Emperor within the province (Tac. *Ann.* 4. 15, 13. 1). The fact of their connexion with the Emperor tended, however, to give them a wider role; Junius Cilo, the procurator of Pontus and Bithynia, was awarded consular *insignia* in A.D. 49 for escorting Mithridates of the Bosphorus to Rome (Tac. *Ann.* 12. 21). They also tended to acquire or usurp the exercise of jurisdiction; this practice was repeatedly forbidden by the Emperors in respect of criminal jurisdiction, but was formally recognized, at least from the end of the second century, in cases between the *fiscus* (q.v.) and *privati*.

Both of these types of procurator might act in place of the senatorial governor of the province. The first-known occasion was in Asia about 88, and this function became increasingly common from the first half of the third century.

(4) Procurators of imperial estates. Their functions are most fully illustrated by the second-century inscriptions from the imperial estates in Africa, which show them issuing regulations about the mutual obligations of *coloni* and *conductores* (q.v.). If the mining area of Vipasca is to be regarded as an imperial property, the inscriptions from there (*FIRA*² i. 104-5) show the wide police and administrative powers of the procurator.

(5) Procurators connected with indirect taxes appear in the first century and more widely in the second (see *PORTORIA* and *VECTIGAL*). Their functions are largely unknown; they may perhaps have judged cases relating to the taxes or have been responsible for collecting them. An anecdote of Suetonius (*Dom.* 12) shows a procurator judging cases relating to the *fiscus* (q.v.) *Judaicus*.

(6) Throughout the first two centuries there was a steady accretion of procuratorial posts in connexion with such things as the aqueducts, the *annona*, the Mint, and imperial *ludi* or *familiae gladiatoriae*.

Entry to procuratorial posts followed normally on military service, either (for men who were already *equites*, q.v.) the 'tres militiae' (*praefectus cohortis*, *tribunus legionis*, *praefectus alae*), or from the rank of *primipilus bis* for men who had risen from the ranks. The first century saw the formation of the 'praetorian cursus', by which a *primipilus* (q.v.) went as tribune of a cohort successively in the three urban units (*vigiles*, Urban, and Praetorian cohorts), went to another legion as *primipilus bis*, and then moved to important procuratorships. In the middle of the first century equestrian procurators began to gain promotion to the major prefectures, Egypt, the *annona*, and the Praetorian Cohorts, and towards the end of the century to the 'secretarial' posts with the Emperor, previously the preserve of imperial freedmen. This process was completed in the reign of Hadrian. Hadrian also created the junior equestrian post of *advocatus fisci*, which served as a non-military point of entry to the equestrian cursus. From the Flavian period onwards it was not uncommon for equestrian office-holders to be adlected into the Senate by the Emperor.

With the steady growth in the number of equestrian posts (182 are attested by the mid third century), they rapidly fell into a regular hierarchy of promotion, which by the mid second century ran (after military service or the post of *advocatus fisci*), from minor procuratorial posts, to provincial procuratorships, equestrian governorships, 'secretarial' posts, and major prefectures. In the later second century came the final formulation of gradations of procuratorial posts by the level of pay—*sexagenarii* (those receiving 60,000 sesterces p.a.), *centenarii* (100,000), *ducentarii* (200,000), and, rarely, *trecentarii* (300,000). Freedmen procurators have been much less

studied, but clearly became progressively less important in the course of the Principate.

In the second half of the third century equestrians steadily replaced senators as provincial governors, a process completed by Diocletian (except for the surviving proconsulates of Africa and Asia); the word *praeses*, increasingly common for both types of governor in the third century, was now universal for equestrian governors. *Procuratores* survived as the officials in charge of imperial mints, mines, factories, and landed properties.

PRODICUS of Ceos, a Sophist and a contemporary of Socrates. We have very little reliable information about his life. We learn from Plato that he was employed by his native city on diplomatic missions and that he took advantage of the opportunities these afforded to further his professional interests. He gained considerable repute in his profession and demanded high fees for his courses of instruction. These are described as being concerned with the right use of words and were marked by their subtle discriminations between the precise meanings of kindred terms. Plato represents Socrates as being on friendly terms with him and paying tribute to the value of his teaching, though always with a touch of irony. There are also references to discussions, or perhaps rather exhortations, on moral questions, and he was the author of the famous myth 'The Choice of Heracles'.

Testimonia and fragments in H. Diels, *Vorsokr.*¹¹ 108-19, M. Untersteiner, *I Sofisti* II (1949). G. C. F.

PRODIGIA. A *prodigium* is an event contrary to the supposed or known workings of nature, taken as a sign that the *pax deorum* is broken or in danger of being broken; whereas an *omen* is commonly a natural and ordinary event, observed by a diviner under certain circumstances. Examples are frequent in Livy, and collected by Julius Obsequens, *Prodigiorum liber*, from him. For example, in 136 B.C. (Obs. 25) the town of Rhegium was mysteriously burned, many objects in various places struck by lightning, streams at Puteoli ran blood, and a slave-girl bore a monstrous child. To deal with such things (*procurare*), Etruscan experts were often summoned (cf. *HARUSPICES*), as in the above instance; by their advice the child was burned and his ashes thrown into the sea. Other examples are mysterious voices of warning (Obs. 24, in 137 B.C.); rains of milk, blood, etc. (ibid. 28, 30, 31, 35, 51, 54); meteors and other like phenomena; the *hastae Martis* or the *ancilia* moving of their own accord (ibid. 44 a, 47); earthquakes and eruptions; statues sweating or weeping (ibid. 6, 28, 52); phantoms of various kinds (ibid. 17, 18, 51). Sacrifices, lustrations, and a *nouendiale sacrum*, or ceremony lasting nine days, were among the commonest forms of *procuratio* (e.g. ibid. 4, 12, 23).

See bibliography to DIVINATION.

H. J. R.

PROEDROI (πρόεδροι) means 'chairmen'. In the fifth century B.C. in Athens the chair at meetings of the *boule* (q.v.) and the *ekklesia* (q.v.) was taken by the foreman of the *prytaneis* (q.v.), but later this duty was taken over by *proedroi*, presumably because the foreman of the *prytaneis* was thought to be overburdened with responsibilities. The new system was introduced at some date between 403/2 and 378/7 (cf. D. M. Lewis, *BSA* 1954, 31 ff.). At each meeting of the *boule* or *ekklesia*, the foreman of the *prytaneis* picked nine *proedroi* by lot from the other members of the *boule*, one from each of the ten *phylai* (q.v.)

except that to which the *prytaneis* themselves belonged, and then he picked by lot one of these nine *proedroi* to be their foreman (*ἐπιστάτης*). One man could not be a *proedros* more than once in a prytany, nor foreman of the *proedroi* more than once in a year. The *proedroi* saw that good order was kept at the meeting, brought forward the various items of business in accordance with the agenda, counted the votes, and finally dismissed the meeting.

Arist. *Ath. Pol.* 44. 2-3.

D. M. M.

PROETUS (*Προῖτος*), a mythical king of the Argolid, who first appears in Homer, in the story of Bellerophon (q.v.). Later (Apollod. 2. 24 ff.) he and Acrisius are sons of Abas son of Danaus (q.v.); for their quarrel see ACRIUS. The only other legend of importance concerns his daughters. These insulted the statue of Hera, or would not receive the rites of Dionysus (the latter is the Hesiodic story, the former and more probably original from Acusilaus, Apollod. 26). They were driven mad by the offended deity and wandered about the country 'with all manner of unseemliness'. In particular, they fancied themselves cows (Verg. *Eccl.* 6. 48). Melampus (q.v. 1), being asked to heal them, demanded a share of the kingdom; this was refused, and they went madder still and killed their own children. Proetus now agreed to Melampus' terms, although they were raised to include another share for his brother Bias. The women were then caught at Sicyon and cured, except one, Iphinoe, who had died.

H. J. R.

PROGYMNASMATĀ, or preliminary exercises, constituted the elementary stage of instruction in schools of rhetoric. There are extant collections by Aelius Theon, Hermogenes (2), Aphthonius, Libanius (qq.v.), and Nicolaus. The principal exercises were *μῦθος* (fable), *διήγημα* (narrative), *χρεία* (moral anecdote), *γνώμη* (maxim), *ἀντισκευή* and *κατασκευή* (refutation and confirmation), *κοινὸς τόπος* (*locus communis*), *ἐγκώμιον* (encomium), *σύγκρισις* (comparison), *ἡθοποία* (piece written in character), *ἔκφρασις* (description), *θεῖσις* (abstract question), *νόμου εἰσφορά* (introduction of a law). The influence of such textbooks on later literature, including that of the Middle Ages and Renaissance, was considerable.

TEXTS: Theon in Spengel, *Rhet.* ii, Hermogenes, ed. H. Rahe (1913); Aphthonius, ed. H. Rahe (1926); Nicolaus, ed. J. Felten (1911); Libanius, ed. R. Foerster, vol. viii (1915) Kroll, *PW*, Suppl. vii 1118, D. L. Clark, *Rhetoric in Greco-Roman Education* (1957), 177 ff.

D. A. R.

PRO(H)AERESĪUS, (A.D. 276-367/8). Greek rhetorician. Born in Cappadocia, he studied in Antioch and Athens, where he succeeded his teacher Julianus as professor of rhetoric. He gained an immense reputation through his ability to improvise and his phenomenal memory. Invited by the Emperor Constantine to his court in Gaul, he had honours showered upon him both there and in Rome; the Senate set up a statue of him, and offered him a chair of rhetoric in the city, which he declined. Among his students in Athens were SS. Basil and Gregory of Nazianzus and the future Emperor Julian (qq.v.). When Julian in 362 issued his edict forbidding Christians to teach, special exception was made for Prohaeresius, who was a Christian; he preferred, however, to resign his chair, but took it up again after Julian's death. None of his speeches survives.

Eunap. *1'S Giangrande* 63-79; Jerome, *Chron.* a. 2378. R. B.

PROLETARIĪ, as opposed to *assidui*, were the citizens of Rome too poor to contribute anything to the State except their children (*proles*). Originally they were equated with the *capite censi* as persons who paid no tribute and were exempt from military service. In the middle second century B.C., however, direct taxation was abandoned and

the property qualification for military service began progressively to be lowered. It is possible that then the term *proletarii* took on a more specialized meaning, and was used to distinguish those newly eligible for enrolment from those (the *capite censi*) who still remained exempt. In 107 this distinction will have disappeared again, when Marius threw military service open to all.

Although in Ciceronian times the *proletarii* are said to have constituted a majority of the total population, they had virtually no voting strength in the major electoral assemblies. They were collected in a single century, which only voted if the issue was still open after the decision of the centuries drawn from the five property classes had been declared.

Mommsen, *Röm. Staatsr.* ii. 237 f.; G. W. Botsford, *The Roman Assemblies* (1909), 207 f. L. S. S.

PROMETHEUS (*Προμηθεύς*, 'the forethinker'; all other etymologies of his name are merely fantastic; the word is used as a common noun, Aesch. *PV* 86), an ancient and popular demigod, one of the Titans (son of Iapetus, Hesiod, *Theog.* 510, where his mother is Clymene the Oceanid). Originally, his character is entirely non-moral; he is the supreme trickster (cf. the like figure, Coyote or another, in Amerindian mythologies, W. Schmidt, *Origin and Growth of Religion*, 189, citing Kroeber), and as such is on occasion opposed to Zeus, whom he outwits. It would appear that he developed in common belief into a supreme craftsman, and was worshipped as such by craftsmen, particularly in Attica (see L. Deubner, *Attische Feste* (1932), 211 f.). Probably it is in this connexion that he is associated with fire and with the creation of man.

Hesiod has two principal tales of him. The first is that when Zeus hid fire away from man, Prometheus stole it and brought it to earth again (*Theog.* 562 ff.). Zeus would not give fire to the ash-trees for man's use, i.e. prevented the hardwood fire-sticks from being effective when rubbed against the soft ones; Prometheus therefore stole from the gods enough fire to make the pith of a stalk of giant fennel smoulder, and from this men got fire once more. It is a tale of common enough type, see Stith Thompson, A 1415 and references. Hesiod gives it, what probably did not originally belong to it, a preface explaining why Zeus acted so. Prometheus had tricked him with regard to the respective share of gods and men in burnt offerings (*Theog.* 535 ff.); he wrapped all the poorest parts of the victim up in fat, the best parts in another bundle, and bade Zeus choose; the simple-minded god taking the fat, man has ever since kept all the best of the meat for himself. This is a manifest aetiological myth to explain sacrificial usage, and its hero may always have been Prometheus. The story is also given an epilogue. Zeus punished mankind in general by creating woman to their confusion; the first woman was called Pandora, because she had 'all gifts' from the gods (she probably is in reality an earth-goddess, the All-giver); Prometheus' simple brother Epimetheus ('After-thinker') married her despite his brother's warnings, and she let out all evils from the store-jar where they were kept (*Theog.* 570 ff., *Op.* 50 ff.). This tale, for which cf. the part played by Eve in the Hebrew myth, is a piece of satire against women with which Prometheus has no necessary connexion.

The other tale is the vengeance of Zeus on Prometheus. He chained him and sent an eagle to eat his liver, which was as immortal as the rest of him and grew at night as fast as the eagle could devour it by day. In this torment he remained until Heracles released him. In Hesiod the reason for the punishment is the deceit regarding the sacrifices (*Theog.* 534 ff.); in Aeschylus (*PV* 7 ff.) it is the theft of fire. But a further complication is introduced, by Aeschylus himself so far as we know. Prometheus

knew the secret regarding Thetis (q.v.), and would not reveal it till, apparently, he at last gave it up as the price of his liberty. Aeschylus also gives Prometheus high moral dignity as the friend of man against the tyranny of Zeus.

Prometheus, as master-craftsman, makes man from clay (Paus. 10. 4. 4) or from clay plus bits of other animals (Hor. *Carm.* 1. 16. 13 ff.).

The punishment of Prometheus and his rescue by Heracles are found in many forms of archaic art from the seventh century, and were shown by Panaeus in his paintings for Phidias' Zeus at Olympia. He appears on several Attic vases of the second half of the fifth century, carrying fire in a fennel-stalk from which satyrs light torches—evidently illustrating a satyr-play (see J. D. Beazley, *AJArch.* 1930, 618 ff.). The creation of Pandora was shown on the base of the Parthenon, but we do not know whether Prometheus or Hephaestus was there the artificer.

PRONUNCIATION, GREEK. The main features of ancient Greek pronunciation may be established through the study of contemporary documents, literary texts, evidence given by grammarians, etc. In many points, however, only approximate phonetic accuracy may be claimed. What follows refers essentially to classical Attic written in the Ionic alphabet (see ALPHABET, GREEK).

A. VOWELS AND DIPHTHONGS

Attic had five short vowels and seven long vowels. (1) Three letters indicated both short and long vowels: α, ι, υ. *ā* and *ā* were central or, more likely, slightly fronted vowels: [a] (cf. *a* in Northern Engl. *cat*) and [a:]; *ī* and *ī* were close front vowels similar in quality to French *i* and to *ee* in Engl. *see*. In Attic, in part of Ionic, etc., *υ* probably represented [y] and [y:]; i.e. front vowels with lip-rounding, similar to French *u* (in *lune*) and German *ü*. Other dialects used the same sign to indicate [u] and [u:]; back vowels similar to German *u* (and to *oo* in Engl. *too*). (2) In Ionic and Attic η = [e:]; long open *e* (as *ai* in French *maître*); [e:], i.e. long close *e* similar in quality to the vowels of French *été*, was represented in the pre-Ionic alphabet by ε, but in the standard Ionic alphabet by the digraph ει (see below). ω = [o:], long open *o*, as in French *fort*; [o:], long close *o* (like the vowel of French *beau*), was expressed first by ο and then by the digraph ου. Later on (c. 350??) [o:] was replaced by [u:] still spelled ου. ε and ο indicated short vowels, either similar in quality to ε [e:] and ου [o:] or more open than these, but less open than η [e:] and ω [o:] respectively. (3) ει, ου. By the end of the fifth century B.C. Attic and Ionic had changed the original diphthongs [ei], [ou] into long vowels: [e:] and [o:]; this is why the digraphs ει and ου were also used for the vowels [e:] and [o:], of similar quality but of different origins. (4) αι, οι, υι were genuine diphthongs [ai], [oi], [yi] (?); in the second century A.D. [ai] changed into [e:], and later on [oi] into [y:]; similar changes had occurred in Boeotian many centuries before. αυ and ευ remained diphthongs [au] and [eu] throughout the ancient period; their second element was probably [u] and not [y]. (5) αι, οι, υι were long diphthongs, and so were probably αυ, ου, υυ. The *i*-element had probably been lost in pronunciation, if not in spelling, by the second or first century B.C. The *iota subscript* is a Byzantine spelling innovation.

Later developments. In Modern Greek the phonemic distinctions of quantity have disappeared and phonetically only the stressed vowels may be considered long. ι, η, υ, ει, οι, υι are now pronounced [i]. The second element of the *u*-diphthongs has been changed into a

spirant [f] or [v] according to the environment. Most of these changes were probably complete by the early Byzantine period.

B. CONSONANTS

π, τ, κ and β, δ, γ indicated the voiceless and voiced plosives of the bilabial, dental, and velar series. It is likely that τ and δ were dental and not alveolar like the Engl. *t* and *d*. φ, θ, and χ were voiceless aspirates [p^h], [t^h], [k^h]; cf. the southern English pronunciation of *p* in *pin* and such words as *top-hat*. (2) μ was the labial and ν the dental nasal. A velar variant of the latter (cf. Engl. *ink*) was found before velar sounds and was frequently indicated by γ (as in *συγγράφω*), which in this use was called *άγμα* by the ancient grammarians. ρ was probably a voiced rolled tip-tongue [r], similar to Italian *r* or to Scottish *r*. Its initial variant (ρ-) was probably voiceless and accompanied by aspiration. λ was a dental lateral sound [l]. σ indicated a voiceless dental sibilant [s]; cf. French *son* and the alveolar *s* in Engl. *see*. A voiced variant [z] was found before voiced consonants. (3) The *spiritus asper* (') indicated a breathed glottal fricative (like Engl. *h*) found at the beginning of some words before a vowel; the *spiritus lenis* (˘), first used by the Alexandrian grammarians, indicated its absence. (4) The value of ζ is disputed and probably varied from dialect to dialect; it may have indicated a cluster [zd] or an affricate [dz]. However, already in the fourth century B.C., Attic shows signs of a pronunciation [zz] or [z], i.e. of a change into a voiced sibilant. ξ and ψ represented the clusters [ks] and [ps] respectively. (5) Some dialects still knew a voiced semivowel [w], similar to Engl. *w*, which was expressed by the letter Ϝ (digamma) and which had disappeared in Attic. A voiceless variant of it may perhaps be indicated by the spelling φ found in some inscriptions. (6) The spellings ππ, λλ, etc., probably indicated geminated plosives and continuants [pp], [ll], etc., similar to those of modern Italian. In the case of Attic ττ corresponding to Ionic σσ the real pronunciation, at least for the early period, is disputed.

Later developments. Signs of the tendency of the voiced and aspirated plosives to change into continuants may be found very early in Greek documents; the full change, however, took place only in the Imperial and early Byzantine period. φ, θ, χ became [f] (like Engl. *f*), [θ] (like Engl. *th* in *thing*), [x] (like *ch* in Scottish *loch*); β and δ became [v] and [ð] (like *th* in Engl. *other*); [γ] (y) was changed into [ɣ] (the voiced equivalent of [x]) or [j] (cf. *y* in Engl. *yes*). The geminated were changed into the corresponding non-geminated consonants.

C. ACCENT

(1) Much of our information on the nature of the Greek accent comes, directly or indirectly, from the ancient grammarians (see GRAMMAR, GRAMMARIANS [GREEK]). The indications are that the early Greek accent was one of pitch, i.e. that the prominence given within the word to the accented syllable was obtained by means of a rise in pitch, while the differences of stress, even if present, were not a relevant factor. It is not easy to establish the date at which the 'musical' or pitch accent was replaced by an accent similar to that of Modern Greek, in which stress is a primary component. It is likely that the change developed over a period of many centuries, but it is usually considered to have been complete by the end of the fourth century A.D.

(2) The Greek inscriptions did not indicate the word accent: for this and for the distinctions among the various kinds of accent we are indebted to the information provided by ancient authors, by some papyri, and by the late MSS. in which accents are marked. The usual signs were first introduced by the Alexandrian grammarians (probably by Aristophanes), but the distinction between

acute and grave is already mentioned in Plato (*Cra.* 399). The acute ' (ὀξεῖα) indicated a high pitch, which, if we believe a much discussed passage of Dionysius of Halicarnassus (*de comp. verb.* 11), differed by a musical fifth from the grave. It could rest on both short and long vowels (or diphthongs): in the second case it is possible, although not generally accepted, that the higher pitch concerned only the second part of the long vowel (Δ = ∪∪). In the ancient tradition all unaccented syllables were considered to bear a grave ' (βαρεῖα), which therefore indicated a lack of accentuation. The fact that an acute resting on the last syllable of a word was changed into a grave within a phrase (θεοὶ but θεοὶ ἄλλοι) is variously interpreted by modern scholars (complete loss of accent, partial lowering of pitch, conventional writing, etc.). It should be noticed, however, that this use of the grave is relatively late; the papyri prefer spellings like κᾰλὸς ἄνθρωπος (for κᾰλὸς ἀνὴρ), περικλῦτος (for περικλυτός), etc. The circumflex (περισπωμένη) is found only on long vowels or diphthongs and, as indicated by the original sign Δ, represents a higher pitch on the first part of the vowel followed by a lower pitch (Δ = ∪∩); in other words it is a combination of an acute and a grave (ἡ ὀξυβαρεῖα according to another terminology).

(3) In polysyllabic words only the last three syllables could bear the accent, and further limitations depended on the vocalic element of the last syllable. (a) If this was short, any of the last three syllables could bear an acute; the penultimate syllable, if long and accented, carried a circumflex in Attic. (b) If it was long, the accent could rest on either of the two last syllables and the penultimate could bear an acute only. Exceptions to this and rules concerning the behaviour of those words or particles which did not have an independent accent (Enclitics and Proclitics) cannot be illustrated here.

PRONUNCIATION, LATIN. For the pronunciation of Latin various types of evidence are available. Besides the tradition of the schools (inaccurate in several respects) we have numerous phonetic descriptions by Latin grammarians which, though sometimes lacking in clarity, yield valuable information when interpreted by experts. Important evidence is also derived from the forms which Latin loan-words assume in foreign languages, and again from changes in orthodox spelling or departures from that spelling made by people of inferior education who attempted to write as they pronounced. In addition, we have certain evidence furnished by phonetic change within the Latin period and by the development or preservation of Latin sounds in the various Romance languages. It must be remembered that for many of the conclusions thus reached about the pronunciation of a 'dead' language only approximate accuracy can be claimed.

A. VOWELS AND DIPHTHONGS

The vowels *a, e, i, o, u* may be either long or short. It is probable that *a*, long and short, had approximately the same quality as the *a* of Eng. *father*. Between the long and the short forms of each of the other vowels there was a difference of quality. Thus while *ē* was open (ē) like *e* in Eng. *met*, *ē* was close (ē) like *e* in Fr. *été*, *i* was open (i) like *i* in Eng. *fit*, while *ī* was close (ī) like *ee* in Eng. *feed*. Similarly *ō* was open (ō) like *o* in Eng. *not*, and *ō* close (ō) like *au* in Fr. *faute*. *ū* was approximately like the *u* of Eng. *full* and *ū* like the *oo* of *fool*. There was also an 'intermediate' vowel, resembling perhaps a short Germ.

ū, which, as in *maximus, maxumus*, was written sometimes as *u*, sometimes as *i*. In educated pronunciation of the classical period *ae* was a diphthong, approximately like *ai* in German *Kaiser*; in Imperial times it became an open long *e* (ē). *oe* was also a diphthong (like *oy* in Eng. *boy*) in classical times, becoming later close *e* (ē). *au* was normally a diphthong like *ov* in Eng. *how* throughout the Latin period. Sporadically, however, in vulgar usage *au* got the sound of *ō* and in some words (e.g. *coda* for *cauda*) this seems to have been a very general pronunciation. The rare *eu*, which has no corresponding diphthong in English, combined a short *e* with a *u*; similarly *ui* in *cui* and *huic* seems to have contained the vowel *u* followed in the same syllable by the sound of *i*.

B. CONSONANTS

(1) The voiceless stops *p, t, c* (*k*) and the voiced stops *b, d, g* must have been approximately like the corresponding sounds in English. *c*, even before *e* and *i*, remained a stop during the classical period (i.e. *Cicero* was pronounced *Kikero*) and for long afterwards. Romance developments show that in the late Imperial period it had in this position undergone some degree of assibilation, thereby starting the process of change which led to the pronunciation of *c* in Fr. *cent* and Ital. *cento*. Similarly *g* remained a stop in all positions until about A.D. 500, when before *e* and *i* it developed into a *y*-sound. *b* between vowels became the spirant (bilabial) *v* fairly generally by the third century A.D. (2) *f* was originally a bilabial but later a labio-dental spirant like Eng. *f*. *s* was a voiceless sibilant (like the voiceless *s* in Eng. *past*) in all positions. In contact with voiced stops it caused them to become voiceless, so that a word like *urbs* was pronounced *urps*. (3) *h* was weakly articulated from an early period. Uneducated pronunciation tended to drop it, and in the later Empire it was lost altogether. The reaction against the tendency to omit it caused sometimes an intrusive 'h' in the affected pronunciation of some people (e.g. *hinsidae* for *insidae*). This habit is satirized in Catullus 84. (4) *n* before a guttural became the guttural nasal *ŋ* (*ng*); and *g* in *-gn-* probably had the same pronunciation. Thus *angus* would be pronounced *angus*, and *dignus dignus*. Final *m* before an initial vowel in the following word had a reduced pronunciation, of which the exact nature is disputed. Even before initial consonants final *m* eventually weakened and, except in monosyllables, leaves no trace in Romance. (5) *r* was trilled, with the point of the tongue probably against the gum. There were two varieties of *l*, one palatal approximately like Eng. *l*, the other velar or guttural like *ll* in Eng. *all*. Palatal *l* occurred before another *l* and before *i*; *l* final and before *a, o, u* or a consonant (except another *l*) was velar. (6) *j* (written *i*) and *g* (written *u*) were semi-vowels = Eng. *y* and *w* respectively. By the third century A.D. this *g* had become a spirant, either bilabial or labio-dental *v*, except in the combinations *qu, gu*, which continued to be pronounced as in English *queen* and *anguish*.

C. ACCENT

(1) *Early accent.* Most scholars hold that at a period before the beginning of literature the first syllable of every word carried a stress accent or, in other words, was pronounced with greater intensity than the remainder. This theory explains most easily the syncope which many Latin words had undergone (e.g. *quindecim* for *quinqvedecem*) and the changes which had affected vowels (e.g. in compounds; *caedo* but *incido, calo* but *incido*). Plautine prosody shows that even in Plautus' period words consisting of four short syllables were still accented in the old way (e.g. *fāciliūs* instead of the classical *fācilius*).

(2) *Accent of the Classical and later periods.* (a) *Position.* If the above theory is correct, a change must have taken place in the accentuation of polysyllabic words in the period before Plautus. Thereafter the position of the accent is regulated by the Penultimate Law, whereby if the penult is long by nature or position, the accent rests on it, but goes back to the antepenult if the penult is short (*confringo* but *cóncido*). Apart from some exceptions like *illic* (for *ilice*), where a final syllable has been lost, disyllabic words were accented on the first syllable.

(b) *Nature.* Descriptions by Latin writers suggest that during the classical period, and for several centuries afterwards, the language had a pitch accent whereby the accented syllable was pronounced on a higher musical note than the others. The terms employed (*accentus acutus, gravis, circumflexus*) are all translations of the Greek musical terminology, and there is no hint in the Latin accounts that the Latin accent differed in character from that of Greek. Not until the fourth century A.D. do we find in the grammarians phraseology which clearly implies the presence of a stress accent. The form assumed by Latin words in the Romance languages points unmistakably to the existence of a stress accent in the Late Latin period.

Scholars differ about the interpretation of these facts. Some accept the grammarians' accounts at their face value and believe that the classical accent was musical but gave way to a stress accent in the late period. Others hold that the accent throughout was one of stress and that the evidence of Latin writers is vitiated by an unscientific dependence on Greek theory. Some, again, adopt an intermediate position and believe that, while evidence in the language itself points to a stress accent having always been predominant, especially in the pronunciation of the lower classes, the influence of Greek education on the higher classes in the classical period had brought about a considerable degree of musical accent.

PROOEMIUM. (1) *Verse.* See HOMERIC HYMNS and LYRIC POETRY, GREEK.

(2) *Prose.* With the development of Attic oratory in the last quarter of the fifth century B.C. the custom arose of compiling collections of stock openings to forensic and political speeches (also of perorations, *ἐπιλογοί*). The first collection was made by Cephala (*Suda*, s.v.), others by Antiphon, Critias, and Thrasymachus. The extant set attributed to Demosthenes numbers fifty-six, five of which are identical with the openings of Dem. 1, 4, 14, 15, 16. Blass argues cogently for the authenticity of the set, often impugned, pointing out that the historical background, in the few places where it is defined, is everywhere that of the first war against Philip, a restriction only explicable on the supposition that Demosthenes himself wrote the proemia between 349 and 346, for his own use when required (cf. Cicero's practice, *Att.* 16. 6. 4), with the exception that some, including those to 14-16 (354-350), were specially composed for particular speeches. Ephorus wrote a prooemium to each book of his history, in which practice he was followed by Diodorus (*Diod. Sic.* 16. 76. 5). The theory of the prooemium is discussed by Aristotle (*Rh.* 3. 14), Hermogenes (*Inu.* 1. 1-5, and Apsines (*Rhet. ad init.*).

R. Swoboda, *De Dem. quae feruntur proemia* (1887); F. Blass, *Die attische Heredamkeit* iii. 1^a (1893), 322 ff.; E. Stemplinger, *Das Plagiat in d. griech. Lit.* (1912), 223 ff. J. D. D.

PROPEMPTIKON (προπεμπτικόν), a composition wishing a friend a prosperous voyage.

1. GREEK. The earliest extant example is Sappho's

χαίροις ἔρχεο κ.τ.λ. (*Berl. Klassikertexte* 5. 2. 12 f.). Others are Erinna (?) fr. 2, Theoc. 7. 52-70, and Callim. fr. 114. Parthenius wrote one. The genre is discussed by Menander (q.v. 4) Rhetor (Spengel, *Rhet.* 3. 395-9).

J. D. D.

II. LATIN. The *Propempticon* of Helvius Cinna was addressed to Pollio in 56 B.C.; only four fragments (containing seven lines) remain and nothing can be known of its form. The fact that it was so obscure as to need a commentary by Hyginus suggests that it was like the densely packed travel-poem of Statius to Maecius Celer (*Silv.* 3. 2). The genre as such and its detailed specifications were probably the invention of Menander (see I. *Greek* above): at any rate Tibullus 1. 3, Propertius 1. 17, 2. 26, Horace, *Odes* 1. 3, and Ovid, *Am.* 2. 11, which are sometimes assigned to the genre, have nothing in common except a few well-tried commonplaces.

F. Jäger, *Das antike Propemptikon* (1913).

G. W. W.

PROPERTIUS, SEXTUS, born between 54 and 47 B.C., at Assisi, where his family were local notables (4. 1. 121 ff.). His father died early, and the family property was much diminished by Octavian's confiscations of 41-40 (4. 1. 127 ff.); in that revolutionary year a kinsman of Propertius fought and died at Perusia, a fact carefully recalled at the end of book 1 (1. 22. 6 ff.).

Like others of his class, Propertius rejected the dull pursuit of office; his rhetorical education was employed in poetry, not in the courts. Following the example of Cornelius Gallus (q.v. 3), he celebrated his love for a mistress to whom he gave the fancy Greek pseudonym of Cynthia; Apuleius says her real name was Hostia (*Apol.* 10). We need not doubt her reality as we doubt that of Ovid's Corinna; many of the incidents suggested in Propertius' poems are conventional and tralatitane, but Cynthia is given a consistency of character, or at least of temper, that convinces us of her actuality.

Book 1 shows Propertius as one member of a coterie of poets, of which Ovid also claimed membership (*Tr.* 4. 10. 45 ff.). The grander circle of Maecenas was opened to him after the publication of book 1; but he seems not to have been intimate with Maecenas' older poets. He speaks of Virgil with admiration but not as a friend would, and Horace almost certainly disliked him heartily (*Hor. Epist.* 2. 2. 90 ff.).

The dates of Propertius' books are uncertain. Book 1 was probably published before Oct. 28 B.C.; the latest events mentioned in 2, 3, and 4 belong to the years 26, 23, and 16 respectively. There are some grounds for thinking book 4 was published posthumously. Propertius was certainly dead by 2 B.C. (*Ov. Rem. Am.* 764). We may infer that he married and did his duty as an Augustan citizen, since Pliny's friend, the poet Passennus Paulus, claimed descent from him (Pliny, *Ep.* 6. 15; 9. 22).

Book 1 was known in antiquity as the *Cynthia monobiblos* (Mart. 14. 189) and consists almost entirely of love poems of remarkable grace and wit. This style is maintained in book 2, though Propertius' association with Maecenas produced as well some elegant tributes to the new regime. Book 3 shows a greater diversity of tone and subject-matter; it is here that Propertius first adopts the ostentatious pose of the Roman Callimachus that irritated Horace, and the opening poems, which deal with his own poetic position, are among its most successful. Some of the Cynthia poems, notably 8 and 16, show his old comic power, but others are tedious failures; this switch of interest is given definition by his rejection of Cynthia at the end of the book. In many poems he is attempting to widen his range, but he shows some uncertainty, some crassness, and some lack of assurance in his new style. Book 4 is considerably more successful. It consists partly of the fragments of a Roman *Aetia*, which showed the

way to Ovid's *Fasti* (1, 2, 4, 6, 9, and 10). To these are added poems on various subjects: the two on Cynthia (7 and 8) are among his most brilliant, and though the epicede on Cornelia (11) is often overpraised by people who do not really like Propertius, it is a Roman work.

Some Romans, though not Quintilian, thought Propertius the most *tersus atque elegans* of the Roman elegists (Quint. 10. 1. 93; cf. also Pliny, *Ep.* 9. 22). Polish and refinement are conspicuous in many of his poems, and would no doubt be conspicuous in more if the MSS. tradition were better. In wit, objectivity, and dramatic power and in the thrusting, progressive movement of individual poems he reminds the English reader of John Donne. His obscurity, of which too much has been made, is also like Donne's: much that is puzzling at first sight becomes plain enough when the implied setting and dramatic development are grasped. The really insoluble difficulties are usually not the poet's fault, but a scribe's. Propertius' elaborate and self-conscious artistry, his vivid visual and tactile imagination, and his success in integrating what he derives from Greek literature with Roman feeling and Roman life make him one of the most continuously fascinating of the Latin poets. See also ELEGIAC POETRY, ALEXANDRIANISM.

PROPHECIES (χρησμοί, *vaticinia*). Besides the oracles of the greater and lesser shrines, there were in circulation in antiquity a number of prophecies, sometimes nameless, often attached to the name of some inspired person. Of these, the most famous was the Sibyl, or the Sibyls (q.v.); but in addition there were several men, some known to have lived during the historical period. Herodotus (1. 62. 4) mentions Amphilytus, a contemporary of Pisistratus, tyrant of Athens, and preserves the text of an oracle which he was suddenly inspired to give the latter. Such persons were known as χρησμοδοί in Greek (e.g. [Plato], *Theages* 124 d) or χρησμολόγοι; in Latin, *vates*; for a list of them, with some account of their lives or legends, see A. Bouché-Leclercq, *Histoire de la divination* (1879-82) ii, ch. 2. Naturally, their alleged utterances were particularly rife in times of stress; cf. Thucydides 2. 8. 2, who speaks both of oracular sayings (λόγια) quoted and χρησμολόγοι 'singing' their prophecies at the outbreak of the Peloponnesian War. In 2. 54. 2 he quotes the text of one nameless utterance, ἤξει Δωριακὸς πόλεμος καὶ λοιμὸς (or λοιμός) ἄμ' αὐτῷ. This craze is a favourite subject for Aristophanes' mockery, particularly in the *Knights*; an especial butt is a certain Bacis (q.v.), whose oracles were extremely popular.

The most celebrated Italian *vates* was perhaps a certain Marcius (q.v. 3), or a pair of brothers, the Marcii (see Cicero, *Div.* 1. 115; 2. 133, with Pease's notes); Cicero also mentions one Publicius. Here again, such effusions were multiplied in times of crisis; Augustus collected and destroyed a number of unauthorized collections (Suet. *Aug.* 31), many of them in Latin, no doubt in large measure a legacy of the Civil Wars. H. J. R.

PROPHETES (προφήτης), the title of the mortal who speaks in the name of a god or interprets his will. It is properly used only of seers and functionaries attached to an established oracular shrine; the unattached seer is

called *mantis*, etc. (see **PROPHECIES**). Moreover, it is more often used of the officials who presided over oracular shrines (as Didyma) than of the actual receivers of mantic inspiration. At Claros a male prophet remained the direct mouthpiece of the god; but at Delphi and possibly at Didyma a woman who could be described as *prophetis* (προφήτις) was directly inspired by Apollo. At Didyma the prophet was an annually elected magistrate. At Delphi the title was not used officially; the two magistrates, elected for life, who performed this office had the title of priest (ἱερεὺς).

For further information and for bibliography see **ORACLES**, also E. Fascher, *ΠΡΟΦΗΤΗΣ* (1927). J. E. I.

PROPONTIS (ἡ Προποντίς), now the *Sea of Marmara*, an intermediate sea between the Aegean and the Euxine, whence its ancient name. Its length, just over 140 miles, and its greatest breadth, hardly 40 miles, are overstated by Herodotus (iv. 85) at 1,400 stades, i.e. 155 miles, and 500 stades, i.e. 55 miles, whereas Strabo (125) gauges the length accurately but exaggerates the breadth absurdly. The Propontis is connected with the Euxine by the deep, narrow, and winding channel of the Thracian Bosphorus, and with the Aegean by that of the Hellespont; these waterways were commanded by Byzantium and Troy respectively. The principal cities on its shores are: Byzantium and Chalcedon at the mouth of the Bosphorus; Nicomedeia at its eastern extremity; Selymbria, Perinthus-Heracleia, and Bisanthe-Rhaedestus on its Thracian coast; Cius and Cyzicus on its south side. The largest island in the Propontis is Proconnesus, now *Marmara*, meaning 'marble', which has given its modern name to the whole sea. There are other islands, including Ophiussa and Halone, in the same neighbourhood, and at the other end, in full view from Byzantium, are the four small islands now known as the *Princes' Islands* (Demonnesi); their ancient names seem to have been Prote (now *Kinali*), Elaea (*Burgaz*), Chalceitis (*Heybeli*), and Pityodes (*Büyükdada*). A list of islands is given by Pliny (*HN* v. 151). The rivers Granicus, Aesepus, Maeceus, and Rhyndacus enter the Propontis on its south side; on the north side there are no rivers of any consequence. G. F. B.

PROPYLAEA, a monumental roofed gateway; pre-eminently, that on the west side of the Athenian Acropolis (see **ATHENS**, **TOPOGRAPHY**) designed by Mnesicles, built of Pentelic marble, with some details of black Eleusis stone, c. 435 B.C. and still largely intact. The plan, with its deep 'hall', its Doric hexastyle porticoes fronting outwards and inwards, and with its single division-wall pierced by five doorways, is of early origin (cf. the 'South Propylaeum' at Cnossos); but Mnesicles provided wing-buildings of lesser height (the south one being curtailed) projecting from the front, forming loggias with Doric columns and rooms beyond. Larger wing-buildings to the east were intended. An inclined ramp continuing the slope of the natural rock formed the approach, and there were five steps at the four outer doorways. The central avenue had a span of nearly 14 feet and was flanked by Ionic colonnades in the deep outer porch; the ceilings were formed of marble beams and of slabs with deeply hollowed square coffers, richly decorated in blue and gold. The room of the north wing was adorned with wall-paintings by Polygnotus (q.v.) and other artists.

In the Propylaea we have a highly elaborate development of the simple propylon, or gateway with a porch on either side. There are traces of such a Propylon, built before the Persian Wars, on this site (cf. W. H. Plommer, *JHS* 1960, 146 ff.). Rundgaard thinks that the north wing too replaced a simpler archaic building. Mnesicles' design was much curtailed, through lack of resources and deference to adjoining shrines, notably that of Athena

Nike whose little Ionic temple was built a few years later on the bastion to the south-west.

PROSCRIPTIO, the publication of a notice, especially (1) a notice of sale; (2) a list of Roman citizens who were declared outlaws and whose goods were confiscated. This procedure was employed by Sulla (82–81 B.C.) and by Antony, Lepidus, and Octavian (43–42) as a means of getting rid of personal and political opponents and obtaining funds; and in virtue, or anticipation, of special powers of inappellable jurisdiction conferred on them as dictator (q.v.) and *triumvir* (q.v.) respectively. The proscribed were hunted down and executed, not only in Rome, but throughout Italy, by squads of soldiers, and the co-operation of their families and slaves and of the general public sought by means of rewards and punishments.

Sulla's proscription, in part an act of revenge for the Marian massacres of 87 and 82, was said to have named 4,700 persons, including over forty senators and 1,600 *equites*: no doubt many escaped. The lists were closed on 1 June 81. The sons and grandsons of the proscribed were debarred from public life, till restored by Caesar in 49. The impression left was profound, and similar conduct was feared from Caesar or Pompey, whichever should win the Civil War: as it was, Caesar's clemency was made an excuse for the proscription of the triumvirs. Their lists included about 300 senators and 2,000 *equites*; but many escaped, and some of these, including a fair proportion of the senators, were afterwards restored.

PROSE-RHYTHM. By prose-rhythm we mean here the quantitative or accentual arrangement of syllables, articulating the sentence and defining its close. We exclude from discussion: rhythm in general (E. A. Sonnenschein, *What is Rhythm?* (1925); De Groot, *Der Rhythmus*); correspondence of sound and sense (Norden, *Ant. Kunstpr.*); Gorgianic figures. For rhythm emphasized by rhyme see ASSONANCE. For *hiatus in Greek Prose* see s.v.

2. *Ancient theory.* From Thrasymachus onwards, prose-rhythm (*ῥυθμός*, *numerus*) was a recognized branch of rhetoric. Our chief authorities are Aristotle, Demetrius, Dionysius, Cicero, Caesius Bassus, Quintilian. They are generally agreed that prose-rhythm should be distinct from verse-rhythm, varied, and not too obvious. Cicero adds that sentence-endings (*clausulae*) are rhythmically most important, though the rest of the sentence is not to be neglected. According to him, the last syllable of a *clausula* is *anceps*; Quintilian disagrees.

3. *Extant Greek theory* gives few precise details. Aristotle recommends — — — as an opening rhythm, — — — — as a *clausula* (he perhaps has Plato in mind; in the *Ethics* — — — — is sought as a *clausula* and — — — — somewhat avoided). Demetrius and Dionysius are vague, and neglect important contrasts of rhythm in the authors they quote.

4. *Latin theorists* confuse matters by borrowing from Greek theorists without regard to differences of language. Cicero (whose sources include Aristotle's *Rhetoric* and lost works of Ephorus, Theophrastus, Theodectes, Hieronymus of Rhodes) apparently recommends the *clausulae* — — — —, — — — —, — — — —, all of which he strongly avoids in practice. However, he also recom-

mends certain of his favourite forms, e.g. — — — —, — — — —, — — — —, — — — —. (See, further, Laurand, *Études*; and CQ 1931, 18.) Bassus recommends several Ciceronian *clausulae* (e.g. — — — — and its five 'resolutions') together with forms usually avoided. Quintilian prefers — — — — to — — — —. Diomedes (4th c. A.D.) is the first theorist to recommend expressly the quite common *clausula* — — — —.

5. *Modern research.* To establish the rhythms—*clausulae* especially—favoured by particular authors, modern scholars have used statistical methods. De Groot has shown that statistics must be *comparative*; since in the structure of any language some rhythms are commoner than others, preference for a *clausula* is shown, not by its absolute frequency, but by its frequency relative to 'unrhythmical' prose. Cicero's *clausula* — — — — has a low absolute frequency (4.7 per cent); but it has a high relative frequency, for it is about twice as common in Cicero as in unrhythmical prose (2.4 per cent). A supplement to this external comparison is the internal comparison of sentence-rhythm and *clausula*-rhythm in the same author (De Groot, Skimina, Novotný, Broadhead; and Zielinski in his later work).

6. *Greek quantitative prose.* The Ionians—Heraclitus, Pherecydes, Herodotus—show no distinct *clausula*.

7. Thrasymachus perhaps initiated a prose-rhythm differing from verse-rhythm; he was certainly regarded as an innovator (Cic. *Orat.* 39. 175), especially in his use of paenonic rhythm (Arist. *Rh.* 3. 1409^a1). We are not told if he cultivated a distinct *clausula*, and his one short continuous fragment is inconclusive (twelve sentence-endings, of which five are — — — — and one — — — —). Gorgias resembles earlier writers in the verse-rhythms of the sentence, but he has a distinct *clausula* (— — — — in *Hel.*, — — — — in *Pal.*).

8. Thucydides is proved by De Groot to be an almost 'unrhythmical' writer, i.e. to depart very little from the natural rhythms of the language. However, he shows some preference for the *clausulae* — — — — and — — — —.

9. The sentence-rhythm of Isocrates is too varied for analysis; he seeks as *clausulae* most forms with a long penultimate (— — — —, — — — —, — — — —, — — — —; not — — — —); is indifferent to — — — —; favours final words of four syllables (as does Hyperides).

10. Demosthenes is concerned more with sentence-rhythm than with *clausula*-rhythm. His only well-defined *clausula* is — — — —. The rhythms — — — —, — — — —, — — — — occur often at the *clausula*, but oftener throughout the sentence. He avoids series of six or more long syllables. But his most characteristic practice is the avoidance everywhere of series of three or more short syllables ('Blass's Law'). Exceptions to this rule average 5 in 100 lines of Demosthenes (contrast Lysias, 23; Isocrates, 25; Aeschines, 21; Hyperides, 28). His technique here is of word-order rather than word-choice; his exceptions may perhaps be deliberate. Thus, though he continually uses *πρότερον* without breaking his rule, he has no scruples in 9. 60, 61. He once uses *διαγίγνομαι* with participle (23. 179, in a form which gives five shorts); but he does not substitute *ἐπιβουλεύων διαγίγνεται* for *ἐπ. διατελεῖ* (19. 326).

11. Plato's rhythmical preferences show considerable evolution. Throughout his work he favours the *clausulae* — — — —, — — — —, — — — —, and somewhat avoids — — — —. In the earlier books of the *Republic* he seeks — — — —, — — — —, — — — —; is indifferent to — — — —; avoids — — — — and — — — —. In the *Lates* he seeks — — — — and — — — —, avoiding — — — — and increasing his avoidance of — — — — (*Resp.* 7.0 per cent; *Leg.* 1.3 per cent, probably the lowest figure in Greek). In the sentence his later work shows increasing preference for series of short syllables, and he then

writes *κύβατερ, μέχριτερ, τινα τρόπον* for *ὥσπερ, ἔωσπερ, τρόπον τινά*. His average percentages of exceptions to 'Blass's Law' are: *Crit.*, 18; *Euthphr.* and *Chrm.*, 24; *Resp.* books 2-9, 25; *Resp.* book 1, 29; *Symp.*, 30; *Soph.*, 36; *Ti.*, 46; *Leg.* book 12, 56 (Vogel's statistics). His later preference for the clausula $\sim \sim \sim \sim$ is in accord with this; but he does not abandon $\sim \sim \sim \sim$, and his avoidance of $\sim \sim \sim \sim$ is never very marked. The dactylo-trochaic rhythms of *Phdr.* are exceptional in his practice. Lucian's clausulae suggest imitation of Plato.

12. The rhythmical practice of other writers is summarized below. Clausulae alone are considered, and only well-marked preference or avoidance recorded.

Sought by Philo, Plutarch, Chariton, Xenophon Ephesius, Josephus; avoided by Lysias, Aeschines.
 Sought by Lys., Alcidas, Hyperides, Ph. Charit., Xen. Eph., Joseph. Sought by Lys., Antisthenes (59·5 per cent), Alc., Isaacus, Xenophon, Hyp., Antiochus Rex, Ph., Plut., Charit. Sought by Lys., Alc., Isaac., Aeschin., Antioch. R., Ph., Charit., Xen. Eph. Sought by Alc., Antioch. R., Ph., Charit., Joseph. Sought by Alc., Antioch. R., Ph., Plut.; avoided by Lys., Aeschin. Sought by Lys., Aeschin., Isaac., Antioch. R., Ph., Charit., Xen. Eph., avoided by Alc., Plut. Avoided by Antisth., Ph., Plut., Charit., Xen. Eph., Joseph. Sought by Xen.; avoided by Lys., Antisth., Aeschin., Hyp., Ph., Plut., Charit., Xen. Eph., Joseph.

13. *Observations.* Antisth., Plato, Hyp., perhaps others, prefer a long final in certain clausulae. Though classical writers on the whole seek rhythms distinct from verse, a good deal of verse-rhythm remains in Isocrates and Demosthenes, few writers altogether escape iambic sequences (R. A. Pope counts fourteen perfect trimeters in Aeschines). King Antiochus, Philo, Plutarch, and the novelists belong to a Hellenistic school which replaced the variety of classical writers with a small canon of sought and avoided clausulae. Hegesias, an earlier representative of the same school, probably influenced Cicero and his followers. To this period belongs the preference for $\text{—} \text{—} \text{—}$ or $\text{—} \text{—} \text{—}$ before $\text{—} \text{—} \text{—}$, as also the general strong avoidance of $\text{—} \text{—} \text{—}$ and $\text{—} \text{—} \text{—}$ as clausulae. (Among classical writers $\text{—} \text{—} \text{—}$ is little avoided, $\text{—} \text{—} \text{—}$ is sought by Isocrates and Xenophon, and allowed by Demosthenes.)

14. *Greek accentual prose.* The origin of the Greek accentual clausula (*cursus*) is still uncertain. There are traces of it in the orator Menander (q.v. 4); it appears fully in Himerius, Procopius, S. Basil, and Byzantine writers generally. The forms most commonly sought have 2 or 4 unaccented syllables between the last two accents: ~ ~ ~ ~, ~ ~ ~ ~ ~, ~ ~ ~ ~ ~, ~ ~ ~ ~ ~, ~ ~ ~ ~ ~. Forms with no syllable between (*χαριστὸς ἄνθρωπος*) are sought by Procop.; those with 1, by Men. Rh., Hm., Procop.; those with 3 or 5 are universally avoided. For details, see Skimma, De Groot.

[illegible]

16. *Cicero* throughout the sentence avoids series of choriambes and dactyls. He has a well-marked system of sought and avoided clausulae. The following are sought as sentence-endings: — ◡ — ◡ and its 'resolutions' ◡ ◡ — ◡ —, — ◡ ◡ — ◡, — ◡ ◡ ◡ —, — ◡ ◡ ◡ ◡ —, — ◡ ◡ ◡ ◡ ◡ —, — ◡ ◡ ◡ ◡ ◡ ◡ —, — ◡ ◡ ◡ ◡ ◡ ◡ ◡ —, often preceded by — — —, — ◡ —, or — ◡ —. Commonly avoided, but used for special effects, is — ◡ — ◡;

strongly avoided are — ◡ ◡ — ◡, ◡ ◡ ◡, — ◡ ◡ ◡, — ◡ ◡ ◡ — ◡, — ◡ ◡ ◡ — ◡. The preferred clausulae reappear at the end of cola and commata, but with more exceptions; — ◡ ◡ — is commoner there, and ◡ ◡ ◡ less strictly avoided. The variations in Cicero's practice belong to subject-matter rather than chronology (see Laurand); but there is a gradual diminution of the 'Asiatic' clausula — ◡ ◡ ◡. Cicero shows in the clausula some desire for coincidence of accent and actus. For ◡ ◡ ◡ — ◡ ◡ there is a coincidence of 60·5 per cent in Cicero as against 54 in unrhymed prose and 51 in Livy. for ◡ ◡ ◡ — ◡ ◡ ◡, 63·5 as against 49·5 and 40; for ◡ — ◡ ◡ ◡, 35 as against 31·5 and 29. Broadhead and Zielinski exaggerate the influence of accent.

17. We may here group together as a Ciceronian school: Caesar, Nepos, Seneca, Suctonius, Quintilian, the Younger Pliny, Apuleius, Tertullian. Their clausulae are in general Ciceronian, except that — — — — — is avoided by most of them, and that — — — — — is tolerated by Caesar and Nepos. — — — — — is avoided by Sen. and Tert., and — — — — — by Sen.

18. Opposed to Cicero's practice are Brutus ('Attic school'), Sallust, Livy. They seek - 0 - 0, but avoid - 0 - 0, - 0 - 0, - 0 - 0; and they tolerate or seek - 0 - 0, - 0 - 0, - 0 - 0, and - 0 (Livy 36.5 per cent). Tacitus in his early work is fairly Ciceronian, but always avoids - 0 - 0. In his mature work he is indifferent to most clausulae, only favouring somewhat - 0 - 0 and - 0 - 0.

19. The 'Greek' clausulae ○○○○ , —○○—○○ have little currency in Latin; but ○○○○ seems to be sought by Sallust (Cat.), Brutus, Pomponius Mela, Apuleius (*Met.*), —○○—○○ by Sallust (*Jug.*), Brutus, Mela, Apuleius (*Apol. Flor.*, *Met.*).

20. *Latin accentual prose.* There is a transitional period when clausulae remain quantitative, but are gradually restricted to forms where (a) accent and ictus coincide, (b) there are 2 or 4 unaccented syllables between the last two accents. Thus *esse debētis, esse confiteor* are retained, but (*nūm*)*quam relinqui, agere debētis* are avoided. Alone among '3-forms', *esse videtur* keeps a certain prestige, but diminishes. The form *gladio petebatur* passes as a combination of quantitative - - - - - and accentual ~ ~ ~ ~ ~. These tendencies may be observed in the choice of clausulae recommended by Sacerdos (3rd c.; see Nicolau's commentary) and in the detailed studies of Cyprian-Jerome, Arnobius, Faustus by P. C. Knook, H. Hagendahl, A. G. Elg. For coincidence of ictus and accent compare these percentages with Cicero's: $\frac{1}{4} \text{ } \frac{1}{4} \text{ } \frac{1}{4} \text{ } \frac{1}{4}$, Augustine 78, Arnobius 95, Leo 93. $\frac{1}{4} \text{ } \frac{1}{4} \text{ } \frac{1}{4} \text{ } \frac{1}{4}$, Augustine 73.5, Arnobius 95.3, Leo 90.5. Much material of this period has yet to be investigated, and unless the works examined are of some length the evidence is apt to be inconclusive; thus it is perhaps impossible to decide whether the rhythms of Niceta's *Te Deum* are purely quantitative or not.

21. In the Middle Ages quantity is neglected, and favoured rhythms are practically reduced to the three accentual cursus-forms: $\sim \sim \sim \sim \sim$ (*plamus*), $\sim \sim \sim \sim \sim$ (*tardus*), $\sim \sim \sim \sim \sim$ (*velox*)—which are used, e.g., by Gregory of Tours, Bernard of Clairvaux, Hilcoise, Dante.

22. *Applications.* Study of prose-rhythm has been useful in some questions of chronology (Plato) and authenticity (for Plutarch's *Συγκρίσεις*, against *Consolato ad Apollonium*). In textual criticism rhythmical criteria may help to distinguish between MS. variants and to reject mistaken emendations. Original emendation should be very cautious, taking into account not only a writer's preferences but also his margin of exceptions. In *Somnium Scipionis* 12, it is simple to change 'ingenique tui consilique' to 'ingenique tui

scilicet'; it would be rash to change *πρὸς ἐμέ* to *πρὸς με* everywhere in Demosthenes, setting 'Blass's Law' above normal usage.

PROSPER TIRO (c. A.D. 390-c. 455), of Aquitaine, became a monk and may have taken deacon's orders. At Marseille he supported Augustine's doctrine of Grace against more moderate interpretations put forward in John Cassian's *Collationes* (426). In 431 he journeyed to Rome to seek Pope Celestine's support for Augustinianism, and on the accession of Leo I (440) he returned to Rome where he acted as the Pope's secretary. According to Gennadius he drafted Leo's letters against Eutyches.

He was important, first as a protagonist of Augustine in the 'Semi-Pelagian' controversy (427-32), and secondly as the compiler of the *Chronicle*. Though he did not know Augustine he wrote (427/8) telling him that Pelagianism was rife in Marseille, and after Augustine's death (430) Prosper wrote three books in his defence. He attacked the anti-predestinarian views of John Cassian (q.v.) in a sarcastic work, *Contra Collatorem*, a reference to Cassian's *Collationes*. After the latter's death in 435 his *Expositio super Psalmos* contained more friendly estimates of his views, but also expressed Prosper's distaste for the current misbeliefs of Nestorians, the Donatists, and Pelagians. While at Rome he popularized Augustine's memory in two works of extracts from Augustine's writings, *Liber Sententiarum ex operibus Sancti Augustini delibatarum* and *Epigrammata ex sententiis Sancti Augustini*, the latter in verse.

At Rome he compiled his *Chronicle*; down to 378 it was based on Jerome's translation of Eusebius' *Chronicle*, and thereafter to 417 borrowed from Sulpicius Severus and Orosius. He continued it first to 443 and finally to 455. From 417 to 455, Prosper's jejune entries are valuable for contemporary events, e.g. the intrigues which led to the invasion of Africa by Gaiseric (429) and also for the early years of Leo's pontificate. The tendency of the work is heavily anti-heretical. This coupled with vindication of St. Augustine rather than historical accuracy was his main interest.

His lasting memorial lay in the canons of the Council of Orange (529), which were based partly on the *Epigrammata*. His style, often modelled on Cicero, was good and the author's liveliness of spirit survives the rather rigid framework of his subjects.

Critical text of *Chronicle* ed. Th. Mommsen, *MGH* ix. 341-400. Other works, Migne, *PL* II (Vienna Corpus ed. in preparation). See articles in *DCB* and *DTC*. Also, E. M. Pickman, *The Mind of Latin Christendom* (1937), 418 ff. W. H. C. F.

PROSTITUTION, SACRED, existed in two main forms. (1) The defilement of virgins before marriage was originally a threshold rite, whereby the dangerous task of having intercourse with a virgin was delegated to a foreigner, since intercourse was in many, if not all, cases limited to strangers. The custom was observed at Babylon (Hdt. i. 199) and at Heliopolis-Baalbek (Sozom. *Hist. Eccl.*

5, 10; Soc. *Hist. Eccl.* i. 18, 48); in Cyprus (Hdt. loc. cit.; Just. *Epit.* 18. 5), in Lydia (Hdt. i. 93; Ael. *VH* 4. 1), and at Sicca Veneria in Numidia (Val. Max. 2. 6. 15) girls are said thus to have earned dowries. In Acilense well-born maidens were dedicated to Anatis as prostitutes for considerable periods (Strabo 532-3), thus constituting a half-way step to (2) regular temple prostitution, generally of slaves, such as existed in Babylonia, in the cult of Ma at Comana Pontica (Strabo 559), of Aphrodite at Corinth (Strabo 378; Ath. 573), and perhaps at Eryx (Strabo 272; Diod. 4. 83), and in Egypt (*PTebe*. 6).

Nilsson would derive all sacred prostitution from the first type, which, he further claims, was originally non-religious, but readily became attached to fertility cults. It might then develop into type 2, or as at Byblus in the cult of Adonis (Lucian, *Syr. D.* 6), where, though the original purpose had been lost, the 'market' was still open only to strangers. The (unfulfilled) vow of the citizens of Locri Epizephyrii to prostitute their virgins (Just. *Epit.* 21. 3), unique in Greek annals, was a desperate measure to secure divine aid in war. The hereditary *παλλακαί* at Tialles were concubines, and perhaps prophetesses, of the god, not temple prostitutes. The evidence for Thebes in Egypt (Hdt. i. 182; Strabo 816) is contradictory.

PROTAGORAS of Abdera, one of the earliest and most successful of the Sophists (q.v.). His date is uncertain but his birth cannot be placed much later than 485 B.C., and was probably earlier, while he was about seventy years old at the time of his death. During forty of these he practised the profession of Sophist with great success, probably mainly at Athens. He claimed to teach 'virtue' (*ἀρετή*), which can perhaps be better expressed as efficiency in the conduct of life. He was evidently a man of high character and generally respected. When Thuri was founded by the Athenians in 444, he was appointed to draw up a code of laws for the new colony. The well-known story of his trial and condemnation at Athens is inconsistent with the statements of Plato and may probably be dismissed as an invention or error of later writers.

His chief significance in the history of thought rests on the doctrine expressed in his well-known dictum 'Man is the measure of all things'. There can be little doubt that this was generally understood in antiquity as being a doctrine of the relativity of all knowledge or opinion to each particular person, and that it involved a complete scepticism about the claims of any science to universal validity. He also adopted an agnostic attitude towards belief in the gods. He does not, however, seem to have extended this scepticism to the claims of morality. Here he apparently adopted conventional moral ideas without much question, and advocated respect by each man for the moral code of his particular community.

Testimonia and fragments in H. Diels, *Fragmenta* II n. 253-71; M. Untersteiner, *I Sofisti* I (1940); A. Capizzi, *Protagora* (1955) Zeller I 2^e. 1296 ff.; J. Burnet, *Greek Philosophy, Thales to Plato* (1914), ch. 7; G. Vlastos, preface to *Plato's Protagoras*, tr. Jowett (1956). G. C. F.

PROTESILAUS, in mythology, commander of the contingent before Troy from Phylace and other places in Thessaly. He was killed in landing by one of the defenders (*Iliad* 2. 695 ff.). Homer also states that 'his wife was left mourning and his house half-finished'. From this it is a natural conclusion that he was newly married, whence a touching legend developed, preserved almost solely in Latin authors (Catull. 68. 73 ff.; Ov. *Her.* 13; Hyg. *Fab.* 103 f.). Protesilaus had offended the

gods by not sacrificing before he began his house (Catullus); or he knew that the first man ashore was fated to be killed and patriotically took it upon himself to fall (Hyginus). His wife Laodameia grieved so for his loss that the gods granted her prayer to see him again for three hours. At the end of that time she killed herself (Eustathius on the *Iliad*, 325, 23 fl., who makes Protesilaus the prime mover throughout, because owing to Aphrodite's anger he desired his wife even after his death); or she spent so much time with an image of him that her father Acastus burned it and she flung herself on the fire (Ilyg. 114, cf. Ov. 151 fl.). The author and date of this legend are unknown.

For his cult see Farnell, *Hero-Culte*, 412, n. 102. II. J. R.

PROTEUS (Πρωτεύς), a minor sea-god, herdsman of the flocks of the sea, seals, etc. In Homer (*Od.* 4. 385 fl.) he is an Egyptian daemon, servant of Poseidon, who has the power to take all manner of shapes, but if held till he resumes the true one, will answer questions. Virgil (*G.* 4. 387 fl.) imitates this. But in Herodotus 2. 112 fl., and Euripides, *Helena* 4, he is a virtuous king of Egypt, who takes Helen (q.v.) and her wealth from Paris and keeps them safe till at length Menelaus arrives and claims them. The relation of this to Stesichorus' palinode is not clear.

II. J. R.

PROTOGENES (late 4th c. B.C.), painter and sculptor, of Caunus; connected by anecdotes with Apelles, Aristotile, Demetrius Poliorcetes. His pictures included 'Ialysus', 'Resting Satyr', 'Alexander and Pan', 'Paralus and Hammonias' (allegories of the Athenian State galleys), portraits of Aristotle's mother, Antigonus, and Philicus, perhaps copied in the Pompeian tragic poet, Pickard-Cambridge, *Dramatic Festivals of Athens* (1953), fig. 44. He wrote two books on painting. His works showed excessive elaboration, but according to Apelles lacked charm (χάρμη).

Overbeck, 1907-36, Rumpf, *Malerei u. Zeichn.* 147. T. B. L. W.

PROTREPTICUS (προτρεπτικός λόγος), an exhortation (to philosophy), first developed as a genre by the Sophists (q.v.), who thus persuaded students to take their courses in philosophy and various τέχναι, especially those required for politics. No early examples are extant, but Plato's *Euthydemus* includes a protreptic discourse (278 c-282 d), and something similar is found in Isocrates' *Against the Sophists*, *Helen*, *Busiris*, and *To Nicocles*. The most famous example in antiquity was Aristotle's *Protrepticus* (now lost), which was partly imitated by Cicero in his *Hortensius* (lost), and was excerpted, to an extent that remains controversial, by Iamblichus in his *Protrepticus* (extant). A later extant example is Galen's protreptic to medicine (Kuhn, *Med. Graec. Opera* vol. i).

PROVINCIA, originally the sphere of action of a magistrate with *imperium* (q.v.), later also of quaestors and pro-magistrates. *Provinciae* were normally allotted or assigned by the Senate at the beginning of the year. A law of C. Gracchus (q.v. 4), to prevent consular *provinciae* from becoming the playthings of politics (see ILLACUS 3), required the Senate to determine before the consular elections—in a vote exempt from tribunician *intercessio* (q.v.)—which *provinciae* the consuls were to have. Holders of *imperium* were from an early date not allowed to leave their *provinciae* as defined.

Down to the First Punic War all *provinciae* were in Italy. Usually the consuls had to campaign, the praetor

(after his creation) had the *provincia urbana* (chiefly the administration of justice); when a second praetor was created, he normally assumed jurisdiction among aliens. But the consuls and both (in due course all) the praetors could be freely used for different *provinciae*, if the Senate saw fit. When Sicily (except for Syracuse) was conquered, it was at first not organized: some favoured cities remained 'free' (see SOCII), the rest paid to Rome the tribute that had gone to Carthage. No more was done for Sardinia (238 B.C.). Only in 227 were two more praetors created, so that the four could normally cast lots for the two new *provinciae* overseas along with the two in the city, which remained superior in standing. During the Hannibalic War Syracuse and parts of Spain were occupied. Sicily was now reorganized under a praetor with two quaestors; Spain, after some time as two *provinciae* of *privati* with special *imperium*, had two praetors created (198/7). No more praetorships were instituted for later 'provinces': Africa and Macedonia-Achaea (146), Asia (133, organized later), Gaul (c. 100). *Prorogatio* became a regular and necessary feature of administration (see PRO CONSULE), which avoided multiplying curule magistracies. (The number of quaestors probably went on increasing.) It was a necessary consequence of this that the Senate was unwilling to commit itself to direct administration: not even Numidia was annexed after the defeat of Jugurtha; and Macedonia, Asia, and Transalpine Gaul only after hesitation had shown the military dangers in leaving them free.

The word *provincia*, though still freely used in its traditional sense, now came to mean particularly an administered overseas territory; and a popular etymology (from *pro* and *vincere*) supported this use. After 123 praetors were increasingly needed for *quaestiones* (q.v.) in Rome, and the consuls' presence was desirable for political reasons; hence 'provinces' now normally went to pro-magistrates. Sulla, who added two praetorships and probably two *quaestiones*, apparently intended to formalize this system, with regular annual succession. In the last generation of the Republic, the rise of the *equites* (q.v.), the Populares, and the new army led to a rapid increase in provinces: in particular, Pompey in the East and Caesar in the West added huge territories. (See CILICIA, CYRENE, BITHYNIA, CRETE, PONTUS, SYRIA, CYPRUS, GAUL.) This, combined with many men's unwillingness to serve abroad (see CICERO, 1), led to the need for long *prorogatio*, especially in periods of civil or major foreign wars; and large *provinciae*, with huge armies, were more and more frequently granted (see LUCULLUS 2, ANTONIUS 2, POMPEY, CAESAR 1, CRASSUS 4), either by the People or by the Senate. It also led to increased exploitation of provincials which became a necessary incentive for attracting men into governing provinces. To stop the dangers arising out of this, Pompey (as consul 52), with the Senate's support, fixed an interval of at least five years between magistracy and provincial tenure and probably made acceptance of the latter compulsory (as it had been in the second century) and limited it in duration. This scheme, before the end of the transitional period necessary for it to become fully operative, was upset by the Civil War, but later restored (for public provinces—see below) by Augustus.

A province, under the Republic, was never a large area under uniform administration. Normally organized after a war (and, if not, possibly assimilated to the majority), it owed its status, at least after 150 and probably even before, to a victorious general and a commission of ten senators. The so-called *lex provinciae* was, in law, the general's decree *ex SC*, on the commission's advice (see Cic. 2 *Verr.* 2. 32 and 40). It remained binding unless the Senate superseded or amended it, as it might do (see SCAEVOLA 4). Pompey's arbitrary settlement of the East, which he

expected to be ratified without scrutiny, was a characteristic piece of arrogance and the cause of genuine anxiety about his intentions. The *lex* would settle local boundaries and constitutions; and it might deal, in greater or less detail, with taxation and other obligations and the administration of justice. It had to take account of numerous free or treaty cities (*see* SOCI) with their own historical relationships with Rome. Inevitably their rights were gradually levelled down: in the late Republic, the free city of Utica was a governor's capital. The *Leges Rupiliae* (q.v.), which probably extended the *lex Hieronica* to all of Sicily not officially 'free', severely limited the 'freedom' of many Sicilian cities; and governors sometimes ignored custom or treaty with unpunished, setting up precedents in deterioration.

Within the framework of the *lex*, the governor issued his own edict (q.v.), normally based on his predecessors' tradition and sometimes on that of the urban magistrates, but never strictly binding on a successor or (at least before the law of Cornelius (1)) even on the governor himself. Within the limits of the *lex*, he had absolute authority over provincials, which he could delegate to his quaestor or legates (usually one to three in number) or to other Romans or in part to the cities themselves (as Scaevola (q.v. 4) did in Asia and Cicero in Cilicia); for judicial purposes, he usually drew heavily on his friends (the *cohors*, q.v.), his staff of civil servants (especially *scribae*, q.v.), and provincial Romans (*see* CONVENTUS), who enjoyed a privileged status in law and even more in fact. Supervision from Rome was lax. The money voted had to be accounted for by the quaestor; but this was a mere formality, and it was unusual (by Cicero's day) to declare a surplus; the governor and the *cohors* expected to share it. Arbitrary power gave unlimited opportunities for extortion; and *repetundae* (q.v.) laws, permitting redress only after the governor's return to Rome, could normally be evaded by anyone rich and well-connected. Prosecutions were a major expense to the province and even a conviction (rarely achieved) would not always benefit the provincials (*see* VERRES).

Indirect taxes were always farmed by *publicani* (q.v.). Direct taxes were collected by various methods (*see* DECUMA, TRIBUTUM), normally involving some tax-farmers (Roman or local). Constant warfare (especially in Spain and in the East) led to devastation and an increasing load of debt, which governors would collect on behalf of their senatorial friends, or assist businessmen in collecting, by methods often approaching sheer terror. Spain and Asia duly showed themselves ready to join anyone fighting the Roman government of the moment.

Caesar began the reorganization of the system and Augustus completed it. In 27 B.C. Augustus was given a large *provincia* (originally perhaps Gaul, Spain, and Syria), which he governed—after 23 as proconsul (q.v.)—through *legati pro praetore* (with the finances administered by procurators) and which contained nearly all the legionary forces. The area changed in extent, and the command was renewed from time to time; and by the end of the reign the 'imperial provinces' were an accepted institution. The remaining ('public', in fact senatorial) provinces were governed by proconsuls, with legates and quaestors, as before; but Augustus had *imperium maius*, which we can see him exercising as early as the Cyrene edicts (q.v.). Egypt, made 'subject to the Roman People' (*Res Gestae* 27) by Augustus, was forbidden to senators and governed by an equestrian *praefectus* with legionary forces; and to the natives the Emperor was Pharaoh. Various minor provinces (e.g. Judaea and Noricum) were administered by prefects (later procurators) without legions. Direct taxes were now directly collected: tax farming was limited to indirect taxation and in due course abolished even there.

This system lasted, in essence, until the third century A.D. In the first century, the last 'senatorial' legion (in Africa) was taken over; recognized frontiers were increasingly reached (Domitian began the construction of a *limes*, q.v.); Britain was annexed by Claudius (and later extended), Dacia and Arabia by Trajan (other conquests were of short duration), and various client kings (q.v.) were succeeded by provincial governors. With the multiplication of consuls, an adequate supply of senior men became available for administration and a hierarchy of provinces developed, both in the Emperor's service and in the Senate's. Asia and Africa (both senatorial) were the highest posts in prestige, but the senior imperial commands gave the greatest power and could serve as springboards to the throne. The subdivision of large provinces into more manageable units, begun by Augustus in Gaul, Germany, and Illyricum, was gradually carried further, as was the detailed supervision of local government by the Emperor (*see* CORRECTOR and CURATOR REI PUBLICAE). Both these trends culminated in the thorough reorganization of Diocletian (q.v.).

In the provinces themselves, the organization of an imperial cult (*see* RULER-CULT, ROMAN) under Augustus and the Julio-Claudians led to the creation of a *conclium* (q.v.) normally one for each province, under a native high priest (*flamen* or *sacerdos*). These councils, down to the third century, provided a channel through which provincial upper-class opinion could reach Rome. The high priest and even ordinary members often gained citizenship, and their descendants might become Roman *eques* or senators. Within a century after Augustus, the equestrian service and the Senate were freely open to provincials from almost any province though some provinces took longer than others to make their full contribution. While romanization thus spread among the upper class, it was advanced among the lower classes by the army: the legions were soon mainly composed of men of provincial origin, and men in the *auxilia* (q.v.) became citizens on honourable discharge and before long even earlier. Gradually the citizenship and *ius Latii* (q.v.) spread among provincial communities. Thus the provinces were unified into a Roman State.

E. B.

PROVOCATIO was an appeal made to the *populus Romanus* by a victim of magisterial *coercitio* (q.v.). It was not until 300 B.C. that a legal right so to appeal against a capital sentence imposed by any magistrate within the boundaries of the city was conferred upon every Roman citizen by a *lex Valeria*. (An earlier '*lex Valeria*' assigned by the tradition to the first year of the Republic is now generally dismissed as a fiction, as are the many references to a fifth- and fourth-century *ius provocatoris* from which certain magistrates—e.g. dictators and *decemviri*—claimed exemption.) Nevertheless, a formal procedure of *provocatio* which carried no guarantee of admission may well have dated from at least 450 B.C. At that date a law of the XII Tables required that capital cases should be heard only by *comitia centuriata*; and, although this did not rule out summary magisterial jurisdiction, as Mommsen believed, it is unlikely that the plebeians could have been persuaded to comply by abandoning criminal jurisdiction in their own unofficial assembly, had the patricians not made some concession by providing for the

possible use of the *iudicium populi* (q.v.) in cases of appeal from *coercitio*. Before the *lex Valeria* admission of *provocatio* was probably guaranteed solely by the ever-present threat of tribunes to extend *auxilium* in the event of refusal. During the second century the right of appeal was further regulated by a series of three *leges Porciae* (q.v.), one of which extended *provocatio* to citizens in the military sphere (i.e. outside Rome). In the imperial age *provocatio* was superseded by *appellatio* (q.v.).

For Mommsen *provocatio* was the cornerstone of the Roman criminal procedure, all cases tried by *iudicia populi* being theoretically hearings on appeal from a magisterial sentence. In recent years this view has been challenged, and attempts have been made to show that the range of magisterial *coercitio* and consequently of *provocatio* was very limited, and that criminal trials were largely conducted by courts of the first instance. Mommsen's position, however, which rests to some extent upon Cicero, has not been totally discredited, and the issue is still open.

PROXENOS. Since Greek States did not send permanent diplomatic representatives abroad, local citizens served as *proxenoi* to look after the interests of other States in their community. By the beginning of the fifth century this system had developed from earlier practices of hospitality under which some relied on hereditary ties with foreign families and others on the more general respect for strangers and suppliants. Survivals from this were the continued existence of private friends in foreign States (*διδάσκει*) and the practice of a few States of appointing *proxenoi* to look after visitors. More commonly States selected their own *proxenoi* in other States and, in return for services already rendered and expected in the future, bestowed honours and privileges upon them. Such appointments were much coveted, and many voluntarily assumed the burdens in the hope of gaining the title. The position usually was hereditary. A *proxenos* must be a citizen of the State in which he served and not of the State he represented. Later, however, when honours were bestowed more freely and had little practical significance, *proxenia* and honorary citizenship frequently were combined in the same grant.

Numerous examples from literature are listed in LSJ, s.v.; examples of decrees, *Tod II*, index. Full modern accounts are rare, but see C. Phillips, *The International Law and Custom of Ancient Greece and Rome* (1911), ch. 6; E. Szanto, *Das griechische Bürgerrecht* (1892), ch. 1. J. A. O. L.

PRUDENTIUS, AURILIUS CLEMENS (b. A.D. 348, d. after 405), the greatest of the Christian Latin poets, a native of Spain (Tarraconensis), abandoned an administrative career, in which he attained high distinction, and dedicated himself to Christian poetry. His works are (a) lyrical: *Cathemerinon*, 'Hymns for the day', and *Peristephanon*, 'Crowns of martyrdom'; (b) didactic: *Apotheosis*, 'The divinity of Christ', *Humantigema*, 'The origin of sin', *Psychomachia*, 'Battle of the soul' (an allegory), *Contra Symmachum*, a polemic against paganism based on the events of 384 (see SYMMACHUS 2), and the *Dittochaeon*, hexameter tetrastichs on biblical topics. Prudentius displays remarkable metrical versatility and a profound knowledge of pagan Latin poetry. Described by Bentley as *Christianorum Maro et Flaccus* he achieved a union between the classical poetical form and the spirit and thought of Christianity. A creative artist, he introduced into Christian poetry the literary hymn, allegorical epic, and 'Christian ballad' (*Peristeph.*). The extensive

influence of his work is visible in medieval art as well as poetry.

PRUSIAS, kings of Bithynia.

(1) PRUSIAS I CHOLUS (c. 230-c. 182 B.C.), son of Ziaelas. He was an energetic and ambitious ruler who used a marriage alliance with Philip V of Macedon and the conflicts of the other powers to enlarge the territory of Bithynia to its greatest extent. He warred with Byzantium (220), defeated Gallic invaders (218), took Phrygia Epietetus and part of Mysia from Attalus I of Pergamum (c. 208), received the ports of Cius and Myrleia from Philip V (202), renaming them Prusias and Apameia, and captured Cierus and Thium from Heracleia. On assurances from the Scipios, he remained neutral in the war with Antiochus III (190-188), but the demand in the settlement at Apameia (188) that he return to Eumenes the former Attalid possessions led to a war (186-184) in which he was defeated, while Hannibal, a refugee at his court, anticipated surrender to the Romans by suicide.

(2) PRUSIAS II CYNEGUS (c. 182-149 B.C.), son of Prusias I, joined Eumenes of Pergamum in war against Pharnaces I of Pontus (181-179). His servile attitude toward the Roman Senate after the fall of his brother-in-law, Perseus of Macedon (168), won him contempt. His invasion of the Pergamene kingdom (156-154) ended in defeat, and demand for an indemnity. He sent his son Nicomedes to Rome as an envoy to secure release from this, but the latter, on learning that death would be the penalty for failure, revolted, and with encouragement from Rome and aid from Pergamum, drove him to sanctuary and put him to death (149).

For bibliography, see s.v. NICOMIDES

PRYTANEIS (*πρυτάνεις*) means 'presidents'. In Athens, after the *phylai* (q.v.) and *boule* (q.v.) were reorganized in 508/7 B.C. by Cleisthenes (q.v. 1), the *boule* each year consisted of fifty men chosen by lot from each of the ten *phylai*. Each group of fifty served as *prytaneis* for one-tenth of the year. This period was called a *prytany* (*πρυτανεία*), owing to the vagaries of Athenian methods of reckoning a year (see CALENDARS) a *prytany* might be anything between thirty-four and thirty-nine days in length. It was reduced to one-twelfth of the year when the number of *phylai* was increased to twelve in 307. To decide which *phyle's* group was to be *prytaneis* next, lots were drawn shortly before the beginning of each *prytany* except the last by all the groups which had not been *prytaneis* so far that year.

The *prytaneis* were on duty every day. They made arrangements for meetings of the *boule* and *ekklesia*, received envoys and letters addressed to the State, and conducted other day-to-day business. Soon after the Persian Wars an office, called the *tholos* because of its circular shape, was built for them next to the *bouluterion* (council-chamber) at the south-west corner of the *agora*. There they dined every day at the State's expense.

Each day one of the *prytaneis* was picked by lot to be their foreman (*ἐπιστάτης*). He remained on duty in the *tholos* for twenty-four hours, with one-third of the *prytaneis*. He had charge of the State seal and of the keys of the treasures and archives. In the fifth century he also took the chair at any meeting of the *boule* or *ekklesia* held on his day, but in the fourth century this duty was taken over by the *proedroi* (q.v.). No one could be foreman more than once, and consequently a considerable proportion (perhaps half) of the citizens held this position at some

time in their lives. The whole system of the *prytaneis* and their foreman, based on lot and rotation, was a means of giving the ordinary citizen a share in the administration of the State, and so was a most important part of Cleisthenes' plan to make Athens democratic.

ARIST. *Ath. Pol.* 43-4.

D. M. M.

PSAON OF PLATAEA, Hellenistic historian, continuing Diyllus from 297/6 B.C., covered partly the same period as Phylarchus and may have been contemporary with him; his work perhaps extended to Ol. 140 (220-217), where Polybius began, and was continued by Menodotus.

FGH II A, 158; C, 131.

A. H. McD.

PSSELLUS, MICHAEL (earlier CONSTANTINE), probably of Nicomedia (A.D. 1018-78/9), after studying law at Constantinople held a judicial post at Philadelphia. Under Constantine IX (1042-55) he became professor of philosophy at the newly refounded imperial University in Constantinople. He was now one of the most influential figures in the Eastern Empire and was appointed State Secretary and Vestarch. Apart from a brief period of retirement in a monastery (1054-5), he held high office continuously at Constantinople until the reign of Michael VII (1071-8), under whom he became chief minister. The ingratitude of the Emperor caused him to spend his last days in obscurity.

WORKS. There are many problems of disputed authorship, and many still unpublished works are attributed in MSS. to Psellus. (1) Scientific and philosophical treatises on mathematics, music, astronomy, physics, metaphysics, ethics, theology, alchemy, demonology, medicine, jurisprudence, topography, etc.; e.g. the miscellany *De Omnifaria Doctrina* (Διδασκαλία παντοδαπή), his literary masterpiece *De Operatione Daemomum* (Π. ἐνεργείας δαιμόνων), his discussion of Athenian judicial terminology, and his short account of the topography of Athens.

(2) Paraphrases of the *Iliad* and of Aristotle, *Categories*, an abridgement of Porphyry, *De Quinque Vocibus*, a commentary on Aristotle, *De Interpretatione*, a treatise on Plato, *Phaedrus*, and an allegorical study on Homer. Also works in letter-form on rhetoric, and poems on rhetoric, grammar, and Greek dialects.

(3) *Chronographia* (Χρονογραφία), a lively and colourful history of the century 976 to 1077, is valuable, though somewhat partisan.

(4) Funeral orations, panegyrics, *apologiae* written in a style of persuasive dignity. His letters, of which about 500 survive, are interesting for their picture of Byzantine civilization and of their author himself.

(5) Rhetorical exercises and essays on set themes.

(6) Occasional verse, satirical and epigrammatic.

Psellus was a man of encyclopedic learning and great literary gifts. At a time when scholarship was at a low ebb, he had a keen though rather self-conscious love of classical and patristic literature and was passionately devoted to Plato and the Neoplatonists. His own style owed much to Plato, Aelius Aristides, and Gregory Nazianzen. More than any other man he laid the foundation of the Byzantine literary and philosophical renaissance of the twelfth century.

In his public life he reflects the faults of the age. Amid the atmosphere of palace-intrigue and court-flattery, scruples and sincerity found no place, and his political career was disfigured by servility and unrestrained ambition.

PSEUDEPIGRAPHIC LITERATURE. Antiquity has left us a number of writings which evidence, internal or external, proves not to be the work of the authors whose names are traditionally attached to them. The causes of this seem to be chiefly: (a) a tendency to ascribe anonymous pieces to a well-known author of like genre. Thus, the whole Epic Cycle and other hexameter poems were at one time or another ascribed to Homer; in Latin several compositions more or less epic in style, as the *Culex* and *Ciris*, have become attached to the name of Virgil, others, in elegiacs, to those of Tibullus and Ovid. (b) Works by the followers of a philosopher tended to be credited to their master; for instance, several short dialogues by members of the Academy bear the name of Plato, and, e.g., the *Problemata*, which are Peripatetic, are preserved as by Aristotle. (c) Rhetorical exercises in the form of speeches, letters, etc., supposed to be by well-known persons, now and then were taken for their real works. Thus, no. 11 of our collection of Demosthenes' speeches is a clever imitation of him, said by Didymus, *In Demosth.*, col. 11, 10, to come from the *Philippica* of Anaximenes of Lampsacus. The Epistles of Phalaris are the most notorious work of this kind, thanks to Bentley's exposure of them. (d) The existence of deliberate forgeries, made to sell (see *LOGOGRAPHES, LITERARY*), is vouched for by Galen (*In Hipp. de nat. hominis* 2. 57, 12 Mewaldt). (e) Various mechanical accidents of copying account for a few pseudepigraphies. (f) But the most frequent cases are of rather late date and connected with the craze for producing evidence of the doctrines one favoured being of great age. For instance, the numerous Neopythagorean treatises, whereof specimens are preserved chiefly in Stobaeus, are regularly attached to the names of prominent early Pythagoreans, including Pythagoras himself (q.v. 1), despite the fairly constant tradition that he wrote nothing. The Sibylline oracles (see *SIBYLLA*) are an outstanding instance of this; Phocylides (q.v.) is the alleged author of a long set of moralizing verses pretty certainly the work of an unknown Jew and of late date. Christian literature has some glaring examples of this practice, notably the Clementine Recognitions and Homilies, most certainly neither by Clement of Rome nor any contemporary, and the works attributed to Dionysius the Areopagite, really produced some three centuries or more after his death. Cf. also HERMES TRISMEGISTUS.

For a general sketch in Latin literature, E. H. Clift, *Latin Pseudepigrapha* (U.S.A. 1945); otherwise under the authors' names. H. J. R.

PSEUDO-CALLISTHENES. The so-called Alexander Romance, wrongly ascribed in antiquity to Callisthenes (q.v.), is extant in various Greek versions, whose complicated textual relationships—reaching back to about 100 B.C.—have been unravelled by Merkelbach. The work belongs to the genre 'fabulous historiography', which, as Ed. Schwartz has made clear, developed in Alexandrian times; it has, in so far as it does not contain any erotic element at all, little or no relationship with the genre 'novel' (*Liebesroman*).

CRITICISM. R. Merkelbach, *Die Quellen des griech. Alexanderromans* (1954; *Zetemata* 9); Christ-Schmid Stählin u. 2^e. 813 ff. (useful bibliography); A. Lesky, *Griech. d. griech. Litt.* (1963), 820 ff.; R. Helm, *Der antike Roman* (1956), 13 ff.; Ed. Schwartz, *Fünf Vorträge über den griech. Roman* (1943); id. *Griechische Geschichtsschreiber* (1959). G. G.

PSYCHE, the soul or, in later usage, the soul as a butterfly, does not appear as a clearly individualized mythological being before the fourth or the fifth century B.C. The notion of the soul occupied the Greeks from very early times. It has been suggested that the soul was first conceived as a bird, on the strength of the passages in Homer where the soul of Patroclus utters a faint noise (*Il.* 23. 101) and the souls of wooers chirp like bats (*Od.* 24. 6). In art a bird is shown flying over the head of a dying hero and birds are often seated on funeral *stelae* (cf. SIRENES). But Homer explicitly depicts the soul as a kind of a double, resembling the dead in 'height, eyes, voice' and wearing the same garments (*Il.* 23. 66), and the archaeological evidence is ambiguous. The Homeric souls, often called *eidola*, disappear like smoke, in the manner of our ghosts, if somebody attempts to touch them (*Od.* 11. 206). They dwell in Hades on the barren asphodel meadow and lack the vitality and memory which they can regain only by drinking blood (*Od.* 11. 25, cf. 24. 1). The Homeric notion remained current down to Plato's times (*Phd.* 81 c, d). On vases we see the soul of Patroclus in full armour watching Achilles as he drags the corpse of Hector; the soul of Sarpedon leaving the body (E. Haspels, *Attic Black-Figure Lekythoi* (Paris, 1936), 51); the souls of Achilles and Memnon weighed by Zeus; and the souls of commoners at a funeral, in the cemetery, and in Hades. On some vases they are shown with Charon, on others with Hermes Psychagogus.

Different notions of the soul were developed by Greek philosophers and poets. The most important change is the elevation of soul from a rather materialistically conceived double to a dematerialized divine being, of a nature totally different from the body. 'The body is the tomb of the soul', said the Orphics (see ORPHISM). The inscription honouring the warriors fallen at Potidaea claims that their souls were received by the aether, their bodies by earth (*Tod* 1² 59). The Homeric connexion with the individual had been severed so far that all *Psychai* could be conceived as female. The earliest representation of Psyche in that form, of the late fifth century, appears in south Italy, the home of Pythagoreans and Orphics. It would appear that the type which represents Psyche as a butterfly was evolved approximately at the same time. Plato's inspired version of the chariots of souls in *Phaedrus* presupposes a connexion of Eros and Psyche. Roughly contemporary with Plato are some beautiful bronze reliefs from Asia Minor (Devambez, *Les Grands Bronzes du Musée d'Istanbul*, 1935) on which Eros and Psyche, a maiden, are shown in quiet harmony. They are united in the Hellenistic 'Invention of the Kiss', a marble group which was copied by Romans (E. Strong, *JRS* 1924, 71) and early Christians, perhaps as a symbol of heavenly happiness (F. Cumont, *Syria* 1929, 231). On the other hand, Eros (q.v.), who had before plagued individual victims of love, now turns also on Psyche, since she, the soul, is recognized as the seat of passions. In Hellenistic poetry and art Eros is represented inflicting innumerable tortures upon Psyche (G. Hanfmann, *AArch.* 1939, 240). In Apuleius (*Met.* 4. 28) the motif of the tormented Psyche is combined with a *märchen* of the Fairy Bridegroom type. The goddess Psyche, who appears in some late writings, is according to Reitzenstein an Iranian goddess in Greek disguise.

G. M. A. H.

PTAH, called *ᾤά* or *ᾤάς* and also Hephaestus by the

Greeks, was an old deity of Memphis. Originally a god of artisans, a fashioner and maker of things, he acquired later a solar character and became one of the chief deities of Egypt. The temple of P'tah was one of the chief buildings in the complex of structures at Memphis which included the temple of Apis and others.

T. A. B.

PTOLEMAEUS (1) of Ascalon, of uncertain date, is said by Steph. Byz. to have been a pupil of Aristarchus, and in the *Suda* to have been father (or teacher) of Archibius (a grammarian at Rome under Trajan). Ptolemaeus joined the Pergamenes and disputed the Aristarchan texts of Homer. He also wrote *Περὶ διαφορᾶς λέξεων*, *Περὶ ὀρθογραφίας*, and *Περὶ μέτρων*.

M. Boege, *De Pt. Ascalonita* (1882).

P. B. R. F.

PTOLEMAEUS (2) **CHENNOUS** ('quail') of Alexandria (fl. c. A.D. 100) wrote the *Sphinx*, a mythologico-grammatical work, perhaps in dramatic form (*ιστορικὸν δράμα*, *Suda*), though this is disputed; *Ἀνθόμηνρος*, in twenty-four rhapsodies, correcting Homer's errors; *Παράδοξος* (or *Καινῇ*) *ιστορία*, of which Photius gives an extract. There are no adequate grounds for identifying this Ptolemaeus with the philosopher and biographer of Aristotle (A. Dihle, *Hermes* 1957, 314 ff.).

J. D. D., K. J. D.

PTOLEMAEUS (3) *ὁ ἐπιθέτης*, grammarian, pupil of Hellanicus the Chorizontist, and a pertinacious opponent of Aristarchus, wrote commentaries on Homer and Bacchylides and kindred monographs.

PTOLEMAEUS (4) of Mende, a priest, wrote on the *πράξεις* of the Egyptian kings in three books; he is scarcely the Ptolemaeus who published a life or history of Herod the Great, soon after 4 B.C.

FGH III 611

PTOLEMAEUS (5) of Naucratis (2nd c. A.D.), Egyptian rhetor, uninfluenced by the Second Sophistic, except in style, where he follows Polemon.

PTOLEMAEUS (6) **PINDARION** (i.e. commentator on Pindar) (2nd c. B.C.), a pupil of Aristarchus, wrote also on Homeric antiquities and on analogy. See CRATES (3) OF MALLUS.

PTOLEMAIS (1) (**ACE**). The Phoenician port of Ace was named Ptolemais c. 261 B.C. by Ptolemy II. From Antiochus IV's reign its people, renamed the 'Antiocheis in Ptolemais', issued municipal coins. Claudius made Ptolemais a Roman colony, planting in it veterans from the four Syrian legions. Its famous oracle on Mount Carmel predicted Vespasian's accession (*Tac. Hist.* 2. 78).

A. H. M. J.

PTOLEMAIS (2) **HERMIOU**, a foundation of Ptolemy Soter, with a substantial Greek population and a Greek constitution, was the centre of Hellenism in Upper Egypt throughout the Graeco-Roman period; Strabo classed it with Memphis in importance, and later it ranked second to Alexandria. Hardly any remains of buildings are visible, but inscriptions have been found recording decrees of the Ptolemaic assembly and council, and references in papyri from other districts show the continued influence of its citizens in Roman times.

G. Plaumann, *Ptolemais in Obraegyptien* (1910); J. Scherer, *BIFAO* 1942, 43 ff.; P. M. Fraser, *Berytus* 1960, 123 ff. J. G. M.

PTOLEMAIS (3) **THERON** ('of the Hunts'), on the west coast of the Red Sea, probably at Aquq (Crowfoot, *Geog. Journ.* xxxvii. 523). Founded by Ptolemy II for

elephant-hunts, it was used as a port for a trade-route to Meroe and the Nile.

Agatharchides (*GGM* 1: 174), Strabo 17: 768-71. Hyde, *Greek Mariners*, 194. E. H. W.

PTOLEMY (1). The name of all the Macedonian kings of Egypt.

PTOLEMY I SOTER (c. 367/6-283 or 282 B.C.), son of the Macedonian Lagus and a certain Arsinoe, who was, perhaps, a mistress and not, as was later believed, a second cousin of Philip II. He was exiled as Alexander's friend, recalled after Philip's death, and appointed *hetaros*, *somatophylax*, and *edaitros* ('Companion', 'Jefeguard', and 'Seneschal') to Alexander. He fought with distinction during Alexander's campaigns, which he subsequently described in an historical work. He married Artacama, Artabazus' daughter, in 324, divorced her after Alexander's death, and subsequently married Eurydice and (with or without divorce) Berenice I (q.v.). He became satrap of Egypt in late summer 323, executed Cleomenes (q.v. 3), and fought without much success against Antigonus Monophthalmus and Demetrius Poliorcetes (315-301). He declared himself king early in 304, finally conquered Palestine, Cyprus, and many possessions in the Aegean Sea and Asia Minor (c. 301-286), but took little active part in government after 285.

He was the originator of the cult of Sarapis (q.v.) and also the founder of Ptolemais Hermiou (q.v.) in Upper Egypt. The legal and military organization of his Empire—the army consisting of military settlers, mercenaries, and native levies—and the main outlines of Ptolemaic administration were due to him (cf. ALEXANDRIA, EGYPT UNDER THE GREEKS AND ROMANS, EPIMELETES, EPISTATES, NOMOS). Registers of land, houses, slaves, cattle, and taxpayers were compiled in the villages, and summaries of these were made for nome registers and the central register in Alexandria, which was used for preparing the State budget. The highest State office was that of the *dioketes* (= manager) whose *oikonomi* administered the Empire like a royal estate. F. M. H.

Ptolemy I wrote, when king, the best of the histories of Alexander. He used Alexander's official *Journal* and other official material, but much was his own recollection; he was in a better position to know than almost anyone. So far as can be made out his book was a genuine history and not merely a military record; Alexander was a supreme figure, but yet a human man. Probably it was defective on the political side; when he wrote he had long lost sympathy with some of Alexander's ideas. He probably desired to correct current popular history and beliefs, and his silences were part of his criticism; but bad history ousted good, and, but for Arrian, practically all knowledge of his work would have perished. See ALEXANDER (3), Bibliography, Ancient Sources. W. W. T.

PTOLEMY II PHILADELPHUS (308-246 B.C.), son of Ptolemy I and Berenice I, was born at Cos, and married Arsinoe I c. 289-288. He was made joint ruler with his father in 285, succeeded to the throne in 283-282 and married Arsinoe II c. 276-275, uniting her Aegean possessions with the Empire. He conquered important districts in Syria and Asia Minor during the First Syrian War (c. 276-271). In the Chremonidean War against Macedonia (266-261) he incurred slight losses; the Second Syrian War (c. 260-253) was indecisive, and was concluded by a marriage between Antiochus II and Berenice 'Syra' (q.v.). East African and south Arabian coastal districts received garrisons as outposts for trade.

Ptolemy II and his advisers created most of the scientific system of Ptolemaic financial administration (cf. AGRICULTURE, BANKS, COMMERCE, FINANCE, INDUSTRY, MONOPOLIES, PASTURAGE, VITICULTURE), planted Greek

settlements in Egypt, especially round Lake Moeris (q.v.), and instituted the Ptolemaic ruler-cult with its priests of Alexander and a growing number of deified members of the dynasty. He built the Pharos, the Museum, the Library, and other edifices and institutions of Alexandria as well as a canal from the Nile to the Red Sea.

PTOLEMY III Euergetes, son of Ptolemy II and Arsinoe I, was born between 288 and 280 and died in 221 B.C. After his (presumable) adoption by Arsinoe II and his succession to the throne in 246 he married Berenice II (q.v.) and united Cyrene with Egypt. In the Third Syrian War (246-241) he acquired important towns in Syria and Asia Minor. Ptolemaic expansion ceased after this, perhaps owing to difficulties in Egypt.

PTOLEMY IV PHILOPATOR (c. 244-205 B.C.), son of Ptolemy III and Berenice II, married Arsinoe III (q.v.) in 217. The main events of his reign were: his succession to the throne (221); invasions of Palestine by Antiochus III (221 and 219-217). He gained a decisive victory over Antiochus (q.v. 3) at Raphia (217), but only with the help of the native Egyptians, who revolted for decades afterwards. Almost the whole Thebaid was ruled in consequence by the Nubian kings Harmachis and Auchmachis (208/7-187/6).

PTOLEMY V EPIPHANES (210-180 B.C.), son of Ptolemy IV and Arsinoe III. He was joint ruler with his father from 210; he succeeded to the throne in 205, the death of Ptolemy IV being kept a secret for a considerable time. The official succession (of uncertain date) was followed by revolts throughout two decades, and, from 203 onwards, by plans of the Seleucid and Macedonian kings to partition the outlying Egyptian territories, the consequence of which was the loss of most possessions in the Aegean, Asia Minor, and Palestine, where his troops suffered a final defeat at Panion in 200. The king was declared of full age in 197 and married the Seleucid princess Cleopatra I (q.v.) in 193. His *epistrategos* Hippalus reconquered the Thebaid in 187/6, and the last native revolt of this period in the Delta was quelled in 184/3.

PTOLEMY VI PHILOMETOR, son of Ptolemy V and Cleopatra I, was born in 186 or (perhaps) 184/3 and died in 145 B.C. He succeeded to the throne in 180 in joint rule with his mother, who died in 176; he formally married Cleopatra II in 175/4. In the course of three invasions from Antiochus IV (170, 169, and 168), he established a joint rule with Ptolemy VIII and Cleopatra II from 170 to 164. He defeated native revolts, but fled from Ptolemy VIII, to return as sole ruler in 164/3. His struggle with this brother continued for a decade. After a successful campaign beginning in 150 he was elected Seleucid king in joint rule with Demetrius II, but was killed in a victorious battle against Alexander Balas.

PTOLEMY VII NEOS PHILOPATOR, son of Ptolemy VI and Cleopatra II, was born c. 162-161, became joint ruler with his father in 145, sole ruler from his father's death until Ptolemy VIII's return to Egypt, and was killed by his uncle's orders in Aug. 144.

PTOLEMY VIII Euergetes II (c. 182/1-116 B.C.), brother of Ptolemy VI. He was joint ruler with Ptolemy VI and Cleopatra II in 170-164; sole ruler in 164-163; king of Cyrene in 163-145; returning to Egypt in 145. He married Cleopatra II in 144, and took Cleopatra III to wife in 142 without being able to divorce Cleopatra II, who led a successful revolt against him in 132. He reconquered Alexandria in 127, and an amnesty and a peaceful reign with the two queens followed from 124. The king's final testament gave all power to Cleopatra III. An earlier testament during his rule in Cyrene bequeathed his possessions to Rome.

PTOLEMY IX SOTER II (LATHYRUS) (c. 141-81 B.C.), eldest son of Ptolemy VIII and Cleopatra III. He was

priest of Alexander from 135/4; subsequently became governor of Cyprus and married Cleopatra IV, his sister, during Ptolemy VIII's last years. Elected joint ruler with Cleopatra III against her wishes in 116, he divorced Cleopatra IV and married Cleopatra Selene, another sister. He had to accept his brother Ptolemy X as joint ruler in 110. He reconquered the kingdom, but another revolt of his brother compelled him to flee to Cyprus in 108/7, and from there to Seleucid Syria. Cleopatra Selene divorced him; but he reconquered Cyprus very soon, was victorious in Syria against the Jewish State allied with his mother, and reconquered Egypt in 89-88. Cleopatra Berenice, his daughter, returned from exile as joint ruler in 88, after Ptolemy X's death, and remained sole ruler from Ptolemy IX's death to 80. The Thebaid revolted against the new rule from 88 to 86.

PTOLEMY X ALEXANDER I (c. 140-88 B.C.), younger brother of Ptolemy IX, was governor of Cyprus from 116; was recalled to Egypt by his mother in 110, but resigned after a short joint rule with the title 'king' of Cyprus. Another joint rule in 108 prepared the way for his final joint third rule with Cleopatra III under pressure from the insurgent Alexandrians. After Cleopatra III's (possibly natural) death, the king married Cleopatra Berenice, daughter of Ptolemy IX, a few days later. Expelled from Egypt by a military revolt, he made successive attempts to recover his kingdom by land from Syria and by sea from Asia Minor, and died in a naval battle (89-88).

The framework of events in the reigns of Ptolemy VIII, IX, and X is very uncertain: see the elaborate study of W. Otto and H. Bengtson, *Zur Geschichte des Niederganges des Ptolemaerreiches* (Bayer. Abh. 17, 1938).

PTOLEMY XI ALEXANDER II (c. 100/99-80 B.C.), son of Ptolemy X and his unknown first wife. Sulla made him joint ruler with and husband of his stepmother Cleopatra Berenice (80 B.C.). He murdered her nineteen days after the wedding, and was killed by the Alexandrians, in spite of his being the last legitimate male descendant of the dynasty.

PTOLEMY XII THEOS PHILOPATOR PHILADELPHUS NEOS DIONYSUS (AULETES), son of Ptolemy IX and a mistress, was born between 116 and 108 and died in 51 B.C. He succeeded to the throne in 80, and married Cleopatra V Tryphaena, his sister, in 80/79. His cultivation of friendly relations with Rome led to his expulsion by the Alexandrians in 58, but he was restored by Gabinius in 55.

PTOLEMY XIII, brother of Cleopatra VII (q.v.), was born in 63 and died in 47 B.C. In 51 he married his sister, who became joint ruler with him but was presently expelled by him. After the murder of Pompey by his ministers (48) he was forced by Caesar to share the throne again with Cleopatra. He subsequently made open war against Caesar, was defeated and drowned in the Nile.

PTOLEMY XIV (c. 59-44 B.C.), another brother of Cleopatra VII. Caesar made him king of Cyprus in 48, and joint ruler and husband of Cleopatra in 47. He was murdered by her orders.

PTOLEMY XV CAESAR: see CAESARION.

See APOLLONIUS 3, ARSINOË, BERENICE, CAESARION, CLOMENEIS 3, CLEOPATRA.

Bouché-Leclercq, *Histoire des Lagides* I-IV (1903-7); W. Otto, *Abhandlungen der bayerischen Akademie, Phil.-Hist. Klasse*, 1928 no. 1, 1934 no. 11, 1938 no. 17, Sitzungsber. 1939 no. 3; W. Peremans and J. Vergote, *Papyrologisch Handboek* (1942), Rostovtzeff, *Hellenistic World, passim*. Numerous articles in *JHS*, *JEG*, *Arch.*, *Arch. Pap.*, and other periodicals. The administration of Ptolemaic Egypt is illustrated by innumerable papyri (Greek and Demotic); see the detailed study by Cl. Préaux, *L'Economie royale des Lagides* (1939), with complete

bibliography and an index of important passages. For Ptolemaic dynastic chronology see T. C. Skeat, *The Reigns of the Ptolemies* (1954), A. E. Samuel, *Ptolemaic Chronology* (1962). F. M. II; P. M. F.

PTOLEMY (2), king of Mauretania (A.D. 23-40), was a son of Juba II (q.v.) and Cleopatra Selene, and thus a grandson of Antony. He shared some responsibility for government in his father's later years. For his help in the war against Tacfarinas (q.v.) he was recognized by Rome as *rex et socius atque amicus populi Romani*; the sceptre and robe that the Senate sent him he displayed on his coinage. In 40 the Emperor Gaius, his cousin, summoned him to Rome and then executed him; whether his offence was his wealth (Dio Cassius), his wearing a purple cloak in public (Suetonius), or a decision to annex Mauretania, is uncertain.

COINAGE. J. Mazard, *Corpus Nummorum Numidiae Mauretanicae* (1955), 127 ff. H. H. S.

PTOLEMY (3) of Cyrene revived the sceptical school of philosophy about 100 B.C. (Diog. Laert. 9. 115).

See Zeller, *Phil. d. Griechen* in. 2^a 2.

PTOLEMY (4) (CLAUDIUS PTOLEMAEUS, *PW* 66), astronomer, mathematician, and geographer (fl. A.D. 127-48, dates derived partly from his observations in Alexandria). His major work, the *Almagest* (this title is the Arabic form of ἡ μεγίστη sc. σύνταξις; Ptolemy's title is μαθηματικὴ σύνταξις), in thirteen books, is a complete textbook of astronomy as the Greeks understood the term (see ASTRONOMY). The basis of the system it expounds is the eccentric/epicyclic theory developed by Apollonius (2) and Hipparchus (3) (qq.v.), and the calculations are worked out with the aid of the trigonometry created by Hipparchus and Menelaus (q.v. 3). But only in the theory of the sun (book 3) and of eclipses (book 6) did Ptolemy merely repeat Hipparchus' work. He introduced an important correction in the theory of the moon (books 4-5), and himself created the first viable theory of the five planets (books 9-13). The fixed-star table too (books 7-8) is based on fresh observations. The *Almagest* is a masterpiece of clear and orderly exposition by a practising astronomer with considerable mathematical ability and a genius for analysis of observations. It quickly became canonical, and remained so for more than a thousand years, dominating astronomical theory in Byzantium, the Islamic world, and thence Europe of the later Middle Ages. Because of its generous acknowledgement of debt to predecessors, it is also an important source for our knowledge of earlier works which it superseded. Ancient commentaries by Pappus and Theon (4) of Alexandria (qq.v.) survive in part.

2. Other astronomical works by Ptolemy are: (a) *φάσεις ἀπλανῶν ἀστέρων*, on the times of the risings and settings of prominent fixed stars (only the second of two books survives); (b) *ὕψος αἰθέρων πλανουμένων*, book 1 a description of the Ptolemaic system, listing the constants derived in the *Almagest*; book 2 (extant only in Arabic translation) an attempt to translate this geometrical system into physical terms; (c) *Canobic Inscription*, a (MS.) list of astronomical constants (some differing slightly from those of the *Almagest*) supposed to have been set up by Ptolemy on a column in Canopus, where he lived; (d) *Planisphaerium* (extant only in Latin translation from the Arabic), describing the stereographic projection of the celestial sphere from its south pole on to the plane of the equator (the theoretical basis of the astrolabe); (e) *Analemma* (extant only in Latin translation from the Greek, except for a few palimpsest fragments), an application of nomographic techniques to the solution of problems of spherical geometry encountered in the theory of sundials (see MATHEMATICS § 7). (f) Astronomical tables. These are extant only in the revised version of Theon

(q.v. 4) of Alexandria, but Ptolemy's own rules for their use (*προχειρών κανόνων διάταξις καὶ ψηφοφορία*) survive.

3. (a) *Astrology*. The *ἀποτελεσματικά* (or *Tetrabiblos*) was almost as influential in its own field as the *Almagest* in its. In it Ptolemy attempts to provide a scientific basis for the various practices of the astrologers. The *καρπός* (*Gentilium*) is pseudoeptigraphic. (b) *Music*. The *ἁρμονικά*, in three books, is a systematic treatment of the mathematical theory of harmony. (c) *Optics*. The *Optica* is extant only in a Latin translation from the Arabic, from which book 1 and the end of book 5 are missing. It is greatly advanced in mathematical refinement and representation of physical and physiological reality beyond the crude treatise of Euclid (q.v.). Particularly remarkable are experiments to determine the angles of refraction between various media (5. 5 ff.). See also *PHYSICS* § 6. (d) *Philosophy*. *Περὶ κριτηρίου καὶ ἡγεμονικοῦ* is a short work on epistemology. (e) *Geography*. See below. (f) *Lost works*. Excerpts from a work on Euclid's 'parallel postulate' are given by Proclus, *Comm. in Eucl.* 191, 362, 365 Friedlein. Simplicius (*in Ar. de caelo*, 9) mentions a work *Περὶ διαστάσεως* (*On Dimension*), in which Ptolemy 'proved' that there are only three dimensions. *Suda* (s.v.) says that he wrote *μηχανικά* in three books; this is probably the same as the work *Περὶ ῥοπῶν* mentioned by Simplicius (*in Ar. de caelo*, 710). Simplicius also mentions a work *Περὶ τῶν στοιχείων* (*in Ar. de caelo*, 20).

LIFE AND WORKS. F. Boll, 'Studien über Claudius Ptolemaeus' (*Jb. f. Cl. Phil. Suppl.* 1804), 51 ff.

Almagest, ed. J. L. Heiberg, 2 vols (Teubner, 1898, 1903). Excellent German translation by K. Manitius, 2 vols (Teubner, 1912-13, corrected repr. 1963). French translation in the old edition by Halma (Paris, 1817-16, reprinted 1927). Besides the above translations see J. B. J. Delambre, *Histoire de l'astronomie ancienne* (1817), esp. II, 67 ff. Detailed bibliography in *PIV* xxiii, 2, 1799 ff. Other astronomical works are edited by J. L. Heiberg in *Ptolemaei Opera Astronomica Minora* (Teubner, 1907; bk. II of the *εὐδοκίαν* in German translation only; Arabic text, including the end of bk. I omitted by Heiberg, published by G. Goldstein in *TAPA* 1967, 3 ff.). This includes the *testimonia* for the lost works. On the *φανος* see H. Vogt, *Der Kalender des Claudius Ptolemaeus* (Sitz. Heidelb., 1920). German translation of the *Planisphaerium* by J. Drecker in *Ius* 1927, 255 ff. See also O. Neugebauer, 'The Early History of the Astrolabe', *Ius* 1940, 240 ff. *Analemma* see P. Luckey, *Das Analemma von Ptolemaeus*, *Astronomische Nachrichten* 210 Nr. 5498 (1927), 17 ff. The only edition of Theon's version of the *πρόχειροι κανόνες* is that of Halma, *Tables manuelles astronomiques de Ptolémée et de Theon*, 3 vols. (1822-5).

The astronomical works, and *Περὶ κριτηρίου καὶ ἡγεμονικοῦ*, are edited in the Teubner edition of Ptolemy's works, vol. II pts. 1 and 2, by Boll, Hoer, and Lammert. For the *Tetrabiblos* see also the Loeb edition by F. E. Robbins, 1940. Much valuable commentary on this will be found in Bouché-Leclercq, *L'Astrologie grecque* (1899, repr. 1963).

The *ἀρμονικά* are edited, together with the commentary of Porphyry (q.v.) and a German translation and commentary, by Ingenier Düring, *Göteborgs Högskolas Årsskrift* 36, 38, and 40 (1930-4).

Optica edition by A. Lejeune, *L'Optique de Claude Ptolemée* (1956). See also Lejeune's *Euclide et Ptolemée, deux stades de l'optique géométrique grecque* (1948).

4. Ptolemy's scientific ideal outstripped his practical application. Adopting Posidonius' estimate of 180,000 stades for the earth's circumference, in preference to Eratosthenes' more correct calculation of 250,000 stades, he systematically underrated the distance between any two positions of longitude, and the errors due to this false graduation accumulated in the outer or eastern portion of his map. Moreover, with rare exceptions, his positions were not really determined by astronomic observation, but by dead reckoning from (often incorrect) reports of travellers. Though Ptolemy recognized the danger of this method of computation, he tabulated all his data in exact terms of latitude and longitude, thus giving a delusive appearance of scientific certainty to his deductions. Furthermore, he rejected the theory of a circumfluent ocean round the three continents, and while he left blank the map of the unknown world to west,

north, and east, he assumed the existence of a large sub-equatorial continent.

5. The most conspicuous errors in Ptolemy's map were the extension of the Eurasian land-mass over 180° of longitude (instead of 130°), and the invention of a Terra Australis connecting the east coast of Africa with China and converting the Indian Ocean into a huge lake. Of its innumerable errors and deficiencies of detail the following are most notable. (1) *Europe*. The Atlantic coast of the continent has an almost unbroken north-east trend. Scotland lies on its back in a west-east direction (for a probable reason see J. J. Tierney, *JHS* 1959, 132 ff.). Scandinavia is a small island. Germany, Poland, and central and northern Russia are largely left blank. The Sea of Azov is greatly magnified. (2) *Asia*. The Caspian Sea is correctly conceived as a lake, but is greatly elongated from west to east, and the Persian Gulf is similarly distorted. India is a rectangle with its main axis running from west to east, and Ceylon is magnified fourteen times. The Malay peninsula is determined with fair accuracy, but the Chinese coast curves away to east and south so as to meet Terra Australis. (3) *Africa*. The Mediterranean coast runs almost continuously from west to east. Two unidentifiable rivers, Gir and Nigir, cross north Africa in the same direction. The White Nile is correctly derived from two Central African lakes, but the mountains on either side are connected into a continuous west-east chain ('Mountains of the Moon').

6. But despite its faults, the treatise of Ptolemy was on the whole the most accurate of ancient geographical works, and it was the most comprehensive. It therefore remained standard until modern times.

E. H. W.

PUBLICANI. Since the Roman Republic had only a rudimentary civil service (see *APPARITORES*) and primitive budgeting methods, the collection of public revenue was normally farmed out, i.e. sold as a public contract to the highest bidder, who then reimbursed himself with what profit he could. In addition, as in other States, there were contracts (*ultra tributa*) for public works and supplies (especially for the army), and these tended to be in the hands of the same persons, especially as men of servile birth and (at least by the time of the Hannibalic War) senatorial families were not admitted to either. By investing the money gained on public contracts in purchasing a tax contract (especially the increasing *portoria* (q.v.) and revenues from public land), men could make great fortunes. In the second century B.C., the Senate and censors often carefully scrutinized the activities of these *publicani* and this caused occasional conflicts, which the *publicani* could not hope to win. But C. Gracchus (q.v. 4), by providing for the sale of the Asian tithe by (normally) four-year contracts in Rome, opened a new and lucrative field for them. By transferring the *repetundae* (q.v.) court to the richest non-senators, probably to counter flagrant

senatorial corruption, he gave the same class of men immense power in the State. They soon gained full social acceptance (by Cicero's day they were the leading *equites*, q.v.) and, having the greatest wealth and the most obvious common interest within the 'equestrian' class, were the most important pressure group in it, so that *equites* and *publicani*, for political purposes, often seem identified. The huge fortunes made by these men, apart from a (socially necessary) investment in land, were put to work in moneylending and business finance, so that *publicani* and *negotiatores* also came to be largely identical, especially on the highest level.

By the second century B.C., the large capital required for the purpose of the main taxes and for arranging public contracts had led to the formation of public companies for the purpose, with special privileges conferred by law; and in the late Republic these were the biggest and best-organized bodies and the largest employers in Rome. They consisted of *socii* (who put up the main capital) under a *magister* (one of the managing directors), who would act as *maniceps* (q.v.) for the contract. Provincial offices were under a *pro magistro* and had a very large staff, from wealthy *equites* in the upper reaches (who could count on the co-operation of the provincial governor) to freedmen and slaves. These offices also could act as bankers to the governor and to other important men visiting the province, and as centres for large-scale financial transactions in their province and adjacent kingdoms. They were particularly wealthy and powerful in Asia, where they collected the main tax. In Rome, shares (*partes*) seem to have been sold to anyone who could afford them, and large numbers of small shareholders, though they had no influence on management, were thus interested in the fortunes of the companies. In the late Republic, senators quite openly held *partes* in the companies and some like Crassus (q.v. 4) were closely connected with them. Competition then seems to have been at best nominal and the companies acted as a monopoly. Thus the main company for Bithynia was owned by all the other *societates*.

Caesar restricted the activities of the *publicani*, depriving them of the Asian *decuma*. Under the Empire, tribute was collected by the government through quaestors and procurators; though on the local level *publicani* might still be called in. Other revenues continued to be collected through them, and the word now acquires the meaning of 'tax-collector'. The New Testament shows their unpopularity. After major complaints, Nero introduced measures to control them, including the compulsory publication of their agreements (*pactiones*) with the local corporations (Tac. *Ann.* 13. 50 f.). In the second century A.D. the place of the companies is taken by individual *conductores* (q.v.).

Bloch Carcopino, *Historie romaine* (1950), 75 ff.; *PW* Suppl. xi, 1184 ff.

PUBLILIUS (1, *PW* 10) **VOLERO**, tribune of the *plebs* in 471 B.C., is traditionally credited with a law that transferred the election of plebeian magistrates from the assembly of the *curiae* to the tribes. As such a concession by the patricians is unlikely at so early a date, the *rogatio Publilia* had better be considered as an anticipation of the *Lex Publilia* (339 B.C.; see **PUBLILIUS** 2).

G. W. Botsford, *The Roman Assemblies* (1909), 270 ff., 300 f.; Ogilvie, *Comm. Livy* 1-5, 373 f.

PUBLILIUS (2, *PW* 11) **PHILO**, **QUINTUS**, consul in 339, 327, 320, and 315 B.C. He was the first plebeian dictator (339), and is credited with three laws which were a landmark in the struggle for social equality: (1) censorship to be opened to plebeians; (2) *plebiscita* to be binding on the whole community (an anticipation of the *Lex*

Hortensia); (3) the *auctoritas patrum* to be reduced to the formal ratifying of proposals, before they went forward to the centuriate assembly. Publius was the first plebeian praetor (337), and, as censor (332), helped towards creating the new tribes Maecia and Scaptia. As consul (327) he besieged Naples (Palaeopolis) and was appointed proconsul for 326 (the first known example of *prorogatio imperii*). The tradition which records his triumphs (over the Latins in 339, and over the Samnites and Palaeopolitae in 326) is not altogether trustworthy. He undoubtedly played a leading part in the recovery of Rome after the Caudine catastrophe, and in her expansion in and beyond Campania, but details of his later career (e.g. his alleged implication in the rebellion of Capua in 314) cannot be explained with certainty. There is, however, every reason to maintain that Philo ranked prominently among the so-called 'democrats', i.e. Appius Claudius' opponents chiefly in home affairs, while sharing in and furthering Appius' 'Southern' policy.

G. W. Botsford, *The Roman Assemblies* (1909), 229 ff.; F. S. Staveley, *Athenaeum* 1955, 28 ff.; F. Cassola, *I gruppi politici romani* (1962), 122 ff.

PUBLILIUS (3, *PW* 28) **SYRUS** (not Publius, Wölfflin, *Philol.* 1865, 439) came to Rome as a slave in the first century B.C., possibly from Antioch (Pliny, *HN* 35. 199). Intellectual ability, psychological discernment, and wit ensured him manumission. He devoted his gifts to the latinized form of the mime, where his one rival was the veteran knight Laberius (q.v.), whom he surpassed in the competition between them ordered by Julius Caesar. Only two of his titles are recorded, *Putatores* and the corrupt *Murmurithon* (Nonius 2. 133; Priscian, *Inst.* K. 2. 532. 25). His clever improvisations suffered through being entrusted to the frail security of actors' copies. The Elder Seneca commended his power of expressing some thoughts better than any other dramatist; and Gellius quotes for their neatness 14 maxims (Sen. *Controv.* 7. 3. 8; Gell. 17. 14). Petronius 55 has wrongly been supposed to cite a passage of 16 lines from Publius.

In the first century A.D. it was realized that, whatever the harm wrought by the immorality of mimes, the apophthegms uttered by various dramatic personages might well be selected and alphabetically arranged to inculcate in schoolboys a proverbial wisdom founded on human experience. So it came about later that Jerome learned in class the line which he quotes twice, 'acgre reprehendas quod sinas consuescere' (Hieron. *Ep.* 107. 8; 128. 4). The great textual difficulty is to disengage truly Publilian *sententiae* from accretions due to paraphrases of genuine verses, or insertions of Senecan and pseudo-Senecan ideas, or such distortions of the original iambic senarii and trochaic septenarii as induced copyists to mistake them for prose.

There could be no unified ethical standard among maxims spoken by different characters in different scenes. Some are platitudes; some contradict others, as proverbs often do. Many advocate self-regarding behaviour; yet the prevailing terseness of expression is an undeniable attraction.

TEXT. J. C. Orelli, *Publii [sic] Syri Mimi et aliorum Sententiae* (1822; 791 iambs and 83 trochaics, with Scaliger's Greek verse translations). W. Meyer, *Publii [sic] Syri Sententiae* (1880, 713 lines); O. Friedrich, *Publii Syri Mimi Sententiae* (1880); R. A. H. Lickford-Smith, *Pub. Syr. Sent.* (1895; 722 lines).

TRANSLATION. Duff, *Minor Lat. Poets* (734 lines).

J. W. D.

PUDICITIA, personification of the chastity or modesty of women. According to Livy (10. 23), she was originally worshipped as Pudicitia Patricia in a small shrine in the Forum Boarium, but in 296 B.C. a rival cult of Pudicitia Plebeia was founded in the Vicus Longus. At first

limited to women who had married but once, the cult degenerated and was forgotten.

For criticism see Wisniewski, *Ger. Abh.* 254 ff.; Platner-Ashby, 433 ff.; for other cults, see Wisniewski, *RR* 334. H. J. R.

PULVINAR, (1) a couch, such as was used for the images or symbols of gods at a *lectisternum* (q.v.; *Ilor. Carm.* 1. 37. 3 and often). This seems to be a purely Greek rite, adopted in Rome. (2) A platform on which such objects were placed, either to be adored at a *supplicatio* (q.v.), or for other ritual purposes, see [Acro] on Horace, *loc. cit.* and literature under SUPPLICATIONES.

Latte, *RR* 224.

H. J. R.

PUNIC WARS: three wars in which Rome gradually superseded Carthage as the dominant power in the western Mediterranean. The early relations of Rome and Carthage had been friendly. The interests of Rome, which were primarily agricultural and confined to Italy, did not clash with those of the Carthaginians, who gained a commercial monopoly in the western Mediterranean. Treaties were negotiated (probably in 509 and 348 B.C.), confirming this Punic monopoly and guaranteeing Italian coast-towns against Carthaginian attack, while the hostility of Pyrrhus to both Rome and Carthage resulted in a supplementary agreement between the two powers (279). But in 264 when the Carthaginians occupied Messina in north-east Sicily a dangerous situation was created, since Rome was now the ally of the Greek cities in south Italy, who saw a threat to their trade or security if Carthage dominated Sicily and the Straits of Messina. When therefore the Mamertines (q.v.) in Messina appealed to Rome for help, the Senate hesitated, foreseeing the possibility of war with Carthage, but the People decided to accept the Mamertine alliance whatever the consequences. When Appius Claudius (q.v. 5) Caudex crossed to Sicily war was declared. In fact both Rome and Carthage had rushed in to secure a key position, but with different motives: defensive imperialism dominated Roman policy; an exploiting commercial imperialism actuated Carthage. Neither side used the Messina affair as an excuse for a predetermined war, but being different in race, culture, and religion, with divergent moral and material interests, Rome and Carthage would gravitate more quickly towards conflict when the minor States between them had been eliminated or assimilated. In the Hellenistic East a common culture held the three great monarchies in a precarious balance of power, which Rome later tried to maintain when she had absorbed something of that culture. In the West dissimilarity made compromise more difficult.

2. THE FIRST PUNIC WAR (264-241) opened with a successful Roman offensive conducted by Appius Claudius Caudex and M. Valerius Messalla (q.v. 1) against the Carthaginians and Hieron in north-east Sicily; this resulted in Hieron entering into alliance with Rome (263). In 262 the Romans won Segesta and, after a siege, Agrigentum, but since Carthage continued fighting they realized that peace could be secured only by driving the Carthaginians completely out of Sicily: this involved challenging their naval supremacy. By a magnificent achievement the Romans built some 160 vessels equipped with grappnels (*corvi*) which helped to thwart their enemy's superior naval skill. The new fleet commanded by Duilius (q.v.) defeated the Carthaginians off Mylae (260). When no decisive result was reached in Sicily, the Romans sent an expeditionary force under Regulus (q.v. 1) to Africa; after the way had been opened by a great naval victory off Ecnomus, it landed in Africa (256), but was defeated in 255. A relieving fleet defeated the Punic navy off the Heraean Promontory, evacuated the survivors of Regulus' army, but was wrecked by a storm off Pachynus on the way home. In Sicily the Romans captured Panormus

(254), thus confining the Carthaginians to the western end of the island, but a newly raised fleet was wrecked off Cape Palinurus (253). Both sides were exhausted. After L. Metellus (q.v. 1) had repulsed a Punic attack on Panormus (250), the Romans blockaded Lilybaeum and Drepana. A naval attack by Claudius (q.v. 6) Pulcher on Drepana failed, while the rest of the fleet was wrecked off south Sicily (249); the Romans, however, seized Mt. Eryx (q.v.), thus cutting off the land-communications of Drepana. Despite the fresh efforts of Hamilcar (q.v. 2) Barca in Sicily (247-241), the Romans at length raised a new fleet under C. Lutatius Catulus (q.v. 1), who defeated the Carthaginians off Aegates Insulae and negotiated peace-terms, which ultimately included the evacuation of Sicily and an indemnity of 3,200 talents to be paid in ten years.

3. Carthage immediately had to face a serious revolt of her mercenaries (the "Truceless War"). Scarcely had she crushed this, when the Romans occupied Sardinia in answer to an appeal from some mercenaries there (238). To Carthaginian protests Rome replied by refusing arbitration and declaring war: Carthage had to submit, surrender Sardinia and Corsica, and pay an additional 1,200 talents. The desire to deprive Carthage of an island base against Italy may partly explain this wanton aggression, which embittered relations which were just becoming more friendly. Primarily as compensation for the loss of Sicily and Sardinia the imperialist party at Carthage turned to Spain, which would also furnish abundant natural wealth and manpower in the event of future hostilities with Rome. The conquest of Spain was achieved from 237 to 219 by Hamilcar, Hasdrubal, and Hannibal (qq.v.). By attacking Rome's ally, Saguntum, Hannibal deliberately precipitated the Second Punic War. The question of war-guilt is complicated. Possibly it was not a long-premeditated war of revenge championed by the family of Barca, but when the Romans interfered south of the Ebro (the Punic sphere of influence *de facto* and possibly *de jure*), Hannibal refused to contemplate a recurrence of bullying such as Carthage had suffered in 238: he struck before Rome was ready.

4. THE SECOND PUNIC WAR (218-201). The Romans prepared to send one army to Africa, a second to Spain, but were foiled by Hannibal's bold invasion of north Italy (see HANNIBAL and SCIPIO 3). They wisely, however, sent an army to Spain where P. and Cn. Scipio (q.v. 4 and 3) prevented reinforcements from reaching Hannibal, won a sea-battle which gave Rome naval supremacy, and took the offensive until their deaths (211); their successor Claudius Nero (q.v. 2) still held the line of the Ebro. Meantime Hannibal had defeated Roman armies at Trebia (218), Trasimene (217), and Cannae (216), but as Rome refused to admit defeat and retained the loyalty of central and northern Italy he attempted to encircle her with a ring of enemies. But this wider strategy ultimately failed: in the west his brother Hasdrubal's offensive in Spain was repulsed (215), while a Carthaginian landing in Sardinia proved abortive (215); in the north the hostile Gauls failed to take decisive action; in the east an alliance was made with Philip V of Macedon, who, however, unaided by the Punic fleet, gradually lost interest in the First Macedonian War (214-205) and negotiated the Peace of Phoenice with Rome (see LAEVINUS and GALBA 2); in the south Greek cities were encouraged to revolt, but their leader Syracuse was reduced to submission by 211 by Marcellus (q.v. 1). Meantime in Italy Hannibal's strength was being worn down by Fabius (5), Sempronius Gracchus, Marcellus, and Fulvius Flaccus (qq.v.), who avoided further pitched battles and recovered Capua (which had revolted after Cannae) in 211 and Tarentum in 209. Hasdrubal, who at length broke through to Italy from Spain, was defeated at the Metaurus (q.v.) by

Claudius Nero and Livius Salinator (q.v.) in 207, and thereby Hannibal's last hope of receiving reinforcements died, despite the attempt of Mago (q.v. 2). Scipio (q.v. 5) Africanus victoriously drove the Carthaginians from Spain by his final victory at Ilipa (206) and led an expeditionary force to Africa where his successive victories forced the recall of Hannibal from Italy. Thanks to his tactical reforms and the help of Masinissa (q.v.), Scipio defeated Hannibal at the battle of Zama (q.v., 202). In 201 peace was signed: Carthage surrendered her navy and Spain, retained her autonomy and her territory within the Phoenician Trenches (i.e. roughly modern Tunisia), became a dependent ally of Rome, and paid an indemnity of 10,000 talents in fifty annual instalments. But the Romans evacuated Africa. Factors which gave Rome the victory included her superiority by sea and in manpower, the loyalty of the Italian allies, the wisdom of the Senate and the doggedness of the People, the blocking of reinforcements to Hannibal, the defensive strategy of Fabius in Italy combined with the offensive strategy of Scipio, who forged a weapon which drove the Carthaginians from Spain and vanquished Hannibal himself. Against such factors Hannibal's untiring gallantry and genius were unavailing. The war was a turning-point in ancient history; it had profound effects on the political, economic, social, and religious life of Italy, while thereafter for centuries no power could endanger Rome's existence.

5. THE THIRD PUNIC WAR (149-146). Carthage, no longer a great Mediterranean power, made a remarkably quick economic recovery, thanks partly to Hannibal's financial reforms, but she was continually provoked by Masinissa, whose aggression the Romans did little to check. Cato (q.v. 1), from motives of revenge and fear, urged the destruction of Carthage; Nasica (see SCIPIO 10) advocated a more lenient policy. There is little evidence to suggest that Roman policy was dictated by commercial jealousy. Intervention was legally justified when Carthage was goaded into attacking Masinissa, Rome's ally (150). Rome declared war on Carthage (149), and a Roman army under Manilius (q.v. 1) landed in Africa. Carthage surrendered, handed over hostages and arms, and then heard the Roman terms that the city itself must be destroyed. Unexpectedly she refused to comply, and with desperate heroism withstood a Roman blockade until 146, when Scipio (q.v. 11) Aemilianus stormed and sacked the city. Carthage was thus destroyed, and her territory was made into the Roman province of Africa.

ANCIENT SOURCES. *First War*: Polyb. bk. 1 based mainly upon the pro-Roman Fabius Pictor and the pro-Carthaginian Philinus. *Second War*: Polyb. bks. 3 and 7-15 (fragmentary). He drew upon both Roman material (public archives, family records, oral tradition from survivors, and writers as Fabius) and Punic material (the Greek writers Sosylus and Sidenus who lived with Hannibal). Livy, bks. 21-30, provides a detailed narrative, based partly upon Polyb., partly upon less trustworthy Roman annalists. *Third War*: Polyb. bks. 36-9 (fragmentary). Appian, *Libya* 67-135 is based upon Polyb., though contaminated with less reliable annalistic material. Subsidiary authorities add little.

MODERN LITERATURE. Wallbank, *Polybius*, is indispensable. G. De Sanctis, *Stor. Rom.*, vol. III, pt. 3 (1916-64), is of fundamental importance; U. Kahstedt, *Geschichte der Karthager von 218-146* (1913), contains detailed source criticism. S. Gsell, *Histoire ancienne de l'Afrique du Nord* i-iv (1913-20), esp. vol. II. For the separate battles J. Kromayer and G. Veith, *Antike Schlachtfelder* III, iv (1912-31), and *Schlachten-Atlas zur antiken Kriegsgeschichte*, *Röm. Abt.* II (1922). J. H. PUPIUS, PUBLIUS, contemporary with Horace, who calls his tragedies 'lacrimosa poemata' (*Epist.* 1. 1. 67).

Bachr. *FPR* 348; Morel, *FPL* 112.

PURPLE. Of the two main kinds of purple-yielding shellfish described by Pliny (*HN* 9. 125-41), *pio pura* and *pelagia* (Greek *πορφύρα*) correspond to the Linnaean *murex*, *murex* and *buccinum* (*κῆρυξ*) to the smaller and less precious *purpura haemostoma*. In antiquity the purple of Tyre always retained its primacy, but purple dyeing was practised also in the Greek cities of Asia, the Greek mainland and islands, southern Italy, and North Africa. After being gathered or caught in baskets and killed suddenly to preserve the secretion, the molluscs were either opened (esp. the larger) or crushed. The mass was then left in salt for three days, extracted with water, and slowly inspissated to one-sixteenth of its original volume. Impurities were removed during this process, and the liquid was then tested with flocks of wool until the colour was right. Many shades within the violet-scarlet range, and even a bluish green, could be obtained by mixing the dyes from different species and by intercepting the photochemical reaction which gives the secretion its colour. ('Twice-dyed' [*δίβαφος*] Tyrian purple resulted from consecutive steeping in *pelagium* and *bucinum*.) Less expensive imitation purple dyes, for which several recipes survive, were also made. In Rome, where the use of purple garments was always a mark of rank, purple dyeing became a state monopoly under Alexander Severus.

PUTEAL: literally a well-kerb, but also used of the stone coping put to cover some place which was taboo such as where lightning had struck (see also BIDENTAL). The most famous was in the Forum—the *puteal Libonis* or *Scribonianum*; its altar-like well-head is depicted on coins (*B.M. Cat. Rom. Republ.* 1, 419), and its tufa foundation was discovered in 1950 (Nash, *Pict. Dict. Rome* II, 259 ff.). H. W. P.

PUTEOLI, modern *Pozzuoli*, a town near Naples (see PAUSILYPTUS MONS). Samian colonists from Cumae founded Dicaearchia here (c. 521 B.C.). Dicaearchia became Puteoli (date unknown), and Puteoli became a Roman dependency (with Capua in 338?) (Strabo 5. 245 f.; Festus, 262 L.). In the Hannibalic War it was an important military and trading port (Livy 24. 7; 26. 17), and in 194 became a citizen colony which was subsequently recolonized several times (Dessau, *ILS* 5317; Plut. *Sulla*, 37; Tac. *Ann.* 14. 27; Pliny, *IIN* 3. 61). As the harbour of Rome, Puteoli became a great commercial entrepôt, by 125 B.C. second only to Delos (Festus, 109 L.). All Rome's eastern imports and exports, including grain, passed through Puteoli (Strabo 3. 145; 17. 793; Pliny, *IIN* 36. 70; Sen. *Ep.* 77). Its trade guilds, fire-brigade, imperial post station, its special road (Via Domitiana, q.v.) joining the Via Appia, its lighthouse, artificial harbour-works, and surviving monuments (e.g. amphitheatre), attest a prosperity which survived the rivalry of Ostia. Devastations by Alaric (410), Genseric (455), and Totila (545) finally ruined Puteoli. In its heyday Puteoli was a fashionable villa resort, e.g. of Sulla, Cicero, Hadrian.

PYGMALION, (1) legendary king of Tyre, brother of Elissa (Dido), whose husband, Acherbas or Sychaeus, he killed in the hope of obtaining his fortune. (See Verg. *Aen.* 1. 343-64, Just. *Epit.* 18. 4, and DIDO.) (2) Legendary king of Cyprus, who having fashioned an ivory statue of a woman fell in love with it. Aphrodite gave it life, and the woman bore Pygmalion a daughter, Paphos, the mother of Cinyras (Ov. *Met.* 10. 243-97), though

according to Apollod. *Bibl.* 3. 14. 3 Cinyras was Pygmalion's son-in-law. Philostephanus (*FIG* iii. 31, fr. 13) calls the statue a figure of Aphrodite. Pygmalion was perhaps, like Cinyras (q.v.), a priest-king, associated with the cult of Aphrodite-Astarte (cf. J. G. Frazer, *Adonis Attis Osiris* (1906), i, ch. 3). F. R. W.

PYGMIES, dwarfs of ridiculous appearance who live in Africa, or India, or Scythia and are distinct from the Cercopes which annoyed Heracles. They are mentioned and discussed in Greek mythology in connexion with their fight against the cranes. Homer (*Il.* 3. 6) says that the cranes flee before the winter to the (southern) stream of Oceanus and bring death to the Pygmies. Hecataeus of Miletus, who definitely located the Pygmies in southern Egypt, Ctesias, and the writers on India (e.g. Megasthenes) considerably elaborated the story. The Pygmies disguise themselves as rams, or ride on rams and goats. They battle with the cranes to protect their fields, or even conduct operations to destroy the eggs of the cranes. Other mythographers invented explanations for the struggle, tracing the enmity back to a beautiful pygmy girl transformed into a crane (Boeius in *Ath.* 9. 393 e).

As Herodotus hinted (2. 32. 6) and Aristotle (*Hist. An.* 8. 12. 597^a) confirmed, the dwarfs of Central Africa may have been the origin of the myth (F. Nicolas, *Anthropos* (1956), 551). Modern explorers report that the Akka dwarfs hunt cranes and that the birds vigorously resist. Around this core of fact, possibly conveyed to Greeks through Egyptian sources (R. Hennig, *Rh. Mus.* 1932), grew a solid shell of dwarf folklore (R. Dangel, *SMSR* 1931, 128) and novelistic invention. The geranomachy is often shown in Greek art, the François vase being the earliest instance. In Hellenistic art dwarfs or Pygmies are often used for parodies of mythological and 'genre' scenes, or shown in Nile landscapes (W. B. MacDaniel, *AJArch.* 1932, 260).

E. Wuest, *PW* s.v. 'Pygmaioi'; M. Gusinde, *Kentniue und Urteile über Pygmaen* (1962). G. M. A. 11.

PYLAEMENES, in mythology, king of the Paphlagonian Eneai (*Iliad* 2. 851). He is distinguished chiefly for coming to life in *Il.* 13. 658, cf. 643, after being killed in 5. 576, a slip of Homer's from which most ridiculous consequences have been drawn by ancient and modern critics. H. J. R.

PYLOS was the name of three places in western Peloponnese (Strabo 8. 339; cf. *Ar. Eq.* 1059). *Messenian Pylos* lay at the north end of Navarino Bay, on a rocky peninsula (formerly Osmanaga, now called Palaiochori or Koryphasion) joined by a sandspit to the mainland and separated by a narrow channel from the island of Sphacteria. On the landward side is the so-called 'Cave of Nestor'. There are traces of Mycenaean occupation and also of Hellenistic (houses and walls). Tradition (Paus. 4. 36. 2) placed the house and tomb of Nestor in this vicinity. Uninhabited in 425 B.C., the Athenians fortified it and held it with a Messenian garrison until 409 (Diod. 13. 64). Its subsequent history is obscure. It is surprising that this fertile district, with one of the best harbours of Greece, was not more important in classical times. Its great period of importance is the Mycenaean. For the ever-increasing evidence of Bronze Age cultural development here and elsewhere in the western Peloponnese, see *MESSENIA* and *ELIS*. With Nestor, as ruler of a wealthy State which sent ninety ships to Troy and included Pylos (*Il.* 2. 591-602), has been associated the Mycenaean palace on an acropolis at Ano Englianos, north-east of the Bay of Navarino and near Chora. It is the centre of a region particularly rich in Mycenaean remains (see *MESSENIA*) from late Middle Helladic through to the end

of Late Helladic IIIB (c. 1200 B.C.). There is not universal agreement that this is in fact the palace of the Pylian dynasty, established by Neleus from Thessaly (Paus. 4. 36. 1), attacked by Heracles, and visited by Telemachus. The kingdom of Nestor stretches in the Catalogue of the Ships to the Alpheus (*Il.* 2. 592), and the tale of the cattle-raid into Elis told in *Il.* 11. 671-761 (see *PYLOS* in *Triphylia*) is difficult to understand if the centre of Neleid rule was at Ano Englianos. Excavation of the palace area shows evidence of a lower town to one side of the acropolis, and of earlier palatial structures going back to the beginning of the Mycenaean period. Finds would seem to suggest that the site possessed a fortification wall in early Mycenaean times, and that this was destroyed in Late Helladic IIIA period, but was not restored when the area was levelled and the existing Late Helladic IIIB palace built, which the excavators suggest was the work of Neleus. The circumstances of the destruction of this palace were formerly described as the 'Dorian Invasion', but some uncertainty is now felt concerning the process of destruction of the Late Bronze Age civilization of Greece. The conflagration baked and preserved the great archive of Linear B tablets relating to the business of government immediately before. These tablets appear to indicate not only an elaborate administration but also preparations to repel attack. The site was not subsequently occupied.

Kiechle, 'Pylos und der pylische Raum in der antiken Tradition', *Hist.* 1960, 1 ff.; W. K. Pritchett, *Studies in Ancient Greek Topography* 1 (1965), 6 ff. See also *MESSENIA*. R. J. H.

PYLOS in Triphylia, a little south of Samikon, was taken by Strabo (followed by some moderns) for the Homeric town of that name. Rich beehive-tombs of the sixteenth century have been found in this district, near Kakovatos. The region might suit better than Pylos in Messenia (q.v.) the description by Nestor (*Il.* 11. 671-761) of the raid in his youth into Elis, past Samikon (?) to the Alpheus, especially since the discovery of Mycenaean tombs (of L.H. IIIB-C date) at Dhiassela near that river (see *BCH* 1957, 574 ff., and the discussion of the whole episode in relation to the historical background and the site of Kakovatos in *AJArch.* 1948, 115, by H. T. Wade-Gery, 'The Dorian Invasion: What Happened at Pylos').

PYRAMUS and **THISBE**, hero and heroine of a love-story almost unknown except from Ovid, *Met.* 4. 55 ff., who says, 53, that it is not a common tale. They were next-door neighbours in Babylon, and, as their parents would not let them marry, they talked with each other through the party-wall of the houses, which was cracked. Finally, they arranged to meet at Ninus' tomb. There Thisbe was frightened by a lion coming from its kill; she dropped her cloak as she ran and the lion mouthed it. Pyramus, finding the bloodstained cloak and supposing her dead, killed himself; she returned, found his body, and followed his example. Their blood stained a mulberry-tree, whose fruit has ever since been black when ripe, in sign of mourning for them. H. J. R.

PYRENEES (Πυρηνή, τὰ Πυρηνῶνα ὄρη; *Pyrenaean mons*), the range of mountains between Gaul and Spain. The name was derived from a city, or port of call, frequented by traders from Massilia. Herodotus (2. 33) places near it the source of the Ister (*Danube*). Avienus (559) knew both the town and the mountains, the former near Portus Veneris (*Vendres*). Silius Italicus (3. 414) and Diodorus (5. 35) present other more imaginative derivations. The error of Polybius (34. 7. 4), ascribing a

north-south direction for the range, was corrected by Pliny (4. 110), but all classical estimates as to length were excessive. The chief highway (Via Augusta) crossed the mountains near their eastern limit. It was supplemented by a road from Jaca to Pau (*Itin. Ant.* 452. 6), and another from Pamplona to Dax (*ibid.* 453. 4). Timber, hams, and bacon appear to have been the important contributions of the Pyrenees to the economic life of the peninsula.

Classical references in *PW*, s.v. 'Hispania'. Excellent modern description in M. Sorre, *Les Pyrénées* (1922). J. J. VAN N.

PYRGI, modern *Santa Severa*, was a port of Caere (q.v.) and famous as the site of a wealthy Etruscan sanctuary of Leucothea or Eleithyia (qq.v.), sacked by Dionysius I (q.v.) in 384 B.C. (Diod. Sic. 15. 14). Recent excavations have revealed two Archaic temples: *A* (c. 480-470) is typically Tuscan, and *B* (c. 500) is a Graeco-Tuscan compromise. Both were destroyed in the third century B.C. Between the two temples were found in 1964 three sheets of gold leaf, one inscribed in Phoenician and the other two (one corresponds generally to the Punic text) in Etruscan. The inscriptions concern a dedication by the 'king' of Caere to the Phoenician goddess Astarte, corresponding to the Etruscan goddess Uni, and demonstrate the close ties that enabled Carthage to influence the internal politics of the cities of Etruria at this time (cf. Arist. *Pol.* 1280a38 ff.; Polyb. 3. 22. 4-13). A fourth (perhaps earlier) inscription on bronze also concerns Uni. The establishment of a Roman military colony at Pyrgi in the third century B.C. reflects the same naval strategy that prompted the near-contemporary foundations of Castrum Novum (modern *Santa Marinella* nearby), Cosa, and Paestum (qq.v.).

Preliminary reports, etc., first nine seasons: M. Pallottino, G. Colonna et alii, *Arch. Class.* ix xviii (1957-66), first definitive report *Not. Scav.* (1959), 143 ff. Inscriptions: M. Pallottino, L. Vlad Borelli, G. Garbini, *Arch. Class.* xvi (1964), 58 ff., bibliography 1964-6; *Stud. xviii* (1966), 279 ff.; J. Heurgon, *JRS* (1966), 1 ff.; W. Fischer and H. Rix, *Gott. Anz.* 1968, 64 ff. D. W. R. R.

PYRRHON (Πῑ' 1) (c. 365-360 to c. 275-270 B.C.), son of Pleistarchus, of Elis, the founder of Greek scepticism. A painter turned philosopher, he was, according to the sources, first taught by Bryson, son of Stilpo (but chronological considerations make this unlikely), then by the Democritean Anaxarchus, whom he followed to India in the train of Alexander the Great. There he is reputed to have encountered some 'magi', to whose influence tradition ascribes some of his later philosophical views. Returning to his native town, he lived a quiet and modest life, following the precepts of his own philosophy, and was highly respected by his fellow citizens, who elected him their high priest. His chief pupils were Timon (2), Philo (3) of Athens, and Nausiphanes of Teios (qq.v.).

Pyrrhon left no writings, and only a few fragments of his immediate pupils survive. It is difficult to determine how much of the more developed philosophy of the later sceptics derives directly from him. This is made more complicated by the problem of the relations between the Pyrrhonian sceptics and the 'New' Academy of Arcesilaus (q.v. 1) and his followers and successors. It is nowadays believed that, whereas the scepticism of the Academy was metaphysical and polemic (against the Stoics and Epicureans), Pyrrhonian scepticism was essentially an attitude to life, the final aim of it being not so much the theoretical *εὔνοχη* as the more practical *ἀταραξία*. Using examples from the deceptions inherent in sense perception and from the contradictions found in the teachings of 'dogmatic' philosophers, the Pyrrhonian concludes that no positive knowledge is possible, and his attitude is that of withholding his judgement (*εὔνοχη*) about all things, stating nothing positive (*οὐδὲν ὀρίζω*), and following in actual life the appearances of things (*φαινόμενα*), without being committed to any permanent and definite attitude

towards them. This leads the sceptic to the state of imperturbability (*ἀταραξία*), his final goal in life.

Later sceptics (Agrippa (5), Aenesidemus, qq.v.) produced lists of arguments of general types against the possibility of positive knowledge (the sceptical *τρόποι*), for refuting the doctrines of the various 'dogmatic' schools. Some of them, in a crude form, may have originated with Pyrrhon himself. But there is no way of deciding on this from our fragmentary evidence. The tendency nowadays to derive some of Pyrrhon's teachings from Democritus (through Anaxarchus), Socrates and the Socratics, and some of the Sophists is based mainly on speculation.

PYRRHUS (319-272 B.C.), the most famous of the Molossian kings of Epirus. After reigning as a minor from 307 to 303 he was driven out and followed the fortunes of Demetrius the Besieger. By the influence of Ptolemy II, whose stepdaughter Antigone he married, and of Agathocles (q.v.), he became joint king with Neoptolemus (297) but soon removed him. Early in his reign he annexed and retained southern Illyria, probably as far as Epidamnus. He tried to emancipate Epirus from Macedonia. By intervening in a dynastic quarrel in Macedonia Pyrrhus obtained the frontier provinces of Parauaea and Tymphaea, together with Ambracia, Amphiloehia, and Acarnania. On the death of Antigone he acquired Corcyra and Leucas as the dowry of his new wife, the daughter of Agathocles, and made an alliance with the Dardanian chief Bardylis, whose daughter he also married. Before he could consolidate his kingdom he went to war with Demetrius, now king of Macedon (291-286), obtaining half of Macedonia, Thessaly, and an alliance with Aetolia and Athens; but he was driven back by Lysimachus (283).

Pyrrhus next undertook to assist Tarentum against the Romans, and with a force of 25,000 men and twenty elephants he defeated the Romans at Heraclea (280). He marched close up to Rome, but failed to impose peace. In 279 he again defeated the Romans at Asculum, and then transferred his forces to Sicily, where he met the Carthaginians, at that time the allies of Rome. He almost expelled the Carthaginians from the island, but broke off the war and returned to Italy. After a drawn battle against the Romans at Beneventum (275), he retired to Epirus with one-third of his expeditionary force. In a new attempt to conquer Macedonia he penned up Antigonos Gonatas in Thessalonica but suddenly moved off to Peloponnesus, where he failed in a siege of Sparta and was killed in a street fight at Argos.

A brilliant tactician and adroit opportunist, Pyrrhus impressed his contemporaries but never won a lasting victory except in creating the large and powerful Epirote State. He made Ambracia his capital, built the great theatre at Dodona, and completed the hellenization of Epirus.

PYTHAGORAS (1), son of Mnesarchus of Samos, emigrated c. 531 B.C., perhaps to escape the tyranny of Polycrates, to Croton. He was a devotee of Apollo, and the Crotoniates identified him with Apollo Hyperboreus. He wrote probably nothing (though works were later fathered on him) and already in Aristotle's day his life was obscured by legend; but an elegy of Xenophanes (fr. 7 Diels) establishes his belief in metempsychosis, and

Heraclitus (frs. 40, 129), Empedocles (fr. 129), Ion of Chios (fr. 4 Diels), and Herodotus (4. 95) testify to his learning and his claim to reach back in memory to former existences. These and later statements indicate that he believed the soul to be a fallen divinity confined within the body as a tomb and condemned to a cycle of reincarnation as man, animal, or plant, from which, however, it may win release by cultivation of an Apolline purity. The spirit, he held, is purified especially by study; accordingly he taught a 'way of life' (Pl. *Resp.* 600 b), in which the investigation of nature (*ιστορίη* Heraclitus fr. 129) became a religion. He is reliably said to have discovered the numerical ratios determining the principal intervals of the musical scale, whence he was led to interpret the world as a whole through numbers, the systematic study of which he thus originated (Aristox. fr. 23 Wehrli; Eudem. fr. 142 Wehrli). He is possibly the discoverer (though not in its Euclidean form) of 'Pythagoras' Theorem' (Euc. I. 47).

In Croton Pythagoras founded a religious society, under the government of which this city rose to supremacy among the Achaean towns in Italy. A conspiracy under Cylon led, however, to Pythagoras' retirement to Metapontum, where he died; and at some date between 460 and 400 the order was almost wholly destroyed. Survivors settled in Thebes (Lysis, Philolaus) and Phleius, some afterwards returning to Tarentum, which became the chief seat of the school till its extinction in the late fourth century B.C. Membership of the order, open to women equally with men, entailed a strict discipline of purity, elements in which were silence, self-examination (*πῆ παρῆν, τί δ' ἔρξα, τί μοι δέον οὐκ ἐτέλεσθῃ*, Diog. Laert. 8. 22), abstinence from flesh, and the observation of precepts originally taboos but later interpreted symbolically (*ἀκούματα, σύμβολα*) and augmented by explicit ethical principles. Fourth-century writers distinguish divergent religious and scientific groups, *ἀκουσματικοί* (*Πυθαγορισταί*) and *μαθηματικοί* (*Πυθαγόρειοι*).

Starting from Pythagoras' discovery of the mathematical basis of the musical intervals, his followers devoted themselves to arithmetic, using a notation consisting probably of patterns of dots; the most important of these was the *τετρακτύς*, which represented the number ten as sum of the first four integers and was traditionally attributed to Pythagoras himself. Pythagorean cosmology was a development of that of the Milesians, which, however, it radically altered by degrading the Infinite from its position as source of the opposites and treating the pair Limit-Unlimited as the primary members of a group of ten pairs, which they regarded as first principles, the Unlimited being inferior in value to the Limit (Arist. *Metaph.* A. 986¹⁵ f.). They said the universe was produced by the First Unit (the Heaven) inhaling the Infinite (or Void), so as to form groups of units or numbers (Arist. *Metaph.* N. 1091¹⁵ f., *Phys.* 213¹² f.), and that all things (even, e.g., opinion, opportunity, injustice, Arist. *Metaph.* A. 990²²) were numbers and had cosmic position. Probably by about 500 B.C. they had reached the hypothesis that the earth is spherical. Aristotle also attributes to them (*Cael.* 293¹⁸ f.) an astronomical system presupposing a central fire, around which circle the celestial bodies, including sun, earth (which thus first becomes a planet), and counter-earth (*ἀντίχθων*, intended to account for lunar eclipses). This system, to which the older belief in a 'harmony of the spheres' was accommodated, appears to date at earliest from the late fifth century. See also ASTRONOMY, MATHEMATICS.

For Pythagorean writers of independent importance (PHILOLAUS, ARCHYTAS, etc.) and for NEOPYTHAGOREANISM see separate articles.

PYTHAGORAS (2), Greek sculptor, active c. 490-448 B.C. A native of Samos and later resident at Rhegium in Italy, whither he probably emigrated on the fall of Samos in 494 B.C. He is said to have combined a certain advance in naturalism (Pliny 34. 59) with an interest in symmetry and rhythm (Diog. Laert. 8. 46). Several statues by him are cited by Pliny (34. 59) and Pausanias (6. 13. 1), among them an 'Apollo shooting the serpent Python with his arrows'. As this subject is represented on a coin of Croton of c. 420-390 B.C., it has been thought that there was some connexion between the two. It has, however, not so far been possible to attribute any extant sculptures to Pythagoras with confidence. G. M. A. R.

PYTHEAS (c. 310-306 B.C.), Greek navigator of Massalia. From Strabo, Diodorus, and Pliny mostly we learn (upon evidence distrusted by the ancients) that, sailing from Gades (*Cádiz*) past Cape Ortegal, the Loire, north-west France, and Uxisame (*Ushant*), he visited Belerium (*Cormell*) and the tin-depot at Ictis (q.v.; *St. Michael's Mount*), circumnavigated Britain, described its inhabitants and climate, reported an island Thule (q.v.) (*Norway or Iceland*), sailed perhaps to the Vistula, and reported an estuary (*Frisian Bight?*) and an island (*Heligoland?*) abounding in amber. Pytheas calculated closely the latitude of Massalia and laid bases for cartographic parallels through north France and Britain.

PYTHERMUS (1), poet, of Teos, wrote drinking-songs, of which one line survives. He composed in the Ionian mode and was mentioned by Hipponax (Ath. 625 c).

Page, *Poet. Mel. Gr.* 910.

PYTHERMUS (2) of Ephesus, writing after Antiochus I or II and followed by Hegesandrus (c. 150 B.C.), published *Ἰστροπία* in eight books, treating Hellenistic history.

FGH II. 80.

PYTHIAN GAMES. From early times there had been a festival at Delphi in connexion with the oracle of Apollo, with a musical competition consisting of a hymn to the god—*νόμος Πυθικός*—sung to a cithara accompaniment. This took place every eighth year, but in 582 B.C. the festival was reorganized and placed under the management of the Amphictionic Council. Henceforth it was celebrated in the third-year of each Olympiad. The musical competitions—in instrumental music, singing, drama, and recitations in verse and prose—still took the first place, but to them now were added athletic and equestrian contests modelled on those at Olympia. The stadium for the foot-races lay close under Mount Parnassus, the chariot-races were held in the Crisaean plain, where a hippodrome was constructed. The prize was a crown of bay-leaves cut in the valley of Tempe.

The Pythian Games ranked next in importance after the Olympian.

F. A. W.

PYTHIUS of Priene (4th c. B.C.), architect. He designed the Mausoleum (q.v.) at Halicarnassus and the temple of Athena Polias at Priene, both in the Ionic Order. He held the opinion that architects should be well versed in the arts, and objected to the use of the Doric order in sacred buildings because of the complications arising from the spacing of the triglyphs. His books on the temple and the Mausoleum have not survived. (Vitr. 1. 1; 4. 3; 7. *praef.*; Pliny, *HN* 36. 30-1. It should be noted that the spelling of the name in the MSS. is very

confused. One cannot be quite sure that the architect of the Mausoleum and the architect of Priene are one and the same man.)

H. W. R., R. E. W.

PYTHON of Catana or Byzantium was said to be author of a satyric play called *Agon*, produced in 324 B.C. in the camp of Alexander the Great on the Hydaspes (in the Punjab); some attributed it to Alexander himself (Ath. 13. 595 d). It contained references to Harpalus, who had recently absconded with Alexander's treasure, and other contemporary persons in the style of the Old Comedy.

Q

QUADI, a German tribe of the Suebic group, left the Main region (c. 8 B.C.) and went to Moravia; they were closely connected with the Marcomanni. Vannius established a kingdom between the March and the Waag, but was overthrown c. A.D. 50, his followers being settled by the Romans in Pannonia. After a war against Domitian the Quadi maintained peace till the great Marcomannic Wars. Though overwhelmed by Rome, they remained a permanent danger, and often with Marcomanni or Sarmatae-Jazyges plundered Roman land (e.g. under Valerian and Gallienus and in 282, 358, and 375). Later some of the Quadi joined the Vandals and Alani and went to Spain.

F. A. W. S.

QUADRATUS (1) **BASSUS**, C. IULIUS, *cos. suff.* A.D. 105, of Pergamum, a *comes* of Trajan. He was praetor (82), served in the Dacian war (86-9), governor of Judaea (c. 90-2), *cos. suff.* (105), served as Trajan's *comes* in the second Dacian War, receiving *ornamenta triumphalia*, governor of Cappadocia (c. 107-12), of Syria (c. 113-17), of Dacia (117/18). He received a public funeral at Pergamum. He is probably to be distinguished from (a) C. Antius A. Iulius Quadratus (*cos. suff.* 94, governor of Syria 101-4, *cos. II ord.* 105) and from (b) C. Iulius Bassus, the proconsul of Bithynia (101-2) whom Pliny defended on an extortion charge in 103.

AE 1933, 268. R. Syme, *JRS* 1946, 162 ff.; id. *Tacitus*, see index.

H. H. S.

QUADRATUS (2), **ASINIUS** (PIV 31), a senator of the Severan age, wrote in Ionic Greek a History of Rome in fifteen books, from the foundation until Severus Alexander, called *Ἀλιευτική*, and also Parthica in at least nine books. Possibly of Greek origin, he may be identified with C. Asinius Protimus Quadratus, *cos. suff.* and proconsul of Achaia.

FGH 97; G. Babieri, *L'Albo senatorio* (1952), n. 59. H. H. S.

QUAESTIONES. In the earliest Roman law alleged crimes against the State, if too serious for summary action by a magistrate (or on appeal against such action by *provocatio*, q.v.), were tried before the Assembly; though for lower-class citizens, this right was, perhaps, largely theoretical. Crimes against private persons were tried by a magistrate (later normally the praetor) with a *consilium*, under the civil procedure of *sacramentum* (q.v.). Public crimes particularly grave, or needing specially careful investigation, were often turned over to a *quaestio*:

an *ad hoc* commission under a magistrate, appointed by the Senate or the People or both (see e.g. Livy 9. 26. 2: 314 B.C.); the Bacchanalia (q.v.) (Livy 39. 14 f.: 186 B.C.); the Silva Sala murders (Cic. *Brut.* 85 f.: 138 B.C.); or the corruption of L. Hostilius Tubulus (Cic. *Fin.* 2. 54). It has been suggested (but not proved) that *sicarii* and *venefici* (armed men and poisoners) were regularly subject to trial by an *ad hoc quaestio* under the praetor or a deputy.

The system was changed by the introduction (by Piso, q.v. 1, in 149 B.C.) of a standing commission (*quaestio perpetua*) of the Senate on *repetundae* (q.v.). At first acting like a civil court, it was converted into a criminal court by C. Gracchus (q.v. 4), who added to it features borrowed from the special *quaestiones*; jurors were drawn from the wealthiest non-senators (see *EQUITES*). In the next forty years, while *ad hoc* commissions on special occasions continued (see *MAMILIUS* 3), several *quaestiones perpetuae* modelled on the *repetundae* court were set up for individual crimes of frequent occurrence: certainly *veneficia* and *maiestas*, probably *ambitus* and *perculatus*. Procedure (including the composition of the juries) probably in general followed the *repetundae* court, with minor individual differences such as we still find later. The composition of the juries was changed by Caepio (q.v. 1), who introduced mixed juries of senators and *equites*; Glaucia (q.v.) restored 'equestrian' juries for *repetundae* and this was certainly followed by the *maiestas* court, possibly by others. After an abortive reform by Drusus, (q.v. 2), Plantius (q.v. 1) introduced juries chosen freely by the individual tribes (which favoured nobles and senators), and Sulla, increasing the Senate to 600, entrusted all the *quaestiones* to senators. He also brought the number of standing courts up to at least seven, possibly more, with a praetor—or, since there were not enough praetors available, a *iudex quaestionis*, normally aedilician—in charge of each. L. Cotta (q.v. 3) in 70, when Sulla's juries had turned out to be clearly unsatisfactory, created three jury panels (*decursae*) of 300 each, allotting one to senators, one to *equites*, and one to *tribuni aerarii* (q.v.). From these, juries for individual cases (one-third from each *decuria*) were chosen—as probably already since Sulla—by lot (*sortitio*), with prosecution and defence having a limited right of *retractio*. The size of a jury varied from one *quaestio* to another. The more important (*repetundae* and *maiestas*) perhaps had juries of 75, the less important (like *inter sicarios*) only of 51. Other details of procedure could also vary; thus some allowed *ampliatio* (q.v.), others (like *repetundae*) prescribed *comperendinatio* (a trial in two parts).

There was no public prosecutor at Rome, nor were prosecutions initiated by the magistrate in charge of each

quaestio. Any private citizen could request authority from such a magistrate to prosecute before his court. If several men wished to bring the same accusation against a person, the magistrate determined in a special *iudicium*, attended by a *consilium* of jurors not on oath, who should be the accuser (though others might then sign the indictment as *subscriptores*); this preliminary inquiry was known as *divinatio*. (Thus Cicero's *Divinatio in Caecilium* sought to show why Cicero rather than Q. Caecilius Niger should be chosen as Verres' accuser.) The authorized accuser then presented the indictment in writing (*nomen deferre*) to the magistrate who entered the charge in the official record (*nomen recipere*), interrogated the accused, and (unless the latter pleaded guilty) fixed the date of hearing. The court for judging each case was constituted from an *album* based on the *decuriae* *relectio* with the co-operation of both parties, accuser and accused, who both had a limited right of challenging the composition of the jury. At the end of the trial the jury gave its verdict by a majority vote. The presiding magistrate did not vote, but pronounced judgement and sentence, against which there was no appeal. Where the charge was capital, the condemned man was permitted to go into exile (see *EXSILIUM*). Magistrates and men absent *reipublica causa* could not be prosecuted before a *quaestio*.

After 70, though numerous laws were passed on individual courts (notably *ambitus*, which proved uncontrollable), the system remained basically unchanged. Caesar temporarily suppressed the last *decuria*, Augustus added a fourth (of lower census, for less serious offences), Gaius (1) a fifth—perhaps because by that time senators had practically ceased attending. Special *quaestiones* on the old model continued throughout the Republic: e.g. that on the Bona Dea affair (see *CLODIUS* 1) or that on Caesar's assassins (see *PEDIUS* 1); their juries were normally chosen according to the prevailing system; but some were specially constituted, in attempts to exclude fear and corruption (e.g. those of Pompey in 52).

Augustus reorganized some of the courts and added one on adultery. He also used the *decuriae* for a reform of voting (q.v.) in elections (see *DESTINATIO*). He clearly intended the system to continue; and in fact it remained in use under the early Empire and, to some extent, until the third century A.D. But with the development of imperial and senatorial jurisdiction in important cases (which also made our sources lose interest in the *quaestiones*) and the jurisdiction of the *praefectus urbi* and the *praefectus praetorio* (qq.v.) over the lower classes, the *quaestiones* soon became unimportant and we have little evidence on their working.

Mommesen, *Röm. Strafr.*; W. Kunkel, *Unters. z. Entwicklung d. röm. Kriminalverfahrens in vorsullanischer Zeit* (1962), see also *REPETUNDAE; LAW AND PROCEDURE, ROMAN*. E. B.

QUAESTOR. *Quaestores parricidii* are said to have been appointed by the kings. Under the Republic there were two, who prosecuted some capital cases before the People. They faded from our record by the second century B.C.

Financial quaestors (perhaps not connected with them) were at first appointed by the consuls, one by each; after 447 B.C. (Tac. *Ann.* 11. 22) they were elected by the tribal assembly. Two were added when plebeians were admitted (421), to administer the *aerarium* in Rome (hence *urbani*) under the Senate's direction. Four more were instituted in 267 (Tac. loc. cit.; Livy, *Per.* 15), perhaps called *classici* and stationed in various Italian towns, notably Ostia (see *ANNONA*). More (we do not know how many and when) were added as various provinces were organized (Sicily even had two), until Sulla, finding nineteen needed for all these duties, added one for the water-supply and fixed the total at twenty. Caesar doubled this number, but Augustus—proposing to rely less on regular magistrates—returned to it.

The quaestorship was commonly held at the age of 27 to 30 (often—in the late Republic normally—after a military tribunate and/or a civil minor magistracy). It was the lowest of the regular magistracies. By the late second century B.C., ex-quaestors were regularly enrolled in the Senate by the next censors. Sulla made the office compulsory in the *cursus honorum*, fixed 30 as the minimum age, and made entry to the Senate automatic. *Provinciae* of quaestors were normally allotted, but—in a tradition going back to the origins of the office—magistrates could choose a quaestor *extra sortem* for personal reasons. If attached to magistrates or pro-magistrates, quaestors were expected to serve (if necessary *pro quaestore*) until their commander gave up office; and they remained morally bound to him as clients for life. In addition to managing the commander's *fiscus* they had responsible duties (cf. Cic. 2 *Verr.* 1. 40), often commanded military forces, and might have to assume supreme command (*pro praetore*) in their superior's absence.

Augustus and—after a brief restoration by Claudius—Nero removed the quaestors from the *Aerarium*; but under the Empire the *Principes*, as well as each consul, had two quaestors; the *quaestores Caesaris*, chosen by the Emperor himself, were often patricians and always young men of distinction. The actual duties of the quaestors in Italy were gradually taken over by imperial officials, but in the senatorial provinces quaestors retained some financial functions throughout the Principate.

Colonies and *municipia*, and normally *collegia* (q.v.), also had quaestors in charge of their finances.

E. B.

QUEROLUS, the 'Grumbler', anonymous comedy, also called *Aulularia* because of some resemblance to Plautus' *Aulularia*. It was written in Gaul probably c. A.D. 400. Rutilius, to whom it is dedicated, seems to be Rutilius Namatianus (q.v.). Evidence suggesting a later date is flimsy. The play teems with verbal echoes from Plautus and Terence, and their metrical technique is closely followed in the iambic hemistich which, after an initial iambic or trochaic cadence, completes each line.

Ed. G. Ranstrand, Göteborg, 1951. See S. Cavallin, *Éranos* 1951, 137 ff. O. S.

QUINCTIUS (PW 24) CAPITOLINUS BARBATUS, TITUS, was consul in 471, 468, 465, 446, 443, and 439 B.C. His main recorded achievement was in 464, when (allegedly as proconsul appointed by a *senatus consultum ultimum*, which is historically nonsense, and makes Livy's source later than and dependent on the events of 121 B.C.), he extricated the consul Furius from a trap set by the Aequi. This bears so close a resemblance to the exploits of Cincinnatus (q.v.), as to suggest that it is a doublet of them.

Ogilvie, *Comm. Livy* 1-5, 398 ff., 516 ff.

P. T.

QUINDECIMVIRI (originally **Duoviri**, then **Decemviri**, Livy 6. 37. 12, first mentioned as **Quindecimviri** in 51 B.C., Caelius in Cicero, *Fam.* 8. 4. 1) **SACRIS FACIUNDIS**, one of the *quattuor amplissima collegia* of the Roman clergy. They were originally custodians of the Sibylline books (Livy 5. 13. 5-6 and often), but their activities were probably widened to cover the supervision of all foreign cults recognized or tolerated in Rome (Wissowa, *RR* 543) on the authority of these books. They were of course originally patricians, but after 367 B.C., when their number was raised to ten, half of them were chosen from the *plebs*. The method was election, probably as for the *pontifices* (q.v.; Cicero loc. cit.). Caesar increased them to sixteen (Dio Cassius

42. 51. 4), and supernumeraries were common under the Empire (cf. *ibid.* 51. 20. 3).

Latte, *RR* 397.

H. J. R.

QUINQUEREME. The standard warship in the fleets of the Hellenistic States and of the Roman Republic was the quinquereme (πεντήρης), a galley accommodating more rowers than the smaller but similar trireme (q.v.) and gaining thus greater force. The crew on a Roman quinquereme numbered 300, in addition to the marines (Polyb. 1. 26. 7). The arrangement of rowers on a quinquereme is even more uncertain than that on a trireme; probably groups of five oarsmen pulled one large oar in the fashion of the medieval Venetian galleys *a scaloccio*. Since the quinquereme did not appear at Athens until 325 B.C., the report that Dionysius of Syracuse introduced the craft is doubtful; possibly it was Phoenician in origin. Expensive to maintain and difficult to man, this vessel lost its supremacy in the first century B.C. but it still found use in the Roman imperial navy. See **TRIEMER**.

C. G. S.

QUINTILIANUS, MARCUS FABIVS, born c. A.D. 30–5 at Calagurris (modern *Calahorra*) in Spain (Auson. *Prof. Burd.* 1. 7). Possibly his father was a rhetor (cf. *Inst.* 9. 3. 73), but his identity with the Quintilianus named by Seneca (*Contr.* 10. *pr.* 2) is pure conjecture. His early education may have been wholly in Rome, though this is disputable, nor is it certain that Remmius Palaemon taught him as is stated by the scholiast on Juvenal 6. 452. As a young man in Rome he attached himself to the orator Domitius Afer, who died in 59 (*Inst.* 5. 7. 7; 10. 1. 86, 118, 12. 11. 3; Pliny, *Epp.* 2. 14. 10). At some period he returned to Spain (possibly he was in Rome in 57 when Cossutianus Capito stood trial, but the reference in *Inst.* 6. 1. 14 does not prove this), Galba brought him back in 68 (Hieron. *Chron.*). He became a famous teacher (cf. Mart. 2. 90); probably he was the first rhetorician to receive a salary from the *fiscus* (under Vespasian, Suet. *l'esp.* 18, the year 88 assigned for this in Hieron. *Chron.* is plainly wrong), and he acquired unusual wealth for one of his profession (Juvenal 7. 186 ff.). He taught, and practised advocacy, for twenty years (*Inst.* 1. *pr.* 1); the Younger Pliny was among his pupils (*Epp.* loc. cit.): he retired with unimpaired powers (cf. *Inst.* 2. 12. 12), presumably in 88, in order to write what would be useful to 'bonae mentis iuvenes'. Domitian made him tutor to his two great-nephews and heirs (*Inst.* 4. *pr.* 2), the sons of Flavius Clemens (q.v.), through whom he gained the *ornamenta consularia* (Auson. *Grat. Act.* 7. 31); it has been hazarded that this brought him into contact with Christianity (Colson, *CR* 1925, 166 ff.). Before retirement he married. His wife died while not yet 19, leaving two little sons; the younger child died aged 5, the elder aged 9, and his overwhelming grief is clear from the preface to *Inst.* 6. The date of his own death is not known; it cannot be inferred from Pliny (*Epp.* loc. cit.) that he died before A.D. 100.

WORKS

(1) *De causis corruptae eloquentiae*, not extant: see *Inst.* 6. *pr.* 3, 8. 6. 76, and cf. 2. 4. 42, 5. 12. 23, 8. 3. 58. It was begun about the time of his younger son's death (6. *pr.* 3; see Colson, introduction to book 1, xix).

(2) A (lost) speech *pro Naevio Arpiniano*: see *Inst.* 7. 2. 24, where its publication is acknowledged as authentic, in contrast to other speeches circulating under his name. He defended the Jewish Queen Berenice (4. 1. 19), and a woman accused of forging her husband's will (9. 2. 73); these might be the subjects of the unauthorized publications, but there is no proof of the fact.

(3) 'Duo libri artis rhetoricae' (1. *pr.* 7; cf. 3. 6. 68),

unsanctioned publications from lecture-notes, transcribed in faulty shorthand.

(4) *Institutio Oratoria*, written and probably published before Domitian's death in 96 (cf. 10. 1. 91, 3. 7. 4), dedicated to Vitorius Marcellus (1. *pr.* 6, 12. 11. 31; cf. Stat. *Silv.* 4. 4); its composition occupied 'paulo plus quam biennium', after which it was put aside for some time (*Ep. ad Tryphonem*, prefixed to the treatise). It covers the training of an orator from babyhood to the grown man, 'uir bonus dicendi peritus' (12. 1. 1), an ideal that Quintilian had hoped to see realized in his own son (6. *pr.* 1). Book 1 discusses childhood education—practical, humane, fascinating, still of significance. In book 2 the boy enters the school of rhetoric, and here too Quintilian's personality and method are arrestingly clear: note the memorable chapter on the Good Schoolmaster (2. 2. 4 'sumat ante omnia parentis erga discipulos suos animum'). The book continues with an examination of the nature and uses of *rhetorica*, followed in book 3 by an account of its origin, its parts, and its functions, with a discussion of *status*. Books 4–6 deal with the detailed structure of a speech (valuable in reading Cicero). Book 7 is concerned with arrangement (*dispositio*) and *status*-lore. Book 8 discusses style, under heads such as propriety, ornament, tropes, while in book 9 figures of thought and speech are illustrated, with a chapter on artistic structure and rhythm. Quintilian is conscious that much of this is hard going, but he remembers always that he is dealing with human nature (6. 3, 'de risu', is entertaining and significant), and in all these minutiae his one ultimate aim is to equip the *uir bonus* with the tools needed for successful pleading. Book 10 opens with a critique of Greek and Latin writers, solely from the rhetorical standpoint (this explains what to us seem some strange judgements and unexpected omissions): Quintilian is at pains to show how Latin can stand up to Greek, and many of his dicta are classics of ancient criticism (e.g. on Menander, Thucydides, Sallust, Livy, Ovid, Lucan). The remaining chapters deal with *imitatio* and practical details of composition. Book 11 discusses memory, delivery, gesture, and dress: here the physical side of ancient oratory is fascinatingly illustrated (some of these rules for delivery appear still current in the *Chironomia* and *Chirologia* of John Bulwer, published 1644—see plates in B. L. Joseph, *Elizabethan Acting*, 1964). The concluding book shows the Complete Orator in action, a man of highest character and ideals, the consummation of all that is best in morals, training, and stylistic discernment: Roman *grauitas* at its noblest, and a final exposition of oratory as a moral force (cf. M. Winterbottom, *JRS* 1964, 90 ff.).

Quintilian's style is silver-age Ciceronian, vigorous, expansive, often pointed, but sometimes lacking in finish and rather lumbering—practical rather than elegant. The treatise profoundly influenced medieval and Renaissance writers, notably Erasmus and Vives; Ben Jonson drew on it in his *Discoveries*, and Pope admired it (see Colson's introduction to book 1, and P. Lehmann, *Philol.* 1934, 349 ff.).

QUINTUS (1), anatomist and physician of the eclectic school in Rome, in the age of Hadrian (A.D. 117-38), and pupil of Marinus. He founded an important medical school, to which the teachers of Galen belonged. Later he was banished from Rome and died in Pergamum. He left no written works, but his anatomical teaching had great influence, e.g. on Galen.

W. D. R.

QUINTUS (2) **SMYRNAEUS** (4th c. A.D.), epic poet, author of a Greek poem, the *Posthomerica*, found in Calabria, headed 'H ποιητής τοῦ Ὀμηρικοῦ Κόιντου, on a manuscript containing also Colluthus, *Rape of Helen* (? 6th c. A.D.). Hence Quintus is sometimes called Calaber, but more often Smyrnaeus, from the single recorded fact about him, that in his youth he lived at Smyrna near the Hermus (Quint. Smyrn. 3. 306-13). The poem, continuing the story of the *Iliad* to the start of the Achaeans for home, shows thorough acquaintance with Homer, but some slight misunderstanding of Homeric Greek, and it may have been meant to form a substitute, in closer agreement with Homer, for the account of the events given in the Epic Cycle (q.v.). The sources are various, some Hellenistic, and one a poem of unknown identity much used by Virgil, possibly the poem indicated by Macrobius (*Sat.* 5. 2) under the name of Peisander. The poetry of Quintus is prolix, never exalted, and sometimes macabre; the parts are greater than the whole, which lacks structural unity; but it has some freedom, competence, eloquence in representing emotion, and pathos, and frequently the similes are attractive.

QUIRINAL, the northernmost hill of Rome, traditionally occupied by Sabines, and certainly the site of an early settlement (*Mon. Ant.* 15. 776 ff.) which became one of the Four Regions of Republican Rome. On it were many famous temples, including the age-old *Capitolium vetus* and those of Semo Sancus (466 B.C.), Salus Semonia (311 B.C.), Quirinus (293 B.C.), Honos (*CIL* vi. 30915), Fortuna Publica (204 B.C.), and Venus Erycina (181 B.C.). Later, the hill was the site of houses of famous associations or luxury, as of Atticus, Narcissus, and Martial. Domitian built the *templum gentis Flaviae* on the site of his ancestral home. Constantine erected large *thermae*. The north fringe of the hill was bordered by cemeteries and by the *horti Sallustiani*.

E. Gjerstad, *Early Rome* iv (1966) 49 ff., 182 ff.

QUIRINIUS, **PUBLIUS SULPICIUS** (*PW* 90), *cos.* 12 B.C., a *novus homo* from Lanuvium (on his career cf. Tacitus, *Ann.* 3. 48). Quirinius defeated the Marmaridae (Florus 2. 31), perhaps as proconsul of Crete and Cyrene (? c. 15 B.C.). Between 12 B.C. and A.D. 2 he subjugated the Homanadenses, 'Cilician' brigands on the southern borderland of the province of Galatia (Strabo 569). The precise date of this war and the command held by Quirinius are disputed. It has been argued that he must have been legate of Syria at the time; but the war could have been conducted only from the side of Galatia, which province, though normally governed by imperial legates of praetorian rank, might easily have been placed under a consular (cf. L. Calpurnius Piso, c. 13 B.C., and M. Plautius Silvanus in A.D. 6). Quirinius prudently paid court to Tiberius at Rhodes, succeeded M. Lollius as guide and supervisor of C. Caesar in the East (A.D. 2), and shortly after married Aemilia Lepida, a descendant of Sulla and Pompey. Legate of Syria in A.D. 6, he superintended the assessment of Judaea when that territory was annexed after the death of Archelaus (Josephus, *Ant.* 17. 1 ff., cf. *ILS* 2683; also Acts v. 37, which mentions the insurrection of Judas the Galilaean ἐν ταῖς ἡμέραις τῆς ἀπογραφῆς). In order to reconcile and explain St. Luke ii. 1 and establish a date for the Nativity before the death of Herod the Great (i.e. before 4 B.C.), various attempts have been made to discover an earlier governorship of Syria by Quirinius, and, by implication, an earlier census in Judaea. It is by no means certain that the accephalous elogium from Tibur (*ILS* 918) should be attributed to Quirinius, and, in any case, it cannot prove two governorships of Syria. It is best kept out of the problem.

Quirinius lived to a wealthy and unpopular old age. In 21 he died and was granted a public funeral on the motion of Tiberius, who recounted his meritorious services (Tac. *Ann.* 3. 48).

L. R. Taylor, *APPhil* 1937, 120 ff., R. Syme, *Klio* 1934, 122 ff., and *Rom. Rev.*, see index, A. N. Sherwin-White, *Roman Society and Roman Law in the New Testament* (1957), 162 ff.; B. Levick, *Roman Colonies in Southern Asia Minor* (1967), 203 ff.

R. S.

QUIRINUS, a god of Sabine origin (Ov. *Fasti* 2. 475 ff., whereon see Frazer), worshipped from very early times on the Quirinal. He appears to have been the local deity of the settlement there before the foundation of Rome. Except that his functions resembled those of Mars and that he had sacred arms (Festus, 238, 9 Lindsay), we know little of him; he regularly forms a third with Jupiter and Mars (qq.v.; e.g. Livy 8. 9. 6); his *flamen* (q.v.) is the lowest of the three *flamines maiores* and the third *spolia opima* belong to him (Servius on *Aen.* 6. 859). His *flamen's* activities are known only in the service of other deities (Gell. 7. 77. 7; Ov. *Fasti* 4. 910; Tert. *De Spect.* 5). His festival is on 17 Feb.; his cult-partner is Hora (Gell. 13. 23. 2), of whom nothing is known. The name must mean 'he of *quirium*'; as this is not a possible word for the labializing Sabine speech, the most plausible etymology is that of Kretschmer (*Glotta* 1921, 147 ff.), that it was originally **co-uri-um*, 'assembly of the men', hence also *Quirites*.

Wisniewa, *RK* 153 ff.; Latte, *RR* 113. Cf. ROMULUS.

II. J. R.

R

RABIRIUS (1, *PW* 5), GAIUS, an *equus* (later a back-bench senator), was prominent in the action against Saturninus (q.v. 1). Attacked by Populars once or twice before, he was accused of *perduellio* in 63 B.C. by Labienus, with the assistance of Caesar. The aim (as his counsel Cicero says in his extant speech) was probably a challenge to the received interpretation of the '*senatus consultum ultimum*'. Having achieved this, they preferred to leave the issue in suspense and Metellus (q.v. 9) Celer, as praetor, collusively terminated the trial by lowering the flag on the Janiculum—clearly the intended conclusion of the whole archaic procedure. The legal details of the case are obscure.

E. G. Hardy, *Some Problems in Roman History* (1924), 27 ff., 99 ff.
E. B.

RABIRIUS (2, *PW* 6) **POSTUMUS**, GAIUS, known unofficially as *Postumus Curtius*, was posthumous son of C. Curtius, adopted under the will of his uncle C. Rabirius (q.v. 1). A banker like his father, he placed loans throughout the Empire, until to recover vast sums from Ptolemy Auletes he took up residence at Alexandria, called himself the king's minister, and requisitioned Egyptian supplies. After the condemnation of Gabinius (q.v. 2) in 54 Rabirius was prosecuted as receiver, but Cicero's extant speech secured his acquittal, mainly on technicalities, the defence of fact was merely that Rabirius was now poor. Caesar assisted him, and by 49 he was a senator, Caesar's ardent partisan, and was employed in the East in 47 and then on commissariat work for the African War; by 45 he had designs on the consulate.

Cf. H. Dessau, *Hermes* 1911, 613 ff.

G. E. F. C.

RABIRIUS (3, *PH* 7), GAIUS, epic poet mentioned alongside of Virgil by Velleius (2. 36. 3). Ovid alludes to his 'mighty utterance' (*Pont.* 4. 16. 5). Quintilian (10. 1. 90) says that he deserves to be studied by those who have the time. Some have unjustifiably thought him to be the author of the poem on Actium of which a fragment was recovered in papyrus 817 from Herculaneum. See Papyrology, LATIN.

Morel, *FPL*.

J. W. D., G. B. A. F.

RAETIA, a Roman province in the Alps, including Tyrol and parts of Bavaria and Switzerland. The Raeti were partly Illyrian, partly Celtic, their language having been affected by Etruscan elements (cf. J. Whatmough, *Harr. Stud.* 1937, 181 ff.). After the Camunni and Venones had been defeated by P. Silius Nerva (16 B.C.) Drusus and Tiberius in a combined operation from the south and from Gaul conquered the Raeti and the Celtic Vindelici, whose territory became a province together with the Vallis Poenina; the latter was disconnected from Raetia after Claudius and before M. Aurelius. At first under the command of the governor of Gaul (who appointed a *praefectus* in A.D. 16–17 after Germanicus had been recalled from the Rhine), Raetia got its own governor, who according to the *communis opinio* was an equestrian procurator with *ius gladii* (Ph. Horowitz, *Rev. Phil.* 1939, 61 ff., tries to prove that until Trajan the governors of Raetia were *praefecti*, and then were replaced by equestrian *procuratores*). The governor, who resided at Augusta Vindelicorum, commanded the troops: 4 *alae* and 11 *cohortes* in A.D. 107 (*CIL* xvi. 55), and 3 *alae* and 13 *cohortes* in 166 (op. cit. 121). During the Marcomannic Wars under M. Aurelius the newly raised Legio III Italica Concord was quartered in Raetia at

Castra Regina (q.v.), its commander becoming the provincial governor as a *legatus Aug. pro praetore*. During the Marcomannic Wars Raetia had suffered from barbarian invaders. At least since Gallienus Raetia was again placed under equestrian administration, and was divided under Diocletian for civil administration into Raetia I (capital probably Curia) and Raetia II (capital Augusta Vindelicorum), both provinces being under the military command of the *dux Raetiarum* who resided at Augusta Vindelicorum (on the frontier see R. Heuberger, *Klio* 1931, 348 ff.). Alamannic pressure increased and the Lake of Constance–Argen–Iller–Danube defence-line was given up soon after A.D. 389; the Alamanni occupied the relinquished territory, though temporarily forced back in 430. About 450 the Alamanni and other German tribes again mastered nearly the whole plain. Before 482 the last outposts on the Danube were evacuated and only the Alpine regions remained under control from Italy.

Goessler, *Die Römer in Württemberg I–III* (1928–32). On the *limes Raeticus* see Fabricius, *PW* xiii. 605 ff. On roads see W. Cartellieri, *Philol.*, Suppl. xviii (1926); I. Castelpietra, *Raetia* (1935), 33 ff. (via Claudia Augusta); II U. Instinsky, *Klio* 1938, 73 ff. (Septimius Severus). Raetia in the Marcomannic Wars. W. Zwickler, *Studien zur Markusaula* 1 (1941), 76 f.

F. A. W. S.

RATAE (*Leicester*), a town of Roman Britain and capital of the Coritani (*Rav. Cosm.* 92; Ptolemy, *Geogr.* 2. 3. 20). There may have been a preliminary military phase of occupation under Claudius. Growing to 130 acres within its third-century walls, it possessed distinguished public buildings and was possibly raised to municipal rank in the later second century. The forum is perhaps Flavian; the public baths with exercise-hall (of which the surviving Jewry Wall is part) were built under Antoninus Pius; and at the end of the second century an additional market square with basilica was provided. The town has produced interesting mosaics and painted wall-plaster.

F. Haverfield, *Arch. Journ.* 1918, 1 ff.; G. A. Webster, *ibid.* 1958, 53, 84, K. M. Kenyon, *Excavations at the Jewry Wall Site, Leicester* (1948), *JRS* 1959, 113 ff.; 1964, 161.

S. S. F.

RAVENNA, city of Cispadane Gaul, now some 15 miles from the Adriatic coast, but nearer to the ancient coastline and almost surrounded by watercourses or marsh. Ravenna may be an Etruscan foundation: the name appears to be Etruscan, and an Etruscan inscription has been found in the city. But in historical times the inhabitants were Umbrian. Ravenna, a federate city of Rome in the last century of the Republic, attained Roman citizenship as a *municipium* in 49 B.C. Augustus decided to make it the base of the Adriatic fleet. Much rebuilding was carried out as a result, and a canal was built to carry the waters of a small branch of the Po through the city to the new harbour established at Classis, a suburb on the coast.

The city soon became a flourishing centre of seaborne trade with a cosmopolitan population; shipbuilding, linen manufacture and the export of fish, wine, and asparagus were its staples. The municipal constitution was abnormal, the real power probably lying with the imperial *praefectus classis*. Several prisoners of State, including Arminius' son and Maroboduus, were interned in Ravenna. The Christian community probably dates from the early third century.

In 404 Ravenna was selected as imperial residence by the Western Emperor Honorius because of its security. It continued to be used as a capital by Odoacer and by

Theodoric the Great, who launched an extensive building programme. After the Byzantine reconquest in 540, it became the residence of the Byzantine governor, the exarch of Italy, until it was lost to the Lombards in 751.

The surviving monuments in Ravenna date from the fifth century A.D. or later. To the Western Roman period belong the Orthodox Baptistery and the Tomb of Galla Placidia. The church of S. Apollinare Nuovo with its magnificent mosaics, including a representation of Theodoric's palace, and the Arian Baptistery date from the Gothic period. The Byzantine period saw the building of the churches of S. Vitale, with its mosaic portraits of Justinian, Bishop Maximian and Theodora, and S. Apollinare in Classe. There are many sarcophagi of the same periods decorated in relief. The Gothic and Byzantine archives of Ravenna, which are a valuable source for the economic and social history of late antiquity, are now scattered through a multitude of libraries.

G. E. F. Chilver, *Cisalpine Gaul* (1941), see index; O. G. von Simon, *Sacred Fortress* (1939), G. Bovini, *Ravenna romana, paleocristiana e paleobizantina* (1962), id. *Saggio di bibliografia su R. antica* (1968). R. B.

REATE, modern *Rieti*, on the River Velinus in Sabine country 45 miles north-east of Rome. Curius Dentatus brought it under Roman control (290 B.C.). Obtaining full Roman citizenship in 268 B.C. it became and remained a flourishing *municipium*, which reckoned Terentius Varro and the Emperor Vespasian (qq.v.) among its native sons.

E. T. S.

RECITATIO, the public reading of a literary work by the author himself. At Rome Crates' lectures suggested the idea of a public reading of the verses of dead poets (Suet. *Gram.* 2), following a Hellenistic practice already adopted by Livius Andronicus and Ennius. But the real creator of the *recitatio* was Asinius Pollio: he was the first Roman to read before an audience his own works (Sen. *Controv.* 4 *praef.* 2). The custom soon spread extraordinarily. It still flourished under Domitian. Afterwards we find fewer allusions to it, although it survives to the sixth century.

Before the construction of Hadrian's Athenaeum, no definite place set apart for *recitationes* existed. Very rarely they took place in a theatre, sometimes at a banquet, oftenest in some hall, hired by the author or lent by a patron; the reader had to supply the necessary furniture (Tac. *Dial.* 9), which cost him dear, as readings did not pay. So starving poets recited anywhere (forum, *thermae*, circus, etc.).

There were two kinds of *recitationes*: the one meant for a restricted audience, the other for the public (Pliny, *Ep.* 7. 17. 11–12). Invitations were given by the author himself, or by means of short notes (*codicilli*) and programmes (*libelli*). Women were not excluded. From a sort of platform the *recitator*, standing up, first delivered a preamble (*praefatio*), then read seated. Sometimes he preferred to get a freedman to read, supplying gestures himself (Pliny, *Ep.* 9. 34. 2). Readings might extend over several days. They were chiefly of verse (epic, tragic, lyric), more rarely of prose (history, philosophy, discourses). The hearers expressed their approval—with occasional support from hired clappers—by applause and by cries ('*effecte*', '*euge*', '*pulchre*', '*sophos*', etc.); they might even rise and kiss the reader.

The *recitatio* at first offered genuine advantages: by it an author made his works quickly known, realized whether they were worth publishing, and obtained the criticisms of competent judges. But very soon it degenerated, becoming an end in itself, encouraging the conceit of authors, and exercising on the literature of the Empire

the same untoward influences as *declamatio* (q.v.)—love of the showy, of smart sayings, with defects in composition and neglect of depth in favour of form.

Th. Herwig, *De recitatione poetarum apud Romanos* (1864); L. Valmargi, *Riv. Fil.* 1888; J. F. B. Mayor, *Thirteen Satires of Juvenal* (1893), 173 ff.; F. Orlando, *Le letture pubbliche in Roma imperiale* (1907), L. Friedländer, *Sittengesch. Roms*¹⁰, Bd. II (1922), 225 ff. C. F., transl. J. W. D.

RECUPERATORES were jurymen who acted in the second stage of Roman civil proceedings in place of the single *iudex* (q.v.). First established by international treaties for cases involving foreigners (Festus, s.v. *Reciperatio*), they were later extended to proceedings in which both parties were citizens. The advantage of a *iudicium recuperatorium* lay apparently in its celerity (restricted number of witnesses, short limit of time for giving judgement). *Recuperatores* were evidently competent to hear a variety of cases (Gai. *Inst.* 4. 46, 141, 185; and there were others), but no principle is discernible, nor is it known what, or who, determined whether a given case should go before them. In post-classical procedure there was no place for *recuperatores*. In Justinian's *Digesta* (q.v.) the compilers deleted this term and replaced it by *iudices*.

B. Schmüdlin, *Das Rekuperatorenverfahren* (1963); G. Pugliese, *Il processo civile romano* u. 1 (1963), 194 ff. A. B.; B. N.

REDICULUS. When Hannibal, attempting to raise the siege of Capua in 211 B.C., made a demonstration against Rome, a shrine was erected to the unknown power which made him go back again, under the name of Rediculus (Festus, 354. 25; 355. 6 Lindsay). It stood outside the Porta Capena, and the deity may have been surnamed Tutanus (Varro, *Sat. Men.*, fr. 213 Buecheler). This connexion, however, and even the association with Hannibal are denied by Latte, *RR* 53. H. J. R.

RED SEA (*Ἐρυθρὰ* or *Ἐρυθραία Θάλασσα*: *Rubrum Mare*. Derivation of name uncertain, perhaps from 'Red Men'—Phoenicians). This name was extended by the ancients to cover all eastern waters, including the Indian Ocean, but referred specifically, as it does now, to the Arabian Gulf. The Red Sea proper was navigated by the Egyptians, by Israelites and Phoenicians, and by the Persians, through whom it became known to the Greeks. It was mentioned by several of the Attic dramatists, and Herodotus (2. 11; 3. 107 ff.) was acquainted with its shape. In an attempt to circumnavigate Arabia, Alexander sent ships from Suez which sailed as far as Yemen (Theophrastus, *Hist. Pl.* 9. 4. 1). The Ptolemies opened up the Red Sea completely. Under Ptolemy I the west coast was explored; under Ptolemy II forts and stations for elephant-hunts were founded here (see BERNICÉ, MYOS HORMOS, PTOLEMAIS THIÉRON) and the Arabian shore was made known as far as Hedjaz and Al 'Ula; under Ptolemy III piracy was suppressed, and in the first century B.C. a '*strategos* of the Red Sea' makes his appearance. Under the Caesars the Red Sea became an important channel for trade between the Roman Empire and the eastern seas.

Peripl. M. Rubr. (translation and notes by W. H. Schoff, 1912), Cary-Warmington, *Explorers*, 67 f., 222; (Pelican) 73 ff., etc. E. H. W.

REGIA, the traditional home of King Numa, was the seat of authority under the Republic of the *pontifex maximus* and contained his archives. It was situated at the east end of the *forum Romanum*, between the Sacra Via and the precinct of Vesta. Its orientation by the

cardinal points matched that of the pre-Neronian *Atrium Vestae* and of the *Domus Publica*; foundations of the buildings of the early Republic, 390 B.C. and 148 B.C., still exist. The trapezoidal plan of the main existing structure, an elegant building in marble erected by Calvinus in 36 B.C., reconciles older and newer orientations (F. E. Brown, *Amer. Acad. Rome* 1935, 67 ff.). The view that the *fasti* (q.v.) *consulares* were affixed to its walls is now rejected (cf. A. Degrassi, *Rend. Pont.* 1945-6 and *Inscr. Ital.* XIII. 1 (1947); L. R. Taylor, *CPhil.* 1946, 1 ff., who attributes them to the adjacent Arch of Augustus). The courtyard contained the *sacrum Martis*, with *hastae* and *ancilia*, and the shrine of Ops Consiva.

Recent excavations by F. E. Brown (1964-5) have clearly established that the early Regia was built at the end of the sixth or the beginning of the fifth century B.C., in a form very similar to that of later phases of building. (The main rebuilding before 36 B.C. now appears to have been in the latter half of the third century). The excavations have also brought to light, below the Regia, traces of a building that may be dated to the second quarter of the sixth century, and which Brown believes to be a temple. At a still lower level remains of huts have been discovered.

F. E. Brown, *Les Origines de la république romaine -- Entretiens Hardt* xii, (1967), 47 ff. I. A. R.; F. C.

REGIFUGIUM. 24 Feb. is marked on the calendars (*Quando Rex Comitatus Fas*). The even number indicates that it is not a lucky day; the only other even-numbered festival is the second *Equiria* (14 Mar.). 24 Mar. and 24 May have the same letters attached, for unknown reasons, but 24 Feb. was called the *Regifugium*, because the *rex sacrorum* (q.v.) concluded the ritual by running away from the Comitium (Plut. *Quaest. Rom.* 63, where see Rose for suggested interpretations). See **POPLIFUGIUM**. H. J. R.

REGILLUS, LUCIUS AEMILIUS (*PW* 127), praetor in 190 B.C., defeated the fleet of Antiochus at Myonnesus, securing the Scipios' passage over to Asia Minor. He celebrated a naval triumph, vowing a temple to *Lares permarini*, which was dedicated in 179. A. H. MCD.

REGILLUS LACUS, where Rome conquered the Latins c. 496 B.C. in a battle allegedly decided by the intervention of Castor and Pollux, is probably the volcanic depression called *Pantano*, south of Gabii (q.v.); it was drained in the seventeenth century. E. T. S.

REGIO. (1) At Rome *regio* denoted particularly the city wards, four in number (Livy 1. 43; Varro, *Ling.* 5. 45) during the Republic, and perhaps representing a regal synecism of the Palatine and Esquiline settlements. By 7 B.C. Augustus had reorganized the whole system, creating fourteen numbered *regiones* (see **ROME**, **TOPOGRAPHY**) administered by *aediles*, *tribum plebis*, and praetors chosen by lot (Dio Cass. 55. 8), and divided into *vici* (see **VICOMAGISTRI**). Under Hadrian the administration had passed to libertine *vicomagistri* and one, or two, *curatores* responsible to the *praefectus vigilum* (*ILS* 6073). Fourteen consular *curatores* under the authority of the *praefectus urbi* were instituted by Alexander Severus (S.I.A. *Alex. Sev.* 33. 1, cf. *CIL* xiv. 2078). Each ward possessed a sub-station (*excubitorium*) of the *vigiles*.

(2) *Regio* is also used of the eleven *regiones* of Italy, instituted by Augustus, probably as a basis for the census (see **ITALY**).

For sources, cf. Lugli, *Fontes* i. 75 ff.

I. A. R.

REGENENSES, a *civitas* of Roman Britain created from the kingdom of Cogidubnus (q.v.). Its *caput* was Novio-

magus (*Chichester*). Romanization was early achieved on an impressive scale under this king as indicated by early villas (Fishbourne, Angmering) and the monuments of Chichester, but thereafter slowed down, for few other towns developed. Apart from the important iron-industry of the Weald, agriculture was the basis of the economy; in the fourth century the Bignor villa, well known for its mosaics, grew to great size.

Collingwood and Wright, *RIB* 89 ff.; A. L. F. Rivet, *Toten and Country in Rom. Brit.* (1958), 158 f.; *VCH, Sussex* iii, B. Cunliffe, *Antiquity* 1965, 177 ff. (Fishbourne). S. S. F.

REGULUS (1), MARCUS ATILIUS (*PW* 51), as consul reduced Brundisium (267 B.C.). As consul II in 256 with L. Manlius Vulso (q.v. 1) he won the naval battle of Ecnomus, thus opening the way for the invasion of Africa. After Vulso's return Regulus was left in sole command in Africa. He defeated the Carthaginians and captured Tunis, but offered impossibly severe terms. In spring 255 he was defeated on ground chosen by Xanthippus (q.v. 2) and was captured; this disaster ended the African expedition. Later (? 249), it is said, he was sent on parole to Rome to arrange an exchange of prisoners (or to negotiate peace-terms which he urged the Senate to decline) and returned to Carthage, where he died in captivity. The further story of his death by torture on his voluntary return to Carthage became a national epic (Hor. *Carm.* 3. 5), but may have been invented to palliate the action of his widow in torturing some Punic prisoners in Rome. On the Regulus legend see E. Klebs, *PW*, s.v. 'Atilius (51)'; T. Frank (*CPhil.* 1926, 311) defends the story of the peace-mission. H. H. S.

REGULUS (2), PUBLIUS MEMMIUS (*PW* 29) (cos. A.D. 31), conceivably from Gallia Narbonensis (*Inscr. lat. de Gaule* 633), a 'discovery' of Tiberius, was suffect consul at the time of Sejanus' fall and governed Moesia, Macedonia, and Achaia from 35 to 44. Later under Claudius he was proconsul of Asia. He was consistently influential, in favour under Claudius and Nero, under whom he died in 61, and well spoken of by Tacitus. He was the first husband of Lollia (q.v.) Paulina. J. P. B.

REGULUS (3), MARCUS AQUILIUS (*PW* 34), who had been a notorious informer in the Neronian period, was detested by the Younger Pliny as 'the biggest scoundrel on two legs' ('omnium bipedum nequissimus', *Ep.* 1. 5. 14). His hysterical talent ('ingenium insanum', *ibid.* 4. 7. 4) and effrontery led many to take him for an orator; but for Herennius (q.v. 1) Senecio he was 'uir malus dicendi imperitus', exactly the opposite of Cato's famous definition. Defects notwithstanding, he secured many convictions in trials for *maiestas*. We know of two lost publications of his: (1) a pamphlet satirizing Arulenus (q.v.) Rusticus after his death; (2) a biography of his own dead son, of which he had 1,000 copies made for circulation. Martial mentions him several times in complimentary terms.

Syme, *Tacitus*, see index.

J. W. D.

RELEGATIO was at first the expulsion of a Roman citizen or a *peregrinus* decreed by a magistrate as a coercive measure. In this application it was a mere administrative act. As a penalty in criminal trials, banishment was applied in different gradations, and terminology is not consistent. The mildest form was merely temporary expulsion, without confinement or death penalty in case of return, and without loss of citizenship or property. The severest form was *deportatio* (introduced by Tiberius), a perpetual banishment to a certain place, combined with confiscation of property and loss of citizenship. *Relegatio* itself consisted either in the exclusion of the *relegatus* from residence in certain places or territories (Rome, Italy, or the

provinces), or in his confinement to a particular place. A very common form was *relegatio in insulam* or *in Oasim* (in Upper Egypt). Banishment in all its variations was especially a punishment for the higher classes (see HONESTIORES). The lower classes were punished for similar crimes with forced labour (*in opus publicum* or *in metalla*) or even with death.

See bibliography under LAW AND PROCEDURE, ROMAN, III; and Z. Zmigrydel-Konopka, *Rev. hist. de droit français* 1939, 307 ff. A. B.; B. N.

RELICS. The cult of heroes (see HERO-CULT), at their real or supposed graves, had occasionally curious results. Naturally, many of these monuments were not real graves at all, as the Pelopion at Olympia; many places also claimed to possess the buried remains of heroes not native to them, and had legends explaining how they came there (Oedipus at Colonus in Attica, Soph. *OC* 576 ff.; Eurystheus in the deme Pallene, Eur. *Herac.* 1031; Hector at Thebes, see W. R. Halliday in *Liverpool Annals* xi. 3 ff.). Moreover, unburied remains were venerated here and there, as the 'honoured bones' mentioned by Pausanias at Asopus in Laconia (3. 22. 9), without even a name, and the bones of the Sibyl at Cumae (Paus. 10. 12. 8), in Apollo's temple. But this was not confined to the cult of heroes. The most remarkable instance of such a thing in the cult of a deity was the Hellotia in Crete, a festival of Athena (q.v., cf. Nilsson, *Feste*, 95 f.). Here a very large wreath, called a *hellotis*, was carried and said to contain the bones of Europa (q.v.; Seleucus in Athenaeus, 678 a-b). What the 'bones' really were is unknown. Furthermore, many relics were not bodies or parts of them. Aniconic cult-objects were occasionally explained as relics, as the stone at Delphi said to have been swallowed by Kronos (q.v.; Hes. *Theog.* 497 ff.), cf. the 'sceptre of Agamemnon' at Chaeronea (Paus. 9. 40. 11) and the 'shield of Diomedes' at Argos (I. R. Arnold in *AJArch.* 1937, 436 ff.).

F. Pfister, *Der Reliquienkult im Altertum* (2 vols., 1909-12); Nilsson, *GGRI* 2. 189. H. J. R.

RELIGION, CELTIC. Important for the religious concepts and practices of the barbarian Celts is the evidence derived from Classical literary sources, however brief and inaccurate, and from abundant Gallo-Roman iconography and epigraphy. These sources supplement and illumine those forthcoming from archaeological discoveries of prehistoric times, or made in areas beyond the Roman Empire, and also the great body of Irish literary tradition. The cumulative result in the light of comparative studies shows a general Indo-European pattern with anthropomorphic sky and earth deities, ritual observances and vocabulary, and an order of sacred and learned persons. Of chief interest to Greek and Latin writers were these learned men. Beginning with Posidonius, the Druids were credited with philosophical and scientific attainments quite alien to their actual condition and function. Their influence in Celtic politics, and on current events, was none the less potent. Two other groups within the learned order, Seers and Bards, were probably recognized by Posidonius, and are variously mentioned, probably in repetition, by Diodorus (5. 31), Strabo (4. 197), and Julius Caesar (*BGall.* 6. 13-14). Pliny's reference (*HN* 16. 249 ff.) to sacred groves is in accord with other evidence, but his account of the ritual gathering of mistletoe by the Druids is unique. Native Irish tradition generally confirms the names and functions of these three groups of learned persons, as also of a long training in a great body of oral texts (cf. Caesar, *BGall.* 6. 14). Caesar (*BGall.* 6. 17-18) identified with Roman god-names the attributes of Gaulish deities, giving chief place to Mercury, then Apollo, Mars, Jupiter, and Minerva. Gallo-Roman altar

dedications show that in the application of *interpretatio Romana* these Roman gods were variously linked with Celtic gods as in Mars Segomo, Apollo Belenus, and Jupiter Taranucus. A frequent combination in such dedications is a Roman god and a Celtic goddess, as in the case of Mercury and Rosmerta. Alternatively, the monument may be entirely Roman but dedicated to a purely Celtic divine couple such as Succellus and Nantosvelta. Taranis, Teutates, and Esus, recorded by Lucan (1. 444-6), do not figure at all prominently in Gallo-Roman epigraphy, and it is probable that these are a triad of epithets for a single tribal god, although they may be accounted as appropriate for any of the male deities in the Celtic supernatural whose attributes were all-embracing rather than specialized. The break-up of the old tribal system in Gaul undoubtedly led to the advancement of some gods at the expense of others, and thus to the appearance of specialization equivalent to the Roman system. The original generalization of attributes is also illustrated in Gallo-Roman iconography where symbols such as the hammer, wheel, and serpent occur in different dedicatory groupings, and interpenetrate each other in geographical distribution. The Celtic goddesses were no less important in their way than the gods, but were even more territorially circumscribed. Their function was essentially the fertility of the land and the people; some few whose cult was propagated by devotees in the Roman army enjoyed artificially wide distributions, but these are not to be mistaken for primitively widespread deities (see DEAE MATRES, EPONA). Cult practices amongst the Celts included various forms of human sacrifice, and the taking and keeping of heads won in battle. The dedication of booty to the gods was widely observed, and massive votive deposits were placed in lakes and at the sources of rivers. The small square Gallo-Roman temple is now known to have had prehistoric prototypes, and square enclosures, with a deep shaft or well for votive purposes, are a type of cult site newly recognized. Some simple wooden images are known from well or other water deposits in Gaul, but there was no durable Celtic iconography prior to Roman influence and after those fourth-century B.C. stone pillars and heads known especially from the Rhenish area, and of Etruscan inspiration. The sanctuaries at Entremont and Roquepertuse (Houches du Rhône) with their stonework and sculpture represent a special Celtic adaptation of Graeco-Etruscan monumental possibilities.

RELIGION, ETRUSCAN. Our knowledge of Etruscan religion is based upon funerary and liturgical inscriptions (see ETRUSCAN LANGUAGE), archaeological evidence, and references in Greek and Roman authors, who generally interpret genuine material from their own point of view. At the end of the Republic, Roman writers, some of them of Etruscan origin (Tarquinius Priscus, Aulus Caecina, Nigidius Figulus), translated into Latin some of the Etruscan sacred books which enshrined their traditional doctrine: we have only fragments of their work, and they tended to contaminate Etruscan sources with Hellenistic philosophy. Later on, Martianus Capella and Johannes Lydus have handed down to us important, but adulterated information.

Etruscan religion, unlike Greek and Roman, was a revealed religion; semi-divine seers (as Tages, Cacus, and the nymph Vegeia) were said to have taught it to their people, and their teaching, with later accretions, was expressed in a code of religious practices, *Etrusca disciplina*, which included *libri rituales*, *libri fulgurales*, and *libri haruspici*. The ritual books included 'prescriptions concerning the founding of cities, the consecration of altars and temples, the inviolability of ramparts, the laws relative to city gates, and all other things of this nature concerning war and peace' (Fest. 358 L.). In fact there was nothing either in public or in private life whose course had not been foreseen in the ritual books.

The *libri fulgurales* handled the interpretation of thunder and lightning; thunderbolts were thrown by various gods and portended events in human life. The Etruscan Jupiter, alone or on advice of his counsellors, threw three kinds of thunderbolts either mild or more or less devastating; eight other gods threw one kind each. Johannes Lydus has preserved a 'brontoscopic calendar', translated by Nigidius Figulus, which indicated the significance of thunderbolts for every day of the year (cf. BIDENTAL).

The *libri haruspici* recorded the experience of the Etruscan people in the practice of scrutinizing the entrails of victims. Their professional *haruspices* won such a reputation in this procedure that the Roman Senate appealed to them whenever unintelligible omens had been announced. The inspection of livers is depicted on Etruscan mirrors and other objects. A bronze model of a sheep's liver, found near Piacenza but probably originating from a priestly college in Cortona (J. Heurgon, *Studi L. Banti*, 1965, 183 ff.), has its convex side divided into forty-four sections, each one marked with names of deities: it shows a reflection of the Etruscan heaven, orientated on the cardinal points, with the seat of all its gods (*temphum*). It reflects 'an elaborate belief in the "sympathy" between cosmic and terrestrial life' (S. Weinstock) which also inspired the description of the dwelling-places of the gods given by Martianus Capella; this shows striking though obscure parallels with their distribution on the liver.

We know of a great number of Etruscan gods, but their origin, functions, and relations are difficult to determine. They mostly bear Etruscan names, but from the start they were subjected to oriental and Greek influences, which reflected a complex and somewhat confused divine world of more individualized and anthropomorphized deities. At their head was *tin* or *tinia*, a thunder-god like Zeus. With *uni* (Juno), assimilated to the Greek Hera, and *menrva* (Minerva), who took the aspect of Athena, *tin* formed a triad, which was worshipped in tripartite temples (e.g. on the Capitoline hill). But Voltumna = Voltumnus or Vertumnus, who was honoured in Rome since the sixth century (*Voltumnalia*) and was accompanied by the eagle (*vultur*), was also held to be 'the first of Etruscan gods'. *Turan*, an old Mediterranean goddess, was identified with Aphrodite, *fufluns* with Dionysus, *turms* with Hermes, *seflans* with Hephaestus etc. The tablets from Pyrgi (q.v.) show the introduction of the Punic goddess Astarte, under the name of *uni-astre*, into a sanctuary of *uni*. Apollo, Artemis, and Heracles kept their Greek names, but *aplu*, *arimini*, and *hercle* sometimes assumed unexpected features in Etruscan mythology. The Greek Charon, surrounded by a host of other funerary deities, including Tuchulcha, Mantus (cf. the city of Mantua), *calu*, *letham*, developed into a conspicuous figure, as the torments of the Underworld assumed increasing importance in Etruscan imagination. Some others, *nefuns* (Neptunus), *maris* (Mars), *veiove* (Veiovis) reappear in the Roman religion. A great many of them (*cilen*, *caba*, etc.) remain for us mere names.

Etruscan ceremonies, together with the gods in whose

honour they were held, the sacrifices which were made, and the priests who performed them, are described on the tile from Capua (a funerary ritual) and on the wrappings of the Zagreb mummy (a liturgical calendar), but their detailed interpretation is still under discussion.

Livy called the Etruscans 'a nation more than any other dedicated to religion, the more as they excelled in practising it' (5. 1). This religion in fact imposed on man an overwhelming subjection and a formally codified discipline. It had a deep influence on Roman religion itself, and the *libri Sibyllini* were probably of Etruscan origin. The Christians proclaimed Etruria *genetrix et mater superstitionum* (Arn. 7. 26).

RELIGION, GERMANIC. Written evidence from the Germanic (Teutonic) peoples before their conversion to Christianity is limited to a few Runic inscriptions. Greek and Roman writers supply some information about their heathen religion. Julius Caesar has a little in *De Bello Gallico*, but this is scrappy and appears to be misleading. Our richest source is the *Germania* of Tacitus, who tends to idolize the simple, heroic life of the Germans, and no doubt oversimplifies, but increase in knowledge shows him to be on the whole reliable. He identifies the three chief gods with Mars, Mercury, and Hercules. Beside describing many customs among the various peoples, he gives a celebrated account of the wagon of the goddess Nerthus (cf. ON *Njörðr*) journeying through the territories of the tribes in Denmark to bring prosperity. Strabo, Plutarch, Ammianus Marcellinus, and Procopius add a little. Evidence about the heathen period is also found in the Latin histories of ecclesiastical writers of the medieval period, who drew on oral tradition among the different peoples.

Inscriptions on altars and carved stones from territories occupied by the Roman army provide further information. Those to Mars probably represent *Tiwaz* (OE *Tiu*, ON *Týr*), high god and god of war, whose title of Mars Thingsus suggests an association with the Thing or assembly and thus with justice. He may also have been worshipped as *Irmín*, and the sacred pillar of *Irmín* of the Saxons must be related to the Jupiter pillars of the Rhineland, based on the conception of a column sustaining the universe, like the World Tree of Scandinavian mythology. Mercury was equated with *Wodan* (OE *Woden*), god of the dead, of magic and inspiration, who gradually replaced *Tiwaz* as war-god, and became *Óðinn*, ruler of the Scandinavian Asgard. He was the ancestor of German kings, and the horse, spear, and eagle were his symbols. In the first century A.D. the thunder-god *Donar* (OE *Þunor*, ON *Þórr*) seems to have been equated with Jupiter, but later with Hercules, who slew monsters with his club as Donar did with his hammer. These gods took over the days of Mars, Mercury, and Jupiter (Tuesday, Wednesday, Thursday) throughout the Germanic world.

Female deities are also named. Some must be associated with fertility, and like Garmangabir(s) suggest connexion with giving, as do later Scandinavian goddess names such as *Gefion* and *Gefn*. One goddess, *Nehalennia*, had a shrine at Domburg, where carved stones have been

found showing her with fruit and corn and sometimes accompanied by a dog or a ship, and it appears that travellers prayed to her for a safe passage to Britain. In the Rhineland there are inscriptions to the *Deae Matres* (q.v.), often shown in threes, established among the Germans as well as the Celts as givers of plenty from the first century A.D. Other female deities were attendants on the war-god, like the *Alaisiagae*, mentioned under various names on stones found at Housesteads on Hadrian's Wall in Britain, predecessors of Valkyries.

Deities remembered vaguely in the North and probably worshipped by the heathen Germans are *Ing*, *Ullr*, and *Forseti*. *Ing* may have been a predecessor of the Scandinavian *Freyr*, and it is clear that fertility deities were worshipped by the Germans under many names. *Wodan's* consort *Frija* gave her name to Friday, the day of Venus, and her descendants in Scandinavia are the goddesses *Frigg* and *Freyja*. There is no evidence for worship of *Loki* or *Baldur*. Tacitus mentions the divine founders of the race, *Tuisto* and *Mannus*, and also the twin gods of the Naharvali, the *Alcis*, whose priests wore women's attire, but of these we know little.

Knowledge of Germanic ritual and sacrifice comes partly from Greek and Latin writers, partly from the heroic literature surviving in Anglo-Saxon England and Scandinavia after the heathen period, and partly from archaeological evidence. Much has been learned in recent years from the study of heathen burials, holy places, sacrificial deposits in the peat-bogs of Denmark, Sweden, and north Germany, and from pagan symbols on ornaments and weapons.

RELIGION, ITALIC. The history of a religion needs documents, and those written in the language of the people of whose religious beliefs and practices it is proposed to give an account. The documentary evidence from ancient Italy, other than Latin and Greek, is meagre or, in some cases, imperfectly understood. But

it is enough to make certain two facts: (1) the development of religion among the Italic tribes was essentially parallel to what took place at Rome—the differences are differences of detail; (2) hence, as at Rome, so in Italy at large, religion during the period c. 400-90 B.C. (which is the only period in which its activity is attested and also remained comparatively independent) was a composite affair that had received contributions from a very old and persistent stratum of Mediterranean people, from the waves of trans-Alpine immigrants—starting in prehistoric times and including the Gauls—who brought several forms of Indo-European language into Italy, from Illyrian settlers on the east coast, from others on the west (the Etruscans—probably of Anatolian origin), from Greek colonists, and, through them, from the Near East. It was, therefore, especially by the end of that period, ripe for the identification of its deities with those of Rome, to whom many of them were sufficiently akin (e.g. Umbrian *cubrar matrer*, at Fulginia, gen. sing. 'Bonae matris', or Picene *dea Cupra*, cf. the Roman Bona dea), or even identical (e.g. Oscan *diuvel*, i.e. 'Iouii', *mamrt[ei]* 'Martii'), as well as for identification with Greek and other deities of the kind that went on in Roman religion. Greek cults are by no means missing from the dialect-records, e.g. Messapic *aprodita* and *damatar*, which interpret themselves; Oscan *apellum*—'Apollo' (Messana, Pompeii), *hercklo*—'Hercules' (Lucania, Campania, Samnium, Vestini, Paeligni, and at Praeneste), *meelkiets*—'Μελχιζιού' (Pompeii), *eukhūt*—'Εὐκόδω' (i.e. Hermes, in Samnium); and, in the fastness of Corfinium even, *perseponas* (i.e. Persephonea, gen. sing.), *uranias* 'Οὐρανίας'. If *liganakdikel* (Samnium) is a translation of Θεραποδῶρα rather than an independent compound (quasi **lignāco-dic-*, qualified by the epithet *entrai*, i.e. 'inmost-forest-revealing goddess'), then a Greek cult-title has been borrowed.

But there is much that is genuinely native, as the enumeration which follows shows (for the *Tabulae Iguvinae* see that article). The fundamental Italic conception of deity, like the Roman, was 'act rather than personality' (e.g. *herentas* 'desire' at Herculaneum and Corfinium, compare the Roman *Venus*, which denoted originally a function or activity of a god (e.g. Jupiter, Ceres; cf. *venerari*); *vezkel*, perhaps 'Lucinae' [?], *patanal* 'Pandae', *genetai* 'Genitae', cf. the Roman Geneta Mana Venus, Genetrix—these three all from the *Tabula Agnonensis*, Samnium). The greater part of the beliefs of Italic tribes were concerned with the innumerable aspects of natural order (*diumpals* [cf. *Lumphuris*, Νύμφαις CIL i², 1624, Naples] and *anafriss* 'imbribus' both *ibid.*—and both with the epithet *kerruo*—'Cerealis', i.e. 'genialis', *cerfu semunu*, Corfinium, gen. pl., cf. Lat. *semunis* acc. pl., *Carm. Arv.*, *Semo Sancus*, and, for *cerfu*, Lat. *duonus cerus*, *Carm. Sal.*, ap. Varr.; cf. also *Mefitis*) or of human life (Venetic *rev-tua*, called *sahnat-e-i* 'healer', Ven. *vrotu* 'turner', cf. *Postuorta*, *Anteuorta*; or Ven. *lah-v-na*, cf. Messapic *togetibas* dat. pl., Sicel *Δάγεις*, Messapic *lahona* dat. sing., perhaps all connected with Gr. *Λοχία*, and so maieutic; Osc. *ammal*, Tab. Agn., clearly nurturing in function, *matuts* *ibid.*, cf. *Mater Matuta*).

Then, too, just as in Roman religion, there are gentile cults, proper to certain families, e.g. Raetic *velxanu*, Ven. *Volkanus*; *Diua Plotina* (Ariminum), *Ancharia* (Asculum), *anagtiat diueiat* 'Angitia Diae' (Samnium, also found among the Marsi and Vestini), and *Pelina* (Paeligni), the last named perhaps already tribal or local, like *Flanatica* (Histri), *Minerua Cabardiacensis* (Travi, Aemilia), *Matronae Vcellasiacae Concanauae* or *Matronae Braecorium Gallianatum* (Transpadana). From Capua and Cumae comes a large group of inscriptions, which call themselves *iuvilas* (n. pl.), cf. *lema iuvila*, i.e. 'Lima Iouia' (Raetic). Each regularly bears

a heraldic emblem and records or prescribes an annual sacrifice to certain tutelary deities, or in honour of the ancestors of the family, on a fixed date. Jupiter 'Flagius' (cf. *Ioui Flazso*, *Flazo* at Pozzuoli) is expressly mentioned, and a goddess analogous to the Roman Lucina seems also to be concerned. The wording of these inscriptions is very similar to that of a number of early Theraan inscriptions (e.g. *IG* xii. 3 Suppl. 1324, cf. iii. 452), and this interpretation of them is thereby confirmed. During the Social War the confederate Italic tribes represented Italia on coins (*Vitelliū*), just as the Romans had *Roma* long before.

Last we have to note the recognition and worship of certain greater personalized powers, which, again as at Rome, were like enough to some of the Olympian deities to be identified with them, or had been borrowed from them—Jupiter himself, *regenai peai cerie iovia* 'Reginae Prae Cereri Iouiae', Castor and Pollux (Pachignian *puclois iouiois* dat. pl.; *Castorei Podlouqueique Qurois* at Lavinium), Mercury (*Mercuri* at Faleri), and Fortuna, originally a goddess of children (*dovo fileia primogeneia* at Praeneste; Antium)—to name no others. Even Juno and Diana appear to have been Latin in the first place rather than Roman. To the most remote times goes back the worship of mother-goddesses, attested by non-epigraphic remains at opposite ends of the peninsula in Liguria and in Malta (compare the later Celtic *Matronae* in Cisalpine, also called *Iunones*), or of mother-earth (*Sicel Anna*, Messapic *ana*, Osc. *Damia*, with a festival *daieca* at Tarentum, cf. Lat. *damum*, Osc. *damuse* . . . '*Damusia'), whose cult was extremely ancient all through the Mediterranean basin, or of infernal deities (attested by several Oscan *defixiones*); and not much later is the worship of animals, often disguised subsequently as eponymous ancestors, Messapic *Dauinus* (the wolf?), *Hirpus* (Sabini, Hirpini—also the wolf), Messapic *Menzanu* (the horse), Sicel *Ἰταλός* (the bull), or of natural features such as the mountain-top (Celtic *Ferninus* in the Alps, *ocres tarincris* gen. sg., Marrucini), hot springs (Ligurian *Bormo*), or rivers (*Padus pater*). Agricultural deities and festivals, like the Ligurian *Leucimalacus* ('apple-ripeners') and *plostraha*, or the Oscan *fuusasials* (loc. pl., 'Floralibus'), are a commonplace. There is, in short, every reason to suppose that, together with the same elements (magic, taboo, animism) that are fundamental in early Roman religion, there went, among the Italic communities, the same kind of development of local and functional spirits as at Rome, worshipped in the same way by sacrifice, prayer, lustration, and vow.

The primary sources are collected in R. S. Conway, *The Italic Dialects* (2 vols., 1897), and in R. S. Conway, J. Whatmough, and S. E. Johnson, *The Prae-Italic Dialects of Italy* (3 vols., 1933). J. Whatmough, *The Foundations of Roman Italy* (1937), includes brief surveys of the known facts from all the dialect-areas. A full discussion of the problems of Italic religion, with much theorizing and some questionable assertion, may be had in F. Altheim, *A History of Roman Religion* (1918; to be used with caution). See also H. J. Rose, *Ancient Roman Religion* (1940), Latte, *RR*, esp. 148 ff. For Samnium, E. T. Salmon, *Samnium and the Samnites* (1967), 143 ff. J. W.

RELIGION, MINOAN-MYCENAEAN. As very few finds of religious importance are reported from the Early and Middle Helladic (Bronze Age) periods of the mainland of Greece, our knowledge of the religion of the pre-Greek population of Greece is almost exclusively derived from Crete, where the Bronze Age is called the Minoan Age (see MINOAN CIVILIZATION). In the Late Helladic period the immigrant Greeks dominated first the mainland, especially its eastern parts, afterwards also Crete. (We revert later to this period, which is also called Mycenaean.) The cult-places in Minoan Crete were partly natural caves or rock-shelters. Some caves, e.g. at Psychro and Arkalochori, have yielded numerous votives, double axes, bronzes, rings, gems, etc. The cave of

Eileithyia at Amnisus (*Od.* 19. 188) is attested on a Linear B tablet from Cnossos. The rock-shelter at Petsofa is peculiar by reason of its terracottas representing limbs and parts of the body; they cannot, however, be votives to a healing god. There were no great temples, but rustic sanctuaries and small chapels in houses and palaces at Cnossos, Gurnia, etc. Their type of façade is known from wall-paintings and pieces of gold foil; it has three compartments with columns and horns of consecration and is crowned by the same horns. At the back is a raised dais on which idols and vessels were placed, other vessels being placed on the floor. There were altars and several kinds of sacrificial vessels too. We very often see an object consisting of two hornlike projections united by a common base; it is called 'horns of consecration'. Sacred vessels or branches were put between the horns. 'Horns of consecration' were often used in a purely ornamental way on vase-pictures and buildings, etc. The symbol of Minoan religion is the double axe which is very often depicted on vases and found among votives; the blades are generally curved and so thin that they are useless for practical purposes. Paintings show it crowning a high pole beneath which a sacrifice is performed. Probably it is the sacrificial axe. There is evidence for a cult of pillars, sacred stones (baetyls), and stone-heaps that remind us of the Greek *hermae*. Tree-cult is proved by many gems and especially by the paintings of the sarcophagus from H. Triada, showing a tree in a holy enclosure. Some representations show a dance of an ecstatic kind. The cult idols are female, bell-shaped, and very primitive; they are often found in houses. A few of better workmanship represent the snake-goddess (see under 2), e.g. the faience statuette from Cnossos and the chryselephantine statuette in Boston. Gems and seal-impressions show the epiphany of gods in bird-shape and also in human form, sometimes as small figures hovering down from the air, sometimes full-sized. There is further a great number of daemons, monsters, and fabulous animals.

It is still disputed whether the Minoans believed in a Great Goddess who ruled this world and the Nether World, comparable with the Great Mother of Asia Minor. There is a number of goddesses, prominent among which is the Mountain Mother. They may be local varieties of one general mother- (or Cybele-) type; but it is also possible that they represent individual deities, although the Minoan polytheism never appears as clear-cut as the Hellenic. We can discern a mistress, with beside her a master, of animals who also are gods of hunters, who worshipped the so-called Mother of Mountains mentioned above; a goddess of tree-cult whom the great gold ring from Mycenae shows seated under a tree and approached by votaries; a goddess seated on board a ship; and finally the snake- or household goddess. The snake is to this day, even in Greece, still more venerated in domestic cult than in the cult of the dead. It is therefore clear that the snake-goddess has her origin in the cult of the house-snake. Of the cult of the dead little is known except for the paintings of the sarcophagus from H. Triada which probably represent a deification of the dead man. The heavenly bodies are sometimes represented; it is uncertain whether worship was paid to them. The bull-cult cannot be proved; the bull-ring which gave rise to the Minotaur myth was hardly anything other than a secular sport. On the other hand, the legends of Pasiphae and Europa give positive evidence. Egyptian influence is apparent in details, Babylonian is less prominent; but, generally speaking, the Minoan religion has a native character of its own.

From the sixteenth century B.C. mainland Greece was strongly influenced by Crete. Mycenaean religion, therefore, culminating in the fourteenth-thirteenth century,

seemed, to judge from the monuments above, to have been wholly minoized. Even before the decipherment of Linear B, however, some marked differences were noted (see next paragraph). The male deity known as 'master of animals', now bearded according to the Greek fashion, is more prominent. A forerunner of the Eleusinian triad Demeter-Kore-Plutus occurs on a Mycenaean ivory. The Mycenaean inscriptions have greatly enlarged our knowledge, although much is still disputed. We now know that many familiar Greek deities were already worshipped by the Mycenaeans, both on the mainland and after their settlement in Crete. Some had a Minoan origin; the Cretan vegetation goddess would correspond with Demeter, the household or snake goddess with Athena, the mistress of animals with Artemis. Often these deities receive the epithet *potnia* (a-ta-na po-ti-ni-ja may mean 'the Lady of Athana', the latter being a place-name). Further, the names occur of Zeus (whom the Greeks may have identified with the youthful Cretan god; some think, however, that this was Hermes), Poseidon, Enyalios, Paian, Eileithyia (see above), Hera, and Hermes. The occurrence of Dionysus and some items of the Dionysiac vocabulary has provoked lively discussions (cp. J. Puhvel in *Mycenaean Studies*, ed. by E. L. Bennett (1964)). The predominance of Poseidon over Zeus at Pylos corresponds with this god's role in *Od.* 3.

The Greeks brought with them Zeus from their old home; their State of Gods is, just as always, modelled after the State of men; like the Mycenaean war-king Agamemnon, Zeus is surrounded by vassals, and there is even a popular assembly in which the small gods take part. The Greek State of the Gods corresponds precisely to the feudal organization of the Mycenaean age. There is in Homer a simple belief in Destiny which recurs among other warlike peoples and helps them to brave the risks of warfare; it probably developed during the warring Mycenaean age. Hera probably developed into an Olympian goddess from a local Argive variety of earth-mother. Her name, kindred with Homeric *Ἥρα*, 'Lord', 'Sir', means 'Lady', as much as *potnia*. Plenty of idols are found in Mycenaean tombs and almost none in Minoan, except for the very end of the Minoan age when it was influenced by the Mycenaeans. The Mycenaeans built stately beehive tombs for their kings which have no parallel in Crete, and the dead were buried unburned. Homer, on the contrary, knows only cremation and speaks always of mounds. Cremation began at the end of the sub-Mycenaean age; the question is too difficult to be treated here; but offerings, though not the dead, were sometimes burned in Mycenaean tombs. The beehive tomb was covered by a mound, at least the top of which projected above the surface. A cult was of course given to the dead kings and princes, who when alive were heroes—to use the word as Homer does. The cult of ancestors may, if the people also are devoted to it, survive the extinction of the family and even the forgetting of the name of the dead man. There is evidence that at one Mycenaean tomb the cult was continued down into the historical age—at Menidi (Acharnae), in fact, to the beginning of the Peloponnesian War.

There is other evidence for cult continuity from Mycenaean to historical times; the temple of the city goddess was built on the ruins of the palace of the Mycenaean king at Athens, Mycenae, Tiryns. Thus Minoan religion was transformed by the Mycenaean Greeks and handed down to the historical age. Certain myths of an un-Greek appearance, especially the myth of the birth and death of Zeus, show that Minoan elements were taken over directly. Hyakinthos, whose Minoan origin his name proves, is another representative of the dying and revival of vegetation. The Divine Child abandoned by its mother

and nourished by others represents another Minoan myth which is coupled with the former. Again, the concept of Elysium, or the Islands of the Blest, seems to be a Minoan heritage. The two great antitheses in Greek religion are not, as many say, the Olympian and the Chthonic religion, but the emotional Minoan and the sober Greek religion. Historical Greek religion is a fusion of the two, but the contrast lingered on in the archaic age and gave the mystic movements their force.

M. P. Nilsson, *The Minoan-Mycenaean Religion and its survival in Greek Religion* (1950), W. K. C. Guthrie, *BICS* 1959, 35 ff.; R. W. Hutchinson, *Prehistoric Crete* (1962), ch. 8, L. R. Palmer, *Mycenaeans and Minoans* (1965), 130 ff.; W. K. C. Guthrie, *CAH*⁴, ii, M. P. N.; J. H. C.

RELIGION, PERSIAN. The Greeks had, from about the fifth century B.C., a fairly good acquaintance with Persian religion, not always, however, with its native form, but with the mixed beliefs and practices brought about by the extension of Persian influence to Babylonia and elsewhere; hence, e.g., the frequent assertion that Zoroaster (q.v.) was an astrologer; cf. Bidez-Cumont, vi. Further colouring is due either to the general opinion that all barbarians are too stupid, or too sage, to worship any but the natural and visible gods, as heaven, earth, and sun (cf. Ap. Rhod. 3. 714 ff. [Colchians], Caesar, *B.Gall.* 6. 21. 2 [Germans]), or to the recurrent, but especially Hellenistic, craze for finding deep philosophical learning among Orientals. Hence the numerous statements about Persians worshipping the sun and earth should be read with caution, though some no doubt refer to real cults of Mithras (q.v.) and of a mother-goddess; and such passages as Dio Chrysostom, 36, 39 ff. von Arnim, which put a quasi-Platonic myth into the mouths of the Magi, may be disregarded. Something was known of Persian gods from fairly early times, though the oldest surviving mentions of Mithras and Ahura-Mazda (Ἄχουράμαδης, Ὀρομάδης, Ὀρομάζης) respectively, Herodotus 1. 131. 3 and [Plato], *Alcib.* 1. 122 a make the former a goddess, the latter Zoroaster's father. Of surviving authors, Plutarch, *Mor.* 369 d ff., 1026 b, gives a correct account of Ahura-Mazda and Angra-Mainyu or Ahriman (Ἀρεμάνιος). Other statements substantially correct are, e.g., Herodotus 1. 132 and Phoenix of Colophon, fr. 1 Powell, about the method of sacrifice; Strabo 15. 3. 15 on the holy fire; Cicero, *Leg.* 2. 26, on Persian objection to temples of Greek type, and numerous remarks about the Magi, Hdt. 3. 61. 1 ff. Aristotle's testimony, *Ἐπεὶ φιλοσοφίας* (see J. Bidez and F. Cumont, *Les Mages hellénisés* (1938), ii. 9, 67, n. 26), gives a valuable clue to the evolution of Iranian doctrines. These may have influenced Greek thought as early as the fifth century. Some knowledge of them may be presumed on the part of Hermippus (Pliny, *HN* 30. 4) and those who drew upon him; some were known by name and a certain amount of truth blended with the falsehoods told about them.

RELIGION, THRACIAN. This appears to have been crude and barbaric before Greek influences transformed it. There is evidence of primitive animal-worship, human sacrifice, magical ceremonies, orgiastic rites. The earliest evidence, however, shows a belief in a future life. The Thracians brought to their worship powerful religious emotions that were still evident in later times.

Their native gods may have been vaguely conceived until individualized in Greek forms. The chthonian powers were especially favoured. Dionysus (q.v.), or a Thracian deity identified with him, was widely worshipped (but the long-held belief that the Greek Dionysus was Thracian in origin appears no longer tenable). He was a god of vegetation and fertility, worshipped in wild, ecstatic rites. He was closely related to Sabazius (q.v.), whose cult was widespread among Thracians and Phrygians. He was perhaps originally conceived in animal form, and the animals thought to embody the god were, according to tradition, torn to pieces and devoured raw by his worshippers, who thereby filled themselves with the god's power.

Other important Thracian deities are Bendis (q.v.), goddess of the chase and fertility, identified with Artemis; the closely related Corys (q.v.) or Coryto; Bedy, a spring and river god; Heros, god of vegetation and the chase, guardian of houses and roads (see RIDER-GODS); the closely related Rhesus (q.v.), the mysterious Zalmoxis (q.v.), of whom we know little; water-spirits, identified with the Nymphs; a war-god, identified with Ares; the Cabiri (q.v.). Several Greek gods were worshipped: Apollo, Zeus, Hera, Hermes, Heracles, Helios, Hades, Persephone, Asclepius, Hygieia, Telesphorus. The Thracians had a well-developed cult of the dead, for whom they raised impressive mounds.

J. E. F.

RELIGION, TERMS RELATING TO. No word in either Greek or Latin corresponds exactly to English 'religion', 'religious'. In the former language perhaps *όσιος* and *εὐσεβής*, with their corresponding abstract nouns, come closest. *όσιος* seems to mean primitively 'usage', 'custom', hence 'good, commendable, pious usage' or the feelings which naturally go with it. It tends to specialize into meaning that which is proper and lawful with regard to holy things, or to traditional morality; it is, for instance, *ἀνόσιον* to commit murder. To say that a man is *εὐσεβής* does not of itself mean that he is what we call pious, unless some such phrase as *πρὸς τοὺς θεούς* is added; the famous *εὐσεβείς* after whom the *εὐσεβῶν χῶρα* in Sicily was named (see *Aetna*, 623 ff., and R. Ellis ad loc.) were loving and self-sacrificing sons, and so *πῖ* (see below). Cf. in general J. C. Bolkestein, *Όσιος en*

Εὐσεβής: *Bijdrage tot de godsdienstige en zedelijke Terminologie van de Grieken* (1936). A word belonging essentially to the religious vocabulary in classical times is *θέμις*, since that which it is or is not *θέμις* to do is respectively allowed or disallowed by religious law or custom; but the Homeric *θέμιστες* are traditional laws, not purely religious. *ἱερός* means properly 'taboo', hence 'consecrated' to some deity, though in Homer it can have a quite secular use (Nilsson, *GGK* 1². 70) and a man careful in his religious duties may be called *ἱερός*, as Ar. *Ran.* 652; *ἱερά* are religious rites, or materials, especially victims, for them. *δεισιδαιμών* varies between 'pietistic' and 'pious', but is usually the former, see H. Bolkestein, 'Theophrastos' Charakter der Deisidaimonia' (*RGVV* xxi. 2, 1929). The word *ἅγιος* so distinctly indicates something belonging to the sacred sphere that it is tempting, despite the difference of breathing, to connect it etymologically with *ἄγιος*, a taboo or the evil state resulting from the violation of one (see E. Williger, 'Hagios, Untersuchungen zur Terminologie des Heiligen', *ibid.* xix. 1, 1922; and Nilsson, loc. cit.). As regards outward observances, the simple word *τιμή* is common; a worshipper is often said to 'attend on' or 'serve' the gods, *θεραπεύειν* and synonyms (never *δουλεύειν* in a purely Greek context). To be a regular worshipper, e.g. of the gods of a State, is *νομίζειν θεούς*, which later comes to mean to believe in their existence (see J. Tate in *CR* 1936, 3; 1937, 3). Occasionally *θηρασκεία* has the former sense (as Hdt. 2. 64. 1); *θηρασκεία* is a common, though mostly late, word for 'worship'. *λατρεία*, *λατρεύειν* are also found (Plato. *Ap.* 23B, *Phaedr.* 244E, Eur. *Ion* 152). A *τελετή* or *τέλος* is any rite, though in Hellenistic Greek it tends to mean a mystical rite or even secret doctrine (see C. Zijderfeld, *Τελετή*, diss. Purmerend, 1934; cf. H. Bolkestein, *Τέλος ὁ γάμος*, *Mededeelingen* lxxvi B, no. 2 (1933)).

In Latin *religio* seems to be properly a bond or restraint of a non-material kind, and so develops into 'sacral or religious observance or scruple'; *religiones*, a complex or system of such restraints, is perhaps the nearest Latin for 'a religion'. Generally, *religio* has a good meaning, though to a materialist, as Lucretius, it is nearly 'superstition', and in Hor. *Sat.* 1. 9. 71 it is something to be slightly ashamed of. *Religiosus* usually means 'pietistic', but denotes a laudable quality in the mouth of an uneducated man (Petron. 44. 18). In its good sense *religio* approaches Hellenistic *εὐλάβεια* (K. Kerényi in *Byzantinisch-Neugriechische Jahrbücher* 1931, 306 ff.). *Sacer* is almost exactly 'taboo', opposed to *profanus*, that which is used in ordinary life, cf. CONSECRATION. It is thus ambivalent, meaning on occasion 'accursed'. That which is actually *sacer* might also be *profanus*, as a temple or a human being, whereas a god is *sacrus*, as is also a man of venerable life or conduct; the inviolable walls of a city are *sanctae res* (Gaius 2. 8, cf. Plut. *Quaest. Rom.* 27 and Rose, *Rom. Quest. of Plut.* (1924), 181), but a table, which may be used for domestic ritual, is *sacra* (Juv. 6. O 4). *Pius*, *pietas* correspond fairly closely to *εὐσεβής* and *εὐσέβεια*, see above; Virgil's Aeneas is *pius* because he observes right relations to all things human and divine. Outward observances are *ritus*, properly no more than 'customs', *honores*, again by no means a peculiarly religious term, *cura caerimoniae* (Cic. *Inv. Rhet.* 2. 161, cf. W. Warde Fowler, *Rel. Exper.*, index s.v.), or simply *carminumae*. *Sacra* denotes the holy objects and the ritual (*sacra facere*, to perform a religious ceremony).

See Latte, *RR*, under the various Latin words.

H. J. R.

REPETUNDÆ. Cases of alleged abuses of power by magistrates and pro-magistrates in the provinces were originally heard by *ad hoc* commissions of the Senate (e.g. Livy 43. 2). In 149 B.C. the tribune Piso (q.v. 1) passed a law setting up a standing committee (see *QUAESTIO*) under

a praetor for this purpose. Its procedure was the *sacramentum* (q.v.) of the civil court, and a verdict of 'Guilty' was probably followed by an assessment of damages (*litis aestimatio*, q.v.) and simple repayment (hence *res repetundae*). C. Gracchus (q.v. 4), finding these courts corrupt and unwilling to convict fellow senators, had two laws passed by fellow tribunes: the first may have been a *lex Iunia* (passed in 123 by M. Silanus, later consul in 109). It provided for a mixed jury of senators and wealthy non-senators (*see* *EQUITES*). Of the second—probably a *lex Acilia* passed by Glabrio (q.v. 2) in 122—large fragments survive (Riccobono, *FIRA*, no. 7). It established a panel of 450 'Equites' only and laid down a detailed (and largely new) procedure. The law of Caepio (q.v. 1), applicable to all *quaestiones*, probably restored the mixed juries (106) and that of Glaucia (101 or 100) the 'Equestrian' juries. But these lost all credit in the case of Rutilius (q.v. 1) in 92, with the result that Drusus (q.v. 2) and Plautius (q.v. 1) tried various compromises and Sulla finally restored all juries to an enlarged Senate. L. Cotta (q.v. 3), in 70, reintroduced mixed juries for all *quaestiones*, and the old conflict was never renewed, though Caesar, Augustus, and Gaius (q.v.) made changes in the jury panel. (On all this, *see* *QUAESTIONES*.)

Piso's law had created what was virtually a special civil court: the only penalty was simple restitution. His law may have been confined to extortion in the provinces, and the oligarchy, while willing to protect its subjects, did not readily do so at the expense of its own members. The *lex Acilia*, while retaining some of the concepts of a civil suit, first made the offence clearly criminal, doubling the amount to be repaid (it was later doubled again), introducing *nominis delatio* and offering public rewards for successful prosecution, including the citizenship for aliens. This offer was apparently restricted later and abolished by Sulla; but rewards for citizens remained. Acilius may have cut down the possibilities of *ampliatio* (q.v.), to avoid infinite delays and Glaucia substituted *compendiatio* (a trial in two set *actiones* and no more) for it. He also widened the scope by adding a consequential action against senatorial accomplices (*quo ea pecunia perueniret*); and it was probably he who first linked conviction with *infamia* (including expulsion from the Senate, which had hitherto no doubt been at the censors' discretion). At some time not later than this (and perhaps as early as 122) the law also began to cover illegal enrichment not through extortion in the provinces (e.g. bribery of jurors and collusive prosecution). After Caesar (perhaps even after Sulla) the capital penalty (i.e. in effect exile—which, for various reasons, guilty men had even earlier generally chosen on conviction) could be applied, where the case was serious enough. Caesar's law, comprehensive and severe, remained basic under the Empire.

Augustus, in 4 B.C., procured the *SC Calvisianum* (*FIRA* 68, 409—*see* *CYRENE*, *EDICTS OF*), by which provincials complaining of extortion could, with the Senate's permission, have the case investigated by five senatorial *recuperatores* (q.v.) and, if successful, would secure repayment. This return to (practically) civil procedure, by removing the consideration of a penalty, would be more likely to secure them compensation and was less expensive and more convenient. Conviction apparently still carried *infamia*; but intercession with the Princeps could reverse this. Several such cases are known, and it became the normal process under the early Empire. At some stage (quite early, it seems) *equites* also became liable. Cases involving criminal penalties continued alongside this civil process and came to be tried in the Senate, as it developed judicial functions. But senators were reluctant to condemn their peers; and men who enjoyed the Emperor's favour were hard to convict. On the whole,

whatever the merits of the case, *delatores* could secure the conviction (sometimes also on an added *maiestas* charge) of men who had fallen into disfavour, but not of others. As a result, by Trajan's reign, *clementia* was invoked to prevent the punishment even of known offenders. In the later Empire, the Emperor (or Praetorian Prefect) assumed jurisdiction, and the *Codes* gave detailed regulations. By then, governors and their staffs were no longer the most serious burden on provincials.

PW s.v. 'Quaestio': J. P. V. D. Balsdon, *PBSR* 1938, 80 ff. A. N. Sherwin-White, *ibid.* 1949, 5 ff.; *JRS* 1952, 43 ff.; G. Tibiletti, *Athenaeum* 1953, 5 ff.; E. Badian, *Hist.* 1962, 203 ff. (with bibliography), A. H. M. Jones, *PCPS* 1960, 39 ff.; C. Nicolet, *L'Ordre équestre* (1966), 465 ff. The *lex Acilia* is translated in E. G. Hardy, *Roman Laws and Charters* (1912). E. B.

REPOSIANUS (3rd c. A.D.), author of a poem in 182 hexameters on the intrigue between Mars and Venus, preserved in one codex only, the *Salmasianus*.

Text with transl., Duff, *Minor Lat. Poets*. J. Tolkein, *Neue Jahrb.* clv. 615 f.; D. Gagliardi, *Le Parole e le Idee* 1966, 184 ff.

REX, the Roman word for 'King' (etymologically connected with *regere*, to lead), is in itself evidence for a period of monarchy, the existence of which is postulated by the general process of political development in the Greek and Roman world, and attested by literary tradition, by archaeology, and by juridical and religious survivals. The word occurs in the Lapis Niger inscription in the Roman Forum, though the doubtful date makes it a matter of dispute whether the *rex* referred to is actually a king or the *rex sacrorum* (q.v.). In any case, the name *Regia*, meaning the palace of the supreme pontiff, and such compounds of *rex* as *rex sacrorum* (or *sacrficulus*) and *interrex* would suffice to prove that these republican officials were preceded by kings, whose name and powers they inherited.

That the king had ritual duties is confirmed by the analogous obligations fulfilled by his counterpart in Athens, the (ἀρχων) βασιλεύς. But the question of the power actually held by the king, and the legal foundation of the Roman monarchy, cannot be answered satisfactorily, owing to the lack of contemporary evidence. The only documents mentioned by ancient authorities are an agreement between Tarquin the Elder and Gabii, and an alliance between Servius Tullius and the Latin League. Therefore, annalists and jurists, in setting forth their theory of kingship and in relating the history of the regal period, merely applied the political system of the Republic to the original constitution of the city, substituting for the consuls one magistrate called *rex*, who ruled by virtue of *imperium* and was attended, as were the consuls, by twelve lictors. Although Roman tradition wrongly connected the origins of several Republican functions and customs with the regal period, it seems certain that some of these rights were actually enjoyed, and some of these duties fulfilled, by the kings, especially by those of Etruscan origin—the wearing of a purple robe, the triumphal procession after a victorious campaign, etc. The king administered justice sitting in an ivory chair on a chariot (hence the term *sella curulis*); he made war and peace; in time of war he assumed the chief command and exercised a supreme right of life and death over every soldier and citizen.

Tradition has it that the early Roman monarchs at least did not inherit their throne but were individually elected. They were nominated by an *interrex* (q.v.) and were appointed by Jupiter at the ceremony of the *inauguratio*. Two Tarquins, however, appear in the last three of the traditional list of seven kings; and it is possible that in the sixth century Etruscan influences occasioned the abandonment of the established Latin methods of selection.

The traditional kings certainly represent neither gods nor the personification of the seven hills, but not all of them can be accepted as historical figures. Yet, however many details may be fictitious or retrojections of later events and customs into the past, tradition is indisputably right in dating the fall of monarchy towards the end of the sixth century B.C. (For a brief refutation of the recent attempts, particularly by K. Hanell and E. Gjerstad, to lower the date of the end of the monarchy to the mid fifth century, see A. Momigliano, *JRS* 1963, 103 ff.) It is difficult to say with certainty whether this was due, as traditionally related, to a revolution, or to a gradual evolution, although the fact that legal measures were taken not later than the fourth century to prevent any attempt at the re-establishment of monarchy seems to favour the former alternative, which is also supported by an analysis of the international situation and of the crisis in which both Etruscans and Greeks in southern Italy were involved. Eventually the example and influence of the Hellenistic kingdoms caused at Rome a change of attitude towards both the conception of monarchy and its practice, thus paving the way for the monarchical adventures of Sulla, Caesar, and Augustus. But it was rather in opposition to than in imitation of Hellenistic kingship that the Augustan Principate was set up, and its founder was not called *rex*, but *princeps*.

Mommsen, *Röm. Staatsr.* II¹. 1.4 ff.; Beloch, *Röm. Gesch.* 225 ff.; U. Cohn, *Regnum* (1958) and in *Notissima Digesto italiano*, s.v. *Monarchia*. On the idea of kingship in the age of Caesar and Augustus, see J. Carcopino, *Les Éléments de l'impérialisme romain* (1961), 120 ff.; J. Branger, *Recherches sur l'aspect idéologique du Principat* (1953); P. Grenade, *Essai sur les origines du Principat* (1961).

P. T.; E. S. S.

REX (1), QUINTUS MARCIUS (*PI* 90), as praetor in 144 B.C. and propraetor built the great Marcian Aqueduct, the first using arches on a large scale. E. B.

REX (2), QUINTUS MARCIUS (*PI* 92), married to a daughter of Claudius (q.v. 10), was consul in 68 B.C. (alone for much of the year), then sent to Cilicia (chiefly to fight the pirates), but was delayed in Italy by unrest in Transpadane Gaul (see CAESAR 1, CRASSUS 4, PISO 2). In his province, instigated by his brother-in-law Clodius (q.v. 1), he refused aid to Lucullus (q.v. 2), and was soon succeeded by Pompey (66). Waiting (vainly) for a triumph, he used his *imperium* against the Catilinarians and died soon after. E. B.

REX NEMORENSIS, the 'king of the grove', i.e. Diana's grove near Aricia. This unique official was an escaped slave who acquired office by killing his predecessor, after a formal challenge in the shape of a violation of the grove by plucking a branch. See Strabo 5. 3. 12, 239; Suetonius, *Calig.* 35; Servius on *Aen.* 6. 136; more in Frazer, *GR* i. 11, note 1. The man was Diana's priest; for attempted explanations of his position see Frazer, op. cit. *passim*; A. Lang, *Magic and Religion*, 206 ff.; Rose, *Roman Questions of Plutarch*, 91; Latte, *RR* 171.

H. J. R.

REX SACRORUM. On the expulsion of the kings from Rome, their sacral functions were confided to a priest who bore the title of *rex sacrorum* officially, less formally *rex* simply; Livy (2. 2. 1), which see for the institution, calls him *rex sacrificolus* (not *sacrificulus*). He was subordinate to the Pontifex Maximus (ibid.), but superior to all the flamens (Festus, 198. 30 Lindsay). He was a patrician born of confarreate marriage (Gaius 1. 112), might hold no other post and was chosen for life (Dion. Hal. *Ant. Rom.* 4. 74. 4), and his wife, the *regina*, had certain sacral duties (Festus, 101. 6).

Marquardt-Wissowa, *Römische Staatsverwaltung* (1881-5), iii^a. 321 ff.; A. Momigliano, *Quarto contributo* (1969), 395 ff. H. J. R.

RHADAMANTHYS, in mythology, son of Zeus and Europa (q.v.); he did not die but went to Elysium (*Od.* 4. 564). There he is a ruler and judge (*Pind. Ol.* 2. 75 ff.). He is uniformly represented as just (id. *Pyth.* 2. 73 f., and often). He is one of the judges of the dead (*Pl. Apol.* 41 a), along with others renowned for their justice, and so often in later authors, e.g. Verg. *Aen.* 6. 566, where he presides over Tartarus. Apart from this he has not much legend; his genealogy varies, Cinaethon ap. Paus. 8. 53. 5 giving Cres-Talos-Hephaestus-Rhadamanthys. His evidently pre-Greek name and the non-Indo-European Elysium have led to many speculations.

Jessen in Roscher's *Lexikon*, s.v.; Nilsson, *GGR* I². 325.

H. J. R.

RHAMNUS, one of the remotest of the Attic demes, situated on the north-east coast overlooking the narrow waters between Attica and Euboea. There are extensive remains of a fortress begun in the fifth century and enlarged in the fourth, which, together with that at Sunium (q.v.), constituted the main defence of the east coast and its vital shipping routes. In addition there was a sanctuary containing two classical temples, one to Themis, the other to Nemesis; the cult statue of the latter was created by either Phidias or more likely his pupil Agoracritus (q.v.) and judged by Marcus Varro (q.v. 2) to be his favourite work of sculpture.

Paus. 1. 32. 2-8 and Frazer's commentary; Pliny, *HN* 36. 17. H. Plommier, 'Three Attic Temples', *BSA* 1950, 94 ff.; J. Pouilloux, *La Forteresse de Rhamonte* (1954); W. B. Dinsmoor, 'Rhamountine Fantasiae', *Hesp.* 1961, 179 ff. C. W. J. E.

RHAMPSINITUS, i.e. Ramses (III?), to whom a folktale (Stith Thompson, K 315. 1) is attached in Herodotus 2. 121. The builder of his treasury left a secret entrance and after his death his two sons stole therefrom. One being trapped, the other beheaded him, avoided capture himself, and at last was reconciled to the king. II. J. R.

RHAPSODES were professional reciters of poetry, particularly of Homer but also of other poets (Ath. 620 a-d, cf. Pl. *Ion* 531 a). The name, which means 'song-stitcher', is first attested in the fifth century (Collitz, *Griech. Dialektinschriften* 5786, IIdt. 5. 67, Soph. *OT* 391), but implies the formulaic compositional technique of earlier minstrels; cf. *ῥάψαντες ἀοιδῶν* 'Iles.' fr. 357 M.-W., *ῥαπτῶν ἐπέων ἀοιδοί* Pind. *Nem.* 2. 1 (variously explained by schol.). Originally reciters of epic accompanied themselves on the lyre, but later they carried a staff instead (cf. Iles. *Th.* 30 with 95). Both are shown on vases; Plato distinguishes rhapsodes from citharodes, but classes Homer's Phemius as a rhapsode (*Ion* 533 b-c). In the fifth and fourth centuries rhapsodes were a familiar sight, especially at public festivals and games, where they competed for prizes. They declaimed from a dais (ibid. 535 e), and hoped to attract a crowd by their conspicuous attire (ibid. 530 b, 535 d) and loud melodious voice (Diod. 14. 109). They would be likely to own texts of Homer (Xen. *Mem.* 4. 2. 10), but recited from memory (id. *Symp.* 3. 6). They were carefully trained, and preserved a traditional pronunciation of Homer down to Alexandrian times (J. Wackernagel, *Kl. Schr.* (1956), 1094 ff.), probably under the influence of the Homeridae (q.v.), who were looked up to as authorities and arbiters (cf. Pl. *Ion* 530 d). A good rhapsode might be filled with emotion while reciting, and communicate it to his audience (ibid. 535 b-c), and there was felt to be a kinship between him and the actor (ibid. 532 d, 536 a, *Resp.* 395 a; Alcibi. *Soph.* 14; Ar. *Rhet.* 1403^{b22}); but he is not to be confused with the *Ὀμηροποιός*, the low-class actor of Homeric scenes who was later popular (Dem. *Phal.* ap. Ath. 620 b, Petron. 59, Artemid. 4. 2, Ach. Tat. 3. 20. 4, *POxy.* 519. 4, etc.). Though despised as stupid by the educated (Xen.

locc. citt.) and a byword for unreliability (*Suda*, *ῥαψώδης*: *ψευδής*, *ῥαψώδης*: *φλυαρία*, etc.), rhapsodes continued to practise their art and compete at games at least down to the third century A.D. (e.g. *SIG*³ 711 i 30, 958. 35, 959⁹, *JG* vii. 1773. 17, 1776. 15).
M. L. W.

RHEGIUM (*Ῥήγιον*: Regium is probably more correct, the name being pre-Greek), modern *Reggio*, a Greek colony in the 'toe' of Italy opposite Messina, was founded c. 720 B.C. by Chalcis (its inhabitants, however, included Messenians, after 600 at least). Originally an oligarchy using the legislation of Charondas of Catana (*Arist. Pol.* 2. 9; 5. 12), Rhegium later became subject to Anaxilas (q.v. 1), who extended its authority, e.g., over Messina (q.v.). But Syracuse, traditional enemy of Chalcidian cities, supported Rhegium's rival Locri and ultimately destroyed Rhegium (387: see *DIONYSIUS* 1). Soon rebuilt, Rhegium, although temporarily held by Campanian mercenaries (280–270), successfully resisted Brutii, Pyrrhus, and Hannibal. Becoming a favoured and loyal Roman ally, it acquired municipal status after 90 B.C. (*Cic. Arch.* 3) and colonists but not colonial status under Augustus. Despite frequent earthquakes it remained a populous, Greek-speaking city throughout imperial times. The lyric poet Ibycus was born here.

Strabo 6. 257 f.; *Idr.* 6. 23; 7. 165, 170; *Thuc.* bks. 4, 6, 7; *Diod. bks.* 11–16; *Livy* 23. 30, 36. 42. F. Cassola, *Gruppi politici romani* (1962), 171 ff.; J. Bérard, *Bibl. topogr.* (1941), 85; G. Vallet, *Rhegium et Zancle* (1958).

RHENUS was the Celtic name for the Rhine. This river (cf. Caesar, *BGall.* 4. 10) became the Roman frontier in Caesar's time, and between the river Vinx and Holland it always so remained, though from the Flavian period until c. A.D. 260 the frontier of Germania Superior lay further east. In Classical times, as always, the river, with its important tributaries, was a great channel of commerce, and the Romans maintained a fleet on it from 12 B.C., the *classis Germanica*, with headquarters at Cologne. The stations of the fleet seem to have been concentrated in Lower Germany where river and frontier coincided. As a means of communication the river was of vital military importance, as between units and between the armies of Germany and Britain and during campaigns, e.g. those of Drusus, Germanicus, Tiberius, Corbulo, and Cerialis. Ancient writers generally regarded the Rhine as having two or three mouths, probably the Waal (Vahalis), Old Rhine, and the Vecht (cf. Strabo 4. 193; *Pliny, HN* 4. 101; *Ptolemy* 2. 9. 1). Drusus canalized the Vecht outlet (see *RE* s.v. *FLAVO* L.), and he also raised a dike, near the delta, completed by Pompeius Paulinus in A.D. 55 (*Tac. Ann.* 13. 53), to regulate the flow of the Rhine. Civilis cut it in 70 to hinder the Roman pursuit (*Hist.* 5. 19). Corbulo dug a canal, the Vliet, between Rhine and Meuse (*Ann.* 11. 20). Roman bridges existed above Basle and at Mainz, Coblenz, and Cologne; Caesar's bridges were built near Andernach.

C. G. Starr, *Roman Imperial Navy* (1960), 141 ff. For hydrographical detail, see H. J. Mackinder, *The Rhine* (1908); H. Roewer, 'Linksrheinische städtische Siedlung', *Forsch. z. deut. Landeskunde* 1955; D. Gurlitt, 'Das Mittelrheintal', *ibid.* 1944.

Another Rhenus (*Reno*) flowed into the Po near Bononia, and on an island here the Second Triumvirate was formed in 43 B.C.
O. B.; P. S.

RHESUS, in *Iliad* 10. 435 ff. a Thracian ally of Priam. On his first night before Troy Odysseus and Diomedes (qq.v.) stole upon his camp, killed him and twelve of his men, and carried off his magnificent horses. Homer makes him son of Eioneus; [Euripides], *Rhesus*, 279, 393–4, of the river Strymon and a Muse (Euterpe, according to schol. *Il.* loc. cit.). The scholiast on *Iliad* loc. cit. says (cf. *Verg. Aen.* 1. 469 ff., with Servius auctus there)

that if Rhesus' horses had tasted 'Trojan pasture and he and they drunk of the Scamander, Troy could not have fallen. As the *Rhesus* (962 ff.) says he shall not go to Hades but live on as a demi-god (*ἀνθρωποδαίμων*) in a cave, he is perhaps originally a Thracian deity. H. J. R.

RHETORIC, GREEK. Later antiquity (see Quint. 12. 10. 64) inevitably saw the beginnings of rhetoric in Homer, notably in the descriptions of the oratory of Nestor (*Il.* 1. 247 ff.), Menelaus and Odysseus (*Il.* 3. 212 ff.); the speeches (especially in *Il.* 9) were much admired as models (Quint. 10. 1. 46 ff.). This is fantastic history, but a salutary reminder that people spoke effectively before the rhetoricians, just as they argued logically before Aristotle. In fact, the teaching of the skills of public speech was doubtless first developed (as Aristotle thought) under the pressure of social and political needs in the fifth-century democracies of Syracuse and Athens. The Sicilians Corax (q.v.) and Tisias (q.v.), said to be the first to write handbooks (*τέχναι, artes*), concentrated on forensic speaking, and gave advice on the use of probability (*εἰκός*) and on how to exaggerate or underplay facts and arguments as required by the case. The spectacular success of Gorgias (q.v. 1) marks the fusion of the native Athenian tradition of political oratory which had produced Pericles with the new technique and style from the West. Gorgias' demonstration pieces (*ἐπιδείξεις*) impressed by the ingenuity of his thought and by the figures (*σχήματα ῥηγίμια*), which exploited the capacity of Greek for rhyme, assonance, and formal parallelism. Another important teacher of this period was Thrasy-machus (q.v.); in the *Tetralogies* of Antiphon (q.v. 1) we have a set of model speeches or exercises, the first in a long history.

2. The brilliant achievements of Attic oratory from Lysias to Hyperides are due to individual genius and political stimulus, not to the influence of rhetorical schools; but behind the great orators stands the mass of average Athenians, dependent for their success in life, and often for their safety, on the exertions of speech-writers (*λογογράφοι*) on their behalf or on the teaching they could pick up themselves. The *Rhetorica ad Alexandrum* (see *ANAXIMENES* 2) gives an idea of the teaching available at the end of the century; it is much less interesting, and less significant for the future, than the more radical approaches of Isocrates and of the philosophers. (a) Isocrates (q.v.) wrote speeches for litigants, perhaps also a *τέχνη*; but the main achievement of his career from c. 390 was educational. His *φιλοσοφία* was distinct both from the teachings of the Sophists and from the dialectic and mathematics of Plato; he wished to give his pupils the right moral and political attitudes, and his principal method was to make them write about such themes and criticize and discuss his own work (5. 17 ff., 12. 200 ff., 13. 18). This was to moralize rhetoric, hitherto openly or tacitly amoral, and to make a claim for it, under a new name, as an education in itself. (b) Plato (q.v. 1) besides criticizing the rhetors and Isocrates (*Gorgias, Phaedrus*) himself outlined (*Phaedrus* 271 c ff.) a 'philosophical' rhetoric, based on an adequate psychology; his hints were followed up by his greatest pupil. (c) Aristotle's *Rhetoric*, the product of many years and some changes of mind, deals in its three books with three main topics: (i) the theory of rhetorical, as distinct from philosophical, argument—enthymeme and example; (ii) the state of mind of the audience and the ways of appealing to their prejudices and emotions; (iii) style. Book 3 is perhaps the most interesting and influential part; it introduces the concept of the basic *ἀρεταί* of style, *σαφήνεια* (clarity), and *τὸ πρέπον* (appropriateness), and contains valuable discussions of metaphor and what Aristotle calls *ἀστεειότης* (cf. *urbanitas*). Much of what Aristotle left inchoate (e.g.

ὁπότερος, the ἀπειρά) was developed by his pupil Theophrastus (q.v.), whose work was apparently the source of much Peripatetic doctrine which we find in later writers. (See LITERARY CRITICISM IN ANTIQUITY, §§ 5-6.)

3. When oratory dried up, rhetoric still continued (cf. RHETORIC, LATIN, § 3). Outliving its original function, it became the principal educational instrument in the spread of Greek culture. The Hellenistic period, however, is, in this as in other fields, obscure. Writers of the Augustan age (see DIONYSIUS 7) saw in the immediately post-Demosthenic period a scholastic and perversely ingenious mannerism ('Asianism'), against which they reacted by returning to classical models; but we possess no theory corresponding to this phase. In our knowledge, the achievement of Hermagoras (q.v.) with his doctrine of *στάσεις* (see below) is the main Hellenistic development. We know also something of Stoic rhetoric (F. Striller, *De Stoicorum studii rhetoricis*, Breslau, 1886) and we possess, from the end of the period, considerable remains of the *Περὶ ῥητορικής* of Philodemus (q.v.), in which the old question 'whether rhetoric is an art' is discussed, and it is argued that at any rate forensic and epideictic oratory cannot be classed as species of the same activity (H. M. Hubbell, *Transactions of the Connecticut Academy of Arts and Sciences* 1920; translation and notes). The stimulus of Rome produced the earliest extant treatises (RHETORIC, LATIN, § 1); it may well be that the realities of Roman public life roused the whole tradition to new life. The activity of the first century B.C. (see APOLLONIUS 9, APOLLODORUS 5, THEODORUS 3) is best understood against a Roman background. With the revival of a more independent Greek literature in imperial times, Greek rhetoric took on a new lease of life; success in the schools might lead to a brilliant future as a sophist. The bulk of the extant *rhētores* are from the imperial and Byzantine periods. The last great systematizer was Hermogenes (q.v. 2); his work and the voluminous later commentaries on it afford the best extant synthesis in Greek, though Richard Volkmann was right to find in the more humane Roman Quintilian the only 'Ariadne's clue' to the labyrinth.

4. A description of the general system of ancient rhetoric, such as Volkmann (and more recently Lausberg: see RHETORIC, LATIN, bibliography) gave, is a necessary complement to an account of its development. (i) For practical purposes, rhetorical precepts could well be grouped, as they often were, under the 'parts of a speech' (prooemium, narrative (διήγησις), statement of case (πρόβλησις, προκατασκευή), proofs (πίστεις), epilogue (ἐπίλογος)), or by means of the threefold distinction (cf. Arist. *Rhet.* 1358^a36 ff.) between forensic, deliberative, and epideictic oratory (γένος δικανικόν, συμβουλευτικόν, ἐπιδεικτικόν: see D. A. G. Hinks, *CQ* 1936, 170 ff.). However, these less sophisticated divisions were generally superseded by one which is already implicit in Aristotle: the division into 'invention' (εὑρεσις, essentially Aristotle's *πίστεις*), diction (λέξις, φράσις) and arrangement (τάξις, οἰκονομία). These, with the two practical appendages, *ὁπότερος* (delivery, *actio*) and *μνήμη* (mnemonics, *memoria*), form the skeleton of most of the comprehensive manuals (e.g. *ad Herennium*, Quintilian, the *corpus* of Hermogenes). (ii) Under *εὑρεσις* comes the important subject of *στάσεις* ('stances', 'issues' by which the problem may be attacked; Lat. *status*, but also *constitutio*). Hermagoras distinguished four: *στοχασμός* (*conjectura*, e.g. did X kill Y?), *ὅρος* (*finis*, e.g. was it murder?), *ποιότης* (*qualitas*, e.g. was it honourable or expedient?), and *μετάληψις* (*translatio*, e.g. it was all Y's fault). Such analyses are valuable both for training debaters and advocates and for understanding the art of the great orators; inevitably, they led into barren, scholastic complexities. (iii) *Οἰκονομία*—not very conspicuous

in ancient treatises—comprised prescriptions for the division of subject-matter within the various 'parts' of a speech and some common-sense advice about arrangement: e.g. 'weakest points in the middle' (see II. 4. 299). (iv) With diction were associated figures, tropes, and *σύνθεσις* (word-order, euphony, rhythm: see PROSE RHYTHM). This is the department which made most contribution to literary criticism (q.v.). Figures (*σχήματα*) are, at least in the developed system (see CAECILIUS 4, GORGAS 2), deviant (*παρὰ φύσιν*) forms of expression or thought; tropes (*τρόποι*) are similarly deviant (abnormal, non-literal) uses of words, such as occur in metaphor, metonymy, hyperbole, etc.

5. For the exercises done in schools of rhetoric, which naturally had a more powerful influence on literature than any amount of theory, see PROGYMNASMATA, DECLAMATIO.

(i) C. Walz, *Rhetores Graeci*, 9 vols. (1832-6) contains the fullest collection, including much Byzantine commentary on Hermogenes. L. Spengel, *Rhetores Graeci*, 3 vols. (1853-6), vol. 1, revised by C. Hammer, 1891) remains the handiest selection, and includes most of the important works (Apsines, Anonymus Segueianus, Hermogenes, Alexander Numenius, etc.). These are not critical texts: some authors (e.g. Aristotle, Hermogenes) have been 10-edited in the Teubner series by H. Rabe and others (note *Prolegomenon Sylloge* (1911), a collection of ancient 'introductions to rhetoric', some of which contain valuable material).

(ii) Pre-Aristotelian texts. L. Radermacher, *Artium Scriptores* (1951).

(iii) Aristotle: commentary on Rhetoric by E. Cope (1877; *Introduction*, 1867), translations by W. Rhys Roberts (1924) and J. H. Freese (Loeb, 1926). F. Solmsen, *Die Entwicklung der aristotelischen Logik und Rhetorik* (1929), 'The Aristotelian tradition in ancient rhetoric', *APPhil.* 1941, 42 ff.

(iv) Surveys: W. Kroll, *Rhetorik*, *PW* Suppl. vii, is indispensable, so is the systematic description by R. Volkmann (*Die Rhetik der Griechen und Römer*) (1885, repr. 1963). Sound and readable modern works: C. S. Baldwin, *Ancient Rhetoric and Poetic* (1928); D. L. Clark, *Rhetoric in Greco-Roman Education* (1957); H. I. Murrou, *Histoire de l'éducation dans l'antiquité* (1950, also E.T.); and especially G. A. Kennedy, *The Art of Persuasion in Greece* (1963), sequel (covering the imperial period) in preparation.

(v) On the early period, see O. Navarre, *La Rhétorique grecque avant Aristote* (1900); V. Buchheit, *Das Genos Epideiktikon* (1910).

(vi) J. C. F. Ernesti's two lexica of technical terms (*Lexicon Technologicum Graecorum (Latiniarum) rhetoricae*, 1795-7, repr. 1962) have not yet been superseded. Recent bibliography: H. I. Hudson-Williams, in *Fifty Years of Classical Scholarship and Twelve* (ed. M. Platnauer, 1967), 193 ff. D. A. R.

RHETORIC, LATIN. Oratory at Rome was born early. Rhetoric—speaking reduced to a method—came later, an import from Greece that aroused suspicion. Cato the Censor, himself a distinguished speaker, pronounced 'rem tene, verba sequentur'; and rhetoricians professing to supply the words risked expulsion (as in 161 B.C.). But Greek teachers trained the Gracchi; Lucilius teased T. Albucius for the intricacy of his Graecizing mosaics in words; and Cicero marks out M. Aemilius Lepidus Porcina (*cos.* 137) as the first master of a smoothness and periodic structure that rivalled the Greeks. In the last quarter of the second century prose rhythms based on contemporary Hellenistic practice appear unmistakably in the orators' fragments. Latin rhetorical textbooks soon began to be written; and in 92 B.C. *rhētores Latini* came under the castigation of the censors. But the respectable orator Marcus Antonius (q.v. 1) wrote a *libellus* that showed knowledge of Hermagoras' (q.v.) *στάσεις*-lore. Soon came both the *Rhetorica ad Herennium* (q.v.) and Cicero's *De Inventione*: the former a complete manual, the latter, closely related to it, only partial, but both evidence of the sophistication of Rome's Greek-based rhetoric in the 80s.

2. Cicero never came nearer than this to writing a rhetorical handbook, though his *Partitiones Oratoriae* and *Topica* handled other traditional themes. In his major rhetorical work, the *De Oratore* (55), dialogue form militates against technical detail; moreover, Cicero was concerned to inculcate his idea of the philosophic orator, with the widest possible education, able to speak 'ornate

copioseque' (1. 21) on any topic: and this naturally went with criticism of those who thought that one could become an orator by reading a textbook. Nevertheless, the *De Oratore* contained much traditional material: as did the later *Orator* (46), where Cicero contrasted the 'perfect orator', well-educated and commanding every kind of style, modelled on Demosthenes, and, implicitly, on Cicero himself, with the so-called Atticists, contemporaries who had a narrower and more austere ideal of oratory. Cicero thus was here defending his own oratorical practice (especially in the matter of rhythm); and this practice, no less than the precepts given in his rhetorical works, was carefully studied by later rhetoricians.

3. The *Philippus* of Cicero, however, were the last examples of great oratory used to influence political action at Rome. Oratory continued under the Principate, but it had practical effect only in the lawcourt. *Declamatio* (q.v.) dominated the schools, and fascinated even grown men: and it soon gave a new style not only to public oratory but also to literature in general. But this by no means spelt the end of rhetoric. As in the period after the death of Demosthenes, rhetorical theory was if anything encouraged by the newly academic nature of the subject. The dispute of Apollodorus (q.v. 5) and Theodorus (q.v. 3) about the rigidity with which rhetorical rules were to be observed was typical of the new mood: and C. Valgius brought Apollodorus' precepts to Latin readers. The first half of the first century A.D. was marked by the contribution of Cornelius Celsus, whose *Encyclopaedia* went into some detail on rhetoric, and by P. Rutilius Lupus' translation (of which part survives) of a Greek work on figures. A little later the Elder Pliny wrote a long work giving detailed instructions on the education of an orator.

4. The massive *Institutio* of Quintilian (q.v.) takes note of this earlier work, if only to reject it; but, more important, it looks back over it to Cicero, and amidst all its detail retains Cicero's enthusiasm for a wide training and his dislike for trivial technicality. There was much in the *Institutio* that reflected contemporary conditions, in its advice to the declaimer and its preoccupation with forensic oratory; but it maintained, in defiance of history, the ideal of the *vir bonus dicendi peritus* (Cato the Censor's phrase), whose eloquence should guide the Senate and people of Rome (12. 1. 26): for a more realistic assessment of the position of oratory under the early Empire we have to look to Tacitus' more or less contemporary *Dialogus*. Despite this, the *Institutio* retained interest, particularly for the Middle Ages and Renaissance, as a handbook on style and a repository of rhetorical wisdom.

5. Halm's collection of *Rhetores Latini Minores* (1863; reprinted 1964) may illustrate the ossification and puerility of rhetoric after the first century, in the pat question-and-answer of Fortunatianus and the derivative summaries of Julius Victor. Oratory of this later period is represented by the *Panegyrici Latini* that have come down to us; and the letters of Fronto in the second century reflect the new importance of eulogy. From the schoolroom we have the extravagances of the *Declamationes Pseudo-Quintilianae* (q.v.). Rhetoricians continued to flourish, and even found themselves celebrated in the poetry of Ausonius; and rhetoric survived to be put to Christian uses in the *Institutiones* of Cassiodorus.

6. For a summary of ancient rhetorical doctrine, which was usually Greek in origin but found, on the whole, its best surviving expositors in Latin, see RHETORIC, GREEK, § 4.

M. L. Clarke, *Rhetoric at Rome* (1953), and W. Kroll's article on *Rhetorik* in *PW Suppl.* vii provide the best historical surveys. On details of rhetorical precept R. Volkmann, *Die Rhetorik der Griechen und Römer*² (1885, repr. 1963), and H. Lausberg, *Handbuch der literarischen Rhetorik* (1960): more readable than either. C. Neumeister, *Grundsätze der forensischen Rhetorik* (1964). S. F. Bonner

gives a survey, with extensive bibliography, in *Fifty Years of Classical Scholarship* (ed. M. Platnauer, 1954), 335 ff. See also the bibliographies for DECLAMATIO, QUINTILIANUS, and RHETORIC, GREEK. M. W.

RHETORICA AD HERENNIIUM. The treatise on rhetoric addressed to C. Herennius (written c. 86–82 B.C.) is by an unknown author. Some, interpreting passages of Quintilian, assign it to 'Cornificius'. It is ascribed in the manuscripts to Cicero, and has often been printed with his works; but the Ciceronian authorship, first challenged in the fifteenth century, is no longer accepted. Its relationship to Cicero's *De Inventione* has not been satisfactorily determined. Rhetoric is treated in five divisions: Invention in judicial, deliberative, and demonstrative causes; Arrangement; Delivery; Memory (an important discussion); and, with abundant illustrations, Style (the oldest surviving treatment in Latin). The doctrine is a fusion of Greek systems; the illustrations, terminology, and spirit are Roman. The style is generally clear, and less archaic and 'plebeian' than scholars once maintained.

TEXTS. F. Marx, 1894 (with Proleg. and Index) and 1921, repr. 1964, with addenda by W. Trillitzsch (Teubner), H. Caplan, 1954 (Loeb). II. Cn.

RHIANUS, of Bene, less probably of Ceraea, in Crete: a contemporary of Eratosthenes (b. c. 275 B.C.). Rhianus began life as a slave and custodian of a wrestling-school. After a belated education he attained fame as a poet and Homeric scholar, probably at Alexandria.

WORKS

Verse: Rhianus wrote epic poems and epigrams, but was best known for the former (Ath. 11. 499 d), of which one was a *Heracleas*. Four others, *Thessalica*, *Achaica*, *Eliaca*, *Messenica*, were tribal epics, rich in myth, history, and geography. The last was used by Pausanias (bk. 4, cf. especially 6. 1) as one source for the history of the Second Messenian War. Episodes in the poem seem to have been modelled on Homer or the rest of the cycle. More romantic scenes, e.g. the escape of Aristomenes from prison and the love-affair which betrayed the Messenians, show the influence of a later school of writing. The longest fragment (1) of Rhianus, possibly complete in itself, consists of twenty-one hexameters on the folly of mankind. Most of the epigrams (frs. 66–76) have a paederastic motif.

Prose: Rhianus produced an edition of the *Iliad* and *Odyssey*. It was more conservative than that of Zenodotus, and the forty-five readings from it which have survived have led critics to judge it favourably.

To some extent Rhianus falls into line with Apollonius Rhodius against Callimachus and his own contemporary Euphorion. Like Apollonius he preferred epic to epyllia, but his language seems to have been simpler than that of Apollonius. In the extant fragments he uses neologisms, but hardly any 'glosses'. His epics must have been agreeable reading, but it is possible, in view of the numerous citations by Stephanus of Byzantium, that they were too cumbered with geography.

TEXTS. Powell, *Coll. Alex.* 9–21; Diehl, *Anth. Lyr. Graec.* vi². 64–8 (epigrams only).

GENERAL LITERATURE. A. Meineke, *Analekta Alexandrina* (1843), 171 ff.; C. Mayhoff, *De Rhiani studiis Homericis* (1870). E. A. B.

RHINTHON, of Tarentum, a potter's son, writer of phylax-plays (ἱεροπραγῳδία, later known as *fabulae Rhintonicae*; see PHYLAXES); contemporary with Ptolemy I (early 3rd c. B.C.). He was honoured with an epitaph by the poetess Nossis of Locri in south Italy (*Anth. Pal.* 7. 414): she calls him Syracusan, and claims originality for his 'tragic phylaxes', i.e. for raising the crude phylax-drama by comic treatment of tragic themes. Of thirty-

eight pieces attributed to Rhinthon nine titles are known (almost all are burlesques of Euripides), but very meagre fragments (in Doric) survive. One (fr. 10) from *'Opéras mentions 'the metre of Hipponax', i.e. scazon: a character in the play (violating dramatic illusion) points out that a curse just uttered will not scan as a tragic iambic trimeter.*

E. Volker, *Rhynthos fragmenta* (1887); CGF 183 ff.; Olivieri, *FCGM* u², 7 ff. W. G. W.

RHIPAEI MONTES (*Ῥιπαῖα Ὀρη*), the 'gusty' and ever snowy mountains, imagined from Homer onwards to exist north of the known parts of Europe. From them blew the North Wind; beyond, down to the Northern Ocean, dwelt Hyperboreans (q.v.). Herodotus ignored the Rhipaeans and Strabo denied their existence. Those who believed in them differed as to their location. Aeschylus and Pindar regarded them as the source of the Danube, and Posidonius thought originally that the Alps were meant. On the other hand, Aristotle placed them beyond Scythia, and Roman poets put them in the extreme north. In general, their latitude was moved northward as knowledge increased. Ptolemy, who considered that they were of moderate altitude, located them in Russia (lat. 57° 30'–63° 21'), between rivers flowing into Baltic and Euxine. They remained on maps until modern times.

Ptol. *Geog.* 3. 5, 15, 22; Kriessling, *PIW*, s.v. *Ῥιπαῖα Ὀρη*.

L. H. W.

RHODANUS, the *River Rhône*, the name being applied to its whole course from the Alps through the Lake of Geneva to the Mediterranean west of Marseille (530 miles). Flowing between the Alps and the Massif Central it provided a main channel of trade and with its chief tributary the Arar (modern *Saône*) gave access to the Rhineland, to the Seine basin and, by a short portage to the Loire, to north-west France. These routes achieved especial importance in the sixth century B.C. after the foundation of Massalia (q.v.). In Roman times traffic on the Rhône and its tributaries was heavy, conducted by *navitae Rhodanici et Ararici* (*CIL* xii. 1688 *et al.*) and *navitae Druentici* (*CIL* xii. 731, 982), and in the late Empire there were a *Classis Fluminis Rhodani* and a *Classis Ararica* (*Not. Dign. [occ.]* 42). Strabo (4. 189) says that the swift current caused wagons to be used for some northbound traffic, but a relief (Espérandieu ix. 6699) shows *helciarum* operating at least on the Druentia (*Durance*). Silting in the delta caused difficulties and in 104–102 B.C. Marius cut a canal (*Fossae Marianaë*, now *Rias Morti*) from the main stream near Grand Passon to the sea west of Fos, where a port was built (now submerged); the canal was handed over to the Massaliotes, but its use contributed to the eclipse of Marseille by Arles. A scheme put forward in A.D. 58 to join the Saône and the Moselle by canal, thus linking the Rhône and the Rhine, came to nothing (*Tac. Ann.* 13. 53). (See also ARELATE, LUGDUNUM, VIENNA.)

RHODES, an island of about 420 square miles, close to the mainland of Caria, was settled by Dorian Greeks who formed three city-states, Ialysus, Lindus, and Camirus. Their development was normal for the time and place—colonization (including Gela, Rhegium, and Phaselis, all Iindian colonies), tyranny, Persian conquest. In the fifth century, till 412–411 B.C., they were members of the Athenian Confederacy, and their constitutions were presumably democratic.

The war with Athens (411–407) combined with internal stresses to produce the union ('Synoecism') of the three

cities into one State with a new federal capital *Rhodos*, though the original cities kept the greatest possible local autonomy. The 'Rhodians' remained democrats, perhaps even extremists, till revolutionary disturbances (c. 397–388) resulted probably in a moderate democracy which was overthrown only for a period of Persian domination (355–333); its stability later depended on a compromise between the interests of the large citizen proletariat and of the wealthy citizens (see especially Strabo 14. 652).

The prosperity of Rhodes must always have come mainly from the carrying trade, especially of corn. It received a great impetus from the conquests of Alexander, giving unrestricted access to Egypt, Cyprus, and Phoenicia, and in the third century Rhodes became easily the richest of the Greek city-states. Politically, too, the partition of Alexander's empire after 323 enabled it to reassert its independence and steer its own course in foreign affairs. This independent policy provoked the famous siege by Demetrius (305–304); but its survival on this occasion increased its prestige and self-confidence, so that in the third century it successfully avoided subservience to any of the 'great powers'. Like Athens earlier, it stood as a centre of exchange and capital and the enemy of piracy on the high seas. The Rhodian fleet was fairly large and always efficient: it was the 'senior service'—its officers were drawn from the best families, its crews (and the workers in the shipyards) from the poor citizens.

Rhodes (with Pergamum) was largely responsible for the first major intervention of Rome in eastern affairs (201). It co-operated with Rome (not previously an ally) in the wars against Philip V and Antiochus, and was rewarded with territory in Caria and Lycia. But Rome punished the equivocal attitude of Rhodes in the Third Macedonian War by proclaiming Delos a free port (167): this unfair competition, and perhaps an increase in piracy which Rhodes could no longer check, crippled it so severely that in three years its annual harbour revenues fell from a million to 150,000 drachmae. It became an ally of Rome on unfavourable terms, and ceased to be a power in the world. It successfully withstood a siege by Mithridates in 88, but was captured and pillaged by Cassius in 43. Nevertheless, under Roman rule Rhodes remained reasonably prosperous, and enjoyed no small distinction as a beautiful city and a centre of higher education, with Panaetius and Posidonius its greatest savants.

ANCIENT SOURCES. Inscriptions, especially IG xii, part 1 (1905), and A. Maury, *Nouveaux sillages épigraphiques, Rhodé et Cos* (1925), *Clara Rhodos* (1928–40).

LITERARY SOURCES are widely scattered: for the famous siege, Diodorus, book 20. 81–8 and 91–100.

MODERN LITERATURE. H. von Gelder, *Geschichte der alten Rhoder*; M. Rostovtzeff, *CAH* viii. 619 ff. (and bibliography); *Hellenistic World*. P. M. Fraser and G. E. Bean, *The Rhodian Peraea and Islands* (1954); H. H. Sluimert, *Röm und Rhodus* (Münch. Beiträge z. Papyrologie, etc. 1957); L. Casson, *TAPA* 1954, 168 ff.

RHODES, CULTS AND LEGENDS OF. The most noteworthy cult at Rhodes was that of Helios (q.v.); the festival was called *Haliaia*, celebrated yearly with sacrifice of a four-horse team thrown into the sea (Festus, 190, 28 Lindsay) and quadrennially with more elaboration. An ancient cult at Lindos was directed to a goddess identified with Athena; she was, however, plainly chthonian, being worshipped with fireless offerings (Pind. *Ol.* 7. 48); for the remarkable chronicle-inscription of her temple see C. Blinkenberg, *La Chronique du temple lindien*, Acad. royale des sciences et des lettres, Copenhagen, 1912, and *Die lindische Tempelchronik* (1915). There were also festivals to Kronos, Poseidon, Apollo (Sminthia), Dionysus, probably the Dioscuri, Heracles and his son Tlepolemus (the *Tlepolemeia*, an agonistic

festival of some importance; cf., for such events in Rhodes, I. R. Arnold in *AYArch.* 1936, 432 ff.). For authorities, see Nilsson, *Feste*, 478. Athenaeus, 360 c, records a custom of Lindos; children in the month Boedromion (presumably Badromios in the local dialect) went about singing a traditional song about the coming of the swallow and collecting contributions from the houses. This was called *χαλιδονίσειν*. Rhodes was the first city to worship Ptolemy I (Diod. Sic. 20. 100. 4) and was from the Hellenistic period a great home of Egyptian cults (Nilsson, *GGR* II. 117 ff.).

A few legends are known. Helios himself chose the island, which had not then risen above the surface of the sea (Pind. *Ol.* 7. 54 ff.). His children by the nymph Rhodos, daughter of Aphrodite (ibid. 14), were instructed by him to offer sacrifice to Athena the day she was born. In their haste they forgot to bring fire (ibid. 39 ff.), hence the custom of fireless sacrifice (above). The sons of Helios were Lindus, Ialysus, and Camirus, eponyms of the three chief cities of the island (schol. rec. Pind. ibid. 34). Rhodes was also the traditional home of the Telchines (q.v.).

H. J. R.

RICIMER, FLAVIUS, patrician and kingmaker in the Western Roman Empire. He compelled the Emperor Avitus to abdicate (A.D. 456), elevated Majorian (q.v.) in 457, deposed and killed him (461), and elevated Libius Severus (461). Severus died in 465, and Ricimer overthrew and killed the Emperor Anthemius in 472, having already elevated Olybrius. He died in 472. As an Arian and a barbarian he could not hope to reign himself.

E. A. T.

RIDDLES. A riddle (*γρίφος*) in its proper sense may be described as a species of *αἰνύμα* or 'dark saying', which in turn belongs to the wider category of *αἶνος* ('story'). It is essentially designed to baffle or challenge the intelligence of the hearer; its subject-matter may be derived from a variety of sources, e.g. natural phenomena, social custom, or myth. The Oracle, for example, is typically expressed in enigmatic form. Early examples of riddles in Greek literature are Hesiod fr. 160 Rz. (contest of Calchas and Mopsus, perhaps rather to be described as a direct test of intelligence) and Theognis 1229 f.; the later *Certamen Hom. et Hes.* (ad fin.) preserves the traditional story of Homer and the Fishermen. By the fifth century B.C. the propounding of *γρίφοι* had become a regular diversion of Greek society, especially at the symposium (Ar. *Vesp.* 20 f.); Aristotle (*Rh.* 1412^a24) mentions τὰ εὖ γινώμενα among the pleasurable seasonings of discourse. The authorship of early collections of riddles was ascribed to Cleobulus of Lindos and his daughter Cleobuline (*Suda*; Wilamowitz, *Textgesch.* d. gr. *Lyr.* 40. 3; O. Crusius, *Philol.* 1896). The Peripatetic Clearchus of Soli (frs. 61-8 in *FGH*) composed a work *Περὶ γρίφων*, which was used by Athenaeus. Athenaeus himself (10. 448 b-459 b) gives a copious selection of riddles from comedy and other sources. A short collection of metrical examples is contained in *Anth. Pal.* 14. The general tendency to enigmatic expression, not unknown in earlier literature, becomes stronger with the Alexandrians, for example in the *Alexandra* of Lycophron.

Riddles occur sporadically in Latin literature. Aulus Gellius (12. 6) cites a metrical one from Varro; Petronius (58) provides examples of the popular type. The Greek term *aenigma* is habitually employed; Gell. (loc. cit.) gives *scirpus* as the native word. The metrical collection bearing the name of *Symphosius* (q.v.) (4th-5th c. A.D.) is composed in imitation of the Greek convivial type.

As might be expected from the character of the two peoples, the Greeks liked a riddle—*γρίφος*—and the Romans did not. 'The investigation of riddles', said the

philosopher Clearchus, who divided them into seven classes, 'is not unconnected with philosophy: a riddle is a sportive problem, and to find the answer we have to use our intellect.' The most famous riddle was that proposed by the Sphinx and answered by Oedipus: 'What is that which walks on four legs, and two legs, and three legs?' Answer: 'Man.' Another was: 'A man and not a man, with a stone and not a stone, hit a bird and not a bird sitting on a tree and not a tree.' Answers: 'A cunuch, a pumice-stone, a bat, a fennel-stalk.' A third ran: 'What is the strongest of all things?' 'Love: iron is strong, but the blacksmith is stronger than iron, and love can subdue the blacksmith.' The cleavage between appearance and reality characteristic of the thought of late antiquity gave a new lease of life to riddles and other enigmatic and paradoxical modes of expression, which were used to embody and represent serious metaphysical doctrines.

RIDER-GODS AND HEROES. Theriomorphic gods were well known to the Greeks in prehistoric times, witness Poseidon (Hades) and the Dioscuri and their association with the horse; we may add the wind-god Boreas. As the horse was unknown to Minoan civilization, the connexion of these gods with horses may be pure Greek. The god became, after 1000 B.C., when riding was introduced, a rider of a horse (as the dead man, originally represented as a horse, became a rider in the 6th c. B.C.). Epithets (Hippios, Hippias), sacrifices, priesthoods, myths, however, still remind us of the origin. Further evidence is afforded by works of art (cf. the horse's head on the so-called Totenmahl reliefs, on which the dead man is shown on a couch, banqueting). Very widespread is a type of relief on which heroes or gods appear as hunters or riders, e.g. the Dioscuri. We see the same also on horseback in the air, approaching the festal table set ready for them (cf. their appearance to the Romans after the battle of Lake Regillus), see THEOXYENIA. In Thrace and neighbouring countries the type was exceedingly popular during later periods and the Roman age. Copies of the 'Thracian rider' (hunter) were often found in shrines, dedicated 'to the Lord Hero' or to local deities, heroes or heroized dead. In Gallo-Roman art the type of Jupiter on horseback slaying a serpent-footed giant is frequent.

L. Maltén, 'Das Pferd im Totenglauben', *JDAI* 1914, 181 ff.; F. Schachermeyr, *Posidon* (1950); Gawril I. Kazarow, *Die Denkmäler des thrakischen Rettergottes in Bulgarien* (Text und Tafelband, 1938). S. E.; J. H. C.

RINGS (*δακτύλιος*, *anulus*) were used in Minoan and Mycenaean times both as signets and as ornaments. They are not mentioned in Homer and are rarely found in Early Iron Age deposits. Since the early sixth century they were in regular use as signets. The practice of wearing rings as ornaments is rare before the fourth century and reaches its height under the Roman Empire. Collections of rings are mentioned at this period. Rings also had special uses at Rome: the gold ring as a military decoration and as a mark of rank, originally limited to *nobiles* and *equestes*, extended under the Empire to denote *ingenuitas*; and the betrothal ring, first of iron, later of gold (apparently unknown in Greece).

Pliny, *HN* 33. 8-32. F. H. Marshall, *Catalogue of the Greek, Etruscan, and Roman Finger Rings in the British Museum* (1907); F. Henkel, *Die römische Fingerringe der Rheinlande* (1913). F. N. P.

RIVER-GODS. The pre-Hellenic inhabitants of Aegean lands probably had cults of river-gods, since many Greek rivers retained pre-Hellenic names (e.g. Ilissus, Peneius, Enipeus); although the incoming Greeks may have

known such cults in their original homeland. The same statement may be made for aboriginal Italy and the incoming Italian peoples.

All rivers, seas, etc., according to Homer (*Il.* 21. 196 ff.), are ultimately derived from Oceanus (father of all rivers, *Iles. Theog.* 337 ff.), or they are 'fallen from heaven' (fed by rain; Xanthus in Homer is even 'son of Zeus'). Old legends of river-gods who had children by mortal women gave to the local rivers an exceptional position in Greek genealogies. The river Inachus is, e.g., the father of Io, and rivers are the ancestors of whole tribes and of the oldest heroes (for the offering of hair to rivers as *κουροτρόφου* see Hom. *Il.* 23. 46, Aesch. *Cho.* 6, Paus. 8. 41. 3; cf. Agamemnon's oath, *Il.* 3. 276 ff.). A vision of rivers is a sign of offspring to the dreamer (Artem. 2. 38). The cults of river-gods, as of other gods produced theophoric names, especially in Boeotia and Attica (Ismenodorus, Cephisodorus, etc.; cf. Bechtel, *Personennamen*, 145 ff. and 529). Yet the river belonged to a lower stratum of polytheism, 'the river power remained only half-personal, an animate nature-power, to whom altars might be erected, but rarely a temple' (Farnell, *Cults* v. 424). A reminiscence of religious primitivism is the ritual of casting victims such as horses and bulls into streams. 'The bovine nature of rivers is well attested, e.g., by coin-issues of Sicily (river-gods as man-headed bulls or horned youths), but full human shape became conventional, e.g. for Nile and Tiber. There is evidence too for river-gods in the form of horses and snakes. The widespread cult of Achelous, for which the Dodonaean oracle made an intense propaganda, is of special interest.

Farnell, *Cults* v. 420 ff.

ROADS. I. GREEK. While some stretches of paved road have survived, especially near important sanctuaries such as Delphi, the main traces of ancient roads in Greece are provided by the retaining walls and the bed cut in the limestone rock. The main road from the Peloponnese to central Greece is clearly visible; some three metres wide, it was designed for carts, with well-graded zig-zags and pull-ins for carts to pass one another. Such roads were originally paved, where not on bedrock. The *diolkos* across the Isthmus of Corinth was a roadway designed for transporting ships; it was four metres wide with two parallel channels cut for the wheels of the transporter. The Macedonians built many military roads from the late fifth century onwards, but their roads in the Balkans have not been examined.

N. G. L. H.

N. G. L. Hammond, 'The main road from Boeotia to the Peloponnese', *BZS* 1954, 103 f.; *Arch. Rep.* 1956, 7 (*diolkos*).

II. ROMAN. From an early date the Romans valued good communications, and their road-system was one of their outstanding achievements. The spread of Roman influence through Italy was consolidated by such roads as the Via Appia (312 B.C.) from Rome to Capua and later to Brundisium, and the Via Flaminia from Rome to Ariminum (268) which in 187 was extended to Bononia as the Via Aemilia. By the end of the Republic all parts of Italy were connected by good roads. In the Principate the main construction was in the provinces, though the Republic had already made the Via Egnatia from Dyrhachium to Thessalonica and the Via Domitia from the Rhône to the Pyrenees, and the Alps could be crossed easily by the pass of Mt. Genève. Augustus made roads across the Great and Little St. Bernard, and his stepson Drusus made one farther east 'from Altinum to the Danube' (*ILS* 208). Much chronological information can be derived from milestones (q.v.): we find, for instance, that Tiberius was specially interested in Dalmatia, Claudius in Gaul, and Hadrian in Africa and the Eastern

Provinces. (Cf. H. S. Jones, *Companion to Roman History* (1912), 40 ff. See also VIA AEMILIA, etc.)

Under the Republic the censors were responsible for the roads and let out the contracts for their construction and repair; but even before the Principate *curatores* of particular roads are found (*ILS* 5800, 5892). In 20 B.C. Augustus established a board of senatorial *curatores viarum*, and from the time of Claudius or Nero we find many *curatores* of particular Italian roads (*ILS* III. 1. 359-60), usually of senatorial rank. No *curatores* of provincial roads are known: for them the governors acting through the local authorities were responsible.

The cost of the roads was probably divided between the public treasury (whether *aerarium* or *fiscus* is uncertain), the local authorities, and the owners of the land through which they passed, but the emperors often made large personal contributions. *ILS* 84 records that the Via Flaminia and the most important roads of Italy were repaired at the cost of Augustus. Hadrian added a sum to the contribution of the *possessores agrorum* to the cost of repairing part of the Via Appia, and paid for the bridges on a road in Africa (*ILS* 5872, 5875).

Methods of construction varied with available materials. There is usually a foundation of large stones overlaid by smaller stones and gravel; occasionally the use of cement has been recorded to bind the matrix. Sometimes the surface is cobbled or even paved with large blocks. Always a camber was obtained for drainage, and side-ditches or gutters were normally provided; main roads were often carried on a high *agger*. Engineering is careful: roads run with remarkable directness in open country and in broken country keep to high ground shunning narrow valleys. Their alignments sometimes demonstrate the remarkable accuracy of long-distance survey.

Vegetius (3-6) mentions the military importance of itineraries (q.v.), which also served other public and private purposes. The Antonine Itinerary, Peutinger map, and Ravenna Cosmography are examples of such road-books giving routes and distances; more limited lists are the Bordeaux-Jerusalem itinerary and the Vicarello mugs.

Roman roads had a primary strategic purpose, but their existence did much for trade and social intercourse, thus helping to create a homogeneous civilization within the Empire.

Salama, *Les Voies romaines de l'Afrique du Nord* (1951); I. D. Margary, *Roman Ways in the Weald* (1948), *Roman Roads in Britain* (1967). G. H. S.; S. S. F.

ROBIGUS, the *numen* of rust in wheat. His festival (Robigalia) was on 25 Apr. (Ov. *Fasti* 4. 905 ff., whereon see Frazer), at the fifth milestone of the Via Claudia (*Fasti Praenest.* on that date). The Flamen Quirinalis offered a dog and a sheep and prayed that rust might not attack the crops. Possibly the original intention was to destroy Robigus (H. J. Rose, *CR* 1922, 17). II. J. R.

I. EARLY ITALY AND REGAL ROME

1. Long before the emergence of Rome as an influence in Italian affairs a variety of peoples, whose civilization outshone that of nascent Rome, had populated Italy (q.v.). The Terremaricoli and men of the 'Apennine' culture of the Bronze Age and the subsequent Iron Age Villanovans (qq.v.) lived in a period unrecorded by written history: our knowledge of them depends essentially on archaeological evidence. Thereafter the standard of civilized life was gradually raised by Etruscans, Oscans, and Greeks, some of whose activities are dimly reflected in surviving literary sources, and it is particularly against the background of the history of the Greeks in southern Italy and of the Etruscans in the centre and north that the development of early Rome must be set.

2. Of the Indo-European peoples in Italy, the Umbrians and Sabellians formed one branch, the Latins another. The latter, who occupied the plain of Latium, soon developed a sense of common origin, from which in time there grew one or more Latin Leagues, and their early hill-top settlements gradually increased in size and influence. One of these shepherds' villages was Rome, traditionally founded as an offshoot from Alba Longa. It quickly surpassed many of its neighbours, thanks to its geographical position near the sea and the centre of Italy, its command of the Tiber-ford, and its control of a primitive salt-route from the Tiber mouth to the central hills. By the beginning of the sixth century the settlements on the different hills had coalesced to form a city (see ROME, TOPOGRAPHY).

3. The surviving literary tradition about early Rome, on which we depend for much of our knowledge, is unsatisfactory in many ways, since more than half a millennium elapsed after the traditional date of Rome's foundation before the Romans began to write its history. When towards the end of the third century B.C. Fabius Pictor and then other annalists attempted the task (see HISTORIOGRAPHY, ROMAN), they had some reliable information to draw upon, such as the *Annales Pontificum*, official lists of magistrates, some documents (as laws, treaties, calendars) and the traditions (oral and written) of many leading families (but probably no ballad poetry, if it had existed, survived), but by this time fact and legend were not easy to distinguish. Further, national pride led the Romans to connect their history with that of the Greek world and to forge links with Greek mythology. Hence were evolved the foundation-stories which attributed a Trojan origin to the Romans through Aeneas, and the founding of the city to his descendants Romulus and Remus (at varying dates: 814, 753, 751, 748, 729 B.C.). Tradition records six kings after Romulus: Numa Pompilius, Tullus Hostilius, Ancus Marcius, Tarquinius Priscus, Servius Tullius, and Tarquinius Superbus, some at least of whom were historical figures. There is no doubt that there were kings in early Rome and that some of them were Etruscan. The king (*rex*) was advised by the Senate, a council of elders (*patres*), representatives of the leading clans (*gentes*), which enjoyed political and religious privileges. The People (*populus*), which included the less privileged classes (how early a sharp division between patricians and plebeians developed is uncertain), were divided into thirty *curiae*. To Servius Tullius are attributed administrative reforms, which in essence are probably his work. He created the *tribus*, which were gradually increased to thirty-five, and divided the people into five *classes* and each class into *centuriae* on the basis of a registration of the citizens and their property (*census*). Gradually a new assembly (Comitia Centuriata) superseded in importance an older assembly of the *curiae* (Comitia Curiata).

4. The literary tradition can be supplemented by other evidence, linguistic, religious, and archaeological. Although the earliest Latin inscription at Rome (on the

Duenos vase) belongs only to c. 525, it is clear that the inhabitants of early Rome spoke Latin: the survival of three brief graffiti in Etruscan found in Rome and belonging to the sixth century helps to confirm the tradition of a period of Etruscan domination of the city, while at the same time the fact that so few Etruscan words were adopted into Latin demonstrates the transitory nature of Etruscan rule there. Further, some religious ceremonies (Lupercalia, Septimontium, the feast of the Argei), which survived into republican times, reflect different stages in the unification of village settlements into one city, while the religious calendar of the Republic in part indicates customs of the sixth century or earlier. Archaeology in 1960 revealed traces of a Bronze Age ('Apennine') settlement (c. 1500 B.C. or later?) near the later Forum Boarium. Evidence for continuity of habitation is lacking, but there is much archaeological evidence for the huts and cemeteries of Iron Age settlements on the hills and in the Forum from the eighth century onwards, some with cremation burials *a pozzo* (in pits, as the Villanovan graves) on the Palatine, others with inhumation *a fossa* (trench graves, as in central Italy) on the Esquiline, and both rites on the Quirinal and in the Forum. These two rites may represent the mingling of Latins and Sabines which the literary tradition records. Further, traces of early buildings and votive deposits, the discovery of archaic architectural terracottas, together with stratigraphic excavation in the Forum, have added much to our knowledge, so that it is possible to trace in general outline the coalescing of the various settlements into an *urbs* or *polis*, not later than c. 575 B.C., and to see the advanced state of civilized life that developed, partly under Etruscan influence, during the sixth century when the city was made habitable by drainage and beautiful by the erection of temples such as that of Jupiter on the Capitol. Commerce and industry increased, and the boundaries of the *ager Romanus* were probably extended to include some 350 square miles. But Rome's debt to the Etruscans, though very great, must not be exaggerated. Under the veneer of a dominating Etruscan rule, Rome remained essentially a Latin city, and agriculture continued to be her chief industry.

5. Archaeological evidence, both old and new, thus seems to confirm in outline the traditional picture. Some archaeologists, however, including E. Gjerstad, believe rather that the traditional chronology must be modified in the light of it: thus they would move the period of Etruscan rule at Rome from the accepted dates of c. 616–510 down to c. 530–450. But such a revolutionary change, which puts the foundation of the Republic half a century later than the traditional date, creates what appear to many to be insuperable difficulties. Another challenge to accepted beliefs will probably gain no more supporters, namely that of A. Alföldi who argues that our knowledge of early Rome derives largely from a fiction deliberately devised by Fabius Pictor: knowing that regal Rome was only a lesser Latin city and a vassal of some southern Etruscan States, Fabius attributed to her in the sixth century that strength and predominance over other Latin cities which in fact (according to Alföldi) she gained only in the fifth: in other words Rome's rise to power has been antedated. Such work, together with other views (e.g. that of H. Müller-Karpe who puts the origins of Rome in the tenth century, or of G. Dumézil who tried to bring early Roman institutions into line with primitive Indo-European customs) is at least a testimony to the lively interest which the study of early Rome is provoking.

II. ROME AND ITALY (509–264 B.C.)

6. With the expulsion of Tarquinius Superbus (510) Rome threw off the Etruscan yoke, and despite the efforts at restoration by Lars Porsenna the monarchy was

abolished. An aristocratic Republic was established, and two annually elected magistrates, later called consuls, were invested with *imperium*, though in times of national emergency they might temporarily be overshadowed by the appointment of a dictator. The history of the Republic during the next 250 years is marked by two struggles: an internal class-struggle, during which the Republican constitution was hammered out and which ended in a compromise, and an external struggle with surrounding peoples, which ended in the assertion of Rome's supremacy as the head of a confederacy which embraced all Italy.

7. The Roman citizens were divided into two classes, patricians and plebeians, perhaps as a result of economic development. Whether or not this division goes very far back in time, the patricians certainly tried to strengthen the barrier after the end of the monarchy. The plebeians suffered grievances which they sought to redress by means of pressure brought by *secessiones* and by virtually creating a separate State within the State. The poorer plebeians sought more land, more liberal laws of debt and personal security against the oppression of patrician magistrates; the wealthier plebeians sought political and social equality with the patricians. During this struggle of the orders the plebeians (*see* *PLEBS*) established their own officers (tribunes and aediles) and assembly (*concilium plebis*) and gradually forced the patricians to recognize these. Landmarks in the struggle are the *Lex Publilia Voleronis* (471), the appointment of *Decemviri* and the codification and publication of the XII Tables, which formed the basis for the future development of Roman law (451-450), the Valerio-Horatian laws (449), the *Lex Canuleia* (445), the Licinian-Sextian rogations (367), the *Leges Publiliae* (339), the reforms of Cn. Flavius (304), the *Lex Ogulnia* (300), and finally the *Lex Hortensia* (287), which after earlier attempts (449, 339) gave *plebiscita* the force of laws binding on the whole community. Meantime, increase in public business, and, still more, patrician attempts to thwart the plebeian assaults on the patrician monopoly of office, led to the establishment of new magistracies. For many years during the period from 445 to 376 *tribuni militum consulari potestate*, an office open to plebeians, replaced the consuls, some of whose powers were transferred to newly established censors (443). The plebeians gradually gained admission to the quaestorship (421), the restored consulship (366), the dictatorship (356), the censorship (351), and in 337 to the praetorship, which had been established in 366 and led through the praetorian edict to the building up of Roman law.

8. Economic problems, such as shortage of food and land and harsh laws of debt, which tended to reduce freemen to serfdom, were attacked by legislators (e.g. Poetelius). Further, the conquest of Italy and the consequent distribution of land and establishment of colonies helped to alleviate economic distress. But while much hardship was lessened, only a small group of plebeian families became sufficiently rich and influential to enjoy the newly gained political privileges, and there grew up a new patricio-plebeian nobility which through the Senate and magistracies exercised a monopoly of government scarcely less exclusive than that enjoyed earlier by the patricians alone. But in theory the sovereignty of the People was at last established and the struggle of the orders was ended; by common sense and compromise the Romans, without bloodshed, had solved a problem which in many Greek States led to unending class-warfare.

9. Rome's external history was even more stormy. Following the collapse of Etruscan power in Latium the Romans, after a conflict with the Latins at Lake Regillus (496?), negotiated through Sp. Cassius a new alliance with the Latin League. Union in Latium was

necessitated by external danger on all fronts: in the north were Etruscans, in the north-east Sabines, eastwards lay the Aequi, and south-east the Volsci. All these peoples were pressing on the plain of Latium. In the first half of the fifth century, in wars adorned by the exploits of Coriolanus and Cincinnatus, a Triple Alliance of Romans, Latins, and Hernici held their own against Aequi and Volsci; in the second half they moved to the offensive and victory. Then under Camillus' leadership Rome besieged and finally captured the Etruscan outpost, Veii (396), but thereafter a predatory horde of Celts led by Brennus swept down from the north, defeated the Roman army at Allia (387) and sacked the city, although Manlius held the Capitol. Thereafter the city was rebuilt and refortified, while Rome's shaken prestige and power in central Italy were slowly re-established. In 358 the treaty between Rome and the Latin League was renewed on less favourable terms for the Latins, who later fought an unsuccessful war of independence (340-338), saw their League dissolved, and entered into fresh relations with Rome.

10. Roman interests were now spreading to Campania, where they became predominant after an alliance with Neapolis (326). This brought Rome into conflict with the Samnite hill-tribes, and bitter struggles ensued. After the (possibly apocryphal) First Samnite War (343-341), the Second lasted intermittently from 326 till Roman victory in 304 and was marked by a major disaster at the Caudine Forks (321). Roman ascendancy in Etruria was extended, and alliances were made with Umbrian cities, the Picenes and Marsi, and with northern Apulia. Early in the third century the Samnites made a new bid for freedom; in alliance with fresh Gallic invaders, Etruscans, and Umbrians they were defeated at Sentinum (295) and finally subdued by 290. Further Celtic tribes and some Etruscan towns gave trouble until the Boni were defeated at Lake Vadimo (283) and again in 282. With the Samnites reduced, Rome was next drawn into southern Italy, where the Greek cities were being hard pressed by Lucanian tribes. When in 282 Rome sent a protective garrison to Thurii at that city's request, Tarentum resented Rome's interference in her sphere of influence, picked a quarrel with Rome, and summoned the help of Pyrrhus of Epirus, who landed in Italy (280). After two 'Pyrrhic' victories at Heraclea and Asculum he withdrew to Sicily (278); after his return (276) he was defeated by Rome (275) and retired to Greece, leaving Rome now undisputed mistress of Italy.

11. Rome's conquest of Italy had been achieved not merely by the sword; indeed, Rome was certainly no more aggressive than her neighbours, since the *ius fetiale* forbade wars of aggression. By founding Latin and Roman colonies at strategic points, and by the construction of roads, Rome had bound Italy together. But she had done more: she had created a political confederacy which embraced all Italy except Cisalpine Gaul. By the principle of incorporation Roman citizenship, in whole or part, had been extended to a large area of Italy, while the rest of the peninsula was bound to Rome by alliances of varying type, the most privileged being *ius Latini*. All, citizens and allies alike, were subject to military service, but only the citizens paid direct taxes. Peace was thus at length substituted for war as the normal condition of life in Italy; very gradually, since Rome did not force her civilization on others, local languages, customs, and cults gave place to a common culture based on the Latin tongue and Roman law. Finally, by this political unification of Italy, Rome was no longer merely a Latin city but had become a great military force and a world power, with whom Ptolemaic Egypt entered into friendly relations (*amicitia*) in 273, and whose war with Pyrrhus attracted the pen of a Greek historian, Timaeus. The era to which

later Romans looked back as the formative period of their national character, when life was simple and austere, was passing. Rome was now politically linked with the hellenized South and in direct contact with Greek influences.

III. ROME AND THE MEDITERRANEAN (264-133 B.C.)

12. As a world power Rome came into contact with Carthaginian interests in the western Mediterranean and with the Hellenistic world in the East. Her conflicts with Carthage are described under PUNIC WARS; they resulted in the elimination of Carthage from the western Mediterranean and in the acquisition by Rome of overseas *provinciae*, Sicily (241), Sardinia (238), Spain (206, organized 197), Africa (146). The Romans had to face another Gallic invasion of Italy, which was shattered at the battle of Telamon (225). Thereafter the northern frontier was secured by the defeat of the Boii and Insubres (224-220; 200-191), the pacification of Cisalpine Gaul, and the protection of its flanks by the reduction of the Ligurians (197-154), Istrians (178-177), and Dalmatian coast (156-155; 129). Thus Roman authority was extended from near Massilia (*Marseille*) round the sweep of the Alps to Istria and thence down the west coast of the Balkan peninsula.

13. Meantime Rome had been drawn into Hellenistic affairs. As a police measure she had suppressed Illyrian piracy in the Adriatic and established a small protectorate in Illyricum (First Illyrian War, 229-228, Second 219; see TRUITA, DEMETRIUS 7). Then she had successfully faced Hannibal's ally, Philip V of Macedon, in the First Macedonian War (214-205; see PUNIC WARS). Thereafter, when Philip launched a career of conquest in the eastern Mediterranean, Rhodes and Pergamum appealed for help to Rome. Actuated by a desire for future security against a possible threat from Philip's fleet or his ally Antiochus III of Syria (a desire which for some may have been strengthened by philhellenic sentiments), the Romans somewhat reluctantly entered upon the Second Macedonian War (200-196), which terminated in the victory of Flamininus at Cynoscephalae. Macedonia was forced to surrender her conquests but survived as an independent State, while Rome proclaimed freedom for Greece; no territory was annexed, and by 194 all Roman troops had evacuated Greece. Rome was next involved with Antiochus, with whom Hannibal had sought refuge. When he invaded Greece he was defeated at Thermopylae by the Romans, who then for the first time crossed to Asia and again defeated him at Magnesia (189). By the treaty of Apamea Antiochus was forced back into Syria, while most of the Seleucid kingdom in Asia Minor was given to Pergamum and Rhodes; Rome annexed no territory. Macedonia remained quiet until the accession of Perseus, who challenged Rome, only to meet defeat at the hands of Aemilius Paullus at Pydna in 168 (Third Macedonian War, 172-168/7). Macedonia was divided into four republics, but after further disorders caused by Andriscus it was at length annexed as a Roman province (147). The Achaean Confederacy was suppressed, and Corinth was destroyed by Mummius (146), not probably from motives of commercial jealousy but as an example to Greece that Roman patience was at an end. For half a century Rome had allowed Greece to enjoy or abuse her freedom: Rome's final intervention brought peace, if not prosperity. Meantime Rome had overawed the Hellenistic kingdoms of Bithynia, Galatia (see VULSO 2), Pergamum, and Rhodes, and had interfered in the politics of Egypt (see POPILLIUS 1) and Syria. In 133 Attalus of Pergamum bequeathed his kingdom to Rome: it was formed into the Roman province of Asia.

14. Meanwhile in the west Rome's attempt to administer and protect her provinces of Spain (acquired in

206 and organized in 197) led her into a long series of conflicts with the native tribes of the interior, especially Celtiberians and Lusitanians, which only ended with the destruction of Numantia by Scipio Aemilianus in 133 (see NUMANTIA, SPAIN, VIRIATHUS, etc.). Finally, after campaigns against Ligurians, Allobroges, and Arverni (125-121), southern Gaul was formed into the province of Gallia Transalpina or Narbonensis.

15. During this period when Rome was establishing an overseas Empire, and more particularly in the latter part of it, economic and social life in Rome and Italy underwent profound changes. In many parts capitalist farming replaced peasant husbandry; with the acquisition of an Empire there was a greater field for industry and commerce, which had relatively little interest for the Roman nobility or influence on Roman policy, but enhanced the importance of the rich business men (see EQUITES); slavery increased, both on the land and in the household; women gained greater freedom; life became more luxurious for the privileged classes, and public games increased; the city, adorned with new public buildings, assumed a fresh appearance. From the First Punic War, when Roman soldiers had fought in Grecian Sicily, the floodgates of Hellenism were open. Many nobles, as the Scipios and Flamininus, were ardent philhellenes, while the earliest Roman historians actually wrote in Greek; Cato's attempt to stem the tide was merely temporary. Fresh contacts were made with Greece in the Macedonian Wars, Greek philosophers lectured in Rome (155), while a group of intellectuals, the so-called Scipionic Circle, attempted to reconcile the best aspects of Greek and Roman life. In all spheres, art and architecture, literature and religion, Greek influences prevailed. But despite these profound changes the governing class, drawn from a small number of families, retained many of its old virtues and its general control of public affairs.

IV. THE FALL OF THE REPUBLIC (133 A.D. B.C.)

16. Rome next had to grapple with many problems of which the solution became urgent. Of imperial problems that of safeguarding the frontiers was the least clamant. More pressing were the consequences of provincial administration, since the institutions of a city-state were ill-adapted to governing an Empire, and the attempts made to modify them were not sufficiently fundamental. The standard of provincial administration fell. Some governors plundered their provinces for private gain, others were corrupted by desire for power. The army began to look rather to its commanders than to the State for the rewards of service, and when led by men of ambition formed a new and dangerous element in Roman life. Rome also faced grave domestic issues, and a struggle developed between Optimates and Populares. Difficulties which might have been settled by compromise were rendered more acute by the rise of ambitious personalities who sought to exploit political power for their own ends. Further, Rome's selfish policy towards her Italian allies, who had helped to win the Empire but were deprived of many of its spoils, led to increasing discontent and ultimately to open war. Finally, there were urgent economic problems. The growth of *latifundia*, the promotion of pasturage at the expense of cereal production, and the system of land-tenure had all combined to drive large numbers of small farmers from the countryside to unemployment in the towns. There was pressing need to re-establish a small peasantry on the land and to rid the cities of idle hands.

17. Public attention was focused on many of these problems by the careers of Tiberius and Gaius Gracchus, who as tribunes representative of the sovereign authority of the Roman People challenged the senatorial monopoly of government. Their efforts, and the subsequent

agrarian legislation, partially solved some economic problems, while Gaius championed the demands of the allies for Roman franchise and made the *equites* a political force and a Third Estate. Their attempts at reform were followed by a conservative reaction and by the war with Jugurtha (112-105). This was conducted by the Senate with such indolence and probably corruption that at length the People and *equites* demanded energetic action, which was given by Marius in whom the People found a military leader.

18. Unrest in Sicily found expression in two Slave Wars (135-132, 103-101). German tribes were on the move, defeating Roman armies (114, 113), and finally wiped out two consular armies at Arausio (105). In this hour of national crisis Marius held repeated consulships (103-101), and thanks to his military reforms saved his country by defeating the Teutones near Aquae Sextiae (102) and the Cimbri near Vercellae (101). But a new danger was at hand: Marius at the head of an army, which had been raised partly from proletarians by voluntary enlistment and owed more to its leader than to the State, might threaten the Senate in the name of the People. He obtained a sixth consulship (100), but was not prepared to use the army against the Senate's control of government: as a *novus homo* he wanted recognition by, rather than the overthrow of, the existing system. His unhappy temporary alliance with the leaders of the popular party, Saturninus and Glaucia (103-100), was followed by his own temporary eclipse and a brief conservative reaction (99-91) which nearly proved fatal to Rome. The attempted reforms of Drusus (91) and his plan to enfranchise the Italians failed, while his assassination precipitated the revolt of the allies in the Social or Marsian War (91-87), the result of the Senate's selfish policy. Some of the allies fought to win Roman citizenship, others as the Samnites to destroy Roman predominance in Italy. By fighting and by political concessions (see under CAESAR 2, POMPEIUS 3, PLAUTIUS 1) the Romans gained victory by conceding the main issue at stake. Italy was now united, and all south of the Po received Roman citizenship.

19. A contention between Marius and Sulla for the command against Mithridates of Pontus led to Sulla's march on Rome at the head of Roman legions (88) and the inauguration of a period of civil war and bloodshed. Thereafter Sulla left for Greece, where he defeated the Pontic army at Chaeronea (86) and settled the East. He returned in 83 to overthrow in civil war the government which Cinna had established in his absence. By 82, after a proscription of his political opponents, he attained a quasi-monarchical position as dictator and attempted to re-establish the authority of the Senate over against the powers of the tribunate and the influence of army commanders by a series of measures which did not long survive his voluntary retirement in 79. Pompey, after defeating Sertorius, who had held Spain against the senatorial government from 80 to 72, enjoyed a joint-consulship in 70 with Crassus, who had suppressed a slave-revolt led by Spartacus in Italy. Backed by their armies these two ambitious leaders, both former lieutenants of Sulla, swept away much of Sulla's legislation. The tribunate once again became a dangerous weapon which might assert the wishes of the Roman People, now mainly the unruly populace of the capital and unrepresentative of Italy as a whole, and those of their unscrupulous and ambitious leaders. Through the tribunate Pompey was given in 67 an overriding command against the pirates, whom he swept out of the Mediterranean, and then against Mithridates, whose renewed aggression had been checked by Lucullus. Though Lucullus had invaded Pontus and defeated Tigranes of Armenia, he had been forced to retire, and thus it was reserved for Pompey to end the Mithridatic

Wars and to resettle the East (64-62), where he reorganized the client-kingdoms, established Syria as a Roman province (64), and promoted urbanization throughout Asia Minor. Other recent provincial changes affected Cisalpine Gaul, Bithynia, Cilicia, Crete, and Cyrene.

20. While Pompey was in the East, Crassus and Caesar intrigued in Rome against his return, using a tribune Rullus to further their ends. Catiline led a revolutionary scheme of broken men, which was unmasked by the consul Cicero (63), who began to hope for a *concordia ordinum*, a reconciliation of all moderate elements in the State. But the Senate foolishly withstood the demands of Pompey, who on his return from the East had loyally retired into private life, and also those of Caesar, who in 60 returned from a command in Spain. Pompey and Caesar together with Crassus were thus forced into an unofficial coalition, known as the First Triumvirate (60). In 59 Caesar as consul gained a prolonged command for himself in Gaul, which he added as a new province to the Empire, thus advancing the frontiers to the Rhine and the English Channel (58-50: see GALLIC WARS). Meantime, in a period of increasing electoral corruption and public disorder, fostered by gang-leaders as Clodius and Milo and resulting in the temporary exile of Cicero (58-57), the Triumvirate appeared to be breaking up, but was reaffirmed at a conference held at Luca (56). While Caesar made his name and won a devoted army in Gaul, Pompey controlled events in Rome and administered his Spanish province through *legati*. The death of Crassus at Carrhae (53) during a disastrous expedition against Parthia emphasized the rivalry of Pompey and Caesar, who gradually drifted into open conflict, with Pompey somewhat reluctantly supporting the senatorial cause. Caesar defeated the Pompeian army in Spain at Ilerda (49) and Pompey himself at Pharsalus (48); he won further victories in Asia at Zela (47), in Africa at Thapsus, where Cato's suicide exemplified the collapse of the Republican cause (46), and in Spain at Munda (45). Whether or not Caesar intended finally to end the Republic, as dictator he introduced the principle of personal autocracy into the constitution. His beneficial legislative reforms and his plans for safeguarding the Empire by military expeditions against Dacia and Parthia were cut short by his assassination by a group of short-sighted Republican conspirators, led by Cassius and Brutus (44).

21. Instead of a restoration of peace and the Republic another round of civil war followed. At first Octavian, Caesar's heir and avenger, supported by Cicero and the Republican party, struggled against Antony, who had been Caesar's helper. After the battle of Mutina (43) the three Caesarian leaders, Antony, Octavian, and Lepidus, formed an official coalition, the Second Triumvirate. The triumvirs defeated the forces of the Republicans led by Brutus and Cassius at Philippi (42). Gradually Octavian strengthened his hold on Italy and the western provinces, eliminating Sextus Pompeius and Lepidus. Meanwhile Antony had gone to the East, where he met Cleopatra, launched a disastrous expedition against Parthia, and finally became suspect of sacrificing Roman interests to Cleopatra. Thus the scene was set for a final clash between the Roman forces of the East and West which culminated in Antony's defeat by Octavian at Actium (31) and his death at Alexandria (30). The Roman world was reunited under the sole leadership of Octavian and peace was restored when he settled the East and annexed Egypt.

22. Despite civil wars, misgovernment, political corruption, the ambitions of the rival dynasts (*principes viri*), and the collapse of the republican constitution, the Roman world still offered a foundation on which a new

system could be constructed. Further, the political unification of Italy was reflected in the greater unity of Italian civilization. The whole of this period and especially the Ciceronian age witnessed a steady advance of oratory, art, and letters. If Cicero was the dominant literary figure, there were also Lucretius, Catullus, Caesar, Varro, and Sallust. Political instability had not undermined all the productive activities of man.

V. AUGUSTUS AND THE JULIO-CLAUDIAN EMPERORS (31 B.C.-A.D. 68)

23. Within the framework of the Republic, which had collapsed through the attacks of military dictators and the lack of an adequate civil service, Augustus, as Octavian was then called, created a new system which endured. His own position as *princeps* (q.v.) made him in fact a disguised constitutional monarch—*auctoritate omnibus praestiti*—with control over legislation, criminal jurisdiction, the army, and to a large extent finance and provincial administration. He shared many of his functions with the Senate, but his power was undivided. The army was reformed and was made the protector instead of a potential destroyer of the State; the frontiers were secured; the provinces were administered with greater care. To secure an adequate supply of civil servants the senatorial and equestrian orders were reorganized; the new executive included boards of *curatores* and *praeferti*, especially the prefect of the newly formed Praetorian Guard, and a *consilium principis*. By new buildings (see, e.g., ARA PACIS, FORUM AUGUSTI), by care for the water- and food-supplies (see ANNONA), by creating cohorts of *vigiles* to prevent fire and urban cohorts as a police force, Augustus made Rome a worthy capital of the Empire. By renovating the State religion and by less successful legislation designed to encourage marriage and a higher standard of morality Augustus hoped to create a new Roman People, the worthy exponents of that civilization which it was the great achievement of the Empire to spread to the provinces of the West. The Graeco-Roman civilization of the Mediterranean now became one, but the centre of gravity of the Empire was fixed in Italy and the West. True, the pendulum was to swing gradually eastwards during the next 300 years, and the Augustan Empire was radically modified in constitution and finally overrun by the barbarians, but not before it had done its great work of romanizing western Europe. Therein lies to a great measure the debt which the world owes to Augustus and his victory at Actium. Nor could Augustus have accomplished his task alone. He owed much to friends like Agrippa and Maecenas and not a little to writers such as Virgil, Horace, and Livy, who made this the Golden Age of Latin literature.

24. Though it was as peacemaker after the long series of civil wars that Augustus derived much of his popularity, he yet added much to the Empire, but for reasons of security rather than from desire for conquest. In the East ambitious plans were abandoned, an agreement was reached with Parthia, and Galatia was made a province (25 B.C.), as was Judaea in A.D. 6. Spain was finally pacified and, like Gaul, was reorganized. Local self-government was encouraged, the growth of towns fostered, and many colonies were founded. In the north Augustus advanced the frontier to the Danube and by the creation of a chain of provinces (Raetia, Noricum, Pannonia, and Moesia) protected the Balkans from invasion by the wild tribes of central Europe. His plan to advance beyond the Rhine to the Elbe was finally abandoned after the defeat of Varus, and the Rhine-Danube formed the frontier. The fostering of provincial *concilia* and the growth of the imperial cult increasingly gave a sense of unity to the Empire. With the frontiers thus secure and a stable central government the Mediterranean world

enjoyed a new era of industrial advance and widespread commerce.

25. Not the least difficult problem which faced Augustus was the succession. His efforts to secure it in the direct line of the Julian house were thwarted by the deaths of Marcellus, Gaius Caesar, and Lucius Caesar. At length he made Tiberius co-regent and at his death the Empire was handed on without a hitch. The prestige of his name and the methods which he had adopted determined to a large measure the decisions of his successors.

26. The reign of Tiberius (A.D. 14-37) saw the political advancement of the Senate at the expense of the People, but nevertheless the senatorial administration increasingly depended on the will of the *princeps*. The career of Sejanus demonstrated the potential power of the Praetorian Prefect and Guard. Though the reign was marked by the growth of delation and ended in a Terror, the provincial administration was good. Tiberius followed the precept of Augustus not to extend the Empire beyond its existing boundaries, except that Cappadocia was made a province. The interlude of the extravagant reign of Gaius (37-41) emphasized the autocratic tendencies latent in the Principate. Claudius' reign (41-54) was notable for his development of the imperial civil service, in which freedmen were given greater influence, for a more liberal extension of Roman franchise, and for an energetic foreign policy which replaced client kingdoms by provinces, and added the two Mauretaniae (42), Britain (43), Lycia (43), and Thrace (46) to the Empire. Nero's reign (54-68) might open well under the guidance of Seneca and Burrus, but his reconciliation with the Senate did not last and he gradually scandalized the aristocracy. Disorder followed in the provinces. In the East Nero adopted a more active policy, which resulted in a clash with Parthia and the defeat of Paetus at Rhandeia (62), although the Armenian problem was settled thanks to Corbulo's display of Roman might. A revolt in Britain was led by Boudicca (61); rebellion spread through Judaea (66-70), while Vindex revolted in Gaul and Galba in Spain. Stoics, aristocrats, army chiefs, and private individuals opposed and hated Nero at home. Thus the Julio-Claudian dynasty collapsed amid rebellion and civil war, but the constructive work of Augustus and Claudius survived the disaster.

VI. THE FLAVIANS AND ANTONINES (A.D. 69-192)

27. The 'Year of the Four Emperors' (69) and the period of renewed civil war is important for its revelation that an Emperor could be made elsewhere than at Rome, by the wishes of the armies in the provinces, who recognized, however, that their nominees were still pretenders until approved by the Senate. Galba from Spain was accepted by the Praetorian Guard and Senate, but in 69 the Praetorians acclaimed Otho and killed Galba. The Rhine armies, however, proclaimed Vitellius, on whose behalf Caecina and Valens defeated Otho's forces at Bedriacum. After Otho's suicide Vitellius was accepted as Emperor, but meantime the eastern legions had declared for Vespasian, whose claim was soon accepted on the Danube. Vespasian's cause was led from Pannonia by Antonius Primus, who defeated the Vitellians and captured Rome. In 70 Jerusalem was stormed, the rising of Civilis on the Rhine and the attempt of Classicus to create an Imperium Galliarum were thwarted, and peace was re-established. From the confusion there had emerged a second Augustus, a *restitutor orbis*, who restored peace, founded a new dynasty, and resumed the task of government.

28. It was the great achievement of Vespasian (69-79) to restore confidence and prosperity, to prevent the change of the Principate's character from civilian to

military, and to minimize the risk of renewed civil war by founding a dynasty and securing the succession of his sons Titus (79-81) and Domitian (81-96). Under the Flavians there was a marked and increasing advance towards absolute monarchy, brought about by the example set by Vespasian of reviving the censorship and holding numerous consulates, and by Domitian's acceptance of semi-divine honours, even though such measures may have been taken primarily to enhance the prestige of the upstart dynasty. The Senate, which by the admission of more provincials became more representative of the Empire, was neglected by Vespasian and slighted by Domitian, who relied more on the *consilium principis*. Wise in the choice of their executive, the Flavians made increasing use of *equites* in place of freedmen. By a prudent economy Vespasian restored the State finances, which withstood Titus' prodigality and Domitian's heavy expenditure. In foreign policy the Flavians aimed at strengthening the existing frontiers, particularly by a valuable consolidation of the Rhine and Danube *limites*, although the rising power of Dacia was given only a taste of Roman might, and an advance was made into Scotland. In general the provinces enjoyed a period of uneventful prosperity, resting on the restored tranquillity of the central government. The Flavians had little to fear from Caecina and Antonius Saturninus, but the obstructive opposition of Stoic and Cynic philosophers (see, e.g., HELVIDIUS PRISCUS) was irritating, while after 88 discontented senatorial opposition led to the renewal of delation and charges of *maiestas* and to the Reign of Terror in which Domitian the tyrant perished.

29. The reigns of the 'Five Good Emperors', Nerva (66-8), Trajan (98-117), Hadrian (117-38), Antoninus Pius (138-61), M. Aurelius (161-80), culminated in the Indian Summer of the Antonines, that era which Gibbon regarded as the happiest known to man. During this period the Principate underwent considerable modification. Nerva was chosen as the 'best citizen' by the Senate, not by the legions, and he found the armies, especially the Praetorian Guard, difficult to control, he compromised by adopting a soldier, Trajan, and making him co-regent. The next three rulers, none of whom had a son to succeed him, followed Nerva's example of adopting as son and successor a man of tried ability, thus averting further crises at their own deaths. Trajan by his tolerance won from a grateful Senate the title of Optimus Princeps. Hadrian, by his versatility, by his measures for the defence of the Empire and his care for its well-being, and above all by his personal activity in the provinces, won the respect of soldiers and civilians alike and peacefully handed over the reins of government to the senator Antoninus Pius, under whose beneficent influence the Empire entered upon one of the most secure periods of its history, although local self-government gradually weakened under the far-reaching paternalism of the central government. With the accession of M. Aurelius Stoicism was enthroned, and the philosopher manfully shouldered the responsibilities thrust upon him. But an era was passing. The joint rule of M. Aurelius and L. Verus (161-9) foreshadowed the division of imperial power. Further, through danger on the frontiers and a devastating plague the Empire was threatened with the loss of its margin of security and prosperity. When M. Aurelius, by promoting his son Commodus (180-93) to the throne, reverted to the dynastic principle of succession in place of the 'choice of the best', it was an ill day for the Empire. The moral basis of the Principate, emphasized by the recent Emperors, was weakened by the misuse and corruption of Commodus. Gradually, with the swelling tide of eastern religious ideas and with the victory of the military over the civilian conception of the Principate, the way was paved for the Dominate.

30. From Nerva to M. Aurelius the Emperors maintained good relations with the Senate, which by the admission of more provincials became yet more representative of the Empire. But if it regained some of its former prestige, it recovered little of its power, although Tacitus might praise Nerva for reconciling *libertas* and *principatus*. From Hadrian's time the administrative civil service, now drawn nearly exclusively from the senatorial and equestrian orders, was organized on a larger and more rigid scale. Honorific titles marked grades of equestrian officials, whose military and civil careers were sharply distinguished. Under Hadrian also there were important changes in the Roman legal system, and here the *consilium principis* played a leading part. The Comitia had died a natural death and its legislative functions were superseded by imperial 'constitutions', which were marked by a spirit of humanity and equity. By careful economy and a modest court the Emperors were able to be liberal in public expenditure, establishing various *alimenta* and *congiaria*, endowing education and planning public works, although under M. Aurelius the *fiscus* began to feel the strain.

31. Throughout the provinces urbanization reached its widest extent. Under ruling aristocracies of public-spirited men, who often spent lavishly to endow and maintain their own cities, the municipalities flourished as never before, although occasionally the Roman government was forced to limit their liberties in order to maintain public order or to support their finances, which sometimes became inadequate under the strain of compulsory contributions imposed on the local magistrates and senators (see LITURGY, CURATOR). The care which the Emperors exercised in the provinces is well illustrated by the correspondence between Trajan and Pliny or by Hadrian's thorough tours of inspection. Trajan and his three successors, who were all of Spanish or Gallic origin, were naturally liberal in granting Roman franchise.

32. There were few extensions of the Empire except under the warrior prince Trajan, who after two wars (101-2, 105-6) defeated Decebalus and annexed Dacia, which was quickly romanized. In the East Trajan annexed Nabataean Arabia in Transjordan and advanced over the Euphrates to wrest from Parthian control the new provinces of Armenia, Mesopotamia, and Assyria. By abandoning his predecessor's eastern conquests Hadrian reached a settlement with Parthia, which was temporarily upset under M. Aurelius. Thus in general Rome still held the line of the Euphrates, but the frontier was strengthened and straightened. Widespread Jewish revolts in 116 were quickly suppressed, while the establishment of a Roman colony in Jerusalem by Hadrian led to a second war in Palestine (131-5) and the ejection of all Jews from Jerusalem, although Hadrian's severe terms were modified by Antoninus. In Britain various attempts were made to secure the frontier: Roman policy led to the evacuation of Scotland and the construction of Hadrian's Wall (122-7); another extension of Roman influence into Scotland was followed by the establishment of the Antonine Wall (142-3). A greater crisis arose when Germanic tribes, the Marcomanni and Quadi, invaded the Danubian provinces and even raided north Italy. By resolute action M. Aurelius repelled the danger and planned to avert its repetition by advancing the frontier to the Carpathians and mountains of Bohemia, but after his death Commodus abandoned the plan. On the Rhine-Danube frontier precautions were taken, such as the rebuilding in stone of earth forts in Upper Germany and Raetia under Hadrian and the construction of an advance line under the Antonines. Administrative changes included the establishment of Upper and Lower Germany as separate provinces under Hadrian, the

division of Pannonia into two provinces under Trajan and of Dacia into two and then three under Hadrian.

33. Although the Roman army which secured the frontiers was as yet unconquerable, it was undergoing many changes. With Hadrian's system of local recruiting it became less mobile and predominantly provincial. Only the Praetorian Guard retained a Latin tradition; the provincial soldiers, although good fighters, had only a slight acquaintance with Roman political ideas or Graeco-Roman culture, while as a result of the gradual separation of military from civil careers the higher officers, who were still mainly of Italian stock, had little experience of civil government.

34. In the latter part of this period the Roman Empire attained its highest economic development with the peace that reigned throughout Mediterranean lands and the extension of the road-system. In agriculture and industry the provinces began to outrun Italy. Commerce extended beyond the bounds of Empire to Scandinavia, overland to China, and through the Indian Ocean to the East. Industry and commerce promoted the growth of cities, while other new towns grew out of the military *canabae*. New buildings at Rome, as the Colosseum, Trajan's Forum, and the Pantheon, found their counterparts in the fora, theatres, amphitheatres, baths, aqueducts, and bridges which now adorned the chief provincial cities. Roman sculpture kept pace with architecture, and imperial ideals often conformed to the artistic traditions of the provinces. Schools and libraries exemplified State interest in education. Literature entered upon its Silver Age with the work of Martial and Juvenal, of Tacitus, Suetonius, and Quintilian, while there was a revival of Greek literature. Christian apologists developed a new branch of literature, and Roman jurisprudence reached its maturity. In every sphere, and especially in the religious, provincial influences spread, and the western stamp which Augustus had set upon the Empire gradually became less clear-cut. Christianity had taken root in Italy, Africa, and Gaul, and was developing that organization which was successfully to challenge the imperial regime. Rome had imposed no uniformity of culture, but had allowed the provincials to retain their varied customs and institutions. The predominantly Latin culture of the West was complementary to the Hellenism of the East. But despite diversity there was a real feeling of unity, and all looked to the Emperor as to a universal Providence by whose unremitting care the *pax Romana* was preserved. True, some problems, such as the social evils of slavery and the pauperization of urban populations or the possibility of a wise policy of decentralization and provincial representation, were not taken in hand. True, the culture of the Empire meant less to the masses in the provinces than to the middle and upper classes for whose benefit the Empire chiefly existed, while there were many fore-shadowings of unhealthy changes to come. Nevertheless, the barriers between Rome and the provinces had fallen, and in an age of general serenity and good will, when men had become more humane, the stability of the Empire may well have seemed assured and the 'Aeternitas Populi Romani' more than a pious hope or an empty dream.

VII. COLLAPSE AND RECOVERY (A.D. 193-330)

35. The death of Commodus ushered in a new period of civil war. The attempt of Pertinax to co-operate with the Senate failed through the renewed influence of the Praetorian Guard, which auctioned the Empire to Didius Julianus. Again, as in A.D. 69, provincial armies put forward their candidates for the throne, Clodius Albinus in Britain, Pescennius Niger in Syria, and Septimius Severus in Pannonia. Severus seized Rome, struck down

his rivals, and established a new dynasty. His reign (193-211) was marked by the development of the power of the equestrian order, the reconstitution of the Praetorian Guard and the increased power of its prefect, and by the creation of the *res privata*, but above all by its military aspect: the civilian constitution of the Empire which Augustus had conceived was set aside. Abandoning all pretence of co-operation with the Senate, Severus openly showed that his authority rested on the support of the army. His restoration of order in northern Britain was followed by the evacuation of Scotland. In general the frontier fortifications were consolidated and the provinces were well administered, some being divided into two. His son Caracalla (M. Aurelius Antoninus, 211-17) developed the military tendencies of the father, and by his edict of 212 abolished all distinction between Italians and provincials, so that the Empire legally became a commonwealth of equal members. But Alamanni and Goths were ominously threatening the Danube frontier. After Macrinus' brief reign (217-18), Elagabalus (218-22) gave Rome an unwelcome insight into eastern cult, oriental pomp, and personal corruption. Alexander Severus (221-35), guided by Julia Mamaea, attempted a *rapprochement* with the Senate and gave Rome a few years of comparative peace and tranquillity. But again the military element triumphed over the civil, and Alexander's murder was followed by half a century of military anarchy which nearly led to the final collapse of the Empire.

36. Emperors followed one another thick and fast: the Thracian peasant Maximinus (235-8), Gordian I, II, Pupienus, Balbinus (238), Gordian III (238-44), the Arabian Philip (244-9), the Illyrian Decius (249-51), Trebonianus Gallus (251-3), the Moor Aemilianus (253), and Valerian (253-60). While the armies played the game of emperor-making, the security and unity of the Empire were nearly destroyed. In the East the Parthian dynasty of the Arsacids was superseded by the aggressive Sassanidae who overran Syria (256), captured Valerian (259), and invaded Asia Minor. They were checked with the help of the caravan city of Palmyra, which under Zenobia now proceeded to challenge Roman supremacy in the East. In the West a pretender, Postumus, established an independent *imperium Galliarum*, which included Spain and Britain. Franks threatened the Lower Rhine, Saxon pirates ventured into the English Channel, Goths raided the Balkans and the Aegean, Alamanni crossed the Rhine and ravaged north Italy as far as Ravenna. With the Empire thus cracking and being rent asunder under his feet Valerian's son and successor Gallienus (253-68) had also to face a swarm of pretenders and rivals, the so-called 'Thirty Tyrants' (q.v. 2). To his honour he brought the Empire through the crisis without complete disaster and laid the foundations of recovery. The tide was turned by his successors, the Illyrian Emperors, Claudius Gothicus (268-70), who repelled the Gothic peril, and Aurelian (270-5), who, though evacuating Dacia, destroyed Palmyra (273), recovered Gaul, and justly earned the title of *Restitutor Orbis*. The great wall which he constructed around Rome was a bulwark of defence but also a symbol of the vanishing *pax Romana*. But still the army could not agree to a durable government and elevated a succession of Emperors, many Illyrian, who had to fight rivals and barbarians alike: Tacitus (275-6), who defeated some Goths in Asia Minor, Florianus (276), Probus (276-82), who secured the Rhine and Danube frontiers and disposed of the rival Bonosus, Carus (282-3), who invaded Mesopotamia, Carinus (283-5), and Numerianus (283-4). Out of this welter of short-lived Emperors emerged Diocletian, who held power for twenty years (284-305) and then voluntarily laid it aside.

37. In order to secure the protection of the Empire and an unchallenged succession Diocletian divided the Empire and imperial power. As joint-Augustus with Maximian he established two junior Caesars, Galerius and Constantius, who should ultimately succeed. But when he insisted on retiring, fresh civil wars followed, in which Constantine by his defeat of Maxentius at the Milvian Bridge gained the Western Empire (312). In the East Licinius won supremacy by defeating Maximinus (313), but was defeated by Constantine in 314 and decisively again in 324, so that the Empire, West and East, was once more united under a resolute ruler. But the centre of gravity was shifting eastwards. The barbarian invasions had left Emperors little time to spend in Rome, and Diocletian had set up his court at Nicomedia in Bithynia. Finally, by 330, Constantine had established at Byzantium a new capital and Christian city, Constantinople or East Rome.

38. The Principate was dead; the military had triumphed over the civil aspect. Further, the basis of imperial authority had collapsed and a new sanction must be found. Eastern ideas of the king as the viceregent of heavenly authority were introduced. Thus Aurelian brought back to Rome the Persian worship of the Unconquered Sun, and Diocletian regarded himself as Jovius the earthly representative of Jupiter. The climax came when Constantine took Christianity (q.v.) into partnership with the Empire. The long period of persecution was ended and the struggle, which had gradually assumed the form of State against Church rather than pagan against Christian, was resolved with Constantine reigning as the earthly representative of the Christians' God; thus the way was prepared for a reconciliation between the Christian Church and the culture of the ancient world. Further, the outward form of imperial authority changed no less than its basis, which was legally autocratic after 282, when Carus dispensed with the theory that his power derived from the Senate. In title *dominus* replaced *princeps*. Aurelian (*dominus et deus*) introduced the pomp of oriental absolutism, while Diocletian and Constantine elaborated a court ceremonial in which the 'sacred' person of the Emperor, arrayed in diadem, purple, and gold, demanded prostration on the part of those admitted to audience. The *consilium principis* became a *sacrum consistorium*. The old republican magistracies either died out or were divested of all executive authority. The Senate survived with undimmed prestige, but its authority was reduced to that of a local town council. Under Diocletian military were separated from civilian offices, and under Constantine the senatorial and equestrian orders united. Provincial administration was profoundly modified: the number of provinces rose to 70 and ultimately to 116, the Empire was grouped into prefectures and dioceses, and the officials (*praesides*, *vicarii*, *praefecti praetorio*, etc.) accordingly increased. Municipal patriotism and self-government declined, owing to impoverishment, financial pressure, and the growth of bureaucracy, so that under Constantine the *curiales* became a hereditary caste and the attempt to avoid office and its crushing responsibilities was checked by State action. Thanks to the military reforms of Diocletian and Constantine with frontier forces (*limitanei*) and mobile reserves (*comitatenses*), the Roman army, although profoundly changed, still guarded the frontiers and kept the barbarians at arm's length. But this security was bought at a price. The great increase of the army and the civil service strained both the manpower of the Empire and its financial resources almost to breaking-point: the situation was met by far-reaching economic reforms which involved considerable restriction of personal liberty of movement and employment.

39. The mid third century witnessed an economic as well as a political collapse. Rising costs of government led to depreciation of the coinage and the extension of a system of requisitions and compulsory labour. The monetary system was undermined and was partially replaced by payments in kind, although the improvement of the coinage under Diocletian and Constantine led to a slow revival of confidence and a gradual restoration of a money economy: a sound gold and silver currency was established. A new taxation system (*annona*; *indictio*) was developed by Diocletian to remedy the injustices of the arbitrary requisitions which had become more common during the preceding upheavals, while he also extended the system of compulsory corporate responsibility for the collection of taxes and for the performance of other services. Gradually various industrial and commercial guilds were converted into hereditary castes in an attempt to maintain the economic life of the Empire, which had declined seriously in the third century as a result of civil wars and barbarian invasions, increasing difficulties of communication, and above all the general sense of insecurity and lack of confidence. Not all parts of the Empire declined as rapidly as did some, but industry, especially in the west, suffered severely and the total cultivated area and the size of the towns gradually diminished. Finally, through the growth of *latifundia*, some landed gentry in their fortified villas could live securely and at ease in a manner which foreshadowed medieval feudalism, but the tenants (*coloni*) on the large estates had gradually to surrender their liberty of movement and sank to a state of serfdom which received legal recognition under Constantine.

40. Social life declined in the towns and flourished rather among the country aristocracy. The State educational institutions were not neglected, and letters received some encouragement. After the third-century collapse both Latin and Greek literature enjoyed a mild revival, while Christian literature showed real vigour. Sculpture declined, but architecture maintained a technically high level, and the way was paved for the transition to 'late classical' art. Neoplatonism and Mithraism strove with Christianity for the allegiance of men, while in the countryside paganism still flourished. But the future lay with Christianity (despite Donatist and Arian controversies), and when Constantine, a Roman Emperor, presided at the Council of Christian bishops at Nicaea in 325 an era in man's history was ended and the threshold of the Middle Ages was revealed.

41. Diocletian and Constantine had buttressed up the Empire, and their organization of the State and its administration was not much altered by their successors. But Constantine's unerring insight in founding a new Christian capital in *partibus Orientis* could not secure the unity of the whole. After his death and renewed civil war the Empire was temporarily reunited under Constantius and Julian, whose reign witnessed a reaction of paganism against Christianity, and again under Theodosius I (395), whose sons, theoretically joint-rulers of a single Empire, were in practice monarchs of East and West with equal rights; and so it continued for another century, an Emperor usually being succeeded by his eldest son. The *de facto* division was emphasized by the existence of two senates, with hereditary membership, although individual senators in the East did not in general gain the extreme wealth and vast landed estates enjoyed by many of those in the West. The latter numbered some 2,000, and these landed nobles, whose power was increased by the numerous smaller men who attached themselves to them in times of invasion, civil war, and economic difficulty, exercised a feudal sway. Economic and social developments increased the hardships of the curials, of the workers in their trade guilds and state-factories who by law could not change

their work, and of the *coloni* and other agricultural labourers. A rigid state control dominated an economy that was theoretically based upon private enterprise. However, among the wealthy, culture survived and even flourished: a revival of letters took place among the pagan nobles of Rome, guided by Symmachus, and Rome's last great historian, Ammianus, flourished. Further, the Church attracted many of the most powerful thinkers: Ambrose, Jerome, Hilary, Augustine, and, in the East, Athanasius, John Chrysostom, Gregory of Nazianzus, and Basil. And the Church, a very different body from the persecuted sect of the days before Constantine, proved in some respects more adaptable than the State. Although at first weakened by heresies, and by monasticism until this way of life was officially regulated, it began to compete with the State for the service of the educated and well-born. A prosperous and powerful Church gradually changed the social balance of the Empire. Bishops might on occasion organize military resistance to the barbarian attacks; they might also seek to convert those federate barbarians who settled within the Empire, thus helping in some degree to romanize them.

42. In the East the Byzantine Empire survived until the Mohammedan capture of Constantinople in 1453. It was enabled to ward off the pressure of Persians, Huns, and Goths, and later of Avars, Bulgars, and Arabs, thanks to the impregnability of the capital, the reserves of military manpower that Asia Minor provided, a generally efficient administrative machinery, and fewer economic tensions than existed in the West. If its culture became predominantly Greek, it at any rate produced two of the greatest monuments of Roman law in the codes of Theodosius II and Justinian. East Rome was in fact the direct continuation of the Roman Empire, and to its resolute resistance to the storms of barbarism the modern world owes the preservation of the legacy of the ancient world since much classical literature was continuously studied and thus survived.

The West, separated from the East, could not long survive the storm of barbarian invasion. Picts, Scots, and Saxons overran Britain which the Romans were no longer able to protect and had to leave to its fate. The main German invasions came in waves. First, the Visigoths, fleeing before the Huns, defeated Valens at Adrianople (378), and ultimately, with the Burgundians, occupied the larger part of Gaul as federates, until in 475 Euric in south-west Gaul became independent of the Roman government. A second wave of Vandals, Suebi, and Alani crossed the Rhine in 406; after settling in Spain, some passed on to Africa where they captured Carthage (439) and established a separate State, thus cutting the Mediterranean in two. A third wave followed the collapse of Attila's Empire (453): Ostrogoths settled in Pannonia and threatened Italy. In 476 the Visigoth Alaric had sacked Rome, and although the threat from Attila was averted in 452, Rome was again raided and plundered by the Vandal Gaeseric in 455. Then the German Odoacer advanced and deposed Romulus Augustulus in 476, but although he became master of Rome and in effect its king, he yet acknowledged the authority of the Emperor at Constantinople. Soon, in 493, Odoacer was overthrown by Theodoric who established the Ostrogothic kingdom in Italy, but he too recognized the authority of the Eastern emperors. Conditions naturally varied in the different parts of the West which the Germans, whether federates or independent, had partitioned and occupied, yet the whole picture was not completely changed: the Roman population, which was barred from military service and from intermarriage with the barbarians, was still subject to Roman law and to a Roman civil administration. Roman rule in the West might be ended, but the survival of Roman law and the Latin tongue, the Roman Church,

and the Holy Roman Empire continued to demonstrate the indestructibility of the Roman tradition.

ROME (TOPOGRAPHY). The Tiber valley at Rome is a deep trough, from $\frac{1}{2}$ to $1\frac{1}{2}$ miles wide, cut into the soft tufa floor of the river's lower basin. The edges of the trough are formed by steep weathered cliffs, seamed and even isolated by tributary streams. Thus were formed the famous hills of Rome, the Capitol, Palatine, and Aventine being cut off from the main hinterland, the

Caelian, Oppian, Esquiline, Viminal, and Quirinal as flat-topped spurs. On the valley floor itself the river meanders in an S-shaped curve, the northern or upper twist containing the flat and mephitic Campus Martius and skirting the Vatican plain, the southern curve skirting the Capitol, *Forum Boarium*, and Aventine, and enclosing *Transtiberim*, a smaller plain at the foot of the Janiculan ridge. Just below the middle of the S-curve the river runs shallow and divides at Tiber island, traditionally erected by man upon a natural basis. The ford so made has no fellow between Rome and the sea, or for many miles upstream. Thus, while hills and spurs provided the natural strongholds beloved by primitive communities, traffic across the heavily populated Latian plain concentrated at the Tiber ford, the key to Rome's predominance.

2. Archaeology attests widespread primitive settlements on the Palatine, Esquiline, and Quirinal (qq.v.), associated with grave-goods going back to the ninth century B.C. Important cemeteries crowded the edges of the marshy valley of the *Forum Romanum* (q.v.), where burials cease by the sixth century B.C., attesting the synoecism brought about by the kings and coincident with the draining of the valley by the *cloaca maxima* (q.v.) and the creation of the *forum* market-place. The Wall of Servius (q.v.) on the Viminal, and cliffs elsewhere, made Rome a great promontory fortress comparable with Veii or Ardea, while the *pons sublicius* supplanted the ford. Regal ambition made a sacred acropolis of the Capitol, royal acres of the Campus Martius, a religious centre of the Aventine, with temple of Diana and *armilustrum*, and a *circus* (q.v.) of the Velabrum. The Republic kept the monuments, made of the Campus Martius a training-ground, and gradually concentrated civic activities in the Forum. The Palatine became a residential centre. Markets lined the Tiber bank, near the bridge and in touch with river-traffic, or clustered behind the Forum, whence State buildings gradually ousted them. The city became crowded, especially in the valleys which formed the irregular arterial routes, and as early as the third century B.C. tenement houses, which were to become a feature of the capital, attest the overcrowding and squalor which beset the narrow thoroughfares, such as the *Vicus Tuscus*, *Vicus Jugarius*, or *Subura*. Civic pride and family ambition early endowed innumerable temples. The city wall was erected c. 378 B.C., enclosing the *Quattuor Regiones* (see REGIO); aqueducts (q.v.) came later, in 312, 272, and 144 B.C.; quays, new Tiber bridges, *basilicae*, and porticoes later still, as in the great outburst of building activity in 184-176 B.C. Sulla was the first of the great dictators or *principes* to systematize large areas, linking the Forum and Capitol as an architectural unit by means of the *Tabularium* (q.v. 1). Pompey set a new fashion in theatres and porticoes, by the famous group of buildings centred upon his theatre and *Hecateostylon*; while of Julius Caesar's grandiose schemes, including Tiber diversion (Cic. *Att.* 13. 33), only the *Forum Iulium* (q.v.) remains, though such buildings as the *basilica Julia* and the *Saepta* (q.v.) were finished by Augustus.

3. Thus the monumental centres of the City had been determined by the Republic upon a basis inherited from the kings. Their surviving outward form, however, owes far more to the Emperors, whose rebuildings or additions transformed or eclipsed the older monuments. Augustus built a new *Forum Augustum* (q.v.), novel in form and dedication, a modest palace on the Palatine, associated with the temple of Apollo, and three new aqueducts (q.v.), while many new monuments in the Campus (q.v.), including the *Mausoleum*, were erected by him or by his *virii triumphales*. It may be claimed that in the Campus he and Agrippa rivalled Pompey. Studied attention was paid to the archaic cult buildings of the

Forum Romanum, in harmony with the religious revival, while the city was divided into fourteen new *regiones* (q.v.). The contributions of Tiberius, the *Castra Praetoria* on the outskirts of the Viminal and the *Domus Tiberiana* on the Palatine (q.v.), are curiously significant of his policy; while the freak building-schemes of Gaius reflect that disregard of public feeling which cost him his life. The only lasting building of Gaius, the *Circus* (q.v.) in *Transiberim*, was to fix through the martyrs the centre of Christianity. The effect of all these building-schemes was to drive the residential quarters off the Palatine to the villas and parks of the Quirinal, Pincian, and Aventine. To supply these higher sites, Claudius built two sumptuous aqueducts. Nero's parkland palace (s.v. *DOMUS AUREA*) attests his Hellenistic tastes, as do his *Colossus* and monumental *Via Sacra* (q.v.), the sole street in Rome comparable with the great colonnaded streets of the Roman East or the newer imperial cities of the West. His Baths and Gymnasium are more to Roman taste. The Flavians spent much energy in romanizing the creations of the *τύραννος*, the *Colosseum* (q.v.), *Forum Vespasianum* (q.v.), and Baths of Titus taking their place. Nerva's *Forum Transitorium* is a curious essay in the monumental approach, linking *Forum Romanum* and *Subura*. Trajan's *Thermae* finally blotted out the *Domus Aurea*, while his monumental *Forum* (q.v.) and market represent the impact of the Syrian Apollodorus upon Roman taste—in 'Tiberim defluxit Orontes!' The Aqua Traiana (s.v. *AQUEDUCTS*) was the first good water-supply in *Transiberim*. Hadrian replaced the vestibule of the *Domus Aurea* by the temple of Venus and Rome, erected a new *Mausoleum* and the *pons Aelius*, and rebuilt the *Pantheon* and Baths of Agrippa in the Campus.

4. Then followed a pause in building activities: the Antonines could afford to live upon the prestige of their predecessors, adding only triumphal monuments and temples of the *Divi*. Later building-schemes, apart from repairs, take the form of isolated monumental buildings, chiefly of utility. Aurelian's *Templum Solis* is the one notable religious building. The typical erections are the great *Thermae*. But the policy of the Severi is illustrated by their vast extension of the imperial palace on the Palatine (q.v.), with ornamental façade (see *SEPTIZODIUM*) on Via Appia, and the *Castra Equitum Singularium* on the Caelian. It is significant for the overcrowding in the City, as well as for the urgent need of cleanliness, that the sites for the great Baths had to be sought on the fringe, Caracalla picking the low ground outside Porta Capena, Diocletian selecting the Viminal, Constantine choosing the Quirinal. Great fires offered the only chance of rebuilding in the older regions: thus, the *Thermae Alexandrinae* were an enlargement of Nero's Baths in the Campus, while the fire of Carinus in 284 created space for the *basilica* of Maxentius, the noblest experiment in vaulting in the ancient world. The city had now reached the climax of its development, and it is significant that Aurelian had again ringed it with a defensive wall (see *WALL OF AURELIAN*). Further changes belong to the medieval topography.

ROMULUS and REMUS, mythical founders of Rome. Their legend, though probably as old as the late fourth century B.C. in one form or another (the Ogulnii dedicated a statue of the she-wolf with the twins in 296 B.C.,

Livy 10. 23. 12; see further J. Carcopino, *La Louve du Capitole*), cannot be very old nor contain any popular element, unless it be the almost universal one of the exposed children who rise to a great position. The name of Romulus means simply 'Roman', cf. the two forms *Sicanus* and *Siculus*; Remus (who in the Latin tradition replaces the Rhomus of most Greek authors), if not a back-formation from local place-names such as Remuri-nus ager, Remona (Festus, 344. 25 and 345. 10 Lindsay), is possibly formed from *Roma* by false analogy with such doublets as *Κέρκυρα*, *Corcyra*, where the *o* is short. The part played by a god in begetting children is against all provably Italian tradition; the entire story moves on purely Greek lines, and the idea of having an eponym whose name explains that of a city is itself Greek. However, there is no doubt that the legend was shaped by someone well acquainted with Roman topography and having a not inconsiderable knowledge of Roman religion and custom; contrast the older stories preserved, e.g., in Festus, 326. 28 ff.

In its normal form (Livy 1. 3. 10 ff.; Dion. Hal. *Ant. Rom.* 1. 76. 1 ff.; Plut. *Rom.* 3 ff.; more in Carter, Roscher's *Lexikon* iv. 174. 14 ff., which article is an excellent summary of the whole matter, with relevant literature) the story runs thus. Numitor, king of Alba Longa, had a younger brother Amulius who deposed him. To prevent the rise of avengers he made Numitor's daughter, R(h)ea Silvia, a Vestal Virgin (q.v.). But she was violated by Mars himself, and bore twins. Amulius, who had imprisoned her, ordered the infants to be thrown into the Tiber. The river was in flood, and the receptacle in which they had been placed drifted ashore near the *Ficus Ruminalis*. There a she-wolf (Plut. *Rom.* 4 adds a woodpecker, both being sacred to Mars) tended and suckled them, until they were found by Faustulus, the royal herdsman (probably a by-form of Faunus, q.v.). He and his wife Acca Larentia (q.v.) brought them up as their own; they increased mightily in strength and boldness, and became leaders of the young men in daring exploits. In one of these Remus was captured and brought before Numitor; Romulus came to the rescue, the relationship was made known, they rose together against Amulius, killed him, and made Numitor king again. The twins then founded a city of their own on the site of Rome, beginning with a settlement on the Palatine; Romulus walled it, and he or his lieutenant Celer killed Remus for leaping over the walls. He opened an asylum on the Capitol for all fugitives, and got wives for them by stealing women from the Sabines, whom he invited to a festival. After a successful reign of some forty years he mysteriously vanished in a storm at Goat's Marsh and became the god Quirinus (q.v.), one of the most obvious Greek touches in the whole story.

For recent discussion see C. J. Classen, *Hist.* 1963, 447 ff.

H. J. R.

ROMULUS AUGUSTULUS, commonly known as the last Roman Emperor of the West (A.D. 475-6), was in fact a usurper and was not recognized in the East. He owes his diminutive name to the fact that he was still a child when his father, the patrician Orestes, elevated him at Ravenna (475). But Orestes was overthrown and killed by Odoacer (q.v.), who deposed Romulus, spared him because of his youth, and sent him to live on a pension in Campania. His subsequent fate is unknown.

E. A. T.

ROSALIA or ROSARIA (generally neut. plur., occasionally fem. sing., plur. *Rosaliae*). The Romans were extravagantly fond of roses and used them especially on all manner of festal occasions, at banquets both official (e.g. *Act. Arval.* ccv, 13 Henzen) and private (e.g.

Martial 9. 93. 5). It is therefore not remarkable that a feast of roses was a common event, although it never became a fixed public festival, except locally. The best-known occasions of this sort were commemorations of the dead, also called *dies rosationis*, when presumably the members of the family met at the grave and decked it with roses. Violets were also used, hence *uiolatio*, *dies uiolares* or *uiolae* (see A. de-Marchi, *Culto privato di Roma antica* 1 (1896), 201). But quite apart from this, feasts of roses are recorded in a number of documents, none earlier than Domitian, at Capua on 5 May, at Rome on 23 May ('macellus rosa [sic] sumat', Philocalus) and 21 May, at Pergamum on 24-6 May, and at various places in northern Italy and central Europe on dates ranging from about 1 June to the middle of July; in other words, at the time of year when roses were to be had abundantly. There is no reason to suppose that all these developed out of the cult of the dead; rather is the reverse true, that the honours done in this manner to the dead were a particular case of inviting them to a feast or other entertainment at which the survivors were also present, or simply a development of the custom, common in antiquity as now, of decking graves with flowers, cf. Nilsson, *op. cit. infra*, 136.

An interesting instance is the *Rosaliae signorum* in the calendar of Dura-Europos which has the entry *pridie kal. Iunius ob rosalias signorum supplicatio*. It seems probable that on that occasion the standards (q.v.) were garlanded with roses. See A. S. Hooey in *Harv. Theol. Rev.* 1937, 15 ff.

M. P. Nilsson, 'Das Rosentest', *Beiträge zur Religionswissenschaft* ii (1914-15), 114 ff. I. J. R.

ROSCIUS (1, *PW* 7), **SEXTUS**, son of a well-connected man of America. The father was killed in 81 B.C., and two relatives, aided by Sulla's freedman Chrysogonus (q.v.), conspired to enter his name in the proscription lists and divide his property, finally (in 80) accusing his son of the murder. Roscius had many noble patrons, including *adlites* of Sulla; but his defence, involving an attack on Chrysogonus, might be resented by Sulla, and so they did not venture to speak for him. The main speech was entrusted—as his first major case—to young Cicero, who made it an Optimate manifesto, powerfully contrasting the good faith and present impotence of the nobles with the irresponsible power of the freedman. Sulla, who genuinely wished to restore the traditional oligarchy, apparently realized that he must support them: Cicero won his case and nothing further is heard of Chrysogonus.

Cicero, *S. Rosc. Am.*, E. Badian, *Foreign Clientelae* (1958), 249. E. B.

ROSCIUS (2, *PIV* 22) **OTHO**, **LUCIUS**, as tribune in 67 B.C. opposed Gabinius (q.v. 2) and tried to gain the support of the *equites* for the Optimates by restoring their right to the first fourteen rows in the theatre—a measure that was unpopular with the *plebs*. It is not known when the right had first been introduced and when abolished; but it was now probably extended to all men of 'equestrian' status. E. B.

ROSCIUS (3, *PW* 16) **GALLUS**, **QUINTUS**, from Solonium in the *ager Ianuvinus* (Cic. *Div.* 1. 79; cf. *Nat. D.* 1. 79 and 82), the famous actor, was of free birth, being brother-in-law to Quinctius (Quinct. 77). Sulla made him a knight (Macrob. *Sat.* 3. 14. 3). Handsome in person (*Arch.* 17), he had a squint (*Nat. D.* 1. 79) and wore a mask (*De Or.* 3. 221). Time moderated his natural vivacity (ibid. 1. 254; *Leg.* 1. 11); supreme in comedy, he also played tragic parts (*De Or.* 3. 102). His name became typical for a consummate artist (*Brut.* 290; *De Or.* 1. 130, 258), his popularity being prodigious (*Arch.* 17). His earnings were enormous (Pliny, *HN* 7. 128; Cic.

QRosc. 23). He was on intimate relations with Catulus (*Nat. D.* 1. 79), Sulla (Plut. *Sulla* 36), and Cicero, to whom he gave his first important brief (Quinct. 77), 81 B.C., and who later (in the *QRosc.*) defended him in a private suit. Cicero mentions his death as recent in 62 B.C. (*Arch.* 17). G. C. R.

ROSTRA. The earliest *rostra*, or speaker's platform, at Rome lay on the south side of the augurally constituted *comitium* (q.v.); it existed in 338 B.C. when it was adorned with the prows (*rostra*) of ships captured from Antium, later with statues and a sundial. This platform is long, with a straight front, associated with the second level of the *comitium*. When rebuilt, probably by Sulla (*JRS* 1922, 21 ff.), it had a curved front. Caesar planned new *rostra* completed in 44 B.C. at the west end of the Forum. The Augustan *rostra*, which incorporated the Julian core, consists of two parts: the curved steps of access on the west, the so-called hemicycle, and the rectangular platform which was faced with marble and decorated with bronze prows. The Augustan *rostra* were called the *rostra vetera* in contrast with the front of the *podium* of the Temple of Divus Julius (29 B.C.), also treated as *rostra* (Frontin. *Aq.* 129; Dio Cass. 56. 34) with ships' prows from Actium. A rough northward extension of the Augustan *rostra* of about A.D. 470 commemorates a naval victory over Vandals (*Röm. Mitt.* 1895, 59).

G. Lugli, *Roma antica* (1946), 140 ff.; Nash, *Pict. Dict. Rome* ii. 276 ff. I. A. R., D. E. S.

ROXANE (the name may be connected with the hill-state of *Roshan*), daughter of the Bactrian baron Oxyartes, was married in 327 to Alexander, who hoped thus to reconcile the great barons of the north-eastern marches. Beyond the story that after Alexander's death she murdered his other wife Barsine (Stateira), little is heard of her; her son Alexander IV was born after Alexander's death, and she and the boy became pawns in the wars of the Successors till Cassander murdered them both. In Greek and Bactrian legend, however, she became a daughter of Darius III and ancestress, through her (supposed) daughter Apama, of the Seleucid and Euthydemid dynasties.

Berve, *Alexanderreich* ii. 346.

W. W. T.

RUBELLIUS (1, *PW* 2) **BLANDUS**, from Tibur, as the first *equus* to teach rhetoric, marked the rise in professional status (Sen. *Controv.* 2, *praef.* 5). He trained Papirius Fabianus who in turn taught the Younger Seneca. He is perhaps the historian cited by Servius on Verg. *G.* 1. 103.

Schanz-Hoasis, § 336. 9, no. 17.

RUBELLIUS (2, *PIV* 5) **BLANDUS**, **GAIUS**, grandson of the above, *convul. suffectus* A.D. 18, married Julia daughter of 'Tiberius' son Drusus in A.D. 33 (*Tac. Ann.* 6. 27. 1). If Juvenal is to be trusted (*Sat.* 8. 39 f.), he had a son of the same name. For his son Rubellius (q.v. 3) Plautus see *Tac. Ann.* 14. 22 and 57-9. M. S. S.

RUBELLIUS (3, *PW* 8) **PLAUTUS**, son of C. Rubellius (q.v. 2) Blandus and Julia the granddaughter of the Emperor Tiberius, was an adherent to Stoicism. His imperial descent made some regard him as a possible rival to Nero, and in A.D. 60, on the Emperor's advice, he withdrew to Asia. Two years later, at the instance of Tigellinus (q.v.), he was forced to suicide, though his father-in-law Antistius (q.v. 2) Vetus urged him to disobey the order. G. E. F. C.

RUBICO (commonly called **Rubicon**), reddish stream flowing into the Adriatic and marking the boundary

between Italy and Cisalpine Gaul: possibly the modern *Pisciattello*. In 49 B.C. Julius Caesar, after some hesitation, precipitated Civil War by crossing it.

Plut. *Caes.* 32; Lucan *l.* 213 f.; Suet. *Iul.* 31, App. *BCiv.* 2. 35.
E. T. S.

RUFINUS (1), FLAVIUS, was left by Theodosius I on his death (A.D. 395) as the chief adviser of his son Arcadius (q.v. 2). He at once incurred the enmity of Stilicho (q.v.); and the latter sent troops to Constantinople who murdered Rufinus in Nov. 395. The poet Claudian wrote vigorously against him. E. A. T.

RUFINUS (2) of Aquileia (c. A.D. 345–410), friend and later antagonist of St. Jerome, travelled in Egypt, founded a monastery on the Mount of Olives, and was the author of many translations from the Greek (Eusebius' *Church History* to which he added two books, Origen, Basil, Gregory Nazianzen, etc.), and of several original works.

WORKS. M. Simonetti, *Tyranus Rufinus Opera*, in *Corpus Christianorum, Ser. Lat.* xx (Turnhout, 1961). Biography, etc.: F. X. Murphy, *Rufinus of Aquileia*, Catholic University of America, Studies in Mediaeval History, N.S. vi, Washington 1945). C. P. II.

RUFINUS (3) (5th c. A.D.), grammarian. His *Commentarium in metra Terentiana* and his *De compositione et de metris oratorum* are extant (ed. Keil, *Gramm. Lat.* vi. 554–78).

Cf. Schanz–Hosius, § 1104.

RUFUS (1), CURTIUS (*PW* 30), of obscure origin and alleged by some to be the son of a gladiator, entered the Senate and won the praetorship, not without encouragement from Tiberius, who remarked 'Curtius Rufus uidetur mihi ex se natus' (Tac. *Ann.* xi. 21). The year of his consulate is unknown (c. 43). Legate of Upper Germany in A.D. 47, he employed his troops with digging for silver in the territory of the Mattiaci and was rewarded with the *ornamenta triumphalia*. Later he was proconsul of Africa, thus fulfilling a prediction made to him in his humble beginnings (Tac. loc. cit., Pliny, *Ep.* vii. 27. 2). He was an old man now, and he died there. The obituary notice in Tacitus hits off an unamiable *novus homo*. Identity with Rufus (q.v. 2), the historian of Alexander, has been canvassed. R. S.

RUFUS (2), QUINTUS CURTIUS (*PW* 31), rhetorician and historian, wrote probably under Claudius (if so, consul about A.D. 43? Cf. RUFUS 1 above), hardly under Augustus, but perhaps under Vespasian. He published a history of Alexander the Great in ten books. Our text begins at book 3 (333 B.C.) and has gaps between books 5 and 6 and in book 10. The portrait of Alexander reflects the Peripatetic view of a tyrant favoured by Fortune, but it contains also varied information, both valuable and dubious, from the general tradition. The description is dramatic, romantic, and rhetorical; we find few technicalities, but emotional presentation, vivid detail, and the introduction of speeches. The style is classic, on the model of Livy, but with contemporary usage in expression.

EDITIONS. J. Miltzell (1841), with commentary: F. Hedicke (2nd ed. 1908, ed. minor 1911); Th. Vogel (1881); P. H. Darné (1897); K. Müller and H. Schönfeld (1954), with German transl. and critical appendix.

W. Kroll, *Studien zum Verständnis der röm. Lit.* (1924), 331; Tarn, *Alexander* v. 91 ff. A. H. McD.

RUFUS (3), CLUVIUS (*PW* 12), the imperial historian, consul probably before A.D. 41. Nero's herald in the theatre, he became Galba's governor of Hispania Tarraconensis. He first supported Otho, but later declared for Vitellius, defending Spain. His *historiae* may have begun with Gaius and ended with Otho; but in any event its

main part covered the reign of Nero. Tacitus (*Ann.* 13. 20; 14. 2) may have followed him in the *Annals*.

Peter, *HRRel.* ii. clxv and 114; Ph. Fabia, *Les Sources de Tacite* (1893), 171, 376; Syme, *Tacitus*, 178 ff., 293 ff., 675 ff. A. H. McD.

RUFUS (4) of Ephesus, physician under Trajan (A.D. 98–117), probably studied in Alexandria; he knew Egypt well, visited Caria and Cos, and practised in Ephesus, at that time a famous medical centre.

Of numerous writings, mostly on dietetics and pathology, these are preserved: Π. ὀνομασίας τῶν τοῦ ἀνθρώπου μερῶν. Ἱατρικὰ ἐρωτήματα. Π. τῶν ἐν νεφροῖς καὶ κύστει παθῶν. Π. σατυριασμοῦ καὶ γονορροίας. Π. τῶν κατ' ἄρθρα νοσημάτων (Latin, *De podagra*).

Rufus was a dogmatist, though of no special creed, a man of great experience and independent mind; in commenting on Hippocrates he did not refrain from criticizing the master. Anatomy he held necessary for sound medical practice. Opposed to general theories, he mostly studied single diseases. He also renounced the usual prognosis and preferred to ask the patient about the history and symptoms of his case. His books, written in a lively and personal style, bear out the judgement of Galen that the objective critic finds nothing missing in Rufus' writings. His influence was greater in the Orient than in the Occident. See ANATOMY AND PHYSIOLOGY, § 11.

TEXTS. Opera, Ch. Daremberg and E. Ruelle (1879); not genuine, 'Ὁρισμοὶ τῶν κατὰ ἄρθρα π. α'. Π. διατομῆς τῶν τοῦ ἀνθρώπου μερῶν. Π. δατῶν. Σύντομος π. σατυριῶν. *De podagra*, H. Mørland, *Symbolae Osloenses* 1933.

MODERN LITERATURE. J. Ilberg, *Abh. Sachs. Akad.* 1910, list of writings, also from Arabic, ibid. 47; cl. M. Wellmann, *Hermes* 1912; for Ephesus, J. Keil, *JOAI* 1905; 1926. H. Gossen, *PW* 1 A. 1207; H. Gartner, 'Die Fragen des Arztes an den Kranken herausgegeben, übersetzt und erläutert', *CMG Suppl.* iv (1902), G. Kowalski, *De corporis humani appellationibus* (Diss. Göttingen, 1900). L. E.

RULER-CULT. I. GREEK. The essential characteristic of Greek ruler-worship is the rendering, as to a god or hero, of honour—τιμή—to individuals deemed superior to other men because of their achievements, position, or power. This tendency lies deeply rooted in the Greek mind and is not to be derived from similar practices in the ancient East.

In the aristocratic society of the Archaic Age, as in the classical *polis* of the fifth century, no man could reach a position of such generally acknowledged pre-eminence as to cause the granting of divine honours to be thought appropriate: the only approximation to deification is the posthumous heroization of oecists (see CITY-FOUNDERS). Only in the period of disintegration after Aegospotami and through the rise of individualism do we find divine honours given to living men, all persons of admitted superiority, usually due to their political or military achievements.

Ruler-cult in a developed form first appears during the reign of Alexander the Great and is directly inspired by his conquests, personality, and, in particular, by his absolute and undisputed power. Alexander's attempt to force the Greeks and Macedonians in his entourage to adopt the Persian custom of prostration before the king—προσκύνησις (in itself not implying worship)—was an isolated and unsuccessful experiment without consequence. Much more important is his encounter with the priest of Ammon (not as yet generally identified with Zeus) at Siwa in 331. The priest seemingly addressed Alexander as the son of Amon-Ra, the traditional salutation due to any Pharaoh of Egypt, but the prestige which the oracle of Ammon then enjoyed throughout the Greek world had a decisive effect, not only on the Greeks, but also and in particular on the romantic imagination of the

young king himself. It is probably the progressive development of these emotions which caused Alexander in 324, together with his order for the restoration of political exiles, to demand and receive formal recognition of his divinity from the Greek *poleis*. Alexander also secured heroic honours for his dead intimate Hephaestion, and it seems clear that his motives were primarily personal rather than political; that is, the desire that his career and personality should receive definite and official recognition from the Greeks.

Alexander demanded honours: they were *voluntarily* granted by the Greeks to his successors and their descendants, and thus the two generations after his death saw the rise of all the characteristic phenomena of Greek ruler-worship. These fall into five categories:

1. Dedications to rulers by individuals are necessarily difficult to interpret; the motives range from sincere devotion to the most interested flattery.

2. Like any oecist, a king was worshipped by cities which he had himself founded—but as a god, not a hero.

3. Rulers were sometimes honoured by having their statues placed in an already existing temple. The king was thought to share the temple with the god (as *σύνναος θεός*) and thus to partake in the honours rendered to the deity and, on occasion, in the deity's qualities.

4. The most characteristic method of dedication was for a Greek *polis*, by legislative enactment, to enrol a king among its official divinities with his own cult and priest. This was a tactful way of honouring a suzerain and could also be an appropriate expression of thanks for the benefactions of a foreign ruler.

5. The Greek monarchies of the east in time created their own official cults. The dynastic cult of the Ptolemies at Alexandria (founded 285–284) in its developed form by the end of the third century consisted of a priest of Alexander, of each pair of deceased rulers, and of the reigning king and queen. In 280 Antiochus I deified his dead father Seleucus and dedicated to him a temple and precinct at Seleucia in Pieria; it was probably also Antiochus I who established the imperial ruler-cult of the Seleucid Empire with high priests of the living king and his divine ancestors (*πρόγονοι*) in each province of the Empire. In the later dynastic cult of the Attalids the kings were deified only after death.

Greek ruler-worship is essentially political and is free from any truly religious emotion (there is no known instance of any prayer addressed to a king). It reached full development only in an age when the effective political powers were supranational imperial States. Its prevalence in the Hellenistic period is primarily caused by the fact that it was the only possible method for the expression of loyalty to such States.

RULER-CULT. II. ROMAN. Hero-cult was not indigenous to Italy. The primitive Romans sacrificed to the ghosts of the dead (*Manes*, q.v.) and conceived of a semi-independent spirit (*genius*, q.v.) attached to living persons. But the myth of a deified founder, Romulus (q.v.), was only invented in or after the fourth century B.C. under Greek influence. From the time of Marcellus' conquest of Syracuse in 212 B.C., Roman officials received divine honours from Greek cities; notable instances are possibly Scipio Africanus (c. 200) and certainly the 'liberator' Flamininus (c. 191). At Rome such honours are not met with until the beginning of the first century B.C., and then exceptionally, e.g. those offered privately to Marius (101) and popularly to the demagogue Marius (3) Gratianus (86). Under Stoic influence the idea that worthy

individuals might become divine after death appeared in Cicero's *Somnium Scipionis* (c. 51) and in the shrine which he planned for his daughter Tullia (d. 45). Caesar as dictator in 45–44 received divine honours, probably by his own wish and perhaps with a reminiscence of Alexander. After his assassination the triumvirs, supported by popular agitation, secured from the Senate his deification in 42.

Imperial emperor-worship has two aspects, the worship of the living ruler, including his identification with gods, and the apotheosis of the dead one; it occurs at three levels: provincial, municipal, and private. In Egypt Augustus succeeded to the religious position of the Ptolemies. Elsewhere the Greeks continued for him the Hellenistic concept of the divine ruler. And at Rome his titles included *Divi filius* and *Augustus*, which gave him a divine aura if not actual divinity. He also enjoyed a certain sanctity in virtue of his tribunician power and, after 12 B.C., the office of *pontifex maximus* (q.v.). Officially, however, Augustus was usually not worshipped directly but in conjunction with the goddess Roma. He particularly encouraged the cults maintained by the provincial assemblies (*κοινά*) in the eastern provinces, e.g. for Asia at Pergamum (29 B.C.) and for Galatia at Ancyra. At Rome the poets constantly spoke of him as divine or divinely inspired. In c. 12–7 B.C. he joined his *genius* with the *Lares compitales* for the official cults of the 265 wards (*vici*) of the city. Throughout Italy, individuals, groups, and towns spontaneously offered worship to him or to his *genius*. In the western provinces Augustus established altars (not temples) to himself, probably again in conjunction with Roma, and assemblies (*concilium*) for Gaul at Lyons (12–10 B.C.), for Germany at Cologne (c. 10 B.C.), and perhaps elsewhere. Municipal (e.g. at Narbo) and private worship seems, however, to have been less common in the West than in the East. After his death in A.D. 14, his cult as *divus Augustus* was formally instituted on the Palatine; cities and provinces (e.g. in Tarraco) throughout the Empire dedicated temples to him as *divus Augustus*. His *Res Gestae* have been most fully preserved on such a temple at Ancyra.

Though his 'constitutional' successors, when consulted, deprecated worship of themselves, the Greeks continued to accord it. Of the 'absolutist' Emperors, Gaius and Domitian required worship, but Nero and Commodus probably welcomed rather than demanded divine honours. The Senate rewarded with apotheosis deceased Emperors who had pleased it.

Emperor-worship was not merely a device to lend dignity and superhuman authority to the ruler or to secure the loyalty of subjects; it represented a spontaneous expression of gratitude to one who had saved and benefited his subjects by establishing peace and prosperity, an expression couched in terms of Hellenistic flattery and supported by the prevalent Stoicism. The practice was perhaps at first more widespread in the East than in the West, more sincere in private than in official (municipal or provincial) cult, and more spontaneous under Augustus than under his successors. In general, it probably contributed little or nothing to fill the religious needs of the population of the Empire. However, it acquired increasing political significance. In the towns of Italy the colleges of *seviri* or *Augustales* in charge of the imperial cult afforded an outlet for the ambition of freedmen, to whom public offices were closed. Augustus' hope that the provincial assemblies might become intermediaries between the cities and the Emperor proved vain, but the provincial and municipal priesthoods and the presence of the provincial temple or altar in a city were much sought-after honours. Emperor-worship enhanced the position of the ruler by contributing to court ceremonial and insignia. Either the ruler or his *genius* (in Greek, his

'tyche') might be invoked with the gods to confirm oaths, a practice to be distinguished from oaths of loyalty to the Emperor. The latter were taken, particularly in the army, before a statue of the Emperor. Offenders against the Emperor's divinity laid themselves open to the charge of treason (*crimen laesae maiestatis*). Though Pliny's detection of Christians by their refusal to sacrifice before the statues of the gods and Trajan in Bithynia (c. A.D. 112) may not represent a general test, this test or that of refusal to confirm an oath by invoking the emperor had become regular in Tertullian's day (c. 200). During the third century, the spread of new oriental 'mystery' cults fostered the view that the emperor was not so much himself divine as especially under divine protection and a channel through which, in a time of temporal and spiritual difficulties, divine favour could be secured for the State. Thus Decius demanded sacrifice to the gods, together with offerings in honour of (not to) himself and an oath by his *genus* as evidence of loyalty from everyone, not merely Christians; cf. the Egyptian certificates (*heli*) of A.D. 250. Finally, when from 312 onwards Constantine (q.v.) and his successors made Christianity more and more the only recognized State religion, the divinity of the Emperor became inconsistent with the dogma that Jesus alone had combined the divine and human. Thus the view that the ruler was especially under divine protection was the only one tenable, and was perpetuated in the medieval theory of the divine right of kings (*rex de gratia*).

RULLUS, PUBLIUS SERVILIUS (*PIV* 80), as tribune (63 B.C.) introduced a major agrarian bill, establishing a commission with extravagant powers to redistribute *ager publicus* in Rome and the provinces. It was probably inspired by Crassus (q.v. 4) and was supported by Caesar, and perhaps both the commission and the land were meant as a bargaining counter to hold against Pompey, whose return with a large army was expected. Cicero, presenting himself as a Popularis defending Pompey's interests, secured the withdrawal of the bill by his (largely extant) speeches *De lege agraria*.

RUMINA, an obscure goddess, who, if her name be not Etruscan (Schulze, *Lat. Eigennamen*, 580 f.), is to be connected with *runa* (breast) and taken to be a *mumen* of suckling. She had a shrine and a sacred fig-tree (*figus Ruminalis*) near the Lupercal, where milk, not wine, was offered.

Vairo, *Rust.* 2. 11. 5 Wissowa, *RR* 242; Latte, who believes in the Etruscan connexion, explains her as the deity of Rome (*RR*, 111).

II. J. R.

RUPIIUS (*PW* 5), PUBLIUS, of an eminent Praenestine family of *publicani*, as a friend of Scipio (q.v. 11) reached the consulship (132 B.C.), in which, for a time, he participated in the action of Popilius (q.v. 2) against the adherents of Ti. Gracchus; but he soon went to Sicily, where he put down the slave revolt, capturing Eunus (q.v.). With a senatorial commission he imposed a severe settlement on the province. He died soon after his return.

E. B.

RUSELLAE, modern *Roselle*, an Etruscan city, stood on a two-crowned hill to the east of the bay that is now the Grosseto plain. Its walls, of polygonal limestone blocks overlaying a seventh-century defence wall of sundried bricks, are dated to the early sixth century and are thus the oldest-known Etruscan stone fortifications. The area within them was inhabited from late Villanovan to late imperial times, with particularly flourishing periods between the sixth and fourth centuries, characterized by imported Attic pottery, and in Hellenistic times, when the city attained its maximum expansion. On the south-east hill, a portion of the Etruscan city of Hellenistic date has been revealed, superimposed on remains of the fifth-fourth centuries: this area has produced a well-stratified sequence of bucchero and of local Campana A and B wares. Rusellae was captured by Rome in 294 B.C.

D. W. R. R.

RUTILIUS (1, *PW* 34) **RUFUS**, PUBLIUS, studied philosophy under Panaetius (becoming a firm Stoic), law under P. Scaevola (q.v. 2) and oratory under Galba (q.v. 3); he served under Scipio (q.v. 11) Aemilianus at Numantia. His sister married a Cotta and he was introduced into the circle of the Metelli, with whom he maintained a lifelong connexion. Failing to reach the consulship of 115 B.C., he unsuccessfully prosecuted—and was prosecuted by—Scaurus (q.v. 1) who had defeated him. In 109/8 he served with distinction as a legate of Metellus (q.v. 6) in Numidia, and in 105, as consul, began the reorganization of military training later completed by Marius. As legate of Scaevola (q.v. 4) in 94/3, he assisted him in re-organizing Asia and governed it in his name for three months, offending powerful Roman interests (especially among the *equites*). On his return he was prosecuted *repetundarum* (with Marius active against him) and, seeking Socratic martyrdom, was convicted and went into exile. The trial became notorious and brought about the attempt of Drusus (q.v. 2) and his advisers to reform the *quaestiones* (q.v.). Honourably received in the province, Rutilius became a citizen of Smyrna, where Cicero met him. He wrote a history of his own time, full of acid judgements on contemporaries, which was read by Sallust and underlies much of our tradition on the period.

E. B.

RUTILIUS (2) **LUPUS**, PUBLIUS (early 1st c. A.D.), rhetorician, abridged in Latin a work on figures of speech by Gorgias, who taught at Athens in the first century B.C. (Quint. *Inst.* 9. 2. 102).

RUTILIUS (3, *PW* 19) **GALLICUS**, GAIUS (*cos. suff.* c. A.D. 70, *cos.* II c. 85), from Augusta Taurinorum. Apart from the poem, with valuable details of his career, which Statius composed to celebrate Rutilius' recovery from an illness (*Silv.* 1. 4), the only evidence about this eminent senator comes from inscriptions. *ILS* 9499 contains his *cursus* down to the consulate (*inter alia* he had been legate of Galatia for nine years, partly under Cn. Domitius Corbulo). He was governor of Lower Germany in 78 (*ILS* 9052), when he defeated the Bructeri and captured the priestess Velela (Stat. *Silv.* 1. 4. 80 f.; Tac. *Germ.* 8). By the year 89 he had been appointed *praefectus urbi*, in which post he may have died.

R. S.

RUTUPIAE, modern *Richborough* (Kent), situated originally on a mainland peninsula of the now silted Thanet channel; a pair of ditches were very probably the

defences of a Claudian landing-party (A.D. 43) and the site was used as a stores base for the conquest. About 80-90 a deeply founded structure (trophy+sea-mark?) was built. Rutupiae was the principal landing-place from the Continent, so that in authors 'Rutupinus' = British. About 250 the trophy, itself in ruins, but perhaps replaced by an equally strange cruciform structure, was surrounded by ditches, which were soon replaced by the

stone Saxon shore-fort of c. 6 acres (Carausius? c. 290 or a little earlier). Quantities of late coins prove a long, perhaps post-Roman occupation.

S

SAALBURG, a site on the Upper German *limes* which commanded a pass across the Taunus mountains, along the outer slopes of which the Roman frontier was established by Domitian. The Saalburg was first occupied during the campaigns against the Chatti (A.D. 83-5) and a fortlet was constructed c. 90 just behind the *limes* proper. A timber fort for an auxiliary cohort was built between A.D. 125 and 128 and given a composite wall of dry stone and timber before 130. This was later reconstructed entirely in stone, probably A.D. 209/13, but the fort was evacuated in the face of the German invasions not later than 259/60 and probably in about 254. The forts and extensive *vicus* have been excavated and the walls and principal buildings of the cohort fort were reconstructed 1898-1907.

SABAZIUS (Σαβαζιος, in Anatolia frequently Σα(ο)(ν)άζιος), a Thracio-Phrygian god, regarded by the Greeks now as purely foreign, again as identical with Dionysus. Wherever his place of origin, Phrygia and Lydia were the chief centres of his cult; the Attalid cult of Sabazius at Pergamum (C. Michel, *Recueil d'Inscriptions grecques* (1897-1927), 46, 142-141 B.C.) was a foundation of the Cappadocian princess, Stratonice. Private associations worshipping Sabazius existed at Athens from the late fifth century, and Demosthenes (18. 259-60) derides his purificatory rites, but evidence for the cult is scanty till imperial times. Identification with Jahwe (cf. Val. Max. 1. 3. 2), whether suggested by Σαβαώθ or σαββαρον, resulted in some assimilation of Jewish practices, but Jewish influence in the Vincentius frescoes at Rome (Dessau, *ILS* 3061) is disputed. Sabazius' chief attribute is the snake, important also in his mysteries. In art, he appears either in Phrygian costume or, since he was frequently called Ζεὺς Sabazius, with the thunderbolt and eagle of Zeus. Noteworthy are the votive hands, making the 'benedictio Latina' and adorned with numerous cult symbols. See also ANATOLIAN DEITIES, HYPHISTOS, MACEDONIAN CULTS.

Fréle in Roscher, *Lex. s.v.*; F. Cumont, *CRAcad. Inscr.* 1906; Nilsson, *GGR* II 658 ff.; C. Picard, *Rev. Arch.* 1961, II. F. R. W.

SABELLI is not synonymous with Sabini (q.v.). It is the Roman name for speakers of Oscan (q.v.). They called themselves *Safineis* and their chief official *meddix* (q.v.). They expanded from their original habitat (reputedly Sabine Amiternum) by proclaiming Sacred Springs and settling in fresh lands (see VER SACRUM), where they usually imposed their language and coalesced with the pre-Sabellian populations. Thus originated Samnites, Frentani, Campani, Lucani, Apuli, Bruttii, and Mamertini. (Paeligni, Vestini, Marrucini, Marsi, and Aequi (?), who spoke Oscan-type dialects, presumably

had a similar origin). These migrations were still continuing in the fifth century B.C. and later: Sabelli conquered Campania c. 450-420, Lucania c. 420-390; Bruttii appeared c. 356. But the Sabelli were more expansive than cohesive. The Samnites, the most typical Sabelli, had no feeling of political unity with their ancestors the Sabines, nor the Frentani with theirs, the Samnites.

Old Sabellian is the description inaccurately applied to some untranslated inscriptions from Picenum, including the oldest non-Etruscan inscriptions from Italy. The two dialects in question may be Illyrian (J. Whatmough, *Præ-Italic Dialects* II (1933), 207).

E. T. Salmon, *Samnium and the Samnites* (1967).

E. T. S.

SABINA, VIRIA, daughter of L. Vibius Sabinus and Matidia (q.v.) (child of Trajan's sister Marciana, q.v.), was thus Trajan's grand-niece. She married Hadrian (q.v.) in A.D. 100, through Plotina's favour. S.H.A. *Hadrian*. 11. 3 describes the childless marriage as unsuccessful and states that the praetorian prefect Septicius Clarus, Suetonius (q.v. 2), and many others were dismissed from service because they were too sympathetic with Sabina. But there is no solid evidence for this view. Sabina remained faithful; she received the honour of coinage with the title *Augusta* in 128. She accompanied Hadrian on his travels; in 130, a companion, Julia Balbilla, had five epigrams cut on the 'colossus of Memnon' in Egypt (*Epigr. Gr.* 988-92). Sabina was consecrated by Hadrian after her death in 136 or 137, and was commemorated on posthumous coins. Groundless scandal subsequently ascribed her death to poisoning by Hadrian, or to compulsory suicide.

S.H.A. *Hadrian*; *Diz. Epigr.* iii. 636 ff.; B. W. Henderson, *Hadrian, etc.* (1923), 22 ff.; Wegner, *Herrscherbild* II. 3 (1956), 84 ff., 126 ff.; Strack, *Reichsprägung* II. 23 ff., 116; B.M. *Coins, Rom. Emp.* III (1930). See also under HADRIAN. C. H. V. S.; M. II.

SABINI lived north-east of Rome principally in villages, politically disunited, often unwallled, and usually perched on Apennine hilltops (Strabo 5. 228, 250). Their origin is unknown; ancient writers, observing their bravery and simple morality, thought them Iaccedaemonians (Dion. Hal. 2. 49). They probably spoke Oscan (see SABELLI; cf. Varro, *Ling.* 7. 28), and were famous for their superstitious practices and strong religious feelings (Festus, 434 L.; Cic. *Dev.* 2. 80); many Roman religious institutions reputedly derived from them. Although the Rape of the Sabine Women is fiction, stories connecting Sabines with primitive Rome are not entirely untrustworthy. Peculiarities of the Latin language, duplicated usages in certain Roman religious practices, the double nature of the Roman burial customs, traditions concerning the Quirinal, Esquiline, and Numa Pompilius imply a Sabine element in the Roman population, the result not of Sabine conquest but of amalgamation or gradual infiltration (e.g. the Claudii: Livy 2. 16). Livy and Dionysius record numerous

wars against Sabines from regal times until 449 B.C., embellishing them with accounts of the legendary Titus Tatius and victorious Valerius (figments doubtless of Valerius Antias' imagination); probably these were operations against sporadic Sabine bands. In 449 Rome won a resounding victory (Livy 3. 38 f.). Silence envelops the Sabines thereafter until 290, when M'. Curius Dentatus for some unrecorded reason suddenly conquered them (Livy, *Epit.* 11), confiscated some of their territory (I. Frank, *Klio* 1911, 367), and sold some Sabines into slavery, the remainder becoming *cives sine suffragio* (Vell. Pat. 1. 14). However, the fertile *Ager Sabinus* (modern *Sabina*; but its exact ancient limits are unknown) remained Sabine: personal names ending in *-edius* were common there (A. Schulten, *Klio* 1903, 235); *octoviri*, the annual magisterial board (prototype of the quattuorviral constitution of Roman *municipia*?), still administered Sabine towns. Becoming full citizens in 268 (Cic. *Balb.* 13), the Sabines were rapidly romanized and ceased to be a separate nation. Chief towns: Reate, Amiternum, Nursia, and, before 449, Cures, Nomentum, and Fidenae (qq.v.).

Whatmough, *Foundations of Roman Italy* (1937), 285 f.; E. C. Evans, *Amer. Acad. Rome* 1939, E. T. Salmon, *Samnium and the Samnites* (1967). E. T. S.

SABINUS (1), Ovid's friend, who composed imaginary replies to Ovid's letters from heroines (*Heroides*) and modelled a work on the *Fasti*.

SABINUS (2, *PW* 29), MASURIUS, a Roman jurist of the first half of the first century A.D. Descended from a relatively poor family, he lived on the contributions of his pupils; in his fifteenth year he obtained equestrian rank, and he received the *ius respondendi* (see JURISPRUDENCE), being perhaps the first of this rank to do so. Sabinus was famous for a standard work, an exposition of the *ius civile* in three books, which served posterity as a model for systematic treatises on private law, entitled *Ex Sabino* or *Ad Sabinum* (as following the system and disposition of Sabinus' work). Other works: *Ad edictum praetoris urbani*; *De furtis*; *Responsa*, and some writings not of a juridical character.

Most of the jurists of the imperial period up to the middle of the second century A.D. were adherents of one or other of two jurists' Schools (*scholae, sectae*). The one was called *Sabiniani* after Sabinus or *Cassiani* after his pupil and successor C. Cassius (q.v. 7) Longinus, the other *Proculiani* after its leader Proculus (q.v.), though our main source, Pomponius (q.v. 6) in *Dig.* 1. 2. 2. 47 ff., takes their origins even further back, to Capito (q.v. 2) and M. Antistius Labeo (q.v.) respectively. These two jurists of the Augustan age held opposing views on both law and politics, but no corresponding contrasts of a general character can be traced between the two Schools. There is a long series of points of law on which they were divided, but no consistent doctrinal basis for their disputes can be found. Nor is this surprising in view of the pragmatic character of the jurists and their lack of interest in broad theoretical constructions. Other notable heads of the Sabinians were Javolenus and Salvius Julianus (qq.v.), and of the Proculians, Nerva (q.v. 4), Pegasus (q.v. 2), Celsus (q.v. 3), and Neratius (q.v.) (see also POMPONIUS 6 and CAIUS 2). The Schools were evidently more than just 'schools of thought', but of their organization we know nothing. They must have died out in the later second century, since there is nothing to suggest that any of the later jurists, from whom the bulk of the surviving literature comes, were members of either.

O. Lenel, *Sabinus-System* (1892); G. Baviera, *Le due scuole dei giur. rom.* (1898); B. Kübler, s.v. 'Rechtsschulen', in *PW* I A. 381 ff., an exhaustive exposition of the opposing school doctrines; S. di

Marzo, 'Cassiani e Sabiniani', *Riv. ital. per se scienze giurid.* 1919, 109 ff.; and see bibliography s.v. JURISPRUDENCE AND LAW AND PROCEDURE, ROMAN, I (History and sources). A. B.; B. N.

SABINUS (3), FLAVIUS (*PW* 166) (*cos. suff. anno incerto*), born c. A.D. 8, the elder brother of the Emperor Vespasian. He was legate of Moesia for seven years (c. 49-56) and *praefectus urbi* for twelve years (Tac. *Hist.* 3. 75, where some suspect the text) under Nero and Otho, though not continuously. When the Flavian forces approached Rome in Dec. 69, he all but completed negotiations for the abdication of Vitellius, when he was set upon by auxiliary troops of the German armies and killed with his friends after a siege on the Capitol, where he had taken refuge. 'Innocentiam iustitiamque eius non argueres; sermonis nimius erat' (Tac. *Hist.* 3. 75). R. S.

SABINUS (4), TITUS FLAVIUS (*PW* 169), consul in A.D. 82 with Domitian, was married to Julia (q.v. 5: 'Titus' daughter, then Domitian's mistress), and was killed by Domitian before the end of 84. His disgrace perhaps involved the banishment of Dio of Prusa.

G. Townend, *JRS* 1961, 54, shows ground for supposing that he and his brother Clemens (q.v.) were not, as has generally been thought, the sons, but the grandsons of Sabinus (3): their father could have been the Flavius Sabinus who commanded Othonian troops and was *cos. suff.* in 69 (Tac. *Hist.* 1. 77, 2. 36). G. E. F. C.

SABRATHA (Neo-Punic *Sbrtn*; Greek *Ἀβράθρα*). A Phoenician port east of the Lesser Syrtis, probably founded in the fifth century B.C., it formed part of the African Tripolis (q.v.) and acquired colonial status in the second century A.D. It enjoyed great prosperity in the Early Empire; the elephant in the mosaic floor of the office of the *Sabratenses* in Ostia may symbolize its trade in African ivory. Sabratha fell into decay in the fifth century and revived briefly under the Byzantines who gave it new walls. Large areas of the city have been excavated, showing the crowded early quarters near the harbour, the Roman civic centre, and a quarter regularly laid out during the second century. Public buildings include the basilica where Apuleius must have been brought to trial (*Apol.* 73), curia, baths, theatre, amphitheatre, temples, including one to Isis, and several churches, among them a Justinianic one with outstanding mosaics (Procop. *De Aedif.* 6. 4. 13).

D. E. L. Haynes, *The Antiquities of Tripolitania* (1956); G. Pesce, *Il tempio d'Iside in Sabratha* (Monografie di Arch. Libica IV, 1951); G. Caputo, *Il teatro di Sabratha* (ibid. III, 1950). O. B.

SACADAS, musician and poet, of Argos (Paus. 9. 30. 2), won three Pythian victories with the flute, composed tunes and elegiac poems set to tunes (Plut. *De mus.* 8), connected with the second establishment of music at Sparta in the first half of the seventh century B.C. Nothing of his work survives. See MUSIC, § 10. C. M. II.

SACAEA (Σάκαια, Strabo II. 8. 4-5, 512; Σακέα, MSS. of Athenaeus, 639 c; τῶν Σακῶν ἑορτή, Dio Chrys. *Orat.* 4. 66), a Babylonian festival, perhaps of New Year (S. II. Hooke, *Orig. of Early Semitic Ritual* (1938), 59), kept up by the Persians. It was a time of general licence, feasting, and disguising (Strabo), when slaves ruled their masters (Berosus in Athenaeus) and a criminal was given all royal rights for the five days the feast lasted and then put to death (Dio).

See Frazer, *GB*¹, index s.v.

H. J. R.

SACERDOS, MARIUS PLOTIUS (3rd c. A.D.), grammarian and metrician. The first book of his *Artes grammaticae* (ed. Keil, *Gramm. Lat.* vi. 427-546) deals with the parts of speech and *vitia orationis* (but the introduction is

lost); the second with nouns, verbs, and constructions; the third with metres. The three books seem not to have been published as a single work and the second is in essentials identical with the spurious *Ars catholica Probi* (cf. Keil iv. 3-43). This work is the oldest Latin grammatical treatise extant in anything like its entirety.

Schanz-Hosius, §§ 604-5.

J. F. M.

SACRAMENTUM (LEGAL) signified in the oldest Roman civil proceeding (*legis actio sacramento*) the sum of money deposited *in iure* by both the litigants as a stake. The loser in the hearing before the judge forfeited his deposit to the State. Later *sacramentum* was not deposited but guaranteed by sureties (*praedes*). The opposite assertions of the parties concerning the right claimed by the plaintiff formed a kind of wager, and the judge had to decide (according to Cic. *Caec.* 33. 97) which party's *sacramentum* was *iustum*, and thus indirectly to settle the issue. The amount of the *sacramentum* depended on the value of the object under litigation: 500 *asses* if the value exceeded 1,000 *asses*, otherwise 50. *Sacramentum* has this meaning as early as the XII Tables, but it presumably began as an oath (the literal meaning). Perhaps the sum of money (earlier probably oxen or sheep) originated as an expiation of perjury. We are told that originally the money was paid to the pontiffs and spent on public sacrifices (Varro, *Lang.* 5. 180; Festus, s.v. *Sacramentum*).

For bibliography see LAW AND PROCEDURE, ROMAN, II.

A. D.; B. N.

SACRAMENTUM (MILITARY), the oath of allegiance, sworn on attestation by a Roman recruit. In republican times this was administered in two stages in order to save time: first came the *praenuntiatio*, in which a selected man recited the complete oath, then the remainder came forward in turn and repeated the words 'idem in me'. A similar procedure was probably followed under the Empire whenever circumstances warranted it. At attestation the number of recruits may occasionally have been small enough to justify individual swearing-in, but the shortened version may have been used at the annual renewal of the oath. Up to and including A.D. 69, this annual renewal took place on New Year's Day, but Fink argues that the oath was transferred, either by Vespasian after his defeat of Vitellius, or by Domitian after the rebellion of Antonius Saturninus, to the date of the *vota*, 3 Jan.

G. R. W.

SACRED BAND (*ἱερὸς λόχος*), the picked corps of Thebans formed by Gorgidas (378 B.C.). It consisted of 300 men who were traditionally grouped as pairs of lovers. To Pelopidas was due the idea of keeping the band together and so fostering their *esprit de corps*. They fought under him at Tegyra (375) and on the attacking wing at Leuctra (371), and were said to have remained undefeated till their heroic annihilation at Chaeronea (338). Their exact equipment is not recorded, but evidently they were shock troops and were largely responsible for the military supremacy of Thebes. A similar corps was formed by the Carthaginians, perhaps in imitation of the Thebans.

Plut. *Fel.* 14 ff.; Ath. 13. 561 e; Polyaeus 2. 5. 1.

H. W. P.

SACRED WARS, the name of the wars declared by the Delphic Amphictiony against one or more of its members on the ground of sacrilege against Apollo.

The *First Sacred War* arose from a dispute between the Delphians and Cirrha about Cirrha's right to levy tolls on pilgrims. Solon is said to have urged Athens to join

in the war, and Cirrha was annihilated c. 590 B.C. by the forces of Thessaly, Sicyon, and Athens. Delphi was declared independent, and Thessaly organized the Amphictiony to her interest.

The *Second Sacred War* was precipitated by a Phocian seizure of Delphi. The Spartans restored the Sanctuary to the Delphians. But soon afterwards the Athenians, led by Pericles, reinstated Phocis (448). We do not know when Delphi was again liberated; its independence was affirmed in the Peace of Nicias (Thuc. 1. 112; 5. 18).

The *Third Sacred War* involved most of Greece and ended in the intervention of Philip II of Macedon. During the Theban Hegemony Thebes had controlled the Amphictiony, and in spring 356 B.C. passed through its council a threat of war, unless Phocian separatist leaders paid the fines imposed on them for cultivating the Crisaean plain (between Delphi and Cirrha), which was sacred to Apollo. The separatists, led by Philomelus, seized Delphi and repelled Boeotian and Locrian attacks. The Sacred War was finally begun in autumn 355, when the Thebans obtained an open declaration of hostilities from the Amphictiony. Philomelus, with passive allies in Sparta, Athens, Achaea, and others, raised mercenaries with Delphian funds to face the coalition of Thessaly, Locris, and Boeotia. Defeating the Thessalians, who withdrew from the war, Philomelus defended Phocis successfully but was killed at Neon (354). Onomarchus, his able successor, invaded Boeotia and subdued Doris, Locris, and part of Thessaly, where he twice defeated Philip of Macedon (353). In 352 Onomarchus, despite Athenian assistance, was defeated and killed by Philip in Thessaly; his successor, Phayllus, held Thermopylae with aid from Athens, Sparta, and Achaea, and prevented Philip from entering central Greece. He eventually fell ill and was succeeded by Phalaecus, who pillaged the shrine at Delphi. By 347 Phocis and Thebes were exhausted by guerrilla warfare; Thebes and Thessaly invited Philip to intervene, while a faction in Phocis invited Athens and Sparta; but Phalaecus, regaining power, rebuffed both. Athens then allied with Philip, and Phocis, isolated, surrendered to Philip, who reconvened the Amphictionic Council. The Phocians were disarmed and obliged to receive garrisons and to pay an indemnity. Their Amphictionic votes were transferred to Philip.

For the First Sacred War see W. G. Forrest, *BCH* 1956, 33 f.; H. W. Parke and D. E. W. Wormell, *The Delphic Oracle* (1956), 104 ff. For the chronology of the Third Sacred War see P. Cloche, *Étude chronologique sur la troisième guerre sacrée* (1915); N. G. L. Hammond, *JHS* 1937, 44 ff.

N. G. L. H.

SACRIFICE (from the Latin *sacrificium*, the performance of a sacred action).

1. A sacrifice, according to Plato (*Euthyphro* 14 c), is a gift to the gods, and this was the current view of antiquity (in which the subject was treated by various scholars, of whom Philochorus is especially noteworthy). Modern comparative method, however, combined with anthropological theory, has sufficiently shown the complexity of the problem. One ancient attempt to classify the confused mass of details is that of Theophrastus, who distinguished offerings of praise, of thanksgiving, and of supplication. We may also distinguish between gods, daemones (heroes), and the dead as recipients of the offerings, and between private and public sacrifices. Finally, we may lay stress on the material of the sacrifice, the difference between vegetable and animal offerings, and on the way in which the offerings were made over to the supernatural powers (communal-sacrificial feast, holocaust, burial, libation, etc.). In view of the prehistoric origin of most of the sacrificial ritual it is for the most part extremely difficult to detect the real source of the ritual in question, which is very often of a purely

magical nature. Only insight into primitive mentality and evolutionary method can here give us a better understanding of the problems; and yet the religious and ethical notions of sacrifice in classical antiquity and in higher religions in general are quite different from those of primitive and savage worshippers.

2. *Bloodless offerings and blood offerings.* (i) Theophrastus and other ancient philosophers believed that man at first knew only vegetarian food and accordingly offered to the gods grass and roots, cereals, vegetables (even blades and leaves), fruits and non-intoxicating liquids (principally milk). Animal food is, however, probably of equal antiquity, but in many Greek cults, especially those of chthonian deities, vegetables were prescribed (all kinds of fruits in the procession for the Sun and the *Ilorai* at Athens, a dish of beans at the Pyanopsia for Apollo, etc.); in a number of cults cakes (q.v.) were customary (cf. *Ar. Plut.* 661 and schol.). We may add cheese, honey, and oil; and, no doubt, home-grown incense was from the remotest antiquity burnt for the gods (*θύω* originally means to 'fumigate', later commonly to 'sacrifice', as contrasted with *ἐναιεῖν*, which is often used of offerings to the dead and heroes).

(ii) *Blood offerings* were the most popular form of ancient sacrifice, public and private. The deity was provided with the same food as the worshipper, meat from domesticated or wild animals and birds, and sometimes fish (q.v.). The meat, specially selected for the deity, was burnt on the altar, wine being simultaneously poured into the flames. Many details, known to us from Homer, may have had a magical character; the sacrificer washed his hands, sprinkled barley-grains, threw some of the victim's hair into the fire, touched the altar (the centre of sanctity), and in a prayer praised the god, thanked him, or begged for his help. The entrails were separately cooked and tasted before the communal sacrificial feast started (on this point Greek and Roman usage agree remarkably). The deity was the honoured guest: this feature was still more prominent at the Theoxenia (q.v.; cf. the *lectisternia*, q.v., of the Romans). Epithets like 'goat-eater' (i.e. Hera), 'bull-eater' (Dionysus) bear witness to the original conception of the deity as really eating of the flesh of the victim. On many inscriptions the necessity of eating the flesh (being sanctified, *tabu*) within the holy precincts is enforced. We may infer that more indifferent worshippers often took it home; in other sacrifices this was quite correct. Concerning Roman ritual it is especially noteworthy that the sacrificer covered his head with his toga during the whole operation. Music (pipes, also lyre) was traditional in Greece as in Rome.

The choice of animals (which ought to be without blemish) was essential and intricate; the rules generally apply to the Greeks as well as the Romans. Male deities usually preferred male victims; bright (celestial) deities demanded light-haired victims, the nether world (and the dead) black victims, but there were many exceptions. The virgins Athena and Artemis sometimes wanted unbroken cattle. A pregnant sow was offered to the earth-goddess in order to intensify her *mana* (her fertility), a cock to the war-god. To some deities animals unfit (or not used) for human food were sacrificed: dogs to Hecate, Eleithyia, Enyalios (Sparta); horses to Poseidon, the Sun (burnt-offering), the Winds (also the river Skamandros into which horses were thrown, according to the *Iliad*; cf. the *equus October* sacrificed to Mars at Rome); asses to Priapus and (at Tarentum) to the Winds. No doubt there existed a mysterious sympathy between these gods and their victims (cf. also the red dog sacrificed to the spirit of the mildew at the Roman Robigalia, see ROBIGUS); the gods were formerly believed to appear in the shape of these very animals, as legend and archaeological evidence

still attest (so Poseidon as god of the earth and the underworld in the shape of a horse).

All sacrifices in which the worshippers shared the victim's flesh (or other food-offerings) with the god(s) are communion-feasts. The Bouphonia at Athens was this kind of sacrifice—the sources do not mention fire or cooking of the victim simply because the writers (Androtion ap. Schol. in *Ar. Nub.* 984; Theophr. ap. Porph. *Abst.* 2. 29; Paus. 1. 24. 4, 28. 10) have given their attention to the strange ritual which accompanied the offering. That ox which took a *pelanos* from a cult table at Zeus' festival of the Dipoleia or Bouphonia was killed; the killer dropped the axe or knife and fled; the implement was then brought to trial, convicted, and cast into the sea. After slaying the ox, everyone present tasted its flesh, apparently raw; thereafter, we may suppose (since the words used are *θύειν* and *θύσία*), the participants prepared the usual communion-meal. They completed the dramatic ritual by stuffing the victim's lude with grass and yoking the dummy ox to a plough. This sacrifice, it appears, had a preliminary touch of omophagy; but the omophagies of Dionysiac worship belong to legend rather than to reality: we find no trustworthy evidence of Dionysiac omophagy as a contemporary practice.

3. In piacular (propitiatory) and purificatory sacrifices the victim or offering was utterly destroyed. As commonly stated in modern works on Greek religion, heavenly and upperworld gods tended to receive a communion sacrifice made (verb *θύειν*) upon a *βωμός* in the daytime; and chthonian deities, heroes, and the dead tended to receive holocausts, made (verb *ἐναιεῖν*) in the evening on a hearth altar, *εἰσάρα* or *ἑρμία*, or in a pit (*βόλπος*); but such a distinction between heavenly and chthonian worship was far from being invariable and universal, since each cult developed its own customs and practices. Many a chthonian cult had a *βωμός* and communion sacrifices (especially common in the worship of the dead); Olympian cults occasionally had *εἰσάρα* (e.g. in the temple of Apollo at Delphi, who also had an outdoor *βωμός*); and holocausts could be made to upperworld gods on *βωμοί*, usually in a time of crisis or fear. Tithes, the firstfruits of herds, flocks, crops, the hunt, and spoils of war (*ἀναρχαί*, *primitiae*), were offered in their entirety to either Olympian or chthonian powers. The verbs *θύειν* and *ἐναιεῖν* are often used interchangeably, especially in poetry. Some *εἰσάρα*, placed over a tomb, had a tube or hole which carried the victim's blood and libations down to the corpse below.

Although Greek heroic legends tell of human sacrifices, as of Iphigenia at Aulis, there is no trustworthy evidence that the Greeks ever offered human victims. The historical Greeks considered human sacrifice a barbarian practice, unholy (*ἀνόσιον*) for Greeks (Ps.-Plato, *Minos* 315). Reports of exceptions are very dubious: there is no reliable evidence that human sacrifices were made as late as the second century A.D. or even the fourth century B.C. in the cults of Zeus Lycacus in south Arcadia, Zeus Laphystius at Halos in Thessaly, and Dionysus Omestes on Tenedos and Chios. We can attribute these reports of exceptional human sacrifices to folk beliefs which circulated throughout Greece outside of the immediate neighbourhoods of these cults, and which probably arose from strangers' misunderstandings of the rites performed. For Italy too there is no sure record of human sacrifice, unless one counts the burial alive of two pairs of foreigners (Gauls and Greeks) in the Forum Boarium (3rd c. B.C.). The piacular killing of a criminal as scapegoat at Massalia and the occasional slaughter of captives of war are hardly evidence of human sacrifice among Greeks and Romans.

4. The oath sacrifice was a magical rite, since an oath is a conditional curse which the oath-taker places on

himself; if he violates the oath, the named penalties are expected to follow automatically. As described in the *Iliad* (3. 268–301, 19. 250–68), the parties to the oath first cut hair from the victims' heads (two lambs in *Iliad* 3, a boar in 19), then invoked the appropriate gods, stated the terms of contract or treaty, cut the victims' throats, poured libations of wine upon the ground, prayed to the gods, and finally either buried the victims or cast them into the sea.

P. Stengel, *Die griechische Kultusaltertümer*² and *Opferbräuche der Griechen* (1910); S. Eitrem, *Opferitus und Voropfer* (1915) and *Symb. Osil* 1938, 9 ff.; A. Loisy, *Essai historique sur le sacrifice* (1920); C. G. Yavis, *Greek Altars* (1949); R. K. Yerkes, *Sacrifice in Greek and Roman Religions and Early Judaism* (1952); S. Dow, D. H. Gill, 'The Greek Cult Table', *AJArch* 1965, 103 ff. S. E., J. E. F.

SACROVIR, JULIUS (*PW* 452), a noble of the Aedui (q.v.), whose family had received Roman citizenship, perhaps from Caesar. In A.D. 21 he and Julius Florus of the Treveri (q.v.) led a rebellion against Rome of which the basic cause was the heavy indebtedness of the Gauls to Roman financiers. Sacrovir collected a large army of his countrymen and occupied Augustodunum (q.v.), but was easily defeated by C. Silius, legate of Upper Germany, and committed suicide. The triumphal arch at Arausio (q.v.) probably commemorates the Roman victory.

C. Julian, *Histoire de la Gaule* IV (1913), 153 ff.

A. M., T. J. C.

SAEPINUM, Samnite (q.v.) mountain town south of Bovianum Undecimanorum (q.v.): modern *Terravecchia near Sepino*. The Romans stormed and destroyed it in 293 B.C. Tiberius built another Saepinum (modern *Altilia*) in the plain below, althwart a famous sheep-track (c. A.D. 4). The ruins of both Samnite and Roman towns are extensive and are being carefully excavated. E. T. S.

SAEPTA IULIA, the voting enclosure for the *comitia tributa*, between the Pantheon and the Temple of Isis in the Campus Martius; it was planned and begun by Julius Caesar (Cic. *Att.* 4. 16. 14) and completed by Agrippa in 26 B.C. The long rectangular voting area, about 300 m. × 95 m., lay due north and south, and was flanked by colonnades, the *Porticus Meleagri* on the east and the *Porticus Argonautarum* on the west; the *Diribitorium*, where the votes were counted, closed its southern end. Parts of the building appear on the Severan Marble Plan, and some walls of the *Porticus Argonautarum* and *Duibitorium* survive, dating from a reconstruction after the fire of A.D. 80.

When the building lost its original purpose, it came to be used for gladiatorial contests and other forms of entertainment, and served as a luxury bazaar (Mart. 9. 59).

G. Gatti, *L'Urbe* 1937, fasc. 9, 8 ff.; G. Carettoni, *Forma Urbis Romae* (1860), 97 ff.; Nash, *Pict. Inct. Rome* II. 291 ff.; L. R. Taylor, *Roman Voting Assemblies* (1966), 47 ff. D. E. S.

S(A)EVIUS NICANOR (2nd–1st c. B.C.), grammarian, the first to gain fame by his teaching (Suet. *Gram.* 5), wrote *commentarii*, said to have been mainly borrowed, and a *satura*.

SAGUNTUM (later *Muriedro*, now *Sagunto*), a city of the Edetani (or Arsetani; cf. *Arse* on coins) about 16 miles north of Valencia in Spain. It had close trade relations with Massilia. An alliance with Rome, and its subsequent siege and capture by Hannibal (219 B.C.), figured in history as the proximate cause of the Second Punic War. In 217 the elder Scipios moved against it (traces of their camp at the neighbouring Almenara survive) and it fell by 212. The city and its walls were rebuilt by the Romans. Sertorius occupied it, but was driven out by

Metellus and Pompey in 75. It became a *municipium civium Romanorum* under Augustus. It was noted for its cereals, a variety of fig, and a type of pottery. Some of the amphorae in Monte Testaccio at Rome came from Saguntum. There survive traces of the Iberian wall and Punic buildings on the citadel and a Roman theatre.

M. Gonzales Simancas, *Sagunto, sus monumentos y las excavaciones* (1929), *PW* s.vv., 'Saguntum' and 'Zacantlia', for Almenara camp, *Arch. Anz.* 1927, 233; 1933, 525. J. J. VAN N.

SALACIA, cult-partner of Neptunus (Gellius 13. 23. 2), probably the *numen* of springing water (root of *salire*; for the suffix cf. *salax*); Neptunus (q.v.) is a deity originally of fresh water.

SALAMIS (1), an island in the Saronic Gulf between the western coast of Attica and the eastern coast of the Megarid, closes the bay of Eleusis on the south. In the strait formed by the slopes of Mt. Aegaleus, the island of Psyttaleia, and the promontory of Cynosura on the south and the small island of St. George on the west, the Persian fleet was crushingly defeated (Sept. 480 B.C.). There is an important Early Iron Age cemetery. Though probably colonized by, and originally belonging to, Aegina, and temporarily occupied by Megara (c. 600 B.C.), Salamis shared the fortunes of Athens from the age of Solon and Pisistratus. Declared a cleruchy soon after Cleisthenes' reforms, it was consequently exploited. In 318 it was conquered by Macedonia. Aratus restored it to Athens (c. 230).

P.-K, *GL* i. 3. V (b); C. F. Styrenius, *Op. Arch.* 1946, N. G. I., Hammond, *JHS* 1956, 32 f. (the battle). P. T.

SALAMIS (2), the principal city of Cyprus, situated on the east coast on a wide, sandy bay. It succeeded an inland settlement at Enkomi which has yielded very rich Mycenaean remains. It appears to have been the first Cypriot city to strike coins; and from these can be recovered a list of kings from the later sixth century onwards. In 411 B.C. King Evagoras began a Hellenic revival against Phoenician encroachment and oriental influences in Cyprus, and became briefly master of nearly all the island. Salamis was the scene of two notable battles: here in 498 B.C. the Persians crushed Cypriot participation in the Ionian revolt, and in 306 Demetrius the Besieger defeated Ptolemy I in a naval action. Capital of Cyprus under the earlier Ptolemies, owing to the silting up of its harbour it was superseded about 200 B.C. by Paphos (q.v.). Under the Romans it remained politically the second city; and supremacy was not restored to it until its refunding by Constantius II as Constantia. In the Roman period, to which all the visible ruins date, it contained until A.D. 116 a large Jewish population.

Excavations J. A. R. Munro and H. A. Tubbs, *JHS* 1891, 50 ff. Gymnasium and theatre V. Karagorghis, *BCH* 1963, 380 ff.; id. *Salamis in Cyprus* (1969); *Arch. Anz.* 1963, 574 ff. T. B. M.

SALAPIA (modern *Salpi*) was a port at the south end of the Gulf of Manfredonia near Margherita di Savoia in northern Apulia. The area always suffered from silting and the classical coastline now lies over 2 miles inland. The early city, where Hannibal wintered, lay in the area of le Mattone on the edge of the modern salt-pans, 2 miles west of Trinitapoli. Sometime in the last two centuries B.C. this site became so unhealthy through silting and malaria that it was abandoned in favour of another four Roman miles away (Vitr. *De Arch.* 1. 4. 12). This second site is marked by the Roman and medieval remains at Posta di Salpi further west along the coast. G. D. B. J.

SALARIIUM is a term used in the imperial period to denote regular payments to officials and (from the reign of Vespasian) to doctors and teachers of rhetoric paid

either by the Emperor or by local communities (*Dig.* 50. 9. 4. 2). Augustus instituted the making of regular payments to senatorial and equestrian officials in the provinces (*Dio* 53. 15). The word *salarium* was used (*Tac. Agr.* 42) for the pay of a proconsul, which was 1,000,000 sesterces p.a. (*Dio* 88. 22); it is not specifically attested for the different sums paid to *procuratores* (q.v.). It is used of the payment by the Emperor to his *quaestor Augusti* (*ILS* 8973), the pay (25,000 sesterces) of a *tribunus semestris* (*CIL* xiii. 3162), payments by an Emperor or a *legatus* to his *comites* (*Suet. Tib.* 46; *Dig.* 1. 22. 4; 50. 13. 1. 8), and the payment by the *aerarium* (q.v.) of the *scriba* of a provincial quaestor (Pliny, *Ep.* 4. 12) and by the *fiscus* (q.v.) to regular *advocati fisci*. A few inscriptions are known in which soldiers, mostly *evocati* of the Praetorian Cohorts, describe themselves as *salaris*.

The rule of classical Roman law that the hire of services could not be the object of *locatio conductio* was waived in the case of *professores*, and by analogy *comites* (*Dig.* 50. 13), who could thus bring actions for the payment of *salaria* by extraordinary proceedings. F. G. B. M.

SALASSI, a Gallic tribe occupying the Val d'Aosta and controlling the Great and Little St. Bernard passes and the mining industry of the valley (gold, iron, and probably other metals). The gold-mines were acquired by Rome in 143 B.C., and the route into the Po valley was controlled from 100 B.C. by the colony planted at Eporedia (q.v.). The tribe was conquered in 25 B.C. by A. Terentius Varro Murena (q.v.), and the colony of Augusta Praetoria (q.v.) founded in the following year.

Strabo, 4. 206 (4.6. 7); Cass. Dio, 53. 25. G. E. F. Chilver, *Alpine Gaul* (1941). P. S.

SALII (from *salire* 'to dance'), an ancient ritual *sodalitas* (see *SODALES*) found in many towns of Italy, usually in association with the war-god. Outside Rome they are heard of at Lavinium, Tusculum, Aricia, Anagnina, and especially at Tibur, where they were attached to Hercules (*Serv. ad Aen.* 8. 285). At Rome they were connected with Mars, though it is possible that of their two companies, each twelve in number, the Palatini and the Collini (or Agonenses), the latter originally belonged to Quirinus; they were required to be of patrician birth and to have both father and mother living. They wore the old Italian war-dress, *tunica picta*, with breastplate covered by the short military cloak (*trabea*), and the conical felt hat known as the *apex* (q.v., see *Dion. Hal.* 2. 70). A sword was girt by their side; on the left arm they carried the *ancilia*, 'figure of eight' shields, preserved in the *sacrum Martis* in the Regia and said to be copies of the original *ancile*, which fell from heaven as a gift from Jupiter to Numa (*Ov. Fasti* 3. 365-92); in the right hand they carried a 'spear or staff' (*Dion. Hal. loc. cit.*). The Salii played a prominent part in the Quinquatrus of 19 Mar. and the Armilustrum of 19 Oct., which marked the opening and closing of the campaigning season. On certain days, too, during each of these two months, marked in the calendar by the note *arma ancilia mouent*, the Salii went in procession through the city. At certain spots they halted and performed elaborate ritual dances (*tripudium*, cf. *Plut. Num.* 13), beating their shields with their staves and singing the *Carmen Saliare* (q.v.) or *axamenta*, of which some fragments are preserved. In the evening they feasted and resumed their procession on the next appointed day.

Latte, *RR* 115 ff.

C. B.

SALINATOR, MARCUS LIVIUS (*PW* 33), was born in 254 B.C.; Livius (q.v. 1) Andronicus was perhaps pedagogue in his father's house. As consul (219) he campaigned against the Illyrians. He celebrated a triumph

and served on the commission which delivered the ultimatum to Carthage, but then he was accused of peculation and withdrew from Rome (218). His bitterness and the desertion of his father-in-law, Pacuvius of Capua, to the enemy explain his non-participation in the first part of the Hannibalic War. Recalled by the consuls in 210, he did not speak in the Senate till 208. As consul II (207) he was reconciled in national interests with his colleague C. Claudius Nero (q.v. 2), his former subordinate officer who had witnessed for the prosecution at the trial. Together they defeated Hasdrubal at Metaurus. Salinator celebrated a triumph and was proconsul in Etruria (206-205) and Gaul (204); as censor (204), again with Nero for colleague, he imposed a salt-tax. II H. S.

SALLUST (1) (GAIVS SALLUSTIUS (*PW* 10) CRISPUS) (probably 86-35 B.C.) was born at Amiternum (Hieron. *Chron.* 151 H); not a *nobilis*, he probably derived from the municipal aristocracy. His early career is unknown. The evidence for a quaestorship is late and unreliable (*Invectiva in Sallustium* 15). Our earliest certain information concerns his tribunate in 52, when he acted against Cicero and Milo (*Asc. Mil.* 37, 45, 49 C). He was expelled from the Senate in 50 (*Dio* 40. 63. 2 ff.); *Inv. in Sall.* 16 alleges immorality but the real grounds were probably Sallust's actions in 52 (ancient gossip about his morals can be dismissed). Ap. Claudius instigated the expulsion; his fellow censor, L. Piso, Caesar's father-in-law, acquiesced, though he shielded the Caesarian Curio. No political connexion is demonstrable between Sallust and Caesar before 50; now, however, he joined Caesar, commanding a legion in 49 (*Oros.* 6. 15. 8). Elected praetor in 47 (*Dio* 42. 52. 1 f.), Sallust took part in the African campaign of 46 (*BAfr.* 8; 34) and was appointed the first governor of Africa Nova (*BAfr.* 97; cf. *App. BCiv.* 2. 300. 415; *Dio* 43. 9. 2). Returning to Rome, he was charged with extortion, allegedly escaping only through Caesar's intervention (*Dio, ibid.*; *Inv. in Sall.* 19). Malpractice is likely enough. Sallust had no immediate prospect of advancement; before his death Caesar had already promised the consulates of 43-41 to others.

Sallust withdrew from public life—the luxury of the Horti Sallustiani may reflect rather the taste of his heir and grand-nephew—and turned to history writing (*Cat.* 4. 1 f.). His first monograph, the *Bellum Catilinae*, dealt with the conspiracy of Catiline (q.v.), especially memorable 'secleris atque periculi novitate' (*Cat.* 4. 4); i.e. Sallust accepts, broadly, the assessment of Cicero. But the conspiracy also exemplified the political and moral decline of Rome, begun after the fall of Carthage, quickening after Sulla's dictatorship (*Cat.* 10-14). *Avaritia*, *ambitio*, and *luxuria*, especially of the *nobiles*, are castigated, but Caesar and Cato stand above the wreck of the *res publica*. Yet Caesar is not favoured more than Cato (cf. *Cat.* 53. 6 ff.); and though Cicero may seem but faintly praised, that is in Sallust's manner. The work's prejudices, e.g. against the *nobiles*, issue from his personal experiences rather than any party loyalty. He probably wrote after Cicero's death (Dec. 43); the rivalries of Caesar's day had been superseded.

The second monograph, the *Bellum Iugurthinum*, recounts the venality and incompetence of the *nobiles* over the succession question in Numidia (q.v.) and the advancement of the *novus homo*, C. Marius (q.v. 1). The Roman campaigns in Numidia are narrated patchily, events at Rome more convincingly, especially the opposition to the *nobiles* which, for Sallust, initiated civil strife (*Iug.* 5. 1 f.). The *nobilis* Metellus (q.v. 6), however, is treated favourably, while his political opponent, Marius, is scarcely Sallust's hero (cf. e.g. *Iug.* 64. 4 f.). The prologue probably reflects the Triumviral period, with publication c. 40.

Sallust's last work, the *Historiae*, was annalistic, covering events from 78; the last datable fragment, from book 5, concerns the year 67, hardly his chosen terminus. The surviving fragments, including speeches and letters, suggest that his theme was the decline of the *res publica* after Sulla.

The *Invectiva in Ciceronem* ascribed to Sallust in the MSS. and cited as genuine by Quintilian (4. 1. 68; 9. 3. 89) is not appropriate to Sallust in 54 (its ostensible date); its author was probably an Augustan rhetorician. Two *Epistulae ad Caesarem senem*, 'Sallustian' in manner, are transmitted anonymously in a codex (Vaticanus lat. 3864) which includes the letters and speeches from Sallust's works. Convincing objections have been raised against their content, ostensible dates (c. 46 and c. 50), style, and language. They are probably *suasoriae* of imperial date (see DECLAMATIO).

As an historian Sallust has weaknesses: inexact chronology, scant, occasionally inaccurate geography, schematic interpretations, and anti-noble prejudice. Apparent chronological error, however, if not mere carelessness, may sometimes be due to regrouping of material for effect; geographical ignorance was a Roman failing; and hostility to the *nobles* arose out of the disappointments of a *novus homo*. Sallust was also influenced by his sources: for *Cat.* he must have relied heavily on Cicero's writings, supplemented by oral testimony (cf. *Cat.* 48. 9); in *Iug.* he perhaps used a general history and the autobiographies of Aemilius Scaurus (1), Rutilius Rufus, and Sulla (1) (qq.v.); some geographical notions (but not much more) may derive from Posidonius and Sallust may have consulted contemporary oratory; for *Hist.* he perhaps used Varro's *De Pompeio*, writings on Lucullus (cf. *Cic. Acad. Pr.* 4), and oral tradition.

Sallust is not a philosopher; the prologues to the monographs neatly express philosophical commonplaces. His political thought is essentially moral and traditional, with special attention to *virtus*; his censoriousness and pessimism were compelling. The works are enlivened by speeches, letters, digressions, and character studies. They created a style for Roman historiography, modelled on Thucydides and the Elder Cato. Its features, developing in the course of the works, are noted by ancient writers (*testimonia* in Kurfess, ed. xxvi ff.). archaisms, 'amputatae sententiae et verba ante expectatum cadentia et obscura brevitates', epigrams, Graecisms, novel vocabulary and syntax, swiftness, 'labor'. Sallust rejects the dominant oratorical style of his day. He won admirers almost immediately and considerably influenced Tacitus.

SALLUSTIUS (2, PH¹ 11) CRISPUS, GAIUS, great-nephew and adopted son of the historian, became the chief private counsellor of Augustus and then of Tiberius, remaining an *eques* throughout like his predecessor Maccenas (q.v.). He was privy to the murder of Agrippa (q.v. 4) Postumus in A.D. 14 and in 16 arrested the slave who impersonated him. He owned copper-mines in the Graian Alps (cf. *Hor. Carm.* 2. 2. 1 ff., an Ode addressed to him). He died in 20, leaving his wealth to an adoptive

son, C. Sallustius Passienus Crispus, a noted orator who held two consulships (in 27 and 44) and married Nero's aunt Domitia and mother Agrippina (q.v. 3).

Syme, *Rom. Rev.*, *Tacitus*, see indexes, H. W. Denario, *CJ* 1961/2, 321 f. A. M. T. J. C.

SALLUSTIUS (3, Σαλούστιος), author of a brief manual of Neoplatonic piety known as *De deis et mundo*. He is probably to be identified with the Emperor Julian's friend, Saturninus Sallustius Secundus. His book echoes the language and ideas of Iamblichus and Julian, and seems to have been written during Julian's reign (A.D. 361-3) in the service of the pagan reaction against Christianity.

Ed. A. D. Nock with Engl. transl. and valuable prolegomena (1926), G. Rochefort (Budé, 1960). Translated and discussed by Gilbert Murray, *Five Stages of Greek Religion* (1951). E. R. D.

SALLUVII (or SALLYES), a tribe dwelling north of Massalia from at least the sixth century B.C. (Avienus, *Ora Marit.* 701). Though they were called Ligurians by earlier writers, Strabo preferred 'Cello-Ligurians' and a Celtic element is suggested by their religion, which centred on the cult of the *tête coupée*. The chief shrines were at Roquepertuse (re-erected in Musée Borély, Marseille) and Entremont (north of Aix). This hill-fort was apparently their capital and displays Greek influence in its sculpture, its defences (with bastions), and the layout of its streets. The Salluvii constantly opposed the Massalotes and later the Romans until C. Sextius Calvinus destroyed their capital (123 B.C.). Revolts were crushed in 90 and 83 B.C.

Diod. Sic. 34 frag. 23, Livy 5. 34. *Per.* 60, 61, 71; Strabo 4. 180, 185, 203; Just. *Epit.* 43. 1-5; App. *Crit.* 12. F. Benoit, *Entremont, Capitale celto-ligures des Salyens de Provence* (1957), Grenier, *Manuel* iv, 480 ff. A. L. F. R.

SALMONEUS (Σαλμωνεύς), a son of Aeolus (q.v. 1). In post-Homeric tradition, e.g. Verg. *Aen.* 6. 585 ff., he was king of Elis, and pretended to be Zeus, flinging torches for lightnings and making a noise like thunder with his chariot; Zeus smote him with a real thunderbolt. It is very likely that this story originates in some rite of weather-magic, a mimic storm to make a real one.

Rose, *Handb. Gh. Myth.* 83, and notes 21, 22; O. Weinreich, 'Menekrates Zeus und Salmoneus', *Tübinger Beiträge z. Altertumsw.* 1933, 82 ff. H. J. R.

SALONAE (later SALONA) was a city of Dalmatia (q.v.) near *Split* in Yugoslavia. In 118-17 B.C. it served as a base for L. Metellus but had to be recaptured by C. Cosconius in 78-76 B.C. The *conventus civium Romanorum* established there defeated the Pompeian admiral M. Octavius in 48 B.C. (Caes. *BCiv.* 3. 9). Caesar's legate A. Gabinius died there (47 B.C.). Soon afterwards a *colonia* was established there (*Martia Iulia Salona, CIL* iii. 1933) and after A.D. 9 it became the provincial capital of Dalmatia. As the focal point of the newly established road system (*CIL* iii. 3198-3201 and *add.*) it grew very rapidly and prospered. During the Marcomannic Wars in A.D. 170 its walls were repaired by detachments drawn from newly raised legions II Pia and III Concordia (later II and III Italica) (*CIL* iii. 1980). On his retirement in A.D. 305 Diocletian, who was born in the vicinity of Salonae, lived in the palace which he built on the coast a few miles away. When much later Salonae was threatened by Avar and Slav invasions the population retreated within the walls of the palace, which became the nucleus of the medieval town (Spalato).

Date of the *colonia*: G. Alföldy, *Acta Antiq. Scient. Hung.* 1962, 357 ff. Topography and remains: W. Gerber with M. Abramic and R. Egger, *Forschungen in Salona* 1 (1917), 11 (1926). E. Dyggve and others, *Recherches à Salone* 1 (Copenhagen, 1928), 11 (1931). On the palace of Diocletian: F. Buhé, *Kaiser Diocletians Palast in Split* (Zagreb, 1929) J. J. Wilkes, *Dalmatia* (1969), 220 ff. J. J. W.

SALUS, an old Roman goddess, later often identified with the Greek Hygieia (q.v.), the attendant of Asclepius.

The temple to *Salus* (meaning apparently the safety of the State) on the Quirinal is said to have been built in 302 B.C. by the dictator C. Junius Bubulcus. Under the Empire, *Salus publica* and *Salus Augusti* appear often side by side. Where the genitive 'Augusti' appears, *Salus* may be regarded as definitely a 'virtue' of this Emperor, his saving power—not merely his health. An *augurium salus*, which did not involve any personification of *salus*, was to be taken annually on a day free of all wars: this was an inquiry to ask whether it was permissible to pray for *salus* for the people. The constant wars of the last years of the Republic caused its frequent omission, but it was revived in 29 B.C. and performed on various occasions in the early Principate (Dessau, *ILS* 9337). Prayers 'pro salute Augusti' were commonly offered, as, for example, by the Arval Brethren.

Salus very frequently appears on coins, with the type of Hygieia, feeding out of her patera the sacred snake and holding the sceptre of divine majesty. A rarer attribute, ears of corn, may properly belong to the older Roman *Salus*.

Wisniewa, *RF* 171 ff., 306 ff., and index; A. S. Pease on Cic. *Div.* 1. 105. For temple, Platner-Ashby, 462. H. M.

SALUTATIO, a formal greeting; especially at the *levée* (*admissio*) of an eminent Roman. Etiquette required a client (q.v.) to attend in formal dress (*togatus*) at his patron's house at dawn, to greet him (*salutare*) and escort him to work (*deducere*), both for protection and for prestige. Friends of equal or nearly equal standing might also attend, out of special respect or flattery (cf. Cic. *Fam.* 9. 20. 3). A great man—like a Hellenistic king—would admit his visitors in groups, according to class; and his standing to some extent depended on the number and class of those attending him. Under the Empire the clients degenerated into a parasitical clique. The gift of money or food (*sportula*) which they traditionally received in exchange for their services became a standard payment of 25 *asses*; though, as Juvenal shows, they could still expect to be invited to dinner on special occasions.

Dar.—Sag., s.v.

E. B.

SALVIANUS was born c. A.D. 400 probably at Trèves where he witnessed the Franks' attack (418). In 425, with his wife's consent, he joined Honoratus' monastery at Lérins, and c. 439 became presbyter at Marseilles till his death (after 470). The German invaders he interpreted as an instrument of divine wrath against the decadent Empire, contrasting Christian laxity with the high morality of the barbarians who erred 'in good faith'. Faced by misery and pauperism he urged that all estates be bequeathed for the poor and denounced inherited wealth. Extant are nine letters, a tract against avarice, and eight books of *Gubernatione Dei* (440).

Ed. F. Pauly (CSEL 8) P. Courcelle, *Histoire littéraire des grandes invasions germaniques* (1948), 119 ff. H. C.

SALVIDIENUS (PW 4) RUFUS, QUINTUS, of very humble origin, perhaps from the country of the Vestini, was one of Octavian's associates in 44 and later one of his principal generals. In 42 he was worsted by Sextus Pompeius in a naval battle off Rhegium and in 41 sent to Spain with six legions, but impeded in north Italy by the Antonian commanders and presently recalled for the impending war of Perusia (q.v.) in which he took a prominent part. In 40 he was appointed governor of Gaul and designated consul, though still an *eques*. Later in the year, however, he sent to Antony, then besieging Brundisium, offering to go over to him. Octavian, informed of this by Antony after their reconciliation, summoned

Salvidienus to Rome and denounced him in the Senate, which declared him a public enemy. He either committed suicide or was executed.

Syme, *Rom. Rev.*, see index; T. P. Wiseman, *CQ* 1964, 130. G. W. R.; T. J. C.

SAMIAN WARE was known to Plautus, Martial, and Pliny as a common, inexpensive table-ware. They were probably thinking of a variety of Eastern *terra sigillata* (q.v.), but the name was adopted by antiquaries for the red-coated pottery found in Britain. Despite attempts at rationalization, the name, usually spelt with small initial, remains the standard term in Britain for Gaulish *sigillata*.

The Gaulish industry was founded by Italian immigrants, but soon diverged from the Arretine inspiration. South Gaulish centres at La Graufesenque (Millau) and Montans (near Toulouse) were founded c. A.D. 15 and rapidly drove Arretine out of Western markets. By Nero's Principate Gaulish samian sold in Italy and Greece and the industry had reached its apogee technically. South Gaul remained dominant until the end of the first century, but its standards deteriorated and under Trajan and Hadrian Les Martres-de-Veyre and Lezoux, in the Auvergne, captured the provincial trade. By the mid second century there were many potteries nearer the frontiers in East Gaul and the Rhineland, and even a minor one at Colchester, but only Rheinzabern, near Speyer, rivalled the principal Gaulish centres. Export from Central Gaul ended with the second century and the East Gaulish potteries did not survive the troubles of the 260s. Samian was replaced on the table by local fine wares.

Organization in *officinae* is attested in south and central Gaul by potters' stamps, but evidence of slaves is sparse. The immense production is shown by graffiti from La Graufesenque: twenty lists on pots stamped by Castus name thirty-eight workmen in his workshop and record manufacture of half a million pots. Decorative motifs are Classical, never Celtic, but with few exceptions coherent subjects were not portrayed. *Horror vacui* was dominant.

The frequent occurrence of characteristic decoration and of potters' stamps in dated contexts make samian widely useful in dating early imperial sites.

See TERRA SIGILLATA. La Graufesenque graffiti: F. Hermet, *La Graufesenque* (1934), 291 ff. Potters' stamps: F. Oswald, *Index of Potters' Stamps on Terra Sigillata* (1931). B. R. H.

SAMNIUM, Oscan-speaking region in the southern Apennines (q.v.). Its inhabitants, primitive and warlike, lived mostly in agricultural villages, frequently unwallled and unidentifiable. The Samnites were divided into four tribal states (Caraceni, Caudini, Hirpini, Pentri), each administered by a *meddix* (q.v.), but were linked together in a confederation which had a federal diet and possibly an assembly. A generalissimo led the confederation in wartime. (Frentani and other Sabelli (q.v.), although ethnic Samnites, were not members of it.) After their treaty with Rome (354 B.C.) the Laris evidently became their boundary with Latium (q.v.). Shortly thereafter their neighbours sought Roman protection. By granting it the Romans precipitated the Samnite Wars. The First (343–341), often unconvincingly reckoned apocryphal, resulted in Roman control of northern Campania (q.v.); the Second (327–321, 316–304), despite the Samnite success at the Caudine Forks (q.v.), prevented Samnite control of Apulia, Lucania and southern Campania; the Third (298–290) involved and decided the destiny of all peninsular Italy. Samnium, still unbowed, then supported Pyrrhus, but the Romans defeated him and split Samnium apart with Latin colonies at Beneventum and Aesernia. Samnium helped Hannibal and lost both population and territory when the Second Punic War was over. Subsequently depopulation increased; pastoral

pursuits gradually replaced agricultural and by 180 Samnium could accommodate transported Ligurians. The Samnites fought implacably in the Social War and in the Civil against Sulla, who slaughtered all he could. The survivors underwent romanization. Chief towns: Aufidena, Bovianum Vetus (q.v.) (Caraceni); Caiata, Caudium, Cupulteria, Satricula, Telesia (Caudini); Abellinum, Aeclanum, Beneventum (q.v.), Compsa (Iirpini); Aesernia, Allifae, Bovianum, Saepinum (qq.v.) (Pentri). The alleged Samnite provenance of *pilum*, *scutum*, and maniples is very questionable.

ANCIENT LITERATURE. Our principal source, Livy (bks. 7-10), depends on annalists more patriotic than trustworthy. Meaglier notices in Diodorus (bks. 19, 20) and Polybius (2 19 f.) supplement him.

Weege, *MDAI* 1909, 98, 141 (for material civilization); G. Camporeale, *Atti Accad. Lincea* 1956, 33 ff. (for constitution). E. T. Salmon, *Samnium and the Samnites* (1967). E. T. S.

SAMOS, an island off western Asia Minor, was occupied in the Early Bronze Age and by Late Mycenaean. In the Early Iron Age it was settled by Ionians and long preserved a distinctive dialect. Samians settled in Amorion c. 690 B.C., at Perinthos (601), Bisanthe, and Hierakon Teichos in Thrace, in Samothrace, at Naucratis, in Cilicia, and perhaps at Dicaearchia (Puteoli), and c. 490 at Zancle (Messana). Colaeus of Samos made a famous voyage to Tartessus c. 638; Aménocles of Corinth had built warships for the Samians c. 704, Samian ships helped Sparta in the Second Messenian War. The rich landed class (*γεωπόροι*) continued influential till late in the fifth century (hence the oligarchic reactions in Samian history), but trade and industry flourished, especially in metalwork and woollen products. Sixth-century Samos was the home of notable architects, sculptors, and gem engravers (Rhocus, Theodoros, Mnesticus), of moralists and poets (Aesop, Ibycus, Anacreon). A Samian engineer, Mandrocles, bridged the Bosphorus for Darius. But the greatest of all Samians, Pythagoras, migrated to south Italy. The temple of Hera (built c. 560, rebuilding begun c. 530) was the largest of its day in the Greek world. The sanctuary has been excavated. Of the town the wall-line, Eupalinos' tunnel, and the Archaic cemetery have been investigated.

The consecutive history of Samos begins with the tyranny of Polycrates (q.v. 1), his steward Macandrius, and his brother Syloson, the last a vassal of Darius. Samos joined the Ionian revolt, but her ships deserted at Lade (494). When the revolt was crushed the Persians allowed her a democratic government. She fought well for Xerxes at Salamis, but soon turned against the Persians and was an autonomous member of the Athenian League till her revolt in 441 which Pericles himself suppressed. During the oligarchic revolution of the 400 (411 B.C.) Samos was the stronghold of the democracy. For their loyal co-operation the Samians were made Athenian citizens after Aegospotami (405); but the city fell to Lysander in 404. About 394 she had a currency alliance with Ephesus, Cnidos, and Rhodes. In 365 Athens captured the island and planted Athenian cleruchs, who were expelled only after Alexander's death. She was eclipsed by Rhodes in the new Hellenistic world, in which her greatest achievement was to produce the astronomer Conon.

SAMOSATA (modern *Samsât*), a fortified city on the right bank of the Euphrates; the residence of the kings of Commagene (q.v.). Like Zeugma, it guarded an important crossing of the river on one of the main caravan

routes from East to West, and it was consequently of considerable strategic and commercial importance. Its formidable defences twice withstood a Roman siege, but in A.D. 72, when the client kingdom of Commagene was annexed, it was forced to surrender, and it was garrisoned henceforth by a Roman legion. Samosata was captured by the Sassanid Sapor I in his invasion of 256 and underwent many vicissitudes during the frontier wars against Persia until in 637 the city was finally captured by the Arabs.

Humann u. Puchstein, *Reisen in Kleinasien etc.* (1890), 181 ff. M. S. D.; E. W. G.

SAMOTHRACE, an island of the north-east Aegean, consisting of a table-like mountain which rises to 5,250 feet, and containing but little cultivable land. Its Greek population was of Samian origin. It formed part of the two maritime confederacies of Athens; in the third century it frequently changed hands among the Hellenistic dynasts; under Roman rule it was a 'civitas libera'. Its chief importance lay in the mystery cult of its twin gods, the Cabiri (q.v.). This cult attained a wide vogue in the Hellenistic age, and its initiates included some Roman notables. The temple of the Cabiri and several Hellenistic buildings have been excavated (here was found the Victory in the Louvre).

SANCHUNIATHON is cited by Philon (q.v. 5) of Byblos as his ancient Phoenician authority (pre-Trojan War, 14/13th c. B.C.) for his *Φοινικικά*, including Phoenician mythology. Once suspect as a forgery, his claim is now supported by the evidence of the Ugarit texts, even if the tradition has been transmitted under Hellenistic influence.

FGH iii c, 802.

A. H. McD.

SANDAS (Σάνδας, Σάνδης, Σάνδων), a god of Tarsus in Cilicia, perhaps of Luwian origin. At his festival a great pyre was erected and burned; the Greeks accordingly equated him with Heracles. Traces of his cult are found in Cappadocia, Lydia, and other nearby lands, but his real nature remains uncertain.

J. G. Frazer, *Adonis Attis Osiris* i, ch. 6.

F. R. W.

SANDRACOTTUS, the Greek form of the Indian name Chandragupta, was probably a commoner of Kshatriya origin, who founded the Mauryan Empire. In 323/2 B.C., with the help of Chanakya, a Brahmin statesman of great wisdom and experience, who wrote a comprehensive book on Hindu polity and statecraft, he overthrew the Nanda King of Magadha (part of the modern Bihar State), whose power and wealth were such that his renown may have been a factor in the refusal of Alexander's army to advance beyond the river Beas (Hyphasis). According to a Sanskrit drama *Mudra-Rakshasa*, a Prince named Parvataka, who is supposed to be Porus (q.v.), helped Chandragupta. By 305, before Seleucus' encounter with Chandragupta, the latter appears to have been already in the possession of almost the whole of the Indo-Pakistan subcontinent north of the Vindhya mountains. The encounter probably took place in Gandhara, west of the Indus. Seleucus did not succeed in his designs and he ceded to Chandragupta the satrapies of Aria, Arachosia, Gedrosia, and Paropanisadae. A matrimonial alliance between the two royal families was also effected. Chandragupta made a present of 500 elephants and Seleucus sent an ambassador, Megasthenes, to the Mauryan court. Chandragupta is also credited with conquests in south India up to Mysore, where his name survived in the twelfth century in local inscriptions and

in the Jain tradition according to which he adopted Jain religion and migrated to the south with his teacher Bhadrabahu and died after a fast. His administration was centrally controlled and strict. He ruled his empire from Pataliputra (*Patna*), with governors at provincial headquarters. Chandragupta reigned for about twenty-four years and died in 299/8 B.C.

SANGARIUS (modern *Sakarya*), important river of north-west Asia Minor already known to Hesiod and Homer. Rising in Phrygia near Pessinus (Strabo 12. 3. 7; coins, *Head, Hist. Num.*² 748) on Mt. Adoreus (Livy 38. 18), it flowed in a winding course through Phrygia Epictetus and Bithynia to enter the Black Sea west of the territory of Heraclea Pontica. The Bithynian section was navigable and rich in fish (Strabo, loc. cit. and Livy, loc. cit.). Its valley provides a line of access from the coast to the plateau, but for part of its course its gorge is a barrier to movements west and east. E. W. G.

SAN GIOVENALE takes its name from the medieval castle on the plateau overlooking the river Vesca north of the Tolfa Hills, 16 miles east of Tarquinia. The plateau was inhabited from the Bronze Age, represented by Apennine Culture pottery associated with houses and a fortification wall of large blocks. An extensive Iron Age village of oval huts dates mainly from the eighth to the late seventh centuries and has produced material similar to that of Tolfa and Allumiere. An Etruscan settlement lasted until the beginning of the fifth century. Tomb-types in the zone range from *pozzi* to Etruscan chamber tombs; a late (third-century B.C.) tomb was reused in Hadrianic times. Occupation at Luna, four miles west of San Giovenale, also extends from the Bronze Age to the Middle Ages: the Apennine levels produced five Mycenaean sherds.

K J D.

SANTRA, a scholar of the Ciceronian age who wrote a *De antiquitate verborum* in at least three books (now lost). He also interested himself in questions of literary history.

Schanz-Hosius, § 196. 1; G. Funnioli, *Gramm. Rom. Frag.* 384-9.

SAPOR (*Shapur*), name of Sassanid kings of the Persian Empire (see SASSANIDS), of which the most famous was Sapor I (reigned A.D. 241-72). Son of Artaxerxes I (q.v. 4: *Ardashur*) and co-regent with him in 241, he was crowned in 242. He continued with spectacular success his father's policy of aggression against Rome, taking full advantage of the internal crisis in the Roman Empire. Hatra (q.v.) and the Roman outposts in Mesopotamia fell to him at an early date. In 252 he secured control of Armenia, expelling its last Arsacid rulers. Sapor styled himself 'King of Kings of Iran and Non-Iran' as he developed his systematic attacks on his Roman neighbour. The Roman counter-offensive under Gordian III was nullified by the death of Gordian and the concessions made by the usurper Philip; the eastern provinces felt the full weight of Sapor's offensive after his capture of the Emperor Valerian near Edessa in 260. The great cities of

Syria and the provinces of eastern Asia Minor were overrun and pillaged. It was left to Odaenathus (q.v.), dynast of Palmyra (d. 266), to play the major part in forcing Sapor to withdraw from Roman territory. In addition to his military achievements (listed on his great inscription at Naqš-e Rostam, *Res Gestae Divi Saporis*) Sapor was famed for his grandiose building operations (he used the labour of Roman captives) and for his relations with the religious leader Mani (see MANICHAISM), who began his preaching in the Persian Empire soon after 240.

SAPPHO, poetess, daughter of Scamandronymus and Cleis, of Eresus and Mytilene in Lesbos, born c. 612 B.C. (*Suda*, s.v. *Σαπφώ*). As a child, no doubt owing to political troubles, she went into exile in Sicily (*Marm. Par.* 36), though apart from a passing reference to Panormus (fr. 7) no traces of this are left in her fragments. She returned to Mytilene, where she was the centre of some kind of *thiasos* which honoured Aphrodite and the Muses and had young girls for its members. With these she lived in great intimacy and affection, wrote poems about them, and celebrated their marriages with songs. She married Cercylas and had a child Cleis (*Suda*, loc. cit., cf. frs. 98, 132). Her brother Charaxus angered her by his love for the courtesan Rhodopis or Doricha, whom Sappho is said to have rated (Hdt. 2. 135, Strabo 17. 808, cf. fr. 15). Little else is known of her life, and nothing of her death, since the old story that she threw herself over a cliff in love for Phaon (Ov. *Ep. Sapph.*, *passim*) seems to be an invention of the New Comedy. Her work was collected in nine books. Book 1 contained poems in the Sapphic stanza and included an address to Aphrodite (fr. 1), which may have been written as a hymn for her companions, but seems to be strictly personal to herself, a poem to an unnamed girl, which was probably inspired by seeing her next to her bridegroom and shows the strength of Sappho's feelings for her (fr. 31), a poem wishing her brother a fair voyage home and offering forgiveness for his faults (fr. 5), lines on the beauty of Anactoria (fr. 16), and an invocation to Aphrodite to appear at a festival in the country (fr. 2). Book 2 contained poems in the Aeolic dactylic pentameter, such as lines of great feeling and intimacy to Atthis (fr. 49), and closed with a narrative poem on the wedding of Hector and Andromache, in which the presence of two Attic forms has raised some doubts about its authenticity. Book 3 contained poems in the greater asclepiad, including lines of contempt to an uneducated woman (fr. 55) in which the theme that song confers immortality appears explicitly for the first time. Book 4 contained poems in ionic tetrameters mostly too fragmentary to be intelligible, though fr. 58 seems to have told the story of Tithonus. Book 5 contained poems composed in stanzas of mixed character, especially fr. 96 on a girl who has gone to Lydia and is compared to the moon outshining the stars, and fr. 94, which gives a retrospect of happy days passed with another girl. Of book 6 nothing survives; of book 7 only some lines on a girl who is prevented by love from attending to her weaving (fr. 102)—a theme of folk-song. Of book 8 we have only one mention. Book 9 probably contained wedding-songs of different character in different metres. In the hexameter fragments a bride is compared to an apple (fr. 105 a) and to a hyacinth (fr. 105 c). Fr. 114 gives a dialogue between the Bride and her Maidenhood, another traditional theme. In this book Sappho was more colloquial than usual and showed an element of badinage (Demetr. *Eloc.* 167, cf. fr. 110). Something of her manner may perhaps be seen from

Catullus' imitations of her in his poems 61 and 62. Sappho writes in the vernacular language of Lesbos, except in a small group of poems (frs. 44, 105, 142-3) in which she admits some variations taken from the epic. Her subjects are usually personal; there are few traces of narrative, though some poems (frs. 102, 137) seem to be modelled on folk-songs. She wrote for herself and her friends, gave candid accounts of her and their feelings, had an excellent eye and ear for natural things, a command of verbal melody, and an unequalled directness and power.

SARAPIS (usually in Latin **Serapis**), according to Tacitus (*Hist.* 4. 83-4) and Plutarch (*Mor.* 361 f-362 e), was brought to Egypt from Sinope by Ptolemy I. There is another tradition that places Sarapis in Babylon in the time of Alexander, and Tacitus reports that Sarapis was believed by some people to have come from Seleucia in Syria, while others thought he came from Memphis. It now seems to have been established that the cult of Sarapis arose at Memphis in the temple above the underground chambers where the bodies of the deceased Apis bulls were entombed, and the projection of all these figures came to be addressed as Osorapis. The probability remains that the king established the worship in Alexandria and sought to make Sarapis an imperial deity. There is some evidence to show that the cult, along with that of Isis, was accepted and propagated by Greeks and Macedonians in the royal civil and military services. The cult of Sarapis did not grow rapidly at Alexandria, however. Although Isis and Sarapis were included in the royal oath by the end of the third century, they do not appear in the oath used in Alexandria. The creation of the cult was marked by the introduction of the worship into Alexandria and, according to tradition, was accomplished through the assistance of Demetrius of Phaleron, the Eumolpid Timotheus, and Manetho. In fact, Demetrius seems to have given the earliest testimony concerning the miraculous powers of Sarapis, since, in his *Paean*, he is supposed to have shown his gratitude to the god for having restored his sight. The Sarapeum at Alexandria, accounted one of the wonders of the world, was said to have been designed by Parmeniscus, while the cult-statue, a great sitting figure adorned with precious metals, was attributed to Bryaxis. The tradition is consistently uniform that those who had a hand in shaping the external features of the cult were men of Greek speech and culture. Manetho, an Egyptian priest who assisted in the formation of the cult, had some familiarity with Hellenic culture, since he wrote in Greek. It is not surprising that this deity combined the attributes of many potent Hellenic gods with some of the characteristics of Osiris. He was represented with the benign and bearded countenance of Zeus, his head crowned with a modius (emblem of fertility). At the right knee of the seated god was the three-headed dog Cerberus, an attribute borrowed from Hades, while the upraised left hand grasped a staff or sceptre, reminiscent of Zeus and Asclepius. Sarapis was a healer of the sick, a worker of miracles, a deity who was superior to fate and who retained from Osiris the character of a god of the underworld. He spoke to his followers in dreams as Asclepius did, yet partook of their festive banquets as a jovial lord of Olympus might have done. He was identified at times not only with the gods already mentioned, but also with Dionysus, Helios, Jupiter, and others. He was associated with Dolichenus and other powerful deities. At Memphis, as well as at

Abydos and elsewhere, we know of people called *katochoi* who seem to have considered themselves bound to the temple precincts until the god should set them free. Except when identified with another god, Sarapis seldom receives an epithet. Yet, in one inscription of the Roman period, a man with an Alexandrian deme name calls Sarapis the god of the city and addresses him as Sarapis Polieus. Sarapis was the chief god in the cult of the Egyptian deities. His cult usually went with that of Isis and Harpocrates, Anubis and others being included on occasion. In the Aegean area we find that most of the public cults of the Egyptian deities were called cults of Sarapis, even though other deities were included. In many Greek cities there were cult societies of *Sarapistsai* who held banquets on certain days, passed decrees, voted crowns to officials of the society and to distinguished strangers, and who set up *stelae* recording thereon their official acts. In the period of the Roman Empire, when the mysteries of Isis were quite widespread throughout the Mediterranean world, the worship of Isis tended to eclipse that of Sarapis. Since the worship of both these gods was spread by commercial contacts as well as by zealots, the cults were strong in those cities which had commercial connexions with the East. The acclamation 'There is one Zeus Sarapis', a cry of enthusiasm for the deity, has come down to us in numerous inscriptions.

ANCIENT SOURCES. Th. Hopfner, *Fontes Historiae Religionis Aegyptiacae* (1922-5), contains the literary sources. The inscriptions are scattered through *IG*, *CHL*, *CIG*, and *Sammelbuch griechischer Urkunden aus Ägypten* (Preisigke). The Delian inscriptions are collected in P. Roussel, *Les Cultes égyptiens à Delos* (1916), and in *Inscriptions de Delos*. Papyri documents may be found in U. Wilcken, *Urkunden der Ptolemäerzeit* 1 (1922-7), and in *Ptairo Zon.* *Ptolem.* *Ptolem.*, and elsewhere. Other sources are collected in O. Weinreich, *Neue Urkunden zur Sarapis-Religion* (1919). Statuary. H. Haas, *Bildatlas zur Religionsgeschichte*, 9-11 Lief. (1926).

MODERN LITERATURE. The classic discussion of the origin of Sarapis is found in part 1 of U. Wilcken, *Urkunden der Ptolemäerzeit* (1922-7). Other works are Cumont, *Rel. et*; G. Lataye, *Histoire du culte des divinités d'Alexandrie* (1884); J. Toutain, *Les Cultes païens dans l'empire romain* (1907-8).

For the Sarapeum at Alexandria, founded by Ptolemy see J. A. Rowe, *Discovery of the Famous Temple and Enclosure of Sarapis at Alexandria* (*Ann. Serv.* Suppl. cahier 2, 1946), for the dispersion of the cult in the Ptolemaic period, T. A. Brady, *The Reception of the Egyptian cults of the Greeks* (110-10 B.C.) (U.S.A. 1935), P. M. Fraser, *Opusc. Athenensia* (4th) 3, 1960, 1 ff. T. A. B., P. M. F.

SARCOPHAGI. A sarcophagus is a coffin for inhumation which in ancient times was often richly decorated, especially if it was to be interred in a chamber-tomb or hypogaeum. In Crete two standard shapes of coffin—the bath-tub and the chest on four legs with a gable roof—were in general use throughout the fourteenth and thirteenth centuries B.C., and some, including the famous Hagia Triada sarcophagus, were richly painted. In the late Archaic period the Clazomenian sarcophagi of painted clay are rectangular or slightly trapezoidal in form. Sculptured sarcophagi appear first in the fifth century B.C. but not in the Greek world itself; a number of anthropoid and casket sarcophagi with sculptured reliefs were made by Greek craftsmen for the kings of Sidon from the fifth century to about 300 B.C. The latest in the series is the famous Alexander Sarcophagus. Some Hellenistic wooden sarcophagi with painted decoration have survived in southern Russia.

The Etruscans used sculptured sarcophagi of clay and stone from the sixth century B.C.; the two commonest types are the casket form with gabled lid and the form with a reclining effigy of the dead. A few sculptured sarcophagi have survived from Republican Rome. The prevailing rite of cremation in Rome gave way to inhumation in the early second century A.D. and the rich series of Roman sculptured marble sarcophagi begins about the time of Trajan. Sculptured sarcophagi were made all over the Roman world; two of the best-known centres

were in Athens and Asia Minor. An important series of lead coffins comes from Roman Syria.

SARDES (Σάρδεις), the chief city of Lydia, lying under a fortified hill in the Hermus valley, near the junction of the roads from Ephesus, Smyrna, Pergamum, and inner Asia Minor. As the capital of the Lydian kingdom, especially under Croesus, and later as the headquarters of the principal Persian satrapy, it was the political centre of Asia Minor in the pre-Hellenistic period, and it also attained fame for its progress in the arts and crafts—its kings were the first to mint gold and silver coins. It was captured and burnt by the Ionians in 498 B.C., and Xerxes mustered his troops at Sardes before he crossed the Hellespont. In the Macedonian period it belonged in succession to Antigonos, the Seleucids, and the Attalids, and in 133 B.C. it passed to the Romans, who made it the capital of a *conventus* in the province Asia. It was one of the 'Seven Churches' of the Apocalypse. Diocletian made it capital of the province Lydia. Its temple of Artemis has been excavated; and since 1958 large-scale excavations in the city have disclosed substantial remains of different periods over a wide area.

H. C. Butler, *Sardis* (1922 ff.). For the most recent discoveries, G. M. A. Hanfmann, *A Short Guide to the Excavations at Sardis* (1962). W. M. C., J. M. C.

SARDINIA (Σαρδῳία), a large island off western Italy containing *nuraghi* and other megalithic monuments of its prehistoric inhabitants (traditionally a mixture of Eubryans, Iberians, and Ligurians). It is more fertile, less mountainous, and much more unhealthy than Corsica. The Greeks apparently never colonized Sardinia. Carthage annexed it (c. 500 B.C.), but failed to pacify the rugged interior. Rome seized the island from Carthage in 238 B.C. (reject Diod. 15. 27) and organized it, with Corsica, as a province in 227 (Corsica became a separate province in imperial times). The Romans despised the Sardinians ('Sardi uenales: alius alio nequior': Festus, 428 L.) and in republican times allowed them not one free city; Sardinia was treated as conquered land that sent money and grain to Rome (it remained an important granary throughout antiquity). The frequent Sardinian revolts ceased in 114 B.C., but brigandage continued. This was gradually suppressed under the Empire (Tac. *Ann.* 2. 85) and Sardinia achieved a little prosperity: Carales obtained Roman civic rights; Turris Libisonis, Uselis, and Cornus became *coloniae*; and the silver- and iron-mines were worked. But the island never really flourished. Finally it fell successively to Vandals, Goths, Byzantine Emperors, and Saracens.

Ancient writers mention Sardinia infrequently. The important references are Strabo 5. 243 f.; Pliny, *HN* 3. 83 f.; Paus. 10. 17. 2 f.; Diod. 4. 29 f., 5. 15; Justin, *HN* 18 and 19; Cic. *Pro Scauro*; Livy, bks. 21-26.

Pesce, *Sardegna punica* (1961); id. *Tharros* (1966); P. Cao, *Sardegna romana* (1940); M. Guido, *Sardinia* (1963). E. T. S.

SARMATAE (Σαρμάται, Σαυρομάται), a nomad tribe, closely related to the Scythians, and speaking a similar Indo-European language, but showing some points of difference in culture. Their women had a freer position, and, in the days of Herodotus at least, hunted and fought alongside the men (4. 116-17). Their troops were all mounted, but while the rank and file were archers, the chieftains and their retainers wore armour and used heavy lances. Until c. 250 B.C. the Sarmatae dwelt east of the river Tanais. During the next 300 years they

moved slowly westwards, displacing the Scythians. Of their two main branches, the Roxolani advanced to the Danube estuary, the Iazyges (q.v.) crossed the Carpathians and occupied the plain between the middle Danube and the Theiss. The Roxolani, checked by the generals of Augustus and Nero (*ILS* 986), became clients of Rome; and the Iazyges entered into similar relations, serving as a buffer between the Dacians and the province of Pannonia. In the second and third centuries the Sarmatae were again set moving by the pressure of German tribes. The Iazyges allied with the Marcomanni against M. Aurelius, and the Roxolani shared the Gothic raids into Moesia. Eventually large numbers of them were settled within Roman territory by Constantine; the rest were partly absorbed by their German neighbours, partly driven back into the Caucasus. M. C.

SARPEDON, in mythology, commander of the Lycian contingent of Priam's allies (*Iliad* 2. 876). He takes a prominent part in the fighting, leading an assaulting column of the allies on the Greek wall (12. 101), and making the first breach (290 ff.). He is finally killed by Patroclus (16. 426 ff.), mourned by his father Zeus (459 ff.), and carried off to Lycia for burial by Sleep and Death (666 ff.).

Post-Homeric accounts make him one of the sons of Zeus and Europa, the difference in mythological dating being got over by supposing that he lived for three generations (Apollod. 3. 6). Ancient critics had already noticed that his connexion with Crete was secondary, schol. *Il.* 6. 199, which makes the difference of time six generations. It is possible that some historical relationship between the two countries lies behind it. At all events, there was an historical cult of him in Lycia, with which the Homeric story of his burial is presumably to be connected; his hero-shrine is mentioned, for instance, by schol. *Il.* 16. 673. The rather wide distribution of place-names formed from his (see Immisch in Roscher's *Lexikon* iv. 393 ff.) suggests that his worship is old and famous, which may well have drawn Homer's attention to him.

H. J. R.

SASERNA, a cognomen of the gens Hostilia. Two Saserne, father and son, wrote on husbandry at the beginning of the first century B.C. and were used by Varro, Pliny (*HN*), and Columella.

Schanz-Hosius i* 242.

SASSANIDS, kings of the New Persian Empire A.D. 224-636. The dynasty derived its name from Sāsān, grandfather of Artaxerxes I (q.v. 4), who took over the inheritance of the Achaemenids and Arsacids. Their Empire at its greatest extent stretched from Syria to India and from Iberia to the Persian Gulf. The Sassanids constantly sought to drive the Romans from Asia; and the forts of the Euphrates *limes* were fortified against attacks from them. Major campaigns were undertaken against them by various Roman Emperors. Valerian was defeated and captured by Sapor I (q.v.), Constantius defeated Sapor II in 345, Julian died on an invasion of Mesopotamia, Kavadh was defeated by Belisarius; Khosroes II conquered Asia Minor and even threatened Constantinople, but was driven back by Heraclius. On their north-east boundary the Sassanids were menaced by the Hephthalites ('White Huns') and Turks. They were driven from Mesopotamia by the Arabs (A.D. 636), but lingered on as a local dynasty in Iran.

The strongly centralized despotic government of the Sassanid Empire was upheld by the powerful priesthood of the Mazdaean State religion.

SATRAP (OP **kshathrapāvan*), the title held by Persian provincial governors. The satrap was in effect a vassal king, with wide powers within his own province (Xen. *Oec.* 4-5), but owing allegiance to the Great King. Certain military and civil officials, responsible only to the latter, acted as checks on his autonomy. The political organization of the Persian Empire into satrapies, at first based on the boundaries of the conquered nations, was revised by Darius; his division into twenty satrapies (Hdt. 3. 89-94), though modified by subsequent territorial conquests and losses, remained the basis for later kings; Alexander preserved the satrapal system and it was continued by the Parthians. The Sassanids (q.v.) had local governors who partly corresponded in function to the old satraps, but the title 'satrap' had declined to mean 'mayor of a city and surroundings'.

M. S. D.; R. N. F.

SATRICUM (1), modern *Conca*, between Antium and Velitrae in Latium (qq.v.). Volsci and Romans fought fiercely for it. Finally, the latter destroyed it (346 B.C.), sparing only the Temple of Mater Matuta. The temple has been excavated and many terracotta revetments found.

A. Andren, *Architectural Terracottas from Etrusco-Italic Temples* (Lund, 1939-40), 154 ff.

(2) Like-named town in the Liris valley (modern *Monte San Giovanni*?), severely punished by Rome for revolting after the Caudine Forks disaster (320 B.C.) (Livy 9. 12-16; Cic. *QFr.* 3. 1. 4.). E. T. S.

SATURA, satire, the only literary form created by the Romans, was so free and personal that its character changed with each satirist. Still, it may be loosely defined as a piece of verse, or prose mingled with verse, intended both to entertain, and to improve society by exposing to derision and hatred the follies, vices, and crimes of men. Among its salient characteristics are spontaneity (real or apparent), topicality, ironic wit, coarse humour, colloquial language, frequent intrusions of the author's personality or *persona*, and incessant variations of tone and style.

NAME. *Satura*, from *satur*, 'full', means 'a medley' full of different things. A mixed stuffing was called *satura* too, and the phrase *lex per saturam* meant a legal bill combining several different enactments. Since variety was essential to satire, the Romans accepted this derivation: Juvenal alludes to it when he says every type of human conduct is the *farrago* of his book (1. 85-6). Other suggested derivations—Etruscan *satur*, 'speech'; Etruscan *śāt*, 'fertility'; *saturi* and *σάτυροι*, 'full-fed'—have found little acceptance.

ORIGINS. *Rome*. (1) Roman sources say Ennius (q.v.) was the first to write satires in verse. They were in four books, using several different metres. Scanty fragments survive, showing that they contained an animal fable, a debate between Life and Death personified, a boastful monologue by a parasite, and at least one utterance by the poet himself. Thus, they had many characteristics of later satire: variety, colloquialism, argument, humour,

moralizing folk-wisdom (cf. Hor. *Serm.* 2. 2, 2. 6. 77 f.), interest in rascals, and the personal touch. But Ennius apparently included no invective and did not use satire to attack anyone personally: for him the title *Satira* or *Saturae* meant *Miscellany*. (The name *Satura* also appears among the writings of Naevius (q.v.), with a citation of a single line in an imposing style: serious or mock-heroic? dramatic or non-dramatic? We cannot tell.)

(2) Livy (7. 2, doubtless copying Varro) describes the evolution of Roman drama. The first complete play with a plot, he says, was put on by Livius Andronicus, but before that Roman actors staged productions combining song, music, and mimic dancing: he calls them *impletas modis saturas*, 'medleys full of (different) rhythms'. Critics disagree about the value of this account; but many think such plotless vaudeville shows did exist. However, no Roman authority suggests they were genetically linked with poetic satire. The most we can say is that poetic and dramatic *saturae* may have grown out of the same impulses and shared some central qualities.

Greece. Quintilian, comparing types of literature in Greece and Rome, remarks '*satura . . . tota nostra est*' (10. 1. 93). This is sometimes translated 'Satire is a Roman invention', but means 'We are supreme in satire'; and indeed there was no single form of literature in Greek which the Roman satirists copied and emulated (Hor. *Serm.* 1. 10. 66). But several Greek influences helped to build it up.

(1) Horace says Athenian Old Comedy was the chief model for Lucilius (q.v.) (*Serm.* 1. 4. 1-7): he means that Lucilius' language (frank, colloquial, often obscene), his style (irreverent, versatile, humorous), his topics (foibles and failures of prominent men), and above all his role as a social and political critic coincided with the techniques and attitudes of Aristophanes and other comedians of his time.

(2) Another inspiration came from the Hellenistic philosophical discourse (*διατριβή*), a popular variant of the academic lecture. Touring Cynic and Stoic propagandists discussed ethical problems in virtuoso speeches, partly disguising their serious import by epigrams, jokes, bold colloquialisms, vivid imagery, character-sketches, anecdotes, fables, quotations of poetry, parodies, rhetorical questions, and dialogues with imaginary opponents. Their manner, *σπουδαγέλιον*, was adopted by Roman satirists: '*ridentem dicere uerum*' says Horace (*Serm.* 1. 1. 24). Horace acknowledges his own debt to the witty Bion (q.v.) of Borysthenes (*Epist.* 2. 2. 60), and many passages of Roman satire—such as Pers. 5. 132 f. and Juv. 8—owe both theme and manner to the Greek 'diatribe'. (On it see W. Capelle, *RAC* 3. 990 ff.)

(3) Greek philosophical satire was too limited in range to mean much for the Romans; but from the Cynic Menippus (q.v. 1), Varro (q.v. 2) took the curious technique of interweaving prose with passages of verse. The imbrics of Archilochus and Callimachus (3) (qq.v.) had less influence on Roman satire than on narrower works such as Horace's *Epodes*.

DEVELOPMENT. Horace (*Serm.* 1. 10. 66) calls Ennius the *auctor* of satire, because he originated it, and Lucilius its *inventor* (1. 10. 48) because he gave it its true nature. Lucilius' innovations were these. He made verse satire a weapon of attack on folly and vice, naming the contemporary fools and knaves he belaboured (Pers. 1. 114-15, Juv. 1. 153-4). He fixed the dactylic hexameter as its medium, applying this ancient and versatile metre to new purposes. He increased the prestige of satire by devoting his whole career to it: for Ennius it was a minor experiment. He emphasized the personal element in it (Hor. *Serm.* 2. 1. 30-4), gave it a wide range of themes, and made its language heavily unliterary, conversational, even coarse. Coarse and careless, thought Horace; but,

like his successors Persius and Juvenal, he admired Lucilius greatly. The loss of Lucilius' thirty volumes is a disaster.

Equally original, even more energetic, though apparently less bitter, Varro (q.v. 2) extended the range of the genre still further by introducing the new form of prose with verse-interludes in a remarkable variety of metres. Of 150 books of his Menippean satires, just enough fragments remain to show their brilliant versatility of style and incisive criticism of human folly. Varro also wrote four books of verse satire and a treatise *De compositione saturarum*: all lost.

It is dangerous to write satire about contemporaries: it provokes resentment and retaliation. Horace discovered this, and all his successors felt it strongly. His earliest satires—perhaps some which he later suppressed—provoked severe criticism, against which he rather unconvincedly defended himself (*Serm.* 1. 4, 1. 10, 2. 1). He left two books, containing ten and eight satires respectively. Although he followed Lucilius, he made his poems notably gentler. They contain no invective against really important individuals such as Antony, no exposures of major vice and crime, but attack such peccadilloes as social climbing (1. 9) and *gourmandise* (2. 4). There is some quite charming autobiography in them: in time he turned away from satire, to write poetic letters to his friends.

A later admirer of Lucilius, Persius (q.v.), felt the danger too (1. 107–23). Before publishing his six satires, his executor Cornutus altered a phrase that might have angered Nero. However, the gibes in his poems are mostly too vague to give offence to any particular person; and behind his Stoic armour of rectitude there glows a warm and kindly heart.

The last extant Lucilian satirist, Juvenal (q.v.), who under Trajan and Hadrian published five books containing sixteen satires, expressed his concern even more drastically: 'pone Tigellinum, taeda lucis in illa | qua stantes ardent' (1. 155–6). He resolved therefore to attack only the dead (1. 170–1), and did indeed pillory Domitian and other evil figures of the past. Still, some of the names of his victims coincide with those of influential living contemporaries: perhaps, insured by his disclaimer, he took the risk. The range of his denunciations is far wider than that of Horace and Persius: it is as wide as Rome itself (*Sat.* 3); it takes in most men and all women (*Sat.* 6). Juvenal looks back over the history of the Roman emperors (e.g. 2. 99–109, 8. 211–30 and 237–44, 10. 56–94 and 329–42) with the sombre pessimism of Tacitus scarcely concealed by a satiric smile. With him satire rises higher than ever before, to rival tragedy (6. 634–7) and command many of the powers of oratory (e.g. 10. 133–87).

In Nero's reign two brilliantly cruel Menippean satires appeared: Seneca's (q.v. 2) *Apocolocyntosis*, a Saturnalian caricature of the deification of Claudius, and Petronius' (q.v. 3) *Satyricon*, an enormous picaresque anti-romance of which only fragments remain. The moral intent of the former comes out in the hopeful prophecy of young Nero's greatness (4) and Augustus' speech to the gods (10–11); that of the latter (apparently one of the least improving books ever written) in its Epicurean contempt for human follies and passions and the exposure of bad taste by the Arbitrator of Elegance. Three centuries later the Emperor Julian (q.v.) published a book which, although written in Greek, deserves to rank among Roman satires: his *Caesars*. Perhaps inspired by Seneca's skit, he shows all his predecessors down to Constantine trying to enter heaven and being judged on their characters and records. This is the last of classical Menippean satires, not unworthy of its ancestry. (Martianus (q.v.) Capella's *Marriage of Mercury and Philology* and Boethius' (q.v.) *Consolation of Philosophy* are Menippean in form but not satiric in purpose.)

G. II

SATURNIA, hill town in the *Albegna* valley in central Etruria. It received a Citizen Colony in 183 B.C., but is otherwise unrecorded in antiquity. Its surviving polygonal walls and interesting necropolis, however, attest its early importance.

A. Minto, *Mon. Ant.* 1925, 585 ff.

E. T. S

SATURNIAN METRE, a type of early Latin verse used, e.g., by Livius Andronicus (*Odyssea*; e.g. 'uirum mihi Camena | insecerunt'), by Naevius (*Bellum Punicum*; e.g. 'nouem louis concordis | filiae sorores'), in inscriptions (e.g. Scipionic epitaphs). About 160 indubitable examples are extant; few, if any, can be called primitive; the most frequently quoted is: 'dabunt malum Metelli | Naeui poetae' (see NAFVVS). Ennius (*Ann.* 214 Vahl.) despised the metre; to Horace (*Epist.* 2. 1. 157) it was 'horridus', to Virgil (*G.* 2. 386) 'incomptus'. Roman grammarians (e.g. Caesius Bassus) in bewilderment tried to equate its many metamorphoses with various Greek metres; but Servius (ad Verg. *G.* 2. 385) speaks of it as composed 'ad rhythmum solum'. Modern scholars agree that each line falls into two parts; otherwise controversy reigns. The 'accentual' theory (e.g. O. Keller) which disregards quantity and imposes on Saturnians the rhythm of 'The queen was in her parlour | eating bread and honey' involves incredibly artificial accentuations (e.g. 'd dé t Tempéstátébus'). W. M. Lindsay's view is that three ordinary word-accent in the first part of the line (normally of 7 syllables) and two in the second part (normally of 6 syllables) function as metrical stresses. Saturnians can, indeed, be so read, but most readers would unconsciously introduce a third (non-accentual) stress into the second part. W. J. W. Koster regards the metre as a double 'tripudium' (cf. 'enos Lases iuate' in hymn of Frater Arvale) which later came under the influence of Greek ideas of quantity. The quantitative analysis (the only metrical system found elsewhere in extant classical Latin) relies on prosodic devices demonstrable in Plautus. It starts from the idea that the line is of the type known to Greek metricians as ἀνισόμῃτα—see Hephaestion, ch. 15, who deals with Greek analogues to the Saturnian from Archilochus, Cratinus, Euripides, and Callimachus (e.g. 'Ἐρασμονὶδὴ Χαρίλαε, χρέμα τὸι γελούον'); but the most significant example comes from the non-literary cult-hymn to Zeus Dictaeus (Diehl, *Anth. Lyr.* ii. 6, 131): ἰὼ μέγιστε κῶρε, χαίρε μοι Κρόνεε (probably early fourth century B.C.). Like certain elements of the *Carmen Arvale* (q.v.) (in which cola of Saturnian type can be identified) and probably like the *versus quadratus* (see METRE, LATIN), the Saturnian would have reached Rome from centres of Greek influence by non-literary routes. The basic system would then be an iambic dimeter catalectic, followed by an ithyphallic (— — — — — — — — — — — — — — — —). Many variations, however, must be supposed in the basic pattern (not implausible in terms of Plautine *cantica*, but surprising in an epic metre and motivated, presumably, by a desire to avoid monotony), or appeal must be made to

the uncertainty of the textual tradition. It is reasonable to assume that Livius Andronicus and Naevius will have introduced substantial changes and refinements into a metrical system which originally owed much to rhythmic devices characteristic of the early *carmen* (q.v.) style (extensive traces of which are easily visible in extant Saturnians).

SATURNINUS (1), LUCIUS APPULFIUS (*PW*, 'Apulcius' 29), of praetorian family and a good popular orator, as quaestor at Ostia was superseded in his *cura annonae* by Scaurus (q.v. 1) and turned violently against the oligarchy. Co-operating with the consul Marius as tribune in 103 B.C., he assigned land in Africa to Marius' veterans and passed a law establishing a special court for a crime vaguely called *maiestas* (*minuta*), intended for use against unpopular aristocrats, and also—then or more probably in 100—a grain law, against the violent opposition of the Optimates. Turbulent in the next two years, he was almost expelled from the Senate by Metellus (q.v. 6) Numidicus, but held another tribunate in 100 and, again co-operating with the consul Marius, proposed to settle the veterans of the German war in Transalpine Gaul and to give Marius a limited (and perhaps traditional) right of enfranchisement in new colonies. An oath of obedience, to be taken by all senators and magistrates, was attached to the law, which was passed by violence. Marius and Saturninus, after manœuvring their common enemy Metellus into being the only senator to refuse it, forced him to go into exile. With the help of the praetor Glaucia (q.v.), who had the support of the *equites* because of his *repetundae* law, Saturninus also proposed colonies and land distributions for the settlement of veterans (Roman and Italian) of other armies and of *proletarii* (q.v.), and was hoping for another tribunate (in 99) to carry out his plans, while Glaucia stood for the consulate. But Glaucia's competitor Memmius (q.v. 1) was killed in a riot, and Marius, worried by Saturninus' independent policy, now intervened and suppressed the agitators under the terms of a '*senatus consultum ultimum*' moved by the *principes Senatus* Scaurus. They were imprisoned in the *Curia* and murdered there (probably late summer 100). Their surviving adherents, active during the next few years, were embittered against Marius, whose powerful faction now began to disintegrate. Saturninus' colonies were not founded; but there is no reason to doubt that his assignations were carried out. He (or a relative) adopted a son of Decius (q.v. 5); and a relative of his married Lepidus (q.v. 2).

H. H. Scullard, *From the Gracchi to Nero*² (1963), 56, 60, with notes (including recent bibliography). E. B.

SATURNINUS (2), GAIUS SENTIUS (*PW* 9) (*cos.* 19 B.C.), of a reputable family from Atina, which acquired note with C. Senti (praetor 94 B.C.). Further, he was related to that Scribonia who married Octavian in 40 (*ILS* 8892). Consul in 19, without colleague for the greater part of the year, he dealt firmly with electoral disorders, refusing to admit the candidature of Egnatius (q.v. 2) Rufus and thwarting his alleged conspiracy. Proconsul of Africa (c. 14); legate of Syria (c. 9-6), Senti next appears as legate under Tiberius in Germany (A.D. 4-5); in A.D. 6 he led the army of the Rhine eastwards to participate in the campaign against Maroboduus. Velleius praises warmly this useful public servant and friend of Tiberius—

'uirum multiplicem in uirtutibus, nauum, agilem prouidum', etc. (2. 105. 1).

For the origin and history of the *Senni* see R. Syme, *Hist.* 1964, 156 ff. R. S.

SATURNINUS (3), LUCIUS ANTONIUS (*PI* 96), governor of Upper Germany, raised revolt at Moguntiacum (probably 1 Jan. A.D. 89). On receipt of the news Domitian left Rome and marched northwards. In the meantime, however, the governor of Lower Germany, Lappius Maximus, who remained loyal, defeated and killed Saturninus in a battle fought beside the Rhine (perhaps near Coblenz). It is stated that German allies of the usurper were unable to cross the Rhine to his assistance because of a sudden thaw (Suet. *Dom.* 6 f.; Dio 67. 11; Mart. 4. 11; 9. 84; *CIL* vi. 2066 (*Acta fratrum arvalium*)). Saturninus was the first senator of his family, and the causes of his action are a mystery. The episode marked a turning-point in the reign of Domitian.

R. S.

SATURNUS, SATURNALIA. Saturnus is one of the most puzzling gods in Roman cult. His festival (see below) is part of the 'Calendar of Numa', and its position, 17 Dec., midway between Consualia and Opalia, is intelligible if we suppose, as has commonly been done (e.g. by Wissowa, *RR* 204), that his name (Sāturnus, also Saeturnus) is to be connected with *sātus* and taken to be that of a god of sowing, or of seed-corn. It would represent the ritual following on the completion of the autumn sowing, and would come appropriately enough between commemorations of the deities of the store-bin and, apparently (see *ors*), of plenty. But serious difficulties attend any such explanation. One remarkable fact is that we have clear evidence that he was sacrificed to in Greek fashion, i.e. with the head uncovered (Festus, 432. 1 Lindsay), and none at all that he was ever worshipped in any other manner. The ancients themselves supposed that he was not a native god, but imported from Greece, a story which blends with the flight of Kronos from Zeus, as in Verg. *Aen.* 8. 319 ff. His name seems to find its nearest parallels in Etruria (F. Altheim, *Griechische Götter* (1930), 8, 178), both as to stem (if we reject the connexion with *sātus*) and suffix. It is therefore by no means impossible that he is a very old importation from Etruria, and conceivable that the Romans were right in identifying him with Kronos (q.v.).

His temple, the ruins of which are still conspicuous, stands on the clivus Capitolinus, and served as a treasury (*aerarium Saturni*), see Platner-Ashby, 463 ff.; Nash, *Pict. Dict. Rome* ii. 294 ff. His cult-partner is the obscure goddess Lua, whose name seems connected with *lues*, an odd colleague for a god of sowing, but more intelligible if he really had something of the grim character of Kronos. See Gellius 13. 23. 2.

Of the early history of his festival nothing is known; Livy (22. 1. 20) speaks as if it originated in 217 B.C., which is obviously not so (see above). At most, some modification of the ritual, in the direction of hellenization, took place then. In historical times it was the merriest festival of the year, 'optimus dierum', Catullus 14. 15. Slaves were allowed temporary liberty to do as they liked, presents were exchanged, particularly wax candles and little pottery images or dolls, *sigillaria* (q.v.): Macrobi. *Sat.* 1. 7. 18 ff., see Wissowa, *op. cit.* 206, note 2 ff., for more references. There was also a sort of mock king, or Lord of Misrule, *Saturnalicius princeps* (Sen. *Apocol.* 8. 2). By about the fourth century A.D. much of this was transferred to New-year's Day, and so became one of the elements of the traditional celebrations of Christmas (M. P. Nilsson, *ARW* 1921, 52 ff.). The resemblance to the Kronia was noticed by the ancients

(Accius in Macrobian *Sat.* 1. 7. 36-7); it may be pointed out that there is also a resemblance to the Sacaea (q.v.), though the evidence for killing or pretended killing of the mock king is of the weakest (Frazer, *GB* II. 310 ff.). The connexion between these various festivals is as yet very obscure.

H. J. R.

SATYRS and **SILENI** are 'spirits of wild life in woods and hills' (Rose, *Handb. Gk. Myth.* 156), bestial in their desires and behaviour, and having details of animal nature, either of a horse or of a goat. Classical authors constantly confused Satyrs and Sileni, but from the fourth century B.C. on Sileni are usually old and retain horse-ears, while Satyrs are usually young (Paus. 1. 23. 5) and have taken over from Pan the traits of a goat. It seems that Satyrs and Sileni had a different origin, but we are ill informed about the early history of the Satyrs, though it has been argued that they possessed an Illyrian origin (H. Krahe, *Festschr. Havers* (1949), 37). Hesiod (ap. Strabo 471) makes them brothers of the Nymphs (q.v.) and calls them 'good-for-nothing and mischievous'. Apollodorus refers to one Arcadian Satyr who stole cattle and was killed by Argus (2. 1. 2), but clearly identifiable Satyrs first appear in satyr-plays, such as Euripides' *Cyclops* and Sophocles' *Ichneutae*, and on representations of satyr-plays in art (F. Brommer, *Satyrspiele*² (1959); J. Boardman, *BICS* 1958, 6). At that point Satyrs are human beings with some details of a horse (Pollux, *Onom.* 4. 142), although the Ichneutae give one rather the impression of dogs (F. R. Walton, *Harv. Stud.* 1935, 167). The famous wine-pouring Satyr of Praxiteles (H. Gallet de Santerre, *Hommages à A. Grenier* (1962), 721) and the later more idyllic and rustic Satyrs of Hellenistic art and poetry are associated with Dionysus and his circle.

The history of Sileni is much more clear. Attic vases of the early sixth century B.C. (Ch. Blinkenberg, *Lindos* (1931), pl. 126; *Hesperia* 1935, 436) show the shaggy, bearded man with horse-ears, sometimes also a horse-tail and horse-legs, pursuing the Nymphs (*Hymn. Hom. Aphrod.* 262), and an inscription on the François vase dispels all doubt of his identity. He is not at first attached to any god, but seems to resemble folklore men of the forest such as the Russian *leshny*. He knows important secrets and is captured to make him reveal them. There may have been many stories on this pattern. On the François vase Silenus is captured by two wild men named Oreios and Therytas. The story that became famous is that of King Midas who caught Silenus after having made him drunk (Theopomp. *PHG* 1, frs. 74-7). Ovid links this story with the punishment of Midas for his avarice (*Met.* 11. 90). In Virgil (*Ecl.* 6) Silenus is caught by two young shepherds and sings them mythological stories (Z. Stewart, *Harv. Stud.* 1959, 179). About the middle of the sixth century B.C. Silenus (or Sileni, the plural being a matter of small importance in this lower layer of folk mythology) is drawn into the circle of Dionysus. He accompanies Dionysus in the triumphant return of Hephaestus (F. Brommer, *JDAI* 1937, 198), goes along to fight the giants, frolics in the thiasus, rides in the *carrus navalis*, makes music, and helps to make and drink wine. The behaviour of the Sileni is not always the best, and they are apt to attack even Hera or Iris (E. Haspels, *Attic Black-Figured Lekythoi* (1936), 20). When Pratinas introduced the satyr-play, the Sileni provided the distinctive costume but suffered a transformation into comic drunkards and cowards. The Silenus *par excellence* in these plays is the old Papposilenus, who has many weaknesses but also has intellectual talents. He is entrusted with the education of Dionysus, and even voices a proverbial philosophy in Pindar (schol. Ar. *Nub.* 223) and in the story of Midas. The comparison of Socrates with Silenus is based not only on common ugliness (K.

Kerényi, *Dioniso* (1949), 17) but also on common irony and wisdom. Portraits of Socrates and idealized heads of Sileni show great similarity (C. Weickert, *Festschrift J. Loeb* (1930), 103). Silenus is often represented as a good father and the Satyrs as his children. Hellenistic art depicts Silenus either as dignified, inspired, and musical, as the painting of the Villa dei Misteri (P. B. Mudie Cook, *JRS* 1913, 157), or as an old drunkard, as in many sculptural and decorative groups.

Kuhnert in Roscher, *Lex.*, s.v. 'Satyros'; F. Brommer, *Satyrroi* (1917); H. Jeammaire, *Mélanges Picard* (1949), 463; M. Edwards, *JHS* 1960; F. Jesi, *Aegyptus* 1962, 257; E. de Saint-Denis, *Rev. Phil.* 1963, 23. G. M. A. H.; J. R. T. P.

SATYRUS (1) (fl. 3rd c. B.C.), Peripatetic biographer from Callatis Pontica, wrote mainly at Oxyrhynchus and Alexandria. Works: (1) *Bioi* of famous men of all types, including Philip II, Sophocles, Demosthenes, Pythagoras, etc. Fragments in Diog. Laert. and Ath.; also four pages of the *Biog. Euryptidou*, found at Oxyrhynchus. (2) *Περὶ χαρακτήρων* (Ath. 4. 168 c). *Περὶ δόμων Ἀλεξανδρέων* is by another Satyrus (*FGH* 631).

Satyrus widened the scope of biography to include all celebrities; he takes an uncritical delight in anecdotes and personalities. The Oxyrh. fragment (in dialogue form) reveals a careful and attractive style.

PHG III. 159-66; A. S. Hunt, *POxy.* IX. 1176.

F. W. W.

SATYRUS (2) (2nd c. B.C.) nicknamed *Zēta*, pupil of Aristarchus, was perhaps the author of a collection of ancient myths (*FGH* I. 20).

SATYRUS (3) (fl. c. 150 A.D.), physician, pupil of Quintus (q.v. 1) of Rome, and teacher of Galen at Pergamum. He was a faithful follower of Quintus in the exegesis of Hippocrates and in the teaching of anatomy and pharmacology.

SAXON SHORE (*Lat. Saxonicum*), name given to the coastline in Gaul and Britain either because exposed to Saxon raids or because settled by Saxon *laeti*.

(1) *Not. Dign. locc.* (c. xxvii, xxxviii) mentions two ports, Grannona and Marcae, under local military *duces*; their sites are uncertain (Grenier, *Manuel* I. 380, 392).

(2) In Britain the *Not. Dign. locc.* (c. xxviii) lists nine forts under a *Comes litoris Saxonici*, who appears in Ammianus' narrative of A.D. 367 (27. 8. 1). They seem to be grouped in pairs (? for naval organization). Actually ten forts are known from Brancaster (Norfolk) to Portchester (Hants), nine of which are certainly those of the *Notitia* list. Outliers are found in Lincolnshire and Wales. All but two have external bastions and all but two others have roughly rectangular ground-plans. The areas are 6-10 acres. The original idea may be due to Carausius (not later), but one fort, Anderida (Pevensey, Sussex), seems later (c. 330).

D. A. White, *Lat. Saxonicum* (U.S.A. 1961), with full bibliography but some rather doubtful inferences; J. N. L. Myres in *Dark Age Britain*, ed. D. B. Harden (1956), 37. C. E. S.

SAXONS, a German tribe first mentioned by Ptolemy (2. 11. 7) as settled in the Cimbric Chersonese (modern Holstein). By c. A.D. 200 they seem to have displaced and subdued the Chauci of the lower Elbe; their distinctive pottery is found in Frisia and towards the lower Rhine, where from the fourth century they engaged in warfare with the Franks, while eastward they reached Swabia and Thuringia, and even penetrated into Italy (568). At sea they attracted the attention of ancient authors by their ruthless piracy (cf. Sid. Apoll. 8. 6. 13-15). Their raids were succeeded by permanent settlement. In Gaul documents and place-names show them established around Bayeux, near Boulogne, and in

south-west Flanders; while in conjunction with their neighbours the Angli and the mysterious Jutes, they began towards the middle of the fifth century to establish themselves permanently in Britain. Saxon settlements were mainly in the south (Wessex, Essex, Middlesex, Sussex), but their name was applied by themselves and others indiscriminately to all the Teutonic invaders.

Full bibliographies in Collingwood-Myer, *Roman Britain*, R. H. Hodgkin, *History of the Anglo-Saxons* (1939); see also L. Schmidt, *Gesch. der deutschen Stämme* (1937); F. Fischer, *Der Stand der Sachsen-Forschung im lxx. Bericht der R.-G. Kommission* (1955).
C. E. S.

SCAEVOLA (1), GAIUS MUCIUS (*PIV* 10), according to some authors originally bore the *cognomen* Cordus, which he subsequently changed for Scaevola, and which may have been borrowed from the story of the Athenian king Codrus. Now *scaevola* was an amulet worn by Roman children, but popular etymology wrongly connected it with *scaeva*, the left hand; thence arose the story of the brave Roman who, having failed to kill Porsenna (q.v.), showed his indifference to physical pain by holding his right hand in fire. The surmise that the legend merely is a misinterpretation of a monument, which represented a young man stretching his right hand over an altar, is improbable. And equally improbable is the surmise that the story is connected with the ritual punishment for perjury.

G. De Sanctis, *Per la scienza dell'antichità* (1909), 321 ff., Ogilvie, *Comm. Laty* 1-5, 202 ff.
P. T.

SCAEVOLA (2), PUBLIUS MUCIUS (*PIV* 17), brother of Crassus (q.v. 1), whom he succeeded as *pontifex maximus*. As tribune in 141 B.C. he instituted a tribunal to try the corrupt ex-praetor L. Hostilius Tubulus, who went into exile. As consul (133), being an eminent lawyer and enemy of Scipio (q.v. 11) Aemilianus, he was one of the senior advisers of Ti. Gracchus (q.v. 3). Despite the request of some senators, he refused to use violence against the tribune, but later defended the action of Scipio (q.v. 12) Nasica in killing him. He followed in the footsteps of his father (consul 175) as a jurist, firmly establishing his family's pre-eminence in this field, and he seems to have published (and perhaps edited) the series of *Annales maximi* (see *ANNALS*).

E. S. Gruen, *Athenaeum* 1965, 321 ff.

E. B.

SCAEVOLA (3), QUINTUS MUCIUS (*PIV* 21), called 'AUGUR' (cf. 4), Stoic, eminent lawyer, son-in-law of Laelius (q.v. 2), but probably, like (2), moderately Gracchan in sympathy (his daughter married Glabrio, q.v. 2). Praetor c. 120 B.C., he was accused *repetundarum* after governing Asia, but acquitted. (The trial was satirized by Lucilius, (q.v. 1). He was consul in 117, and in 100 opposed Saturninus (q.v. 1). He taught (among others) his son-in-law L. Crassus (q.v. 3) and, in his old age, Cicero, who venerated his memory and introduced him into several dialogues. Alone among the *principes* present in the city, he opposed Sulla after his march on Rome (88) and aided Marius, who had married his granddaughter. He died soon after.

E. B.

SCAEVOLA (4), QUINTUS MUCIUS (*PIV* 22), called 'PONTIFEX' (cf. 3), son of (2), whom he surpassed as an orator and even as a lawyer. He published the first systematic treatise on the civil law, providing the foundation for many later commentaries. In his most famous case, the *causa Curiana* (Cic. *De Or.* 1. 180 *et al.*), he defended the strict wording of a will, against the defence of *aequitas* and intention by L. Crassus (q.v. 3). As consul (95 B.C.), he and Crassus passed the *lex Licinia Mucia* instituting a *quaestio* against aliens who had been illegally enrolled as citizens. Perhaps on the motion of

Scaurus (q.v. 1), he was sent as proconsul to govern Asia and settle its troubles by a complete reorganization, which he achieved with the aid of his legate Rutilius (q.v. 1). His arrangements were made binding on his successors by the Senate, and were a model for other governors. Departing from Asia after nine months, he left Rutilius in charge and later helped in his defence when he was prosecuted *repetundarum*. He himself escaped prosecution, probably through his connexion with Marius. *Pontifex maximus* in 89, he was threatened by Fimbria (q.v.) after Marius' death (86), but protected by the Cinnan government, under which he stayed in Rome. He was killed by Brutus (q.v. 3) in 82, probably when (like many others) he was on the point of joining Sulla.

Badian, *Stud. Gr. Rom. Hist.*, see index.

L. B.

SCAEVOLA (5), QUINTUS CERVIDIUS (*PIV* 1), a leading Roman jurist of the later second century A.D., *praef. rigillum* 175, legal adviser of Marcus Aurelius, and teacher of Paulus (q.v. 1). The works attributed to him include *Quaestiones* (20 books), *Digesta* (40 books), *Responsa* (6 books), and *Regulae* (4 books). He was evidently in great demand as a consultant jurist: his works are heavily casuistic in character, and the cases are apparently drawn from practice. They often come from the provinces, and he sometimes gives the facts in the original Greek. This, and some Graecisms, has led to the supposition that he was himself a Greek, but the more likely explanation lies in his popularity as a consultant. Moreover, it is likely that both the *Digesta* and the *Responsa* are post-classical compilations of his *responsa*. His style is very terse, and he rarely gives reasons for his opinions. Modestinus (q.v.) speaks of him, with Ulpian (q.v. 1) and Paulus (q.v. 1), as a leader among the jurists.

A. B.; B. N.

SCAMANDER, a river of the Troad (now called *Menderes su*), rising in Mt. Ida and flowing into the Hellespont after a course of c. 60 miles. Despite Pliny's phrase 'amnis navigabilis' (*IIN* 5. 124), it can never have been open to shipping. Lechevalier's view that the perennial stream flowing from the springs at Bunatbashi (Kirk Goz) was Homer's Scamander is now abandoned. J. M. C.

SCANDINAVIA. The earliest information about Scandinavia is Pytheas' account (c. 325 B.C.) of Thule (q.v.), if its identification with Norway is correct. Mela (q.v. 3) mentions 'islands' in the Sinus Codanus 'north of the Elbe'; Pliny states (*IIN* 4. 96) that the largest and most fertile of these is the island of Scandnavia and mentions Sevo Mons, which may be the mountains between south Sweden and Norway. Tacitus (*Germ.* 44, 45) knows of the Suones (Svear, Swedes), a seafaring nation which evidently came within the ken of the amber traders at the mouth of the Vistula; Ptolemy mentions several tribes in Scandia. Jutland was better known to the Romans, a naval expedition having sailed as far as the Skaw in A.D. 5 (*Mon. Anc.* 26).

The Scandinavian Neolithic Age, fertilized by influences coming with the Megalithic culture from the south-west, was one of considerable achievement, and the subsequent Bronze Age culture in which the trade in Jutland amber (q.v.) with the south played an important part, was of a high order. There was a falling-off in the Early Iron Age, and by the end of the first century B.C. a number of peoples (Langobardi, Vandili, Burgundiones, Gutones) had migrated, in part at any rate, to the German mainland. The home-staying Scandinavians entered on a new period of prosperity in the first century A.D. and enjoyed a lively intercourse with other peoples, as the great quantity of Roman goods in their graves shows. In the third and fourth centuries they came under the

influence of the culture stream from the Gothic settlements on the Black Sea and in the Danube lands.

SCAURUS (1), MARCUS AEMILIUS (PW 140), of patrician (but recently impoverished and undistinguished) family, had to work his way up like a *novus homo*. He amassed wealth (not always reputably), gained the support of the Metelli, and was consul (with a Metellus) in 115 B.C., defeating Rutilius (q.v. 1). As consul he humiliated Decius (q.v. 5), was made *princeps Senatus* by the censors (one a Metellus) though probably not the senior patrician, and triumphed over Ligurian tribesmen. Henceforth increasingly powerful in the Senate, he married Metella (q.v. 1) and became the head of the Metellan faction, then at the height of its glory. Though himself involved in negotiations with Jugurtha (q.v.), he became one of the chairmen of the tribunal set up by Mamilus (q.v. 3). Censor in 109, he had to be forced to resign on the death of his colleague Drusus (q.v. 1). Some time before 103, he received a *cura annonae*, superseding the quaestor Saturninus (q.v. 1). In 100 he moved the '*senatus consultum ultimum*' against Saturninus and his supporters. In the 90s he was sent to Asia and, on his return, may have brought about the mission to Asia of Scaevola (q.v. 4) Pontifex. After the conviction of Rutilius (q.v. 1) he was one of the chief advisers of Drusus (q.v. 2) and was attacked by Varius (q.v. 1), but crushed him with a haughty reply. He was dead by late 89, when Metella married Sulla. Throughout his life he was involved in numerous trials, not always successful in prosecution, but never convicted. He was the last great *princeps Senatus*, exercising vast power through *factio* and *auctoritas*.

He wrote an autobiography, but it was soon forgotten. Cicero's admiration for him has coloured most of our tradition. Traces of a very different view remain, especially in Sallust. See G. Bloch, *Mélanges d'histoire ancienne* 1909 (inadequate). E. B.

SCAURUS (2), MARCUS AEMILIUS (PW 141), son of (1) and Metella (q.v. 1), hence stepson of Sulla. Quaestor under Pompey (c. 65 B.C.), he intervened in Judaea and Nabataea, chiefly for his personal profit. As aedile in 58 he issued coins (Sydenham, *CRR* 912-14) commemorating his inglorious campaign against the king of the Nabataeans as a victory. In this office he also gave extravagant games, spending his enormous wealth. As praetor (56), he presided over the trial of Sestius (q.v.), then governed Sardinia (55), where he tried to recoup his fortunes. Prosecuted *repetundarum* in 54 (before Cato, q.v. 5), he briefed Cicero and other eminent men and was acquitted. Standing for the consulship of 53, he was accused (like the other candidates) of *ambitus*, defended by Cicero, but convicted through the hostility of Pompey, whose divorced wife Mucia he had married. He went into exile.

Cicero, especially the fragments of *Pro Scauro* (with Asconius' comments). E. B.

SCAURUS (3), MAMPRCUS AEMILIUS (PW 139), the last male member of the distinguished republican family of Aemilii Scauri, was a man of unsavoury character, but a distinguished orator and advocate (Sen. *Controv.* 10, praef. 2-3; Tac. *Ann.* 6. 29). Though disliked by Tiberius, he was suffect consul, probably in A.D. 21, but did not govern a province. Twice prosecuted for *maiestas*, in 32 and 34, on the second occasion he committed suicide.

J. P. B.

SCEPSIS, a city of the Troad, reputed to be a foundation of Scamandrius and Ascanius, whose descendants

ruled there. It seems to have been an Aeolic settlement but reinforced by Milesians. Released by Lysimachus from incorporation in Alexandria Troas (301 B.C.), Scepsis enjoyed a vigorous cultural life into Roman times; Aristotle's library was kept there for two centuries. The site is on Kurşunlu Tepe in the upper Scamander valley; there is little to be seen since the surviving remains were carted off by the Muteselim of Bayramiç about 1800.

W. Leaf, *Strabo on the Troad* (1923), 269-84.

J. M. C.

SCOPTICS, philosophers who assert the impossibility of knowledge. On their view, the real nature of things is beyond our grasp; and we must therefore suspend judgement on any issue that presents itself to us. This leads to a rejection of all dogmatic systems of thought.

In antiquity, Scepticism proper began with Pyrrhon (q.v.) and his school, though it had its roots in earlier thought, particularly in the Sophistic movement. Pyrrhon's scepticism, and that of his most prominent pupil, Timon (q.v. 2), was essentially practical in its aims; its object was to produce imperturbability of mind (*ἀταραξία*), thus far resembling Epicureanism. According to Diogenes Laertius (9. 115), Timon had no immediate successor. (See SOPHISTS, EPICURUS.)

Scepticism was introduced into the Academy by Arcesilaus (q.v. 1), and formed the basis of Academic teaching until the headship of Antiochus of Ascalon. It was of a more disinterested and theoretical kind than that of Pyrrhon; the proof of the impossibility of knowledge was regarded as an end in itself, criticism being centred on the Stoic notion of 'conceptual perception' (*καταληπτική φαντασία*), which provided for direct apprehension of reality. But Academic scepticism too had its more positive side: Carneades (q.v.) put forward a detailed theory of probability, on which action was to be based.

Outside the Academy, Pyrrhonism was revived by Aenesidemus (q.v.), if not earlier. Pyrrhonism and Academic ideas were combined and systematized; Aenesidemus himself reduced the arguments against knowledge to a series of ten formulae (*τρόποι τῆς ἐποχῆς*), and these were further reduced by Agrippa (5) and Menodotus (3) (qq.v.). The new tradition had important links with the so-called empirical physicians, finally culminating in Sextus (q.v. 2) Empiricus, who gives us in his works an account of the whole system.

C. J. R.

SCERDILAIIDAS, an Illyrian chieftain, probably the son of King Pleuratus and brother of King Agron. When the latter in 230 B.C. was succeeded by his widow Teuta (q.v.) who acted as regent for her stepson Pinnes, Scerdilaidas led her forces against Epirus. But after her defeat by Rome, when Demetrius (q.v. 6) of Pharos became effective ruler and a 'friend' of Rome, Scerdilaidas' position is obscure. He co-operated with Demetrius in a naval attack on Pylos (220), and made an alliance with Philip V of Macedon (220/19). On the defeat of Demetrius by Rome, he presumably seized the guardianship of Pinnes, but he soon appears as king. He broke with Philip. An appeal to Rome brought him ten ships (216), but Philip attacked and seized Lissus and other places (213/12). Scerdilaidas joined with Rome in signing the Aetolian treaty (212/11), but did not live to join in the Peace of Phoenice (205): before then he had been succeeded by his son Pleuratus II (c. 207-180).

H. II. S.

SCHERIA (Σχερία, epic Σχερή), the land of the Phaeacians, at which Odysseus (q.v.) arrives after his shipwreck (*Od.* 5. 451 ff., cf. 34). It is a fertile country, apparently an island (b. 204), having an excellent, almost land-locked harbour (263 ff.), by which its city stands, at least one river (5. 451), and a mild climate (cf. 7. 117 ff.; fruits grow all the year round). The population are enterprising and very skilful seafarers, great gossips, boastful and rather impudent, not very warlike or athletic, fond of pleasure, but kindly and willing to escort strangers in their wonderful ships. Various real places have been suggested as the original of Scheria, the most popular in ancient and modern times being Corfu; but as that is within some 80 miles of Ithaca, whereas Scheria is distant a night's voyage for one of the magical Phaeacian ships (*Od.* 13. 81 ff.), the identification is unlikely. See, however, A. Shewan, *Homeric Essays* (1935), 242 ff. That details of real places have been used for the picture is likely. H. J. R.

SCHOLARSHIP, GREEK, IN ANTIQUITY. Until the end of the sixth century B.C. Greek literature depended for its survival on oral tradition. Rhapsodes claimed to be exact about the actual words of Homer (*Xen. Mem.* 4. 2. 10). But textual corruption and variation were inevitable. Pisistratus is said to have had an official text of Homer compiled, but the method of recension is unknown, and interpolations were alleged in antiquity. From the sixth to the fourth century Homeric criticism was not so much philological as directed against the morality of his mythology, as in Plato's famous attack (*Resp.* 377 d). Texts were prepared by Antimachus and Aristotle; a treatise was written by Democritus, and a commentary by Ion of Ephesus, but their nature and value are uncertain.

2. Towards the end of the fifth century books became more common, and private collections became possible, though on a small scale (cf. the library of Euripides). But this development did not secure texts from corruption. The absence, in many cases, of an authoritative text, the difficulties presented to the copyist by the form of the fifth-century book, which lacked word-division and punctuation, careless or ignorant transcription, and, in the case of the drama, actors' tampering with the text, were continual sources of danger. Tragedy suffered so badly in the fourth century that in 330 B.C. Lycurgus ordered that a public copy of the text of the three great tragic poets should be deposited in the State archives. This was perhaps merely a copy of the best acting-version. That it was not regarded as presenting the original text of the poets seems clear from Alexandrian criticism. Autograph manuscripts of Plato and Aristotle may have been kept in the Academy and Lyceum. Aristotle made the first important contribution to literary history with his *Didascaliae*, and other Peripatetics devoted themselves to the history and criticism of literature and to grammatical and scientific scholarship, e.g. Theophrastus and Demetrius of Phalerum.

3. The last-named was credited with advising Ptolemy Soter (305–285 B.C.) to found a library at Alexandria. With the establishment of this library in the Bruchium, of the smaller library in the Serapeum, and of the collegiate body in the Museum, the prerequisites for scholarship became available. The libraries contained a huge collection of papyrus rolls, which grew in number from 200,000 c. 285 B.C. to 700,000 in the first century B.C. The successive librarians were learned scholars (e.g. Zenodotus, Aristophanes). Research was facilitated by their careful classification of authors and texts (cf. Callimachus, *Pinakes*), by their determination of genuine and spurious works, and by their introduction of rolls of standard size, which made possible the division of large works, formerly

inconvenient to handle, into groups of rolls. These Alexandrian scholars sought to reconstitute the original text of the classical writers, especially Homer. They adopted the sound practice of comparing manuscripts and studying the usage of each writer, but they also followed too subjective criteria. Caution grew with experience and knowledge, Aristophanes and Aristarchus modifying the arbitrary method of Zenodotus. Their work is best shown in the Venetian scholia to the *Iliad*. In their recensions (διορθώσεις) they used marginal signs, of which the most important were the *obelus* (ὀβελός —), used by Zenodotus and later scholars to mark a spurious line, the asterisk (ἀσπερίσκος *), used by Aristophanes to mark incomplete sense and by Aristarchus to mark a verse wrongly repeated elsewhere, the *κεραύνιον* (Τ) marking a succession of spurious lines, the *ἀντίστιγμα* (Σ), used by Aristophanes to indicate erroneous repetition and by Aristarchus to mark disturbed word-order, the *δισπλή* (∴) marking anything noteworthy. The authors thus edited formed the basis of the Alexandrian canon of the best poets, later extended to include prose-writers. Besides such critical editions, the Alexandrians produced exegetical commentaries (*ὑπομνήματα*), filled with antiquarian and mythological lore, works of literary history and criticism, and lexicographical studies; they also pursued research in metric, grammar, and accentuation. Concurrently with the development of literary studies in Alexandria went the growth of Pergamum as a rival centre of learning with a large library, in which parchment was first used on a considerable scale for books. Here scholarship was exercised rather upon prose than upon poetry, and although editions and commentaries were produced (notably by Crates of Mallos), its best work was probably done in the fields of antiquarian and grammatical research.

4. From the second century B.C. the demand for popular editions and handbooks brought forth variorum commentaries, published separately from the text, but having lemmata (see SCHOLIA), and compilations (cf. especially the writings of Didymus), which preserved the best features of Alexandrian scholarship and from which much of the older scholia on classical authors is derived. These commentaries were of great importance in preventing a text's corruption, since the notes would fit only the particular text for which they had been written (cf. the excellent preservation of the nine annotated plays of Euripides, and the seven comedies of Aristophanes in the Venetian MS.).

5. From the time of Hadrian Greek scholarship declined. The systematic study of grammar (e.g. by Apollonius Dyscolus and Herodian), of metric (e.g. by Hephaestion), and the compilation of lexica (e.g. by Harpocration and Hesychius) continued the preservation of the results of Alexandrian research. But the steadily diminishing interest in Greek classical authors and the preference for select editions and anthologies (cf. the works of Proclus and Stobaeus) caused the disappearance of the writings of many earlier authors. The process of disappearance was further helped by the transfer of texts from the decaying papyrus rolls to durable vellum codices in the fourth and fifth centuries, when only such texts as were valued were copied. Although readers might add marginal notes to their text, the medieval combination of text and scholia on the same page is scarcely found in antiquity; the commentary, however abbreviated and compilatory in character, is still a separate book. Although the Roman and early Byzantine ages were a period of loss, texts were not seriously corrupted. The evidence of papyri shows that the quality of texts suffered little between the second and eleventh centuries. Poets were more fortunate than prose-writers in escaping corruption, thanks to the transmission of the Alexandrian

commentaries, but some prose-authors, notably Herodotus, Isocrates, Plato, Demosthenes, have come down to us in a good state.

6. After the eighth century, which was the darkest age for Greek literature and scholarship, there came a revival in the ninth century, begun by Photius and Arethas, whose enthusiasm probably helped, along with the industry of lexicographers like the compiler of the *Suda*, q.v. (10th c.), to save many texts, and many of our best manuscripts belong to this time. Rare classical texts were sought out and transcribed from the cumbersome majuscule to the new minuscule hand, an operation which often involved problems of word-division, breathing, accentuation, etc. In the twelfth century Tzetzes annotated the *Iliad* and Eustathius produced his important Homeric commentary and struggled to secure the preservation of the monastic libraries. Under the Palaeologi at Byzantium there was a renaissance of learning which produced editions of classical authors, commentaries, handbooks, and lexica. But scholars like Thomas Magister and Demetrius Triclinius (early 14th c.) were often willful and drastic in textual criticism, and their unsatisfactory views of metre and language led them into frequent error. Nevertheless, they were trying to do what the great Alexandrians had done 1,500 years earlier, and without them the scholarship of the Renaissance would have been impossible. Their texts became current in Italy, and, but for the fall of Constantinople, their method would have left an indelible mark on Greek literature.

J. F. L., R. B.

SCHOLARSHIP, LATIN, IN ANTIQUITY. Interest in systematic Latin scholarship began in Rome with the visit of Crates (q.v. 3) of Mallos c. 168 B.C. His influence may be seen in the orthographical and literary investigations of L. Accius (170- c. 85) and in the satires of Lucilius (180-102). But the first Roman 'scholar' was L. Aelius Stilo Praeconinus of Lanuvium (c. 154-c. 74), whose studies included, besides grammar and literary history (he made a list of the genuine plays of Plautus), etymological, antiquarian, and historical subjects. He inspired M. Terentius Varro (116-27) to his encyclopedic studies: Varro's antiquarian researches (*Antiquitates rerum humanarum et divinarum*), his grammatical writings (*De lingua Latina*), his educational treatises (*Disciplinarum libri novem*) formed a storehouse and model for later critics and scholars. The interest aroused by Varro and his predecessors in grammar and the history of Roman literature is seen in Cicero, Horace, and Caesar amongst others. Varro's scholarship was rivalled by that of P. Nigidius Figulus (98-45), who wrote *Commentarii grammatici* and shares with Varro the credit of inventing the terminology of Latin grammar. Other professed scholars of the same period are L. Ateius Praetextatus and Valerius Cato. A great stimulus to scholarship was given by the founding of the Palatine Library with its collections of Greek and Latin literature in 28 B.C. and the appointment of C. Julius Hyginus (64 B.C.-A.D. 17), who wrote a commentary on Virgil, as librarian. At the close of the Augustan period Fenestella's *Annales* continued the encyclopedic scholarship of Varro; Verrius Flaccus wrote his *De orthographia* and in his *De verborum significatu* produced the first Latin lexicon, a storehouse of information later abridged by Pompeius Festus and drawn upon by all subsequent scholars.

Later, in the first century A.D., Q. Remmius Palaemon, the teacher of Quintilian, wrote an *Ars Grammatica*, the first formal Latin grammar. The tradition of literary criticism was continued by L. Annaeus Seneca, Petronius, and Persius. Q. Asconius Pedianus (A.D. 3-88 or, according to others, 9 B.C.-A.D. 76) wrote a commentary on Cicero's orations and a defence of Virgil, and the Elder Pliny (A.D. 23-79) wrote on *dubius sermo*. M. Valerius Probus (d. A.D. 88) of Berytus not merely studied the *sermo antiquus* (upon which he wrote a *Silva observationum*) but produced careful texts based upon a study of early manuscripts of a number of Latin authors. Fabius Quintilianus (d. 95?), in the *Institutio Oratoria*, summed up the current views upon grammar and literary criticism. In the next century C. Suetonius Tranquillus (d. c. 140) wrote, besides lives of orators, poets, and scholars (*De viris illustribus*), a treatise upon critical signs. His younger contemporary Aulus Gellius, in his *Noctes Atticae*, supplies valuable details on the earlier language and literature and on lexicography and grammar. At the end of the century Terentianus Maurus published a manual on prosody and metre; Acron commented on Terence and Horace; and Festus abridged Verrius Flaccus.

In the third century Porphyrius commented on Horace, C. Julius Romanus wrote on grammar, and Solinus wrote an epitome of Pliny, while the learned Censorinus compiled his *De die natali* (A.D. 238). Early in the next century Nonius Marcellus compiled his *De compendiosa doctrina* from the works of earlier scholars; C. Marius Victorinus wrote on metre and commented on Cicero; Aelius Donatus compiled his celebrated grammar, wrote a noted commentary on Terence and another on Virgil; Charisius and Diomedes compiled grammars. At the end of the century Maurus Servius Honoratus wrote his famous commentary on Virgil (extant in a longer and shorter form), omitting nothing but literary criticism. St. Jerome (c. 348-420) revised the Latin Bible, wrote *De viris illustribus* (after Suetonius), and translated the chronicle of Eusebius. At the end of the century Macrobius wrote a commentary on Cicero's *Somnium Scipionis*, and in his *Saturnalia* discussed Virgil and ancient Latin literature and language. Martianus Capella, early in the fifth century, summarized ancient learning in his *Nuptiae Philologiae et Mercurii*. The list of Latin scholars closes with the name of Priscian, early in the sixth century, who wrote a grammar in eighteen books, sixteen of which dealt with accident, in which was summed up all the grammatical learning of previous centuries. See also LITERARY CRITICISM, and separate articles on the writers mentioned.

J. E. Sandys, *A History of Classical Scholarship* 1 (1903); W. Kroll, *Studien z. Verst. d. rom. Lit.* (1924), 87 ff., 308 ff. R. M. 11.

SCHOLIA. The word *σχόλιον* is first found in Cicero (*Att.* 16. 7. 3); its plural is now generally used to describe a body of notes (preserved in the margins of texts) which expound or criticize the language or subject-matter of an author. An individual scholium usually consists of a lemma (i.e. a word or phrase repeated from the text of the author) and an interpretation. In default of a lemma, a reference mark or the mere position of the item in the margin indicates the passage with which the note is concerned. Though the distinctions between scholia, glosses, and commentaries cannot be rigidly drawn, the term 'gloss' is usually applied to sporadic interpretations of the meanings of separate words and the term 'commentary' (*commentum*, *commentarius*) to an exposition which (except for interspersed lemmata) is continuous and is generally transmitted as a separate work (e.g. Porphyrius on Aristotle, Asconius on Cicero). In a collection of scholia, however, while many items do not differ in length or substance from glosses, others have clearly come from a learned source. In general, scholia can be

regarded as the *disiecta membra* of lost commentaries; and it is often possible to trace them with some probability to their immediate or ultimate sources. The breaking up of a commentary into marginal scholia met the convenience of readers of a text, but inevitably caused the loss of much that we should have valued. Where space permitted, the successive owners of a manuscript would sometimes add notes of their own or excerpts from commentaries not previously incorporated; and this heterogeneous material was always at the mercy of copyists who sometimes curtailed or recast it. Yet despite many trivialities and much useless lumber, scholia often throw valuable light on points of fact or problems of exegesis (especially when based on the work of one of the great scholars of antiquity), and sometimes their interpretations contain evidence for the author's text. Their lemmata, however, which were frequently adjusted by copyists, need to be used with the utmost caution. Individual manuscripts or groups of manuscripts of a single author often present sets of scholia which bear little immediate relationship to each other; for example, the Homeric scholia in cod. Venetus A are quite distinct from those in cod. Venetus B, and both sets differ from the scholia in cod. Townlicianus.

2. GREEK SCHOLIA. The notes found in the Venice codex (A) of Homer afford a good illustration of the origin of scholia. Though they cite the views of Zenodotus of Ephesus, Aristophanes of Byzantium, and Aristarchus, they are not based directly on the continuous commentaries (*ὑπομήματα*) and special treatises (*συγγρίμματα*) of the great Alexandrians. Nor are they directly derived from the work of the indefatigable Didymus (q.v. 1) Chalcenterus, who in the first century B.C. summed up the countless Homeric *προβλήματα*, *ζητήματα*, and *ῥίσκεις* of earlier scholars; for they contain references to Aristonicus (the younger contemporary of Didymus) and to Herodian and Nicanor (both of the 1st c. A.D.) who wrote on Homer's prosody and on punctuation. Their chief immediate source is a lost commentary composed not earlier than the middle of the second century A.D.; and on the reliability of its author we depend for our knowledge of the work of his many predecessors. The extant scholia (or, rather, sets of scholia) on Hesiod, Pindar, Aeschylus, Sophocles, Euripides, and Aristophanes are all indebted ultimately to Didymus; but in every instance there are probably several intermediate stages between him and them. Behind the scholia on the Alexandrian poets Apollonius Rhodius, Theocritus, Lycophron, and Nicander lies the work of Theon (q.v. 1), a scholar of the age of Tibullus. Scholia on prose authors, apart from Plato and Demosthenes, are comparatively scanty. Late manuscripts of the poets frequently contain scholia taken from Byzantine scholars such as Tzetzes (12th c.), Eustathius (12th c.), Demetrius Triclinius (early 14th c.), and Thomas Magister (early 14th c.).

3. LATIN SCHOLIA. None of the collections of scholia on Latin authors is earlier than the third century A.D. and many are as late as the sixth or seventh century. Despite attributions made in the Middle Ages, they are all several stages removed from the work of first- and second-century scholars (Cornutus, Probus, Velius Longus, Arruntius Celsus, Aemilius Asper, Terentius Scaurus). Of prose authors, only the speeches of Cicero have scholia. Terence is the only republican poet whose text is thus annotated (the scholia in the cod. Bembinus being particularly important). The various but not extensive sets of scholia on Virgil are overshadowed by the great commentary of Servius, but the scholia Bernensia (closely related to Philargyrius, q.v.) are valuable. For Horace there are collections attributed to Acron and Porphyrio (qq.v.) as well as the less important notes of the 'commentator Cruquianus'. The *Ihis* of Ovid and the

Aratea of Germanicus both have scholia; and of the poets of the first century A.D., Persius, Lucan, Statius, and Juvenal each has two or more sets of annotations.

A. Gudeman, art. 'Scholien' (Greek only) in *PIW*; P. Faider, *Repertoire des éditions de textes et commentaires d'auteurs latins* (1911); J. E. Sandys, *Hist. of Class. Scholarship* 1st (1906), 1. W. Hall, *Companion to Classical Texts* (1913). Ample information can be found in the sections devoted to individual authors in Christ-Schmid-Stahlin and Schanz-Hosius; to the editions there mentioned add: J. F. Mountford, *Scholia Bembrina* (1914); H. J. Botschuyver, *Scholia in Horatium Aed. codicum Parisinorum* (1935); P. Wessner, *Scholia in Lucretium vetustiora* (1931); J. Irigoin, *Les Scholies critiques de Pindare* (1958); A. La Penna, *Scholia in P. Ovidi Nasonis Ibis* (1959); H. Erbse, *Beiträge zur Überlieferung der Iliascholia* (1960); L. M. Positano, D. Holweide, W. J. W. Koster, *Scholia in Aristophanem* (1960 2); L. M. Positano, *Demetrii Triclinii in Aeschylus Peristichia* (1963).

SCIPIO (1) **BARBATUS**, LUCIUS CORNELIUS (*PIW* 343), consul 298 B.C.; his sarcophagus was the oldest discovered in the Scipios' tomb. The inscription subsequently carved on this sarcophagus records Scipio's exploits in Samnium and Lucania (Dessau, *ILS* 1), and is more trustworthy than Livy (10. 12 f.), who describes his Etruscan successes.

E. T. S.

SCIPIO (2), LUCIUS CORNELIUS (*PIW* 323), son of (1) above, was curule aedile, consul (259 B.C.), and censor (258). In 259 he attempted to use the new Roman fleet to deprive the Carthaginians of a naval base against Italy: he captured Alernia and reduced Corsica, but failed to storm Olbia in Sardinia. Two inscriptions (*ILS* 2, 3; Degraffi, *ILLRP*, no. 310) record his career, but do not mention the triumph which the *Fasti Triumphales* assign to him. Near the Porta Capena he dedicated a temple to the Tempestates which had spared his fleet.

H. H. S.

SCIPIO (3) **CALVUS**, GNAEUS CORNELIUS (*PIW* 345), son of Lucius (2) above, brother of Publius (4), and uncle of Africanus Major (5). As consul in 222 B.C. with his colleague Marcellus (q.v. 1) he defeated the Insubres and captured Mediolanum. In 218 he was sent to Spain, probably as his brother's legate, to prevent reinforcements reaching Hannibal in Italy and to break the Carthaginian power in Spain. His strategy was to advance southwards along the coast, winning adequate bases and command of the sea. In 217 he probably received proconsular *imperium* and won a decisive naval victory off the Ebro. His brother Publius arrived to take supreme command, and together they advanced to Saguntum (traces of their camp survive at Almenara, 5 miles north). In 215 they inflicted a crushing defeat near Ilerda on Hasdrubal, who was attempting to break through to Italy. By 212 they had captured Saguntum, from which base they could advance further south. In 211, while Publius was defeated on the upper Baetis, Gnaeus was destroyed with his army at Ilorci in the hinterland of Carthago Nova (on the site see H. H. Scullard, *Scipio Africanus* (1930), 50 ff., 143).

SOURCES: A. Schulten, *Fontes Hispaniae Antiquae* in (1935), 52 ff. H. H. S.

SCIPIO (4), PUBLIUS CORNELIUS (*PIW* 330), was younger brother of Gnaeus (3) above, and father of Africanus Major (5). Consul in 218 B.C., Scipio had to divert his army, destined for Spain, to suppress a Gallic rising in north Italy. With fresh troops he reached the mouth of the Rhône, only to find that Hannibal had slipped past. Scipio hastened back to north Italy, where he hoped to fight delaying actions along the tributaries of the Po. Beaten back and wounded in a cavalry skirmish at Ticinus, he retired to Trebia where he was joined by Sempronius who insisted on engaging Hannibal. The Romans were defeated and lost two-thirds of their army (Dec. 218). In 217 Scipio was sent as proconsul to join his brother in Spain. For his campaign there and his death in 211 see Scipio (3).

H. H. S.

SCIPIO (5) AFRICANUS MAJOR, PUBLIUS CORNELIUS (*PW* 336) (236–184/3 B.C.), son of Publius (4) above, and husband of Aemilia, the sister of Paullus (q.v. 2); father of two sons (8 and 9 below) and two daughters, Cornelia, wife of Scipio (10) Nasica, and Cornelia (q.v. 1), mother of the Gracchi. Born in 236 B.C., Scipio is said to have saved his father's life at the battle of Ticinus (218) and as military tribune to have rallied the survivors of Cannae at Canusium (216). After being curule aedile (213), he was appointed by the People to the command in Spain, being the first *privatus* to be invested with proconsular *imperium* (210). In Spain he followed his father's offensive strategy rather than the cautious policy of his own predecessor, Nero (q.v. 2). He seized the enemy's base, Carthago Nova (q.v.), by a brilliant *coup de main* (209). He drilled his army in new tactics, by which the three lines of the Roman army acted with greater mutual independence; he possibly adopted the Spanish sword and improved the *pilum*. In 208 he defeated Hasdrubal Barca at Baccula (*Bailen*) in Bactica: screened by his light troops, his main forces divided and fell on the enemy's flanks, a movement which was a complete break with traditional Roman tactics. He wisely avoided a wild-goose chase after the fleeing Hasdrubal (q.v. 2) and decided to fight on in Spain, where he finally defeated the two other Carthaginian armies at Ilipa (*Alcala del Rio*, near *Seville*): he held the enemy's main forces while the wings outflanked them (206). Thus Roman domination was established in Spain. Before he left Spain Scipio settled some veterans at Italica (q.v.).

As consul for 205, Scipio carried through his determination to invade Africa, despite senatorial opposition led by Fabius (q.v. 5). With an army composed partly of volunteers he crossed to Sicily; he also succeeded in snatching Locri from Hannibal. In 204 as proconsul he landed with perhaps 35,000 men in Africa, where he besieged Utica and wintered on a nearby headland (Castra Cornelia). Early in 203 he successfully attacked and burnt the camps of Syphax and Hasdrubal (q.v. 3) some 6 miles to the south. At Campi Magni (*Souk el Kremis*) on the upper Bagradas, Scipio defeated another enemy army by a double outflanking operation. When he captured Tunis, Carthage sought peace. During an armistice terms were referred to Rome, but after Hannibal's return to Africa the Carthaginians renewed the war in 202. After joining Masinissa, Scipio finally defeated Hannibal in the battle of Zama (q.v.), where neither side could outflank the other and the issue was decided by the Roman and Numidian cavalry, which broke off its pursuit of the Punic horsemen and fell on the rear of Hannibal's army. Scipio was named Africanus after the country he had conquered.

In 199 Scipio was elected censor and became *princeps senatus*. A keen supporter of a philhellenic policy, he prudently but vainly urged in his second consulship (194) that Greece should not be completely evacuated lest Antiochus of Syria should invade it. In 193 he was sent on an embassy to north Africa and perhaps also to the East. When his brother Lucius (7) was given the command against Antiochus (190), Africanus, who could not constitutionally yet be re-elected consul, was 'associated' with the command and served as his brother's legate. After crossing to Asia, where he received back from Antiochus his captured son Lucius (9), Scipio fell ill and took no active part in his brother's victory at Magnesia (189). Meanwhile in Rome political attacks, led by Cato, were launched on the Scipios, culminating in the 'Trials of the Scipios', on which the ancient evidence is conflicting. Africanus intervened when Lucius was accused in 187; whether he himself was formally accused either in 187 or 184 is not beyond doubt. But his influence was undermined and he withdrew embittered and ill to

Literum where he died soon afterwards (184/3).

An outstanding man of action, Scipio may nevertheless on occasion have felt himself to have been divinely inspired and the favourite of Jupiter Capitolinus. This aspect of his character gave rise to the 'Scipionic legend', born during his lifetime but later elaborated (e.g. by parallels with Alexander the Great). Profoundly convinced of his own powers, Scipio personified a new era in which Greek ideas swept over Roman life. By his tactical reforms and strategic ideals he forged a new weapon with which he asserted Rome's supremacy in Spain, Africa, and the Hellenistic East, championing Rome's imperial and protectorate mission in the world. He turned a city-militia into a semi-professional army, which for ten years he commanded at the People's wish; his victory at Zama gave him the most powerful position yet held by a Roman general. But the time had not yet come when the individual challenged the power of the Senate. Scipio offered no threat to the nobility except through the normal channels of political life in which he showed no particular ability. Factional jealousies, the size of his *chentela*, and reaction against his generous foreign policy and his enthusiasm for Greek culture created *invidia* and led to his downfall amid personal and political rivalries, but he had demonstrated that Rome's destiny was to be a Mediterranean, not merely an Italian, power.

Soldier and Politician* (1970); W. Schur, *Scipio Africanus und die Begründung der römischen Welt Herrschaft* (1927); H. H. Scullard, op. cit. and (on Ilipa) *JRS* 1936, 191 ff.; R. M. Haywood, *Studies on Scipio Africanus* (U.S.A. 1931). On Scipio's politics see Scullard, *Rom. Pol.*, see index; A. H. McDonald, *JRS* 1918, 153 ff.; Taylor, *Voting Districts*, 306 ff.; F. Cassola, *I gruppi politici romani nel III sec. a. C.* (1962). On the 'Trials' see P. Fraccaro, *Opusculi* 1 (1956), 203 ff.; and Scullard, op. cit. 290 ff. On Scipio's portrait, M. L. Vollenweider, *MJH* 1958, 27 ff. On the legend, F. W. Wallbank, *PCPS* 1967, 54 ff. See further s.v. PUNIC WARS.

H. H. S.

SCIPIO (6) NĀSICA, PUBLIUS CORNELIUS (*PW* 350) (cos. 191 B.C.), son of Scipio (3), received the Magna Mater (204), was curule aedile (197), praetor in Further Spain (194), defeating the Lusitanians at Ilipa, and consul in 191, when he completed the subjugation of Boian territory (191–190). His failure in the censor elections of 189 and 184 marks the Scipionic decline, and apart from the founding of Aquileia (181) and his action as patron in the Spanish inquiry of 171, he played no further part in public life.

(Scullard, *Rom. Pol.* 122, 137 ff.

A. H. McD.

SCIPIO (7) ASIATICUS (ASIAGENUS, ASIAGENES), LUCIUS CORNELIUS (*PW* 337) (cos. 190 B.C.), brother of Scipio Africanus, whose legate he was in Spain (207–206), Sicily (205), and Africa (204–202), was curule aedile (195) and praetor in Sicily (193). In 191 he was with M'. Aelius Glabrio at Thermopylae, and in 190 succeeded him as consul. This marked the Scipionic control of policy against Antiochus, and Scipio Africanus accompanied him to the East in effective command. Making a truce with the Aetolians, he crossed to Asia Minor to defeat Antiochus at Magnesia (probably Jan. 189). After preliminary peace negotiations he was succeeded by Manlius Vulso, returning to triumph in 188, with votive games in 186. The senatorial opposition to Africanus' dominance, however, brought on him a demand for accounts and for inquiry into moneys received from Antiochus, and eventually a charge of peculation, on which he would have been imprisoned except for the intervention of Sempronius Gracchus (cf. PETILLIUS and MINUCIUS 3). Cato degraded him from equestrian status in 184. An undistinguished figure, his career follows that of his great brother.

W. Schur, *Scipio Africanus* (1927); Scullard, *Rom. Pol.* 128 ff., 290 ff.

A. H. McD.

SCIPIO (8) **PUBLIUS CORNELIUS** (*PW* 331), elder son of Africanus Major, adopted the later Africanus Minor before 168 B.C. Augur in 180, he was precluded from a public career by ill health; an outstanding orator, he also wrote an historical work in Greek (*Cic. Brut.* 77). An inscription in Saturnian verse from the Tomb of the Scipios probably refers to him (Dessau, *ILS* 4; Degraasi, *ILLRP* 311).
H. H. S.

SCIPIO (9), **LUCIUS CORNELIUS** (*PW* 325), son of Africanus Major, was captured in the war with Antiochus (192 B.C.), but was released unransomed before Magnesia in 190. He gained the praetorship (174) with the help of C. Cicereius, his father's secretary, but incurred the censors' displeasure. Details of his capture and personality are confused.
H. H. S.

SCIPIO (10) **NASICA CORCULUM**, **PUBLIUS CORNELIUS** (*PW* 353), curule aedile in 169 B.C., distinguished himself in the Pydna campaign (168); his account of it in an *ἐπιστόλιον* is preserved by Plutarch (*Aem.* 15-18). On account of irregular election, he resigned the consulship of 162. Censor in 159, he removed unauthorized statues from the Forum. Consul in 155, he ended the Dalmatian War. He checked the building of a theatre on grounds of public morality. Against Cato's policy of destroying Carthage, he urged the moral stimulus of Carthage to Rome, presumably representing the traditional liberal Scipionic policy in Africa. In 152 he forced Masinissa to withdraw from Carthaginian territory. He was envoy to Andriscus (150), *pontifex maximus* (150), and *princeps senatus* (147). Learned in pontifical and civil law, he upheld traditional standards of morality and politics, at home and abroad.

M. Gelzer, *Kl. Schr.* (1963), II 39; Scullard, *Rom. Pol.* 226, 240.
A. H. M. D.

SCIPIO (11) **AEMILIANUS AFRICANUS NUMANTINUS**, **PUBLIUS CORNELIUS** (*PW* 335), 185/4-129 B.C., second son of L. Aemilius Paullus (q.v. 2), was adopted by P. Scipio, son of Scipio Africanus. In 168 he fought under Paullus at Pydna. While in Greece he met Polybius (q.v. 1), with whom he afterwards formed an especially close friendship. In 151 he volunteered to serve in Spain under the consul Lucullus when many others were reluctant to do so. Sent by Lucullus to fetch reinforcements from Masinissa (q.v.), he witnessed the great battle between the Carthaginians and the Numidians, subsequently presiding over some abortive negotiations. In 149 and early 148 he achieved great distinction as a military tribune in the Third Punic War (see PUNIC WARS). He was a candidate for the aedileship of 147 but was elected consul, although he was under age and had not held the praetorship. This required special legislation, which was carried only after great dissension. As consul, with his closest friend Laelius (q.v. 2) as his chief *legatus*, he restored the discipline of the army in Africa and devoted great energy to making the blockade of Carthage effective. The construction of the famous mole to close the entrance to the harbour was an enormous undertaking. The city fell in the spring of 146, and after supervising its destruction Scipio celebrated a magnificent triumph.

Elected censor in 142, he wished to perform his duties strictly and severely but was thwarted by his colleague, L. Mummius (q.v.). In 140-139 he headed an embassy to the countries of the eastern Mediterranean, taking as a companion the philosopher Panaetius (q.v.), who also stayed with him in Rome for a time. In 137-136 he was much involved in the intrigues surrounding the *foedus Mancinum* (see MANCINUS). Constant failures in the Numantine War (see NUMANTIA) led to his election to

the consulship of 134. Since second consulships were prohibited this also required special legislation. He again had to restore military discipline, but by the autumn was able to encircle Numantia with an elaborate series of fortifications. When the city fell in the late summer of 133 he destroyed it utterly, returning home in 132 to a second triumph. Finding the political scene transformed by the tribunate and death of Tiberius Gracchus (q.v. 3), he soon took the lead among the anti-Gracchans. Early in 129, championing the discontented Italians, he initiated moves against Tiberius' legislation, provoking a major political storm. By this time he had forfeited much of the mass enthusiasm which he had inspired earlier. His sudden death at the height of the crisis gave rise to rumours, probably false, that he was murdered. Among the suspects was his wife Sempronia, sister of the Gracchi. His marriage to her had been childless and unhappy.

He was a man of strict personal morality, courageous, cultured, and intellectual, with philhellenic leanings (see SCIPIONIC CIRCLE), but he could be cruel and ruthless. An able speaker, he had a ready and often caustic wit. He was a competent general, with great powers of organization. Interpretations of his policies, his influence, and his significance have differed widely. He had powerful enemies and never achieved a position of unchallenged leadership, though for nearly twenty years he was a key personality in Roman politics. For this and other reasons it is a mistake to stress his personal responsibility for the policies pursued in the Viriathic and Numantine wars (see VIRIATHUS and NUMANTIA), although he probably approved of what was done. He may have influenced Roman policy towards the Hellenistic powers, but there is little evidence. Despite his philhellenism he was averse to certain changes in social customs, perhaps in part because he judged them detrimental to military vigour. It is not clear what solutions, if any, he had to offer to the social and demographic problems of the time.

His combination of cultured interests, military success, and political eminence, fortified by his opposition to the Gracchans, roused the admiration of Cicero, who idealized him as the paragon of the wise, beneficent statesman. Cicero used him as the central character of his *De Republica* and also in his *De Senectute*; the *De Amicitia* dwells on the friendship between Scipio and Laelius.

Livy, *Ept.* 48 ff., Polyb. II 31 ff and bks. 32-9; App. *Pun.* 71 f and 98 ff.; *Hisp.* 84 ff.; *BCiv.* 1; Plut. *Apophth. Scip. Min.*, *Cic. De Or.*, *Brut.*; Val. Max.

A. E. A.

SCIPIO (12) **NASICA SERAPIO**, **PUBLIUS CORNELIUS** (*PW* 354), son of (10), as consul in 138 B.C. (with Brutus, q.v. 2) was involved in trouble with the tribunes about the army levy. In 133 he vigorously opposed his cousin Ti. Gracchus (q.v. 3). When Tiberius sought re-election and was accused of aiming at tyranny, and the consul Scaevola (q.v. 2) refused to use force against him, Scipio led a charge by senators and their clients in which Tiberius was killed. The deed was ever after applauded by Optimates, and execrated by Populares (see, e.g., *Rhet. Her.* 4. 68). Sent to Asia as head of a mission (132)—partly to escape popular fury—he died at Pergamum. He was *pontifex maximus* (it is not clear for how long).
E. H.

SCIPIONIC CIRCLE. Scipio Aemilianus (q.v. 11) and certain of his friends, especially Laelius (q.v. 2) and Furius (q.v. 2) Philus, shared a philhellenic outlook and a considerable interest in literature and philosophy. In their earlier years they were the patrons of Terence (q.v.); later they had close contacts with Panaetius (q.v.) and

fostered the work of Lucilius (q.v. 1). This group is often referred to as 'the Scipionic Circle', though the term is almost entirely modern, resting on only one rather imprecise ancient reference (Cic. *Amic.* 69). The concept has been abused, by unduly extending its scope, by giving it political significance and by exaggerating the uniqueness of these philhellenic and literary interests, but it is true that the figures patronized by this particular 'Circle' were outstanding and exercised a considerable influence upon the development of Latin literature and thought. The persons chiefly associated with the 'Circle' are usually taken to be those used by Cicero as the *dramatis personae* of his *De Republica*.

K. Buchner, *Römische Literaturgeschichte* (1957), 142. R. M. Brown, *A Study of the Scipionic Circle* (1914), which greatly extends the scope of the concept, H. Strasburger, *Illinois* 1966, 60 ff., A. E. Astin, *Scipio Aemilianus* (1967), 294.

SCIRAS, writer of phylax-plays, like Rhinthon, also of *Tarentum*, probably in third century B.C. One title, *Μελέαγρος*, survives, with one fragment of 2 vv. (parody of Eur. *Hipp.* 75).

CGF 190.

SCIRON (Σκίρων), a brigand infesting the dangerous Scironian Way (Σκιρωνίς ὁδός, *Illd.* 8. 71. 2) over the Scironian Cliffs (Σκιρωνίδες πέτραι, Strabo 9. 1. 4) near Megara. He made passers-by wash his feet and, as they did so, kicked them over the cliff, where, according to some, they were devoured by a great tortoise (Apollod. *Epit.* 1. 2; Plut. *Thes.* 10; *Hyg. Fab.* 38. 4; and other authors, see O. Waser in Roscher, art. 'Skiron'). Theseus (q.v.), on his way to Athens, threw him into the sea, where, according to Ov. *Met.* 7. 444 ff., his bones turned into the cliffs bearing his name. The Megarian account made him no brigand but a most respectable and highly connected person (Plut. loc. cit.). H. J. R.

SCIOPHORIA, an Athenian festival, also called *Scira*, celebrated the 12th Scirophorion (June/July) and, according to ancient texts, in honour of Demeter and Kore. (The attempt to claim it for Athena alone must be rejected.) The name indicates that something was carried, the σκίρα. The ancient interpretation was that these were parasols, and it is said that the priestess of Athena Polias and the priest of Poseidon-Erechtheus went from the Acropolis to a place called Scira walking under a great white baldacchino. Some modern scholars maintain that they were the sucking-pigs, serpent- and phallus-shaped cakes thrown into underground *megara* and brought up at the Thesmophoria (q.v.).

E. Gjerstad, *ARW* 1929, 189 ff., justly criticized by L. Deubner, *Attische Feste* (1932), 40 ff. M. P. N.; J. H. C.

SCOLIA, drinking-songs, especially Attic. Athenaeus (15. 603 f.) preserves a collection for the late sixth and early fifth centuries. They were sung in the Prytaneum; a singer held a myrtle-branch and, when he had finished, passed the branch to another and called on him for a song. The process is illustrated in Ar. *Esp.* 1216 ff., cf. schol. Pl. *Grg.* 451 c, Plut. *Quaest. conv.* 1. 1. 5. There were also choral σκόλια, possibly of a later date, like two pieces in a papyrus at Berlin (*Scol. Anon.* 30).

Text Page, *Poet. Mel. Gr.* 472-8. R. Reitzenstein, *Epigramm und Skolion* (1893), 3 ff.; C. M. Bowra, *Greek Lyric Poetry* (1962), 373 ff. C. M. B.

SCOPAS (4th c. B.C.), sculptor, of Paros; possibly son of Aristander, who was working in 405 B.C., if the Parian sculptor, Aristander, son of Scopas, known from signatures of the first century B.C., is a descendant. Pliny dates him 420 B.C., perhaps by his birth. Selected works, (i) dated: 1. Temple of Athena Alea at Tegea; after 395

B.C. Scopas was ἀρχιτέκτων and made marble statues of Asclepius and Hygieia; he must have designed and supervised the pediments (A. Calydonian boar-hunt, B. Achilles and Telephus). The surviving fragments are the basis of all attributions (Winter, *KB* 300. 2-4). A copy of the Asclepius has been recognized. He also made a beardless Asclepius for Gortys (Arcadia). 2. One column in Artemis temple at Ephesus, after 356 B.C. Doubtful, since *una a Scopas* should perhaps read *imo scapo*. 3. East side of Mausoleum, after 351 B.C. Slab 1022 (Winter, *KB* 304. 3) recalls the 'Tegea sculptures in style.

(ii) *Undated*: 4. Heracles in Sicily, marble. Copies have been recognized in the Lansdowne Heracles, etc. (Winter, *KB* 300. 8; 301. 1). 5. Bacchant, marble. Callistratus' description justifies recognition of Dresden Maenad (Winter, *KB* 306. 4) as copy. 6. Apollo from Rhamnus, later in Palatine temple. Marble, represented as Citharode. Reproduced on Sorrento base. 7. Poseidon, Thetis, Achilles, Nereids, Tritons, etc. In temple of Neptune at Rome (built by Cn. Domitius Ahenobarbus, 32 B.C.). The base has been recognized (Winter, *KB* 384. 5). The Tritoness of Ostia may derive from the group. 8. Seated Mars and Venus in temple of Mars at Rome (built by D. Junius Brutus Callaicus, 138 B.C.). 9. Apollo Smintheus at Chryse. Represented on coins. 10. Aphrodite Pandemus at Elis, bronze. Represented on coins. 11. Niobid group. Attributed to Scopas or Praxiteles. The style of surviving copies (Winter, *KB* 307) suggests neither.

(iii) *Attributed*: 12. Mcleager (Winter, *KB* 300. 7, 301. 2). The Tegea sculptures are remarkable for the expression of violent emotion and movement. His influence is seen in many later works, e.g. the Pergamene gigantomachy (Winter, *KB* 352-5).

T. B. L. W.

SCOPELIANUS, famous Sophist in Smyrna, in the reigns of Domitian and Hadrian; author of an epic *Πυγάρια*.

Philostr. *VS* 1. 21.

SCORDISCI were a Celtic tribe, later intermingled with Illyrians and Thracians, who invaded Greece in the early third century B.C. and then settled around the confluence of the Savus and the Danube to the east of Sirmium and southward to the upper Margus (Just. 32. 3). In the later second and early first century B.C. many Roman governors of Macedonia undertook campaigns against them. As late as 16 B.C. they were still raiding Macedonia but had been conquered or won over by 12 B.C., when they co-operated with Tiberius in attacks on the Pannonian Breuci (Cass. Dio 54. 30. 3; 31. 2. 4). A *civitas Scordiscorum* is attested on inscriptions in the late first century A.D. under the rule of *principes* and *praefecti* (A. Mócsy, *Hist.* 1957, 488 f.).

G. Alfoldy, 'Des Territoires occupés par les Scordisques', *Act. Ant. Acad. Scient. Hung.* 1964, 107 ff. J. J. W.

SCRIBAE meant originally all persons who practised writing. Subsequently, when copyists came to be called *librarii*, the term was restricted to secretaries of private individuals, who wanted assistance in correspondence and book-keeping, or of magistrates, especially those concerned with finance and municipal affairs. These public *scribae* were generally freeborn citizens, belonged to the class of the knights, and received a regular salary. They formed several corporations, e.g. the *scribae quaestorii*. Divided into three *decuriae*, they kept the archives of the Senate, transcribed documents, and acted as cashiers and accountants at the *aerarium*. With the growth of bureaucracy in the imperial age, *scribae* were generally

appointed to assist any financial, military, or municipal magistracy. See also APPARITORES.

Mommien, *Röm. Staatsr.* v. 346 ff.; C. Lécrivain, *Dar-Sag.* iv. 2. 1123 f.; A. H. M. Jones, *Stud. in Roman Government and Law* (1960), 154 ff. P. T.

SCRIBONIA (PW 32), sister of L. Scribonius (q.v. 1) Libo, was married at least three times. Her first two husbands, both of whom held the consulship, are hard to identify; by one of them she was the mother of Cornelia, wife of Paullus (4). The third was Octavian, who married her in 40 B.C. in order to conciliate Sextus Pompeius, Libo's son-in-law, but in 39, on the birth of their daughter Julia (q.v. 2), divorced her, 'pertaesus, ut scribit, morum peruersitatem eius' (Suet. *Aug.* 62. 2). She accompanied Julia into exile in 2 B.C., remaining with her till her death in A.D. 14. She herself was still alive in 16.

Syme, *Rom. Rev.* 213, 229; E. F. Leon, *TAPA* 1951, 168 ff. T. J. C.

SCRIBONIANUS (1), LUCIUS ARRUNTIVS (PW 14) CAMILLVS, was consul in A.D. 32. He was legate of Dalmatia under Gaius and Claudius. In 42, at the instigation of Annus Vinicianus and many Roman senators and equites, he persuaded his two legions (VII and XI) to revolt against Claudius. After four days the legions abandoned the revolt, and he was murdered.

PIR² A, 1140. J. P. B.

SCRIBONIANUS (2), L. ARRUNTIVS (PW 21) (FURIUS), son of (1) above, claimed descent from Pompeius Magnus (*ILS* 976). He was banished in A.D. 52 for consulting astrologers and died soon afterwards.

PIR² A, 1147. J. P. B.

SCRIBONIUS (1, PW 20) **LIBO**, LUCIUS, of senatorial family, father-in-law of Sextus Pompeius, supported Pompey's pretensions to an Egyptian command in 56 B.C. and later commanded a division of his fleet in the Adriatic (49-48). By the end of 46 he had made his peace with Caesar, but must have been proscribed in 43, as in 40 he is one of Sextus' principal adherents sent by him to Antony to arrange an alliance against Octavian. However, he agreed readily to Octavian's marriage with his sister Scribonia (q.v.), and in 39 crossed over from Sicily to prepare the ground for the Pact of Misenum. In 36 he accompanied Sextus to Asia, but abandoned him for Antony in 35. He was consul in 34, and perhaps still alive in 21.

Syme, *Rom. Rev.*, see index. T. J. C.

SCRIBONIUS (2, PW 23) **LIBO DRUSUS**, MARCUS, great-grandson of Pompeius Magnus. His trial before the Senate in A.D. 16 was the first of the important treason trials of Tiberius' Principate. Tacitus (*Ann.* 2. 27 ff.) considered him an innocent, if half-witted, victim of conspiracy, a judgement which is not impugned by *Fasti Amerinum* (Sept. 13) (Syme, *Tacitus*, 399 f.). He committed suicide during the trial.

J. P. B.

SCRIBONIUS (3) **LARGUS**, Roman physician c. A.D. 1-50, studied at Rome in the time of Tiberius. In 43 he accompanied Claudius on his British campaign, probably on the recommendation of his patron C. Julius Callistus, secretary to Claudius, who also procured the Emperor's patronage for Scribonius' writings. In gratitude Scribonius dedicated to Callistus his only work to come down to us, the *Compositioes* (prescriptions). The contents of this show him to be an empiricist in method, closely akin to Celsus. His work was largely used by (among other writers) Marcellus Empiricus.

Ed. G. Helmreich (1887), K. Deichgräber, *Professio Medici Zum Vorwort des S. Largus* (1950) W. D. R.

SCROFA, GNAEVS TREMELLIVS, quaestor in 71 B.C. and agrarian commissioner in 59, was friendly with Cicero and Atticus, and chief interlocutor in the first two books of Varro's *De re rustica*. Importing elegance into his work on agriculture, he thought little of the matter-of-fact Sasernae (q.v.; Varro, *Rust.* 1. 2. 25). Varro, Pliny, Columella used him. J. W. D.

SCULPTURE, GREEK. Archaic period, c. 650-480 B.C. During the geometric period of the ninth, the eighth, and the early seventh century statuettes in various materials had been produced, but, as far as is now known, it was not until about 650 B.C. that monumental sculpture was practised in Greece. The inspiration evidently came from Egypt, with which close contact is attested during this very time; also, but to a less extent, from Mesopotamia; and perhaps through a few Mycenaean survivals. From this time on there was an active output of life-size and over life-size statues and reliefs in all parts of Greece—Asia Minor, the Aegean Islands, Greece proper, and southern Italy. The majority of the statues consist of standing and seated male and female figures; but occasionally figures in motion were attempted, especially for the pedimental groups. The chief materials employed were wood, limestone, Island marble, terracotta, and bronze. The sculptures in terracotta and marble were regularly coloured. Those in bronze were first hammered over a core and riveted together, later they were cast solid, and finally cast hollow. The wooden sculptures have practically all disappeared. The standing male figures—the so-called kouroi—are almost all represented in the same general pose: erect, with left leg advanced, and both arms lowered. In contrast to the singular Egyptian statues, they are shown mostly nude and free-standing, with no support at the back. What gives these archaic Greek statues a unique interest is that they show a progressive knowledge of the anatomy of the human body. Step by step, decade by decade, the Greek sculptor learned to represent the complicated structure of the head, the trunk, the arms, the legs and feet, in every detail and in their respective interrelations. By about 480 B.C. an anatomically functioning human figure was achieved—for the first time in the history of the world. Among the earliest and most complete examples of kouroi which have survived are a statue from Delos, two from Sunium, a statue now in New York, and the Cleobis and Biton in Delphi. The series continues with the kouroi from Tenea (in Munich), from Volomandra (in Athens), from Melos (in Athens), and from Attica (in Munich); and it terminates with examples from Ceos (in Athens), Bocotia (in Athens), and the now famous Aristodikos (in Athens). The so-called Omphalos Apollo (a Roman copy of an original of c. 460 B.C.) shows the resultant statue of a youth standing in a free, natural pose, with all parts of the body convincingly rendered.

The female standing figures were generally represented clothed, with only the head and limbs showing the same anatomical evolution as do the kouroi. The chief interest here, therefore, centres in the rendering of the drapery, which gradually develops from a foldless, undifferentiated covering to a more lifelike garment. First are observable a few shallow folds cut into the flat surfaces; presently an increase of such folds with a progressive ability to differentiate both those of the thin (lucen) and of the heavier (woollen) garments. For this purpose a set of conventions was evolved consisting of ridges and grooves going in various directions and terminating in zigzags. Here too the derivation from Egyptian prototypes is evident. Gradually a more naturalistic treatment was achieved, always, however, within the framework of a decorative scheme. Well-preserved examples of such korai, as they are commonly called, are first the Nikandre,

a Naxian dedication found at Delos, now in Athens; a small statue from Auxerre in southern France, in the Louvre; several statues from Sarnos, now in the Museum there, in the Louvre, and in Berlin; and, above all, the famous series of Maidens which came to light on the Athenian Acropolis, buried there after the sack by the Persians in 480 B.C., and refound, many still resplendent in their original colours, during the eighties of the last century.

The seated male and female figures are best exemplified by the statues from Miletus in the British Museum and in the Louvre, by the Athena perhaps by Endoios in the Acropolis Museum, and by the goddess from Tarentum in Berlin. The pose, at first stiff and motionless, gradually becomes more relaxed and animated, while the drapery, which almost always covers the body, goes through the same changes as in the standing figures.

In a few statues and in the pediments, metopes, and friezes of buildings which have survived from various regions one can catch a glimpse of the development of the other stances that were attempted by the archaic sculptors. Figures reclining and in movement—striding, flying, running, falling—are rendered with progressive ability; and gradually the various parts of a composition become interrelated. One can watch this evolution in a few statues, such as a series of flying Victories, and in the pedimental group of Corcyra in Corfu, the metopes of the Sicyonian Treasury at Delphi, the figures on a limestone relief from Mycenae, and in the superb friezes of the Siphnian Treasury and the metopes of the Athenian Treasury, both at Delphi.

In addition to free-standing statues and architectural sculptures, grave monuments played an important part in archaic Greece. These early gravestones consisted of tall, narrow shafts, generally decorated with a standing male figure in relief and surmounted by a sphinx carved in the round. A few of these monuments are signed by their makers; for instance, the well-known gravestone of Aristion in Athens bears the signature of Aristocles, and one from Boeotia is signed by Alxenor of Naxos.

It is noteworthy that the steady progression from conventional to naturalistic representations was similar throughout the Greek world, uniformly shared by Greek artists all over the Mediterranean. Only occasionally, one can observe the work of progressives and of conservatists among the artists.

2. The classical period of the fifth and fourth centuries, c. 480–330 B.C.

(a) The fifth century. The archaic period was followed first by the so-called early classical epoch—a time of experimentation in various directions, such as in the expression of emotion and in the rendering of complicated stances; then by the classical age proper, characterized by an elevation of spirit combined with a superbly competent rendering of naturalistic form. In both epochs there were great achievements, symbolized for us today by two groups of sculptures: the pediments and metopes of the temple of Zeus at Olympia (c. 465–457 B.C.), and the metopes, friezes, and pediments of the temple of Athena at Athens, known as the Parthenon (447–431 B.C.). In both periods great sculptors arose whose names live to this day. In the first, Pythagoras, who, according to ancient authors, was particularly interested in harmonious composition; Calamis, known for the delicacy and grace of his works, and famous for his representations of horses; and Myron, several of whose statues are preserved in Roman copies. In the second epoch came Phidias (q.v.) of Athens and Polyclitus (q.v. 2) of Argos. In antiquity Phidias' fame rested chiefly on his colossal chryselephantine statues of Athena in the Parthenon and of Zeus at Olympia; today his name is associated with the extant architectural sculptures of the Parthenon, for

which he must have been responsible since, according to Plutarch (*Pericles* 13. 4 and 9), Pericles made him general manager and overseer of all artistic undertakings. Under him Greek sculpture attained the grandeur and sublimity which to us remain the chief characteristics of Greek art. Polyclitus was famous for his quietly standing figures in harmonious poses. Of two of his bronze works—the Doryphorus, 'a youth carrying a lance', and the Diadumenus, 'a youth winding a fillet round his head'—several Roman copies in marble exist, which can give an idea of the harmonious design of the originals. They represent the consummation of the long struggles in the representation of the standing human figure and acted as models for future sculptors.

In addition to these two great sculptors there were a host of other gifted artists, of whom Cresilas, Alcamenes, Agoracritus, Strongylon, Callimachus, and Paeonius (qq.v.) are perhaps the best known today. They and their contemporaries produced the sculptural decoration of the many buildings that arose all over Attica and Greece during this incomparable time—e.g. the Erechtheum, the temple of Athena Nike and its 'balustrade', the temple of Apollo at Phigalea, the temple of Hera at Argos—as well as many a splendid single monument, such as the Nike by Paeonius at Olympia.

(b) The fourth century. The Peloponnesian War (431–404 B.C.) in which most of Greece was engaged, and which finally spread to Sicily, put an end to this artistic activity, especially in Athens. The lull, however, was only temporary. Soon important buildings again arose, not only in Greece but in Asia Minor. Of some of these the sculptural decoration has in part survived; for instance, of the temple of Asclepius at Epidaurus (first quarter of the fourth century); of the temple of Athena Alea at Tegea (c. 370–350 B.C.); of the Mausoleum of Halicarnassus (c. 350–330 B.C.); and of the temple of Artemis at Ephesus (c. 350–330 B.C.). Again great figures arose whose names can be associated with these activities, and who are also known for their single statues. Thus a statue of Eirene by Cephisodotus, which was perhaps erected to celebrate the peace which followed the Athenian victory over Sparta in 375 B.C., has been recognized in several Roman copies. Timotheus and Thrasymedes are associated with the sculptures from Epidaurus; Bryaxis made a statue of which the decorated base with his signature is preserved, Leochares, to whom a number of statues have been tentatively attributed. But the leading sculptors of the time were Praxiteles of Athens, Scopas of Paros, and Lysippus of Sicyon. Of Praxiteles we are in the happy position of possessing an original work in the Hermes found at Olympia in the temple of Hera, at the very spot at which Pausanias saw it during his journeys over Greece. Its superb workmanship and the charm of its composition help us to visualize Praxiteles' much praised masterpiece, the Aphrodite of Cnidus, which survives only in second-rate Roman copies. Other works by Praxiteles which have been more or less securely identified are the Apollo Sauroctonus ('the Lizard-Slayer'), a Satyr, and several Aphrodites. Of Scopas there remain some heads and fragments from the temple of Athena Alea at Tegea, perhaps a slab from the Mausoleum, with which he is known to have been associated, and a Pothos, of which Roman copies have been tentatively identified. Of the third great figure of the fourth century, Lysippus, much is known from the statements of ancient writers, but little of his work has survived to our day. The most convincingly identified statue by him is the Apoxyomenus, 'youth scraping himself', of which a Roman copy has been recognized in a marble statue in the Vatican. Instead of the squarely built statues of Polyclitus, he introduced a slenderer figure with long legs and a small head. In addition there have been recognized

a standing statue of Heracles, the so-called Heracles Farnese in Naples, and a seated statue of Heracles, the so-called Heracles Epitrapezus, of which a colossal version has recently been found at Lucus Fucens. A Greek original statue of Agias at Delphi may be an adaptation of a work by him. He was especially famous for his large compositions, some consisting of over twenty figures, and for his portraits. Thus Alexander the Great is said to have preferred him as a portraitist to all others. He was also pre-eminent in representations of animals.

These three artists gave to Greek sculpture a new direction. Instead of the majesty and grandeur of the fifth century they imbued their works with a sober grace. The former spiritual quality has given way to a more human approach, with an increased interest in the individual. These new elements are also observable in the fourth-century Athenian grave monuments with their moving yet restrained rendering of the sorrow of parting, and in the portraits of Thucydides, Plato, and Socrates, which show a gradually heightened sense for a specific individuality.

3. Hellenistic period, c. 330–100 B.C. With the conquests of Alexander the Great the boundaries of the Greek world were greatly enlarged, and Hellenic civilization spread throughout this new eastern, Hellenistic empire. Inevitably the enlargement brought with it fundamental changes also in art. The most important was an increased realism—in movement, in modelling, in expression, and in the range of subjects treated. It is best exemplified by the sculptures from Pergamum, by the Laocoon, by some of the statues recently found at Sperlonga, as well as by many a single work that has survived in a Roman copy. Instead of the quiet stances of former times contortions were favoured, and in relief work strong contrasts between light and shade were produced by a deep carving into the surface. Old age, childhood, deformity, racial differences, strong emotion were now studied with new insight. An increased realism may also be observed in the portraiture of this period, for instance, in the statue of Demosthenes, the blind Homer, the Pseudo-Seneca, and some of the penetrating portraits on Hellenistic coins. Another trend was the so-called *sfumato* style, with delicate modelling and serene expressions—a development from the Praxitelean sculptures.

4. The 'Graeco-Roman' period, c. 100 B.C. and later. The conquest of Greece by Rome initiated still another period in Greek sculpture. The Roman admiration for Greek art brought with it a taste for the works of the past, resulting in an age of copying. Greek sculptors who for almost six centuries had produced masterpieces in ever-changing styles were now engaged all over the Roman Empire in copying the works of a bygone age. To this practice we owe much of our knowledge of Greek sculpture, for many a lost Greek original has survived in such copies. But it spelled the end of an original output, except that it initiated Roman art as such, in which Greek types were borrowed and adapted to form new compositions, and in which the art of portraiture was further developed. See also ART, GREEK RELIGIOUS, and the individual sculptors.

SCULPTURE, ROMAN. Etruscan sculptors are recorded to have worked in Rome during the regal period, and some fragments in terracotta, of regal or early republican date, have been discovered. Etruscan sculpture, heavily indebted in its early stages to archaic Greek art, is well known from the seventh to the first century B.C. The Etruscans produced votive sculpture in bronze and clay, and architectural sculpture in the latter material: stone they reserved for tomb sculpture and sarcophagi. Early sculptures of local style have also come to light in other regions of Italy. From the fourth century onward later Greek artistic currents percolated into Rome through Etruria and Campania, and many Greek statues reached the city as war booty. In the second century sculptors from Hellenistic lands began to flock to Rome and Italy, but no sculptures from Rome that can be securely dated before the late second and early first centuries have survived. Under the late Republic marble (usually assisted by colour) came into use for portraiture (q.v.), other statuary, and architectural ornament.

One of the most important products of Roman sculpture is the great series of historical and commemorative reliefs on public buildings of the capital and other cities. The historical relief originated in late republican times, but came into prominence under the Empire. The Ara Pacis (q.v.) illustrates the idealizing Greek style favoured under Augustus. In Flavian times the panels on the Arch of Titus show greater feeling for pictorial effect and the rendering of depth, while the two Domitianic friezes from the Palazzo della Cancelleria reveal a classicizing tendency. The columns of Trajan and Marcus Aurelius exemplify the 'continuous' narrative style in which the stories of Rome's wars with the barbarians are unrolled as in a film in unbroken sequence round the shafts. Between these two columns fall the again more classicized reliefs of Hadrian's reign, followed under the Antonines by a rich, pictorial style of panel carving with experiments in perspective, crowd-representation, and deep-cut contrasts of light and shade. The reliefs on the arches of Septimius Severus in the Roman Forum and at Lepcis Magna in Tripolitania combine Antonine picturesqueness with a new interest in repetitive and frontal poses for the figures. No State reliefs of the third century have come down to us. In the contemporary reliefs on the Arch of Constantine the new Severan tendencies are developed and intensified and they now became the hallmark of the 'late-antique'.

Other types of relief were: decorative, for interior walls (stucco and terracotta were here employed as well as marble); and sepulchral to the first and early second centuries belong the funerary altars (q.v.) and from the second to the early fourth century there was a large output of sarcophagi (q.v.) with mythological, battle, or genre scenes. Christian sarcophagi of the third, fourth, and fifth centuries are completely Roman in their style. Of Roman pedimental sculpture little remains, although some information is provided by coins and other representations. Sculpture in the round was largely confined to adaptations of Greek types. But there were some original creations; and honorific portrait statues appear in toga, cuirass, or heroic nudity. The sculptors of the eastern provinces, possessing artistic traditions of their own, in some respects led the capital, as is clear from such works as the historical reliefs from Ephesus and the series of Attic and Asiatic sarcophagi. In the western provinces sculpture was mainly funerary and votive. Characteristic are the carved grave *stelae* and such local manifestations as the Jupiter-columns of Roman Germany. The fusion of Celtic with classical traditions in the style and content of the art of these regions is of special interest.

SCYLACIUM (or **SCYLLETIUM**), modern *Squillace*, on the 'sole' of the Italian 'boot', overlooking the stormy *Scylleticus Sinus* and dominating the narrowest part of the Bruttian peninsula. Greek in origin, its early history is unknown. Becoming the *colonia Minervia* c. 122 B.C., it attained some prosperity. Cassiodorus (q.v.) was born here.

E. T. S.

SCYLAX of Caryanda, by order of Darius I, is said to have sailed down the Indus to its mouth, and thence, in a voyage of thirty months, to have reached the isthmus of Suez (Hdt. 4. 44). Though the voyage has been doubted, the book that he wrote is quoted apparently by Hecataeus (q.v. 1) (cf. F 295, 296), as well as by later authors like Aristotle, Strabo, and Avienus (q.v.). No MS. has survived; the *Periplus* that bears his name was written in the fourth century B.C.

GGM i xxxiii-li; 15-96 (text of Periplus), FGrH iii C, no. 709. W. A. Heidel, *The Franks of the ancient Gk. Maps* (1917), esp. 47 ff.; Hyde, *Greek Measures*, 174 ff.

E. H. W.

SCYLLA (Σκύλλα, -α), (1) a sea-monster, living in a cave opposite Charybdis (q.v.); she had six heads, each with a triple row of teeth, and twelve feet. She lived on fish of all sorts, but if a ship came near enough, she would seize six men at a time from it and devour them. The only way to restrain her was to implore the intervention of her mother Crataeis. She was immortal and irresistible (see Homer, *Od.* 12. 85 ff., 245 ff.). Later authors (e.g. Verg. *Ecl.* 6. 75) say she had a girdle of dogs' heads about her loins. There were also stories, of uncertain date and origin, to the effect that she had once been of human shape but was turned by magic into a monster. e.g. Ovid (*Met.* 13. 730 ff., 14. 1 ff.) says she was loved by Glaucus (q.v. 2) the merman, and changed by Circe (q.v.), who was her rival. Tzetzes on Lycophron, 46 and 650, makes Poseidon the lover and Amphitrite the rival. Rationalizations of her into a rock (cf. Ovid, *Met.* 14. 73) or other natural danger of the sea are fairly common; her father is regularly Phorcys, q.v. She is often (as Verg. loc. cit.) confused with (2), daughter of Nisus (q.v. 1) king of Megara.

H. J. R.

SCYMNUS, a Greek of Chios, fl. c. 185 B.C., alleged author of a lost prose *περὶ ἡννῆας*. He is not the author of the extant *Περὶ ἡννῆας*, an unpoetical geographical summary in iambs, written c. 90 B.C. or earlier: introduction, Europe, especially coasts of Spain, Italy, Sicily, Adriatic, Euxine; then Asia. The rest is lost. The author, usually referred to now as Pseudo-Scymnus, using various sources, is worth little, except on the Euxine, Ligurian, and Spanish coasts, and Greek colonies.

E. H. W.

SCYTHIA was the name given by the Greeks to the country between the Carpathians and the river Don. The term 'Scythian' is frequently used to denote an association of central Asian tribes of Indo-European origin and speech who started penetrating into eastern Europe and the Caucasian area early in the first millennium B.C. By c. 650 B.C. they had made themselves the masters of what are now north-western Iran and eastern Turkey as far as the river Halys. After ruling there for some twenty-

eight years they were expelled from Asia by the Medes. Retreating to the north-west, they settled first in the Kuban basin, then moved into what is now southern Russia. There the group to which, strictly speaking, the term Scythian should alone apply, first founded a kingdom—Royal Scythia—on the lower reaches of the Dnieper; when expelled from that area (c. 2nd c. B.C.) by the Sarmatians they transferred it to the Crimea. From as early as the fifth century B.C. groups of Scythians also penetrated as far west as Hungary and north as Pomerania.

The Royal Scythians traded with the Greeks living on the Black Sea's northern shore, exchanging wheat, which they levied from the native population, fish, honey, furs, and other foodstuffs for luxuries such as pottery and jewelry, even though they were themselves highly skilled at working metals. They were a pastoral people and adhered to the nomadic way of life till their disappearance from the pages of history in c. second century A.D. Warlike and brave, they were among the very first to master the art of horsemanship. They owed much of their military success to the skill of their mounted archers, even defeating a Macedonian army commanded by Alexander's general Zopyrion (c. 325 B.C.). However, it was partly owing to the effects of their scorched-earth policy that Darius was obliged to abandon his invasion of their territory (c. 512 B.C.).

The Scythians worshipped the elements, the Great Goddess, and—above all—the graves of their ancestors. For their kings and chieftains they built elaborate, richly furnished tombs, all of which took the form of horse burials. Many of the objects and horse trappings recovered from these are of considerable intrinsic value, being of gold or bronze, often enhanced with enamel inlays or jewels. All are profusely decorated, the majority with animal designs which endow them with permanent artistic value. Indeed, the technical skill, linear mastery, intense vitality, and profound sensibility of these renderings is so remarkable that the designs form a distinct school of art. It is one which ensures its Scythian creators of an important place in the history of European culture.

SCYTHINUS of Teos, contemporary of Plato, wrote *Ἰαμβοί* which expressed Heraclitus' doctrine in verse, and also a prose work *Περὶ φύσεως* and a *Ἱστορία* which was a novelistic account of Heracles' deeds as benefactor of the human race.

Ed. Diels, *PPF* 169.

W. D. R.

SEALS (*σφραγίς*, *signum*, *sigillum*) played an important part in ancient life, taking the place of the modern signature on documents and, to some extent, of locks and keys. The materials for sealings were lead and wax for documents; in commerce a lump of clay was commonly pressed down over the cordage. In Roman times small seal-cases were frequently employed to protect the impression from damage. The seals themselves were generally of stone or metal, sometimes of ivory, glass, and other materials; some early seals, pierced by string holes, were worn round the neck or wrist but ancient seals were usually worn as signet rings.

The use of seals began in Neolithic times in Greece and they were in common use in E.H. Seals of ivory, hard stones, and precious metals were made in Crete where they appear in EM II; the two main types were the stamp and the cylinder-seal. The finest Minoan and Mycenaean seals were cut in hard stone and precious metal. The techniques of cutting stone seals were revived in the later Geometric period, the most notable series being the so-called Island Gems; hard stones—

chalcedony, cornelian, rock crystal, and others—were used again from the middle of the sixth century. The scarab form which had been popular in Egypt from the ninth dynasty was adopted in archaic Greece and the scaraboid was the commonest form in the fifth century. Gold signet rings were also popular.

The principal device on ancient seals was usually pictorial—a favourite deity, a mythical hero, animals, and, later, portraits. The seal devices of several prominent men of Roman times are known; Augustus first used a sphinx and later a portrait of Alexander the Great.

Greek cities possessed civic seals, for public documents or public property; the Romans utilized a magistrate's personal seal.

V. E. G. Kenna, *Cretan Seals* (1960), J. Boardman, *Greek Island Gems* (1963), *Archaic Greek Gems* (1968), V. Chupot, *Our Sag. S.V. 'signetum'*, I. N. P.; D. E. S.

SECESSIO means the 'withdrawal' of the *plebs* from the rest of the Roman community. It implies detachment from public life and emigration from town. The plebeians *en masse* retired outside the *pomerium*, often to the Aventine, which was turned over to them not later than 450 B.C. We have no means of deciding how many secessions (five are recorded between 494 and 287 B.C.) actually occurred. It would be too radical to accept only the last, for the account of it differs widely from that of the earlier ones, so that a mere anticipation would be incomprehensible. The first secession (traditionally dated to 494), which was stopped by Menenius (q.v.), and the second of 449, which is reputed to have caused the fall of the decemvirs, are perhaps retrojections, though plebeian agitation is in both episodes likely. Nor is the third, with which Canuleius (q.v.) is credited, beyond suspicion, although the *Lex Canuleia* (445) may have been forced through by a secession. The fourth, which is not beyond suspicion either, was merely a military rebellion (342). The fifth secession of 287 is indisputably historical. Social troubles, arising from the pressure of debts, led the *plebs* to withdraw to the Janiculum. A plebeian dictator, Q. Hortensius (q.v. 1), was appointed, and his law terminated the struggle of the Orders.

SECOND ATHENIAN LEAGUE, the modern name for the alliance formed by Athens in 378 B.C. to exploit the widespread resentment caused by Sparta's abuse of her power as champion of the King's Peace (386). The alliance resembled the Delian League (q.v.) but specific guarantees of autonomy ensured that there would be neither tribute nor garrisons, nor interference in the internal affairs of member States; a carefully prescribed procedure accorded the *synedion* of the Allies a probouleutic function in questions of peace and war and an independent power in certain other matters. Only six States (including Thebes) joined in 378, but, after Athens had by the Decree of Aristotle of spring 377 renounced all claims to allied territory whether as cleruchy (q.v.) or as private possession, numbers steadily increased. The Common Peace of 375 represented the triumph of the new power. With the defeat of Sparta at Leuctra in 371, the *raison d'être* of the League disappeared and, when Athens was unwilling that Sparta should be completely destroyed, Thebes seceded from the League taking with her the States of Euboea and central Greece, and proceeded to the liberation of Peloponnesian States. At the same time Athens began to concentrate all her efforts and the funds of the League on the recovery of two important assets of her former Empire, viz. Amphipolis and the Chersonese. Although Athens formally did not break her promise of 377 not to settle cleruchies in allied States, she

ceased to recruit new members and, when Timotheus (q.v. 2) recaptured Samos in 365, a cleruchy was established there which doubtless encouraged Epamondas (q.v.) to intervene in the Aegean (364) and so to shake the loyalty of the leading allies, Byzantium, Chios, and Rhodes. Athenian generals, for their part, were severe in exacting war-contributions (*syntaxeis*), and although the *synedion* continued to function, the plain aim of many Athenians was the recovery of empire. In 357 under the protection of Mausolus (q.v.) Rhodes and Chios joined Byzantium in revolt, and in the ensuing Social War Athens was unable to subject them. After 355 the League lingered on (the *synedion* playing a part in the peace negotiations of 346), but it had ceased to count for much in Greek affairs and was dissolved after Chaeronea.

SECULAR GAMES, scenic games (*ludi*) and sacrifices performed by the Roman State to commemorate the end of one *saeculum* and the beginning of a new one. The *saeculum*, defined as the longest span of human life, was fixed in the Republic as an era of a hundred years. The celebration was ordered by the Sibylline Books and was under the direction of the *duumviri* (later *decemviri* (q.v.) or *quindecimviri*) *sacris faciundis*. The ceremony took place in the Campus Martius, near the Tiber, at a spot which was known as Tarentum or Terentum. The gods honoured in the republican *ludi* are said to have been Dis and Proserpina, who had an altar near by. The games were associated in origin with the Valerian gens, and Valerius Corvus' first consulship, 348 B.C., may have been the date of the first celebration. The secular games of 249 B.C. are much better authenticated. Many scholars believe that the ceremony was actually introduced in that year from Tarentum, though the connexion of the site of the games with the south Italian city is by no means certain. The next celebration took place in 146 B.C. (a date attested by contemporary writers, and therefore more trustworthy than Livy's assignment of the games to 149). Like modern centennials, the *saeculum* was not always celebrated punctually. No games were held a century later, although, if we may trust the indications of coins with symbols of the *saeculum* on them (Alfoldi, *Hermes* 1930, 369 ff.), there were plans in 45–42 B.C. to celebrate the *ludi* in the near future. The Fourth Eclogue has been interpreted as a prediction—not fulfilled—of games to be held in 40 B.C.

Augustus' plans to celebrate the beginning of a new age were known to Virgil, who died two years before the games took place, and were referred to in the familiar words 'aurea condet saecula' (*Aen.* 6, 792–3). At Augustus' request the *quindecimviri* made calculations for the celebration and fixed the length of the *saeculum* at 110 years. Augustus' *ludi* in 17 B.C. are well known from Horace's *Carmen Saeculare* and from an inscription, found near the Tiber, which gives details of the complicated ritual. They consisted of three nights and three successive days of sacrifices and archaic scenic games, and of seven supplementary days of more modern entertainment in theatre and circus. Dis and Proserpina do not appear among the gods honoured. Each night Augustus and Agrippa made appropriate offerings and sacrifices beside the Tiber to the Moerae, to the Eilthyiae, and to Terra Mater. On the first two days they made sacrifices on the Capitol to Jupiter and Juno Regina; on the third day they made offerings to Apollo and Diana on the Palatine. The scenic games continued night and day, and 110 matrons held *sellisternia* for Juno and Diana. As we know from the inscription, it was after the offerings on the third day that twenty-seven boys and

twenty-seven girls, whose fathers and mothers were living, sang Horace's hymn, first on the Palatine and then on the Capitol. In the hymn Horace brings into great prominence Augustus' patron god Apollo in his new Palatine temple.

The antiquarian Emperor Claudius revived the *saeculum* of a hundred years and held games in A.D. 47 for the eight-hundredth birthday of Rome. Following his example, Philip in 248 celebrated the thousandth anniversary of the city. Domitian in 88 and Septimius Severus in 204 calculated their festivals by use of the Augustan *saeculum* of a hundred and ten years. From Septimius Severus' celebration extensive inscriptional records have been discovered, including a fragmentary secular hymn written in hexameters by an unknown poet.

SECUNDUS, JULIUS (*PW* 470), among recent orators specially mentioned by Quintilian (*Inst.* 10. 1. 120; 3. 12). Like M. Aper, another of the *personae* in Tacitus' *Dialogus*, he came from Gaul. A quiet and elegant speaker, he also wrote a biography of Julius Africanus (q.v. 1). He was secretary to Otho.

G. V. Howersock, *Greek Sophists in the Roman Empire* (1960), Appendix 1. J. W. D.

SECURITAS, commonly associated with the Emperor or the State as a 'virtue' or 'desirable state' (*res expetenda*). Securitas was commonly invoked when some imminent danger had been averted or on an occasion, like 10 Jan., A.D. 69, when the Arval Brethren sacrificed to her on the adoption of Piso. Her characteristic attribute is the column on which she leans.

WINSLOW, *RK* 335.

H. M.

SECURITY in Roman law was given to the creditor in the form either of a surety (*see* *STIPULATIO*) or of rights over the property of the debtor. By the earliest real security, *fideiucia*, the creditor acquired ownership of the pledged object by *manipatio* (q.v.) or *in iure cessio* (*see* *DOMINIUM*), subject to an agreement or trust for its reconveyance after payment of the debt. The agreement would also usually regulate the creditor's right of sale, etc. By a later form of pledge (*pignus*) the creditor acquired only interdictal possession (*see* *POSSESSIO*) by a simple delivery. Because of the inconvenience of the debtor's losing possession the Praetor intervened—at first probably in the case of pledges by agricultural tenants to their landlords (of slaves, cattle, agricultural implements)—to enable the creditor to assert his interest without the need for the transfer of possession. This non-possessory 'charge' was later called *hypotheca*. The debtor could hypothecate the same object successively to several creditors, but the earlier mortgage had priority; later mortgages might enforce their rights only if the preceding one was satisfied. Some mortgages, as for taxes due to the *fiscus* or (by a reform of Justinian's) for the dowry of a woman, were implied by law and privileged (i.e. given overriding priority). A. B., B. N.

SEDULIUS (first half of 5th c. A.D.), a Christian Latin poet, author of the *Paschale carmen*, a free adaptation of the Gospel narrative, with a prose version *Paschale opus*, in five books, and two hymns.

Text: J. Huemer, *CSEL* x. F. Cornaro, *Sedulio poeta*, with trans. A. H.-W. (1956).

SEGESTA (Greek *Ἐγέστα*, the Greeks apparently not appreciating the native initial sibilant), principal city of

the Elymi in north-west Sicily, on and below Monte Varvaro a little north-west of modern Calatafimi. By the fifth century B.C. it was considerably hellenized. The Segestans wrote their language in Greek characters and built at least three Doric temples—the largest remaining unfinished. They developed a traditional hostility with Selinus (q.v.), in pursuit of which they allied themselves with Athens (*IG* 1². 19—458/7 or 454/3 B.C.) and with Carthage (410 B.C.). There was war between them in 454 (if Diod. Sic. 11. 86 be thus interpreted) and in 416, when Athenian intervention was successfully encouraged with a false display of wealth (Thuc. 6. 6–8 and 46). In 409 Carthage achieved what Athens had not: Selinus was sacked, but Segesta passed into the Carthaginian sphere of domination. Agathocles seized it in 307, treating the population with exceptional barbarity; it also came briefly under Pyrrhus' control (276).

In the First Punic War Segesta immediately surrendered to and was generously treated by the Romans, who like the Segestans claimed Trojan descent. It became a *civitas libera et immunitis*, but declined after the Servile War (103–100). Still a significant community in A.D. 25 (*Tac. Ann.* 4. 43), it subsequently disappeared. The site is now, save for tourist facilities, deserted; the remains and their setting are alike magnificent.

Principal temple, A. M. Burford, *CQ* 1961, 87 ff.; recent discoveries, V. Tusa, *Atti del V° Congresso internazionale di Archeologia classica* II (1961), 31 ff., inscriptions, id. *Koinkalos* 1960, 34 ff. A. G. W.

SEIA, an obscure Roman goddess, said to be the guardian of corn while underground (August. *De civ. D.* 4. 8). Her statue, with that of Segestia (Segesta in Pliny, *HN* 18. 8) and a third who must not be named indoors (Tutulna?), stood in the Circus Maximus (cf. *Tert. De Spect.* 8, Macrobi. *Sat.* 1. 16. 8). H. J. R.

SEJANUS (LUCIUS AELIUS (*PW* 133) SEIANUS; d. A.D. 31), of Volsinii (*Bolsena*). The maternal ancestry of Sejanus was distinguished; his father was an *eques*, L. Seius Strabo. He was made his father's colleague as Prefect of the Praetorian Guard by Tiberius on his accession, and soon, on his father's appointment as Prefect of Egypt, he became sole commander of the Guard, whose strength he increased by quartering the cohorts in a barracks near the Porta Viminalis. Over Tiberius he exercised a steadily increasing influence. After the death of Tiberius' son Drusus in 23 (which Sejanus was suspected of compassing) his influence in the Senate was paramount, and in a succession of treason trials he attacked his enemies (chiefly adherents of Agrippina). He failed to secure Tiberius' consent for a marriage with Livia, the widow of Tiberius' son Drusus, in 25, but his influence increased through Tiberius' retirement (which he encouraged) to Caprae in 27. In 29 he secured the arrest and deportation of Agrippina and her eldest son Nero; her second son Drusus was imprisoned in the Palace in 30. In 31 Sejanus perhaps planned to strike at the principate. He was consul, had been granted *imperium proconsulare*, and had hopes of *tribunica potestas*. Tiberius, however, warned by Antonia, the widow of his brother Drusus, sent a letter to the Senate. Sejanus was arrested, brought before the Senate, and executed, the command of the Guard having been transferred to Macro (q.v.). The ease with which he was suppressed shows that his conspiracy was still in an early stage.

Syme, *Tacitus*, 401 ff.; A. Boddington, *AJPPh.* 1963, 1 ff. J. P. B.

SELENE, Greek moon-goddess (Roman Luna), was daughter of the Titans Hyperion and Theia, according to Hesiod (*Theog.* 371), sister of Helios and Eos; but different parents are named by other authorities—the Titan Pallas or Ilihus as father, Euryphaessa as mother. Selene drives

the moon chariot, drawn by a pair of horses or oxen, or she rides on a horse or mule or ox.

Selene has few myths. Best known is the story of her love for Endymion which caused Zeus to cast him into an eternal sleep in a cave on Mount Latmus, where Selene visits him. In another story Pan loved Selene and lured her into the woods. We are also told that Zeus and Selene were parents of Hecate, the dew (Alcman, fr. 39 Bergk), and that Helios and Selene were parents of the Hours (Quint. Smyrn. 10. 337).

Selene was identified with Artemis, probably before the fifth century B.C., perhaps because both had been identified with Hecate. Selene had little cult in Greece. There was an oracular shrine of Selene Pasiphac near Thalamai in Laconia (Plut. *Agis* 9; Paus. 3. 26. 1). Representations of the moon on ancient Cretan rings and gems do not necessarily indicate a Minoan moon cult, but may do so. In later times, however, the Phrygian moon-god Men (q.v.; Selene was sometimes called Mene) received worship in several Greek cities. It is the luminary itself rather than the goddess Selene that played a role in Greek magic, folklore, and poetry.

W. H. Roscher, *Über Selene und Verwandtes* (1890). J. E. F.

SELEUCEIA (1) ON TIGRIS was founded c. 312 B.C. by Seleucus I Nicator, as the capital of his empire. It became the great outpost of Greek civilization in the Orient, and replaced Babylon as the entrepôt of trade between east and west. Built beside the ancient Opis, on a natural lake where the Nahrnalka canal from the Euphrates joined the Tigris, Seleuceia was a port for maritime shipping (Strabo 16. 739). The city had a mixed Greek and Babylonian population and a large Jewish colony; Pliny estimated the total population as 600,000 in his day (*HN* 6. 122). Even after the centre of Seleucid power had shifted to Syria, Seleuceia maintained its essentially Greek character. When the Parthians conquered Babylonia, they preserved its free constitution, and kept their troops and administrative officials at Ctesiphon (q.v.) on the opposite river bank. In the Parthian period Seleuceia was still a great commercial centre, in spite of the rivalry of Volagesocerta. But it became the seat of violent factions and dynastic quarrels, after a seven years' revolt (A.D. 35-42, Tac. *Ann.* 11. 9. 6) it was heavily punished. Excavations show that the city thenceforward gradually became orientalized; burnt down by Trajan, it was rebuilt in Parthian style. Its final destruction in A.D. 164 by Avidius Cassius marks the end of Hellenism in Babylonia.

SELEUCEIA (2) IN PIERIA was founded c. 300 B.C. by Seleucus I to be his capital, a function that was, however, soon transferred to Antioch, whose seaport it thenceforward remained. Captured by Ptolemy III c. 245, it was recovered in 219 by Antiochus III; its adult male citizens then numbered 6,000. It issued municipal coinage from Antiochus IV's reign, coined as one of the Brother Peoples (149-147), and in 108 received its freedom, which was confirmed by Pompey (64 B.C.) in reward for its resistance to Tigranes. It was the station of an imperial fleet; Vespasian improved the harbour, whence St. Paul had sailed on his first mission c. A.D. 64.

A. H. M. J.; H. S.

SELEUCUS (1) I (Nicator) (c. 358-281 B.C.), son of Antiochus (presumably a Macedonian noble). He ac-

companied Alexander to Asia, but was never among his most prominent generals, though probably a close personal associate. After Alexander's death he obtained the satrapy of Babylonia (321), where he supported Antigonus against Eumenes, but nevertheless lost his satrapy and fled to Egypt (316). He regained Babylon by a spectacular exploit, and soon gained Media and Susiana also: from this year the Seleucid Era begins (7 Oct. 312, Macedonian calendar; but 3 Apr. 311, Babylonian).

Seleucus naturally joined the coalition of 'separatist' generals against Antigonus, and the victory of Ipsus (301) gave his kingdom access to the Mediterranean through Syria and (296) Cilicia. Henceforth his policy had a predominantly western bias, as illustrated by the founding of Antioch (300) to balance Seleuceia (q.v. 1), by his marriage to Stratonice daughter of Demetrius (298), and by the avenues for expansion which he sought in Syria and Asia Minor. He saw presumably that it was only by continued Greek immigration that a Graeco-Macedonian empire in Asia could survive. In the East he ceded the Indian provinces to Chandragupta early in his reign (304?). He finally won Asia Minor with the victory of Corupedium over Lysimachus (281), which also gave him hopes of seizing the vacant throne of Macedonia. He invaded Europe, but was murdered by Ptolemy Keraunos, who wanted Macedonia for himself.

The achievement of Seleucus was inferior only to that of Alexander, for he reassembled most of Alexander's empire in Asia. The dual character of his dominion, Mediterranean and continental, was implicit in his two capitals and his two wives (he never repudiated the Bactrian Apama, his wife since 324). He assured the succession by elevating his son Antiochus (q.v. 1) to share his throne (292). In character he seems the most humane, and certainly was one of the ablest, of the Successors.

ANCIENT SOURCES. For the Seleucids in general the sources are too scattered to be indicated briefly. See bibliographies to *CAH* vi, ch. 15 (W. W. Tarn); vii, chs. 3 (Tarn), 5 (M. Rostovtzeff), and 22 (Tarn); viii, chs. 6 and 7 (M. Helleux) and 16 (E. Rieu).

MODERN LITERATURE. *CAH* vi-viii; E. R. Bevan, *The House of Seleucus* (1902); E. Bickerman, *Institutions des Séleucides* (1938); R. A. Parker and W. H. Edson, *Phil.* 1958, 153 ff.

G. T. G.

SELEUCUS (2) II (CALLINICUS) (c. 265-225 B.C.) was the eldest son of Antiochus II and Laodice. In this reign (commencing in 246) the Seleucid Empire first suffered severely from the same centrifugal tendencies which had previously beset the Persian Empire. In the Far East, Bactria became definitely independent, and the native kingdom of Parthia also came into existence (248-247): in the West, Seleucid Asia Minor was lost temporarily. Seleucus was hampered throughout by dynastic troubles: first, the pretensions of his stepbrother which produced the invasion of Ptolemy III with its spectacular (though ephemeral) successes ('Third Syrian War', 246-241), and, later, those of his younger brother Antiochus (q.v. 8) Hierax in Asia Minor. Seleucus spent his life on campaign, but it remained for his son Antiochus ('the Great') to restore the kingdom.

W. W. Tarn, *CAH* vii 716 ff.

G. T. G.

SELEUCUS (3) III (Soter) (c. 245-223 B.C.), eldest son of Seleucus II, reigned three years only, being murdered (for reasons unknown) on a campaign against Attalus I of Pergamum.

SELEUCUS (4) IV (PHILOPATOR) (c. 218-175 B.C.), second son of Antiochus III, in whose lifetime he already held important commands, till finally he was associated with him in the kingship after the battle of Magnesia (189).

In his sole reign (which commenced in 187) he maintained correct relations with Rome and observed the terms of the peace of Apamea (188), which forbade political adventures in the West, and rendered them impossible by reason of the severe indemnity which it imposed upon him. But he also kept up friendly relations with Macedonia and Egypt, the two Powers of the Near East which remained independent of Rome. He was murdered by his minister Heliodorus for reasons which remain obscure.

E. R. Bevan, *CAH* viii. 495 ff.

G. T. G.

SELEUCUS (5, *PW* 38) of Seleucia on the Tigris (? c. 150 B.C.), described by Strabo (16. 1. 6) as a Chaldaean, i.e. member of a Babylonian astronomical fraternity, stands alone as a thoroughgoing supporter of Aristarchus (q.v. 1) of Samos' heliocentric hypothesis, which he tried to demonstrate (Plut. *Quaest. Plat.* 8. 1, 1006 c; *Dox. Graec.* 383). He wrote on the tides in opposition to Crates (q.v. 3) of Mallos; he attributed the tides to the moon's resisting the rotation of the earth; Strabo (3. 5. 9) says that he discovered periodical inequalities in the flux and reflux of the Red Sea, which he attributed to the position of the moon in the zodiac.

T. H.

SELEUCUS (6) **HOMERICUS** of Alexandria was perhaps at the court of the Emperor Tiberius (Suet. *Tib.* 56). He is said to have written commentaries in Greek on practically every Greek poet. Besides works on Greek language and style and on Alexandrian proverbs, he wrote a criticism of the critical signs used by Aristarchus, a biographical work probably on literary figures, a theological treatise, a paradoxographical study, a miscellany, and a commentary on the *axones* of Solon. It is doubtful whether the *Περὶ φιλοσοφίας* mentioned by Diogenes Laertius is by this Seleucus.

FIIG iii. 500; *FGH* iii. 341; M. Müller, *de Seleuco Homérico* (1891); R. Reitzenstein, *Geschichte der griechischen Etymologie* (1897), 157 ff.

SELINUS (Σελινόων, modern *Selinunte*), founded by Megara Hyblaea on the south-west coast of Sicily in 651 B.C. (Diod. Sic. 13. 59. 4) or 628 (Thuc. 6. 4. 2), lies on two low eminences commanding a fertile plain. Prospering quickly, it colonized Heraclea Minoa. As the westernmost Greek city it was in uncomfortable proximity to both Phoenicians and Elymians, and a pro-Punic policy, followed by tyrants in the early period, aligned Selinus with Carthage in 480 (Diod. Sic. 13. 55). Making their peace with Syracuse thereafter, the Selinuntines were wealthy enough to build a series of temples, the shattered remains of which still impress with their magnificence. Long-standing enmity with Segesta (q.v.; cf. *Tod* 1^a, no. 37) brought Athenian intervention in Sicily (415) and the Carthaginian invasion of 409, when Hannibal sacked Selinus. Refounded soon after by the refugees, the city remained within Carthage's orbit until, for the better defence of Lilybaeum (q.v.), the Carthaginians destroyed it (250 B.C.). Its site became, and still is, deserted (disregard Pliny, *HN* 3. 91).

SELLA CURULIS was an ivory folding seat, without back or arms, used by Roman magistrates *cum imperio*. Its Etruscan origin was maintained by the ancient authorities, and their conjecture is supported by archaeological evidence, chiefly from Caere. The name was derived (Gell. 3. 18. 3 ff.) from the chariot (*currus*) in which the chief magistrate was conveyed to the place of judgement, and originally the *sella curulis* served as the seat

of justice. Subsequently it became the attribute of all the higher ('curule') magistrates.

Mommsen, *Röm. Staatsr.* 1^a. 399 ff.

P. T.

SEMELE (Σεμέλη), otherwise called **Thyone** (Θυώνη), in mythology, a daughter of Cadmus and mother of Dionysus (q.v.). Whether or not Semele is Zemelo and originally the name of a Thracio-Phrygian earth-goddess (see e.g. Nilsson, *GGR* 1². 568), it is certainly not Greek, whereas Thyone is. Such double namings are not uncommon, cf. Alexander-Paris. Her story consists almost wholly of her relations with Zeus and Dionysus. The former's association with her aroused Hera's jealousy, and the goddess, disguising herself (*Ov. Met.* 3. 250 ff.; *Hyg. Fab.* 167, 179, from older sources, cf. e.g. *Eur. Bacch.* 6 ff.), advised her to test the divinity of her lover by bidding him come to her in his true shape. She persuaded him to give whatever she should ask, and he was thus tricked into granting a request which he knew would result in her death. The fire of his thunderbolts killed her, but made her son immortal (cf. *Ov. Fasti* 3. 715 ff.; Rose, *CR* 1922, 116). Zeus put the unborn child in his thigh, whence he was born at full time, and, after coming to maturity, he descended into Hades and brought Semele up (*Pind. Ol.* 2. 25 ff.; *Paus.* 2. 37. 5--Argive legend of the place where he went down to fetch her; and elsewhere); she thus became an Olympian goddess. Thus, if she was originally a goddess, is evidently secondary. She had a cult in Thebes in historical times (*Eur. loc. cit.*; *Paus.* 9. 12. 3-4).

The statement of Hesychius, s.v. 'Εγχεύ, that this was another name for her, is pretty obviously due to a misunderstanding of a lost comedian's joke. Someone had said that Dionysus was son of 'Pour-out' or 'Fill-up' and his words had been taken seriously; see Rose, *CQ* 1932, 58. For Actaeon's love of her (in which case he can hardly have been her nephew) see Acusilaus in *Apollod.* 3. 30, and cf. *ACTAEON*.

H. J. R.

SEMIRAMIS (Σεμίραμις), in Greek legend, the daughter of the Syrian goddess Derceto (see *ATARGATIS*). Exposed at birth, she was tended by doves till found by shepherds. Her first husband was Onnes, her second Ninus, king of Assyria, after whose death she ruled many years, renowned in war and as builder of Babylon (this point Berosus, *FIIG* ii. 507, denies). At death she was changed into a dove, which was accordingly held sacred (*Diod. Sic.* 2. 4. 20). The historical figure behind this legend is almost certainly Sammutamat, wife of the Assyrian king Shamshi-Adad V, and herself regent 810-805 B.C. in the minority of her son Adad-Nirari III.

F. R. W.

SEMO SANCUS DIUS FIDIUS (for the full name see *Dion. Hal. Ant. Rom.* 4. 58. 4). A deity of puzzling origin and functions, said to be Sabine (e.g. *Prop.* 4. 9. 74; he is there identified with Hercules (q.v.)), apparently from the interpretation of *Dius Fidius* as *Iovis filius*, and *Sancus* is, as often, corrupted, whether by Propertius himself or a copyist, into *Sanctus*. Semo appears to be his name, and suggests the Semunes of the Arval hymn, usually taken to be deities of sowing. *Sancus* would seem to be an epithet, perhaps connected with *sancire*, cf. the adj. *sanguialis*, which also shows a *u*-stem. *Fidius* pretty certainly is to be explained as cognate with *fides*, and *Dius* is simply 'divine' or 'heavenly'. Wissowa (*RK* 130 ff.) argued against differentiating Semo *Sancus* from *Dius Fidius* (cf. Warde Fowler, *Roman Festivals* (1899), 135 ff.), but Latte (*RR* 126 ff.) thinks that originally they were separate deities. In historical times he is connected with oaths and treaties (Wissowa in *Roscher's Lexikon* iv. 318 f., cf. *RK* loc. cit.), hence the common oath *medius fidius*. Hence he has some

connexion with thunder. His temple stood on the Quirinal (Platner-Ashby, 460 f.); ascribed to Tarquinius Superbus and dedicated in 466 B.C., it contained a bronze statue of Tanaquil. He had some sort of cult on Tiber island also (Wissowa, locc. cit.). There was a temple of Semo Sancus at Velitrae. Conceivably a deity of sowing had been absorbed by Jupiter (q.v.).

H. J. R., II. W. P.

SEMONIDES, iambic and elegiac poet, originally of Samos, but connected especially with Amorgos (*Suda* s.v. *Σημωνίδης*, Strabo 487, Steph. Byz. s.v. *Ἀμοργός*). The *Suda* makes him a contemporary of Archilochus, Cyril places him in 664-661 (*Adv. Iul.* 1. 12), and modern critics have tended to place him later still because of an alleged dependence, not only on Archilochus (fr. 1 and Archil. fr. 84), but also on Phocylides (fr. 7 and Phoc. fr. 2). A piece of elegiac verse on the shortness of life which some MSS. of Stobaeus (4. 34) attribute to Simonides of Ceos has been ascribed with some reason to Semonides. He is also said to have written a history of Samos in two books of elegiacs (*Suda*). Of his iambic fragments the longest, fr. 7, describes various types of women by comparing them to animals and shows the influence of popular fables; another, fr. 1, discourses on the illusions and uncertainties of life and prescribes a mean between desire and despair. Semonides has plenty of humour and some satirical gift; he writes easily. His language is Ionic. See also IAMBIIC POETRY, GREEK.

SENATUS. I. REGAL AND REPUBLICAN ROME

(a) *Composition*. The Senate was the council of the kings and survived the monarchy. Tradition attributes to Romulus the institution of a Senate of 100 members, but the oldest certain number is 300, evidently connected with the 3 tribes and 30 curiae. Sulla increased the number to 600, Caesar to 900, and Augustus reverted to 600. The distinction between patrician and plebeian senators, whatever its origin, must have been already definite in the second half of the fifth century B.C. The patrician senators, called *patres*, continued to retain certain prerogatives (cf. below). Plebeian senators were called *adlecti* or *conscripti*. Patricians and plebeians together were called *qui patres qui conscripti* or *patres* (cf. *conscripti*). *Senatores pedarii*, who voted but did not speak, were probably at first those who had not held magistracies, and later magistrates of low rank. The senators were chosen first by the kings, later by the consuls, and at least after the *plebiscitum* of Ovinus (q.v.) by the censors. Late in the third century it was the rule to choose first ex-curule magistrates, who could take part in the sessions before formal appointment. In the time of the Gracchi plebeian aediles and, by the *plebiscitum Atilium, tribuni plebis* secured the same privileges. Sulla made admission to the Senate depend mainly on the quaestorship. Thus the Senate was recruited indirectly by popular election. Censors could remove qualified persons only if guilty of misconduct; the exclusion could be revoked by their successors. Certain professions (e.g. petty industry) and certain civic punishments or

moral transgressions disqualified from admission. Freedmen or sons of freedmen were not usually admitted. A property qualification (1,000,000 sesterces) was first imposed by Augustus, but the senators usually had at least equestrian census.

Senators wore the *clavus latus* (q.v.) and special shoes. They had reserved seats at religious ceremonies and public entertainments. They were not allowed to leave Italy without the Senate's permission. Being excluded from State contracts and the possession of large ships (see CLAUDIUS 7), they were predominantly a landlord class. They had at times an exclusive or privileged position as judges in criminal and civil courts (see quaestiones). As office depended mainly on wealth and birth, 'new men' were rare, and the Senate tended to become hereditary (see NOVUS HOMO, OPTIMATES). Membership being *de facto* permanent, senators exerted great influence on internal and foreign policy. The transformation of the Senate into a body of ex-magistrates avoided serious clashes between the *imperium* of the magistrates and the *auctoritas* of the Senate and made the Senate responsible in the last centuries B.C. for the direction of the Roman State. The Republic collapsed when military leaders destroyed the authority of the Senate.

(b) *Procedure*. The Senate was summoned by the presiding magistrates, either holders of *imperium* or, later, tribunes, according to an order of precedence. Sessions were held between dawn and sunset, but were forbidden by a *Lex Pupia* (2nd or 1st c. B.C.) during the *Comitia*. Only during the Empire were the times of meeting fixed—usually two each month. The meeting had to take place either in Rome (see CURIA 2), or within a mile of the city, in a place both public and consecrated. The first sitting of the year was in the temple of Jupiter Capitolinus.

Sittings were held in private, but with opened doors, the tribunes of the *plebs* sitting in the vestibule in the period before their admission to sessions. Each senator spoke from his seat. Freedom of speech was unlimited during the Republic. Augustus imposed a time-limit. First came the report (*relatio*) of the chairman or another magistrate, who submitted it in writing. Each senator was asked (*interrogatio*) his opinion (*sententia*), according to his rank (*censorii*, *consulares*, *praetorii*, *aedilicii*, etc.). Within each category the patricians took precedence, the senior patrician *censorius* of the *gentes maiores* (after 209 B.C. any patrician *censorius*) heading the list as *princeps senatus*. After Sulla the magistrate gave priority to the consuls designate or, in their absence, to any *consularis*; and *princeps senatus* became a merely social title open to plebeians. After the debate the different opinions were put to vote by a division (*discessio*). Sometimes *relatio* was followed by *discessio* without *interrogatio*. Certain resolutions required a quorum. Any resolution, called either *decretum* or, more commonly, *senatus consultum* (q.v.), could be vetoed by the tribunes. The urban quaestors kept the records in the *aerarium*. The publication of official reports in the *acta rerum urbanarum*, ordered by Caesar, was suppressed in part by Augustus. Improvements in shorthand made accurate reports possible.

(c) *Functions*. The Senate existed, formally, to advise the magistrates. The patrician senators retained two special functions. The first, which became a pure formality, was to ratify the deliberations of the People (and probably of the *plebs*) and was called *patrum auctoritas* (q.v.). The second was to elect an *interrex* (q.v.) for the arrangement of elections, if no magistrates were available.

The Senate advised the magistrates in matters of domestic and foreign policy, finance and religion, and on their legislative proposals. It could invalidate laws already voted by pointing out technical flaws in procedure. It suggested the nomination of a dictator, assigned the

various duties to the magistrates, decided the *prorogatio imperii*, established the equipment (*ornatio*) for each magistrate and pro-magistrate, and marked out the two provinces destined for the consuls. In wartime it influenced the choice and the extension of commissions, fixed the number of the levies, and criticized the conduct of war. In finance it determined the rate of the tribute, supervised revenue and expenditure, and controlled the *aerarium*. It could order the censors to redraft contracts and regulated the coinage (at least of the mint of Rome). The practical decision of war, the conclusion of peace treaties, and the conduct of foreign policy were usually in the hands of the Senate, but the formal declaration of war and ratification of treaties belonged to the *Comitia*. It often received ambassadors and appointed senators to help the magistrates or pro-magistrates in concluding treaties and in settling the organization of conquered territory. The arbitration of the Senate was often asked by Italian communities, by provincials and client States. Religious life was controlled by the Senate, which contained the members of the principal priestly colleges and could order religious ceremonies and introduce new cults. In urgent cases the Senate could order dispensation from the observance of law, subject usually to ratification by the *Comitia*, and after the Gracchan period it could pass the *senatus consultum ultimum* (q.v.).

II. THE IMPERIAL AGE

(a) *The ordo*. In Augustus' view the preservation of the Senate's prestige was vital to his intended restoration of the Republic. The Senate was left to govern Italy and those provinces which required only small garrisons (see *PROVINCIA*). Consequently it retained the *aerarium*. But the Emperor soon acquired control both of the *aerarium* and of the whole senatorial administration. The Senate retained only the supervision of copper coinage. Tacitus' statement (*Ann.* 1. 15) that in A.D. 14 Tiberius transferred to it the actual election of the magistrates must be somewhat qualified after the discovery of the *Tabula Hebana* (q.v.). Even in the Senate the imperial *nominatio* and *commendatio* (q.v.) reduced the importance of elections to a minimum. Thus the self-recruitment of the Senate by the quaestorian elections was influenced by the will of the Emperors, who could also, by *adlectio* (q.v.), directly introduce new members to any senatorial rank.

The Senate became a hereditary order, since, except for new men introduced by the Emperor, only the sons of the senators could become senators. Most of the high offices in the State (governments of provinces, with few exceptions, commands of legions, *praefectus urbi*, *praefecti aerarii*, *legati iuridici*, *correctores*, etc.) were reserved for senators. The senators became a privileged class interested in preserving the Empire. Future senators served at first a year in the army as *tribuni laticlavii*, then held the vigintivirate and entered the Senate at twenty-five through the quaestorship. The senators were called *clarissimi*, a title extended during the second century to wife, sons, and daughters.

(b) *Functions and authority*. The Senate developed judicial functions from republican precedents. A legislative power grew out of its advisory capacity. *Senatus consulta* had acquired full recognition as laws at least by A.D. 200. The Emperor had the right of convening, presiding over and laying matters before the Senate, and had the titular position of *princeps senatus*. The *relatio* of the Emperor took precedence. It was usually a written speech (*oratio*), which the later jurists quoted as authoritative rather than the subsequent *senatus consultum*. The number of senators attending meetings continually decreased. Mere *acclamations* were often substituted for discussion. On the whole, the Senate lost its independence; its freedom was restricted to the choice of a new

Emperor when the throne was vacant, or during a revolution. The Senate, however, was always, in formal connexion with the People, the true repository of the *imperium*: it conferred his powers on the *Principes*. The acknowledgement of the Senate, therefore, was the condition of the legitimacy of an Emperor (see *AUGUSTUS*, *PRINCEPS*). Furthermore, the Senate preserved a tradition of discussion, of competence, of respect for the public interest and for republican procedure, and represented a sort of public opinion—of the wealthy classes. Friendly relations between Senate and Emperors were taken to distinguish 'good' Emperors from tyrants. 'Good' Emperors allowed the Senate to try its members. *Damnatio memoriae* (q.v.) depended on the Senate.

(c) *From the Principate to the Late Empire*. In the late Republic numbers of municipal Italians and even some provincials entered the Senate, especially under Julius Caesar. Under the Empire, the number of provincial senators increased almost continuously, but until the time of Septimius Severus the majority were Italian. In the first century the provincials came mostly from Spain and Gallia Narbonensis; afterwards Orientals and Africans prevailed. The Danubian provinces never supplied many members.

The distinction between senatorial and imperial provinces was gradually eliminated and the *aerarium* became simply the city-treasury of Rome. Gallienus deprived senators of the command of legions and greatly reduced their share of provincial government. The increasing importance of the *equites* resulted under Constantine and his successors in a virtual fusion of the two orders. This new senatorial order recovered much administrative authority; it drew its recruits chiefly from the palatine *militiae*, the lawyers and other learned professions, and the army. Consequently the number of senators greatly increased. Constantine matched the Senate of Rome with another in Constantinople, which in A.D. 359 was made completely equal to that of Rome. Admission to the Senate was a complex procedure, based on an imperial codicil and subsequent election (normally formal by the Senate). Senators were divided into three groups, with different privileges: *clarissimi*; (*clarissimi et*) *spectabiles*; (*clarissimi et*) *illustres*. By c. A.D. 384 each Senate had about 2,000 members. By 450 the two lower classes were excused from attending in the capital. Under Justinian only the *illustres* were entitled to speak, *sententiam dicere*. The *praefectus urbi* usually presided. Senators were (with exceptions) free from curial burdens, but subject to special taxes. As a political body the Senate naturally declined still further; but it remained the representative of the Roman People and continued to legislate. As a body of great landlords, the Senate—or rather the two Senates—remained an essential element of the social structure of the Empire. The Senators of Rome were wealthier and more conservative than those of Constantinople. In the fourth century senators led the defence of Paganism in Italy and in the fifth many assisted the barbarian generals to destroy imperial authority. The Roman Senate is last mentioned in A.D. 603.

1. Mommsen, *Röm. Staatsr.* iii. 2 (1888), is fundamental, but does not entirely supersede earlier works (e.g. G. Bloch, *Les Origines du sénat romain* (1883); P. Willems, *Le Sénat de la république romaine* (1885)). O'Brien Moore, *PW Suppl.* vi. 660, is very good. A. H. J. Greenidge, *Roman Public Life* (1901), 261 ff., 377 ff. E. Mever, *Röm. Staat und Staatsgedanke* (1961); A. Ormanni, *Sul regolamento interno del Senato* (1960). For the origins see also G. Pacchioni, *Att. Acc. Scienze Torino* 1925, 875 ff. A. Magdelain, 'Auspicia ad patres redeunt', *Homages J.-Bayet* (1964), 427 ff. On a special development, F. Gabba, 'Senati in esilio', *Bull. Ist. Dir. Rom.* 1960, 221 ff. Further bibliography in J. SENATUS CONSULTUM was the advice of the Senate to the magistrates. In republican times it had no legislative force, but *de facto* it was binding. If it was vetoed, it lost its binding force, but conserved the *senatus auctoritas*. During the Empire the *senatus consulta* were at first implemented by a clause in the praetor's edict; after Hadrian certain *senatus consulta* immediately had the force of law. The *senatus consultum* was drafted after the session of the Senate in the presence of the presiding magistrate and some witnesses, usually including the proposer. If necessary, it was translated into Greek. Many *senatus consulta* are preserved in their Greek translation.

A *senatus consultum* usually contained: (1) the name of the presiding magistrate, date, place of assembly, witnesses; (2) the magistrate's report; (3) the introductory formula: 'd(e) c(a) r(e) i(ta) c(ensuerunt)'; (4) the terms of the *consultum*, which often confirmed its own advisory nature in references to the magistrates such as 's(i) e(s) u(idebitur); i(ta) u(tei) e(s) c r(e)p(ublica) f(ideue) s(ua) u(ideatur)'; (5) the letter C (= *censuere*), indicating senatorial approval. In the imperial age was added the number of the senators present.

The texts of *senatus consulta* were deposited in the *aerarium*. Another copy was in ancient times given to the plebeian sanctuary of Ceres. The documents were classified, but not sufficiently to avoid losses and falsifications. The jurists often named them after one of the consuls of the year (*SC Orfitianum*) or more rarely after the Emperor who proposed them (*SC Claudianum*) or after the occasion of the *SC* (*SC Macedonianum*).

Many *senatus consulta* are collected in Bruns, *Fontes* (1909), and in Riccobono, *FIRA* i. For the Greek texts, P. Viereck, *Sermo graecus quo S P Q R magistratusque populi romani... us sunt* (1888), is fundamental. P. Willems, *Le Sénat de la république romaine* i, 248, n. 204; O'Brien Moore, *PW Suppl.* vi, 800 ff. (with a list of *SC*). A. M.

SENATUS CONSULTUM ULTIMUM, a declaration of public emergency by the Senate, usually interpreted as authorizing the magistrates to employ every means of repression against public enemies (not necessarily specified *nominatum*), without being subjected to *provocatio* and *intercessio* (Sall. *Cat.* 29). The formula was: 'senatus decreuit darent operam consules ne quid res publica detrimenti caperet' (Sall. loc. cit., cf. e.g. Caes. *BCiv.* i, 5). The proper name was *SC de republica defendenda*. The name *SC ultimum*, which is used in modern times, is derived from Caesar, loc. cit.

Its first certain use concerned C. Gracchus. The other assured instances are: the 'tumultus' of Saturninus and Glaucia (100 B.C.), against Sulla (83), Lepidus (77), Catiline (63), in the disturbances of 62 (Metellus Nepos)

and 52 (Clodius), against Caesar (49), M. Caelius Rufus (48), the disturbances of Dolabella (47), against M. Antonius, and against Octavian (43). It was last employed against Salvadius Rufus in 40.

The exercise of this power by the Senate was hotly contested, e.g. in connexion with C. Rabirius (q.v.). The law of Clodius *de capite civis Romani* in 58 was also a partial condemnation of the *senatus consultum ultimum*.

SENECA (1), LUCIUS ANNAEUS, writer on rhetoric, was born of equestrian family at Corduba in Spain about 55 B.C. Of his life we know little; he was certainly in Rome both as a young man and after his marriage, and his knowledge of the contemporary schools of declamation implies that he spent much time there. He amassed a considerable fortune and may have held an official post in Spain or engaged in trade. By his marriage with Helvia, a fellow countrywoman, he had three sons—Annaeus Novatus, who after adoption by L. Junius Gallio became governor of Achaia, L. Annaeus Seneca (q.v. 2) the philosopher, and M. Annaeus Mela, the father of Lucan. He died between A.D. 37 and 41, after the death of Tiberius and before the exile of his son the philosopher.

His history of his own times, which began with the outbreak of the civil war, is lost. The *Oratorum sententiae divisiones colores*, addressed to his sons, consists of extracts, supplied by his retentive memory, from the declaimers whom he had heard during his long life, interspersed with digressions and comments of his own. The work comprised ten books devoted to *controversiae*, each with a preface, and at least two devoted to *suasoriae*. In our manuscripts only five books (1, 2, 7, 9, and 10) of the *controversiae* and one of the *suasoriae* have survived and these have suffered some mutilation: an abridgement made for school use (probably 4th c.) gives us some knowledge of the contents of the missing books of *controversiae* and, what is more important, supplies two of the missing prefaces.

Shrewd observation, a phenomenal memory, and an experience extending from Cicero's age into the reign of Gaius make Seneca's work a most valuable source for the literary history of the early Empire. The rhetorical schools were his lifelong interest, but he clearly recognized their excesses and their dangers. While the new movement fascinated him, his own sympathies were with the oratorical tradition of Cicero. The specimens of the handling of some forty themes by more than a hundred rhetores, great and small, if they are not verbally exact quotations, show remarkable skill in reproducing the styles and mannerisms of others; they are relieved by pithy incidental criticisms and scraps of literary reminiscence which serve to maintain the atmosphere of informality. Seneca's own views, both on individual declaimers and on the general tendencies of his time, are developed at greater length in the prefaces, written in an easy but terse and incisive prose which represents the transition from the periodic to the pointed style. The work bears out the character ascribed to him by his son: he was 'maiorum consuetudini deditus', a man of old-fashioned Roman strictness, fair-minded but suspicious of novelty and of Greek culture, critical of the decadence of contemporary society but combining seriousness with an ironic humour. *See also DECLAMATIO AND LITERARY CRITICISM*, § 9.

C. J. F.

SENECA (2), LUCIUS ANNAEUS, was born at Corduba, in southern Spain, between 4 B.C. and A.D. 1. He was born into a wealthy equestrian family of Italian stock, being the second son of the Elder Seneca and Helvia; his brothers were Annacus Novatus, known as Iunius Gallio (q.v.) after his adoption by the orator of that name, and Annaeus Mela (q.v. 2), the father of Lucan. He was happily married to a woman younger than himself, Pompeia Paulina; the evidence for an earlier marriage is tenuous. He had one son, who died in 41.

He was brought to Rome by an aunt on his mother's side, the wife of C. Galerius, prefect of Egypt from 16 to 31. Little is known about his life before A.D. 41. He studied grammar and rhetoric and at some time practised in the courts, but turned at an early age to philosophy. His philosophical training was varied: he attended lectures by Sotion, a Sextian eclectic, Attalus the Stoic, and Papirius Fabianus, also a Sextian; he was later an intimate friend of the Cynic Demetrius. At some time he joined his aunt in Egypt, who nursed him through a period of ill health, returning about 31; through her influence he was shortly afterwards elected quaestor. On the strength of works which have largely been lost he had achieved a considerable reputation as a writer and orator by the time of Gaius' accession, and in 39, according to a story in Dio, his brilliance so offended the Emperor's megalomania that it nearly cost him his life; jealousy may not have been the only motive. In 41 he was banished to Corsica for alleged adultery with Julia Livilla, a sister of Gaius, and remained in exile until 49, when he was recalled through the influence of Agrippina and made praetor. He was also appointed tutor to the young Nero. In 51 Burrus (q.v.), who was to become Seneca's congenial ally and colleague during his years of political influence, was made prefect of the praetorian guard; and with Nero's accession in 54 Seneca exchanged the role of tutor for that of political adviser and minister.

During the next eight years the Empire, virtually under the joint control of Seneca and Burrus, enjoyed a period of good government. As *amicus Principis* and *senator consularis* (he was suffect consul in 56), with influential allies both at court and among the army commanders, unrivalled as an orator and man of letters, Seneca's power was ill-defined but real. His party is difficult to assess and he is reticent about his friends; almost all his addressees are *equites*. His policy, based on compromise and diplomacy rather than innovation or idealism, was modest but successful. But, as Nero fell under the influence of men more willing to condone and even encourage his crimes, Seneca's power declined and his position became intolerable. Nero's murderous acts had tarnished for ever the reputation of his minister, and in 62 the death of Burrus snapped his power. Seneca asked to retire and relinquish his vast wealth to Nero. The retirement was tacitly permitted, the wealth not accepted until later; in practice he withdrew from public life, spent little time in Rome, and devoted his remaining years to philosophy and the company of a circle of congenial friends. In 65 he was forced to commit suicide for alleged participation in the unsuccessful Pisonian conspiracy; the manner of his death, sympathetically described by Tacitus (*Ann.* 15. 64), makes painful reading but reveals an ultimate courage.

Seneca's extant works comprise, first, the ten ethical treatises which are found in the Ambrosian MS. (C. 90 inf.) under the name *dialogi*. They are, with the exception of the *De ira*, comparatively short, and their general content is readily inferred from their traditional titles;

the dating is in many cases controversial. They comprise: the *De providentia*, dedicated to Lucilius Iunior, maintaining the theme that no evil can befall the good man, and probably late; *De constantia sapientis*, addressed to Annaeus Serenus and written sometime after 47; *De ira*, divided into three books, dedicated to Seneca's brother Novatus, and probably belonging to the early years of Claudius' reign; *Ad Marciam de consolatione*, a belated and politically inspired attempt to console the daughter of Cremutius Cordus for the death of her sons, perhaps his earliest extant work and probably written in 40; *De vita beata*, incomplete, addressed to Novatus (now called Gallio) and composed during the late 50s, partly as an apologia for his own way of life; *De otio*, of which only eight chapters survive, dated with some probability by its general theme to the period of Seneca's own retirement; *De tranquillitate animi*, which begins with a semi-dialogue with Serenus, of unknown but probably late date; *De brevitate vitae*, addressed to Paulinus, *praefectus annonae* under Nero and (now or later) Seneca's father-in-law, dated with considerable probability to 55; *Ad Polybium de consolatione*, an unattractive piece, written about 43 to win the favour of Claudius' freedman; *Ad Helviam de consolatione*, sent to his mother to console her for her son's exile, an agreeable essay despite the formal nature of the *locus*.

Besides the Ambrosian dialogues, we have four other prose works. The first is the *De clementia*, an eloquent recommendation of mercy to the autocrat, presented to Nero and written Dec. 55/6; of the original three books, only the first and the beginning of the second survive. The codex Nazarianus (Vat. Pal. 1547), the fundamental source for the text of this treatise, also contains the *De beneficiis*, an elaborate and rambling work in seven books, often dry and technical; it is addressed to Aebutius Liberalis and was written sometime after the death of Claudius, with 56 as a *terminus post quem* for book 2. Of much more interest is the *Naturales Quaestiones*, dedicated to Lucilius and written during the period of Seneca's retirement; it deals mainly with natural phenomena, though ethics often impinge on physics, and is of great scientific and some literary interest. The text is corrupt and broken, and the original books, apparently eight in number, have a disturbed sequence. To the same period belongs the longest of the prose works, the *Epistulae Morales*, consisting of 124 letters divided into twenty books; more were extant in antiquity. Their advertised recipient is again Lucilius, but the letters are not real letters and the fiction of a genuine correspondence is only sporadically maintained. Though the form may have been suggested by the publication (perhaps recent) of Cicero's letters, their antecedents are to be found rather in the philosophical letter, the declamation, and the diatribic tradition. The use of the letter-form adds a degree of artificiality absent from the other works, but their variety and informality have made them the most popular of Seneca's works at all times.

In a category of its own is the obscurely entitled *Apocolocyntosis*, a Menippean satire written in a medley of prose and verse. It is a clever, original, and amusing skit on the deification of Claudius, containing some serious political criticism and much bitter personal malice.

Other prose works have been lost, for the titles or fragments of over a dozen survive. These included letters and speeches, a *Vita patris*, some ethical works, geographical treatises on India and Egypt, and books on physics and natural history.

The bulk of Seneca's prose work is philosophical in content and an important source for the history of Stoicism. His own Stoicism, mellowed by eclecticism, human experience, and common sense, has a proreptic and practical purpose and subordinates philosophy to

moral exhortation. The moralizing is given all the force which an accomplished rhetorician can provide and is enlivened by anecdote, hyperbole, and vigorous denunciation. The style is brilliant, exploiting to the full the literary fashions of the day while remaining essentially individual, and has an important place in the history of European prose. Non-periodic and highly rhythmical, antithetical, and abrupt, it relies for its effect on rhetorical device, vivid metaphor, striking vocabulary, paradox, and point; the point, a product of the philosophical as much as the rhetorical tradition, is refined to excess by the unflinching ingenuity of the writer. Aimed at immediate impact, the structure is often deliberately loose and need not imply an inability to develop a sustained theme. The brilliance and artifice, rarely letting up and unsupported by any real depth or originality of thought, is apt to cloy.

His most important poetical works are nine tragedies: *Hercules Furens*, based generally on the *Hercules Furens* of Euripides; *Troades*, with a dual source in Euripides' *Troades* and *Ileuba*; *Phoenissae*, reminiscent at first of Sophocles' *OC*, but bringing in Jocasta (an unfinished, or mutilated, text); *Medea*, mainly drawn from Euripides, but other sources may here and there be latent; *Phaedra*, the Euripidean myth, but with a repentant Phaedra; *Oedipus*, with a considerable Sophoclean basis; *Agamemnon*, in which a debt to Aeschylus is rather to be assumed than easily traced; *Thyestes*, a horrific treatment of the gruesome myth, without extant source; *Hercules Oetaeus*, of dubious authenticity, with little in it, apart from subject, to suggest the *Trachiniae*—long, dull, and psychologically incredible.

A tenth tragedy, *Octavia* (q.v.), interesting as the sole surviving *praetexta*, and for its subject, but for little else, is obviously, from internal evidence, not by Seneca.

The tragedies suffer from the same weaknesses as Silver Latin epic, a tendency to exaggeration and a love of rhetoric. Some of the dramatic effects are spoilt by overdone horror, which leads sometimes to the bizarre, sometimes to the grotesque. The characterization, too, is often crude, but the characters of *Ileuba*, *Medea*, *Phaedra*, and *Hippolytus* are quite convincingly drawn, if not very subtly. In form the plays are modelled closely, like earlier Roman tragedy, on Greek, that is, dramatic episodes, interspersed with odes to be sung by a chorus (though it seems likely that the author thought of the plays as to be read rather than acted). The odes are written in a rather limited number of metres, chiefly the anapaestic, which tends to become monotonous. Some are written in sapphics, glycomics, and asclepiads. The odes are simple and direct in style, but they lack originality, and not much poetry is to be found in them. On the other hand, the episodes, which are written in iambic senarii, are often dramatic; the Latin can be crisp and pointed; and the stichomythia is sometimes even more telling, in style if not in matter, than it is in the Greek tragedians. The *Troades* is free from Seneca's usual vices; and in the *Medea* he has contrived a more dramatic end than Euripides.

Besides the tragedies we have seventy-seven epigrams, a few handed down under Seneca's name, and others attributed to him. Apart from the three epigrams specified as Seneca's in the *Codex Salmasianus*, their authenticity is highly dubious.

Seneca the man has appealed to few; his failings are obvious and out of place in a moral teacher; there were nobler Stoics. But the disconcerting rift between his preaching and his practice has tended to monopolize too much attention and so obscure the complexity of both his character and his achievement. To postulate a close correlation between the formal utterances of stock philosophical or rhetorical *loci* and the realities of biography is out of keeping with the literary convention, and leads

to over-simplification. At the same time orator, statesman, diplomat, financier, master of a variety of genres, man of wide learning and experience, there is more to Seneca than his moralizing; he conformed to his principles too late to save his reputation, but this should not obscure the subtlety of the politician, the artistry and psychological insight of the writer, and the humanity of the man.

TEXTS AND EDITIONS *Dialogues*, M. C. Gertz (1886), E. Hermes (Teubner, 1905), A. Bouvier and R. Waltz (Budé, 4 vols., 1922-42), L. Castiglioni and I. Viansino (Paravia, 3 vols., 1940-61), *dial.* iii vi, ix xii only), *De clementia et de beneficiis*, M. C. Gertz (1876), C. Hosius (Teubner, 1914), F. Préchac (Budé, 1921), *Natural Questions*, A. SENONES, the last Gauls to settle in Italy, came from a parent stock which in Caesar's time inhabited the Seine basin (Caes. *BCall.* 2, 2, etc.). In Italy, ousting the Umbrians, they established themselves on the Adriatic coast between Ariminum and Ancona (qq.v.), the Ager Gallicus of historical times. Diodorus and Livy, but not Polybius, say that Senones led the marauding Gallic band that captured Rome in 390 B.C. Thereafter Senones remained a constant menace for 100 years until Rome subjugated them in 283 (Polyb. 2, 17 f.; Diod. 14, 113 f.; Livy 5, 35). They then disappeared from Italy, being either expelled or massacred. Their territory was used partly for colonies (Sena, Ariminum), partly for the allotments which Flaminius assigned to individual Roman citizens in 232.

For bibliography see *ITALIAN GAUL*.

[E. T. S.]

SENTENTIA, in the language of Roman literary and rhetorical criticism, means the finished expression of a thought. In post-Augustan times the word is used especially to denote the terse, pointed, epigrammatic expression of a striking thought (cf. Quint. 8, 5, 2), which often is of general application (in which case *sententia* is equivalent to 'aphorism', 'wise saw'), but is not necessarily so; any striking thought expressed in this terse, pointed manner can be denoted by the word *sententia*.

Such *sententiae* are found in early Latin literature, e.g. in the Elder Cato (from whom Seneca (*Ep.* 94, 27) quotes 'emas non quod opus est, sed quod necesse est; quod non opus est, asse carum est', as an example of a thought 'packed into a *sententia*'). Quintilian (12, 10, 48) tells us that he finds such *sententiae* in Cicero; they are found also in the fragments of Varro's *Saturae Menippeae* and in the historian Sallust; and the mime of the late Republic afforded ample scope for their use (cf. the surviving *Sententiae* of Publilius (q.v. 3) Syrus; e.g. 'tam deest auaro quod habet quam quod non habet'). It was in the

Silver Age, however, when the influence of the rhetorical schools on literature became much more marked, that the employment of *sententiae* reached its full development. In prose, for instance, the moralizing essays of Seneca are full of them, and Tacitus uses them with masterly effect (e.g. *Agr.* 30. 6 'ubi solitudinem faciunt, pacem appellant'). So too in verse: e.g. the dramas of Seneca, the epic of Lucan (whom Quintilian, with references to this characteristic, calls 'sententis clarissimus' (10. 1. 90); e.g. 1. 128 'uictrix causa deis placuit sed uicta Catoni'), the satires of Juvenal (e.g. 1. 74 'probitas laudatur et alget'), and, of course, the epigrams of Martial.

W. S. W.

SENTINUM, near modern *Sassoferrato*, on the eastern slopes of the Apennines in Umbria. Here the Romans defeated Samnites, Gauls, and possibly some other peoples in the decisive battle for the supremacy of Italy (295 B.C.). Both the Samnite general, Egnatius (1), Gellius, and the Roman, Decius (3) Mus (qq.v.), fell, the latter allegedly by *devotio*.

P. Sommella, *Antichi campi di battaglia in Italia* (1967), 35 ff. E. T. S.

SEPTIMIUS (1), **PUBLIUS**, a republican writer on architecture mentioned by Vitruvius (7. *praef.* 14).

SEPTIMIUS (2) **SERENUS**, one of the 'neoteric' school in Hadrian's time, wrote rural poems.

Morel, *FPL* 148 ff.

SEPTIZODIUM or **(SEPTIZONIUM)**, a freestanding ornamental façade, screening the south-east corner of the Palatine Hill at Rome, and dedicated by Severus in A.D. 203 (*CIL* vi. 31229). It closed the vista of the Via Appia like a stage-background, in which the elements were three large niches girt with three stories of colonnading. Earlier examples of *septizodium* occur in Rome (Suet. *Titus* 2, schol. cod. Berol. fol. 337) and Lambaesis (*CIL* vii. 2657). The adjective *επτιζωνος* is applied to the seven planets (Dio Cass. 37. 18), and although the word is not itself used metaphorically of the days of the week which they govern (see Dombart, *PW*, s.v.), the representation of these gods upon calendars is a commonplace. Perhaps, therefore, these great ornamental façades, filled with statuary, mosaics, and numbers, served as public calendars as well as embellishments.

Ch. Hülsen, *Das Septizonium des Septimius Severus*, *Winckelmannsprogramm*, n. 46 (1886); Th. Dombart, *Das Septizonium zu Rom* (1922); L. Crema, *L'architettura romana* (1959), 545 ff. G. Carretoni, *Forma Urbis Romae* (1960), 66 f. I. A. R.

SEPTUAGINT (in abbreviation, **LXX**), the collection of writings which became the Old Testament of the Greek-speaking Christians. They are mainly translated from the Hebrew (or Aramaic) Scriptures but include, in books later called by Protestants the Apocrypha, some pieces composed in Greek and others translated from lost Semitic originals.

The name is derived from a story told in Greek by a Jewish writer professing under the name Aristas to be writing a letter to Philocrates before the middle of the third century B.C. It relates that Ptolemy II Philadelphus, the contemporary king of Egypt, in response to a suggestion of his librarian, Demetrius of Phalerum, asked for a translation of the Jewish Law, and was sent from Jerusalem seventy-two (or seventy) learned Jews who on the island of Pharos near Alexandria made a Greek translation of it for the royal library. The story which at first

had some verisimilitude was embellished by later writers with legendary elements and was extended to include beside the Law the other translated books.

The translation was evidently done by different hands at different times. Nearly all of it was finished before the Christian era. Like subsequent translations into vernacular languages, it was intended primarily for those Jews who having migrated into Egypt and other Greek-speaking lands became more at home with the Greek language than with the Hebrew. Since the Christian movement very early became less Jewish than Gentile the Septuagint became its Bible and is quoted in the New Testament and in later Christian writers as well as by the Jews Philo and Josephus. Apart from Jews or Christians few ancient writers show any knowledge of it. Greek and Roman references to things Jewish are not derived directly from it. The citation of Genesis in the anonymous treatise *On the Sublime* 9. 9 is a single exception that 'proves the rule'. The influence of the LXX is probably first manifest in less literary circles, as in the Corpus Hermeticum and in the magical papyri. Translations of the Old Testament into Latin and some other languages were chiefly based upon the Greek, though Jerome in preparing the Latin Vulgate made increasing use of the Hebrew.

The Greek translations of the several books or parts of them vary in style and in degree of literalness. When not influenced by the original Semitic idiom, their Greek, as in the New Testament, and in non-literary documents of the period, represents the vernacular Hellenistic (*Koine*).

Since the Hebrew from which the LXX was translated is older than the major Hebrew MSS. known to us and than the standardized (Massoretic) text of the Old Testament, its apparent differences reflect some variation in the underlying Hebrew. The discovery in 1947 and thereafter of Hebrew scrolls or fragments at Qumran by the Dead Sea show that such differences existed before A.D. 70. These early MSS. sometimes agree with the Septuagint against the Massoretic text, sometimes vice versa, and (in the Law) sometimes with the Samaritan Hebrew. Just what is the history of such variant texts is still under debate.

In like manner the Greek MSS. show variation, suggesting that they were corrupted in copying or were deliberately edited or revised. This variation also is the object of continuing study. Again limited finds near the Dead Sea or elsewhere of fragmentary early Greek MSS. of parts of the Old Testament have provided fresh grounds for conjecture in this field. Each form of text whether Hebrew or Greek had its own associations and history.

Perhaps just because the Christians used the LXX, later Jews, if they wished a Greek translation at all, made new ones or revived earlier ones. Three of these are attached to the names of Theodotion, Aquila, and Symmachus, and were copied in columns parallel to the Hebrew and the Septuagint in the famous *Hexapla* of Origen in the third century of the Christian era. They are no longer extensively preserved.

ARISTAS. TEXT Teubner (Wendland, 1900), Swete (Introduction, see below). Translation. Thackeray (1917). Commentary: H. G. Meecham (1915), M. Hadas (1951), A. Pelletier (1962).

HANDY EDITIONS OF THE LXX TEXT WITH MINIMAL APPARATUS. H. B. Swete, 3 vols. (1887-94) and later editions; A. Rahlf, 2 vols. (Stuttgart, c. 1935). Text with critical apparatus: A. E. Brooke, N. McLellan *et al.* (1906-), in progress; A. Rahlf, J. Ziegler *et al.* (Göttingen, 1931-), in progress.

INTRODUCTION. H. B. Swete, revised by R. R. Ottley (1914) *Handbook*. R. R. Ottley (1920). Grammar. R. Helbing (1907), H. St. J. Thackeray (1909), F.-M. Abel (1927). Concordance: F. Hatch and H. A. Redpath, 2 vols. and supplement (1897-1906), *Lexicon*. J. F. Schleusner (2nd ed., 3 vols., 1842).

INFLUENCE. A. Deissmann, 'Die Hellenisierung des Semitischen Monotheismus', *Neue Jahrb.* 1901; H. St. J. Thackeray, *The Septuagint and Jewish Worship* (1923), C. H. Dodd, *The Bible and the Greeks* (1934).

SUMMARIES OF RECENT RESEARCH. H. M. Orlinsky, *Journal of American Oriental Society* 1941, 81 ff., and later essays; P. Kutz in

The Background of the New Testament, ed. by W. D. Davies and D. Daube (1956), 176 ff.; J. W. Wevers, *Theologische Rundschau* 1954, 85 ff., 171 ff., and later essays.

ON the ΗΕΧΑΡΛΑ. F. Field, *Origenis Hexaplorum quae supersunt*, 2 vols. (1867-74). H. J. C.

SERAPION (1) of Alexandria, founder of the empirical school of medicine (c. 200-150 B.C.), wrote (1) *Ἰπὸς τὰς διαρρίψεις*; (2) *Θεραπευτικά*. He placed individual observation and experiment first, the statements of recognized authorities second, and argument from analogy third — to be used when the other two are lacking. He is much praised by Galen. W. D. R.

SERAPION (2) of Antiocheia, a mathematical geographer (2nd or 1st c. B.C.), held that the sun is eighteen times the size of the earth. He also wrote on astrology. He may probably be dated later than Hipparchus and Ptolemy, and earlier than Ptolemy.

Ed. in CCAG.

W. D. R.

SERENUS (1) **SAMMONICUS**, a voluminous writer of the time of Septimius Severus, was murdered by Caracalla's orders in A.D. 212. His only known work is *Res reconditae*. He had a library of 62,000 books.

G. W. Bowersock, *Greek Sophists in the Roman Empire* (1969), ch. 8.

SERENUS (2) (or **SERENIUS**), **QUINTUS** (or **QUINCTIUS**), author of a medical textbook in verse, *Libri medicinalis*, which may be dated between the end of the second and the fourth century. It depends in the main on the *Medicina Plinii* and on Pliny's *Natural History*. The author may have been the poet Serenus Sammonicus (son of the other Serenus Sammonicus, q.v.), who was a friend of Gordian I (b. c. A.D. 159) and the teacher of Gordian II (b. c. 192), and died before 235.

Ed. F. Vollmer, *CML* II 3, R. Pöpin (1950).

W. D. R.

SERENUS (3), mathematician, from Antinoë in Egypt (formerly thought to be of Antissa in Lesbos), may probably be dated between Pappus and Theon of Alexandria (i.e. c. A.D. 300-50). Two of his works are extant: *Περὶ κυλίνδρου τομῆς* and *Περὶ κώνου τομῆς*; both edited by J. L. Heiberg (1896). A commentary on the *κωνικά* of Apollonius of Perga has been lost. Serenus is not of first-rate importance, but preserves much that is of value from earlier writers, notably Apollonius. W. D. R.

SERES, the Chinese and Tibetans, first known to Greeks left by Alexander in inner Asia. Aristotle knew vaguely of silk, but not of China. They became famous from Augustus' time as producers of silk sent by land to Asia Minor and by sea to Egypt. As trade developed, the name Seres was applied to Chinese and Tibetans as approached by land, 'Sinae' being their name as approached by sea from India. By Nero's reign further Chinese products were reaching the Roman Empire, the Seres were definitely placed above India, and some geographical details filtered through. In A.D. 97, after Chinese conquests in central Asia, Kan Ying visited Antioch, and c. 120 a 'Roman' Maes Titianus sent agents, probably to Kashgar and Daraut Kurghan (where 'Chinese' were met) and beyond. These learnt of cities—Daxata (*Singifu*), where Roman coins have been found) and Sera (*Loh Yang*?), seven months from Kashgar (or Daraut Kurghan), and gained rough ideas of Pamir, Tian Shan, and Altai Mountains, and of rivers (Hwang-ho and Yang tsze-Kiang?), but nothing of the sea east of China. They proved that silk was an animal product. Meanwhile one Alexander had sailed from India to Cattigara (q.v.); others reached the Sinae in China itself, naming their capital 'Thinæ' (*Nanking*?). Yet Ptolemy made the Chinese coast face west and join Africa. In 166

a mission reached China from Marcus Aurelius, another in 284. About 550, silk-moth eggs were smuggled to Constantinople. By the sixth century A.D. it was known, e.g. by Cosmas Indicopleustes, that east of China lay sea, not land; and that in order to reach China by sea one must end by sailing northwards.

Some of the early glass vessels found in China are thought to be Roman—C. G. Seligman, 'The Roman Orient and the Far East', *Antiquity* 1937, 5 ff. In *Rome and China* (1939) F. Teggart develops a theory that coincidence of ancient barbarian migrations and invasions with war in the Middle East was caused by interruption of commerce by Chinese and (as a less disturbing factor) Roman aggression.

Ptol. *Geog.* 6 16. 1 ff. (Seres), 7 3 1 ff. (Sinae), 1 11 7 (Maes); Warrington, *Indian Commerce*, 36-7, 71-2, etc. F. Hirth, *China and the Roman Orient* (1885). Hougmann, *PW*, 8 v., R. E. M. Wheeler, *Rome beyond the Imperial Frontiers* (1955), 183 ff., 201 ff., Thomson, *Hist. Anc. Geog.* 131 f., 174 f., 300 ff., 366 ff., 411 f., on Maes, M. Carv, *CQ* 1956, 110 ff. See also J. T. Miller, *The Spice Trade of the Roman Empire* (1969), index. E. H. W.

SERGIUS, author (date unknown) of *Explanaciones in Donat in* (ed. Keil, *Gramm. Lat.* iv. 486-565; cf. also 475-85). In MSS. his name is often confused with that of Servius.

SERMO bears a variety of meanings in Latin. Besides being used for conversation, verse in conversational manner and with satiric bent (as in Lucilius and Horace), for style, and for the language of a nation (in *Latino sermone*, Cic. *De Or.* 3. 42), *sermo* is in rhetoric especially applied to the sketch of effective lines of argument well illustrated in the set of shorter pseudo-Quintilianean *declamationes* (q.v.). J. W. D.

SERPENTS, SACRED. As the *δαισιδαίμων* in Theophrastus (*Char.* 16. 4) when he sees a snake in his house takes it for a warning to invoke a god or found a *heroon*, it may be assumed that less pistic persons had similar feelings regarding some serpents. They are, indeed, the regular accompaniment of heroes and of some, especially chthonian, deities. Sabadius is mentioned in Theophrastus; the god whom Aeschines' mother is alleged to have served, apparently Attis (*Dem.* 18. 260), had snakes in his ritual, which were handled by some of the officiants; Zeus Melichius is represented by a huge snake (Harrison, *Prolegomena* (1922), 18 and fig. 1). When, therefore, Alexander of Abonutichus produced his new god in serpent form (Lucian, *Alex.* 7 ff.) he was following time-honoured tradition. In Italy the serpent was connected with the genius (q.v.), cf. Cic. *Div.* 2. 62, where Ti. Sempronius Gracchus, father of the tribunes, sees two snakes, a male and a female, in his bedroom and is told that according as he kills one or the other, he or Cornelia will die, which duly comes to pass. However, they are not found only in this context. Apart from foreign cults (as that of Aesculapius, see especially Ov. *Met.* 15. 669 ff., where the god in serpent form follows the embassy sent to bring him to Rome) and stories of foreign colour (as Tac. *Ann.* 11. 11. 6), in the old Italian worship of Juno Sospita the serpent played a part (*Prop.* 4. 8. 3 ff.). See also ANIMALS, SACRED; ASCLEPIUS, § 5; RELIGION, MINOAN-MYCENAEAN. H. J. R.

SERRANUS, an epic poet who died prematurely, mentioned with Salsius Bassus (q.v. 3) by Quintilian (*Inst.* 10. 1. 89-90) and Juvenal (7. 80).

SERTORIUS (*PW* 3), **QUINTUS**, a Sabine *equus* from Nursia, served under Cæpio (q.v. 1) and Marius in Gaul and (with distinction) under Didius (q.v. 1) in Spain. Quæstor in 90 B.C., then legate in the Social War, he was

offended by Sulla and joined Cinna, taking part in his capture of Rome (87), but opposing Marius' terror. Failing to gain advancement under Cinna, he became praetor (probably) in 83 and was given the whole of Spain (which he knew) as his province. He went there at the end of the year, but was driven out by 81 and, after many adventures, fled to Mauretania. Summoned back by the Lusitanians, he accepted their invitation and soon gained widespread support among the tribes, owing to his bravery, justice, and skill in exploiting their superstition. (His white fawn was regarded as a sign of divine protection.) Successful against many Roman commanders (especially—for several years—Metellus (q.v. 7) Pius), he at one time held most of Roman Spain. Popular with the natives, he tried to romanize their chieftains and acted throughout as a Roman commander, relying heavily on anti-Sullan Romans and Italians in the country, and even creating a 'counter-Senate' from among them and refugees from Italy. Claiming to be the heir of the lawful government ousted by Sulla's rebellion, he had much support and concealed sympathy in Rome, and Lepidus (q.v. 2) tried to co-operate with him against the Sullan order. After the arrival of Pompey (76), he fought (on the whole) successfully against him for three years, but less successfully against Metellus, who now knew his methods; and the two armies gradually wore him down. He tried to establish links with Mithridates—but refused to surrender Asia to him—and with the pirates. Finally, having lost some of his popularity and become embittered by failure, he was murdered (in 73 or 72) by Perperna (q.v. 3), who had joined him after Lepidus' defeat. His memory probably helped Caesar later.

SERVASIUS, SULPICIUS LUPERCUS, JUNIOR ('Sebastus', cod. Leid. Voss. of Ausonius; 'Sebastus', Schryver, Baehrens; 'Servastus', Wernsdorff), a fourth-century A.D. schoolman of uncertain name, has left three Sapphic stanzas *De vetustate*, and forty-two elegiac lines *De cupiditate*.

TEXT WITH TRANSLATION. Duff, *Minor Lat. Poets*. J. W. D.

SERVIANUS, L. IULIUS (*PW* 538) **URSUS** (b. c. A.D. 47), married the young (Aelia) Domitia Paullina, older (?) sister of Hadrian (q.v.). He was *cos. suff.*, probably in 93 (unless he was the Sex. Iulius ?) Servianus given by the *Fasti Potent.* in 90). He succeeded Trajan (q.v.) as legate of Upper Germany (Oct. 97), and, apparently in 98, became legate of Upper Pannonia. Trajan allowed him to become *cos. II ord.* in 102 with Sura (q.v.), and may have regarded him as worthy to be his successor (so Xiphilinus; Zonar. and S.H.A. name Hadrian). His relationship with Hadrian may have been less close; Hadrian showed no special honour to his sister Paullina on her death (130), and allowed Servianus to be *cos. III ord.* only in 134, though Servianus seems to have been the last *privatus* to receive this honour. When Hadrian adopted L. Aelius (q.v. 2) as his successor, Servianus and Cn. Pedianus Fuscus Salinator (either Servianus' son-in-law who had been *cos. ord.* with Hadrian in 118, or this man's son) expressed dissatisfaction. The already ailing Hadrian ordered their deaths, perhaps by suicide, despite the ninety-year-old Servianus' protestation of innocence. Possibly Servianus had hoped that Salinator would be chosen as successor and Hadrian feared lest they create trouble for his successor.

SERVILIA (*PW* 101) was daughter of Q. Caepio (2) and

Livia (sister of M. Drusus (2)), stepdaughter of M. Cato (5), and mistress of Caesar. By her first husband, M. Brutus (4), she was mother of M. Brutus (5) and by her second, D. Silanus (q.v.), of three daughters who became the wives of M. Lepidus (3), P. Servilius (2), and C. Cassius (6). With these and other connexions, her own high birth, and her strong character, her political influence was undoubtedly far-reaching, though best attested within the circle of the Liberators after Caesar's death (see e.g. Cic. *Att.* 15. 11. 1 f., *ad Brut.* 1. 18. 1 f.).

Munzer, *Römische Adelsparteien* (repr. 1963), 336 ff., 426 f.; Syme, *Rom. Rev.*, see index; G. Gianelli, *Donne di Roma antica* iii (1945). T. J. C.

SERVILIUS (1, *PW* 93) **VATIA (ISAURICUS)**, **PUBLIUS**, grandson of Metellus (q.v. 3), praetor and propraetor (perhaps in Sardinia), he was given a triumph in 88 B.C. by Sulla and intended for the consulate of 87, but was defeated by Cinna (q.v. 1) owing to Sulla's unpopularity. Serving with distinction in the *bellum Sullanum* (83–81), he became consul (79) and, as proconsul in Cilicia, fought successfully against pirates and mountain tribes and first properly organized a territorial province there. Triumphant again (74), he became an influential politician, reaching the censorship in 55 (with Valerius Messalla (2) they regulated the Tiber). He failed to become *pontifex maximus* in 63 (see CAESAR 1). During the 60s and 50s he generally shared Cicero's views. He died in 44, aged 90.

For his campaigns see H. A. Ormerod, *JRS* 1922, 35 ff., *Maigie, Rom. Rule Asia Min.* i. 287 ff. (with notes in vol. 1). E. B.

SERVILIUS (2, *PW* 67) **ISAURICUS**, **PUBLIUS**, son of (1) above, as praetor in 54 B.C. supported Cato, but became a Caesarian and Caesar's colleague as consul in 48. After suppressing the disturbances of Caelius he governed Asia, whence he corresponded with Cicero in 46. After Caesar's murder Cicero affected to regard him as an ally, but knew him for a man of straw or worse (cf. *ad Brut.* 2. 2. 3, if genuine), and in 43 Servilius betrothed his daughter to Octavian and became reconciled with Antony. Octavian jilted Servilia, but compensated her father with the consulate of 41, in which he showed his usual caution during the Perusine War. G. E. F. C.

SERVILIUS (3) **NONIANUS, MARCUS** (*cos.* A.D. 35), famous for his *recitationes*, the applause on one occasion attracting Claudius Caesar to join his audience (Pliny, *Ep.* 1. 13. 3). For his style in history see Quint. *Inst.* 10. 1. 102; Tac. *Dial.* 23; Peter, *HRRel.* ii. cxxviii, 98.

Syme, *Tacitus*, see index.

SERVITUDES. In classical Roman law this term was applied to restrictions on the ownership (see DOMINIUM) of land in favour of neighbouring land (e.g. a right of way from one plot over another to the highway, or a right to draw water from one plot for the benefit of another, or a right that nothing shall be built on one plot so as to obstruct the light to a building on the other). The term expresses the idea that one plot serves or is enslaved to the other (hence the modern expressions *praedium dominans, serviens*). A distinction was made between rustic and urban servitudes (*iura praediorum rusticorum, urbanorum*) according as they served a predominantly agricultural purpose or not (e.g. right of way or of water as opposed to right of light). Rustic servitudes were *res mancipi* (see MANCIPATIO), and were the older. Unlike a contractual right which could bind and entitle only the parties to the contract, servitudes bound and entitled whoever were the owners for the time being of the land in question.

Justinian included in the category of servitudes another class of restrictions on ownership, comprising usufruct

(*ususfructus*)—the right to use and take the fruits of another's property, movable or immovable—*usus*—right simply to use—and *habitus* and *operae servorum*, which were merely modifications of *usus*, applicable to houses and the services of slaves respectively. These personal servitudes (*servitutes personarum*) are like the others (now distinguished as praedial—*servitutes praediorum*) in that they bind whoever is the owner for the time being of a thing, but are unlike them in that they entitle a particular person, irrespective of his ownership of anything. They are personal to him and inalienable, and can be created only for his life or some shorter period. They serve, moreover, a different purpose. Praedial servitudes effect a permanent enhancement of the content of one ownership at the expense of another, whereas personal servitudes effect (to some extent) a division in time of a single ownership. Thus, usufruct was a method by which a Roman could give a life-interest to one person and a reversionary interest to another (e.g. to a widow and then to a child). See also FIDICOMMISSUM, VINDICATIO.

B. N.

SERVIVS (1) **TULLIVS**, the sixth king of Rome (traditionally 578–535 B.C.), is an indisputably historical figure, whose Roman or Latin origin (despite his later identification with the Etruscan *Mastarna*, q.v.) is attested by his character as an interloper in an age of Etruscan domination of Rome, and by his having built the temple to the Latin goddess Diana on the Aventine. Here the text of a treaty between Rome and the Latin League, traditionally attributed to Servius and known to authors of the Augustan age, was preserved. There is no reason to doubt the authenticity of the treaty, the invention of which would have been wholly purposeless. The tradition that Servius was the son of a maidservant, and that he built the walls of Rome (see WALL OF SERVIVS) rather than merely an *agger*, must be rejected. The constitutional reforms attributed to him (as a reputedly liberal ruler) are rejected by some modern scholars as fictitious precedents for laws passed in the fourth century on behalf of the *plebs*, but are accepted by others (see CENTURIA, CLASSIS). For his death, see TULLIA (1).

For papyrological evidence, see POxy. 2688; M. A. Levi, *Riv. Fil.* 1928, A. Piganiol, *Scritti in onore di B. Nogara* (1937), 373 ff. For Dionysius of Halicarnassus on Servius, see E. Gabba, *Athenaeum* 1961, 98 ff. For a conservative view of the Servian reforms see H. Last, *JRS* 1945, 30 ff. A. Alföldi, *Early Rome and the Latins* (1964), 212 ff., Ogilvie, *Comm. Livy* I–5, 156 ff. A. Momigliano, *JRS* 1961, 106 ff., confirms (contra Alföldi) the tradition that Servius did establish a sanctuary (though an *ara* rather than an *aedes*) of Diana on the Aventine as a federal sanctuary for the Latins, see also op. cit. 119 ff. for his views on the Servian organization. For recent attempts to lower the traditional date of Servius' reign, see TARQUINIUS (1).

P. T.

SERVIVS (2) (4th c. A.D.—a young man about A.D. 384 according to Macrobius, q.v.), grammarian and commentator (called *Marius* or *Maurus Servivus Honoratus* in MSS. from the 9th c. onwards). His greatest work was a commentary on Virgil (in the order *Aen.*, *Ecl.*, *G.*), for which he directly or indirectly brought under contribution much of the earlier Virgilian criticism. He relied greatly on Aelius Donatus, though he names him only when he disagrees with him. Since his work was designed for school purposes, he stresses grammatical, rhetorical, and stylistic points, but he does not neglect subject-matter, on which some of his notes show considerable learning. By way of illustration he quotes freely not only from Virgil but also from Terence, Cicero, Sallust, Lucan, Statius, and Juvenal. Often he reports conflicting views, but he retains his own judgement and is always a keen defender of his author. The Servian

commentary is found in a longer and a shorter version in manuscripts; but only the shorter was printed until Pierre Daniel in 1600 published the longer form, which he regarded as the original Servivus. G. Thilo, however, in the nineteenth century showed that the so-called Servivus Auctus or Servivus Danielis consisted of (a) Servivus and (b) the remains of a much more learned commentary (composed in the order *Ecl.*, *G.*, *Aen.*) which he attributed to some Irish monk of the seventh or eighth century (possibly Adamnan). In his edition he printed what he judged to belong to this hypothetical commentary in italics. The current opinion (cf. e.g. E. K. Rand, *CQ* 1916, 158 ff.) is that the 'additions' in Servivus Danielis may be parts of the commentary of Aelius Donatus which Servivus himself had not incorporated. The other extant works of Servivus are: *Explanatio in artem Donati*, *De finalibus*, *De centum metris*, *De metris Horatii*. The *Glossae Servii grammatici* are an apocryphal compilation. See also SCHOLARSHIP, LATIN, IN ANTIQUITY.

Ed. G. Thilo (vols. i, ii, iii, pt. 1, 1881–7; vol. iii, pt. 2 = Appendix Serviana, ed. H. Hagen, 1902). Vol. ii (*Aen.* i–ii) of a new edition by a group of Harvard scholars appeared in 1946, vol. iii (*Aen.* iii–v) in 1965. *Explanatio*, etc., ed. Keil, *Gramm. Lat.* iv, 405–48, 440–55, 456–67, 468–72. *Glossae* ed. G. Goetz, *Corp. Gloss. Lat.* ii, 507–33; E. Fraenkel, *JRS* 1948, 111 ff., 1949, 145 ff. (*Kleine Beiträge* (1964), 339 ff.) Schanz-Hosius, § 128. 2 and § 835. J. F. M.

SESOSTRIS (Hdt. 2. 102–11) was a mythical Egyptian king to whom were ascribed great conquests in Africa and Asia. In Ptolemaic times he was regarded as a person who had once lived and been heroized. Little of historical value can be gained from the somewhat lengthy discussion of the story by Herodotus.

K. Lange, *Sesostris* (1954).

T. A. B.

SESTIVS (*PIV* 6), PUBLIVS, as quaestor (63 B.C.) and proquaestor served under Antonius (q.v. 3) in Italy (against Catiline) and Macedonia. As tribune designate and tribune (58/7) he worked hard in the interests of Cicero and against Clodius (q.v. 1), suffering injuries in street fighting. Accused *de vi* (56), he was defended by Crassus (q.v. 4), Hortensius (q.v. 2), and Cicero (whose published speech propounds an Optimat programme) and acquitted. Praetor by 54, he was accused (perhaps twice) of *ambitus* and again acquitted with Cicero's help. Proconsul of Cilicia in 49, he joined Caesar after Pharsalus and served under him, remaining in touch with Cicero. He was married to a daughter or grand-daughter of Scipio (7) Asiagenus. He was not prominent after Caesar's death; but his son, a fierce Republican, became consul in 23 (as suffect to Augustus). Cicero (writing confidentially) thought Sestivus' temperament morose and his style undistinguished (*Att.* 7. 17).

Cicero, *Pro Sestio*, is the main source.

E. B.

SESTOS, a city of the Thracian Chersonese, possessing the best harbour in the Dardanelles, and commanding the chief crossing of the straits (to Abydos). Its original Greek population came from Lesbos. Darius returned by way of Sestos from his Scythian Expedition, and Xerxes here set foot on Europe, crossing the Dardanelles by a bridge of boats. Athenian interest in Sestos began with the occupation of the Chersonese by Miltiades; at this time perhaps it received an Athenian settlement. It was the first town to be freed from Persia by the Athenian fleet (479–478), and it was the chief Athenian station during the naval operations against Sparta in the Dardanelles (411–404). After a brief Spartan occupation (404 to 393 or 386) it reverted to Athens in 365. A rebellion against Athens in 357 led to its recapture by Chares, the enslavement of the population, and the establishment of an Athenian cleruchy (352). After a frequent change

of overlords in the Hellenistic age it became a free city under Roman rule, but it lost its position as the principal crossing-point between Europe and Asia to Byzantium.

S. Casson, *Macedonia, Thrace and Illyria* (1926), 210 ff.; U. Kahrstedt, 'Beiträge zur Geschichte der Thrakischen Chersonesos', *Deutsche Beiträge zur Altertumswissenschaft* vi (1954). M. C.

SET (called **Typhon** by the Greeks) was a god of Upper Egypt. He appears in the myth of Osiris as the wicked brother who murders the great god of the underworld and wounds his son Horus. The role of Set in this myth was well known to the Greeks, hence he is the wicked Typhon in Plutarch's essay concerning Isis and Osiris (13 ff.). The Greek Typhon (q.v.) was a wicked son of Gaia and Tartarus who was overcome by Zeus, just as Horus finally overcame Set.

SEVERUS (1), **LUCIUS SEPTIMIUS** (*PIV* s.v. Severus, 13), Emperor A.D. 193–211. Born A.D. 145 or 146, he came from an equestrian family, with senatorial connexions, from Lepcis Magna in north Africa. He had a distinguished military career, was consul in 190, and subsequently governor of Upper Pannonia. He was hailed as Emperor at Carnuntum on 13 Apr. 193 after the murder of Pertinax and elevation of Didius Julianus, and entered Rome without resistance on 9 June. His first act was to dismiss the Praetorians and constitute a new guard for which all legionaries were eligible. The memory of Pertinax was rehabilitated, and after granting the title of Caesar to Clodius Albinus, governor of Britain, he set out for the East against a rival claimant, Pescennius (q.v.) Niger.

Victories by Septimius' guards at Perinthus, Cyzicus, and Nicaea were followed by a decisive battle at Issus (194), and punitive expeditions in 195 against the Osroeni and other Parthian vassals who had helped Niger. To prevent a recurrence of civil war Syria was divided into two provinces, Coele and Phoenice. Septimius was determined to found a vast dynasty and hastened the inevitable conflict with Albinus; before returning to Europe, he raised his son Caracalla to the rank of Caesar and adopted himself into the family of the Antonines (196). The issue was settled at a battle near Lugdunum (Feb. 197). Britain, like Syria, was divided into two provinces, and a rigorous persecution of the senatorial adherents of Niger and Albinus initiated.

After a short stay in Rome Septimius moved east to retaliate against Parthia for its support of Niger. A successful campaign culminated in the fall of Ctesiphon (Dec. 197). After two abortive attacks on the desert fortress of Hatra the war ended with the annexation of Osroene and Mesopotamia (199). The next two years were spent in Syria and Egypt, where Alexandria was given a municipal council. On 1 Jan. 202 Septimius and Caracalla became joint-consuls at Antioch, and then returned to Rome.

Septimius spent much of the next six years in Rome but visited Africa in 203–4. In 208 he set out with his wife and two sons for Britain. In the hope of intimidating the Caledonians Scotland was invaded, but the Roman losses were severe, and a temporary peace was patched up in the autumn of 210. Worn out by sickness and broken in spirit by Caracalla's unfilial conduct he died at York in 211.

Septimius wanted a more thorough control of all aspects of imperial life, and found the equestrian order the best source of recruits for the administration. The number of equestrian posts was substantially increased at all levels, and occasionally *vicarii*, who were equestrian procurators, replaced regular senatorial governors. The Senate as a body lost authority, though individual

senators of Italian, African, and Oriental origin still pursued influential careers. Severus was keenly interested in the administration of justice, and humane and equitable tendencies persisted; the jurist Papinian was praetorian prefect from 205, and Paulus and Ulpian were active at the same time.

A new department of the treasury was set up, the *res privata*; it included all the extensive properties confiscated by Severus, and most of the inherited Antonine properties. Severus was ruthless in his exactions, but his expenditures were large both on campaigns and in the raising of new legions. The pay of the soldiers was increased from 300 to 500 *denarii*. More to be criticized were six *liberalitates* to the people of Rome, the revival of the alimentary system, and a substantial public building programme in Rome which included an arch in the Forum, a palace on the Palatine, and the Septizodium (q.v.). Yet he left a huge surplus at his death.

The chief military reform was the constitution of the new Guard, which henceforth served as a seminary for officers. This change represents not a barbarization but a democratization of the army, just as the stationing of Legio II Parthica at Althann illustrates Septimius' policy of placing Italy on a level with the provinces. New concessions were made to the soldiers, who were allowed to marry during their service and on their discharge enjoyed special benefits.

In the provinces Hadrian's Wall was repaired and outposts south of the *Limes Tripolitanus* established. New colonies, which frequently received *ius italicum*, were founded, notably in Africa and Syria, where there was a generally high level of prosperity. Elsewhere, e.g. in Lydia and Egypt, the government seems to have been unable to prevent the exploitation of the peasants by landlords or officials. Severus' alleged 'un-Roman' outlook is highly doubtful; he had a thoroughly realistic appreciation of the military basis of the imperial power; the army was the factor that determined his policy, and to maintain its cost the civil population was subjected to a variety of imperial requisitions. On his death-bed the Emperor is said to have exhorted his sons to live in peace, enrich the soldiers, and despise the rest of the world.

Herodian 2.11–3.10; Dio Cass. bks. 77–8, S.H.A. J. Hasebroek, *Untersuchungen zur Geschichte des Kaisers Septimius Severus* (1921), M. Platnauer, *The Life and Reign of the Emperor L. Septimius Severus* (1918); H. U. Instinsky, *Klio* 1942, 200 ff.; T. D. Barnes, *Hist.* 1967, 87 ff.; A. M. McCann, *The Portraits of S. N.* (1968). H. M. D. P.; B. H. W.

SEVERUS (2) **ALEXANDER**, **MARCUS AURILIUS** (*PIV* 221), Emperor A.D. 222–35. This was the title by which Alexianus (b. A.D. 208/9) son of Julia (9) Mamaea was known, when he was adopted by Elagabalus at the age of 13 and made sole Emperor on the murder of the latter in 222. Throughout his reign he was under the influence of his mother.

Alexander's reign is represented in the *Historia Augusta* (q.v.) as a resuscitation of senatorial power, but this is largely illusory. The interests of the Senate were, however, apparently protected by its having some elected members on the Emperor's council. The humane trend in the administration of justice was carried on under jurists like Paulus and Ulpian. The violence of the soldiers was never far away, however; Alexander had to acquiesce in the murder of Ulpian by the praetorians who resented his discipline as prefect, and the historian Dio Cassius narrowly escaped the same fate.

In 231 Alexander and his mother left Rome for Antioch, to repel an invasion of Mesopotamia by the Persian king Artaxerxes (q.v. 4). The campaign, which took place in 232, was not an unqualified success, but Mesopotamia was recovered.

Alexander returned to a triumph in Rome (233).

but his stay was short, as news of unrest in Germany necessitated his presence on the Rhine. The army, part of which was sent direct from Syria, was concentrated at Mainz, but Alexander made the fatal mistake of trying to buy peace. This pacifism was interpreted as cowardice by the legions; looking for a leader of courage and energy, their choice fell on a Thracian peasant called Maximinus (235). Soon afterwards Alexander and his mother, deserted even by the Oriental troops they had favoured, were murdered.

SEVERUS (3), **SEXTUS JULIUS**, shows the preceding names Cn. Minicius (*PW* 11) Faustinus; the *praenomen* are occasionally reversed as *Sex. . . . Cn. . . .* He was a Dalmatian by birth, who rose to senatorial rank and had a brilliant career (*ILS* 1056) under Hadrian (q.v.). Preliminary and urban offices once discharged, he was successively commander of Legio XIV Gemina, governor of Dacia (c. 120-6), *cos. suff.* in 127 (*CIL* xvi. 72; *Fasti Ost. s.a.*), governor of Lower Moesia (128-30), of Britain (c. 130-3), of Judaea (c. 133-5), and then—the first to hold this office—of the newly formed Syria Palaestina (*AE*. 1904, 295, no. 9).

SEVERUS (4, *PH* 15), **FLAVIUS VALERIUS**, an Illyrian soldier of humble origin and boon companion of Galerius, chosen at his wish to succeed as Caesar in the West in A.D. 305. On the death of Constantius Chlorus in 306 Severus succeeded him as Augustus, and Constantine, proclaimed in Britain, was fitted into the system as his Caesar. When Maxentius rose in Rome (Oct. 306), Galerius ordered up Severus from Milan to suppress him. Baffled by the walls of Rome and deserted by his own men, Severus retired to Ravenna and surrendered, on the promise of his life, to the old Maximian. When Galerius invaded Italy in 307, Severus was treacherously put to death by Maxentius at Tres Tabernae. H. M.

SEVERUS (5), **SULPICIUS**—Latin historian who was born in Aquitania c. A.D. 360. A member of a prominent family, he studied law in Bordeaux and became a convert to Christianity c. 380 together with his friend Paulinus (q.v.) of Nola. After the death of his aristocratic wife, he organized under the influence of Bishop Martin of Tours a sort of monastic life on his own estates for himself and his friends. In old age he seems to have passed through a period of Pelagianism. He died c. A.D. 420. Gennadius wrote a brief biography of him (*Vir. ill.* 19), and we have also thirteen letters to him by Paulinus. His extant works are: (1) a life of (Saint) Martin of Tours which is an apology for asceticism and is supplemented by three letters on Martin's miracles and death and by a dialogue which compares Martin's feats with those of the Egyptian hermits; (2) a universal chronicle to A.D. 400 which is an important source for the history of fourth-century events, especially of the Priscillianist heresy (Severus disapproved of the execution of Priscillianus). The whole book is an interesting attempt to present a 'breviarium' of history from the Christian point of view: it uses Christian chronographers, especially St. Jerome, but also Pagan writers. J. Bernays suggested that for the destruction of Jerusalem in A.D. 70 Sulpicius followed the lost account of Tacitus. Sallust and Tacitus are his models in the matter of style.

Best ed. C. Halm (1866); ed. in preparation in *Corpus Christian* by H. M. Peebles. For the Chronicle also A. Lavertuon (1806-0), with important commentary; for the life of Martin, J. Fontaine's commentary (1068); J. Bernays, *Ges. Abhandl.* ii. 1885, 81 ff.; Schanz-Hosius iv. 2, 472 ff.; H. Delchaye, *Anal. Boll.* 1920, 5 ff.; P. Hylten,

Studien zu Sulpicius Severus (1940), on style and text; S. Prete, *I Chronica di S. S.* (1955); H. Montefiore, *Istv* 1962, 156 ff., Ch. Saumagne, *Rev. Hist.* 1964, 67 ff.; J. Fontaine, *Atcl. Ch. Mohrmann* (1964), 84 ff. A. M.

SEXI, a Phoenician settlement at Almuñecar on the coast of southern Spain in Baetica, at least as old as the eighth century B.C. Egyptian alabaster vessels with the seals of the XXII Dynasty (870-847) from Tanais in Egypt have been found; also seventh-century proto-corinthian pottery. The later coinage depicts the tunny fish; salt-fish was a chief industry in Roman times.

M. Pellicer, *Excavaciones en el Cerro de S. Cristobal* (1962), *Madrid. Mittel.* 1963, 9 ff.; A. Vives, *La Moneda hispanica* (1920), iii. 19 ff. H. H. S.

SEXTIUS (1, *PW* 13), **TITUS**, of obscure family, perhaps from Ostia, was a *legatus* of Caesar's in Gaul (53-50 B.C.?) and perhaps also in the Civil War. In 44 he became governor of Africa Nova (Numidia). After Mutina he was ordered by the Senate to send two of his legions back to Italy for the defence of the State and to transfer the third to Cornificius (q.v. 1), governor of Africa Vetus. Later he attacked Cornificius on behalf of the *Triumvirs*, defeated him (42), and ruled both provinces till 41, when on request from L. Antonius he handed them over to Octavian's lieutenant C. Fuficius Fango. During the Perusine War he recovered them for Antony, and in 40 surrendered them to Lepidus. His descendants, some of whom assumed the surname Africanus, held several consulships.

Syme, *Rom. Rev.*, see index; T. P. Wiseman, *CQ* 1964, 130 f. G. W. R.; T. J. C.

SEXTIUS (2), **QUINTUS**, philosopher of the time of Augustus, founded a philosophical school which met with great success at first but did not last long. He claimed to be the founder of a native school of philosophy, but was in fact an eclectic, borrowing from Stoicism his ethical views, from Plato the theory that the soul is an incorporeal entity, and from the Pythagoreans a belief in vegetarianism. See **DIATRIBE**. He is probably identical with the botanical and medical writer Sextius Niger, whose work *Περὶ ὕλης ἰατρικῆς* was used by Pliny and Dioscorides. W. D. R.

SEXTUS (1) of Chaeronea, nephew of Plutarch, Platonist, teacher of Marcus Aurelius and Varus.

SEXTUS (2) **EMPIRICUS**, doctor of medicine and sceptical philosopher; date very uncertain, but probably between Galen and Diogenes Laertius, c. A.D. 200. He was a Greek (*Math.* i. 246—use of 1st person plural), not from Athens; he may have spent time in Rome. He was taught by one Herodotus (Diog. Laert. 9. 116), who was well known as a doctor in Rome. The name Empiricus, which is mentioned by Diogenes (9. 117), puts him into the 'empirical' school of doctors.

Three works survive:

(1) *Πυρρώνειοι ὑποτυπώσεις* (= *Outlines of Pyrrhonism*) in three books, the first an outline of the case for philosophical scepticism, the last two a summary rejection of dogmatic philosophies, divided by subject-matter.

(2) *Πρὸς λογικοὺς* A-B, *Πρὸς φυσικοὺς* A-B, and *Πρὸς ἠθικοὺς* (= *Adversus Mathematicos* VII-XI), a fuller critique of various philosophical systems.

(3) *Πρὸς μαθηματικούς* (= *Adversus Mathematicos* I-VI = *Against the Professors* I-VI), divided as follows: *Against I the Grammarians; II the Rhetoricians; III the Geometers; IV the Arithmeticians; V the Astrologers; VI the Musicians.*

Although he used compilations rather than original sources, Sextus is a valuable source of information on

earlier philosophy. He has a much better appreciation of an argument than the idiotic and scandalous Diogenes Laertius. In particular, he is one of the best sources for Stoic logic. His original contribution is small.

Greek text, ed. Mutschmann, rev. J. Mau and K. Janáček (Teubner 1954-), Gk. text and Eng. trans., ed. J. B. Bury (Loeb Classical Library, 1933-40) N. Etheridge, *Scepticism, Man and God* (1964, sel. Eng. trans. with notes). D. J. F.

SEXTUS (3), originator of a collection of gnomes, *Σέξτου γνώμαι*, mentioned by Origen and translated into Latin by Rufinus, who gave it the name of *Anulus*. The Syriac translation bears the title *Dicta selecta sancti Aysti episcopi Romani*, but Jerome argues against the authorship of Xystus (A.D. 256-8) and calls the author Sextus Pythagoreus. The original collection was probably non-Christian and made in the second century A.D., but additions implying a Christian background were gradually made, though definite allusions to Christ or to Christian doctrine were avoided.

Ed. A. Elter (1891-2). H. Chadwick, *The Sentences of Sextus* (1959). W. D. R.

SHIPS. The shipping of the ancient Mediterranean consisted of two main types of vessels—the slim, light-draught war-galley (see **TRIEMES**, **QUINQUEREME**) and the heavy, slow merchant ship. The distinction between these, which accompanied the separation of merchant and pirate in the archaic Greek period, reflects the wide difference in functions: the merchant ship kept the sea night and day with heavy cargoes, in all but the worst weather; for the warship, considerations of seaworthiness were subordinate to efficiency and handiness in battle. Fleets of war, in consequence, often found blockades and long cruises dangerous.

The proportion of length to breadth, in the galley about 7:1, approximated to 4:1 for the transport. Merchant and war-vessels alike were constructed from wood, chiefly larch, cypress, and fir (Theophrastus, *Hist. Pl.* 5. 7). As today, a keel was set upon ways in a dock-yard; to this shipwrights attached ribs, upon which the planking of the hull was nailed. Strengthening cables seem to have taken the place of stringers parallel to the keel in some cases. The prow of the merchant vessel was simple, without ram or voluted prow-post; the stern-post, which curved back towards the prow, on cargo ships often resembled a goose's neck. While war-galleys were at most decked only on prow and stern, other craft were usually completely decked by 400 B.C. and had a cabin aft. In the stern were a ladder for use if the ship were beached, usually an anchor in addition to the prow-anchor, and the tutelary image of some god, from which the ship might take its name. This name, or some indicative symbol, was often placed on the prow. The steering-gear consisted of two large rudder-oars, one projecting on either side of the stern.

Merchant craft, having a permanent mast, relied chiefly on sail, though long sweeps could be used. At first they had one mast, which bore a square sail, made from linen or sometimes from hides; later a small forward mast was added, and in the Roman Empire two or three main masts are sometimes found, with triangular sails above the main yard. Such sailing-vessels apparently made three to four knots in normal conditions (see **NAVIGATION**).

With the spread of commerce merchant vessels increased in size. The unique *Alexandria* of Hieron II could carry perhaps 1,600 tons, and the Alexandrian grain-ship *Isis*, of the second century A.D., measured

roughly 180 by 45 feet, with a depth of 44 feet and a carrying capacity of 1,200 tons. These were exceptional; but by the Roman Empire the average *navis oneraria* rated perhaps at 50 tons.

SIBYLLA. This word, of uncertain etymology, appears first in Heraclitus (ap. Plut. *Pyth. Or.* 6; Clem. *Al. Strom.* 1. 70. 3), and was early used as a proper name (e.g. Ar. *Pax* 1095, 1116). As a single prophetic female the Sibyl was variously localized, and legends of her wanderings account for her presence at different spots, but as early as Heracles Ponticus (Clem. *Strom.* 1. 108. 3) she became pluralized, and thereafter we find two, three, four, five, six, or ten Sibyls, in different places and some bearing individual names, since the term Sibyl had now become generic. Varro's *Res Divinae* (ap. Lact. *Inst.* 1. 6. 8-12) lists ten: 1. Persian; 2. Libyan; 3. Delphic; 4. Cimmerian (in Italy); 5. Erythraean; 6. Samian; 7. Cumaean (named Amalthea, Hierophile, Demophile, or, in Verg. *Aen.* 6. 36, Deiphobe); 8. Hellepontic (at Marpesus near Troy); 9. Phrygian (at Ancyra); 10. Tiburtine (named Albunea). Sibyls at Delos, Clarus, Colophon, Sardis, Dodona; and elsewhere (A. Bouché-Leclercq, *Hist. de la divination* II (1880), 175, 183. Buchholz in Roscher, *Lexikon* IV. 796-803) are doubtful and perhaps to be identified with some of those in Varro's list. For a legend of the Cumaean Sibyl see **APOLLO**, § 6.

The ecstatic character of Sibylline prophecy (cf. Heraclitus ap. Plut. loc. cit.) is described by Virgil, *Aen.* 6. 77-102. The content of such utterances was early reduced to written form, in Greek hexameter verses, the genuineness of which was often guaranteed by acrostics (Cic. *Div.* 2. 112; Dion. Hal. 4. 62. 6). They were originally, in the case of the Cumaean Sibyl (Varro ap. Serv. *Aen.* 3. 444), inscribed on palm-leaves. Collections of these verses were made for later consultation; and there is a famous story (Dion. Hal. 4. 62. 1-6; Pliny, *HN* 13. 88; Lact. *Inst.* 1. 6. 10-11; Serv. *Aen.* 6. 72, etc.) of the sale to Tarquinius Priscus of one such collection which was put into the charge of a special priestly college (see **QUINDECIMVIRI SACRIS FACIUNDIS**), to be consulted only at the command of the Senate, in contrast to the unrestricted consultation of Sibyls elsewhere. After these Sibylline Books had been destroyed in the burning of the Capitol in 83 B.C. a new collection was made from various sources to replace them. To the Jewish-Hellenistic culture and later to Christian influence are due many blatant forgeries, and fourteen somewhat miscellaneous books of oracles are still extant (ed. by A. Rzachi, 1891; J. Geffcken, 1902: annotated collection, with good introduction by A. Kurfess (Tusculum, 1951)). The last known consultation of the books was in 363 (Amm. Marc. 23. 1. 7), and the official collection was burned in the time of Stilicho (Rut. Namat. 2. 52). The influence of Jewish and Christian interpolations, however, combined with the prophecy of the Cumaean Sibyl in Virgil's *Fourth Eclogue* to give to all the Sibyls a position in Christian literature and art somewhat similar to that accorded the Old Testament prophets.

A. S. P.

SICCA VENERIA, modern *le Kef*, a Roman town in Tunisia. Originally a Libyan community under Carthaginian rule, it became a *colonia* under Augustus (Colonia Iulia Veneria Ciria Nova Sicca). It was the centre of a cult of Venus, said to have been introduced from Eryx.

The town was the birthplace of Arnobius, and received substantial fortifications in the Byzantine period.

B. H. W.

SICELS (*Siculi*). 'Sicel' appears to be a generic term applied by Greeks to the indigenous peoples they encountered when founding their colonies on the east coast of Sicily towards the end of the eighth century B.C.; they were supposed to have arrived comparatively recently from the Italian mainland (Hellanicus, *FCrII* 1 F 79b; Dion. Hal. *Ant. Rom.* 1. 22; Thuc. 6. 25), where their presence is traditionally attested in the south and perhaps linguistically also in Latium. Archaeology has shown conclusively that the Pantalica-Cassibile-Finocchito culture of the Late Bronze-Early Iron Age in eastern Sicily has affinities with the east Mediterranean and not with the Italian late Apennine Culture, as the sources would lead one to expect: this is in sharp contrast to the contemporary Ausonian culture of the Aeolian Islands (see *AEOLIAE INSULAE*). P. Orsi in 1892 divided Sicilian prehistory into four post-Neolithic 'Siculan' periods, and christened as 'Sicels' all the people of eastern Sicily throughout the Early Bronze Age Castelluccio and Middle Bronze Age Thapsos cultures: these two cultures are, however, considerably earlier than the period suggested by the ancient sources for the Sicel incursion, and their affinities are once more with the east Mediterranean. See also *SICILY*.

D. W. R. R.

SICILY. PREHISTORY. Ancient writers distinguished three native peoples—Sicani in west-central, Siceli in eastern, and Elymi in western Sicily. Thucydides (6. 2) attributes an Iberian origin to the Sicani, Italic to the Sicels, and Trojan to the Elymi. Archaeologically there is no differentiation of culture between east and west corresponding to the Sicel-Sican distinction, but the Italic origin of immigrants to Sicily in the Late Bronze Age is confirmed by evidence from the Lipari islands and north-eastern Sicily, showing phases of the 'Apennine' culture known as Ausonian. Surviving Sicel linguistic elements argue in the same direction. In south-east Sicily the pre-Greek culture does not show clear Italic affinities (see *SICELS*).

2. THE GREEK SETTLEMENT. Despite Thucydides' account, the Phoenicians did not apparently settle in Sicily before the Greeks, and their colonization was limited to Motya, Panormus, and Soloeis. The Elymi, whose principal centres were Segesta, Eryx, and Entella, became traditional allies of the Carthaginians. From c. 735 B.C. ('Thucydides' date-indications in 6. 3-5 form the chronological basis) there followed a prolonged period of Greek colonization (see *COLONIZATION*) and under the various Greek cities. The natives were ejected from the colonized sites, or (as at Syracuse) reduced to dependent status; occasionally (as at Leontini) there was peaceful coexistence. Once established, the Greeks themselves and their civilization by degrees penetrated and transformed the native area; in some places (e.g. Morgantina) the process was quite rapid. By the Hellenistic period the island was a Siculo-Greek amalgam. The Greeks exploited the island's economic potentialities, and imported Corinthian, Rhodian, and (later) Attic pottery illustrates the considerable trade with Greece. Markets in Africa, south Italy, and (after c. 500) Rome were also available. Temple-building and rapid urbanization attest the wealth and culture of the archaic period; the first Sicilian coinage belongs to the second half of the sixth century. The Phoenicians acquiesced in the Greek settlement, but

defended their enclave against Pentathlus (c. 580) and Doricus (c. 510).

3. EARLY TYRANNIES. As in Greece, tyranny emerged, but the aristocracies were tenacious, while the threat, potential or actual, of Carthage and the Sicels affected internal politics; this in turn produced greater social instability. Early tyrannies in Agragas and elsewhere foreshadowed the despotism of Hippocrates (q.v. 1) of Gela, who was the first of the great classical tyrants in Sicily. His successor Gelon (q.v.) transferred his capital to Syracuse. A Carthaginian attempt, at the instance of some still independent Greek cities, to check Gelon and his ally Theron (q.v.) of Agragas met disaster at Himera (480). Under Gelon and Hieron (q.v. 1) Sicelot-Greek culture reached its classical zenith. It penetrated the Phoenician colonies, and the Elymi became increasingly Hellenized. After the deaths of Theron and Hieron the tyrannies soon came to an end. The attempt of the Sicel leader Ducetius (q.v.) to organize a national movement proved abortive.

4. THE AGE OF DIONYSIUS. In the latter part of the fifth century the cities maintained their mutual independence and were democratically governed. But democracy did not strike roots in Sicily as in Greece, and external dangers demanded a more authoritarian organization. The Athenians twice intervened in the island (427-424 and 415-413) on the basis of alliances with Leontini and Segesta, with hopes of ultimately controlling it; the first intervention did not succeed and the second (great) expedition ended in utter failure. Carthage now profited by the exhaustion of Syracuse to attempt the complete conquest of Sicily (409). Selinus and Himera fell in 409, Agragas and Gela in 406/5. In the days of crisis Dionysius I succeeded in establishing himself as tyrant of Syracuse; the Carthaginians were repulsed, and Syracuse, which came to control all Sicily outside Carthage's 'area' in the far west, prospered; but the cost was tyranny and the loss of political freedom. Dionysius' death (367) was followed, after a decade, by civil war; petty tyrants established themselves in the various cities, and the Carthaginians again intervened.

5. THE HELLENISTIC PERIOD. At this low ebb in their fortunes the Syracusans sent for Timoleon (q.v.), who defeated the Carthaginians and re-established settled government. His arrangements did not long survive his death (c. 336), and oligarchy prevailed. In 317 Agathocles seized the Syracusan tyranny and subjugated most of the island. When he died (289) fresh anarchy ensued, there were more local tyrants, Carthage again threatened, and the tyrant's ex-mercenaries (Mamertini) carved out a dominion for themselves in Messina. City-state Sicily was in fact in dissolution. Pyrrhus (q.v.) of Epirus was called in, but despite quick successes produced no lasting effect. Hieron II (q.v.) of Syracuse to some extent halted the decline, but his defeat of the Mamertini brought on a Carthaginian occupation of Messina and was the occasion for Roman interference and the First Punic War (264-241), after which most of the island became a Roman province. Hieron's kingdom remained autonomous and prosperous until his death in 215, when Syracuse went over to Carthage. After the Roman capture of Syracuse (211) all Sicily was unified under the provincial government.

6. THE ROMAN PROVINCE. The government consisted of a praetor (later proconsul or propraetor) with a quaestor in Syracuse and another in Lilybaeum. A provincial Sicilian council had no real power. Messina and Tauromenium, which had voluntarily accepted Rome's alliance, were distinguished as *civitates foederatae*; a few other communities were *liberae et immunes* (e.g. Segesta, Panormus). Of the remainder some paid a tithe (*civitates decumanae*) on a system established by Hieron II; the

land of others became *ager publicus*, for which they paid rent in addition to the tithe (*civitates censoriae*). All had some local autonomy, infringed by such governors as C. Verres (73–71) but generally respected, and issued small-denomination coinage until the early Empire. Under the Republic wheat-growing, cardinal to Rome's food-supply, was fostered; large *latifundia* grew up as a result of big Roman purchases of real estate. These were worked by slaves whose conditions provoked the serious rebellions of 135–132 and 104–100 B.C. The north-east of the island also suffered in 36 when Octavian expelled Sex. Pompeius, in whose occupation of Sicily he and Antony had acquiesced in 39.

7. THE IMPERIAL PERIOD. The island continued to prosper under the Empire until the barbarian invasions, and Latin and Greek culture long coexisted. Caesar apparently granted the Sicilians Latin rights. Antony claimed he had intended to make them full citizens, but Octavian was less generous. As Augustus he gave Messana and a few other cities Roman citizenship, and he founded veteran-colonies at Catana, Panormus, Syracuse, Tauro-menium, Thermae, and Tyndaris. The old administrative system was replaced by one of (a) tax-free Roman *coloniae* and *municipia*, (b) tax-free Latin *municipia*, (c) tax-paying Latin *municipia*. A fixed levy replaced the tithe. *Latifundia*, among them large imperial estates, remained the prevalent agricultural pattern, especially as wheat-growing declined in importance. Yet village life, and therefore smallholdings, evidently flourished also, and in general the population in no way declined, even though some of the old cities (e.g. Morgantina) had by then decayed.

SICINIUS (PW 9), GNAEUS, a witty orator, as tribune 76 B.C. tried unsuccessfully to restore the powers of the tribunate. E. B.

SICULUS FLACCUS, *gromaticus* (q.v.), of unknown date; author of a treatise on categories of land-tenure in Italy.

SICYON, Corinth's western neighbour, stood in a rich plain 2 miles from the sea. The archaic town lay at the foot of a large triangular plateau which was the acropolis. Demetrius Poliorcetes transplanted it to the acropolis. The remains of this town include the theatre, stadium, agora with fountains and portico, and large Roman buildings.

Sicyon was founded from Argos, and owed Argos religious and originally also political duties. These were set aside by the tyranny which, begun by Orthagoras c. 660 B.C., and favouring the non-Dorian elements, lasted over 100 years. Its greatest power was attained under Cleisthenes, who led the forces which destroyed Crisa in the first Sacred War (c. 580), and also had relations further west. He celebrated his daughter's wedding with fabulous magnificence (IIdt. 6. 126). Sparta put down the

tyranny and Sicyon became her faithful ally. In the third century its chief citizen, Aratus, gave it an important position in the Achaean Confederacy. Sicyon was a famous centre of art. In the archaic period it was a home of painting and pottery (Pliny, *HN* 35. 151–2), but the attribution of the 'Protocorinthian' vases to Sicyon is now discredited (H. Payne, *Nerocorinthia*, 1931, 35 ff.). In the fourth century it possessed the leading school of painters and produced the sculptor Lysippus.

SIDE (Σίδη), city and harbour on the coast of Pamphylia. Founded, according to Eusebius, in 1405 B.C., it remained a barbarian city till resettled by colonists from Aeolian Cyme, probably in the seventh or sixth century. Arrian says, quoting the Sidetans themselves, that the colonists at once forgot their Greek and began to speak an unknown barbaric tongue. This story is illustrated by the peculiar script and dialect on coins and inscriptions of the city down to about 300 B.C. This has not yet been interpreted. The Sidetans were on bad terms with their neighbours of Aspendus, and were called by Stratoniceus the most rascally of mankind. Side submitted quietly to Alexander, and in 190 B.C. was the scene of an indecisive naval battle between Antiochus III and the Rhodians, who were supporting Rome. In the second and first centuries Side was deeply implicated in the Cilician piracy, affording the pirates both a dockyard and a market for their prisoners. Under the early Empire the city was very rich and influential, but in the later third and fourth centuries became impoverished, largely owing to the inroads of the Isaurians. The ruins at Selimiye, or Eski Antalya, are extensive and were excavated from 1947 to 1966 by the Turks. Best preserved are the Hellenistic walls and the Roman theatre.

Arif Mufit Mansel, *Die Ruinen von Side* (1963).

G. E. B.

SIDICINI, Oscan-speaking neighbours of the Aurunci (q.v.) immediately north of Campania (q.v.). By threatening their chief town, Teanum, the Samnites precipitated the First Samnite War (343 B.C.) (see SAMNIUM). The Sidicini came under Roman domination, probably during the Second Samnite War, but remained technically independent until the Social War. They were rapidly romanized thereafter.

E. T. S.

SIDON, a city on the coast of Phoenicia, was ruled under Persia by a native dynasty which had close commercial relations with Athens and was already hellenized, as the sarcophagi of the kings show. The dynasty was confirmed by Alexander but suppressed in the early third century (the last known king was the Ptolemaic admiral Philocles), and Sidon became a republic, ruled by Suffetes. From Antiochus IV's reign it issued municipal coinage, still mostly inscribed in Phoenician. In 111 B.C. it gained its freedom, which was recognized by Pompey. It received from Augustus a great accession of territory up to Mount Hermon (see ITURAEA). Under Elagabalus it became a Roman colony. Sidon was a great commercial city and also possessed two important industries, purple-dyeing and glass-blowing; the latter art was discovered in the first century B.C. at Sidon, and the names of many Sidonian glass-blowers of the early Principate are known, chiefly from signatures on extant pieces.

A. H. M. J.

SIDONIUS APOLLINARIS (GAIUS SOLIUS APOLLINARIS SIDONIUS), a Gallo-Roman of noble family, was born at Lugdunum (*Lyon*) about A.D. 430. He married Papianilla, daughter of Avitus, and through her acquired the estate of Avitacum in Auvergne. Avitus was proclaimed emperor, July 455. Sidonius accompanied him

to Rome, and there recited in his honour, 1 Jan. 456, a panegyric in verse (*Carm.* 7), which was rewarded with a statue in Trajan's Forum. Avitus was soon dethroned. Sidonius then joined an insurrection with headquarters at Lyon, but was finally reconciled to Majorian, the new Emperor, and delivered at Lyon (458) a panegyric on him (*ibid.* 5). In 459 or 460 he held some government post at Rome. After Majorian's fall (461) he spent some years in his native country. In 467 he led a Gallo-Roman deputation to the Emperor Anthemius at Rome. On 1 Jan. 468 he recited his third and last panegyric (*ibid.* 2), after which he became *praefectus urbi*. He returned to Gaul in 469 and accepted the bishopric of Auvergne with seat at Clermont-Ferrand. Although ill-equipped for ecclesiastical office, he discharged his sacred duties with earnestness and success; above all, he upheld his people in resisting the Goths. In 475 Rome, to his dismay, ceded Auvergne to Euric. Sidonius was subjected to a mild imprisonment in the fortress of Liviana, near Carcassonne. Released in 476, he was ultimately allowed to resume his bishopric. The usual date for his death, 479, is probably a little too early. He was canonized.

WORKS. (1) *Carmina*: (a) 1-8, the three long panegyrics (in reversed chronological order) together with prefaces and dedications; (b) 9-24, professedly youthful poems, ranging from 4 to 512 lines, practically all addressed to, or concerned with, friends. (2) *Epistulae*, nine books, addressed to many friends and relations. Books 1-2 belong to the period before his episcopate. Some letters were specially written for the collection, the others were carefully revised. Both poems and letters throw important light on the fifth century. They show Sidonius as a genial and sympathetic man, a loyal friend and ardent patriot, but also as a rather narrow-minded aristocrat and literary pedant. His originality was limited, but he had a keen eye for external details. His language is absurdly stilted and obscure, with all manner of rhetorical tricks exaggerated *ad nauseam*. He had only a superficial knowledge of Greek, and his acquaintance with philosophy did not go beyond the scanty equipment provided in the schools. The Younger Pliny was his model for his letters, Claudian for his panegyrics.

W. B. A.; F. J. E. R.

SIEGECRAFT, GREEK. The art of taking fortified citadels or cities may be divided into three periods in Greek military history.

I. BRONZE AGE TO PERSIAN WARS. The scanty evidence (e.g. Hom. *Il.* 12; Paus. 10. 37. 7-8; Crisa c. 600) suggests that Greek siegecraft was in a backward state into which ideas occasionally filtered from the main stream of development further east (see Y. Yadin, *The Art of Warfare in Biblical Lands*, 1963). Alyattes took Old Smyrna c. 600 (*BSA* 1958/9, 1 ff.), Persian siegecraft overwhelmed several Cypriot and Ionian cities, 497-493, most Athenians abandoned their city in 480 because it could not withstand a Persian siege; but the fortifications in question would probably have sufficed to resist Greek besiegers.

II. TRANSITION, PERSIAN WARS TO PHILIP II. Apart from surprise or treachery, besiegers relied mainly on blockade, normally involving circumvallation. Samos surrendered to Pericles after nine months (440; Thuc. 1. 115 ff.); little Potidaea resisted Athenian siege for three years (432-430). Such blockades were expensive: Samos

cost Athens 1,400 talents, Potidaea 2,000. But some besiegers were beginning to appreciate the value of machines and storming. Pericles possibly used engines at Samos (*Diod.* 12. 28); Plataea finally fell to blockade, though the Peloponnesians employed mound (*χῶμα*), battering-ram (*κρίος*), and fire (420-427; Thuc. 2. 75 ff.—a show-piece). Comparatively simple defences could withstand this limited siege-technique, and Pericles based his strategy on the then valid assumption that the Athens-Peiraeus fortress was impregnable. Shortage of archers and slingers, to cover assaults and keep casualties down, partly accounts for Greek weakness. About 400, the invention of artillery (q.v.) gave the Greeks powerful means of providing effective covering 'fire'; later artillery could smash battlements and even help destroy walls. Thus, Dionysius I successfully attacked Motya with a mole, six-story mobile siege-towers, rams, and *gastraphetai* (397; *Diod.* 14. 49 ff.). Philip II's siege-train profoundly impressed the Greeks, though his eighty-cubit towers and arrow-shooting catapults failed at Perinthus (340; *Diod.* 16. 74 f.); siegecraft had almost reached maturity.

III. ALEXANDER AND AFTER. Philip II founded the Macedonian engineering school; Alexander reaped the benefit. Confident in the capacity of his engineers (Diades, Charias, Poseidonius) and his more powerful artillery, he displayed fully developed siege-technique in taking Miletus, Halicarnassus, Tyre, Gaza. His siege-train played a vital part in the conquest of Persia. Demetrius' sieges of Salamis (*Diod.* 20. 48) and Rhodes (*Diod.* 20. 85-8; 93-7) provide illuminating evidence for Hellenistic siegecraft. Siege-devices included mining, *stoas* (heavily timbered galleries), artillery, *helepoles* (giant siege-towers carrying catapults and sometimes drawbridges, *ἐπιβάθραι*), mechanical scaling ladders (*σκαμβύκαι*), various mobile sheds, *χελῶναι*—*χαστροίδες* (for ditch-filling), *ὀρυκτροίδες* (for digging saps), *κρηφόροι* (ram-carrying). Of course, cities rapidly learned to construct elaborate defences—better walls, numerous chambered towers, ditch-systems, outworks. They deployed defensive artillery, so that sieges often included artillery-duels (e.g. Rhodes). A well-fortified and equipped city could resist a vigorous Hellenistic assault, but few could afford the expense. Hence, after Alexander, besiegers generally had the whip hand, e.g. the interesting attack of Philip V on Echinus (210; Polyb. 9. 41). About 200, Philon Mechanicus, whose poliorcetic manual excellently describes Hellenistic methods of defence and attack, observes significantly: 'Walls are easily taken by stone-throwing artillery and stoas.'

Aeneas Tacticus, *Poliorcetica*, Athenaeus and Biton in C. Wescher, *Poliorcétique des Grecs* (1867); Philon Mechanicus v. ed. R. Schoene (1893). E. Schramm in J. Kromayer and G. Veith, *Heerwesen und Kriegführung der Griechen und Römer* (1928), ch. 5; E. W. Marsden, *Greek and Roman Artillery* (1969). E. W. M.

SIEGECRAFT, ROMAN. Early Roman besiegers employed blockade (*obsidio*) with methodical circumvallation, exploited surprise, and sometimes, especially after weakening the besieged by *obsidio*, clinched matters by assault (*oppugnatio*), using the shield-tortoise (*testudo*), ladders (*scalae*), and possibly mound (*agger*) and primitive ram (*aries*). Veii, blockaded 405-396 B.C., fell to assault by mine (*cuniculus*), Livy 5. 15 ff.

From the third century B.C., the Romans assimilated the machinery and techniques of Hellenistic siegecraft (see SIEGECRAFT, GREEK), but continued to use elaborate field-works, thus effectively combining *obsidio* and *oppugnatio*. The sieges of Syracuse by Marcellus (213-211 B.C. Livy 24. 32 ff.; Polyb. 8. 3 ff.), the Peiraeus by Sulla (87-86 B.C. App. *Mith.* 30 ff.), and of Avaricum, Alesia, and Massilia by Caesar are particularly instructive. Equipment included large and small bolt-shooting

artillery (*catapultae*, *scorpiones*), stone-throwers (*ballistae*) mobile towers (*turres ambulatores* — *helepoleis*), mechanical ladders (*sambucae*), movable siege-sheds (e.g. ram-carrying tortoise, *testudo arietaria* — *χελώνη κριοφόρος*; for sapping, the *musculus* — *χελώνη διορυκτρής*; light mantlets, *vineae* — *ἀμπέλοι*), protective galleries (*porticus* — *stoa*s, sometimes formed by a line of *vineae*), mobile screens (*plutei*), wall-borer (*terebra* — *τρύπανον*), hooks and crowbars for dislodging masonry (*falces murales*, *vertes*). The Roman catapult fragments found at Ampurias and Vitruvius' descriptions (to. 10 ff.) show that Roman engines corresponded closely to Greek artillery (q.v.). The same is true of other siege-machinery (Vitr. 10. 13 ff.). Thus the quality of equipment was good, but its quantity, dependent on the initiative of individual commanders (cf. Scipio's efforts to acquire artillery for siege of Utica, 204 B.C., Livy 29. 35. 8), tended to be inadequate.

Every imperial legion had over fifty *catapultae* (one illustrated on C. Vedennius Moderatus' tombstone, *ILS* 2034) and *ballistae*, a workshop (see *JRS* 1961, 158 ff. for *fabrica* at Inchtuthil), and artificers. Thus commanders—and engineers like Trajan's Apollodorus (q.v. 7)—possessed, or could manufacture, any machine of Hellenistic type necessary for a vigorous siege—whether of a hill-fort (see R. E. M. Wheeler, *Maiden Castle* (1943), 61 ff.) or of sophisticated defences like Jotapata (besieged by Vespasian, Joseph. *B.J.* 3. 166 ff.), Jerusalem (Titus' siege, id. 5. 263 ff.), and Masada (id. 7. 276 ff.; *JRS* 1962, 142 ff.).

By the fourth century A.D., artillery comprised the one-armed stone-throwing *onager*—mainly defensive—powerful arrow-shooting *ballistae* (first indicated on Trajan's Column), and small non-torsion arrow-shooting *arcuballistae*. Ammianus' accounts (e.g. 24. 4; *Maozamalcha*) show that Roman siegecraft was still not to be despised.

Vegetius, *De re militari* iv. H. S. Jones, *Companion to Roman History* (1912), 215 ff.; J. Kromayer and G. Veith, *Heerwesen und Kriegführung der Griechen und Römer* (1928), 171 ff., 442 ff., 600 ff.; E. W. Maraden, *Greek and Roman Artillery* (1909). E. W. M.

SIGILLARIA. The custom of making presents of little pottery figures at the Saturnalia (q.v.) was so firmly fixed at Rome that there was a regular market for them, where apparently other trifling wares were also sold (Auson. *Cent. Nupt.* 206. 7 Peiper). It was usual to give dependants money for this fair (e.g. Suet. *Claud.* 5). The origin of the custom is not known; the date of the fair was, in imperial times, the last of the seven days which the Saturnalia then lasted (Macrobius, *Sat.* 1. 10. 24). H. J. R.

SIGNA MILITARIA. The earliest standard of the Roman army was the *signum* of the manipulus. Its primitive form was a hand on the top of a pole, which later was replaced by a spearhead decorated with *phalerae*, *coronae*, and zodiac emblems. When the cohort superseded the manipulus as the tactical unit, the *signum* of the leading manipulus in each cohort became the chief standard of the cohort. The century had no separate *signum*.

In the pre-Marian army there were also five legionary standards, which were placed for safety in battle between the first two lines. In substitution for these Marius gave each legion an *aquila* of silver or silver gilt with *coronae* as its sole decoration. The *aquila* was the *numen legionis*; its loss sometimes entailed the disbandment of the legion.

Under the Principate the legion retained its *aquila* and *signa*, and to these were added *imagines*, standards containing medallions with the portraits of the reigning and deified Emperors. *Vexilla*, traditionally the standards of the cavalry, were employed in the legions to mark detachments (*vexillationes*), and, in the first century, the corps of veterans serving *sub vexillo*.

In cohorts of *auxilia* the infantry had *signa*, the mounted men *vexilla*: in the *alae* there was a regimental standard carried by the *vexillarius alae*, and the *turmae* had *signa* in addition. *Imagines* came to be carried by all units, including the *numeri*, except the Praetorian Guard, who had only *signa* and *vexilla*.

In the Late Empire the traditional standards, with the exception of the *imagines*, were retained, and two new ones added, the *draco* and the *labarum*. The former was probably barbarian in origin and adopted from the Dacians, the latter was not so much a military standard as the symbol of triumphant Christianity. See also *VEXILLUM*; *STANDARDS*, *CULT* OF.

H. M. D. P.; G. R. W.

SIGNIA, modern *Segni*, strongly placed at the north-east angle of the Volscian Mountains in Latium (q.v.). A Latin colony here (495 B.C.) helped contain the Volsci. Sulla defeated the Marians near by (Battle of Sacriportus, 82 B.C.). Ancient ruins include spectacular polygonal walls, corbelled gate (*Porta Saracena*), temple in squared masonry, large open-air reservoir.

G. Lugli, *La tecnica edilizia romana* (1957), 121 ff. E. T. S.

SILA, name given to the forests and mountains in the 'toe' of Italy. Rome annexed much of this region after the Pyrrhic War and exploited its pitch and ship's timbers. E. T. S.

SILANION (4th c. B.C.), sculptor, of Athens, dated by Pliny 328 B.C. Selected works: 1. Theseus, in Athens. 2. Dying locust, bronze with admixture of silver in the face. 3. Sappho, in Syracuse, later in Rome. 4. Corinna (M. Bieber, *Sculpt. Hellenist. Age*, figs. 120–2, cf. *Lustrum* 1961, 19). 5. Plato, erected in the Academy by Mithridates the Persian; after 387 (foundation of Academy). The original of surviving Plato busts (Winter, *KB* 317. 2), which differ too much to justify further attribution to Silanion. 6. The sculptor Apollodorus (noted mainly for his irritable temper). 'Nec hominem ex aere lecit sed iracundiam' (Pliny, *HN* 34. 81). 7. The boxer Satyrus, at Olympia, after 327. 8. Signature from Miletus, about 328 B.C. Silanion wrote *Præcepta symmetrarum*. His pupil Zeuxiades made a statue of Hyperides, who died 322.

SILANUS, (1) DECIMUS JUNIUS (*PH* 163), husband of Servilia (q.v.), as consul designate (63 B.C.) proposed the 'extreme penalty' for the Catilinarians and, after Caesar's speech, explained he had meant imprisonment. As consul, with Murena (q.v.), he passed the *lex Licinia Iunia* on promulgation. Cassius (q.v. 6) and Lepidus (q.v. 3) were his sons-in-law. E. H.

Many Junii Silani were prominent in the Early Empire, though lacking outstanding individual contribution. Some may be listed:

(2) M. Junius (*PW* 172) Silanus (*cos.* 25 B.C.), of varied political allegiance. In 44 B.C. he supported his brother-in-law Lepidus, went over to Antony at Mutina (43), fell out of favour with the triumvirs, fled to Sextus Pompeius (39), served under Antony in Greece (34–32), but before Actium went over to Octavian, who later raised him to the patriciate (30) and held the consulship with him in 25. (For the suggestion that the consul of 25 should be differentiated from the legate of 43, see Broughton, *MRR*, *Suppl.* 32.)

(3) M. Junius (PW 175) Silanus Torquatus (consul A.D. 19, for the whole year), grandson of no. 2. He was responsible, with his colleague Norbanus, for the *lex Iunia Norbana* (see LATINI IUNIANI). He was proconsul of Africa (36-9?). He married Aemilia Lepida, a great-granddaughter of Augustus, and all his five children (nos. 4-7 below) suffered from being descendants of Augustus.

(4) M. Junius (PW 176) Silanus (consul A.D. 46, for the whole year), son of no. 3. Born in A.D. 14, a great-great-grandson of Augustus, he was proconsul of Asia in 54. Although he lacked ambition (the Emperor Gaius called him a 'golden sheep', *pecus aurea*), Agrippina thought that his Augustan connexion might jeopardize the succession of her son Nero and that Silanus might be tempted to avenge the death of his brother (no. 6) for which she was responsible. He was put to death.

(5) D. Junius (PW 183) Silanus Torquatus (cos. A.D. 53), son of no. 3, was forced by Nero to commit suicide (64) because he was alleged to have boasted of his descent from Augustus.

(6) L. Junius (PW 180) Silanus Torquatus (praetor A.D. 48), son of no. 3, was betrothed to Octavia, daughter of the Emperor Claudius. He went with Claudius to Britain and received from him the *ornamenta triumphalia*. Through the intrigues of Agrippina he was expelled from the Senate (allegedly for incest with his sister, no. 7 below) and was deprived of his praetorship. He committed suicide on the day that Claudius married Agrippina (49).

(7) Junia (PW 108) Calpurnia, daughter of no. 3, 'festivissima omnium puellarum', married a son of L. Vitellius (q.v. 2) who as censor (A.D. 48) accused her of incest (see no. 6 above) in order to help Agrippina. She was banished (49), but was recalled by Nero after Agrippina's death; she survived till late in Vespasian's reign.

(8) L. Junius (PW 183) Silanus Torquatus was a son of the consul of 46 (no. 4) and a nephew of Junia Lepida, the consul's sister. She had married the jurist Cassius (q.v. 8). Silanus was brought up in their home. In 65 Nero accused him of treason and of incest with his aunt Lepida. He was exiled, but was murdered before he could leave Italy (cf. L. Petersen *Hist.* 1966, 328 ff.).

(9) C. Junius (PW 158) Silanus represents a collateral branch of the family. His three sons (nos. 10-12) were prominent.

(10) C. Junius (PW 159) (cos. A.D. 10), son of no. 9, was proconsul of Asia (20/1), and inquirer of the *senatus-consultum Silamanum*, dealing with the torture of slaves. Accused of *maiestas*, he was exiled (22).

(11) M. Junius (PW 174) Silanus (cos. suff. A.D. 15), son of no. 9, had considerable influence with Tiberius and the Senate. In 33 his daughter Junia Claudia married Gaius (Caligula), who killed Silanus in 38 (Dio wrongly calls him the 'golden sheep', see no. 4).

(12) D. Junius (PW 164) Silanus. When his affair with the Younger Julia (q.v. 3), the granddaughter of Augustus, became known, he voluntarily went into exile (A.D. 8). Thanks to the influence of his brother (no. 11), Tiberius allowed him to return (A.D. 20), but not to hold office.

(13) C. Appius Junius (PW 155) Silanus (cos. A.D. 28). His parentage is uncertain: he is not likely to have been the son of either no. 9 or 10. He was acquitted on a charge of *maiestas* (32) and was governor of Hispania Tarraconensis (40/1). He enjoyed the friendship of the Emperor Claudius who married him to Domitia Lepida, mother of Claudius' wife Messalina (41). Having refused the advances of Messalina, Silanus was accused by her and Narcissus of treason and executed (42). H. H. S.

of his campaigns for a Greek public; it served as a source for Polybius and for Coelius Antipater, whom Livy used considerably in the third decade. How objective this work was is uncertain; but it contained digressions in the Hellenistic fashion and a romantic element exemplified by the story of Hannibal's dream before he crossed the Ebro (Cic. *Div.* 1. 48 9). Silenus also wrote at least four books of *Sicelica*. F. W. W.

SILIUS (1, PW 4), GAIUS, grandson of P. Silius Nerva (cos. 20 B.C.), consul-designate for A.D. 48 and described as 'iuventutis Romanae pulcherrimus' (Tac. *Ann.* 11. 12), attracted the guilty passion of Messalina and was involved in a liaison, perhaps in a plot to displace Claudius. The lovers openly celebrated a marriage while the Emperor was absent at Ostia. The imperial freedmen, in alarm, took counsel together and compelled Claudius to act. Silius and his paramour were put to death (48). R. S.

SILIUS (2, PW 17) **ITALICUS** (an inscription gives his full name, TIBERIUS CATIUS ASCONIUS SILIUS ITALICUS; see CR 1935, 216 f.). His birthplace is uncertain, perhaps Patavium (CR 1936, 56 ff.), but not Italica in Spain. He died c. A.D. 101 aged 75, from voluntary starvation to shorten an incurable ailment (Pliny, *Ep.* 3. 7). This fixes his birth in 26. As a pleader he won fame, and was consul in 68; he supported Vitellius for the succession (Tac. *Hist.* 3. 65), and later, about 77, gained high praise for his administration of Asia. Thereafter, he enjoyed an elegant retirement amongst numerous friends in Rome and Campania; a connoisseur of books, pictures, and statuary, he owned many country-houses, including one of Cicero's, for whom he showed great reverence, as for Virgil, whose tomb in Naples he repaired. From Martial's flattering references to him after 88 it seems that his poetic interest began only late in life. He was acquainted with Epictetus (Arr. *Epict. Diss.* 3. 8. 7) and was as Stoic in his outlook as he was in his death.

WORKS *Punica*, the longest Latin poem, an historical epic in 12,200 verses on the Second Punic War. The seventeen books begin with Hannibal's oath and, except for digressions on Regulus and Anna, proceed in regular order of events to Scipio's triumph after Zama. The poem was planned by 88, but probably only books 1-6 appeared under Domitian (E. Bickel, *Rh. Mus.* 1911, 505); as 14. 686 dates from the close of Nerva's Principate, hasty workmanship would explain the inferiority of the final books. Since he wrote 'maior cura ingenio' (Pliny, *Ep.* 3. 7. 5), sources should be traceable for his facts; though owing most to Livy's Third Decad, he is not a mere free versifier of Livy. On geography Varro is his chief source, along with Hyginus; his ethnography rests ultimately on Posidonius. His poetry owes most to the *Aeneid*, but adaptations occur from Lucan's and the other epics. Despite his clinging to a mythological scheme and the outworn epic machinery, Silius has some vitality. His learning, displayed in endless epithets and catalogues, is tiresome; he has too many rhetorical speeches; his language is not really poetic, and accounts of battles are confused and gruesome; but the versification is not monotonous; his similes are clear and lifelike; and short passages show good narrative skill or straightforward description. Scipio fails as hero, and Hannibal comes nearer the part.

TEXTS A. Drakenborch (Utrecht, 1717); G. A. Rupert (Göttingen, 1795-8); L. Hauer (Teubner, 1890-2).

TRANSLATION With text, J. D. Duff (Loeb, 1931). **SOURCES** A. Klotz, *Rh. Mus.* 1911, 1 ff.; J. Nicol, *The Historical and Geographical Sources used by Sil. Ital.* (1936); B. Rehm, *Phallos*, Suppl. xxiv. 2. 97 ff. D. J. C.

SILENUS, probably of Kale Acte in Sicily (*FGrH* 175), accompanied Hannibal to Italy and composed a history

SILK. The mulberry silkworm (*hombyx mori*), the cocoons of which are unwound to produce true silk, was

not bred in the Mediterranean world before the sixth century A.D., and the secret of unwinding cocoons also appears to have remained confined to China. But true silk (*serica vestis*) was imported into western Asia, as cloth (which was sometimes undone and rewoven) or as yarn or raw silk (*μέραφα*), probably by the fifth century B.C. and perhaps earlier (cf. Hdt. 1. 135, *Μηδική ἐσθής*). From Alexander's time onwards it spread further west, until in the Early Roman Empire it, and its costliness, could become a favourite target of moralists. For some time 'silk' garments were only half silk (*subserica*, *tramoserica*), with linen warp or weft, and even so they were by law confined to women. Pure silk material (*holoserica vestis*), which is said to have been worth its weight in gold, is not mentioned before the early third century A.D., when Elagabalus was the first to wear it. Meanwhile, however, wild or tussore silk, derived from the spinning of material scraped from the cocoons of other species, had been known as *Coa vestis* (from its manufacture on the island of Cos) or *bombycina vestis*. (*Coa vestis* was probably a dark silk derived from saturnia pyri, *bombycina* a lighter silk from *pachypasa otus*.) The Coan industry, first mentioned by Aristotle (*HA* 5. 19. 6; cf. Pliny, *HN* 11. 76) but probably older, is not referred to after Pliny, and may have succumbed to the competition of imports of true silk.

H. Blümner, *Technologie der Gewerbe und Künste* 12 (1912), 201 ff.; Forbes, *Stud. And. Technol.* iv² 50 ff.; J. I. Miller, *The Spice Trade of the Roman Empire* (1969), see index. L. A. M.

SILURES, a tribe in south-east Wales, an offshoot of the Iron Age B culture with C influences. Under Caratacus, they gave trouble to the Roman armies, but were finally subdued by Frontinus (A.D. 74–8), who planted a legionary fortress at Isca (*Caerleon*). A Roman town in the plain (Venta Silurum, *Caerwent*) replaced their hill forts.

Collingwood–Myres, *Roman Britain*, 94 ff., 110 ff.; V. E. Nash-Williams, *The Roman Frontier in Wales* (1954), 1 ff.; Frere, *Britannia*, 52 ff., 81 ff. C. E. S.

SILVA, like *ὑλη*, could mean raw material, and, perhaps with a suggestion of its Ciceronian sense of a forest-like abundance, was extended as a literary title to work of varied content (cf. Suetonius' *Pratum*). Quintilian (*Inst.* 10. 3. 17) explains it as a rapid draft, and this applies to Statius' *Silvae*, which are occasional poems hastily composed. Ben Jonson's definition, 'the Ancients call'd that kind of body *Sylea*, or *Υλη*, in which there were workes of divers nature, and matter congested', indicates why it remained an appropriate title for miscellaneous verses into the Renaissance, e.g. Mantuanus' 'subitaria carmina' (Bologna, 1502) or Politian's 'Sylvae'. J. W. D.

SILVANUS, the Roman god of uncultivated land beyond the boundaries of the tillage. He was thus uncanny and dangerous, see **PILUMNUS**. His personality also seems to have been very vague, for, *Silvanus* being merely an adjective, he has no name, unless, with Wissowa (*RK* 213), we suppose that the substantive *Faunus* (q.v.) is to be supplied. Clearly it would be well to propitiate him when making inroads into his domain, so it is quite understandable that 'every estate has three Silvani' (Gromatici, 302. 14 Iachmann), one for the boundary, one *domesticus*, *possessioni consecratus* (watching over the farmhouse itself?), and one for the herdsmen; of course a late and somewhat fossilized form of the worship, which itself dated from times when such land represented the felling of trees and other interferences with the wild country. *Silvanus* thus bears a kind of resemblance to Greek satyrs and Sileni, and is freely identified with them and with Pan (Wissowa, *ibid.* 215), also with foreign, especially barbarian, gods somehow connected with untitled land, or supposed to be, regard-

less of their relative importance. *Silvanus* also occurs as a title of Mars (q.v.; Cato, *Agr.* 83), unless *Marti Silvano* is archaic asyndeton for *Marti et Silvano*.

H. J. R.

SILVER. Though known in remote antiquity, silver was for long a rarer and more valuable metal than gold, which could be easily obtained from alluvial deposits by simple washing, whereas silver had to be extracted by regular mining processes. The Phoenicians are said to have been the first to bring silver into general use; several of the silver objects mentioned in Homer have Sidonian associations. The main sources for classical Greece were Bactriana, Colchis, Lydia, Mt. Pangaeus in Thrace, and Laurium, which provided abundant supplies for Athens down to 413 B.C. In the western Mediterranean Spain was the most prolific source of supply, with Sardinia, Gaul, and Britain as minor sources. The conquests of Spain and Asia made silver plentiful at Rome, where it had previously been rare.

Silver was worked with a hammer into plates which were soldered or riveted together and then decorated with repoussé work (*ἐμψαστική*), stamping, chasing, and engraving. Vases might be hammered or cast from a mould and were often adorned with reliefs (*emblemata*), let into the body of the vessel or *crustae* soldered upon the surface. For coins molten dumps were struck between dies. To provide colour contrast silver objects were often gilded with gold leaf or, in the Roman period, with the help of a mercury amalgam. Niello, a black metallic sulphide used as inlay, was employed in the Bronze Age, and from the Hellenistic period on.

Less popular than gold for jewellery, silver was especially used for valuable and luxurious specimens of objects for which bronze was the common material. It was extensively used for statuettes, but rarely for larger sculpture; for the domestic furniture of wealthy Romans; and, above all, for services of dinner-plate. Many of these services (*ministerium*) have been preserved, examples being the Treasures of Hildesheim (q.v.) in Berlin, and of Boscoreale in Paris, both of the Early Empire; and the Esquiline and Mildenhall Treasures in London, of the Late Empire. They include flat dishes for eating (*lances*), flat or hemispherical bowls for drinking (*calices*, *scyphi*), jugs (*urceoli*), saucepans (*trulli*), buckets for fruit (*situlae*), spoons (*cochlearia*), pepper-casters (*piperatoria*), etc. Cups were the special subjects of artists of whom Pliny gives a list dating from the fourth and third centuries B.C.; he remarks that while no names of goldsmiths have been preserved, the silversmiths (*argentarii*) are numerous.

Pliny, *HN* bk. 33. 11 B. Walters, *Catalogue of Silver Plate in the British Museum* (1921); Forbes, *Stud. Anc. Technol.* viii, ch. 6; R. Higgins, *Greek and Roman Jewellery* (1961); D. Strong, *Greek and Roman Gold and Silver Plate* (1966). F. N. P.; J. B.

SILVIUS, son of Aeneas (q.v.) and Lavinia, father of Silvius Aeneas and ancestor of the Alban royal house of Silvii (Verg. *Aen.* 6. 760–7; Livy 1. 3). A legend due to the name, but unknown to Virgil, told that Lavinia, fearing the jealousy of Ascanius, fled to the woods and there gave birth to her son (Dion. Hal. 1. 70). C. B.

SIMMIAS (1) (or *Simias*) of Thebes, a member of the inner circle of Socrates' friends, one of those who were prepared to put up money to secure his escape from prison, and who were with him on the day of his death. He had previously associated with the Pythagorean Philolaus, but the theory which he defends in the *Phaedo* is almost certainly not Pythagorean, involving as it does a denial of the soul's immortality. In the *Phaedrus* Plato praises highly his philosophical ability, Diogenes Laertius ascribes to him twenty-three dialogues (not extant), but it is doubtful whether this ascription is sound. W. D. R.

SIMMIAS (2) of Rhodes, poet and grammarian, lived in Rhodes (Strabo 364, 655) about 300 B.C., wrote three books of γλῶσσοι and four of ποιήματα (*Suda* s.v. Σιμμίας). Of the first Athenaeus gives a few quotations (327 c, 472 c, 479 c, 677 c) about the meanings of words. The poems vary in character. Fragments survive of a hexametric epic on Apollo (fr. 1 Powell), and others called *Gorgo* and *Mῆνεις* (frs. 6–8), and of lyrical poems (frs. 13–17). There are also three complete *Technopaegnia* called *Wings* (fr. 24), *Axe* (fr. 25) and *Fig* (fr. 26) and epigrams (frs. 18–22) which are in the epideictic manner of the time. His style shows affinities to the Coan circle of Theocritus, and though he calls himself Δωρία ἀγδών, he does not write in any single dialect.

TEXT. Diehl, *Anth. Lyr. Graec.* ii. 257–75, Powell, *Coll. Alex.* 109–20.

CRITICISM. H. Fränkel, *De Simia Rhodio* (1915). C. M. B.

SIMON of Athens, a shoemaker, was according to a late tradition a friend of Socrates, who used to visit him in his workshop and discuss philosophical questions with him. He plays a considerable part in the (late) *Socraticae epistulae*, and Diogenes Laertius says he was the first to write reminiscences of Socrates in dialogue form. But he is never mentioned by Plato or Xenophon, and his very existence as a real personage is not quite certain.

W. D. R.

SIMONIDES (c. 556–468 B.C.), lyric and elegiac poet, born at Iulis in Ceos (fr. 147 D), the son of Leoprepes. In the last years of the sixth century he wrote Epinician Odes for Glaucus of Carystus (fr. 509 P, Paus. 6. 10. 1) and Eualcidas of Eretria (fr. 518 P). He was the guest of Hipparchus at Athens ([Pl.] *Hipparch.* 228 c), and to this period may have belonged some of his fifty-six victories in dithyrambic competitions (fr. 79 D). A couplet honouring the murderers of Hipparchus, though attributed to him (fr. 76 D), is not necessarily by him, while his epitaph on Hipparchus' daughter, Archedice, shows his affection for the family (fr. 85 D). About 514 he went to Thessaly, where he was the guest of the Scopads, and celebrated their chariot victories (Theoc. 16. 42–7). He was miraculously preserved when their house fell and destroyed them (Callim. fr. 71, Cic. *De Or.* 2. 86. 353). He lamented them in a Dirge (schol. Theoc. 16. 36). To the same period belong his dirge on Antiochus the son of Echekratidas (ibid. 44), but the only substantial fragment from this time is his lines to Scopas on the nature of virtue (fr. 542 P) in which he seeks to substitute a good conscience as the right test for a good man instead of all-round excellence. He was back in Athens in 490, when his epitaph on the fallen of Marathon was preferred to that of Aeschylus (*Vit. Aesch.* 4). In the wars of 480–479 he rose to great prominence and wrote a commemorative hymn to the Spartans who fell at Thermopylae (fr. 531 P), a hymn of thanksgiving for the victory of Artemisium (frs. 532–5 P), and epitaphs for the fallen, including his own friend Megistias (fr. 83 D) and the Spartans who died with Leonidas (fr. 92 D). At this time he was a friend of Themistocles (Plut. *Them.* 5, Cic. *Fin.* 2. 32. 104), in whose interest he carried on a verbal warfare with Timocreon (frs. 169–70 D, Diog. Laert. 2. 25, 40). About 476 B.C. he went to Syracuse as the guest of Hieron, with whom various stories connect him (Pl. *Ep.* 2. 311 a, Ath. 656 d, Ael. *VII* 9. 1), and made peace between him and Theron (Timaeus ap. schol. Pind. *Ol.* 2. 29). He died in 468 (*Marm. Par.* 73) and was buried at Acragas (Callim. fr. 71). He was said to be ugly (Plut. *Them.* 5), fond of money (Ar. *Pax* 698, Callim. fr. 77), and the inventor of a technique for remembering (Cic. *De Or.* 2. 357). His work falls into the following classes: (1) Hymns, of which very little survives, except frs. 531–5 P. (2) Scolia and Encomia, including his poem to

Scopas (fr. 542 P) and his quatrain on the four best things (*Scol. Att.* 7). (3) Dirges, for which he was extremely renowned (Quint. *Inst.* 10. 1. 64), notably frs. 520–31 P. The famous lines on Danae (fr. 543 P) do not necessarily come from a Dirge. (4) Epinicians, written for many patrons, including Astylus of Croton (fr. 506 P), Crisus of Aegina (fr. 507 P), Xenocrates of Acragas (fr. 513 P), Anaxilus of Rhegium (fr. 515 P). In these he seems to have been much more playful than Pindar. (5) Elegies, frs. 62–6, 84, 99, 128, 130 D, including both poems on public events such as the battle of Plataea and short, sympotic poems. (6) Inscriptional epigrams for dedications and epitaphs. The authenticity of these is very doubtful in many cases, as they were probably not collected till the fourth century and would not have the author's name on the stone. The most likely to be genuine are frs. 70, 83, 85, 91 D; see EPIGRAM, GREEK, § 2. (7). Since many apophthegms are attributed to him, a collection of such may have existed. He was admired for his choice of words (Dion. Ha. ii. 205. 7, *De Impt.*), his sweetness (Cic. *Nat. D.* 1. 22), his harmonious style (Dion. Hal. *Comp.* 23).

TEXT. Page, *Poet. Mel. Gr.* 248–323; for elegiacs, Diehl, *Anth. Lyr. Graec.* ii. 84–118.

CRITICISM. U. von Wilamowitz-Moellendorf, *Sappho und Simonides* (1913), 137 ff. C. M. Bowra, *Greek Lyric Poetry* (1961), 108 ff.; A. Haugvæte, *Les Épigrammes de Simonide*, M. Boas, *De Epigrammatis Simonideis* (1905). C. M. B.

SIMPLICIUS (Σιμπλίκιος), sixth century A.D., Aristotelian commentator. Born in Cilicia, he studied at Alexandria and Athens and subsequently made his home in the latter city save for a short period of exile in Persia (A.D. 531–3). His learned and sober commentaries on the *De Caelo*, *Categories*, *Physics*, and *De Anima* (Comm. in *Arist. Graeca*, vols. 7–11) contain much valuable material, including many fragments of pre-Socratic philosophers. Also extant are a commentary on the *Manual* of Epictetus (ed. J. Schweighäuser, 1800) and a work on Quadratures (ed. F. Rudio, 1907).

E. R. D.

SIMYLUS, (1) Greek didactic iambographer, of whom a few fragments survive, of the third or second, or even of the first, century B.C. Probably not identical with a comic poet of the same name (*CAP* ii. 444).

(2) Greek author of an elegy or epigram on Tarpeia, perhaps slightly earlier than the Augustan age. *Anth. Lyr. Graec.* ii. 248.

Meineke, *FCG*, praef. xiii ff.; J. E. Sandys, *History of Classical Scholarship* (1903), i. 56; J. W. H. Atkins, *Literary Criticism in Antiquity* (1924), i. 179, *PW* iii A. 1, 216 f. J. D. D.

SIN. The various words which may be translated by 'sin' and the ideas which they represent fall into two classes, a lower and a higher. In the former the act is one which brings about undesirable relations between the agent and his supernatural environment; it may be the breach of a taboo, disobedience to the command of a supernatural being, departure from the recognized standard of conduct (νόμιμα, *fas*) of his community. It need not be what we should regard as immoral; it does not necessarily connote any evil intention, or any intention at all, on the agent's part; it often is not individual in itself, very often not individual in its consequences. Indeed, the fact that its consequences are supposed to extend far beyond the sinner is the main reason for general objection to it. In the latter the act is itself considered wrong, offending a deity or deities because the god or gods are supposed to be righteous and interested in human morality. The history of Greek thought in this respect is a progress from the lower to the higher conception. Rome seems of herself to have made but small advance in this direction till enlightened by Greek theology.

Of the former stage, in Greece, Hesiod furnishes a good

example (cf. SUPERSTITION). He forbids, with equal earnestness and apparently equal assuredness that divine vengeance will follow transgression, on the one hand a number of acts of which any moral code would disapprove, such as the ill-treatment of orphans and of one's own parents (*Op.* 330 ff.), and on the other purely ritual offences such as omitting to wash the hands before pouring libation (*ibid.* 724 ff.; full list in R. Pettazzoni, *La confessione dei peccati* III (1936), 174 ff.). This is in a poem which repeatedly and emphatically insists on the justice of Zeus. In some archaic rites, such as that of the Samothracian gods, confession of offences was a preliminary to initiation; it does not appear that anything more was needed, the confession being simply a process of getting rid of the state of sinfulness and so leaving the candidate ritually pure; Pettazzoni, *op. cit.* 163 ff., cf. I. 60 ff.; *Harv. Theol. Rev.* 1937, 1 ff., the last giving other examples of confession in ancient ritual, especially oriental cults.

For Rome, a similar state of things can be detected for early times. It is significant that the word *scelus*, perhaps the nearest classical equivalent of 'sin', can also, in Plautus and other Republican authors, mean 'ill-luck', such as would naturally come mechanically from the violation of some taboo. A legend, the more significant because it is probably pure invention and therefore shows fairly early ideas of what is proper in such matters, represents grave consequences befalling as the result of a wholly accidental *vitium*, or shortcoming, in the celebration of games to Jupiter (*Livy* 2. 36). The XII Tables show at least the beginnings of a movement towards a more enlightened view, for they make provision for lenient treatment of a merely accidental homicide (*Cic. Top.* 64).

Greece, as early as Homer and more articulately and thoroughly in later authors down to about the end of the fifth century B.C., develops a theory which strongly stresses the moral aspect. Sin is the result of *ὑβρις* or overweening disregard of the rights of others; Theognis in a famous passage declares this due to *κόρος*, satiety, in other words too much prosperity, but adds 'when wealth attends a base man' (*Theog.* 153, cf. Solon, fr. 3. 9 Diehl), while Aeschylus (*Ag.* 751 ff.) emphatically denies that prosperity of itself has any such result (contrast *Ildt.* 1. 32. 6-9). In any case, this *ὑβρις* results in *ἄτη*, a state of blindness to both moral and prudential considerations, in which 'the evil appears good' (*Soph. Ant.* 622, see Jebb *ad loc.*), and this brings about utter ruin. These sins appear in no case to be mere ritual offences, but serious wrongdoings. It was further held that punishment might not overtake the actual sinner, but either his descendants (as Solon, fr. 1. 29 ff. Diehl) or those somehow associated with him (*Hes. op. cit.* 240; cf. e.g. *Ilor. Carm.* 3. 2. 29 f.), despite their innocence. This problem seems to have exercised Aeschylus greatly, for several of his plays deal with the problem of the hereditary curse, as the surviving trilogy and that of which the *Seven against Thebes* remains. His solution would appear to be that the children of the sinful inherit a certain tendency to sin, but are nevertheless free agents who may return to better ways.

Some of the more mystical religious systems, notably Orphism (q.v.), occupied themselves with the relations between sin and suffering, and seem to have found a solution in the theory that sins committed in one life may be atoned for in another, see especially Pind. *Ol.* 2. 56 ff. (probably Pythagorean). Orphism seems actually to have had a kind of dogma of original sin (*Pind.* fr. 127 Bowra, see Rose in *Greek Poetry and Life* (1936), 79 ff.).

Further examination of this and kindred problems was mostly left to the philosophic schools (it is worth noting that one of the Christian words for sin, *ἀμαρτία*,

may derive from a Stoic technicality, see Wilamowitz-Moellendorf, *Glaube der Hellenen* II (1932), 120). Many of the later, orientalizing cults elaborately developed the idea of punishment for sin after death, which in Homer hardly exists, save for the penalties inflicted on a few who had directly and personally offended the gods (*Od.* 11. 576 ff.), but expanded under philosophico-religious influences (Orphic-Pythagorean?) into such schemes of Hell, Purgatory, and Paradise as are found in Verg. *Aen.* 6 and became extremely minute and particular in later documents (see A. Dieterich, *Nekyia*², 1913).

LITERATURE. Besides the works mentioned in the text, see a good summary by A. W. Mair in Hastings, *ERE* xi. 545 ff., cf. J. S. Reid, *ibid.* 569 ff., and on the philosophical aspects A. W. H. Adkins, *Merit and Responsibility* (1960). H. J. R.

SINGARA, a city in northern Mesopotamia situated on the southern slope of the range of the same name (modern *Jebel Sinjar*). Captured by Trajan and again in Verus' campaign, it became part of the Roman eastern *limes* defences and was an important military base in the frontier province created by Septimius Severus. Under Severus Alexander it became a *colonia*, but it was captured by the Persian Sapor II in 360 and in 363 was ceded to Persia by Jovian. The Romans made skilful use of the Singara hills in the organization of their Mesopotamian *limes*. Singara's importance in this was due to its position on the central Mesopotamian trade route that came into being in the Parthian period (see *HARRA*).

R. Cagnat, *Syria* 1927, 53 ff.; A. Poidebard, *La Vracée de Rome dans le Désert de Syrie* (1914), ch. 6. E. W. G.

SINIS, a brigand who lived on the Isthmus of Corinth. He made all comers contend with him at holding down a pine-tree, which, when they could no longer hold it, flung them into the air and so killed them (so Apollod. 3. 218 and others, see for details Worner in Roscher, s.v.), or, more intelligibly, tied them to two such trees which were then let go and tore them asunder (so Diod. Sic. 4. 59. 3 and others). Hence he was surnamed *Πυτοκάμπτης* (Πυτοκαμπτης), i.e. pine-bender. Theseus (q.v.), on his way to Athens, killed him in the same manner, *Plut. Thes.* 8, who adds that Perigune (*Περιγονίη*), Sinis' daughter, became the concubine first of Theseus and later of Deioneus son of Eurytus of Oechalia. H. J. R.

SINNIUS CAPITO, scholar of the Augustan age whose *Epistulae* (containing grammatical discussions), *Libri de syllabis*, and *Libri spectaculorum* are mentioned by later writers.

Schanz-Hosius, § 353, Funaioli, *Gramm. Rom. Frag.* 458-66.

SINON, a pretended deserter from the Greek forces at Troy, who told the Trojans a long and false tale of the building of the Trojan Horse (*Verg. Aen.* 2. 57-194) and after it had been taken within the walls released the Greek soldiers inside it and joined in the sack of the city. The story is derived from the epic cycle and is treated by several extant writers.

O. Immisch in Roscher, *Lex.* iv. 935 ff.; A. C. Pearson, *Fragments of Sophocles* II (1917), 181 ff.; R. G. Austin, *Verg. Aen.* 2 *ad loc.* A. S. P.

SINOPE, a town situated almost at the midpoint of the south shore of the Euxine on an easily defended peninsula with two good harbours about its base, and near the place where the crossing to the Crimea is shortest. The promontory is well watered and fertile (Strabo speaks of market-gardens), the tunny catch was famous, and the mountains noted for their timber and cabinet woods. Founded by Miletus probably in the late seventh century (traditionally founded before 756 B.C., destroyed by the Cimmerians and refounded before 600), it early

commanded the maritime trade of much of both coasts of the Pontic region and established many colonies along the coast, some of which were tributary to it in Xenophon's time. In spite of mountain barriers it drew trade from the interior, notably in Sinopic earth (cinnabar). About 437 it was freed from a tyrant by Pericles and received Athenian settlers. It was attacked and occupied briefly by the Persian satrap Datames (c. 375). The town probably maintained its freedom under Alexander and his immediate successors, and with the assistance of Rhodes repulsed Mithridates III of Pontus in 220, but was finally occupied by Pharnaces I in 183 and soon became the Pontic capital. In the Third Mithridatic War it was captured and constituted a free town by Lucullus. It was occupied and suffered severely at the hands of Pharnaces II (q.v.), but Caesar repaired its losses by settling a Roman colony with the title of Colonia Iulia Felix Sinope. In the third century it possessed *Ius Italicum*. An abundant coinage attests its prosperity both in the early and the imperial periods, and the appearance of men of Sinope all about the Euxine, the Aegean, at Athens, and at Rhodes attests the wide commercial connexions of the city. Its vigorous hellenism is shown by the names of Diogenes the Cynic, Diphilus the comic poet and other men of letters. Strabo describes it as a city with fine buildings, market-place, porticoes, gymnasium, and fortifications.

Strabo 12. 545. D. M. Robinson, *Ancient Sinope* (1906); C. Roebuck, *Ionian Trade and Colonization* (1950), 117 ff., and index; Magie, *Rom. Rule Asia Min.* 183 ff., and index. T. R. S. B.

SIPONTUM ('Sepontum' *Rav. Cosm.*; 'Sopontum' *Tab. Peut.*) lay at the northern end of the Gulf of Manfredonia in northern Apulia where the coastal dunes meet the limestone outcrops of the Gargano peninsula. Its site is marked by the Norman church of S. Maria di Siponto, a mile south-west of Manfredonia. Its role as the port of Arpi (q.v.) made it important in the republican period and it was a stage on the Adriatic coastal road. The town was quadrilateral in shape and was enclosed by a massive wall of free-standing limestone blocks reminiscent of the wall circuit at Paestum.

CIL ix. 65 ff.

G. D. II J.

SIRENS, sea-songstresses, whose appearance is not described in Homer. In the *Odyssey* (12. 39, 184) the Sirens live on an island near Scylla and Charybdis. Sailors charmed by their song land and perish; the meadow is full of decaying corpses. But Odysseus following the advice of Circe passes safely. Similarly Orpheus saves the Argonauts by competing with them (Ap. Rhod. 4. 803; Apollod. 1. 9. 25). In other stories the Sirens must die if a mortal can resist their song (Hvg. *Fab.* 141). The escape of Odysseus and of Orpheus and their defeat by the Muses (q.v.) lead to their death. The Sirens are omniscient and have the power to quiet the winds (with their song? Hes. fr. 60 Rzsch). They are sometimes called daughters of Earth (J. Pollard, *AF-arch.* 1949, 357); they sing the strains of Hades (Soph. fr. 861 Pearson), and they live in Hades (Pl. *Cra.* 403 d). Sirens accompany the dead on their voyage to the lower world and crown tombs, from very early times. This leads some authorities to assume that they were originally birds inhabited by souls of the dead. A poetical interpretation makes these funeral Sirens grieve for the dead with mournful songs just as they mourn for Persephone (Diostheus 8 in Hvg. *Fab.* ed. Rose; Eur. *Hel.* 167 f.). When definite geographical locations began to be attached to Homeric geography, it was held that Sirens ranged along the coast of south Italy, where they were worshipped by the seafaring population (Strabo 1. 22) in Naples (C. G. Pugliese, *PP*

1952, 420), Sorrentum, and Sicily. They probably figured in Timaeus (q.v. 2).

In art Sirens are represented as half women and half birds, though male bearded Sirens preponderate among the earlier examples. They are frequently attached to bronze cauldrons (O. Muscarella, *Hesp.* 1962, 317). Not all are associated with music. Some apparently represent omens, familiars of deities, or unworldly powers (E. Kunze, *MDAI(A)* 1932, 135). The rapacious monsters of the archaic period are ennobled in classical art to mournful, beautiful beings; in Hellenistic art and literature they are representative of music almost as much as Muses (E. Buschor, *Die Museen des Jenseits* (1944); J. Pollard, *CR* 1952, 60) and are said to be daughters of a Muse (Ap. Rhod. 4. 896). Occasionally they are given an erotic character (Attic comedy).

For a possible connexion between Σειρήν and Σείριος cf. K. Latte, *Festschrift der Göttinger Akademie* 1951.

Weicker in Roscher's *Lexikon* s.v. 'Sirenen', H. Payne, *Neocorinthia* (1931), 119, E. Haspels, *Attic Black-figured Leekytha* (Paris, 1936), 150, K. Maröt, *Die Anfänge der griechischen Literatur* (1960), J. Pollard, *Seers, Shrines and Sirens* (1965), G. Bowdell and P. Waugh, *Sea Eucharist* (1965). G. M. A. H. J. R. T. P.

SIRIS, seventh-century Greek colony on the Gulf of Tarentum (q.v.) (modern *Nova Siri*: the R. Siris [*Sumo*] has buried any ancient remains). An allegedly Ionian, but possibly Achaean foundation, Siris occupied the site of earlier Trojan and Chonic settlements and itself disappeared in the sixth century, destroyed by Sybaris and Metapontum (qq.v.). Heraclea (q.v. 1) replaced it (432 B.C.). E. T. S.

SIRMIMUM, a city on the Savus in Pannonia (Inferior), was probably originally the *oppidum* of the Amantini (Pliny, *HN* 3. 148). It was occupied by the Romans probably during the *Bellum Pannonicum* of 12-9 B.C., and became an important Roman military base in the first century A.D. (Cass. Dio 55. 29). A *colonia* was established there under Vespasian. In the Later Empire it was often the residence of Emperors and high officials, due largely to its importance as a road-junction in the Danube area. It possessed an imperial arms factory (*Not. Dign. occ.* 9. 18), was a fleet station (loc. cit. 32, 50), and the site of an imperial mint which flourished 320-6, 351-65 (gold, silver, and copper) and 379 and possibly 394 (6 gold only). Large numbers of laws were issued at Sirmium from Diocletian onwards.

A. Mócsy, *Die Bevölkerung von Pannonien bis zu den Markomannenkriegen* (Budapest, 1959), 761. On the coinage cf. Mattingly-Sydenham, *RIC* vii. 462; ix. 156 f., R. A. G. Carson et al., *Latte Roman Bronze Coinage, 324-498* (1960), 70. J. J. W.

SISCIA, called also *Segesta* (from the island between the rivers Savus and Colapis on which it stood, Pliny, *HN* 3. 148, cf. App. *Ill.* 10. 22 f.), was a city in Pannonia (Superior). Probably taken by Roman commanders in 119 B.C. (App. *Ill.* 10), it was captured by Octavian in 35 B.C. and a garrison established there. During the early first century A.D. it may have been the station of Legio IX Hispana (cf. the possible military building inscription of Tiberius *CIL* iii. 10849). Under Vespasian a *colonia* was settled there, which later acquired the title *Septimia* from Severus. Siscia functioned as an imperial mint (c. A.D. 260-385). Its natural strength was increased by the construction of a canal across the confluence of the rivers under Tiberius (Cass. Dio 49. 37. 3), and it served both as a fleet station (*Not. Dign. occ.* 32. 56) and probably a customs post (*CIL* iii. 10821, 13408).

Coinage. A. Alföldi, *Siscia* (1931), and *Numismatikai Közlemények* (1927-8). Topography. G. Verth, *Die Feldzüge des C. Julius Caesar Octavianus in Illyrien* (1914), 51 ff., cf. fig. 7. *Colonia A. Mócsy, Die Bevölkerung von Pannonien bis zu den Markomannenkriegen* (Budapest, 1959), 25 f. J. J. W.

SISENNA, LUCIUS CORNELIUS (*PW* 374), the historian, praetor in 78 B.C., defended Verres (70), and was legate to Pompey in 67, dying in Crete. His *Historiae*, in at least twelve books (scarcely the twenty-three of fr. 132), after a reference to Roman origins treated the Social War and Sullan Civil War, certainly from 90 to 82, probably to Sulla's death; it may have continued the work of Sempronius Asellio (q.v.). The composition was literary, not chronological, the style vivid and striking, on the model of Cleitarchus (Cic. *Leg.* 1. 2. 7). This Hellenistic influence appears in his translation of Aristides' *Milesiaca*, associating him with Petronius and Apuleius. His historical authority, however, was recognized by Sallust and Varro. He is not the Plautine commentator of this

Peter, *HRRel.* 1² cccxxiv, 276; A. Schneider, *De Sit. hist. reliquis* (1882). Hadrian, *Stud. Gr. Rom. Hist.* 212 ff., and *Athenaeum* 1064, 422 ff.; R. Syme, *Sallust* (1964), 48. A. H. McD.

SISYPHUS, in mythology, son of Aeolus (q.v. 2). In *Od.* 11. 593 ff. he is one of those tormented in Hades, having eternally to roll a rock up a hill, from the top of which it always rolls down again. In *Il.* 6. 154-5 he lives in Ephyre in the Argolid and is grandfather of Bellerophon (q.v.), and 'most crafty of men'. The reason for his damnation is not stated in Homer; others, as Eustathius and the schol. on Homer, ll.c.c. (cf. Rose, *Handb. Gk. Myth.* 270, 294, and notes), connect it with his offence against Zeus in telling Asopus where the god had taken his daughter Aegina. For the associated folk tale of how Sisyphus befooled Death and Hades see *TIANATOS*. Being clearly the familiar trickster of popular tales, he is naturally brought into association with Autolycus (q.v. 1); thus, Polyacenus (*Strat.* 6. 52, cf. *Ilyg. Fab.* 201) says Autolycus used to steal his cattle, but Sisyphus stopped him by attaching to their hooves lead tablets with the words 'stolen by Autolycus', whereby he tracked them. He is also father of Odysseus in post-Homeric accounts, cf. *ARTICULA*. His name is a not infrequent nickname for cunning persons (see Wilsch in Roscher's *Lex.* iv. 964, 22 ff.). A more serious side of his character is reflected in his shrine, the Sisyphceion, on the Acrocorinthus (Strabo 8. 6. 21) and his grave on the Isthmus (Paus. 2. 2. 2).

II J. R.

SITALCES, son of Teres, king of the Odrysae of Thrace (q.v.). Sitalces continued the policy of his father, and under him the Odrysian kingdom took shape, until it covered a larger area than the whole of central Greece, extending from the Danube on the north to the Aegean on the south, and the Euxine on the east, a kingdom more powerful and better equipped than the Macedonian. In 431 B.C. through the agency of Nymphodorus (q.v.) of Abdera, Athenian *proxenos* in Thrace, whose sister was married to Sitalces, the Athenians approached Sitalces to obtain his help in controlling Perdiccas (q.v. 2) of Macedon and the towns of Thrace (Thuc. 2. 29). In the following year (430) the Spartans tried in vain (Thuc. 2. 67) to persuade Sitalces to abandon his alliance with Athens and to send an army to relieve Potidaea, which was being besieged by the Athenians. In 429 B.C. Sitalces marched against Perdiccas and the Chalcidians, taking with him Amyntas, son of Philip, brother of Perdiccas, whom he intended to put on the throne of Macedonia. Sitalces overran Chalcidice (q.v.) and Bottiaea, but, after a campaign of thirty days, he returned to his own country having achieved nothing. In taking this action he seems to have acted on the advice of his nephew, Seuthes, who later married Perdiccas' daughter, Stratonice. In 424 B.C. Sitalces organized an expedition against the Triballi, which ended in disaster and his death (Thuc. 4. 101).

Thuc. 2. 20, 95-101. A. Hoeck, 'Das Odrysenreich in Thrakien', *Hermes* 1891, 76 ff.; S. Casson, *Macedonia, Thrace and Illyria* (1926). J. M. R. C.

SITOPHYLAKES (σιτοφύλακες) were Athenian officials appointed annually by lot to supervise the sale of corn and prevent overcharging for barley-meal and bread. There were originally five for the city of Athens and five for Peiraeus, but later the numbers were increased to twenty and fifteen respectively.

LYSIAS 22; Arist. *Ath. Pol.* 51. 3.

D. M. M.

SITTIVS (*PW* 3), PUBLIUS, of Nuceria, a wealthy *eques* and friend of Cicero and of Sulla (q.v. 2), with business interests in Spain and Mauretania. Going to Spain in 64 B.C., when in debt and suspected of Catilinarian sympathies, he proceeded to Mauretania to restore his fortunes as a mercenary leader. Attacking Juba (q.v. 1) in support of Caesar (46), he defeated the Pompeian remnants after Thapsus and was rewarded by Caesar with a principality centred on Cirta (q.v.), which he settled chiefly with his mercenaries and perhaps with other (mostly Campanian) families. He was assassinated by a native chieftain in 44, but his *Sittiani* long retained a distinct identity.

L. B.

SKYTALE, a secret method of communication used by Spartan magistracies during wartime, especially between ephors and king or general. Each of them had a stick of equal size, so that a message written on a strip of leather wound round the stick of the sender, and then detached, became illegible until the strip was rewound on the stick of the recipient. The skytale is described by Plut. *Lys.* 19, and Gell. 17. 9.

V E.

SLAVERY. The jurist Florentinus defined slavery as 'an institution of the *ius gentium* whereby someone is subject to the *dominium* of another contrary to nature' (*Dig.* 1. 5. 4. 1). In non-juristic contexts the ancients regularly employed the various words we translate 'slave' (as well as words whose root-sense is not servile at all) much more loosely, though not carelessly. The Greeks in particular, whose servile vocabulary was unusually varied, extended the terms to other categories of bondage, such as *heLOTS* (q.v.), in which the property relationship between master and bondsman was, strictly speaking, not present. Thus in classical Greek *δοῦλος* (rather than, e.g., *ἀνδράποδον*) was customary when the contrast with a free man was the point, and in that context it was also appropriate for a *heLot*, as it would not be when contrasting Spartan and Athenian institutions. Nevertheless, the property element remained essential in the end, whether the owner was a private individual, a corporate body, an organ of state, or a god. At the same time, the slave was also a person, and that ambiguity permeated the history of the institution throughout antiquity.

2. **ORIGINS**. Conversion of a person into property is tolerable only for complete outsiders (including the children born to slaves). Within the community itself, a variety of dependent statuses existed, chiefly in the more backward or archaic societies, such as debt-bondsmen, *hektemoroi* (q.v.), or clients (q.v.), involving severe loss of freedom but always stopping short of total, permanent loss. Outright enslavement was also permitted in certain special circumstances, but then physical ejection from the community was required (fictitiously in the case of exposed children) or the step was allowed because it was a commutation of capital punishment (the Roman *servi poenae*). Enslavement of outsiders and their conversion into property meant *ipso facto* deracination: loss of name (Varro, *Ling.* 8. 10, 21), of all the normal ties of

kin and 'nation', even of gods, replaced by new focuses of attachment provided by the master and his society.

Casual enslavement of individual outsiders, especially of captive women, went on as far back as our evidence goes. The many references in the Linear B tablets to *doeri*, the Mycenaean form of *δεδούλος*, indicate that some sort of bondage was important in the Bronze Age. Subsequently in some areas of Greece—Crete, the Peloponnese, Thessaly—there was subjugation *in situ* of whole populations (helots, *penestai*, etc.), repeated later by Greek migrants elsewhere. When that occurred, chattel slavery was unnecessary and tended to remain insignificant even in the Classical Period. Elsewhere among the archaic Greeks as in early Rome, the labour force seems to have been adequately provided through the dependent relationships already mentioned. At least neither the Homeric poems nor the traditions about early Rome suggest widespread slavery, despite the presence of some slaves. In Athens slavery became important only after the abolition by Solon (q.v.) of the status of *hektemoroi* and of debt-bondage, and in Rome following the abolition of *nexum* (q.v.).

3. NUMBERS. Only a few unreliable figures have come down to us. It may be doubted whether precise numbers were known to contemporaries save in those exceptional societies, such as Egypt, in which censuses were carefully taken for fiscal reasons. A reasonable guess would be that even in cities with a high slave density the ratio of slaves to free did not exceed 1:3 (excluding helots from consideration), comparable with other slave societies, such as the American South. More revealing than raw totals is the location of slaves within the economy and among the social classes. Slave ownership was widely distributed among the free, appearing well down in the social and economic scale; as late as the fourth century A.D. Libanius complained (*Or.* 31. 11) that his teachers were too impoverished to afford more than two or three slaves. At the top, the political and intellectual élites in all the great centres of the classical Greek world, except Sparta, and of the Roman Republic and Early Empire depended heavily, though not exclusively, on slave labour for their incomes and for personal services.

Because the level of personal fortunes and of governmental operations was much higher in the Roman world, slave concentrations were proportionately also greater. No Greek could match the 800 slaves Pompey's son recruited from his personal shepherds and attendants (Caes. *BCiv.* 3. 4. 4), as no Greek State could match the 700 slaves who were the regular maintenance staff of imperial Rome's aqueducts (Frontin. *Aq.* 116-17). On the other hand, the number in the Attic silver mines (see LAURUM) may have reached 30,000 in the fourth century B.C.

4. EMPLOYMENT OF SLAVES. Slaves were employed throughout the gamut of human activity, skilled and unskilled, other than political. There were no uniquely slave tasks; the distinction was rather one of status and condition of employment. However, there were two areas in which the preponderance of labour was slave: domestic in the broadest sense (including, e.g., household textile-making) and mining (q.v.). In commerce, banking, and manufacture (see INDUSTRY) there was widespread independent activity by small shopkeepers and craftsmen, but establishments which outgrew the manpower of the family almost invariably expanded by acquiring slaves, sometimes, though rarely, reaching 100 or more men. In the latter the managers and overseers were usually slaves as well. And there were slaves in the professions, both 'liberal' and 'illiberal'.

In agriculture (q.v.) the picture seems more complicated. Peasant farming always coexisted with larger estates and the latter were either worked by slaves (or

other kinds of dependent labour) or leased out in smaller units, the tenants being in the same position, with respect to labour, as small proprietors. The extent to which slaves figured in large-scale agriculture in classical Greece is hard to measure. On the one hand, for example, there is Thucydides' remark (1. 141) that in the Peloponnese most men were self-employed (*αὐτορρητοί*). And, on the other hand, there is his evidence of numerous slaves in the countryside in Coreyra (3. 73), or the implication underlying Xenophon's *Oeconomicus* that the gentleman farmer lived in the city and left his estate to a slave bailiff and slave workmen. Size apart, Xenophon's picture is not really different from that of the Roman *latifundia* (q.v.) before tenancy and the colonate (see COLONUS (b)) made heavy inroads in the course of the Empire. In the absence of all quantitative evidence, caution is essential in discussing the position in the Empire. Occasional grumbling remarks in the literature are not a sufficient basis for generalization. Columella favoured tenants for holdings too far away to permit the owner to visit (*Rust.* 1. 7. 6-7), but only under those conditions, and he assumed that vine-dressers and other specially skilled workers would continue to be slaves.

Ps.-Aristotle's description of the slave's life as one of 'work, punishment and food' (*Oec.* 1344^b35) is tempered by his recommendation (915) that the incentive be held out of freedom at a predetermined date. No statistics are available, but the practice of manumission seems to have been more common in domestic and urban employments than in agriculture or mining (see FREEDMEN). In the cities one procedure was to provide a slave with what the Romans called a *peculium* (q.v.), from the profits of which he eventually purchased his freedom.

Direct ownership and employment of slaves by the State were limited by the practice of contracting out most public enterprises. Hence the Greek *δημόσιαι* were restricted to the police, a few clerks, and some miscellaneous posts. Imperial Rome, with its extended governmental activity, required more public slaves in the imperial 'household', for the maintenance of the aqueducts (q.v.), and later in the State factories. Contractors were free to employ whatever labour they wished. In the military sphere the privately owned slave batman was common, but slaves were freed and armed only in moments of crisis, and their use in the navies was infrequent and spasmodic.

It is impossible to discuss the profitability of ancient slavery. Complicated calculations have been attempted but they rest on too few data to be meaningful. The domestic sector stood outside all such considerations anyway. For the rest, the wealth of the owners of large estates and manufactures and the fortunes drawn from mines cannot mean anything other than the profitability of the system. In the peak centuries slaves were cheap: two years' keep would buy a skilled workman. When the sources of supply shrank in the Roman Empire, prices rose and numbers of slaves began to drop: the *pax Romana* had closed off too large a part of the world to slave recruitment.

5. SLAVE SUPPLY. Although the statement that war and piracy (q.v.) were the chief sources of slave supply is true in a way, it diverts attention from the indispensable slave-trader. An army which seized a large number of captives either marched them to some near-by market or sold them on the spot to traders who came along for the purpose. 'Piracy' was often a cover-word for an organized slaving system, the most famous being the one based in south-western Asia Minor after 150 B.C., with Delos the transshipment centre (Strabo 14. 5. 2). Neither war nor piracy could have maintained the necessary flow without the complementary efforts of slave-dealers who regularly brought in 'barbarians' obtained from the latter's own

territories, where they were made available either through warfare among themselves or by 'peaceful' practices, such as sale of children.

Ancient sources rarely mention the slave-trade, apart from the many figures of captives in particular battles or campaigns and from accounts of particular phases in the persistent, and often equivocal, struggle with piracy. Only by accident, for example, do we know that Ephesus was a major slave-market during a period of at least 400 years (cf. 11dt. 8. 105 and Varro, *Ling.* 8. 21). Nor is a systematic account possible of the distribution of slaves by nationality. Certain nationalities were traditionally believed to be better suited for certain occupations (*Dig.* 21. 1. 31. 21), but the surviving literature shows little interest in accuracy in this matter. As for breeding, we are reduced to guesswork. Evidence in the Delphic manumission inscriptions, papyri, and Roman legal texts on slave-sales perhaps implies more breeding than many modern writers allow.

6. REVOLTS. The mixture of nationalities usually found in any large body of slaves was, among other things, a deterrent to revolt (Arist. [*Oec.*] 1344^b18). In any event, large-scale slave revolts have always been extremely difficult to organize and, unlike helot revolts, they played no role in Greek history. It was flight which slave-owners feared and to which the law devoted much attention, a danger which was much increased during war or social turmoil (e.g. Thuc. 7. 27. 5). The three great revolts in Roman history occurred during a period of very severe social strain, the first two in Sicily, c. 130-132 and 104-100 (Diod. 34-6), the third that led by Spartacus (q.v.) in Italy, 73-71 B.C. (App. *BCiv.* 1. 14). Among the special circumstances were the large concentration of co-nationals — from the hellenized east in Sicily, from the north under Spartacus — and the presence of slaves capable of giving leadership. The numbers participating were said to exceed 100,000, a claim substantiated by the long and considerable military effort which suppression required. The revolts ended in failure, despite the rather mysterious way they were echoed at long distance, in the Attic silver mines and in Pergamum.

The Pergamene revolt of 133-129, led by Aristonicus (q.v. 1), developed utopian features and attracted free men. With that one exception, the slave revolts were not socially revolutionary: they sought to change the position of the slaves actually involved, either by taking possession of the territory or by forcing their way home, but not to change society, and, in particular, not to abolish slavery as an institution. Nor did they obtain significant support from the free poor, who saw in the struggles none of their affair.

7. LAW. Because the slave was, in the American phrase, a 'peculiar property', the law had to deal with him more often than with any other single subject. Every act or relationship, civil or criminal, contractual or delictual or familial, required special regulations and modifications if a slave were involved. In a sense there was no law of slavery apart from the rules defining and determining a man's status; there were only special provisions respecting slaves within the law of sales, of contracts, and so forth. And they varied, within rather narrow limits, according to the social structure, as between Gortyn and Athens or between the Rome of the XII Tables (q.v.) and the Rome of Cicero. As society and the economy became more complex, more slaves were employed in managerial and quasi-independent roles, and that required new legal regulations, about the *peculium*, for example. Inevitably there was a tendency to give greater recognition to *de facto* personality, to quasi-marriage rights (see *CONUBERNIUM*), or to the right of asylum. At best, however, amelioration touched only the edges of the institution, leaving the essence unaltered: it is enough

to note that Justinian's lawyers still had to pack the *Corpus Iuris* with classical law about slaves.

8. THE HELLENISTIC EAST. In the Greek cities slavery played its traditional role on the whole, and numbers were relatively high because the major cities were so much more populous than those of Greece itself. In the countryside, however, and specifically in the areas not part of the territory of a Greek city, chattel slavery remained essentially insignificant, as it had been before Alexander's conquests. Royal and noble claims to the land included certain rights over the peasantry, whether they were known as *laoi* or *βασιλικοὶ γεωργοί* or by some other name. Hence there was no need for a substantial slave labour force, and indeed important interests against it.

9. PSYCHOLOGY. As with the law so with every other aspect of behaviour and thinking: the ubiquity of the slave was an integral factor. That can be seen in the enormously complex variations in rules and practices with respect to slave participation in cult, in the history of prostitution and of sexual habits and attitudes generally, in the writings of philosophers about human nature or about Greeks and barbarians (including the debate about whether or not slavery was a 'natural' institution), in expressed attitudes to labour or in the fragmentary instances of utopian thinking. What one cannot expect is any systematic contemporary discussion of the impact of slavery because no one in antiquity was in a position to analyse the system from outside, and modern scholars are understandably reluctant to attempt the difficult analysis the ancients were unable to make for themselves. Yet somehow one must grasp the psychology of Xenophon when he made the proposal in all seriousness that the Athenian State acquire enough publicly owned slaves to work in the mines so that 'every Athenian be maintained at public expense' (*Vect.* 4. 33); or of Horace, a court poet seemingly oblivious of his servile ancestry.

A critical bibliographical essay is appended to M. I. Finley, ed. *Slavery in Classical Antiquity* (1960, with suppl. 1968), and there is a very long list of titles in W. L. Westermann, *The Slave Systems of Greek and Roman Antiquity* (1955) Part 1 of Ja. A. Leneman, *Die Sklaverei in mykenischen und homerischen Griechenland* (1966), systematically analyses the literature on ancient slavery from the beginning of the nineteenth century. On legal aspects full bibliographies will be found under the appropriate rubrics in A. Berger, *Encyclopaedic Dictionary of Roman Law* (1953). In what follows, therefore, emphasis is on important books and monographs and recent articles (Mauz, *Abhandlungen der Akad. d. Wiss. u. d. Lit.* in Mainz, Geistes- u. sozialwiss. Klasse).

SMYRNA (Σμύρνα or Ζμύρνα), a city on the west coast of Asia Minor at the head of the gulf into which flows the Hermus, the natural outlet of the trade of the Hermus valley and within easy reach of the Maeander valley. Old Smyrna lay at the north-eastern corner of the gulf. Occupied by Greeks c. 1000 B.C. and originally Aeolic, it seems soon to have become Ionic; excavation has shown that the old village-like layout was replaced in the seventh century by a handsome fortified city with regular streets. After its capture by Alyattes of Lydia c. 600 Smyrna ceased for 300 years to exist as a city; it was refounded on its present site around Mount Pagus by Alexander or his successors Antigonos and Lysimachos, and at once became one of the chief cities of Asia. Throughout the Roman period it was famous for its wealth, its fine buildings, and its devotion to science and medicine. It sided with Rome against Mithridates, and in the imperial period owed much to Roman favour. It was made a 'temple-warden' (*νεωκόρος*) in the imperial cult by Tiberius and was restored after its destruction by earthquakes in A.D. 178 and 180 by Marcus Aurelius. It was one of the 'Seven Churches' of the Apocalypse. Homer was reputed to be a Smyrnaean by birth; other famous poets of Smyrna were Mimnermus, Bion, and Quintus Smyrnaeus.

SOCIAL WAR is the name given to a war against rebellious allies (*socii*).

(1) ὁ συμμαχικός πόλεμος, the revolt of the allies of Athens (357–355 B.C.), led by Rhodes, Cos, and Clusos, with the support of Byzantium and Mausolus of Caria, caused by discontent at Athenian supremacy and the exactions imposed by Athenian generals and mercenaries. The defeat of Athens at sea at Embata (356) and the threat of Persian intervention (355) led to negotiations and peace.

(2) The war (220–217) in which the Aetolians and their allies, Sparta and Elis, opposed Philip V of Macedon and his Hellenic League. Philip's campaigns brought it to a successful conclusion in the Peace of Naupactus, the terms of which were very favourable to him.

(3) The Social, Marsic, or Italian War (91–87; the main fighting being in 90–89), waged by Rome's Italian allies (*socii*, among whom the Marsi were prominent) against her predominance. Rome gained the victory largely through the political concession of granting her citizenship to the enemy. Thereafter Italy, south of the Po, was united by the common bond of citizenship. H. H. S.

SOCII. The Roman confederation consisted, apart from Latini (q.v.), of the *socii Italici* and allies from beyond Italy. The Italian peoples—Etruscan, Umbrian, Sabelian, and Greek—were allied to Rome by formal treaties (see *FORNUS*). But frequent revolts led to the final subordination of the federate allies to Rome by the formal requirement that they must 'preserve the greatness (*maiestas*) of the Roman people'. The Italian allies provided Rome with troops *e formula togatorum*—the Greeks giving sailors for the fleet—both in defensive and offensive wars. Otherwise they were sovereign peoples, but tended in the second century B.C. to fall under the general supervision of Rome, until their autonomy became in practice limited. The allies sometimes imitated Roman institutions, notably at Bantia in Bruttium, which romanized its constitution (see *MEDDIX*), while Rome occasionally granted them certain privileges of the Latins, chiefly *commercium*, *conubium*, or *ius exilii*. But generally the *socii Italici* differed from Rome and the Latins in language, custom, and laws, and being less privileged than the Latins felt more deeply the deterioration in the

Roman attitude, which led to the Social War. This was fought in the defence of local and personal liberty against the abuse of the unrestricted *imperium* by Roman magistrates, claims finally met by the grant of Roman citizenship under the Julian and Plautian laws of 90–89 B.C. (see *CAESAR* 2; *PLAUTIUS* 1).

From early times Rome had allies outside Italy, notably Carthage and Massilia. After 200 B.C. the number of these *civitates foederatae* rapidly increased. Greek city-states, confederations, and kings became allies, on nonnally equal terms. With Rome's rise to world power the position of these *foederati* deteriorated, till they became merely the most highly privileged class of provincial communities, though in theory their rights depended upon a bilateral agreement. They were never included in the *formula togatorum*, although they sometimes provided auxiliary troops, cavalry or light-armed. They did not normally receive the social *turna*, though *exsilium* was valid among them. But they were immune from interference by provincial governors and in internal affairs were in practice freer than the Italian allies, notably in the right of coinage. *Foederati* did not commonly survive in the Western Provinces; for when they rebelled, Rome reduced them to the status either of ordinary provincial communities, *stipendiarii*, or of *civitates liberae*. The latter originally were the Greek States of Sicily and mainland Greece declared free after the defeat of the Hellenistic kings, notably by Flamininus in 196 B.C. Their freedom depended upon a revocable decision of Rome. This 'freedom' later became a substitute for or modification of direct provincialization, as in Macedon (167 B.C.), and Africa (145). Special conditions added to the declaration secured for Rome the substantial advantages—notably the payment of tribute—without the burden of provincial government. Such free States were also known as *socii*, or *socii et amici populi Romani*, terms also applied to the ordinary provincial subjects of Rome. In the Ciceronian age *socius* came to mean any community which had been received in *fidem populi Romani*, though surviving 'free States' continued to exercise diminishing privileges under the Principate.

A. N. S.-W.

SOCRATES (1) (469–399 B.C.), son of Sophroniscus and Phaenarete, Athenian of the deme of Alopece. His father is said to have been a sculptor or stonemason and was apparently reasonably well-to-do. At any rate Socrates served in the army as a hoplite, though he was reduced to poverty later. He married late in life Xanthippe, who became notorious in subsequent generations for the stories of her bad temper, though these are very likely to have been exaggerated. There is some evidence that this was his second marriage.

In early life, if we are to judge from Aristophanes' caricature of him in the *Clouds* and the autobiography that Plato puts into his mouth in the *Phaedo*, he was interested in the scientific philosophy of his time. He is said to have associated with Archelaus the physicist, but Aristophanes' picture of him as head of a definite philosophical school is not to be taken seriously and Xenophon seems to have denied any such period in his development. At any rate by the time at which we know most about him he had abandoned these interests and devoted himself to the work of inquiry into the right conduct of life, carried

on by the familiar Socratic method of cross-questioning the people with whom he came in contact. If this represents a change of interest, it is probably to be dated some years before the Peloponnesian War and has been plausibly connected with the response made by the Delphic oracle to his friend Chaerephon, to the effect that no one was wiser than Socrates. Of the external events of his life we know comparatively little. He served in the army and we hear of him taking part in the fighting at Potidaea, Amphipolis, and Delium, where he gained a great reputation for courage. He found himself one of the Presidents of the Assembly at the time of the trial of the generals after Arginusae and courageously refused to put the illegal motion to the vote in spite of the fury of the multitude. After the fall of Athens we hear of him defying the orders of the Thirty Tyrants when they tried to implicate him in their misdeeds.

In 399 B.C. he was brought to trial before a popular jury on the charge of introducing strange gods and of corrupting the youth. There has been considerable dispute as to the precise significance of this charge. But the available evidence suggests that the accusation of introducing strange gods was never clearly formulated or pressed very hard. It may well have been put in just to create prejudice, while the real gravamen of the charge lay in the accusation of being a subversive influence on the minds of the young men. This was undoubtedly connected, whether avowedly or not, with his known friendship with some of the men who had been most prominent in attacks on democracy in Athens. After a not very conciliatory speech in his defence he was condemned to death. He refused to take advantage of a plan for his escape, made by some of his friends, and thirty days after the condemnation he drank the hemlock.

His general appearance and manner of life are probably more familiar to us than those of any figure in Greek history. He was a man of strong physique and great powers of endurance, and completely indifferent to comfort and luxury. He was remarkable for his unflinching courage, both moral and physical, and his strong sense of duty. Together with this went an extremely genial and kindly temperament and a keen sense of humour, while he was obviously a man of the greatest intellectual ability. It was the combination of these qualities which secured for him a devoted circle of friends of very varied types, from young men of good family looking forward to a public career to serious thinkers who seem to have come to him for light on the problems which interested them. His circle included both Athenians and men from other cities of Greece. Several of them became known later as founders of philosophical schools of their own representing very diverse views. Such were Plato and Antisthenes at Athens, Euclides at Megara and, possibly, Phaedo at Elis.

Socrates' religious views have also been the subject of some debate. He was undoubtedly a man of strong religious sense and scrupulous in religious observances. But he is very likely to have applied the dissolvent influence of his critical method to some of the conventional religious beliefs of the time. On the other hand, there is no real evidence of definite membership of any unorthodox religious body or sect. One of the best-known things about him is the experience, which he had at intervals throughout his life, of a divine sign or warning which determined his action for him from time to time. The exact nature of this has been the subject of much discussion, but still remains a mystery.

The precise significance of Socrates' contribution to thought has been a matter of considerable debate in recent times. There are some who ascribe to him a great part of the positive philosophical doctrines usually asso-

ciated with the name of Plato. But this does not commend itself to the majority of scholars, who accept as the literal truth the statement frequently ascribed to him by the earliest authorities that he had no set of positive doctrines to teach. None the less his influence on subsequent thought was undoubtedly very great. Later authors in ancient times represented him as being the first thinker to turn men's minds towards questions of morality and the conduct of life. This can hardly be literally true, as an interest in these matters seems to have been developing in Greece in the earliest years of his life. But he does seem to have been the first person to apply serious critical and philosophical thought to these questions, and to examine systematically the fundamental assumptions from which current discussions about conduct started. In the course of this he was the first to lay stress on the importance of systematic definition of the general terms used in discussion. In this way he may be regarded as the inspiration for the development, not only of moral philosophy, but also of logic. To understand his influence fully we have to remember both his own striking personality and the intellectual tendencies of the time. He worked in an age of widespread criticism and discussion which was beginning to produce a sceptical attitude about the foundations of morality and the possibility of knowledge alike. And the example of his strong moral sense and devotion to truth combined with his readiness or even eagerness to face squarely any criticism and discussion was what established his influence most firmly among the men of his age.

PRIMARY ANCIENT SOURCES: Plato; Xenophon, *Mem.*, *Ap.*, *Symp.*; Aeschines Socraticus (fragments, Teubner text); Aristotle, *Metaph.*, *Eth. Nic.*, *Mag. Mor.* (for philosophical contribution).

MODERN AUTHORS (a) General: Zeller ii 1st, J. Burnet, *From Thales to Plato* (1914); H. Maier, *Sokrates* (1913); C. Ritter, *Sokrates* (1911); A. E. Taylor, *Socrates* (1912); W. Jaeger, *Paideia* ii, ch. 2 (Engl. Transl. 1943); O. Gigon, *Sokrates* (1917) and commentaries on Xenophon, *Mem.* (1953, 1950).

(b) On the Socratic controversy, particularly relations of Socrates and Plato: A. E. Taylor, *Vita Socratica* (1911); W. D. Ross, *Aristotle's Metaphysics*, introd. ii (1924); A. Dier, *Around de Platon* (1927); G. C. Field, *Plato and his Contemporaries* (1910); R. Hackforth, *The Composition of Plato's Apology* (1911). The question of the authenticity of Plato's and Xenophon's portraits of Socrates is bound up with the question how far they were taking part in the battle of pamphleteers which began with Polykrates' *Κριτικὰ Σοκρατικὰ*, see A. Chrast, *Sokrates, Man or Myth* (1957), ch. 4; E. R. Dodds, *Plato's Gorgias* (1950), 28 f. On the development in Plato's account of Socrates see G. Rudberg, *Symb. Ost.* 1951. G. C. F.

SOCRATES (2) (c. A.D. 380-c. 450), a Constantinopolitan lawyer, continued the *Historia Ecclesiastica* of Eusebius from 305 to 439, trying to give an objective account based on documents and first-hand testimony. Books 1-2, at first dependent on Rufinus, were revised from fuller knowledge of Athanasius' historical writings. Socrates knew little of the West, but for the eastern church assembled many documents, including a collection of conciliar *Acta* made by Sabinus, bishop of Hieraclea, in 375 (now lost). Though he made some bad mistakes and did not always understand doctrinal issues, he is generally sensible and straightforward, plain in style, interesting for his lay outlook (e.g. his dislike of episcopal squabbles, sympathy with Novatianist schismatics, ambivalent estimate of Chrysostom). In principle, but insufficiently in practice, he saw the necessity of relating ecclesiastical to secular affairs. His history was the principal source of Sozomen and Theodoret; the three histories were edited to provide the *Theo manual*, *Historia Tripartita*.

EDITIONS: H. Valensius (Paris, 1686); W. Bright (1893). S. L. G.

SODALES, 'companions' or 'associates', members the minor priesthoods at Rome, which ranked below the *Collegia* (q.v.) and differed from them in that they acted only as a body and not as individuals. The chief of these were the *Petiales* (q.v.), who had charge of the *ius*

fetiale and made treaties (Livy 1. 24) and declared war (Livy 1. 32). Three other *sodalitates* were concerned with annual rites; the *Salii* (q.v.), priests of Mars, active in March and October, at the opening and closing of the campaigning season; the *Luperci*, executors of the ritual of the *Lupercalia* (q.v.) in February; and the *Freres Arvales* (q.v.), celebrants of agricultural rites, associated later with the cult of the imperial house. Besides these there were the *Sodales Titii* or *Titenses*, of whom nothing is known but their name; Roman tradition (Tac. *Ann.* 1. 54) connected them with the Sabine king *Titus Tatius*; some recent scholars look to the Etruscan deity *Mutinus Titinius* and suspect that their ritual was originally phallic. To these ancient *sodalitates* were added after the death of Augustus the *Sodales Augustales*, who were charged with the cult of the two *Diui*, *Julius* and *Augustus*; later imperial families instituted *Sodales Flaviales*, *Hadrianales*, and *Antoniniani*. C. B.

SOL. The name of the Sun is given to two utterly different deities in Rome. The older is *Sol Indiges*, of whom we know that he had a sacrifice on 9 Aug. (Augustan calendars for that date: *Soli Indigiti in colle Quirinale*), while calendars for 11 Dec., especially the *Fasti Antiates*, give *AG(onium) IND(igetis)*. Nothing more is known with any certainty; the indication for 11 Dec. is supplemented by *Lydus* (*Mens* 4. 155, 172. 22 *Wuensch*), who says that the festival was in honour of *Helios*. See *Koch, Gestrirverehrung im alten Italien* (1933), 63 ff., against *Wissowa, RK* 317; but some of *Koch's* combinations are very hazardous, see *H. J. Rose, Harv. Theol. Rev.* 1937, 165 ff. This cult was native, apparently, and is connected by *Latte* (*RR* 44) with the agricultural calendar.

Much later and certainly foreign (Syrian) was the worship of *Sol Invictus*, to give him his most characteristic title. Eastern sun-gods had been making their way in the west, helped no doubt by the current identification of *Apollo* with *Helios* (e.g. *Hor. Carm. Saec.* 9), for some time; but the first attempt to make the Sun's the chief worship was that of *Elagabalus* (A.D. 218-22) (S.H.A. *Vit. Ant. Heliogab.* 6. 7 and 17. 8), who introduced the god of *Emesa*, whose priest and, apparently, incarnation he was, *El Gabal*. *Elagabalus's* excesses and consequent unpopularity and assassination checked the cult, but *Aurelian* (270-5) reintroduced a similar worship, also oriental; he was himself the child of a priestess of the Sun (see S.H.A. *Vit. Aurel.* 5. 5 and 35. 3). This remained the chief imperial and official worship till Christianity displaced it, although the cult of the older gods, especially *Jupiter*, did not cease, but rather the new one was in some sort parallel to it, the Sun's clergy being called *pontifices Solis*, a significant name which was part of a policy of romanizing the oriental god. *Sol* had a magnificent temple on the *campus Agrippae*, see *Platner-Ashby*, 491 ff. Its dedication day (*natalis*) was 25 Dec.

Wissowa, RK 365 ff.; *Cumont, Rel. or.* 106 ff.; *Latte, RR* 231 ff. H. J. R.

SOLINUS, GAIUS IULIUS, wrote (probably soon after A.D. 200) *Collectanea Rerum Memorabilium*, a geographical summary of parts of the known world, with remarks on origins, history, customs of nations, and products of countries. Almost the whole is taken from *Pliny's Natural History* and *Mela* without acknowledgment. There is a meagre addition about the British Isles which gives us *Tanatus* (*Thanet*); the stone jet, found abundantly in Britain; and the absence of snakes in Ireland. He introduced the name '*mare Mediterraneum*'.

Edition. *Mommsen*, 1895², repr. 1958. That of *Saumaise*, prefixed to his *Plinianae exercitationes* (1680), is still useful. *Transl. A. Golding*, 1587, reproduced in facsimile 1955. *H. Walter Die Coll. R. M. des C. Jul. Solinus* (1968). E. H. W.

SOLON, Athenian statesman and poet, was of noble descent but moderate means; perhaps, as the tradition stated and his travels and economic measures suggest, he was a merchant. He was prominent in Athens' war with *Megara* for the possession of *Salamis*, urging his countrymen to renewed effort when they despaired of success (c. 600?). In 594/3 he was chief archon, and in later times it was believed that this was the occasion of his reforms; but many difficulties are removed if we date them about twenty years later. It was further believed that he spent the ten years after his reforms in overseas travel, visiting *Egypt* (where he met *Amasis*, q.v. 1), *Cyprus*, and perhaps *Lydia* (the story of a meeting with *Croesus*, q.v., was already rejected on chronological grounds in antiquity), and returning to find Athens torn by the 'regional' strife (see *PISTRATUS, MEGACLES*) which ended only with the establishment of the tyranny. He vainly endeavoured to dissuade the Athenians from supporting *Pisistratus*, and survived his first usurpation, just how long was not agreed; according to one version, he died in *Cyprus* and his bones were scattered in the island of *Salamis*.

It was probably not till the fourth century that written accounts of *Solon's* work, based on his poems, on surviving fragments of his law-code, and on oral tradition, began to be composed; hence the large speculative element both in the extant sources and in modern reconstructions: the general lines are, however, clear. Attica in the early sixth century laboured under grave economic distress and political conflict. The *Eupatridai* (q.v.) not only controlled the machinery of government but had reduced many of their poorer countrymen to a condition of serfdom as *hektemoroi* (q.v.). These, it seems, and any other propertyless Athenians who contracted debts, having no security to offer but their persons, were liable, when they defaulted in the payment of their dues or the restoration of what they had borrowed, to be sold into actual slavery in Attica or overseas. The discontent of the unprivileged classes had risen to a dangerous level, and *Solon*, who apparently had the confidence of all parties, was appointed to resolve the crisis and legislate for the future.

He first cancelled all debts for which land or liberty was the security (we do not indeed know whether credit was as yet obtainable on any other terms), and so released the peasants from serfdom, restored their farms, and redeemed those who had been sold into slavery, and he forbade all borrowing on the security of the person in future. These measures, known as the *Seisachtheia*, or shaking-off of burdens, though drastic, fell short of the wholesale redistribution of the land which some of his poorer supporters had demanded. Other economic reforms, such as the introduction of a native Attic coinage approximating to the 'Euboic' standard used by Corinth and the western Greeks (see *COINAGE, GREEK*), a corresponding alteration of the system of weights and measures, a prohibition of the export of agricultural produce other than olive-oil, and the granting of citizenship to immigrant craftsmen, were designed to encourage trade and industry and so provide a long-term solution of the country's economic problems.

Solon also reformed the constitution. He divided the citizens into four census-classes (*τεταρτα*) called *pentakosiomedimnoi*, *hippeis*, *zeugitai*, and *thetes* (qq.v.), according to their annual production of corn, oil, and wine (it is generally agreed that an equivalent rating in money-income for those who made their living in other ways, if not provided by *Solon*, must have been introduced sooner or later), and gave each class a proportionate measure of political responsibility. He reserved the chief offices (see *ARCHONTES*) and the *Areopagus* (q.v.) for the two highest classes; the *zeugitai* were admitted to minor offices and the new *boule*; and the *thetes* to the *ekklesia*

and Heliæa (qq.v.). He probably defined the rights and duties of the *ekklesia* for the first time, and strengthened its position in relation to the Areopagus by the institution of a *boule* (q.v.) with probouleutic functions. By granting a right of appeal to the Heliæa he freed the individual from the unfettered power of the magistrates and gave the people some control over them. Lastly, he issued a new and more humane code of justice abolishing all the ordinances of Draco (q.v.) except those concerning homicide.

In attempting to satisfy all parties Solon inevitably satisfied none. Yet his economic reforms not only relieved immediate distress but permanently ended the major evils of serfdom and slavery for debt; and although poverty and discontent were not abolished, they were progressively diminished by the expansion of trade and industry which he encouraged: in this respect his work was carried further by Pisistratus. His constitutional reforms, again, did not prevent further internal strife; but by substituting wealth for birth as the criterion of political privilege and securing the rights of all citizens to some share in the government he broke the monopoly of the Eupatridai and laid the foundations of the future democracy. His laws (i.e. the constitution and the code of justice) were of course added to and in large part superseded; the official copies (see *AXONES*) were lost and the text of some obsolete provisions forgotten; but those which remained in force were incorporated, with appropriate modifications, in the revision begun in 410 (see *NOMOTHETAI*).

SOPATER (Σώπατρος) of Paphos, Greek parodist and writer of *phylakes*, flourished from the time of Alexander to that of Ptolemy II. Fr. 19 mentions Thibron, who put Harpalus to death in 324 B.C. It may be inferred from frs. 1 and 24 that Sopater lived in Alexandria. Fourteen titles of plays survive: three (*Βακχίς*, *Βακχίδος μυστήριες*, *Βακχίδος γάμος*) seem to form a triad, unless merely varied descriptions of the same piece; *Ἰππόλυτος*, *Νέκυια*, *Ὀρέστης* are burlesques of mythology or tragedy cf. (MIDDLE COMEDY). From *Γαλάται*, *The Gauls*, fr. 6 (12 vv.)—the longest extant *phylax*-fragment—contains rallery of the Stoics; this passage, far removed from the buffoonery of the original *phylakes*, approaches the spirit and language of Attic Comedy.

CGF 192 ff. T. B. L. Webster, *Hellenistic Poetry and Art* (1961), 126 f. W. G. W.; W. G. A.

SOPHAENETUS of Stymphalus (fl. c. 400 B.C.), author of an *Anabasis* of Cyrus and one of the generals who led the Greek army back to the Black Sea. Where Diodorus' account of the expedition differs from Xenophon's, we may suppose that his source, Ephorus, who used Xenophon, drew his divergent information from Sophaenetos.

FGH II n. 109.

G. L. B.

SOPHILUS, comic poet, τῆς μέσης κωμῳδίας and 'Sikyonian or Theban' (*Suda*), but he certainly wrote for

the Attic theatre (Ath. 123 d, 228 b). We have nine titles; it is conceivable that his *Androkles* refers to the man mentioned in Menander, *Sam.* 261 ff.

FCG iii. 581 ff.; CAF ii. 444 ff.; FAC ii. 546 ff.

K. J. D.

SOPHISTS. The word σοφιστής does not appear to have been in use before the fifth century B.C. In its earliest use it simply means a wise man or a man skilled at any particular kind of activity. From the first there is, however, perhaps some suggestion of a man who made a special job of being wise, and it gradually came to be specially, though never exclusively, applied to members of a particular profession. This was the profession of itinerant teachers who went from city to city giving instruction for a fee. The subjects of instruction varied somewhat in content, but always had a relation to the art of getting on, or of success in life. Some Sophists, such as Protagoras, claimed to teach 'virtue', which was almost equivalent to efficiency in the conduct of life. Others, like Gorgias and his successors, confined themselves to the teaching of oratory, which in democratic cities was one of the chief roads to success. Instruction in this was, indeed, included in the teaching even of those who made the wider claim. We hear of other aspects of their teaching, such as the system of memory-training ascribed to Hippias, but all have reference to this central practical aim. Their nearest modern parallel is to be found in the numerous institutions at the present day which advertise their ability to train people for success in business, or in life in general. Their activities met a very real demand for higher education, and the leading Sophists enjoyed great success and amassed large fortunes. See also EDUCATION, III. 3-4.

It is important to remember that the Sophists were a profession and not a school of thought, though some of them, such as Protagoras, taught definite philosophic views. But the very nature of the profession tended to produce a certain attitude of mind, which placed emphasis on material success and on the ability to argue for any point of view irrespective of its truth. The general influence of the Sophists was therefore necessarily in the direction of scepticism both about the claims of reasoning to arrive at the truth and about the claims of any moral code to determine one's conduct. At the best they taught no more than uncritical acceptance of the conventional moral code of one's particular society. At the worst, in the teaching, for instance, of men like Antiphon and Thrasymachus, they encouraged a cynical disbelief in all moral restraints on the pursuit of selfish, personal ambitions. Some of the early Sophists were men of high character and unblemished reputation. But others were not so, and there were apparently good grounds in their activities for the undesirable associations which the word came to have and which have passed over into its English derivative.

Under the Roman Empire, particularly from the second century A.D. onwards, the word acquired a more specialized meaning and became restricted to teachers and practitioners of rhetoric, which by this time was tending to become a purely literary exercise practised for its own sake. It was, however, a very popular pursuit, and successful practitioners in it enjoyed a high reputation. It became the most valued part of higher education, and teachers of rhetoric were endowed at many of the great centres of population. In later centuries the movement tended to become specially associated with paganism and died out after the final triumph of Christianity.

SOPHOCLES (1).

I. LIFE (c. 496-406 B.C.)

Sophocles, son of Sophilus, a wealthy industrialist, was born in or about 496 B.C. at Colonus (*Marm. Par.* 56 and 64), to the praise of which one of his loveliest odes is dedicated (*OC* 668 ff.). His youthful beauty and his skill in dancing and music attracted attention, and he led the paean of victory after Salamis with his lyre. His master in music was Lamprus, one of the great teachers of the old school (*Life*. cf. *Plut. De mus.* 31). His first victory in tragedy was won in 468 B.C. (*Marm. Par.* 56: *IG²* ii. 2325), when he defeated Aeschylus; Plutarch (*Cim.* 8) says that it was his first appearance as a tragic poet—this has been doubted—and that owing to the excitement of popular feeling the archon entrusted the award of the prize to Cimon and his fellow generals. One of his plays on this occasion was probably the *Triptolemus*. In two other early plays he made his mark—as a ball-player in the character of Nausicaa (in the *Πύρρος* or *ἡ Ναυσικάα*) and as a player on the lyre in that of *Thamyris* (in the play of that name); but the weakness of his voice caused him to give up acting in person (*Life*). His early life coincided with the expansion of the Athenian Empire, and he himself took an honourable share in the duties of citizenship. In 443/2 he was *Hellenotamias* or imperial treasurer (*IG²* i. 202); he was elected general twice at least—in 440, when he was a colleague of Pericles in the suppression of the Samian revolt (*Life*; *Plut. Per.* 8, etc.), and later with Nicias (*Plut. Nic.* 15); and after the Sicilian disaster he was one of the *πρόβουλοι* appointed to deal with the crisis (*Arist. Rh.* 3. 18, etc.). Whether he owed his appointment in 440 to the success of the *Antigone* may be doubted. There is a pleasant record of his conversations with Ion at Chios in the course of the Samian Expedition (*Ath.* 13. 603 ff.), and two other friends of Cimon are connected with him in different ways: Polygnotus, who depicted him in the *Stoa Poikile* holding the lyre, and Archelaus the philosopher, to whom he wrote an elegiac poem. He also wrote (c. 441 B.C.) a poem to Herodotus, with whom there are a number of points of contact in his work (*Plut. An seni* 3). He was priest of the healing deity Amynios, Alcon, or Halon (the exact name is doubtful) and made his own house a place of worship for Asclepius until the temple built for him was ready (*Plut. Num.* 3, *Etyim. Magn.* s.v. *Δελφῶν*); in recognition of this he was honoured as a hero with the title *Δελφῶν* after his death. He also composed a paean to Asclepius. These and other indications suggest that he accepted the religion of his day without misgivings, just as in other ways he showed himself a healthy minded and normal, as well as a distinguished, Athenian, and he is said to have refused all invitations to leave Athens for the courts of kings (*Life*, cf. fr. 789). His interest in the theory and criticism as well as in the writing of poetry was shown in the composition of a prose work *On the Chorus*, in the story of his discussion of poetical expressions with Ion (*Ath.* loc. cit.), and in his founding of a literary club (the *Θίαιος* of the Muses). He seems to have distinguished his own conscious technique from the inspiration which carried Aeschylus away (*εἰ καὶ τὰ δέοντα ποιεῖς ἀλλ' οὐκ εἰδώς γε ποιεῖς*). He died late in 406, and Aristophanes in the next year summed up his genial and kindly temperament in the line *ὁ δ' εὐκόλος μὲν ἐνθάδ', εὐκόλος δ' ἐκεῖ* (*Ran.* 82). It was characteristic that a few months before his death he appeared with his chorus and actors in mourning for Euripides at the *praagon* (q.v.) before the Great Dionysia. Phrynichus (the Comic poet) spoke of him as *εὐδαίμων ἄνθρωπος καὶ δελφίος*, who died a good death and was taken from the evil to come.

He is said to have composed (probably) 123 plays, and with these he won 24 victories, which means that

96 of his plays were successful; in his other contests he was placed second, but never third.

II. WORKS

Sophocles, according to *Plut. De prof. virt.* 7, distinguished three periods in his own style: first the 'bombastic' style (*ὄγκος*) of Aeschylus; secondly, a harsh and artificial style (*πικρὸν καὶ κατὰ τεχνον*) of his own, and thirdly, the best type of style and most suited for the expression of character (*ῥηθικώτατον καὶ βέλτεστον*). The extant plays, the earliest of which must fall about twenty-five years after his first appearance, seem all to belong to the third period, though the fragments of some lost early plays recall in matter and vocabulary some of the characteristics of Aeschylus, and some critics have professed to find traces of the second style (whatever Plutarch's words may mean) in the *Ajax* and *Antigone*. The latter was probably produced in 441; the *Ajax* is probably rather earlier; for the *Oedipus Tyrannus* a year soon after 410 seems probable, and the *Trachiniae* may belong to the same period, though the indications are very uncertain. It is disputed whether the *Electra* preceded or followed Euripides' *Electra* (413), and it is variously placed by scholars between 418 and 410. The *Philoctetes* was produced in 409 (arg.), and the *Oedipus Coloneus* posthumously in 401 (arg.). The date of the satyric *Ichneutae* is uncertain (see Powell and Barber, *New Chapters* iii. 93 f.). Of the lost plays, the *Telephoeia*, if it was in fact a Trilogy dealing with the story of Telephus (and consisting perhaps of the *Aleadae*, the *Mys*, and the *Ἀχαιῶν σύλλογος*), is likely to have been an early group (see *ibid.* iii. 68 ff.). More than one-third of the known titles are those of plays taken from the Trojan cycle of legend (including that of the house of Atreus); the remainder cover a wide range; about twenty are those of satyric plays.

A W P C.

III. CHARACTER OF HIS WORK (See also TRAGEDY)

1. Sophocles is credited by Aristotle (*Poet.* 4) with three changes in the form of tragedy: he introduced the third actor, introduced 'scene-painting' (*σκηνογραφία*), and enlarged the chorus from twelve to fifteen. What the scene-painting amounted to is uncertain, and we can only guess at the purpose of enlarging the chorus. The third actor was a fundamental development. It would be interesting to know what actually had happened when 'Sophocles introduced the third actor'. Since it meant altering the rules of the dramatic contest some kind of official consent was presumably necessary, and therefore general agreement among the practising dramatists. Although it is easy to see why Sophocles wanted a third actor, the change would have represented a general rather than a personal desire. Drama must have been moving away from the lyrical towards the histrionic. It is also to be noted that Sophocles did not follow the example of Aeschylus in composing connected trilogies.

2. The third actor enabled the dramatist to increase the number of his *dramatis personae* considerably, since the actors might 'double'. Therefore he could make both plot and situation more complex, and thereby draw character more fully. For example, the heroine of the *Electra* faces in succession at least ten distinct situations: first alone, then with the chorus, then with Chrysothemis, Clytemnestra, the Messenger, and so on. Each situation brings out a different facet of her nature. The new complexity of situation is best illustrated by the triangular scenes in which Aeschylus and Euripides had little interest and Sophocles no rival: three persons are simultaneously involved in the same situation, but with contrasting hopes or fears. Thus, the Messenger in the *Electra* tells his false tale in order to deceive Clytemnestra and further Orestes' vengeance: for Clytemnestra, as she listens, it is

deliverance from terror, but for Electra, the end of everything. The best of such scenes occur in the later plays. An interesting variant is *Philoctetes* 974–1080, where one of the three persons, though he says nothing until the final verses, undergoes a most humiliating experience.

3. Sophocles' delicate though powerful delineation of character was well matched by the flexibility of his style. Like Shakespeare, he had at his command the whole range of dramatic speech, from weight and dignity to extreme swiftness and lightness, even casualness: though, unlike Shakespeare, he did not (especially in the later plays) write many 'poetical' passages (lyrics excepted). It is no disparagement of Aeschylus and Euripides to say that Sophocles' style was much more varied than theirs: his conception of drama demanded, as theirs did not, that the speech of his characters should be able to respond instantly to the thought or emotion of the moment. Therefore he will sometimes write four- or five-word verses which have weight without any trace of stiffness, while at the other extreme he once performs the feat, astonishing in an inflected language, of getting twenty-one words into twenty-four syllables (*OT* 370 f.; cf. *Electra* 624 f., 359). Light verse-endings are common, as *Electra* 332 and 426, ending with *ōrī*, or a verse may end with an elision, as *Electra* 1017, *OT* 29. Sophocles' rhetoric, when he is rhetorical, is superb; no less moving is the utter simplicity of his simple passages. It has often been suggested that his rhetoric owes something to contemporary sophists who studied the art of rhetoric: perhaps it is an open question if Sophocles learned more from the professors, or the professors from Sophocles.

4. His use of the chorus is no less flexible. There are six odes in the *Antigone* (counting the formal parodos), only one in the *Philoctetes*, four in the (later) *Coloneus*. No one formula, such as 'ideal spectator', can properly describe the uses that Sophocles found for the chorus. Usually he gives it a markedly dramatic character, but when it suits him he will allow that character to lapse, and use the chorus as a purely lyrical instrument. The chorus of the *OT* consists of citizens intensely loyal to Oedipus, but in the third ode this character is in abeyance. So it is too in the second and fifth odes of the *Antigone*, although elsewhere in the play it is so much of a dramatic character that it says the right things but about the wrong person—about Antigone, not Creon; at which moments it is certainly no 'ideal spectator'.

Not a few of the odes easily bear comparison with the very best of Greek lyric poetry, though they are essentially dramatic both in structure and function. Changes of rhythm within a stanza are much more frequent and strongly marked than in Euripides, even than in Aeschylus, and often the effect of the change is obvious. (See for example the sudden anapaestic verses at *OT* 469 f. and 470 f.) They suggest that the dance-movements must have been vividly dramatic. Euripides' odes are rhythmically uninteresting by comparison; perhaps he relied more on melody.

The chief actor was usually given a generous share in the lyrical part of the play. At a rough computation Electra's role comprises 640 verses, of which rather more than a quarter were sung or chanted; Antigone sings 75 out of about 220 verses. The lyrical element, taken as a whole, is markedly smaller than is usual in Aeschylus, though it is proportionately as big in the *Ajax*, *Antigone*, and *Philoctetes* as in the *PV* and *Persae*.

5. *Structure and Thought.* Sophocles' plots raise an acute problem. By universal consent, the design of some of the plays, notably of the *OT*, is masterly; of others, apparently inept, for the *Ajax* finishes with a new set of characters, and there has been much discussion whether the central character of the *Trachiniae* was meant to be Deianira or Heracles. Sophocles appears even to have

forgotten Antigone in the last hundred verses of that play. Since he was a competent dramatist it is likely that he so designed his plots as to help him say what he meant; in which case his plot-structure and his thought should be considered together. There is little profit in making special assumptions to explain one puzzling structure—as for example that Ajax, being an Attic Hero (as Sophocles does not point out), must have his tomb and therefore must be buried—when they do nothing to explain similar puzzles in other plays.

The vividness with which Sophocles portrays his persons and their motives and conflicts reinforces the modern idea that tragic drama first and foremost represents persons. Aristotle thought differently: he is emphatic that 'tragedy is a mimesis not of persons but of an action (*πρᾶξις*)' (*Poet.* 49^b24, 50^a16, 50^b3), and it is possible that he was right. Inspecting the action of the plays, one finds that it is usually shared, in one way or another, by the human agents and by gods. Therefore the meaning of his religion is of critical importance. If it was no more than a general piety, whether conventional or deeply felt, then a play like the *Trachiniae* is no more than two personal tragedies not very securely joined by piety; further, one is left wondering why Sophocles was not inspired to strengthen the unity of the play (as of the *Antigone* also) by bringing on the heroine's body in the final scenes. But it may have been more than piety. For example, what happens to Creon in the *Antigone* is represented as the outcome, perfectly natural in the circumstances, of what he has done to Polynices' body, to Antigone, to Haemon, to Eurydice (cf. 1301–5); yet Tiresias declares that it is going to be brought about by the angry gods and their Erinyes. In the *Electra*, the act of vengeance and restitution, so ardently desired by Electra, for so many reasons, is undertaken, on no divine prompting (vv. 32–7), by Orestes out of personal and public motives (cf. vv. 67–72), and it is achieved entirely by their own efforts. Guile, *dólos*, answers guile (vv. 37, 197, 490, 1392, 1397). Yet there is the constant implication that the gods—Apollo, and Zeus (160–3, 174–6), Dike and Ares, Helios, and the Erinyes (1384–97)—are acting with them. Such instances suggest that for Sophocles and his audiences the participation of the gods in actions that are already completely explained in human terms implied something like the operation of some universal law; in which case it would be at once intelligible that the action would take precedence over the persons, and that the persons, and what they do, should be displayed as vividly and naturally as possible.

The *praxis* of the *Trachiniae* (to take perhaps the most critical example) involves the following: that Zeus has already punished Heracles for one unjustifiable action, his killing of Iphitus; that his final exploit, which is to end either in his death or in the lasting peace that Deianira so desperately longs for, is the wanton destruction of a whole city for the sake of getting a girl; that the girl is going to supplant the loyal wife; that in such a sudden crisis Deianira does what is entirely natural, for her, in the circumstances; that the poison that she innocently uses is activated by the heat of the fire upon which Heracles is making to Zeus his thank-offering for his destruction of the city. In the first ode the chorus sings of the regular order of nature, in accordance with which Deianira's long anxiety should be followed by peace and joy, especially since Zeus keeps an eye upon his offspring (vv. 130 f.). But instead of joy there is total catastrophe, and the cause of it is plain. The question whether Deianira or Heracles was meant to be the central character seems unimportant, especially if we can believe the last line of the play: 'Nothing is here but Zeus.' Aristotle seems to have been right. The structural difficulties vanish if Sophocles drew his persons for the sake of the action,

not vice versa, and if his religion reflected not a mere pious attitude but active thinking about the ways of the universe.

SOPHOCLES (2) the Younger, son of Ariston and grandson of the great Sophocles, produced his grandfather's *Oedipus Coloneus* in 401 B.C., and plays of his own from 396 onwards. The numbers of his plays and victories are uncertain (*Suda* s.v., Arg. Soph. OC).

SOPHONISBA (*Sophoniba* Livy; *Σοφονίσβα* Appian; the correct name is Saphanba'al), daughter of Hasdrubal (q.v. 3); she married Syphax (q.v.), whom she thus won over to the Carthaginian cause. When Masinissa and Laelius overthrew Syphax (203 B.C.) Sophonisba took poison which according to the romantic story (Livy 30. 12-15) was sent to her by Masinissa, now enamoured of her and unable by any other means to save her from captivity at Rome. Details of her story (e.g. that before her marriage to Syphax she had been betrothed to Masinissa) may be false, but the outline need not be questioned. H. H. S.

SOPHRON (*Σώφρων*) (fifth c. B.C.), Syracusan writer of mimes. His mimes were divided according to subject-matter into *ἀνδρείαι* and *γυναικείαι*. We have one important papyrus fragment and some 170 short citations, mostly preserved to illustrate the Doric dialect. Of the *ἀνδρείαι* may be mentioned *Θυννοθήρας* ('The Tunny-fisher') and *Ἰλίου* (i.e. ὁ ἰλίου) τὸν ἀγρόταν (possibly a dispute between a fisherman and a farmer); of the *γυναικείαι*—*Ἰκέστραι* ('The Sempstresses'), *Συναριστάσαι* ('Women at breakfast'), *Ταὶ γυναῖκες αἱ τὸν θεόν* (i.e. Hekate) *φαντι ἐξελάν* (i.e. 'The Sorceresses'). Sophron's mimes were written in some kind of rhythmic prose (schol. Greg. Naz. [in Kaibel, *CGF* 153] *ῥυθμοῖς τισι καὶ κώλοις ἐχρήσατο*). Their subject-matter was the events of everyday life. Sophron, who was probably the first writer to give literary form to the mime, was greatly admired by Plato (Douris of Samos, *FGH* 76 F 72). Herodas possibly and Theocritus certainly owed much to him—a schol. on Theoc. 2 says that Theocritus adapted (*μεταφέρει*) one of Sophron's mimes.

Kaibel, *CGF* 152 ff.; Olivieri, *FGM* iii.

M. P.; K. J. D.

SOPHRONIUS, c. A.D. 560-638, patriarch of Jerusalem (from 634) at the time of the Arab conquest. He wrote a theological manifesto against the doctrine that though Christ had two natures he had only one will, panegyrics on Egyptian saints (Cyrus and John, John the almsgiver, Maria the penitent prostitute), sermons for Christmas and other feasts, and twenty-three anacreontic odes of esoteric difficulty.

Ed. Migne, *PG* lxxxvii (1), 3147 ff.; *Odes*, ed. M. Gigante (1957). H. G. Beck, *Kirche und theologische Literatur im byzantinischen Reich* (1959), 434 ff. H. C.

SORA, 60 miles south-east of Rome at the big bend of the River Liris (q.v.). Rome took Sora from the Volsci in

345 B.C., but Samnites disputed her control until a Latin Colony was established there (303 B.C.). It has always been an important town with a picturesque acropolis but few ancient remains.

I. T. S.

SORACTE, modern *Soratte*, the isolated 2,420-foot limestone mountain, easily visible from Rome 26 miles to the south, which Horace celebrated (*Odes* 1. 9). Here priests called *Hirpi*, resembling Roman *Luperci*, worshipped Apollo Soranus by walking over hot coals (Phny, *HN* 7. 19; Serv. *ad Aen.* 11. 787). *Sant' Oreste*, a village on the lower slopes, preserved the name in corrupted form through medieval times.

I. T. S.

SORANUS of Ephesus, physician under Trajan and Hadrian (98-138), studied in Alexandria and practised in Rome. He was one of the greatest physicians, a man of erudition, of objective judgement, full of love for his native Greece, critical towards the Romans of the world metropolis.

Of his books, almost twenty in number, dealing with history of medicine, terminological problems, and medicine proper, there are preserved in Greek. 1. *Γυναικεία* I-IV (I. Hygiene of midwife, conception, etc., II. Childbed, care of the infant; III and IV. Pathology). 2. *Π. σημείων καταγράμτων* and *Π. ἐπιδήσεων*, fragments of a surgical treatise.

Soranus restored the Methodical school by moderating its exaggerations in the spirit of the new classical era and by harmonizing it with the tradition. Though believing in general symptoms, he did not neglect individual factors, distinguished the different forms of diseases, and observed accurately the course of an illness. A terse but excellent author, his books in Latin translations or adaptations were widely read in the West. See ANATOMY and PHYSIOLOGY, § 11.

TEXT. J. Ilberg, *CMG* iv (1927), cf. also M. and I. Drabkin, 'Caelius Aurelianus, *Gynaecia*', *Bull. Hist. Medicine*, Suppl. xii (1951). Transl. of *Gynaecia*: O. SORTITION (*κλήρωσις*), election by lot, a method of appointing officials in Greek city-states, especially in democracies. It was based on the idea of equality and reduced outside influence. Little is known of its use except at Athens. It remains uncertain when sortition was introduced there, perhaps as early as Solon. From 487/6 B.C. the archons were appointed by lot out of nominated candidates (*πρόκριτοι*); later, this became a double sortition. From the time when the archons began to be elected by lot, they lost political leadership. But all ordinary magistrates, a few excepted, were thus appointed; also the Council (a Prytany of fifty from each *phyle*) and the juries (by a very complicated procedure). Lot decided very many questions in political and social life. Politically, sortition, combined with the prohibition or at least severe restriction of re-election, enabled rotation in office, and electoral contests were avoided by its use; moreover, the power of magistrates was reduced, and thus the sovereignty of the popular assembly guaranteed. Sortition was practicable, as almost every citizen had a minimum of political experience, and nobody could be elected without having presented himself. Certain precautions were always taken, and military and some technical (especially financial) officials were appointed by vote.

Except for a few critics like Socrates, the principle of sortition was never discussed. It was, indeed, a necessary and fundamental element of the democratic *polis*.

Arist. *Ath. Pol.* T. W. Headlam, *Election by Lot at Athens* (1891, 2nd ed. 1933), V. Ehrenberg, *PW*, s.v. 'Loosung'. V. E.

SOSIBIUS of Lacedaemon. In the reign of Ptolemy I (323–283 B.C.) he went to Egypt and became closely associated with the Alexandrian school. He is probably to be identified with the grammarian Sosibius ὁ λυτικός, so called because of his ability to deal with Homeric problems. He is important for his studies in the history of Sparta (*Περὶ τῶν ἐν Λακεδαίμονι θυσίων* and *Χρόνων ἀναγραφὴ*).

FGH iii B, 595.

G. L. B.

SOSICRATES, local historian and biographer perhaps from Rhodes, fl. mid second century B.C. Works (*PHG* iv, 500–3): (1) *Φιλοσόφων διαδοχὴ*, a biographical study of various philosophers, following the teacher-pupil relation. Sosicrates used Hermippus and perhaps Satyrus. Whether he used Apollodorus is disputed: a common source in Eratosthenes may explain similarities. (2) *Κρητικὰ* (*FGH* H461) which Apollodorus used; this may be the earlier work. If he is the Sosicrates mentioned in Timachidas (*Lind. Temp. Chron.* 317, Blinkenberg), he flourished 150–130 B.C.: but the identification is uncertain.

F. W. W.

SOSIGENES, astronomer, earlier confused with a Stoic and a Peripatetic of the same name, was Caesar's astronomical expert in his introduction of the Julian calendar in 47 B.C.

SOSIPATER (*Σωσίπατρος*), Greek comic poet: fr. 1, cookery—a sublime science. Apparently among the earlier writers of the New Comedy (v. 11 Chariades is named as living, whereas in Euphron fr. 1. 7 he appears to be dead).

FGG iv 482 ff.; CAF iii. 314 ff.

SOSIPHANES of Syracuse, tragic poet, flourished about the last third of the fourth century B.C., though some date him later and there may have been two poets of the name. He is credited with seventy-three tragedies (*Suda*, s.v.), and seven victories. He is included in some lists of the *Pleiad* (see TRAGEDY § 22). A short but striking fragment on the transitoriness of human happiness survives.

TGF 819–20.

A. W. P.-C.

SOSITHEUS, of Alexandria Troas, lived in Athens, Syracuse, and Alexandria, was a member of the *Pleiad* (see TRAGEDY § 22), and wrote tragedies and satyric plays, including a *Daphnis* or *Lityrses*, in which a sarcastic reference to the Stoic Cleanthes occurred; twenty lines of this play survive, as well as a laudatory epigram on the poet by Dioscorides (*Anth. Pal.* 7. 707).

TGF 821–4.

A. W. P.-C.

SOSIUS (1, *PW* 2), **GAIUS**, probably son of a praetor, served Antony as quaestor c. 40 B.C., was appointed by him governor of Syria and Cilicia in 38, captured Jerusalem for Herod (q.v. 1) in 37, and triumphed 'ex Iudaea' in Sept. 34. In 32 he and Domitius (5) were consuls. Both supported Antony. Sosius began the year with a diplomatic attack on Octavian; Octavian made a vigorous rejoinder, and the consuls and many senators fled to Antony. Sosius commanded the left wing of Antony's fleet at Actium. He was subsequently pardoned by Octavian at the instance of Arruntius (q.v. 1). He restored the temple of Apollo near the theatre of Marcellus, and

took part in the *Ludi Saeculares* of 17 B.C. as *quindecimvir sacris faciundis*.

Syme, *Rom. Rev.*, see index; M. Grant, *From Imperium to Auctoritas* (1946), 39 ff.; Platner-Ashby, 15 f., Nash, *Pict. Dict. Rome* i. 28 ff. G. W. R., T. J. C.

SOSIUS (2, *PW* 11) **SENECIO**, **QUINTUS** (*cos. ord.* A.D. 99, *II ord.* 107), is revealed by the convergence of casual evidence as one of the most important members of the governmental oligarchy under Trajan. Of his origin, family, and official career before the consulate nothing is recorded. The link with an influential consular (Sex. Julius Frontinus was his father-in-law) and the friendship of the new Emperor explain his conspicuous advancement: Sosius and Cornelius Palma are the first pair of *consules ordinarii* appointed by Trajan. The date of his second consulate, held with the great Licinius Sura as colleague, and the honour of a public statue (Dio Cass. 68. 12. 2), support the conjecture that he held a high command in the Second Dacian War (A.D. 105–6). Sympathetic, like others of his class and rank (for example, C. Minicius Fundanus, *cos. suff.* 107), to the pursuits of philosophy and letters, Sosius might be claimed for a representative figure in a 'proto-Antonine' period of imperial civilization—Plutarch of Chaeronea enjoyed his friendship and commemorated it by the dedication of several works. He was also a friend of Pliny.

Sosius did not leave a son to perpetuate the family, but his daughter married Q. Pompeius Falco (*cos. suff.* 108), and that line is prominent in the Antonine aristocracy, with manifold connexions and a much-advertised pedigree, as witness the polyonymous consul of A.D. 169 (Dessau, *ILS* 1104), who has thirty-four names, apart from *praenomina*.

R. S.

SOSTRATUS, surgeon and zoologist, probably practised in Alexandria after 30 B.C. His medical works dealt chiefly with gynaecology. In zoology he perhaps ranks next after Aristotle among the Greeks.

Works: *Περὶ ζώων* or *Περὶ φύσεως ζώων*; *Περὶ βλητῶν καὶ δακτύλων*. Elian and the scholia to Nicander preserve much information about his zoological works.

W. D. R.

SOSYLUS of Lacedaemon (fl. 218 B.C.), who accompanied Hannibal on his campaigns and wrote a methodical and impartial history of the latter (*Περὶ Ἀννίβου πράξεων*) in seven books towards the end of the third century B.C. One of the more important sources of Polybius, whose harsh verdict on him (Polyb. 3. 20. 5) must be toned down in the light of a papyrus fragment from his fourth book.

FGH ii B, 176.

G. L. B.

SOTADES (1), Athenian comic poet, *τῆς μέσης κωμωδίας* according to the *Suda*, and (fr. 3, cf. Harp. s.v. *κωμῆν*) a contemporary of Demosthenes. We have three titles and three fragments; fr. 1 is a long description of the cooking of fish.

FGG iii 585 ff.; CAF ii 447 ff.; FAC ii. 552 ff.

K. J. D.

SOTADES (2), Iambic poet, of Maronea, lived in the time of Ptolemy Philadelphus, of whose marriage with Arsinoë he disapproved strongly (Ath. 621 a, fr. 1 Powell). He invented the *versus sotadeus*, a minor ionic metre which allowed great variations. Some fragments of his work survive, notably from his transcription of the *Iliad* into sotadeans (frs. 4 a–c), and lines to the flute-player Theodorus (fr. 2). The sotadeans preserved by Stobaeus (frs. 6–14) are commonly thought not to be his, and may be moralizing verses composed for the education of Greek children in Egypt. See IAMBIC POETRY, GREEK.

TEXT. Diehl, *Anth. Lyr. Graec.* ii. 286-94; Powell, *Coll. Alex.* 238-45. C. M. B.

SOTER (Σωτήρ), fem. **SOTEIRA** (Σώτειρα), a title of several deities, expressing their power to save their worshippers from dangers. It has no Latin equivalent (Cic. *Verr.* 2. 2. 154), unless it be Juno's epithet Sispes or Sospita. It is used, for example, of Zeus (as Xenophon, *An.* 1. 8. 16, and often) and of Kore (Ar. *Ran.* 379, cf. Farnell, *Cults* iii. 198). In Hellenistic times it comes to be used of men, especially kings, often implying some measure of deification; Antigonos Doson was called Euergetes in life, Soter after his death (Polyb. 5. 9. 10). The most famous holder of the title was perhaps Ptolemy I. Like all such titles, it was later cheapened, being given, for instance, to the notorious Verres (Cic. loc. cit. See Nilsson, *GGK* ii. 174 ff., 371 ff.). Its transcendental use is Christian, cf. A. D. Nock in *Essays on the Trinity and the Incarnation* (ed. A. E. J. Rawlinson, 1928), 87 ff. H. J. R.

SOTERIA. The term σωτήρια was appropriate for any sacrifice(s), with or without attendant agonies, etc., performed either once or several times in commemoration, or in hope, of the deliverance of one man or a group from oppression, sickness, or danger. Commonly Σωτήρια designated certain more or less elaborate city or national festivals celebrated at regular intervals to commemorate major events. (Compare the (older) 'Ελευθέρια, at Plataea, Syracuse, Samos; a third usage consisted in naming festivals in honour of the deliverer himself, e.g. the Diogeneia at Athens after 230/29 B.C.). The known Soteria, some sixteen in all (PIL, s.v.) are Hellenistic (or later), part of the efflorescence of festivals at that time. The Soteria at Delphi, to commemorate the defeat of Brennus and his Celts in winter 279/8 B.C., are best known: inscriptions furnish a considerable body of detail (as yet not synthesized) about the performances, and data important for third-century chronology. Soon after the departure of the Gauls, the Amphictyones founded annual Soteria. It was not until 243/2 that the Aetolians re-founded the same festival: the positive dating in that year of the Aethian archon Polycetus has settled a controversy (*Hesp.* 1938, 121, no. 24; for the whole problem, R. Flacchière, *Les Aitoliens à Delphes*, 1937).

SOTERICUS (c. A.D. 300), epic poet, author of Greek poems on Dionysus, Alexander, and other subjects (*Suda*).

SOTION (1) of Alexandria, Peripatetic, wrote (? between 200 and 170 B.C.) (1) a *Διαδοχή τῶν φιλοσόφων* in thirteen books, in which each philosopher is treated as the definite successor of another; (2) a book on Timon's *Σύλλοι*. The former work is a main though not a direct source of Diogenes Laertius' information, as well as of the doxographic summaries in such patristic writers as Eusebius and Theodoretus. Sotion seems to have introduced the ultra-simple division of the philosophical successions into Ionian and Italian.

Diehl, *Dox. Graec.* 147-9.

W. D. R.

SOTION (2), Peripatetic, not earlier than the reign of Tiberius (A.D. 14-37).

WORKS: *Κέρας Αμαλθείας*; *Strange Stories* (ed. A. Westermann, in *Παραδοξογράφοι*, 1830, 183), about rivers, springs, and pools; *Dioclean Disputations* (against Epicurus); a commentary on the *Topics*. W. D. R.

SOUL. Apart from philosophic doctrines concerning the soul, there are traces in vocabulary and usage of

comparatively primitive ideas surviving in both Greece and Italy. Savages not infrequently believe that a man has several souls (e.g. Frazer, *GB* iii. 27, 80); now in Greek, notably in Homer, there are several words which mean something like 'soul' and seem to refer to parts of a man having different functions. *Ψυχή*, to judge by its etymology, means the breath-soul, which corresponds to the unsubstantial nature of departed *ψυχαί* as phantoms, *εἰδωλα* (*Od.* 11. 51, cf. 83; *Il.* 23. 104). Such phantoms have no *φρένες*, midriff and the parts adjacent, vitals; to give them more than a faint semblance of life they need to drink blood. It seems not improbable that the *θυμός*, the 'hot' or 'reeking' part, is the blood-soul; to kill is to take away the *θυμός*, to save the *θυμός* is to save life (*Il.* 22. 68 and often; *Od.* 11. 105). In Latin the evidence is less strong, partly no doubt because early documents are lacking; *anima* and *animus* correspond rather to later, philosophical uses respectively of *ψυχή* and *θυμός* than to the above meanings. But we may note the existence of *umbra* in the sense of ghost, suggesting belief in a shadow-soul; cf. Lucretius' insistence (4. 364 ff.) on the true nature of shadows. See, further, AFTER-LIFE, GENIUS, PSYCHE.

Rose in *Actes du congrès international d'histoire des religions tenu à Paris en octobre 1927* (1928), ii. 178 ff., and for some criticism of these views as too rigid, Nilsson, *GGK* i. 192 ff., H. Snell, *The Discovery of the Mind* (L.T. 1951), ch. 1; W. Jaeger, *Theology of the Early Greek Philosophers* (1947), ch. 5, R. B. Onians, *The Origins of European Thought* (1955), 93 ff. H. J. R.

SOZOMEN (d. c. A.D. 450), a lawyer in Constantinople, wrote a history of the Church from 324 to 439, of which the conclusion has perhaps been lost. It depends heavily upon Socrates (whom it never mentions), is similar in outlook and content, less critical but more stylish. Sozomen had some additional information, particularly for monasticism; book 9, which uses Olympiodorus, is almost independent of Socrates (q.v. 2).

Ed. J. Bidez and G. C. Hansen (Berlin, 1960).

SPAIN. I. PREHISTORY. The Spanish peninsula, split by mountains and diverse in climate, has never known ethnical unity. Related to southern France in some of its cave-paintings (e.g. the late palaeolithic Altamira), it also produced the indigenous 'Capsian' culture of the south, and the Bell-beaker people who spread to central Europe. Iberians from Africa began exploiting its metals in early Neolithic times, and later expanded from Almería over most of the south and east; Celts, invading from the north in the Late Bronze and Iron Ages, eventually mixed with Iberians in some parts of the centre and west (see CELTIBERIANS, LUSITANIA), but remained typically Celtic in the north-west, where scattered hill-forts contrast with the thickly urbanized Mediterranean regions. Everywhere the tribal units were much smaller than the general ethnic terms imply.

2. PHOENICIANS, GREEKS, CARTHAGINIANS. Traditionally, Phoenicians of Tyre discovered Tartessus (q.v.) and colonized Gades (q.v.) c. 1100 B.C. Some accept the date, others lower it to the eighth or seventh century. In the later seventh century Samian and Phocæan metal-traders reached Tartessus. The Phocæans planted colonies at Mainake, near Malaca (q.v.) and Ebusus (*Ibiza*); their colony Massilia founded others on the east Spanish coast, notably Emporion (q.v.), Rhodæ (*Rosas*), and Artemision (Dianium, now *Denia*). All the Greek centres south of Emporion disappeared when Carthage, during the third century, asserted itself in Spain. Hamilcar Barca and Hannibal conquered large territories, founded Carthago Nova (q.v.), and mobilized Spanish manpower and mineral wealth for the attack on Rome. The Second Punic War, starting from Hannibal's siege of Rome's

ally Saguntum (q.v.) and his approach to the Ebro, continued on the Spanish front until Carthage was driven out by Scipio Africanus in 206.

3. THE ROMAN PROVINCES. In 205 Rome held a narrow east coastal strip (Hispania Citerior) carrying the main road south to Carthago Nova, and beyond it a territory (Hispania Ulterior) including the south-east coast and the Baetis (*Guadalquivir*) valley. Two commands were necessary. In 197 two new praetors (q.v.) were created for Spain. Both provinces were gradually extended inland in punitive campaigns against rebels, guerrillas, and finally the big coalitions of Viriathus (q.v.) and the Celtiberians (q.v.). On the fall of Numantia (q.v.) in 133, Scipio Aemilianus with a senatorial commission drew up *leges* for both provinces, which covered at most two-thirds of the peninsula. The process of conquest halted, except for minor additions by Pompey in the war against Sertorius (q.v.). Further operations—sorties by triumph-hunting generals, and Caesar's civil war against the Pompeians (49–45)—were not attempts at expansion. That the Republic tried and failed to subdue the whole peninsula was a thesis of propaganda to enhance Augustus' conquests north of the Tagus and up to the Biscay coast. They resulted in a largely new province of Lusitania (q.v.) and a great new extension of Citerior (renamed *Tarraconensis*) to the north and west Ocean. These provinces were assigned to the Emperor; most of Ulterior (renamed *Baetica*, q.v.) was returned to the Senate in 27 B.C.

The Republic had imposed a tribute of one-twentieth in corn and a fixed sum in silver, for which local mints were introduced (not only at Osca, though the coinage was commonly called *argentum Oscanse*). The further duty of military service was illustrated by the mounted lancer on many of the coins; cavalry and Balearic slingers were Spain's chief auxiliary troops. Mines (those of Carthago Nova yielded 25,000 drachmae a day) were public property at first, later mostly sold to private owners. They drew swarms of Italian businessmen to the south and east, which were also rich in crops and herds. Here, besides the mercantile groups, were Roman veterans settled at Italica and half-Spanish *libertini* at Carteia (qq.v.). Elsewhere Rome disarmed resistance and fostered agriculture by moving peoples from the hill-forts, distributing land, and planting native towns (e.g. Gracurus, founded in 179 by Ti. Gracchus, q.v. 2). Cases of misgovernment led in 171 to the institution of trials *de repetundis*, but the picture of oppression was exaggerated by unreliable sources.

Two Roman colonies may have existed before Caesar and Augustus added 21, with many Roman and Latin *municipia*. Augustus formed juridical *conventus*, which in *Tarraconensis* developed their own emperor-cults (here the provincial cult began in A.D. 15; in *Baetica* not till Flavian times). The new Augustan conquest required three legions in north-west *Tarraconensis*; Vespasian reduced them to one, VII Gemina. Discoveries of gold, iron, and tin repaid the annexation. The older Roman territories reached a peak of economic development in the first and second centuries A.D.; Pliny (*IIN* 37. 203) reckoned that Spain as a whole was even richer than Gaul, counting manpower among the assets of its barren parts. But standards of civilized life varied widely. It was not as a reward for 'romanization' that Vespasian gave Latin rights to all the Spanish communities, from the Latin-speaking towns of *Baetica* to Celts still in round huts; the north-west was not suddenly urbanized, as some have inferred. Existing towns, however, prospered under their new charters (for which see MALACA); municipal decline scarcely began before the fourth century. The colonies were sending more senators to Rome than any provincial land except Narbonese Gaul. In literature they

had produced the Senecas and Lucan; Columella, Quintilian, and Martial were of native stock.

In the third century northern Spain was hard hit by the Frankish invasions. The peninsula, with the Balearics and Tingitana, was divided into six provinces by Diocletian. Early in the fourth century a powerful church emerged at the Council of Iliberis (Elvira, near modern *Granada*). Hosius (Ossius), bishop of Corduba (q.v.), confirmed its influence; it inspired the works of Prudentius (q.v.) and Orosius (q.v.), survived the barbarian invasions of the fifth century, converted the Visigothic kings to the Athanasian faith, and transmitted a residual legacy of Roman culture through the bishop of Seville, Isidorus (q.v. 2).

SPARTA. I. NAME AND SITUATION. Σπάρτη, more probably from σπάρτος ('Spanish broom') than from σπάρτη, 'the sown land' or 'the place of scattered settlements', is used indifferently in Homer with Λακεδαίμων for the dwelling-place of Menelaus. The latter is the official name in historic times, Σπάρτη having poetic or patriotic associations and never being used to describe the territory as contrasted with the city. Sparta is situated on low hills and level ground c. 650–700 feet above sea-level on the west bank of the Eurotas, between two tributaries which flow from the slopes of Taygetus, and covered a roughly elliptical area measuring c. 2 miles (north to south) by 1½, with the acropolis slightly north of the centre. It was partially walled before the end of the fourth century, completely not before 184 (Livy 34. 38; 38. 34; Paus. 7. 8. 5) when the circuit measured 48 stades (Polybius 9. 21. 2; confirmed by excavation in 1906). Several other landmarks of Spartan topography have also been identified, including the sanctuary of Athena Chalkioikos on the Acropolis overlooking the vast theatre of early imperial date which replaced a smaller Hellenistic structure; the sanctuary of Artemis Orthia, where the Spartan boys were flogged, in the 'Contest of the Whips', on the bank of the Eurotas, which fixes the position of the quarter 'Limnai'; the quarter of 'Pitane' to the north-west of the Acropolis; and, most probably, the Agora south-east of the theatre. The position of the other two quarters Kynosura and Mesoa remains uncertain, but with the data obtained, Pausanias' account of the topography of the city becomes much more intelligible.

2. HISTORY. (a) Sparta itself, unlike neighbouring Therapne and Amyclae (qq.v.), has produced few pre-Dorian traces, suggesting at most minor occupation in the LH III period, nor did the catastrophe of c. 1200 B.C. (see DORIANS and LACONIA) lead to immediate settlement. But, during the tenth century, at least four Dorian villages grew up around the acropolis and despite early political union (this is the most likely explanation of the

dual kingship of Agiads and Eurypontids (qq.v.) Sparta long retained the appearance and traditions of its village origin (Thuc. 1. 10). The course of her expansion in Laconia cannot be plotted, but by 700 at the latest all but the eastern coastal strip had been reduced and the population, pre-Dorian and Dorian, reduced to the status either of *Perioikoi* (q.v.), who retained partial independence subject to the obligation to serve in Sparta in war, or of helots (q.v.), who were serfs bound to the soil which they cultivated for their Spartan masters.

(b) In a great war between about 735 and 715 B.C. much of neighbouring Messenia (q.v.) was annexed and its population helotized. Thus Sparta committed herself to an agricultural future and saddled herself with the lasting problem of holding her gains during the seventh century against outside attack (she was heavily defeated by Argos (q.v.) at Hysiae in 669) and internal discontent (there was a serious Messenian revolt c. 660—the exact date is disputed. see ARISTOMENES I and MESSENA). During the sixth century the external problem was solved by the annexation of Cynuria and Cythera (q.v.), by a long war against Arcadian Tegea to reverse a serious defeat, a defeat of Argos, and the institution of a new policy (c. 550; perhaps due to the ephor Chilon, q.v.), by which the Arcadian cities were admitted to alliance. Thus she formed the nucleus of what was to be formally organized c. 510–500 into the Peloponnesian League (q.v.). To the period 550–510 belong a series of campaigns which was to earn her later reputation as an enemy of tyranny (see SICYON, POLYCRATES I, LYGDAMIS, HIPPIAS I). But at home the Messenian problem remained and there was a further revolt c. 490 (see ANAXILAS I, ZANCLE).

(c) Modern scholars place Sparta's acquisition of the constitution and socio-military institutions which tradition ascribed to Lycurgus (q.v.) anywhere between c. 800 and 600 B.C. with a majority for some point in the seventh century. Whatever the date they gave her a defined constitution earlier and therefore more primitive than that of any other significant city and, thanks to the stability of the Spartan economy and of Spartan problems, its essential provisions remained unchanged for centuries. Thus the young Spartan was devoted from the age of 7 to a deadening regime of military training and militaristic obedience which produced the finest army in Greece (see ARMIES, GREEK, § 3) but, much more gradually, a notorious austerity of life and an absolutely rigid oligarchic government (see APELLAI I, EPHORS, GEROUSIA).

(d) Sparta's leadership in Greek affairs, which she maintained with increased credit in the invasion of Xerxes, began to decline soon after 470, partly as a result of the disgrace of Pausanias (q.v. 1) and Leotychides (q.v.), the anti-Spartan activities of Themistocles, and, above all, the growth of the Delian League under Athens, and it was more seriously impaired by the loss of life in the earthquake of 465 B.C. and the strain of another Messenian War (c. 465–460). But she survived the first Peloponnesian War with Athens (460–446) without disgrace and, in 431, her jealousy and fear of Athenian expansion, exacerbated by her allies, prompted her to begin another war (see PELOPONNESIAN WAR). The pre-eminence which she regained by the overthrow of Athens in 404 was nevertheless precariously based on a dwindling citizen-population, on the individualist ambitions of Lysander and Agesilaus (qq.v.), and on an increasing disregard for the traditional equality of possessions and for the prohibition of monied wealth and of the alienation of land-lots; and it is not surprising that she never recovered her strength after the disaster of Leuctra (371) and the restoration of Messenian independence by Epaminondas (q.v.).

(e) During the next hundred years or more the number of her citizens and her political importance were steadily

declining. The deadening effects of her conservative regime were realized, far too late, in 242 B.C. by Agis IV, whose proposals to revive the strictness of the Lycurgan training and to admit *Perioikoi* and foreigners to the citizen-body were obstructed by the ephors and the few remaining *Spartiatæ*; and, after his violent death, by Cleomenes III, who by revolutionary methods abolished the ephorate and raised the number of citizens to 4,000, but, ruling as a tyrant, was opposed and overthrown by the Achaean Confederacy and Antigonos (q.v. 3) Doson at Sellasia (222 or 221). Of the various tyrants who followed him, Nabis, who styled himself king, was the most successful, but was defeated by Flamininus (q.v. 1) in 195, and Sparta was compelled to join the Achaean Confederacy and finally incorporated as a *civitas foederata* in the province of Achaia. A remarkable revival of prosperity under the Roman Empire, especially in the second century, is attested by inscriptions and architectural remains, and a revival of the Lycurgan regime is a picturesque, if unpleasant, feature of the age of Septimius Severus. Surviving the destructive raid of the Heruli in A.D. 267, Sparta finally succumbed in ruins at the hands of the Goths under Alaric in 395.

KING-LIST. Before c. 800 B.C. the list is very hypothetical. Until 491/90, the Spartans claimed, son had succeeded father; though it is difficult to believe, there is no evidence to refute the claim. Thereafter relationship is indicated in brackets, the reference being to the preceding king.

ANCIENT SOURCES. (a) Documents: *IG* v. 1 (1911); *BSA* xxvi-xxx (1923-30). Public documents prior to Hellenistic times are extremely scarce, and the great majority of surviving inscriptions are statue-bases and lists of magistrates of the imperial age.

(b) Authors: Poets: see Alcman and Tyrtaeus; Homer, esp. *Od.* iv. Prose: Hdt. 1, 65 ff., bks. 5-6 *passim* (Cleomenes), bks. 7-9 (Persian Wars). Thuc. 1, 10, 18, 89 ff., 101-3, 128 ff. (Pausanias); bks. 2-8 *passim* (Peloponnesian War). Xen. *Hell.* (*passim*), *Lac. Pol.*; Arist. *Pol.* 2, 9, 5, 7 and *passim*. Plut. *Lycurgus*, *Lysander*, *Agessilaus*, *Agis* (IV), *Cleomenes* (III), *Apophthegmata Laconica*. For topography, *Strabo* 8, 4-6 (Laconia), Pausanias 3, 11-20 (Sparta).

MODERN WORKS. The article 'Sparta' in *PH* gives full accounts of topography (E. Bølte), Constitution and History (V. Ehrenberg), Religion and Art (L. Ziehen), and a bibliography to 1924. More recent works are: F. Olher, *Le Mirage spartiate* (1931), ii (1941); P. Roussel, *Sparta* (1960); K. M. T. Chitties, *Ancient Sparta* (1949); H. Michell, *Sparta* (1952); W. den Boer, *Laconian Studies* (1954); F. Kiechle, *Lakomen und Sparta* (1962); G. L. Huxley, *Early Sparta* (1962); A. H. M. Jones, *Sparta* (1967); A. J. Toynbee, *Some Problems of Greek History* (1969), 152 ff. Most of these have detailed bibliographies.

EXCAVATIONS AND ANTIQUITIES. *BSA* xii-xvi (1905-10), xxvi-xxx (1923-30), 1949; R. M. Dawkins and others, *The Sanctuary of Artemis Orthia at Sparta* (1929), E. A. Lane, *BSA* xxxiv (1931-4), J. Boardman, *BSA* lviii (1961), G. Lippold, *Frühgriechische Bildhauerschulen* (1950), with references.

MAPS. *Graecia Antiqua* (Frazer and van Buren, 1930), pl. xxxv. A. M. W., W. G. F.

SPARTA, CULTS AND MYTHS. The former are well discussed in general by Ziehen in *PH*, s.v. 'Sparta'. Prominent among them were those of Apollo at Amyclae (Ilyacinthia, see *IYACINTHUS*; his throne and archaic statue there were famous, Paus. 3, 19, 1 ff.); of Artemis, who became identified with a Dorian goddess, Orthia (the name has various forms, see 'Artemis Orthia', *JHS* Suppl. v, 1929, esp. 399 ff.); Athena, whose principal temple was the Bronze House, hence her epithet Chalkioikos; Aphrodite, here worshipped as an armed goddess, Areia or *Ἀρμιμένη*; Enyalios, apparently regarded as separate from Ares, with some interesting ritual, including sacrifice of puppies and a sham-fight; Zeus, who in Hellenistic times had (*inter alia*) the title of Agamemnon, a curious blend of the cults of a god and a hero, if the somewhat doubtful evidence is correct. Of heroes and heroines, the Dioscuri (q.v.) were prominent, often in connexion with Helen (q.v.); see F. Chapouthier, *Les Dioscures au service d'une déesse* (1935), especially 143 ff. Helen herself was worshipped in a way indicating that she is more goddess than heroine. The Leucippides also (see *DIOSCURI*) had a cult. Of festivals, one of the most prominent was the Carnea (q.v.).

Really Spartan myths are quite uncommon, most of the fabulous history of the place representing attempts to attach pre-Dorian mythology to the Dorians. The Pelopidae, including Agamemnon, who is killed at Amyclae as early as Pindar, *Pyth.* 11, 31, the hint being taken from *Od.* 4, 514 ff., are claimed as a kind of Spartans, and Heracles has a series of adventures there and is made out to be an ancestor, though he had little cult.

See bibliography s.v. SPARTA (Excavations).

H. J. R.

SPARTACUS, Thracian gladiator who led a revolt at Capua in 73 B.C. Numerous Thracian, Celtic, and German renegades quickly joined him. Spartacus defeated two Roman armies, then devastated southern Italy, continually attracting additional fugitives; ultimately his army numbered 90,000. In 72, after losing his Celtic associate Crixus, he defeated three Roman armies and reached Cisalpine Gaul whence, he hoped, his followers would disperse to their homes. They, however, preferred to plunder Italy. Spartacus accordingly marched south again, conquered two more Roman armies, desolated

Iucania, and would have invaded Sicily, had not piratical transports failed him. In 71 Crassus, after unsuccessfully attempting to corner Spartacus in the 'toe' of Italy, finally caught and destroyed him in Lucania, subsequently crucifying any rebels he captured. Pompey, returning from Spain, annihilated the few who escaped. Spartacus quickly became a legend; he was competent, brave, physically powerful, and apparently humane.

The primary source was apparently Sallust's *Historiae* (Plutarch (*Crass.* 8 f.; *Pomp.* 21) and Appian (*HCiv.* 1, 116 f.) give continuous, but not wholly trustworthy, accounts, the writers who follow Livy (*Epit.* 95 f.; *Florus* 2, 8; *Eutrop.* 6, 7; *Oros.* 5, 24) sketchier versions. See T. Rice Holmes, *Roman Republic* (1923), 1, 156 f.; L. Pareti, *Storia di Roma* iii (1953), 687 ff. E. T. S.

SPARTOCIDS, a dynasty which established itself at Panticapaeum (q.v.) in 438 B.C., and ruled most of the Crimea and the Taman peninsula until c. 110 B.C.: see BOSPORUS (2), CIMMERIAN. It was called after its founder, Spartocus I. The Spartocids were probably of Thracian origin, but soon became hellenized. The earlier members of the dynasty avoided regal style and were known simply as *ἀρχοντες Βοσπόρου*; but they kept a mercenary force and probably owned most of the Crimean land. From the time of Spartocus III (304-284) they bore the title of kings. They so developed the cultivation of wheat in their dominions as to become the greatest exporters of grain to Greece. In the fifth century they probably conceded a right of pre-emption to Athens; in the next two centuries they still cultivated the Athenian market, but dealt freely with other Aegean cities. Their wealth is attested by their magnificently furnished rock-tombs near Panticapaeum. In the second and first centuries the Spartocids suffered from Scythian and Sarmatian invasions of the Crimea, and c. 110 they were displaced by Mithridates VI of Pontus, whose help was sought by Paerisades V. This last Spartocid ruler was killed in an uprising led by the Scythian Saumacus whom he had probably been forced to adopt. The Bosporan kingdom thus became part of Mithridates' empire.

The dynasty comprised (cf. R. Werner, op. cit.): Spartocus I (438/7-433/2), Seleucus (with Satyrus I, 433/2-393/2), Satyrus I (433/2-389/8, alone 393/2-389/8), Leucon I (389/8-349/8), Spartocus II (with Paerisades I 349/8-344/7), Paerisades I (349/8-311/10, alone 344/3-311/10), Satyrus II (311/10-310/00), Prytanis (310/00), Eumelus (310/00-304/3) Spartocus III (304/3-284/3), Paerisades II (284/3-c. 245). Hereafter less is known of the dynasty: Spartocus IV (c. 245-c. 215), Comasare (c. 215-c. 175), Paerisades III (between 215 and 190?), Paerisades IV Philometor (c. 190?-after 160), Spartocus V (between 160 and 150), Leucon II (between 160 and 150), Hygiaeon (c. 150), Paerisades V (after 150-108/7).

SPARTOI, see CADMUS. Their descendants had a birthmark in the shape of a spearhead, Arist. *Poet.* 1454^b22 (from Euripides' *Antigone*?), by which they could be known.

SPELUNCA, natural grotto on the Tyrrhenian coast of Italy immediately east of Tarracina (q.v.), where the Emperor Tiberius had a villa. Sejanus (q.v.) rescued him from death in a cave in there. Modern *Sperlonga* preserves the name. Recently the grotto has yielded thousands of fragments of Hellenistic-type sculptures, mostly of marine monsters, and a Greek inscription naming three Rhodian sculptors.

P. MacKendrick, *The Mute Stones Speak* (1962), 171 ff.; G. Jacobi, *L'antro di Tiberio a Sperlonga* (1963); G. Saeflund, *Fynden. Tiberiusgrottan* (1966). E. T. S.

SPES, a *res expetenda* rather than an actual 'virtue'. A temple was built to her by A. Atilius Calatinus in the First Punic War. Burnt down in 31 B.C., it was restored by Germanicus in A.D. 17. 'Spes P.R.' is the rising generation, the hope of the race, 'Spes Augusta' imperial promise centred in the princes (cf. *supplicatio Spei et Iuuentutis*, 18 Oct., for the *toga urilis* of Augustus). She bears an opening flower and catches up her skirt as if in haste. Her temple in the Forum Holitorium is identified with one of the three temples under S. Nicola in Carcere (Platner-Ashby, 493; Nash, *Pict. Dict. Rome* 1. 418 ff.).

G. Wissowa, *RK* 263, 329 f.

H. M.

SPEUSIPPUS (c. 407–339 B.C.). Athenian philosopher, son of Eurytion and of Plato's sister Potone. He accompanied Plato on his last visit to Sicily (361) and succeeded him as head of the Academy from 347 to 339. Of his voluminous writings (Diog. Laert. 4. 4) only fragments and later reports remain, but Aristotle treats him with respect and it is clear that he continued and helped to shape some major philosophical interests which the Academy had acquired under Plato.

(a) DEFINITION. Speusippus argued that, since a definition is designed to identify its subject and differentiate it from everything else, it can only be established by knowing everything there is. This can hardly have been intended, as some ancient critics thought, to refute all attempts at defining. More probably it was his view of definition which prompted Speusippus in his ten books of *Ἱστορία* to set about collecting the observable resemblances between different sorts of plant and animal, for he may have thought (as Aristotle sometimes did, *An. Post.* B 13) that a species can be defined by discovering a set of characteristics which it shares with various other species, taken collectively, but not with any one other species.

The Academy's interest in definition had led to the recognition that some expressions have more than one meaning. Speusippus marked this by drawing distinctions comparable to, but fuller than, those familiar from Aristotle's logic. Where a single word is in question, it may have one sense or more than one (*συνώνυμα, ὁμώνυμα*); where more than one word is in question, they may stand for one thing or for quite different things, or one may derive its sense from the other (*πολλώνυμα, ἑτερόνυμα, παράνομα*). This in itself would give Speusippus his place at the birth of logic in the Academy.

(b) PHILOSOPHY AND EXACT SCIENCE. Speusippus wrote on Pythagorean mathematics, endorsing the search for the elements of numbers which Plato had taken over from the Pythagoreans (see the newly discovered fragment of Speusippus, *Plato Latinitas* iii. 40 1–5). But he refused to equate numbers with Platonic Ideas, which like others in the Academy he rejected; and he further denied the claim, which Aristotle ascribes to the Pythagoreans and Plato, that the elements of number are the elements of everything else. Other sorts and levels of reality, he argued, need other sorts of element. Hence Aristotle accuses him of making the universe 'episodic', disconnected; but it is Speusippus' theory that underlies Aristotle's attempt in *Metaph.* A to show that it is not strictly true, but only true 'by analogy', that all things have the same elements.

(c) ETHICS. In the Academic debate which can be heard behind Plato's *Philebus* and the ethical writings of Aristotle Speusippus makes two appearances. He holds, first, that pleasure is neither good nor evil in itself, and second, that goodness is to be found only in the final stages of development and not in the origins.

Under all these heads it is likely that the best of his work has been digested in that of Aristotle and his successors,

and in particular that his biological observations in the *Ἱστορία* were largely absorbed in the treatises of the Lyceum.

Testimonia and fragments in P. Lang, *De Speusippi Academiae Scriptis* (1911); Zeller ii 1^a 982, 1010; F. Hambruch, *Logische Regeln der plat. Schule in der aristotel. Topik* (1904); J. Stenzel in *JW* iii A. 1616 ff.; H. Cherniss, *Aristotle's Crit. of Plato and the Acad.* i (1944), esp. ch. 1; P. Merlan, *From Platonism to Neoplatonism* (1961).

G. E. L. O.

SPHAERUS of Borysthenes (b. c. 285 or 265, lived at least to 221 B.C.), a pupil first of Zeno, then of Cleanthes; friend and adviser of the Spartan reformer Cleomenes. His numerous writings dealt with all branches of philosophy (especially with morals and politics) and with certain of the older philosophers. His definitions were highly esteemed in the Stoic school.

Testimonia in von Arnim, *Stoic.* i. 139–42.

W. D. R.

SPHINX, a mythological monster, with human head and the body of a lion. Originating in Egypt, probably as a type of the king, the Sphinx became known early to Syrians, Phoenicians, and Mycenaean Greeks. Already in the Near East it was transformed into a female being and remained female in Greek literature, although in art bearded male Sphinxes are known in the archaic period (H. Payne, *Necrocorinthia*, 1931, 89). Sphinxes were at first adopted by the Greek artists as a type of ghost-like monsters who carry off boys or youths and are present at fatal combats. Like many other monsters, the Sphinx acquired an apotropaic significance and was placed on tombs (Diog. Laert. 1. 89) and depicted on shields (Aesch. *Sept.* 522). In Boeotia, the native land of Hesiod's great mythological system, the Sphinx became a central figure of the native cycle concerned with the mythical dynasty of the Labdacidae. In an early version the Sphinx, sent by Hera to Thebes, asked the Thebans the riddle about the three ages of men (Apollo, 3. 5. 7 f.; a piece of folklore). They failed to solve it, and after each effort the Sphinx carried away and devoured one of them, including Haemon, son of Creon (E. Haspels, *Attic Black-Fig. Lekythoi*, 1938, 131), until Oedipus (q.v.) solved the riddle. The Sphinx committed suicide, or was killed by Oedipus (Corinna in schol. Eur. *Phoen.* 26). Later accounts, attesting the growth of Delphic religion, make Apollo send the Sphinx. These versions were used by Sophocles (*OT*) and Euripides (*Phoen.*).

In art sphinxes appear in great abundance in the 'animal friezes' of the orientizing period; marble statues of Sphinxes, such as the Sphinx of the Naxians in Delphi, are given as votives to Apollo (Ch. Picard, *Manuel d'archéol.* 1. 570, fig. 197), or guard the tombs of Attica (G. M. A. Richter, *Mélanges Picard*, 1949, 863). In Classical art the Sphinx is humanized. The Sphinx from Aegina and those of later Attic vases have beautiful serious faces, sometimes female breasts. Instead of the Hesiodic monster, the child of Echidna and Orthros (*Theog.* 326), the Sphinx becomes the wise, enigmatic, and musical messenger of divine justice; the tragic poets call her 'the wise virgin' and say that she sang her riddle (Eur. *Phoen.* 48, 1507).

G. M. A. II; J. R. T. P.

SPINA, an Etruscan port situated on what was the mouth of the southern branch of the Po. It was established towards the end of the sixth century (by Greeks or Etruscans?). The site was identified by air-photography in 1956; this city of the marshes had an elaborate canal system. Together with Adria (q.v.), it supplied the earlier foundation of Felsina (q.v.), Etruria Padana, and

ultimately Europe with the products of the rich fifth-century Greek commerce. A great quantity of Attic red-figure and other Greek pottery has been recovered from the Valle Trebba and Valle Pega cemeteries; it is now in the museum at Ferrara. Spina exercised considerable naval influence in the Adriatic and maintained a 'Treasury' at Delphi.

SPINNING. In an ancient household a large amount of a woman's time was spent in wool-work; and on the tomb of a virtuous Roman matron the crowning words of praise were 'Lanum fecit'. The fleeces were brought into the house in their rough state and had first to be washed. The wool was then teased and pulled into fluff before being treated by an instrument called *epinetron* which separated the fibres and arranged them lengthways, making them ready for spinning. The spindle—*κλωστήρ*, *fusus*—was a straight piece of reed, wood, or metal about 12 inches long; the whorl was a disk of clay, wood, or ivory attached to the end of the spindle; and the operation of spinning was as follows. The wool was placed on the distaff (*ῥακάστη*, *colus*), and from it a little was drawn, twisted, and fixed to a hook at the top of the spindle. With the help of the whorl the spindle was spun round, and as it spun more wool was paid out from the distaff and twisted into yarn.

Forbes, *Stud. Anc. Technol.* iv. 149 f.

F. A. W.

SPOLETIUM, mountain town in Umbria: modern *Spoleto*, with spectacular ancient remains. Becoming a Latin colony (241 B.C.), Spoletum rendered yeoman service against Hannibal (q.v.). After suffering severely in Social and Civil Wars, it became a flourishing *municipium*, the Via Flaminia (q.v.) being diverted to serve it. Later it was a Lombard duchy and is still an important city. See UMBRIANS.

C. Pietrangeli, *Spoletum* (Rome, 1939).

E. T. S.

SPOLIA OPIMA were spoils offered by a Roman general who had slain an enemy leader in single combat. Three kinds are distinguished, *prima*, *secunda*, and *tertia* according to the rank of the winner and the duty to which the spoils were dedicated. *Prima spolia* (or *opima*) were consecrated in the temple of Jupiter Feretrius (*secunda* and *tertia* to Mars and Quirinus respectively). *Spolia opima* were traditionally won on three occasions. Romulus' victory was obviously invented to credit him with the building of the temple of Jupiter Feretrius and the institution of the custom. But the historicity of the victories of A. Cornelius Cossus (q.v.) over Tolumnius (c. 428) and of M. Claudius Marcellus (q.v. 1) over Viridomarus (222 B.C.) is attested by epigraphical and literary evidence. Interest in *spolia opima* revived in 29 B.C. owing to the victory of Licinius Crassus (q.v. 6) over Deldo, the chief of the Bastarnae, and Octavian's rejection of Crassus' claim.

SPRINGS, SACRED. The worship of springs (or wells), a phenomenon of the highest antiquity and widespread all over the world, is in essential points similar to that of rivers (see RIVER-GODS). Flowing water, especially when bubbling up from the interior of the earth, was to the primitive mind animate and divine, and the plastic creative imagination of the Greeks personified such spirits of fountains as nymphs (see NYMPHS). Fountains with

extraordinary qualities gained special significance and acquired corresponding myths—warm healing fountains were attached to the cults of Hephaestus, Heracles, and Artemis. Mantic springs were attached to several famous oracles, as those of Apollo at Didyma (q.v.) near Miletus and at Delphi (Cassotis); cf. the spring at Claros, that of Daphne near Antioch, and that in the Troad near the grave of the Sibyl. Poseidon was said to have caused fountains to spring up (e.g. the salty fountain on the Athenian Acropolis, in the Erechtheum); so also Dionysus (thus a fountain near Haliartus reminded men of the wine-god and his nurses because of the ruddy colour of its waters: Plut. *Lys.* 28. 7). The fountain on the summit of the Boeotian Helicon, Hippocrène, was brought forth by a blow of the hoof of Pegasus, said to have been the horse of Poseidon. Fountains were also named after heroes, as Achilles and Agamemnon; those that disappear into the earth were considered to be entrances to Hades (as Styx in Arcadia, Asterion in Argos). A number of myths (cf. Dirce, s.v. AMPHION, and AMYMON) and cults (cf. the nymphs of the spring) clearly show the strong fascination which springs exercised on Greek minds. The Roman festival Fontinalia (13 Oct.), when flowers were thrown into the fountains, was important. The Romans also threw coins into wells (Pliny, *Ep.* 8. 8. 2). Horace sacrifices a kid to the Bandusian spring (*Carm.* 3. 13. 3).

SPURINNA, TITUS VESTRICIUS (*PW* s.v.), born in Transpadane Italy c. A.D. 25, commanded part of Otho's (q.v.) advanced guard in A.D. 69, and successfully defended Placentia after quelling a mutiny. *Cop. suff.* under Vespasian, he is almost certainly one of two men (Pliny, *Pan.* 60-1) who received a second consulate from Nerva and a third from Trajan: his second consulate is definitely attested by the *Fasti Ostiensis*. Nerva honoured him with a statue for a campaign against the Bructeri, but it is uncertain when that operation took place. In his old age Spurrina lived an active life in the country and wrote Greek and Latin lyrics; he was still alive c. 105, a friend of the Younger Pliny, and possibly an oral source for Tacitus' *Historiae*.

Syme, *Tactus*, App. 6.

G. E. F. C.

STABERIUS EROS, a scholar, originally a slave, who taught the children of the Sullan *proscripti* free. Brutus and Cassius were his pupils (Pliny, *HN* 35. 199; Suet. *Gram.* 13).

STABIAE, modern *Castellamare* in Campania just south of Pompeii (q.v.). It was taken by the insurgents and destroyed by Sulla in the Social War (90/89 B.C.). In the Early Empire it was a fashionable resort until the Vesuvius eruption buried it (A.D. 79). The Elder Pliny perished here. Excavations have uncovered exceptionally fine frescoes.

L. d'Orsi, *Gli scavi di Stabia* (1954); O. Elia, *Pitture di Stabia* (1957). E. T. S.

STADIUM. The Greek *στάδιον*, the running-track, was a long parallelogram, about 200 yards long and 30 yards wide. In the sprint race (also known as *στάδιον*) the competitors ran the length of the track; in the longer events they went up and down the straight, turning sharply round pillars at the end. When possible the stadium lay between two hills with an embankment at the two ends which were either left square or rounded in a half-circle, for the convenience of the spectators. The four best-known extant stadia are those at Delphi, Olympia, Epidauros, and Athens. At Delphi the present structure, dating from the second century A.D., is largely due to

Herodes Atticus, who also rebuilt the stadium at Athens with forty-six rows of marble seats holding some 50,000 people. In all four stadia the start and finish are marked with pillars and stone slabs divided into sections, one for each runner. At Epidaurus there are also small pillars every hundred feet on each side of the track, and a stone channel with basins at intervals to provide the spectators with water.

E. N. Gardiner, *Athletics of the Ancient World* (1930), 128 ff.
F. A. W.

STANDARDS, CULT OF. Every permanent station of a Roman military unit, especially a legion, and every camp regularly constructed contained a chapel, which, at least in imperial times (Vegetius, *De re mil.* 2. 6), was under the charge of the first cohort, or headquarters company. In this were kept, besides the statues of gods worshipped by the troops and of the emperors, the standards of the unit and its component parts. These, from an unknown date (Pliny, *HN* 13. 23; our information does not go back to republican times), received divine or quasi-divine honours. They were anointed and otherwise tended on feast-days (Pliny, *ibid.*, cf. ROSALIA). A suppliant might take refuge at them (Tac. *Ann.* 1. 39. 7); an altar was on occasion dedicated at least partly to them, or at all events to the most important, the eagle of the legion (*CIL* iii. 7591; no. 14 v. Domaszewski); the *natalis* of the eagle, presumably the anniversary of the day when the unit was first commissioned, was celebrated (*CIL* ii. 6183; no. 3 v. Domaszewski); sacrifice was made to them particularly on the occasion of a victory (Joseph. *Bj* 6. 316, where the troops who took Jerusalem make offerings to their ensigns in the Temple, not in their camp). Tertullian even says with rhetorical exaggeration that the soldiers venerated them beyond all gods (*Apol.* 16). They are not precisely gods, but are associated with *genius* and *uirtus* (*CIL* iii. 7591, above), and are 'propria legionum numina' (Tac. *Ann.* 2. 17. 2). This perhaps goes to the heart of the matter; they are the embodiment of the luck or power of their unit and hence worthy of respect and to be kept sacredly. See SIGNA MILITARIA.

A. von Domaszewski, *Die Religion des römischen Heeres* (West-deutsche Zeitschrift 1895), 9 ff.
H. J. R.

STAPHYLUS (1), personification of the grape-cluster, σταφυλή. He is vaguely attached to Dionysus, as his son by Ariadne (q.v.); Plut. *Thes.* 20; his favourite (schol. Ar. *Plut.* 1021); an Assyrian king who welcomes him during his Indian campaign (Nonnus, *Dion.* 18. 5 ff.). Or he discovered the vine and informed Oeneus (q.v.); 'Probus' on Verg. *G.* 1. 9).

H. J. R.

STAPHYLUS (2) of Naucratis, an Alexandrian to whom are assigned histories of Athens and Thessaly (Περὶ Ἀθηνῶν and Θεσσαλικά). Perhaps c. 300 B.C.

FGH iii. 269.

STASEAS of Naples, the first Peripatetic philosopher known to have settled in Rome. M. Calpurnius Piso became his pupil c. 92 B.C. He is frequently mentioned by Cicero. He seems to have occupied himself particularly with the problem of the normal length of human life.

W. D. R.

STASINUS of Cyprus (? 8th c. B.C.), epic poet, possibly author of the *Cypria* (Ath. 15. 682 d), See EPIC CYCLE, § 5.

EGF 15-32.

STATILIUS (PW 34) **TAURUS**, TITUS (cos. suff. 37 B.C., cos. II 26 B.C.), the greatest Augustan marshal after Agrippa. Of uncertain origin (perhaps Lucanian), by military talent and steadfast loyalty he rose to wealth

and honours; he was thrice acclaimed *imperator* by the legions and held several priesthoods (*ILS* 893; 893 a). His earliest recorded service for Octavian was as an admiral in the *Bellum Siculum* (36). After the conquest of Sicily he crossed to Africa and secured that province, holding a triumph in 34 (the amphitheatre erected in commemoration on the Campus Martius was completed in 30). He also fought in Illyricum (34-33), commanded the land army in the campaign of Actium (31), and conducted operations in Spain (29). After his second consulate (26) the only record of him is that he was put in charge of Rome as *praefectus urbi* in 16 when Augustus departed to the provinces of the West (Dio Cass. 54. 19. 6; Tac. *Ann.* 6. 11). He probably died not long after. Of his descendants the last and brightest was Statilia Messallina (q.v. 2), the third wife of Nero.

Syme, *Rom. Rev.*, see index.

R. S.

STATIUS, PUBLIUS PAPINIUS (c. A.D. 45-96), was born at Naples, where his father, himself a poet, was a school-master. From his father, whom he eulogizes in *Silvae* 5. 3, he learned much of the poetic technique he was afterwards to develop. Settling in Rome, he established there his fame and popularity as a poet. From his *Silvae* we learn that he recited his works to fashionable audiences (cf. Juv. 7. 82-6), that he became intimately acquainted with several of the leading men of his day, and that he was admitted to the court of Domitian, to whose good graces he owed the running water in an estate he acquired at Alba (3. 1. 61 ff.), where his father was buried (5. 3. 35-40). He won the prize, probably in 89, at the annual festival instituted by Domitian at Alba, but was, much to his chagrin, unsuccessful at the quinquennial Capitoline contest, probably in 94. To his wife Claudia he pays graceful compliments (3. 5). They had no children, though Claudia had a daughter by a previous marriage and Statius adopted a son who died young (5. 5). Statius' health was not robust, and we hear of one serious illness through which he was nursed by his wife. Towards the end of his life he retired to his native city, where he died, seemingly before the murder of Domitian (Sept. 96). He appears to have been of an amiable disposition, deeply attached to his relations and capable of warm friendship. Though not of great wealth, he was probably in easy circumstances, at any rate during his later years. Real hardship does not seem ever to have fallen to his lot and, generally speaking, it is only of the pleasant sides of life that we have glimpses in his poems. The least pleasing aspect of his nature is to be seen in the extravagant flattery lavished on Domitian (e.g. *Silv.* 4. 1-3), which may be partially extenuated by the conditions of the age.

WORKS. A poem on Domitian's German wars and the *Agave*, a libretto for a pantomimus mentioned by Juvenal 7. 87, have perished. The epic *Thebais*, published about 91, took twelve years to complete and tells in twelve books the story of the quarrel between Eteocles (q.v. 2) and Polynices. The *Achilles*, brought to a conclusion in the second book by the poet's death, deals with the education of Achilles under the Centaur Chiron, his disguise as a girl during his sojourn at the court of Lycomedes in Scyros, his amour with Deidameia, his detection by Ulysses and Diomedes, and his departure for Troy. The *Silvae* in five books published at different times from 92 onwards, the fifth being posthumous, consist of thirty-two occasional poems addressed to the poet's friends celebrating their marriages, villas, baths, *objets d'art*, or public benefactions, offering congratulations on recovery from illness, the birth of an heir, or attainment of high office, or consolations on the loss of relatives, and sometimes dealing with lighter subjects. The most famous is the short address to Sleep (5. 4). These poems are mostly in hexameters, though four are

in hendecasyllabics, one in sapphics, and one in alcaics. They were lost in medieval times till Poggio discovered a manuscript containing them at Constance in 1417.

Statius' verse is fluent and highly polished, even in the hastily composed *Silvae*. The *Thebais* requires episodic treatment and lacks a real hero. There are frequent imitations of Virgil in word and thought, and the gods take part in the action. Excessive use of hyperbole is perhaps the chief fault in taste. But the various episodes, highly coloured and rhetorical though they be, are generally successful regarded as separate wholes, the descriptive passages striking, and the narrative lively. The sentiment rarely reaches sublimity, but telling effects are achieved in 'pathetic' passages. The epics were much admired throughout medieval times, and Statius, regarded by Dante as a Christian, is an important character in the *Purgatorio*. He was a favourite also of Chaucer's.

LIT. F. Vollmer's edition of *Silvae* (Teubner, 1898).

MSS. OF EPICS. A. Klotz, *Hermes*, 1905. See too, Gariod's edition of *Thebais* (1906), for theory (arising from nature of MS. variants) of a second edition of *Thebais* by Statius himself.

MSS. OF *SILVAE*. All MSS of *Silvae* derive from M, i.e. Codex Matritensis Biblioth. Nation. 1678. For different views on problems connected with the tradition, e.g. whether M is the MS. discovered by Poggio or only a copy of it, a question not yet decided, see Teubner editions by Klotz (1911) and Marastoni (1961).

STELE. Stone slabs as grave markers are found occasionally in Bronze Age Greece, the most notable being those with relief decoration above the Shaft Graves at Mycenae. In Geometric and early Archaic Greece such stelai are rare, but in Athens about 600 begins a distinguished series with relief decoration on the shaft, topped first by a sphinx, then by a palmette finial. The latter type originated in east Greece, and it persisted after 500 in the islands, after the Athenian series had already ended. A new type of stèle in Athens appears after the mid fifth century. It is broader, with pilasters at the side and a pediment above, and carries relief representations of the dead or scenes of parting. The series was stopped by decree of Demetrius of Phalerum at the end of the fourth century and later grave markers are simple short cylindrical blocks. The word is also applied to the upright rectangular slabs on which decrees and similar public documents were inscribed, and to *horoi* marking the limits of property.

G. M. A. Richter, *The Archaic Gravestones of Attica* (1961); K. F. Johansen, *The Attic Grave Reliefs* (1951), L. H. Jeffery, *BSA* 1962, 115 ff.

STENTOR, a man who could shout as loudly as fifty ordinary people (*Iliad* 5. 785-6). He is evidently known to Homer, but no later author has anything worth quoting to say of him.

STEPHANUS of Byzantium was a Greek grammarian, probably a contemporary of Justinian, and apparently a teacher in the imperial university in Constantinople. Nothing is known in detail of his life. He is the author of *Ἑθνικά*, in sixty books, an alphabetical list of place-names together with the adjectives derived from them. The original work, which contained information on foundation-legends, etymologies, changes of name, oracles, historical anecdotes, proverbs, etc., is lost. The surviving epitome, consisting mainly of jejune entries, was compiled some time between the sixth and tenth centuries A.D. It may be the work of one Hermolaus, mentioned in the *Suda*, but some scholars believe that it is actually a

conflation of at least two epitomes, made on slightly different principles. There are fragments of the original extensive text embedded in the *De Administrando Imperio* and *De Thematribus* of Constantine Porphyrogenitus.

Stephanus was neither a geographer—he makes no direct use of Ptolemy—nor a historian—he puts down side by side information dating from different epochs—but a grammarian. His prime interest is the correct formation of ethnic adjectives, for which he has two criteria, morphological regularity and regional usage. His direct sources, which he sometimes mentions, include Hierodorus, Oros of Miletus, Philo of Byblos *Περὶ πόλεων*, Dionysius Periegetes, Strabo, historians from Hecataeus to Polybius, and lost grammarians and antiquarians. He is not entirely uncritical in his handling of his sources, but his main value is as a compilation of material from writers whose works are lost. The surviving epitome was used by the *Etymologicum Magnum*, Eustathius, and probably the *Suda*. The last writer to use the original version was Constantine Porphyrogenitus. The *Ἑθνικά* are preserved in a large number of MSS., mainly dating from the Renaissance. There is no satisfactory critical edition.

Ed. A. Meineke, Berlin (1849, repr. 1958).

R. B.

STEROPE or **ASTEROPE**, (1) one of the Pleiads, wife of Oenomaus (q.v.; Paus. 5. 10. 6); (2) daughter of Cepheus king of Tegea (Apollod. 2. 144). Heracles gave her (in Paus. 8. 47. 5, Athena gave Cepheus) some of the hair of Medusa, bidding her lift it thrice above the city wall, to put attackers to flight.

H. J. R.

STERTINIUS, in the Augustan Age, turned Stoic tenets into Latin verse and, according to Acro (ad Hor. *Epist.* 1. 12. 20), wrote 220 books.

STESICHORUS, lyric poet, said to have been born at Maturus (Steph. Byz. s.v. *Μάταυρος*) and to have lived at Himera (Pl. *Phdr.* 244 a, Arist. *Rh.* 1393^b). His real name was said to be Teisias (*Suda* s.v. *Στησίχορος*), and it is quite possible that *Στησίχορος* was a title. His dates are confused by *Marm. Par.* 50, which places his arrival in Greece in 485 B.C. This seems a mistake, and there can be little doubt that he was alive in the first half of the sixth century, since he is connected with Phalaris (Arist. *Rh.* 1393^b) and the *Suda* places his birth at 632-620 B.C. and his death 556-553 B.C. His works were collected in twenty-six books, and seem to have been lyrical poems composed on a big scale, in which the narrative element was strong. Titles of several poems survive and indicate that he told stories gathered from widely different epic sources. It is not known what type of poems he composed, though it is possible that some were Dithyrambs, since narrative predominated in this type, and Stesichorus may have been influenced by the voyage of Arion in the West. Though the fragments are scanty, something may be learned of his work. In his *Funeral-games of Pelias* he drew on the Argonautic saga and described the games in some detail (frs. 178-80). His *Geryoneis* told of Heracles' quest of the cattle of Geryon, and was remarkable for its knowledge of the silver-mines of Tartessus (fr. 184), its conception of Heracles as a great drinker (fr. 181), its account of the Sun's magic cup which Heracles borrowed for his voyage (fr. 185), and for the notion that Geryon was winged (schol. Hes. *Th.* 287), which was soon popularized by painters. His *Boar-hunters* (frs. 221-2) seems to have been about the Calydonian boar-hunt, and his *Eriphyle* (fr. 194) dealt with a famous Theban legend. His *Ilupersis* drew on the epic, and was interesting for its account of Epeus who made the Wooden Horse (fr. 200), though attempts to connect it with the legend of Aeneas remain unproved. In his *Helen* he seems to have told the conventional story in a

first version, which contained an account of her marriage to Menelaus (fr. 187). But legend (Pl. *Phdr.* 243 a) told that he was blinded for this and did not recover until he recanted in a second poem, his famous *Palmode*, in which he denied that Helen ever went to Troy (fr. 192) and put the blame on Homer for the story (fr. 193). In a second *Palmode* (ibid.) he put the blame on Hesiod. Perhaps the truth behind this is that Stesichorus outraged opinion which regarded Helen as a goddess, as it did in Sparta. His *Orestes* in two books seems also to have been sung at Sparta at a spring festival (frs. 211-12), and differed from Homer in placing the death of Agamemnon in Lacedaemon. It contained an account of Clytemnestra's dream (fr. 219), and gave some part to the nurse of Orestes (fr. 218). The *Rhadine*, attributed to him, seems more likely to be a later, romantic work by another poet, perhaps of the same name (cf. *Marm. Par.* 73). The fragments show that he wrote in the traditional language of choral lyric, used a kind of 'dactylo-epitrite' metre, and was an ingenious inventor of episodes later very popular, such as the birth of Athene in full armour from the head of Zeus (*Etym. Magn.* 772. 49). He was admired for his dignity (Quint. *Inst.* 10. 1. 62) and grandeur in plot and character (Dion. Hal. *Vett. Cens.* 2. 27). See also PASTORAL POETRY, GREEK.

STICHOMETRY. (1) GREEK. *Στίχος* means primarily a line of verse, and metrical texts were naturally measured by the number of their verses; but for bibliographical purposes the equivalent of a hexameter line was taken as a unit of measurement for prose works also. For this purpose the hexameter line was reckoned as approximately 16 syllables or 36 letters (Galen, *De placitis Hippocratis et Platonis* 8. 1. 655). This does not mean that prose works were habitually written in lines of this length. On the contrary, the evidence of papyri found in Egypt shows that the lines in prose manuscripts were usually not much more than half of this. The *στίχος* was simply a unit of measurement indicating the extent of the book, or of portions of a work, and serving to fix the remuneration of the copyist. Thus Josephus (*AJ* 20. 11. 3) states that his work consists of twenty books and 60,000 *στίχοι*, and according to Diogenes Laertius the works of Aristotle comprised 445,270 *στίχοι*; while the Edict of Diocletian

fixes a scribe's wage at 25 to 20 *denarii* per 100 *στίχοι*. Callimachus, in his catalogue (*πινυκες*) of the Alexandrian Library, recorded the number of *στίχοι* in each work. Many extant manuscripts contain notes of the number of *στίχοι*, e.g. several of the Herculaneum rolls, the Chester Beatty papyrus and the Codex Claromontanus of the Pauline Epistles, the Laurentian manuscripts of Herodotus and Sophocles, etc.

(2) LATIN. In Latin manuscripts the same system was in force, the unit being the Virgilian line of 16 syllables. This is stated explicitly in Philipps MS. 12266, where the writer, in order to check the dishonesty of copyists, states that he had calculated on this basis the number of lines in the books of the Bible and the writings of Cyprian. Stichometrical notes are, however, not common in Latin manuscripts.

Stichometry, a purely mechanical device, is distinct from colometry, the method of dividing texts according to sense-lines. This, according to Jerome (pref. to Isaiah) was common in manuscripts of Demosthenes and Cicero, and was adopted in his Vulgate version of the Prophets. There is no trace of it in extant Greek papyri, but it is found in bilingual manuscripts (where its utility is obvious), and in some later Vulgate manuscripts.

STICHOMYTHIA (στίχομυθία, Poll. 4. 113, τὸ παρ' ἐν ἱαμβίῳ ἀντιλέγειν) is a form of dramatic dialogue in which two characters speak a single line each for a considerable stretch (cf. *Henry VI*, III. iii. 2). Sometimes they speak two lines each with similar regularity (Eur. *Bacch.* 935 ff.). As Gross shows, Aeschylus was less strict in his use of stichomythia in later plays than in earlier, whereas Euripides grew more strict. Sophocles, avoiding in this as in other respects stiffness in the structure of his iambic verse, is far freer than either; and in comedy, with its naturalistic technique of dialogue and ready tolerance of *antilabe* (breaking of a line between speakers), there is hardly a trace of stichomythia (Ar. *Ach.* 1097 ff., a special case; 305 ff., pairs; *Plut.* 163 ff.). Stichomythia can be highly effective, as in the tensely concentrated dialogue between Orestes and his mother (Aesch. *Cho.* 908 ff.), and that between Oedipus and the Herdsman (Soph. *OT* 1147 ff.); but it tends to involve the introduction of padding (e.g. Soph. *OT* 559, Eur. *Ion* 1002). Even in a long and otherwise regular series stichomythia is sometimes broken, particularly towards the end. Editors occasionally emend needlessly through a mistaken desire for symmetry.

STILICHO, FLAVIUS, Roman general, was the effective ruler of the Western Empire from A.D. 395 until 408. On the accession of Arcadius (q.v. 2) to the Eastern throne in 395 Stilicho brought about the downfall and death of the new Emperor's chief adviser, Rufinus (q.v. 1). About this time the poet Claudian began to publish his poems in praise of Stilicho. In 395 and 397 he ineffectively invaded Greece in order to defeat the Visigoths of Alaric; but in 402 and 403 he defeated Alaric at Pollentia (*Pol-lenzia*) and Verona respectively, withdrawing troops from Britain and other provinces to make up his army. In 405 he annihilated at Fiesole a horde of Ostrogoths and other barbarians, led by Radagaisus, who had invaded Italy. He was beheaded on the orders of Honorius (q.v.) in 408. Little is known of his character.

E. A. T.

STILO PRAECONINUS, LUCIUS AELIUS (Suet. *Gram.* 3; Pliny, *HN* 33. 29), the first great Roman scholar, born at Lanuvium about 150 B.C., of equestrian rank, and a Stoic by training. He interested himself in literary criticism, antiquities, grammar, and etymologies; though not an orator, he composed speeches for others. Amongst his pupils he numbered Varro and Cicero (*Brutus* 205-7), and his aims and methods profoundly influenced his own and succeeding generations. His work on literature included interpretations of the *carmina Saliorum*, comments on the language of the XII Tables, critical editions of Ennius and Lucilius, and the establishing of a canon of twenty-five plays of Plautus, whose language he rated highly (Quint. 10. 1. 99). It is difficult to estimate his debt to Greek grammarians, but his treatise on sentences (*De proloquiis*; Gell. 16. 8. 1) was probably inspired by the *Περί ἀλωματων* of Chrysippus.

Cl. G. Funaioli, *Gramm. Rom. Frag.* 57-76. Schanz-Hosius, I 76 a. J. E. M.

STILPON (c. 380-300 B.C.), third head of the Megarian school, may have studied under Diogenes the Cynic, as well as under Euclides the founder of the Megarian school. During his headship the school was the most popular in Greece; *inter alios* the originally Socratic school of Eretria came under its influence, and Zeno, the founder of Stoicism, acquired from Stilpon his skill in dialectic. Stilpon is said to have written at least twenty dialogues, and the names of some are preserved. In metaphysics he maintained the monism characteristic of the Megarian school, denied the Platonic distinction between universals and individuals, and asserted the wrongness of all assertion that was not tautologous; in ethics, under Cynic influence, he extolled the virtue of ἀπάθεια, but did not press the doctrine to such extremes as the Cynics. His influence on Stoic logic was probably considerable. W. D. R.

STIMULA, Roman goddess of unknown functions. She had a grove (Livy 39. 12. 4, cf. Ov. *Fasti* 6. 503), where the Bacchanals met in 186 B.C.; hence identified with Semele (q.v.). Ovid (*ibid.*; August. *De civ. D.* 4. 11) derives her name 'de stimulis quibus . . . homo impellitur'. H. J. R.

STIPENDIUM means a payment in money. As applied to the Roman provinces it meant a direct tax (see *TRIBUTUM*). It was also applied to soldiers' pay. Since this was originally issued at the end of the campaigning season, *stipendium* came to mean also, first a campaign, and ultimately a year of service. In the latter sense we regularly find in the auxiliary diplomata (q.v.) the phrase 'quinis et vicenis pluribusve stipendius emeritis'. The other meaning, however, persisted, and from Caesar to Domitian, and from Severus onwards, was applied to the four-monthly payments made to the troops in January, May, and September: hence Suetonius (*Dom.* 7) could describe the Domitianic increase of pay by the words 'addidit et quartum stipendium militi, aurcos ternos.'

(a) **YEARS OF SERVICE.** Polybius states that every Roman citizen with the requisite property-qualification was liable to serve for 16 years between his 17th and 46th years, or for 20 years in an emergency. These terms were observed by Augustus when in 13 B.C. he drew up the regulations for his permanent standing army: 16 years of service + 4 as a veteran became the period for a legionary, while the praetorian was favoured with the shorter period of 12 years. He was soon obliged to lengthen the prescribed terms, and in A.D. 5 these became for the legionary 20 years + 5 as a veteran; for the praetorian, 16 years; for the auxiliary, 25 years. Many men were willing to serve beyond their time, and there are instances of

service as long as 40 years. Under the Flavians service with the veterans was absorbed into the regular service, and legionaries then served for the same number of years as the auxiliaries. Service in the fleet was for 26 years.

(b) **PAY.** Pay was issued as early as the siege of Veii (c. 400 B.C.), but it is not until the second century B.C. that we have much evidence as to its amount.

From c. 170 to c. 122 B.C. the basic legionary rate was 5 *asses* a day, with substantial deductions for food, clothing, and arms: at the then prevailing tariffing of 10 *asses* to the *denarius* this meant an annual rate of 180 *denarii*. From the retariffing of the *as* at 16 to the *denarius* until the time of Caesar the rate remained at 5 *asses* a day: this meant a reduction to 112½ *denarii* in the annual rate, but stoppages were now made for food and arms only. Caesar doubled the pay to 225 *denarii* and brought back the deductions for clothing. The rate remained unchanged until the time of Domitian, who increased it to 300 *denarii*. It was increased further to 500 *denarii* by Septimius Severus, and to 750 *denarii* by Caracalla.

Praetorian pay was probably 375 *denarii* a year for the greater part of the reign of Augustus, and was increased to 750 *denarii* in his later years. The urban cohorts then received 375 *denarii*, half the scale of the praetorians. The pay of the *vigiles* and the fleet is uncertain.

Auxiliary pay varied according to arm, members of *alae* receiving more than members of cohorts, and the mounted men in the cohorts more than the *pedites*, whose basic rate was as low as 75 *denarii* a year before the increase under Domitian.

The *principales* (non-commissioned officers) were paid more than the private soldiers, and for pay purposes were graded as *duplicarii* (double-pay men) and *sesquuplicarii* (pay-and-a-half men) according to rank.

In the third century inflation made nonsense of the previous scales and the monetary content of the pay became of little value. Real pay became increasingly made in kind.

Comparison of Basic Pay from
Domitian to Severus (in *denarii*)

Praetorians	1,000	<i>Alae</i>	200
Urban Cohorts	500	Cohorts— <i>equites</i>	150
Legions	300	<i>pedites</i>	100

STIPULATIO, a formal contract concluded orally in the form of question (made by the future creditor, *stipulator*: 'centum dari spondes?'), and answer (by the future debtor: 'spondeo'). From the use of *spondeo* was derived the more restricted term *sponsio*. *Stipulatio* was one of the oldest institutions of Roman private law (for its existence in the time of the XII Tables see Gai. *Inst.* 4. 17 a), and it gradually developed into a 'fulcrum' of the whole Roman system of obligations. Any agreement could be given legal effect by being incorporated in this simple oral form (see *CONTRACT, ROMAN LAW OF*). Other verbs (*promittere*, *dare*, *facere*, and Greek equivalents) were permissible in the classical law and (unlike *spondere*) were open to foreigners.

Stipulatio was also used for some special purposes. Romans commonly required security for a debt in the form of a surety (see also *SECURITY*). The earliest forms (called *sponsio* and *fidepromissio*, from the verbs used) were available only when the principal debt had been created by *stipulatio*. The surety promised to discharge the same obligation as the principal debtor. The later (but still Republican) *fideiussio* was available whether the principal debt arose from a *stipulatio* or in any other way.

There were other technical differences. Another use was *novatio*: one or more obligations concluded in another form could be confirmed and transferred into a stipulation.

Stipulatio was also extensively used in civil proceedings, e.g. to oblige a defendant or his representative to fulfil a judgement (*iudicatum solvi*). In many cases a *stipulatio* could be ordered by a magistrate, especially by the praetor (*stipulationes praetoriae*), either to reinforce an already existing obligation, or to create a new obligation for the protection of an interest otherwise not protected (e.g. at the beginning of a usufruct (see *SERVITUTES*), or in case of damage threatened to a neighbour's property by the dangerous condition of a building, etc.).

Stipulatio underwent a 'degeneration' the character of which is disputed. On the one hand, its oral form was relaxed. It is usually thought that by the time of Gaius (*Inst.* 3. 92) the use of any particular verb was unnecessary, the formality residing only in an oral question and answer (provided that the same verb was used in both, and that the parties were present together). Many think that by the time of Justinian even this was made unnecessary by an obscure constitution of Leo (*Cod. Inst.* 8. 37. 10; *Inst.* 3. 15. 1) of A.D. 472 which removed the need for 'solemnia verba'. On the other hand, the emphasis shifted from the oral form to the written evidence of it. For since witnesses were unnecessary, it became usual to draw up a written memorandum (*instrumentum, cautio*), and already in the time of Cicero (*Top.* 26. 96) *stipulatio* could be classed as a written act. It is probable that well before Justinian the document had in practice replaced the oral form, and Justinian ruled that even a document made *inter absentes* should be valid unless the parties could be proved to have been in different places for the whole day in question.

STOA (1), philosophical school or sect, founded by Zeno of Citium in about 300 B.C., named after the Stoa Poikile, a public hall in Athens, in which Zeno and his successors used to teach. Though the school was probably less strictly organized than the Academy and the Peripatos, it had a continuous succession of official heads (*προσπάται*) from Zeno to at least A.D. 260 (the latest date known) and probably some time later. But it had faded out long before Justinian closed the last philosophical schools at Athens in A.D. 529.

The history of the school is usually divided into three periods: (I) the Early Stoa (from Zeno to the first half of the second century B.C.); (II) the Middle Stoa (second and first centuries B.C.); (III) the Late Stoa (time of the Roman Empire).

1. The *Early Stoa* is represented by: (1) Zeno (until 263); (2) disciples of Zeno: Cleanthes (*προσπάτης* from 263 to 232), Ariston of Chios, Herillus of Carthage, Dionysius "ὁ Μεταθέμενος", Persaeus, Aratus of Soli; (3) disciples of Cleanthes: Chrysippus (*προσπάτης* from 232 to 207) and Sphaerus; (4) disciples of Chrysippus: Zeno of Tarsus and Diogenes the Babylonian, who followed Zeno of Tarsus as *προσπάτης* (exact date unknown); (5) disciples of Diogenes: Antipater of Tarsus (*προσπάτης* from c. 150 to 129 B.C.), Archdemus of Tarsus, and Boethus of Sidon.

Zeno was the author of all the fundamental doctrines of the Early Stoa. His system was taken over in its entirety by Cleanthes—while Ariston and Herillus developed doctrines of their own and were later considered heretics—and it was elaborated and corrected by Chrysippus. The philosophy of Chrysippus became later so much identified with Stoic orthodoxy that it super-

seded the Zenonian system in the mind of posterity. This makes it difficult to determine exactly in what respects Chrysippus differed from his predecessors, since neither his nor their works have survived.

The system of the Early Stoics was divided into three parts: (a) τὸ λογικόν (comprising theory of knowledge, logic, rhetoric); (b) τὸ φυσικόν (ontology, physics, theology); (c) τὸ ἠθικόν (ethics). Their main doctrines were the following:

(1) Virtue is based on knowledge. Only the wise man who not only knows the truth but also knows with certainty that he knows it can be really virtuous. Since knowledge is the agreement of one's mental conceptions with reality, the wisdom of the wise man consists in his having such mental conceptions as are caused by real things, correspond exactly to (or are accurate images of) these things, and could not have been produced by other causes. Conceptions of this kind are called *καταληπτικαὶ φαντασίαι*. In the first part of their system (τὸ λογικόν) the Stoics tried to prove that such conceptions are possible and discussed how they are acquired, how they differ from other conceptions, and how they can be expressed in language.

(2) It is the aim of the philosopher to live in harmony (Zeno), or, as Chrysippus added, in harmony with nature (*ὁμολογουμένως φύσει ζῆν*). The formative and guiding principle in nature is the λόγος (reason), which is identified with God and manifests itself as *εἰμαρμένη* (fate, necessity) and *πρόνοια* (divine providence). In a special way it manifests itself in human reason. Among the elements fire is most closely related to the λόγος. The universe is periodically consumed by fire, from which in due course a new world arises.

(3) To be virtuous, that is to live in harmony with reason, is the only good, not to be virtuous the only evil. Everything else is indifferent (*ἀδιάφορον*). But the orthodox Stoics—in contrast to heretics like Ariston—admitted that there were also *προηγμένα* (for instance: self-preservation, health) which the wise man chooses and *ἀποπροηγμένα* (death, illness, pain, etc.) which he avoids if he can do so without acting unvirtuously. Yet their presence or absence does not affect his happiness. For since he always acts in harmony with reason he is always possessed of the only real good and therefore completely independent of the vicissitudes of fortune. He is also absolutely brave, since he knows that pain and death are no evils; absolutely continent, since he knows that pleasure is not a good; and absolutely just, since he is not influenced by prejudice or favour.

II. The *Middle Stoa* is chiefly represented by Panaetius, Diogenes the Babylonian's successor as *προσπάτης*, and by his disciples Posidonius and Hecaton.

Zeno of Tarsus and his disciples had begun to doubt some special doctrines of their predecessors, for instance the doctrine of a periodical world conflagration (*ἐκπύρωσις*). Panaetius was the first to reject this doctrine altogether and to undertake a thorough revision of the whole Stoic system of philosophy, partly under the influence of Platonic and Aristotelian ideas. In ethics he rejected the belief that only the absolutely wise man can be virtuous. He considered it the duty of the philosopher to help those who without aspiring to absolute wisdom are making progress in wisdom and virtue (*προκόπτοντες*). He tried to adapt Stoic ethics to the needs of active statesmen and soldiers. It was through him that Stoicism became so important an element in the life of the best representatives of Roman nobility. His ethical views had great influence on P. Scipio Aemilianus, in whose company he spent some years of his life, and on Scipio's friends P. Rutilius Rufus, C. Laelius, Q. Aelius Tubero, Q. Mucius Scaevola the augur, Q. Mucius Scaevola the pontifex and famous jurist, etc. Through his

writings he influenced the younger Cato, Brutus, and Cicero, though the latter professed himself an Academic. His disciple Hecaton created a system of moral casuistry, discussing in detail how the virtuous man would act under certain circumstances, especially when there is a seeming conflict of duties. Posidonius subjected the system of the Early Stoics to an even more thorough revision than Panaetius. He was the author of a new natural philosophy comprising all sciences. Mainly through him Stoicism influenced many scientists, such as the astronomers Geminus and Cleomedes and the geographer Strabo.

III. During the latest period in the history of the Stoa purely theoretical questions, though still discussed (cf. Seneca's *Quaestiones Naturales*, and, in the second century, the dispute between Academics, Peripatetics, and Stoics over the categories), receded into the background, giving way to a philosophy which was almost exclusively concerned with ethical questions.

Most important among the Stoic philosophers of the first century after Christ were L. Annaeus Seneca, L. Annaeus Cornutus, C. Musonius Rufus, and, towards the end of the century, Epictetus. At the same time Stoicism gave a philosophical foundation for the aristocratic opposition to those of the Emperors who tried to rule without or against the Senate. Helvidius Priscus, Paetus Thrasea, Rubellius Plautus, the famous opponents of Nero, and Junius Rusticus, who was condemned to death under Domitian, professed Stoicism.

The most important representative of Stoicism in the second century was the Emperor M. Aurelius. The names of a great many Stoic philosophers of minor importance who lived at that time have come down to us. None of the important representatives of the school taught in Athens during that period.

From the third century onward the school gradually faded out. But Stoic doctrine had an important influence on later Neoplatonism and on the philosophy of some of the Fathers of the Christian Church. While the Stoic school ceased to exist, Stoicism spread far beyond the ranks of professional philosophers, and continued to exercise an important influence on the life and thought of many.

See also ALLEGORY, GREEK, § 3; ASTROLOGY; ARCESILAUS (1) for the sceptical criticism of the Stoic doctrine of knowledge).

STOA (2). The name stoa is applied to various types of building with a roof supported by columns, but principally to a long open colonnade. This, besides being an appendage of various structures, was developed by the Greeks as a building in its own right. The stoa may be considered a sophisticated version of the simple lean-to shed, or alternatively, in some forms, as a long hall or *megaron* (see TEMPLE) with one side thrown open.

It was employed especially in shrines and in the agora. Archaic examples are found at Delos and in the Heraeum at Samos (see *Ath. Mitt.* 1957, 52 ff.). Greater depth was given to the colonnade by inserting an inner row of columns, which were commonly Ionic (the outer being Doric) and twice as widely spaced.

At Athens the Poikile or Painted Stoa, decorated with pictures by Polygnotus (q.v.) and other famous artists, was built about 460 B.C. Later in the century the Stoa of Zeus Eleutherios, which may also be the Basileios or Stoa of the archon called Basileus, was built in the

Athenian agora. Its remains (*Hesp.* 1937, 6 ff.) show that it was embellished with short projecting wings at either end, a form copied in several later examples.

In the fourth century and the Hellenistic Age stoas of enormous length became fashionable. The South Stoa at Corinth is a splendid example (*Corinth*, vol. 1. 4, U.S.A. 1954). Like many stoas, it had a series of rooms opening behind the colonnade. In the same period, magnificent two-storied colonnades were built, notably at Pergamum (q.v.). The Stoa of Attalus II at Athens, now rebuilt to serve as a Museum, shows vividly what this type of building looked like.

Colonnades were also combined in various rectangular schemes (see TOWNS); and the peristyle, or enclosed court with colonnades on all sides, was used in shrines, gymnasia (q.v.), and on a modest scale in houses (q.v.).

The stoa was the general-purpose building of the Greeks. It offered shelter from sun, wind, and rain. It could be used as council-chamber or court-house, market-hall or class-room; and also for informal conversation as in several Socratic dialogues.

STOBAEUS (*Ἰωάννης Στοβαεὺς*), author of an anthology of excerpts from poets and prose-writers, intended in the first instance for the instruction of his son Septimius. The work was probably composed in the early fifth century A.D.; it consisted originally of four books, which came to be grouped later under the title *Ἐκλογαὶ καὶ Ἀθρολόγιον*, though subject-matter and treatment are essentially homogeneous. It deals with a variety of topics, from metaphysics to household economy; from book 2 onwards it is concerned chiefly with ethical questions. The illustrative extracts, which Stobaeus probably owed in large measure to earlier collectors, are arranged under successive headings, being grouped generally in the same order, beginning with the poets. Stobaeus cites a multitude of authors, from Homer to Themistius; the writers of the Second Sophistic are scarcely represented, but there are many excerpts from the Neoplatonists; Christian authors are not excerpted. Photius (9th c.) commends the work for its usefulness, especially to writers and speakers. Its value for us consists in the large number of citations from earlier literature, which not only supplement our knowledge of classical authors, but often throw light upon difficulties in the regular manuscript tradition.

Suda (s.v. *Ἰωάννης*), Photius, *Bibl.*, cod. 167. EDITION. C. Wachsmuth and O. Hense (1884-1921). CRITICISM. A. Elter, *De Ioh. St. cod. Phot.* (1880), id. *De gnom. graec. hist. et orig.* (1893-6); O. Hense, *PW* xx. 2549 ff. W. M. F.; R. D.

STOLO, GAIUS LICINIUS (*PIV* 161), and L. Sextius Lateranus, traditionally tribunes of the *plebs* from 376 to 367 B.C., were celebrated as the authors of the law that opened the consulship to the *plebs*, by enacting that one consul might be a plebeian. L. Sextius was in all likelihood the first plebeian consul and he may have been appointed in 366: but the details of the long struggle, which preceded the passing of the Licinian-Sextian laws, and most of the laws themselves, must be rejected either as anticipating events of the Gracchan Age, or as inventions of Licinius Macer designed to glorify his family. By the enactment which increased from two to ten the number of the officials who superintended various religious ceremonies, the plebeians secured an equal representation. The existence of a law on debts and usury, providing that interest should be deducted from the principal and the balance paid in three equal annual instalments, is sometimes denied. By far the most disputed measure is that which limited tenancies of public land; even if Stolo

took some such step to meet the economic crisis of his time, the details are obviously borrowed from the agrarian policy of the Gracchan Age.

B. Niese, *Hermes* 1888, G. Niccolini, *Fests d. tribum d. plebe* (1934), 56 ff.; H. Scullard, *Hist. Roman World* (1962), 94 f.; K. v. Fritz, *Hist.* 1951, 1 ff.

STONES, SACRED. The Greeks and Romans preserved many survivals of religious primitivism, some of which may be due to the pre-Greek and pre-Roman cultures (especially where there was no clear explanation or legend). Good specimens are the many stones (and rocks) that because of their remarkable appearance or mysterious efficacy were regarded as holy, possessing unusual power (or *mana*), in fact fetishes (cf. the Greek *bautylos*). Unhewn stones were the Eros of Thespias, the Charites of Orchomenus, the healing 'Heracles' at Hyettus (characteristically all Boeotian cults), the 'Zeus Descender' (Καππότας) at Gythium (probably a meteorite); at Delphi was shown the very stone which Kronos swallowed in place of the newborn Zeus, and oil was daily poured on it. Here they also possessed the much-revered omphalos (q.v.). Thirty squared stones were revered at Phaeac and had individual divine names; an obelisk at Megara was named Apollon Karinos, and the small stone columns which commonly stood before the doors of Athenian houses were called by the name of Apollo Agyieus. At Pheneus in Arcadia solemn oaths were taken by the *petroma* of Demeter, which was 'two great stones joined to one another' (Paus. 8. 15. 1). We know of representations of Zeus as a pillar (Tarentum) (pillar-cult was well known to the Cretans of pre-Greek times), as a pyramid (Sicyon), and as an omphalos (on Mount Casius). Herms were extremely popular—square columns with human heads and a *membrum virile*. From the Near East we may adduce the black stone (a meteorite) belonging to the Mother of the Gods at Pessinus, the white conical stone of Aphrodite at Paphos, and the cones and pyramids which often occur on coins from Asia Minor.

At Rome an ancient boundary-stone on the Capitol passed as Jupiter Terminus, who here followed on the old god Terminus. The Romans also swore on 'Jupiter the stone' (cf. E. Harrison, *Essays in Ridgeway*, 92 ff.), and the *lapis manalis*, which was carried from the Porta Capena by the pontifices and over which water was probably poured, was important as a rain charm.

STRABO (64/3 B.C.—A.D. 21 at least), historian and geographer, a Greek (partly Asiatic in descent) of Amaseia, Pontus. He studied grammar under Aristodemus, and, later, geography under Tyrannion, philosophy under Xenarchus, and knew Posidonius. He was in Rome in 44–35, c. 31, and 7 B.C.; in Egypt 25–c. 19 B.C. (collecting geographical material); and in Amaseia c. 7 B.C. to his death. A Peripatetic, Strabo became a Stoic, with some contempt for religion, and admired the Romans and their Empire; independent but no great traveller, he knew various parts of Asia Minor and Egypt, but little of Greece or Italy, and probably wrote for persons in political positions (he emphasizes the use of geography in public affairs—1. 1. 16–18), but whether at Rome for Romans or at Amaseia or Alexandria for Greeks is disputed. Apparent ignorance and omissions do point to some special purpose.

His *Historical Sketches* (Ἱστορικὰ ὑπομνήματα), forty-seven books excluding the era covered by Polybius, are lost; his *Geography* (Γεωγραφία), seventeen books, has survived. Books 1–2: introductory. 1. Homer; Eratosthenes criticized. 2. Mathematical geography; criticism

of Eratosthenes and Polybius, examination of Posidonius (especially zones); Eudoxus' voyages. Strabo's opinions on the earth, cartography on sphere and plane. 3. Spain, Isles of Scilly. 4. Gaul, Britain, etc. 5–6. Italy, Sicily; the Roman Empire. 7. North and east Europe, north Balkans (some is lost). 8–10. Greece (very antiquarian and mythological). 11. Euxine-Caspian, etc., Taurus, Armenia. 12–14. Asia Minor (some mythology and history). 15. India, Persia. 16. Mesopotamia, Palestine, Ethiopian coasts, Arabia. 17. Egypt, Ethiopia, north Africa.

Strabo brings Eratosthenes more up to date. On a geocentric sphere, the one land-mass is ocean-girt. He knows Mediterranean lands, Egypt, Asia Minor, little of British Isles; nothing of northernmost Europe and Asia; Caspian by Alexander's writers and Megasthenes, Africa is a triangle north of the equator. Strabo gives geographical and historical information readably, without details except where interesting or important. Having moderate (and not up-to-date) mathematical and astronomical knowledge, he underestimates both, latitudes, longitudes, and 'climata' he treats lightly, and is inadequate in physical geography and phenomena, being predisposed towards his own ideas of what is important. He reveres Homer, undervalues Herodotus, scorns Pytheas. He adds Roman to Greek authorities, despising (rightly?) Roman geographers. But his work is a storehouse of information, an historical geography, and a philosophy of geography.

STRATEGOI (στρατηγοί) was the ordinary term for military commanders in Greece, but in Athens in the fifth century B.C. *strategoi* had political as well as military importance. Nothing is known of Athenian *strategoi* in the sixth century, when the army was commanded by the *polemarchos* (q.v.), but in 501/500 a new arrangement was introduced by which the people annually elected ten *strategoi*, one from each of the ten *phylai* (q.v.) (Arist. *Ath. Pol.* 22. 2). Each *strategos* commanded the regiment of his own *phyle*, while the *polemarchos* retained the supreme command. From 487/6 onwards the *polemarchos*, like the other *archontes*, was appointed by lot. Good leaders, whether military or political, obviously could not be regularly selected by lot; and so the *polemarchos* ceased to command the army, and the *strategoi*, who continued to be elected, not only became the chief military commanders, but in some cases became political leaders too.

Themistocles and Cimon were early examples of *strategoi* who were politicians as well as generals. Pericles was a *strategos* very often throughout his career; from 443 he held the office almost continuously until his death in 429. Cleon, Nicias, and Alcibiades were all *strategoi*. But at the end of the fifth century, with the collapse of the military and naval power of Athens, and later because of an increasing tendency to specialization, military office ceased to be a means of acquiring political influence.

The annual election of *strategoi* was held in the spring, and their term of office coincided with the ordinary Athenian year, from midsummer to midsummer. If a *strategos* died or was dismissed from office, a by-election might be held to replace him for the remainder of the year. The original rule that one *strategos* was elected from each *phyle* underwent some modification: in several

years (the earliest is 441/40; cf. *FGH* 324 F 38) one *phyle* is known to have supplied two *strategoi* simultaneously, leaving another *phyle* unrepresented. The reason for this relaxation of the rule may have been that Pericles' long tenure of the office would otherwise have excluded other members of his *phyle* for many years. (But the view of some modern scholars that in such cases one *strategos* had powers superior to the others seems to be without foundation.) By Aristotle's time the rule had been entirely abandoned, and *strategoi* were elected without regard to *phylai*.

After the *strategoi* took over the supreme command from the *polemarchos*, they ceased to command the regiments of the *phylai* individually. (This function was taken over by the *taxiarchos*.) A particular military or naval expedition might have one or several *strategoi* in command; only occasionally did all ten go together. A *strategos* might be given special powers to take decisions in the field without reference back to Athens (*στρατηγὸς αὐτοκράτωρ*). At home, the *strategoi* were responsible for recruitment and the calling up of citizens for military or naval service, and for organizing the maintenance and command of ships by the system of trierarchies (q.v.). When a legal case arose from any of these matters, such as a prosecution for desertion or evasion of military service, or a dispute over the duty to perform a trierarchy (see ANTIDOSIS), the *strategoi* were the magistrates responsible for bringing the case to a lawcourt and presiding over the trial (see DIKASTERION). In the fourth century a systematic division of duties was made: one *strategos* commanded the infantry, one was in charge of the defence of Attica, two were in charge of the defence of Peiraeus, and one supervised the trierarchies, leaving five available for other duties (Arist. *Ath. Pol.* 61. 1).

The Athenian people kept a close watch on their *strategoi*. At the end of their term of office they were subject to *euthyna* (q.v.) like other magistrates. But in addition every prytany (see PRYTANEIS) each *strategos* was subject to a vote, by show of hands, on the question whether his conduct in office was satisfactory. If the vote went against him, he was tried in a lawcourt; but if he was acquitted by the court, he resumed his office (Arist. *Ath. Pol.* 61. 2). These arrangements illustrate one of the most striking features of the Athenian democracy: reluctance to give power to able men and fear that it might be abused.

In the Hellenistic age *strategos* was the title of officials with wide powers, political as well as military, in the Aetolian Confederacy (q.v.) and in the Achaean Confederacy (q.v.). It was also used for the governor of a district in Ptolemaic Egypt (see NOMOS) and elsewhere in the Hellenistic empires, and it became the regular Greek word for the Roman *praetor* (q.v.).

D. M. M.

STRATOCLES (b. c. 350 B.C.) was one of Demosthenes' accusers in the Harpalus trial (324–323). He became the agent of Demetrius Poliorcetes in Athens from 307 and directed the immoderate adulation shown to him. In 303 his authority was upheld by Demetrius against an attempted revolt by the party of Cassander, but was shattered after Demetrius' defeat at Ipsus (301). In 294 he was reinstated by Demetrius, but had to share his power with more moderate politicians. The date of his death is unknown. His main characteristic was unscrupulous demagoguery.

W. B. Dinsmoor, *Archons of Athens* (1931).

F. W. W.

STRATON (1) of Lampsacus, Aristotelian philosopher, head of the Peripatetic School after Theophrastus until

his death (c. 287–269 B.C.). The preserved list of his books (Diog. Laer. 5. 59–60) includes ethics, cosmology, zoology, psychology, physics, and logic; his work on physics and cosmology earned him the name of ὁ Φυσικός. Fragments of several books survive; a substantial portion of his doctrine about void may be preserved in the Introduction to Hero's *Pneumatica* (see GOTTSCHALK).

He contradicted Aristotle in asserting the existence of void in the cosmos. This has been taken for a concession to the Atomists, but it seems unlikely; Strato argued only for 'disseminate void'—i.e. void interstices of small dimensions separating particles of matter. His reasoning was drawn chiefly from the penetration of apparently solid objects by 'physical powers' like heat and sound, and perhaps also from compression (but this is doubtful). The origin of this theory is Theophrastus' theory of 'pores', rather than anything in the Atomists.

Strato argued that the processes of nature were to be explained by natural causes, not by the action of any god. This is mainly an attack on the Stoics, but it also dispenses, apparently, with the very limited part played by Aristotle's divine unmoved movers. Strato rejected the universal teleology of the Stoics; the evidence is not sufficient to decide to what extent he denied that kind of teleology which is the characteristic feature of Aristotelian biology.

Strato was an orthodox Aristotelian in his view of the cosmos as unique, uncreated, and geocentric. He modified the Aristotelian theory of the natural motions of the primary bodies (as the Stoics also did) to give fire and air not absolute lightness but simply less weight than the other two elements; and he dispensed with the fifth body (aether) with its natural circular motion.

He was the last Head of the Peripatetic School to do important original work. His theory about the void, his most famous contribution, was important in the history of physiology through its adoption by Erasistratus, and in technology through its adoption by Hero.

D. J. I.

STRATON (2), New Comedy poet. The only extant fragment is a skit upon the glossomania of the time, in which a bombastic cook describes common things in obsolete poetical words and phrases, and causes his patron to call him 'ex-slave of some kind of rhapsode' (μυῦδοροποιούρου τινός | δούλος γεγονώς), and therefore filled with Homeric vocables. The play *Phoenicides* (*Phoenix*, according to the *Suda*) is dated c. 300 B.C. by the reference (v. 43) to the work of Philetas of Cos.

The author: *FCG* i. 426 ff. Traditional version of the text (from Ath. 9. 382 b). *FCG* iv. 545 f.; *CAF* iii. 361 f. Papyrus version with additional vv. and free from actors' (?) interpolations. Guéraud and Jouguet, *Un Livre d'écolier* (1918), 14 ff.; Page, *GLP*, no. 57. See also Webster, *Later Greek Comedy* (1953), 145; H. Dolm, *Magister* (1904), 198 ff.

W. G. W.; W. G. A.

STRATON (3) of Sardis, who lived in Hadrian's time, made a collection of poetic epigrams about homosexual love and lust, the remains of which survive (mainly in book 12) in the Greek Anthology (q.v.). Among them are about 100 of his own poems, which are usually either coarse or mawkish.

G. II.

STRATONICEIA (Στρατονίκηια, now *Eskihisar*, an important Seleucid foundation in the interior of Caria, called after Stratonice, wife of Antiochus I, and probably founded by him; it was peopled with Macedonians. The

city was presented to Rhodes by 'Antiochus and Seleucus' (Polyb. 30. 31. 6), i.e. Antiochus I and his son Seleucus (?), who had previously endowed it lavishly. Lost by Rhodes, probably to Philip V, it was recovered in 197 B.C. (Livy 30. 18. 22). Rhodian possession was confirmed by the Romans at Apamea in 188, but revoked in 167. Like Mylasa (q.v.), Stratoniceia gained favour by resisting Q. Labienus in 40 B.C., and was a free city under the Empire. According to Steph. Byz. (s.v.) it was refounded by Hadrian as Hadrianopolis, but this name never came into general use. Stratoniceia possessed two important sanctuaries: the famous temple of Hecate at Lagina, and that of Zeus Chrysaoreus near the city. The latter served as the religious and political centre of a Chrysaoric League common to all Carians, of which the village was the basis; at its meetings the cities possessed votes in proportion to the number of villages on their territory. The Stratoniceans were admitted, though not Carian by race, by virtue of their possession of Carian villages (Strabo 660). Under the early Empire Stratoniceia, surprisingly in view of her origin, claimed the title of 'autochthonous' (SEG iv. 263); the explanation is perhaps that the city was founded on the site of an earlier Carian town (Steph. Byz. mentions a Carian city of Idrias, 'formerly called Chrysaoris', which is not otherwise known). The ruins at Eskihsar are not extensive, but include a theatre and a large building known as the Serapeum.

P. M. Fraser-G. E. Bean, *The Rhodian Peraea* (1954), Chs. iii and iv. G. E. B.

STRATONICUS (fl. c. 410-360 B.C.), of Athens, musician and wit, contemporary of Timotheus and Polveidus (Ath. 8. 352 a-b) and of the actor Simycas (ibid. 348 a). His witticisms, *Εὐτράπελοι λόγοι*, were well known soon after his death and excerpts made of them (Ath. 350 d). Characteristic examples are: 'Who is more barbarous—the Boeotians or the Thessalians?' 'The Eleians' (ibid. 350 b); and on a small city: *αὕτη οὐ πόλις ἐστίν, ἀλλὰ μόλις* (ibid. 352 a). C. M. B.

STRATTIS, Athenian comic poet, produced *Ἀνθρωπορέστης* after Eur. Or. (408) and *Atalanta* 'long after' (Schol. Ar. Ran. 146) Ar. Ran. (405). We have nineteen titles and seventy fragments; many titles suggest tragic parody (rather than mythological burlesque, so far as the distinction can be drawn), e.g. *Medea*, *Philoctetes*, *Phoenixiae*. A traditional figure, the gluttonous Heracles, was a character (fr. 11) in *Callipides*.

FCG ii. 763 ff.; CAF i. 711 ff.; FAC i. 812 ff. K. J. D.

STRENAE. This name was given by the Romans to the luck-bringing twigs which at the New Year were brought from the grove of the goddess Strenia and were exchanged by way of gift as bearers of luck and blessing. This oldest form of *strenae* was preserved in cult, since on the old New Year's Day (1 Mar.) the old laurel branches before the doors of the *rex sacrorum*, the great *flamines*, the *Curiae*, and the temple of Vesta were replaced by new branches. The *strena* is a Spring ceremony and is related to the German May tree. Later it came to be a gift, usually money, but twigs retained an aspect of luck in popular usage. The fact that the use involved an omen led to the word *strena* receiving the meaning 'omen' as early as Plautus.

L. Deubner, *Glotta* 1912, 34 ff.; U. Wilcken, *Arch. Pap.* xi. 207. L. D.

STYX, a river of Arcadia, which plunges from a snow-fed spring on the north-east side of Mt. Chelmos, down a black rock to a depth of 600 feet, and flows through a

wild gorge to join the Crathis. Its water was thought poisonous. It was one of the rivers of the underworld; the gods in Homer, and the Arcadians in fact, took oath by it (Hdt. 6. 74).

SUBSCRIPTIONES. (1) GREEK. In rolls of the Classical Period (so far as our evidence goes) information as to the contents of a manuscript is appended at the end. It gave principally the name of the author and title of the work. In extant papyri the subscriptions are of this simplest type. In one of the earliest Biblical papyrus codices (Chester Beatty Pap. II, of the Pauline Epistles), the number of *στίχοι* (see STICHOMETRY) in each epistle has been added, but in a different hand.

Medieval codices often add more information, such as the name of the scribe, the fact that the text has been corrected, or the date of writing. Thus the *Codex Sinaiticus* has notes at the end of Esdras and Esther recording the correction of the text from a manuscript by Pamphilus. In later times prayers for faithfulness in transcription, or curses against inaccuracy or theft, are sometimes added. We should note that later manuscripts may recopy earlier subscriptions (sometimes inaccurately, e.g. as regards date).

(2) LATIN. Early Latin classical manuscripts not infrequently have subscriptions recording the name of a corrector, often a man of considerable standing; e.g. the Medicean codex of Virgil, 'Turcius Rufus Apronianus Asterius . . . legi et distinxit codicem fratris Macharii'; Asterius, who was consul in 494, also revised Sedulius. Other subscriptions are: (Martial) 'Ego Torquatus Gennadius emendavi feliciter', (Apuleius) 'Ego Cispus Sallustius emendavi Romae felix' (with dates = 395 and 397); (Persius) 'Flavius Julius temptavi emendare sine autographo' (A.D. 402). These men represent not only the copying but the late Roman scholarship of the fourth century. Their work may have affected the textual tradition; e.g. many manuscripts of Terence contain the text as revised by Calliopius. Most manuscripts of the first decade of Livy bear the subscriptions of Nicomachus Flavianus, his son Nicomachus Dexter, and of Victorianus, all men associated with Symmachus (q.v. 2) in the senatorial literary circle that about A.D. 400 upheld the pagan traditions of Rome.

SUBURA, the valley between the Viminal and Esquiline Hills of Rome, opening out of the Argiletum and Forum Transitorium. The district was notorious for its bustle, noise, dirt, and shady morality. Its reputable traders sold provisions and delicacies, and manufacturing trades are also known (CIL vi (1953), 9824, 9399, 9491, 33862). Here lay a Jewish synagogue (CIG 6447). Distinguished residents included Julius Caesar.

SUDA (ἡ Σοῦδα) or **SUIDAS** is the name of a lexicon, not an author: the word is borrowed from Latin and means *Fortress* or *Stronghold*: see F. Dölger, *Der Titel d. S.* (1936), who instances other fanciful names of such collections, e.g. Pamphilus' *Λεξικόν*. The lexicon, which is a historical and literary encyclopedia rather than a mere word-list, was compiled about the end of the tenth century A.D. Texts (with scholia) of Homer, Sophocles, Aristophanes, and the *Anth. Pal.* were directly consulted; otherwise, the work is mainly based not on copies of the

writings of authors or commentators but on abridgements and selections from these made by late hands, e.g. The *Συναγωγή* (see LEXICA SEGUIERIANA), Harpocration, and Diogenianus (qq.v.). The historians are quoted from the *Excerptis* of Constantine Porphyrogenitus; biography comes mainly from Hesychius of Miletus. The work is marred by contradictions and other ineptitudes. Many of its sources were already corrupt, and like most works of its kind it has suffered from interpolation. Nevertheless, it is of the highest importance, since it preserves (however imperfectly) much that is ultimately derived from the earliest or best authorities in ancient scholarship, and includes topics from many departments of Greek learning and civilization.

SUEBI, a term applied by Tacitus in his *Germania* to an extensive group of Germanic peoples living east of the Elbe and including the Hermunduri, Marcomanni, Quadi, Semnones, and others. Roman writers other than Tacitus do not give so wide an extension to Suebia, and Tacitus himself in his later works limits the name to the Marcomanni and Quadi. The central tribe of the Suebi was the Semnones living in Brandenburg who controlled a shrine which was respected by all other Suebi and was the scene of human sacrifices. We do not know what was the relationship between the Suebi of whom Tacitus speaks and the Suebi who crossed the Rhine in A.D. 406, entered Spain in 409, and founded a kingdom in Gallacia which lasted until destroyed by the Visigoths in 585. The Spanish Suebi were converted to Catholicism by St. Martin of Braga c. 560.

E. A. T.

SUEIUS, a pedantic writer of rural idylls. Ribbeck identifies him with Serius, a friend of Cicero and of Varro.

Baehr, *FPR* 285; Morel, *FPL* 53. H. Bardon, *La Littérature latine inconnue* 1 (1952), 180 ff.

SUESSULA, inland town of Campania, midway between Capua and Nola (qq.v.). modern *Cancello*. It came under Roman control along with Capua in 338 B.C. Later it was the headquarters for Claudius Marcellus' successful operations against Hannibal (q.v.). Although unmentioned thereafter, it evidently remained a fair-sized town throughout antiquity.

E. T. S.

SUETONIUS (1) **PAULINUS**, GAIUS, as ex-praetor in A.D. 41, commanded against the Mauretanians and was the first Roman to cross the Atlas mountains, of which he wrote a description (Pliny, *HN* 5. 14). He was probably *consul suffectus* c. 42. In 58 he was appointed governor of Britain and at once began a forward movement reaching the Irish Sea and subduing Mona (Anglesey), a stronghold of Druidism. During the campaign he learnt of Boudicca's revolt (60) and swiftly returned with his advance-guard, but unable to concentrate an adequate force was compelled to abandon Londinium and Verulamium to sack. Retreating (along Watling Street) to his main force, he routed Boudicca's attack. His severity towards the rebels led to discords with the *procurator* Classicianus and his own recall (60). In 69 he supported Otho, and took a leading part in the campaign of Bedriacum, after which he came to terms with Vitellius.

Collingwood-Myres, *Roman Britain*, 98 ff.; Syme, *Taratus*, 762 ff. C. E. S.

SUETONIUS (2, *PW* 4) **TRANQUILLUS**, GAIUS (b. c. A.D. 69), son of the equestrian Suetonius Laetus, tribune of Legio XIII at Bedriacum in 69 (*Otho* 10), and originating perhaps from Pisaurum, perhaps from Hippo Regius in Numidia; while his grandfather seems

to have been associated with Caligula's court (*Cal.* 19). Suetonius is mentioned or addressed several times in the Younger Pliny's letters, as a quiet and scholarly man, who, after some experience at the bar, settled down as a writer. Presumably to qualify him for a career in the imperial service, he obtained through Pliny's agency a military tribunate, but did not take it up (*Ep.* 3.8. 1). He may well have accompanied Pliny to Bithynia about A.D. 111; for from this province Pliny wrote to Trajan and obtained for the childless Suetonius the *ius trium liberorum* (*Tra.* 10. 94-5). Shortly after this must begin the series of appointments to the palace, culminating in the three secretarial posts of a *studius*, a *bibliothecis*, and *ab epistulis*, which figure in a fragmentary inscription found at Bône in Algeria in 1952. The last post he held under Hadrian, by whom he was dismissed in 121/2, together with the praetorian prefect Septicius Clarus (S.H.A. *Had.* 11. 3), to whom Suetonius had not long before dedicated the first books of his *Caesars* (Joh. Lyd. *de Mag.* 2. 6). We hear nothing more of his career; but he probably continued writing for some years, and his work *On Public Offices* may have been connected with Hadrian's reorganization of the civil service. Altogether Suetonius represents the new type of professional scholars who came to prominence in the second century.

WORKS

1. *De viris illustribus*, composed during the reign of Trajan, biographies of Roman literary men arranged by classes. Of these, *De grammaticis et rhetoribus* is partly preserved in a MS.; and a few lives, variously abbreviated or corrupted, have come down in MSS. of the authors' works. *Terence*, *Horace*, *Lucan*, and the *Donatus Virgil* are generally regarded as coming from *De poetis*; the claims of *Tibullus* and *Persius* have been argued. Jerome, in his chronological table, gives brief items from Suetonius' work, including thirty-three poets, down to Lucan; fifteen orators, including Paccienus Crispus, part of whose life is preserved in the Schol. to Juvenal, 4. 81, and six historians, including the Elder Pliny, a brief fragment on whom has come down with his own *Natural Histories*. The remains of this work are to be found in Reifferscheid, 80 ff., and in Roth, 257-72, 287-301.

2. *De vita Caesarum*, twelve biographies from Julius Caesar to Domitian. The first few chapters of Julius were lost between the sixth and ninth centuries.

3. Lost works, in Greek as well as Latin, some known only from the list in the *Suda*, s.v. *Τράγκυλλος*, others from isolated citations in later writers. These included *Iudaea Historia*, on Roman games and festivals; and works on Greek games, on famous courtesans, on kings, on public offices, on Rome and its customs, on the Roman year, on Cicero's *Republic*, on terms of abuse (in Greek), on the correct names for clothes, etc., on critical marks in texts, on bodily faults. Several of these may have been included in the *Pratum* or *Prata*, a miscellany probably also referred to as *De variis rebus*. The evidence for these works is found most conveniently in Schanz-Hosius iii. 58 ff., Roth, 275 ff.

Since nearly all earlier Greek and Roman biography has been lost, the originality of Suetonius is hard to assess. Some contribution must have been made by Alexandrian biography, political and literary, some by Roman *tituli* and *laudationes*. However this may be, the *Caesars* differs from earlier works, as from the nearly contemporary *Lives* of Plutarch, in being arranged *per species* rather than chronologically: after a section on the subject's ancestors, a chronological passage outlines his life from birth to accession; then his activities and characteristics are treated as if under a series of rubrics, varied according to the individual and illustrated with a number of relevant anecdotes; and the chronological sequence is resumed

for an account of his death, sometimes followed by a description of his physical and other personal peculiarities. For the historian, this scheme is irritating, since many of the anecdotes can barely be understood thus removed from their proper contexts; nor is this drawback compensated by any real biographical gift on Suetonius' part, which might enable the separate details to add up to a whole. The grammarian's touch is seen in the frequent employment of *divino*, a statement of the main heads to be dealt with in the following sections, as most clearly in *Jul.* 44. 4: 'ea quae ad formam et habitum et cultum et mores, nec minus quae ad civilia et bellica eius studia pertinent, non alienum erit summatis exponere.' Unfortunately the plan of the subsequent material is often not easy to recognize, and is sometimes even obscured by this method of introduction.

Suetonius has few stylistic pretensions, beyond that of simplicity. Indeed he marks a departure in Latin historiography in that he is prepared to quote verbatim from earlier writers and from documents of various sorts, in prose and in verse, in Greek as well as Latin—a practice which was to be continued by such other scholars as Gellius and Macrobius. In particular, he quotes extensively from the letters of Augustus, which he presumably studied while working in the palace. The fact that, while Augustus' letters are drawn upon for the lives of Tiberius, Caligula and Claudius, there is no direct quotation from the correspondence of any later Emperor, suggests that Suetonius had completed only the first two lives when he was dismissed from office. The rare occasions when he seriously analyses a problem (e.g. *Tib.* 21. 2, *Cal.* 8) show that he possessed real critical ability; but all too often he is content simply to set down statements from one source or another, without choosing either to reconcile them or even to indicate the discrepancy. The great number of scurrilous anecdotes in most of the lives may be due to the nature of his sources; but he evidently found it harder to pass over a good scandal, however improbable, than Tacitus did. Moreover, his encyclopedist's mind was more attracted by curiosities of every sort than by major historical events or characters, which tend to be ignored unless they throw direct light on the Emperor's own personality. There is some justification in the judgement of the author of S.H.A. *Probus*, 2. 7, that Sallust, Livy, and Tacitus wrote *diserte*, Suetonius *vere*. Certainly he appears to reproduce his sources closely, without rhetorical perversion or deliberate ambiguity.

Suetonius was followed, in his series of imperial lives, by Marius Maximus and a number of other lost biographers, referred to only by the *Augustan History*, itself modelled on Suetonius, although displaying less skill and considerably less honesty. The sheer interest of the subject and the simplicity of the style have made Suetonius popular almost uninteruptedly since his death. He served as a model for Einhard's *Life of Charlemagne*, and lost his position as the classic biographer only when Plutarch was translated into the modern European languages.

SUFFECTIO was the procedure by which a substitute (*suffectus*) was appointed, whenever a Roman magistrate resigned or died during his term of office. It was employed to fill vacancies even of very short duration: there are examples of *suffecti* who exercised their power only for a few hours. Under the Empire, when the consulship ceased to be held for a full year, the consuls appointed after the original pair were also called *suffecti*. No *suffectus* ever gave his name to the year, although he kept the rank and title of an ex-magistrate (e.g. *cir. consularis*, *praetorius*, *quaestorius*).

Mommsen, *Röm. Staatsr.* I² 592.

P. T.

SULLIUS (PW 4) RUFUS, PUBLIUS, married first Vistilia (mother by other husbands of Corbulo and of Gaius Caligula's wife Caesonia), then Ovid's step-daughter. Banished by Tiberius, recalled by Gaius, under Claudius he was consul, proconsul of Asia, and in Rome a notorious prosecutor. Seneca secured his banishment in A.D. 58.

J. P. B.

SULLA (1) FELIX, LUCIUS CORNELIUS (PW 392), born c. 138 B.C. of an old (but not recently prominent) patrician family (going back to the Rufini); after a dissolute—but financially successful—youth, he first distinguished himself as quaestor under Marius, finally securing the surrender of Jugurtha by Bocchus, by which he later—rightly, but tactlessly—claimed to have won the war. He served against the Germans under Marius, then under Catulus (q.v. 2). *Praetor urbanus* (after a failure) in 97, he was assigned Cilicia *pro consule* (96) and then instructed to instal Ariobarzanes in Cappadocia, which he successfully accomplished, displaying Roman power to eastern kingdoms (including, for the first time, Parthia). His future greatness and his death at the height of good fortune were there foretold to him by a Chaldaean. Prosecuted on his return, he was unable to advance to the consulship. In 91, seeking and obtaining support from the Optimates, he brought to a head a feud against Marius, who had incurred their disfavour by his action against Rutilius (q.v. 1). The Social War supervened, and Sulla fought successfully in the southern theatre. In 89, with the help of the Metelli, he gained the consulship of 88 (with Pompeius (q.v. 2), whose son married his daughter) and married Metella (q.v. 1), whose husband Scarius (q.v. 1) had recently died. He was now an acknowledged power in the State.

Given the command against Mithridates by the Senate, he was deprived of it by the tribune Sulpius (q.v. 1), who transferred it to Marius in order to gain his alliance. Sulla pretended to acquiesce, but finding support among his troops (though not among his officers, except for one quaestor, probably his *adfinis* Lucullus, q.v. 2), he boldly marched on Rome and took the city by force. Even his friends were shocked by his methods: he had Sulpius killed in office and his laws repealed, while Marius and other opponents escaped with difficulty. After passing several laws by threat of force, he had to send his army away and allow the election of Cinna (q.v. 1) as consul for 87, against his own candidate Servilius (q.v. 1); and he failed to gain control of the army of Pompeius (q.v. 3) Strabo through his colleague and *adfinis* Pompeius (q.v. 2), who was killed in the attempt. Despite these reverses, and ignoring a summons to stand trial, he embarked for Greece, where Q. Brutus Sura, legate of the governor of Macedonia, had already driven

the enemy back to the sea: his hope of safety lay in winning the eastern war.

Outlawed, but not molested, under Cinna, he agreed (it seems) to refrain from attacking Valerius Flaccus (q.v. 6) when he marched against Mithridates. Forcing Sulla to abandon his campaign, he himself twice defeated Archelaus (q.v. 3) and sacked the Piraeus and (in part) Athens. Having saved Mithridates from Fimbria (see LUCULLUS, 2), he made peace with the king at Dardanus, granting him recognition as an ally of Rome and impunity for his adherents in return for his surrendering his conquests and supporting Sulla with money and supplies. He then dealt with Fimbria, reconciled his own army (disgruntled at the peace with the enemy of Rome) by quartering it on the cities of Asia (which he bled of their wealth), and on hearing of Cinna's death, abandoned negotiations with Rome and openly rebelled (84). Invading Italy, he was soon joined by most eminent men—especially Metellus (q.v. 7) Pius, M. CRASSUS (q.v. 4) and Pompey—and within a year defeated all the loyalist forces in Italy (see CARBO 2, CAURINUS, MARIUS 2, NORBANUS 1). Finding the Italians hostile, he undertook not to diminish their rights of citizenship, but he massacred those who continued resistance (especially the Samnites: see PAPIUS) and imposed severe penalties and confiscations on their communities. In Rome, under a law of Flaccus (q.v. 5)—who became his *magister equitum*—he was elected Dictator and granted complete immunity. He continued and legalized his massacres by publishing 'proscription' lists (sometimes fraudulently added to by subordinates: see CHRYSOGONUS).

During 81 he enacted a legislative programme designed to put power firmly in the hands of the Senate, whose numbers (traditionally 300) he raised to 600 by adlecting *equites* supporting him. In addition to various minor reforms, he (1) curbed the tribunate by requiring the Senate's approval for tribunician bills, limiting the veto, and barring senior magistracies to ex-tribunes (which made the office unattractive to ambitious men); (2) restored the *questiones*—the number of which he raised to at least seven—to the enlarged Senate; (3) raised the number of praetors to eight and that of quaestors to twenty, chiefly to cope with the number of provinces without (in general) prolonging tenure beyond a year; (4) laid down a strict *cursum honorum*, with the quaestorship and praetorship compulsory before the consulship could be reached at a minimum age of 42, and made quaestors automatically members of the Senate; (5) subjected holders of *imperium* outside Rome to stricter control by the Senate. At the same time he settled his veterans on confiscated land (especially in Campania and Etruria) as guarantors of his order. Then, convinced by the old prophecy (in which he fully believed) that he had not long to live, he gradually divested himself of power and restored constitutional government, becoming consul in 80 (with Metellus Pius) and returning to private status in 79. He retired to Campania, where he died in 78 of a long-standing disease. His funeral was impressively arranged to display the power of his veterans, especially in view of the agitation of the consul Lepidus (q.v. 2). But his constitutional reforms, weakened by a series of concessions, were largely overthrown in 70 by his old adherents Pompey and Crassus.

Despite his mystical belief in his luck (hence his *agnomen* and the *praenomina* of his twin children: see SULLA 3), despite his arrogance and ruthlessness, Sulla never aimed at permanent tyranny: he did not even put his portrait on his coins. He undoubtedly wished his settlement to succeed, and he thought it out carefully (no doubt with the help of his associates, who were basically the faction that had supported M. Drusus, q.v. 2), to eliminate the 'two-headedness' (in Varro's phrase) that

had been the bane of Roman politics since C. Gracchus. His arrangements were consistent, practical, and neither visionary nor romantically reactionary. Yet he had no appreciation of deep-seated problems (including the ones he had created). The quick disintegration of his constitution was due both to his own example and to the decline in the morale, public spirit, and authority of the oligarchy that he made supreme—a decline that he had done much to foster. He set the precedent for the use of military force against the State—and for its success; he spared the only powerful enemy of Rome for his personal advantage and prepared the ground for that enemy's future success by ruining the cities of Asia; he weeded out, both in Rome and in Italy, those most loyal to the State and prepared to defend it, while rewarding those who were not; he threw Italy into turmoil by giving much confiscated land to veterans unfitted to work it and accustomed to violence in pursuit of their aims; worst of all, he exposed both the hollowness of Republican forms in the new conditions of power and the moral weakness of most of the ruling élite, which rushed to welcome the political and economic profits of successful rebellion. It was soon evident that honour and public service were not to be expected of these men. A generation later, Italy, which had flocked to defend the Republic against Sulla, showed no eagerness to defend his beneficiaries against one who imitated his methods; and for much of the ruling class itself, *clementia* now made a rebel seem unobjectionable. Sulla's positive achievement was to instil men with a horror of civil war that delayed it for a generation; but it is largely due to him that, when the memory faded, the coming of that war, and the end of the Republic that he had tried to re-establish, were made all but inevitable.

Sulla's *Commentarii* (probably an account not unlike Caesar's, though more egotistical), were edited by Lucullus (q.v. 2) and are an important ultimate source, recognizable in Plutarch, Appian, and Livy. Another major strand, especially of the Livian tradition, goes back to Sisenna. Cicero has many personal memories of the period. Of modern works, Mommsen's *History of Rome* is still highly profitable. For recent work, see E. Badian, *Hist.* 1962, 222, 228 (with bibliography), add Badian, *Stud. Cl. Rom. Hist.*, see index; E. Gabba, *Annali della Scuola Normale Superiore di Pisa* 1964, 1 fl., U. Laffi, *Athenaeum* 1967, 177 f., 355 f.

SULLA (2), PUBLIUS CORNELIUS (*PIV* 386), relative of (1), in whose proscriptions he amassed wealth and under whom he helped to found a veteran colony at Pompeii. With Autronius (q.v.), he was elected consul for 65 B.C., then convicted of *ambitus* (thus struck with *infamia*) and said to be involved in the 'first conspiracy' of Catiline. Prosecuted as a Catilinarian in 62, he secured the support of Hortensius (q.v. 2) and Cicero—whom he rewarded well—and was acquitted. In the Civil War he joined Caesar and secured his rehabilitation, increasing his wealth in the sales of Pompeian properties. He died c. 45.

Cicero, *Pro Sulla*.

E. B.

SULLA (3) (**FELIX**), FAUSTUS CORNELIUS (*PIV* 377), son of (1) and of Metella (1): his *praenomen* and that of his twin sister Fausta were intended to symbolize Sulla's luck. He inherited most of his father's wealth, but soon spent it (especially on lavish memorial games in 60 B.C.). Marrying Pompey's daughter, he served under him in the East and was the first to mount the walls of the Temple at Jerusalem. He was quaestor in 54 (see his coins, Sydenham, *CRR* 882 f.) and assisted Milo (Fausta's husband) in 52; and he restored the *Curia* burnt after the death of Clodius (q.v. 1). Taking Pompey's side in the Civil War, he was killed by Sittius' men after Thapsus (46).

E. B.

SULMO, modern *Sulmona*, town of the Paeligni at the centre of Italy. It resisted Hannibal (211 B.C.) and supported Julius Caesar (49 B.C.), but is famed chiefly as

Ovid's birthplace (43 B.C.). A late republican terraced sanctuary has been recently excavated in its vicinity. The Sulmo Sulla sacked was probably elsewhere (modern *Sermoneta*?), in Latium.

E. T. Salmon, *Ovidiana* (ed. N. I. Herescu, 1958), 3 ff.; F. Castagnoli (ed.), *Studi di urbanistica antica* (1966), 107 ff. E. T. S.

SULPICIA (1, *PIV* s.v. Sulpicius 114), daughter of Servius Sulpicius Rufus, and ward of Valerius Messalla (q.v. 3) Corvinus, is not to be confused with her namesake celebrated by Martial (10. 35 and 38). She composed six short elegies incorporated in the Tibullus collection (4. 7-12), in which with unique frankness and rare warmth she passionately avows her love for Cerinthus, a young gentleman of her own sphere, not a freedman or the Cornutus mentioned by Tibullus (2. 2 and 3). Though Sulpicia's literary remains amount to only forty lines and show traces of amateurishness, they nevertheless completely lack conventionality and affectation and constitute a splendid human document. Here is the first poetry we have written by a *docta puella*, and it throws light on certain social tendencies of the Augustan Age. See also ELEGIAC POETRY, LATIN.

Text in editions of Tibullus, commentaries in editions of K. F. Smith and Postgate (see TIBULLUS); G. Némethy, *Tibulli Carmina. Acc. Sulpiciae Elegidia* (1905). Schanz-Hosius, J II.

SULPICIA (2, *PIV* s.v. Sulpicius 115), wife of Calenus, in Martial's time, and by him praised as authoress of poetry of honourable love (10. 35 and 38). A 'satira' of seventy lines is questionably ascribed to her.

Text in O. Jahn's ed. of Persius and Juvenal, *PLM* v 91, I. Lana (1949), with Ital. transl. See G. Thiele, 'Die Poesie unter Domitian', *Hermes* 1916, 233 ff.; J. W. Duff, *Roman Satire* (1937), Schanz-Hosius, § 416.

SULPICIOUS (1, *PIV* 92) **RUFUS**, **PUBLIUS**, was a member (with Drusus, q.v. 2, and Cotta, q.v. 1) of a circle of brilliant and ambitious young nobles taught by L. Crassus (q.v. 3). In 95 B.C. he prosecuted Norbanus (q.v.), and as tribune in 88 tried to carry on Drusus' ideas by securing the fair distribution of the enfranchised Italians in the tribes. Opposed by the Optimates (including his friend, the consul Pompeius, q.v. 2), he began to stress the *Popularis* aspects of his programme and turned for support to Marius, with whom he had found himself accidentally collaborating in opposition to the consular candidature of Caesar (q.v. 3). In return for transferring the command against Mithridates from Sulla to Marius, he was able to pass his laws (with some violence), but, when Sulla reacted by marching on Rome, had to flee. He was captured and executed and his laws were annulled.

E. Badian, *Foreign Clientelae* (1958), 230, id. *Hist.* 1969, 481 ff. E. B.

SULPICIOUS (2, *PIV* 95) **RUFUS**, **SERVIUS** (cos. 51 B.C.), prosecuted Murena (q.v.) when defeated by him in the consular elections for 62 B.C. He waited eleven years for his consulate, and in 51 seems to have resisted the extreme policies of his colleague M. Marcellus (q.v. 4—Cic. *Fam.* 4. 3. 1). In 49 he attended Caesar's Senate; he governed Achaëa for Caesar in 46. He died on an embassy to Antony in Jan. 43, and was honoured with a public funeral and a statue on the Rostra. The *Ninth Philippic* is Cicero's eulogy on him, a man of peace and great sanctity of character, chiefly famous as a jurisconsult. He wrote to Cicero two celebrated letters—a description of the murder of M. Marcellus (*Fam.* 4. 12) and a consolation for Tullia's death (ibid. 4. 5).

G. E. F. C.

SULPICIOUS (3) **BLITHO** (1st c. B.C.), one of Nepos' sources (*Hannibal* 13. 1). For confusion with Sulpicius Galba, grandfather of the Emperor Galba, see Schanz-Hosius 1, § 112. 6; Peter, *HRRel.* cccclxxxix.

SULPICIOUS (4), **SERVIUS**, author of love-poems, mentioned by Horace (*Sat.* 1. 10. 86) and Ovid (*Tr.* 2. 441).

SULPICIOUS (5) **CAMERINUS**, **QUINTUS**, epic poet (Ovid, *Pont.* 4. 16. 19) and possibly same as consul of A.D. 9.

SULPICIOUS (6) **APOLLINARIS** (2nd c. A.D.), scholar, the teacher of Aulus Gellius and the Emperor Pertinax. He wrote learned letters (*epistolicae quaestiones*, now lost), verse summaries of the *Aeneid* (6 hexameters for each book; see Bachrens, *PLM* iv. 169), and metrical summaries of the plays of Terence (cf. e.g. W. M. Lindsay's ed. of *Ter.*).

Schanz-Hosius, § 597.

J. F. M.

SUMMANUS, perhaps originally an epithet of Jupiter (q.v.), as 'dweller in the most high places', but distinguished from him (Festus, 254. 3) as the god who sends nocturnal thunderbolts. Latte (*RR* 208) derives the cult from an omen during the war with Pyrrhus when a temple was founded; this may, however, have replaced an altar ascribed to Titus Tatius (Platner-Ashby, 502). Wheel-shaped cakes called *summanalia* were offered to him (Festus, 474. 17). His identification with Pluto (Martianus Capella, 2. 161) is fanciful.

Wissowa, *RK* 135.

H. J. R.

SUNNIUM, a bold promontory at the south apex of Attica, was crowned by a marble temple of Poseidon built c. 440 B.C. on the foundations of a temple destroyed by the Persians. There was also a slightly older Ionic temple of Athena of unusual design (Vitr. *De Arch.* 4. 8. 4), later removed to Athens. The early importance of the sanctuary is attested by a mass of Egyptian objects, evidence of overseas trade, and by several archaic marble statues. Sunnium was fortified in 413 for the security of the Athenian corn-ships; the circuit of the walls and the boat-houses are well preserved. The fort was also involved in the wars of the third century and the revolt of the slaves from Laurium (q.v.).

Thuc. 8. 4, Παυς 1. 1; *AN* Οἰκονομίδης, Σούνιον, ἀρχαιολογικὴς ἐξήγησις (1957).

C. W. J. E.

SUPERSTITION. The word 'superstition' is relative, for it may be taken to mean indulgence in beliefs or practices which have been abandoned by general, or at least by educated, opinion of the time. For instance, the Emperor Tiberius cannot be called superstitious for believing in astrology, but a modern could be, since its falsity is now well known. It is doubtful whether a Greek or Latin word exists for superstition, since *δεισιδαιμονία* (cf. RELIGION), when derogatory, as it most often is, means rather excessive pietism or religiosity, whereas *superstitio* itself is implied by Virgil to be unenlightened and meaningless worship ('uana superstitio ueterumque ignara deorum', *Aen.* 8. 187, see W. Warde Fowler, *Aeneas at the Site of Rome*, 1918, 57), perhaps with reference especially to oriental cults of the poet's day. It is hardly possible here to do more than give examples of the existence of magico-religious rites or beliefs known to have been condemned by the more enlightened people of the time.

Whereas Homer evidently writes for a remarkably free-thinking public, he has traces of a state nearer the primitive. For example, although his Achaean characters regard fish merely as very poor food, he speaks of one as *ἱερός*, holy or taboo (*Il.* 16. 407). This plainly refers to some belief like that of the Syrians with regard to the holy fish of their goddess (Hyg. *Fab.* 197). Hesiod, writing some time later but from a peasant environment, is full of scruples which a Homeric hero would laugh at,

e.g. *Op.* 750, against a boy of twelve years or twelve months sitting on a tomb; 753, against a man using a woman's bath, besides the elaborate observation of certain days of the month, 765 ff., if that is really Hesiodic.

The prevalent use of amulets (q.v.) was evidently regarded as superstitious by the more enlightened minds of the fifth and fourth centuries B.C.; hence the point of the story in Theophrastus, ap. Plut. *Pericles* 38, that that statesman during his last illness apologized to a friend for having one about his neck, put there by the women of his household, saying that he must be very low to submit to such folly. A similar contempt is expressed by Plato, *Resp.* 2. 364 b ff., for practitioners of magic (q.v.), and some of the lower forms of purificatory rites which clung to the fringes of Orphism (q.v.). The former of these gained ground with the degeneracy of natural science, as may be seen by comparing the earlier works on medicine, e.g. the Hippocratic corpus, above all *De morbo sacro*, which protests against the unscientific ascription of diseases to supernatural agencies, with some of the later productions, especially the extraordinary mixture of traditional remedies and conjuring which has come down to us from Marcellus of Bordeaux.

In Rome one of the most frequently denounced forms of superstition is the adoption of fragments of foreign ritual, especially the more spectacular kinds. Thus Juvenal's women consult all manner of foreign diviners, indulge in extraordinary orgiastic rites, and perform more or less Egyptian penances (*Sat.* 6. 314 ff., 511 ff.). A fairly common form of this seems to have been the observance of some Jewish rites, especially the Sabbath, by those who were neither Jews nor proselytes (*Juv.* 14. 96, cf. *Hor. Sat.* 1. 9. 69).

With the coming of Christianity, many who were superstitiously inclined developed two new forms of their aberration. One was the retention, despite all the Doctors of the Church could say, of purely pagan beliefs; e.g. St. Augustine complains, *Expos. epist. ad Galat.* 35, of Christians who tell him 'to his face' that they will not start on a journey the day after the Kalends, which in pagan Roman belief was *religiosus* (cf. Plut. *Quaest. Rom.* 25). The other was the employment of Christian names, holy books, etc., for magic, as the Christian charms, Preisendanz II. 189 ff., and cf. the strictures of St. Augustine (*in Iohan. evang. tract.* vii. 12) against those who use a Gospel as a remedy for headache. Similar uses had long been made of Jewish formulae, etc., see, e.g., M. Rist in *Journ. Bib. Lit.* 1938, 289 ff. See MAGIC.

There is no comprehensive and authoritative work, but material will be found in all large treatises on ancient religion, e.g. Nilsson, *GGRI* I², 795 ff., II. 207 ff., 392 ff.; cf. E. R. Dodds, *The Greeks and the Irrational* (1951).

SUPPLICATIONES. On the occasion of a great national calamity (as after the battle of Lake Trasimene, Livy 22. 10. 8) or success (as after the crushing of Veriginetorix' revolt, Caesar, *B Gall.* 7. 90. 8) it was the custom at Rome and elsewhere (cf. *ILS* 108: Cumae) to give opportunity for general adoration of the gods, or certain of them, by providing access to their statues or other emblems, often at least placed on *pulvinaria* (q.v.). This was known as a *supplicatio*, from the kneeling or prostrations of the worshippers (commoner in Italy than Greece, C. Sittl, *Gebärden*, 177 f., but cf. H. Bolkestein, *Theophrastos' Charakter der Deisdaimonia* (1929), 23 ff.). It was at least on occasion associated with a *lectisternium* (q.v.), as in Livy, loc. cit., but is to be distinguished from it, as Livy there does. It is apparently a genuinely Roman procedure, older than the foreign use of statues to represent the gods. That it is often said to have taken place *ad (circa) omnia pulvinaria* is held by Wissowa (*RK* 424) to indicate, along with the fact that it generally followed a consultation of the Sibylline Books, that in the

form familiar from our authorities it was fully hellenized; but see A. K. Lake, *Quantulacumque* (1937), 243 ff., and Latte, *RR* 245 ff.

H. J. R.

SURA, LUCIUS LICINIUS (*PW* 167), was born in Hispania Tarraconensis. A *novus homo*, he rose in the senatorial career as a *candidatus Caesaris*, probably of Domitian, and eventually commanded Legio I Minervia at Bonn c. A.D. 93-7, became governor of Gallia Belgica 97, and *cos. I suff.* in 97 or 98. A fellow-countryman of Trajan and, like him, versed in frontier-defence, he became his intimate, and possibly influenced Nerva to adopt Trajan. Governor of Lower Germany, then *cos. II ord.* in 102, he served with distinction on Trajan's staff in both Dacian Wars. He received *ornamenta triumphalia* with a statue at public expense. He became *cos. III ord.* in 107 (a rare honour) and died soon after 110. Rich and cultured, he wielded immense influence. Pliny in one letter (*Ep.* 4. 30) submits a physical problem to him, and in another (*Ep.* 7. 27) a psychic one. Sura was a patron of Martial (6. 64. 12-13), who admired the old-fashioned style of his oratory (7. 47. 1-2). It is recorded that he composed speeches for Trajan (*S.H.A. Hadr.* 3. 11).

Dio Cass. 68. 15. 1 ff.; *ILS* 1022, though the name is lost, undoubtedly gives his career, for dedications from near Tarraco, *ILS* 1952, 6056, see also B. Stech, *Klio Beiheft* x (1912), no. 811, Syme, *Tactus*, see index.

C. H. V. S., M. H.

SURENAS, i.e. the Suren. The Surens, one of the seven great Parthian families, ruled Seistan as vassals of the Arsacids, with their capital at Alexandria-Prophthasia. The best-known Surenas formed a highly trained professional army of 10,000 horse-archers, with 1,000 swift Arabian camels carrying a huge reserve of arrows. With this force he overthrew Mithridates III and restored Orodes II to his throne, and then defeated Crassus' invasion (see CARRHAE). For a moment his genius had made the horse-archer, the common man who had won Carrhae, potential master of the world; but the Parthian nobles were jealous, and Orodes put to death his too brilliant vassal. Another 'Surena' in A.D. 36 crowned the pretender Tiridates king of Parthia, 'patrio more' (*Tac. Ann.* 6. 42). The Surens played an important role in later wars between their Sassanid overlords and Rome and Byzantium.

W. W. T., E. W. G.

SURGERY. I. BEFORE 300 B.C.

1. In the Homeric poems references to surgery are mainly in the *Iliad* and concerned with the treatment of the wounds there recorded. The wound is cleaned; blood squeezed or sucked out; edges united by bandaging; and an analgesic of dried herbs rubbed in and applied as an air-tight pad. The only wound-spell is in the *Odyssey* (19. 457-8 *ἐναοδίη*, cf. Pindar, *Pyth.* 3. 45 ff.). Homeric treatment resembles the best Egyptian practice. Moreover, instruments early in Greek use, notably the trephine, closely resemble Mesopotamian finds. Thus there is presumption that Greek surgery drew on the traditions of both these civilizations. The first historic Greek practitioner after Asclepius and his sons (*Il.* 2. 731-2; 4. 194; 11. 518 and 614, etc.) was Democedes of Croton. He treated King Darius surgically and had certainly Persian contacts (*Hdt.* 3. 125, 129, 137).

2. The surgical part of the Hippocratic Collection is in confusion. *Fractures, Dislocations* (i.e. ἀρθρώσεις, of joints), and *Wounds of the head* are of about 400 B.C., the two former being parts of a larger work. *The nature of bones* is of about 350 B.C. *On surgery and Mochlicon* (= *Instruments of reduction*) are later abbreviations of earlier works, but the introductory chapter of *Mochlicon* is the displaced first part of *The nature of bones*. Treatises covering the whole medical field were, Galen indicates,

commonly called 'Concerning the things of surgery'. Some idea of such a work is gained by reading the above works in the following order: *On Surgery*, being a greatly abbreviated introduction to the whole; introductory chapter of *Mochlicon*, being descriptions of the bones; *The nature of bones*, a sketch of theoretical anatomy for the surgeon, omitting bones (despite title); *Fractures*; *Dislocations*; remaining chapters of *Mochlicon*; *Wounds of the head*. It must be remembered that the parts differ greatly in age and state and that there is repetition and overlapping.

3. Startlingly modern are the minute directions for preparation of the operating room, and such points as the management of light—both artificial and natural—scrupulous cleanliness of hands, care and use of instruments with special precautions for those of iron, decencies of the operating chamber, modes of dressing wounds, use of splints, and need for tidiness, cleanliness, after-care, and nursing. The directions for bandaging and for diagnosis and treatment of dislocations and fractures, especially of depressed fractures of the skull, are very impressive. In *Fractures* and *Dislocations* certain procedures for reduction are identical with those now in use, but other passages are incompatible with the facts of anatomy. *Wounds of the head* has a special place in the history of surgery. It is a practical work by a highly skilled craftsman, and every sentence suggests experience. Although its treatment of depressed fractures has been criticized from an early date, the book was in current use until the middle of the eighteenth century. It introduces technical terms, two of which, *bregma* and *diploe*, survive in modern usage.

4. Among instruments described is the 'bench of Hippocrates', a bed for reducing dislocations, especially of the hip. The form is so ancient as to antedate the screw as a mechanical power. Lever, crank, windlass, and pulley are employed. With minor changes it was in continuous use for at least 2,000 years. There is no reason to associate it with Hippocrates; it may well be more ancient than he, but the name is late.

II. ALEXANDRIA AND THE EMPIRE

5. After 300 B.C. anatomical knowledge enters surgery from the Alexandrian school. Thus *Dislocations* has an obvious interpolation (on the anatomy of the shoulder-joint) of at least a century later than the main text. Similarly the surgeon Hegector can be approximately dated from a fragment of his work (preserved by Apollonius of Citium) describing the anatomy of the hip-joint in a way discoverable only by dissection. We have no complete surgical work of Alexandrian origin.

6. Passing by the stories of Pliny, the first professed surgeon at Rome of whom we have news is Megetes of Sidon early in the first century A.D. Heliodorus soon after gave the first account of ligation and torsion of blood-vessels, treated stricture by internal section, performed radical cures for hernias, and was especially skilled in skull operations. Amputations were fully described by Archigenes of Apamea. Antyllus treated cataracts surgically and removed aneurysms by applying two ligatures and cutting down between them—an operation still known by his name alternatively with that of John Hunter (1728-93). These surgeons of the first and second centuries A.D. acted with resource and confidence. The fragments of their works have the authentic tang of experience.

7. The standard account of Roman surgery of the first century A.D. is the seventh book of *De medicina* of Aulus Cornelius Celsus. The professional standing of Celsus—whether lay or professional, bond or free—and the character of his book—whether translated from a Greek text, or

product of personal experience, or a compilation—are disputed, but it is certain from the articulation of the book that its author or compiler had practical surgical experience. He gives details of the very dangerous operations for extirpating a goitre and for cutting for stone, and describes well what might be thought to be the modern operation for removing tonsils and for other procedures on the face and mouth and for the removal of polypus from the nose. He gives the first account of dental practice, which includes wiring of loose teeth and use of a dental mirror. His attitude and line of treatment are sensible and humane.

8. Galen was no surgeon but his works include accounts of his surgical predecessors. Useful details are also preserved in the works of later Greek writers, notably Oribasius and Paul of Aegina. (For organization of the surgical service in the imperial army see MEDICINE.)

9. Graphic representations have a place in the history of surgery. The most important are: (a) A kylix of about 490 B.C., painted by Sosias, of Achilles bandaging Patroclus. The drawing is excellent, but the bandaging execrable. (b) A vase-painting of about 400 B.C. of a surgeon treating patients in his surgery. (c) A few votives, murals, memorial slabs, etc., showing instruments for operations. The best is a tablet of instruments from the Asclepium at Athens. (Details of (a), (b), and (c) are discussed by Charles Singer, *Greek Medicine and Greek Biology*, 1922.) (d) Surgical instruments. The best collection is from Pompeii, where over 200 have been found. (e) Trajan's column shows an advanced dressing-station of a legion. (f) A Laurentian manuscript of about 900, copied from a very early MS. contains illustrations of Soranus of Ephesus *On bandaging* and *On the uterus* and of Apollonius of Citium *On reduction of dislocations*.

10. There was interest in veterinary surgery, especially under the Empire. The army had hospitals for animals (Hyginus, *Liber de muneribus castrorum* 21. 22). Much can be gleaned from agricultural writings, but there was also a considerable veterinary literature. The *Mulomedicina Chironis* of about A.D. 100 survives in a philologically curious Latin version of about A.D. 300. It formed the basis for the larger *Digesta artis mulomedicinae* of Publius Vegetius Renatus (383-450), unexpectedly scientific and well arranged, which long remained in use. Abstracts of a collection of ancient works called *Hippiatrica*, said to have been made for Constantine Porphyrogenitus (905-59), have been in use ever since his time.

The surgical works of 'Hippocrates' are mostly in vol. II of the Loeb *Hippocrates* by E. T. Whittington (1927). Two older works of permanent importance are: J. E. Petrequin, *Chirurgie d'Hippocrate* (2 vols., 1877-8), product of 30 years' study by an accomplished surgeon, and Francis Adams, *The Genuine Works of Hippocrates* (2 vols., 1849), by the last great Greek scholar who practised under almost the circumstances of an ancient surgeon. For Celsus the Loeb edition of W. G. Spencer (4 vols., 1916-8) covers most needs. M. Wellmann, *Celsus, eine Quellenuntersuchung* (1913), is important. For texts, H. Kühnlein *Hippocratis Opera Omnia* (2 vols., 1894-1902); F. Marx, *Celsi opera quae supersunt* (1915); U. C. Hussemaker and C. Dabemberg, *Œuvres d'Oribase* (6 vols., 1851-76). The notes and comments of Francis Adams, *The Seven Books of Paulus Aegineta* (3 vols., 1844-7), are without rival. Werner R. Lewick, 'Die Bank des Hippokrates', *Jamus* 1936, is exhaustive. See also PW Suppl. vi, *Nachtzüge* (Hippokrates) cols. 1290 ff.; J. S. Milne, *Surgical Instruments in Greek and Roman times* (1907); J. Scarborough, *Roman Medicine* (1906). Veterinary surgery. Sir Frederic Smith, *Early History of Veterinary Literature* (1919); E. Lommatsch, *P. Vegetii Renati Mulomedicina* (1903); H. Ahlquist, *Studien zur Mulomedicina Chironis* (1909). C. S.

SURRENTUM, modern *Sorrento*, on the southern headland of the Bay of Naples, celebrated for its charming surroundings, delightful climate, and salubrious wine. Surrentum spoke Oscan in republican times and was a *municipium* under the Empire, but is rarely mentioned in history. Ancient remains include the villa of Pollius Felix, elaborately described by Statius (*Silo.* 2. 2). E. T. S.

SUSA, the 'city of lilies', was the capital of Elam, and afterwards of the Achaemenids, where Darius I built his palace (Apadāna). Under Seleucids and Parthians its name was Seleuceia-on-the-Eulaeus; the excavations have furnished numerous Greek inscriptions. In A.D. 1 there were still Greek cleruchs in charge of the citadel, i.e. some early Seleucid had planted a military colony there; probably it became a *polis* under Antiochus III. In A.D. 21 it was still a full-Greek city, with a Council, Assembly, and elected magistrates whose qualifications were scrutinized; it could send embassies, and was therefore a State; though subject to Parthia, it had more than local autonomy. Beside Greeks, other peoples can be traced—Persians, Syrians, Jews, Anatolians, Babylonians, Elymaeans; its city-goddess was the Elamite Nanaia, renamed Artemis, in whose temple Greeks manumitted their slaves. Four Greek poems are known, one a lyric ode (1st c. B.C.) addressed to Apollo by a Syrian title, Mura (Lord); it belongs to a known class of acrostic poems, and that and the forms of decrees and manumissions show that Susa was well within the Greek culture-sphere.

SEG vii. 1-33; Fr. Cumont, *CRAcad. Inscr.* 1930-3; W. W. Tarn, *The Greeks in Bactria and India* (1938), 27, 39, 68; G. le Rider, *Suse sous les Séleucides et les Parthes* (1965). W. W. T.

SUSARION is first mentioned in the Parian Marble, under some year between 581 and 560, as having originated Comedy in the Attic deme Icaria. A later tradition makes him a Megarian, and he calls himself *υἱὸς Φιλίνου Μεγαροῦεν Τριποδίσκιος* in the only putative citation from his work. This citation is in normal Attic, and its authenticity is highly improbable; Susarion may indeed be a fictitious person.

FCG ii. 3 f.; CGF 77 f.; Pickard-Cambridge-Webster, *Dithyramb*, 183 ff. K. J. D.

SUTRIUM, the modern *Sutri*, a small but strategically important Etruscan town, 28 miles north-west of Rome and 6 miles west of Nepes (q.v.). Founded perhaps as late as the fifth century B.C. to control the important road (later the Via Cassia) through the Ciminian forest, it played an important part in the fighting that followed the destruction of Veii in 396 B.C. (Livy 6. 9. 3), very soon after which date it became a Latin colony. Its subsequent history was mainly uneventful until the early Middle Ages, when its position made it once more an important defensive outpost of Rome. It became a *municipium* after the Social War and received a fresh group of colonists soon after the death of Caesar, under the name of Colonia Coniuncta Iulia Sutrina.

CIL xi. 489. G. Duncan, *PBSR* 1958, 63 ff. J. B. W.-P.

SYBARIS (Σύβαρις), an Achaean-Troezenian foundation (c. 720 B.C.) near a similarly named river on the Gulf of Tarentum: the site has been identified near modern *Sibari* in the *Piana del Crati*. By expanding its territory, dispatching colonies (Laus, Scidrus, Posidonias-Paestum), and monopolizing Etruscan trade Sybaris became powerful; her wealthy luxuriousness was proverbial. But in 510 internal dissensions enabled Croton (q.v.) to obliterate Sybaris; the neighbouring river Crathis was diverted from its course to flow over the sacked city. Sybarite exiles, after twice unsuccessfully attempting to refund Sybaris, joined the Athenian foundation at Thurii (q.v.) (443). Thurii quickly expelled them, whereupon they established a new Sybaris on the river Traeis, never an important place.

Strabo 6. 263; Hdt. 5. 44 f.; Diod. 12. 9 f.; Ath. 12. 518 c f. J. S. Calaway, *Sybaris* (U.S.A. 1950); F. Ramey, *AJArch.* 1960, 261 ff. See, too, bibliography s.v. MAGNA GRAECIA. E. T. S.

SYENE (*Assuan*), on the southern frontier of ancient Egypt, on the right bank of the Nile, just below the First

Cataract. It was a trading town, and from its quarries came the valuable 'syenite' stone. Under the Ptolemies it replaced Elephantine as the frontier outpost; in 25 B.C. it was freed from Ethiopian invaders by the Romans, who established a garrison there. The fact that the sun's rays fell vertically in Syene at midsummer was utilized by Eratosthenes (q.v.) to make a remarkable calculation of the earth's circumference. E. H. W.

SYKOPHANTAI (συκοφάνται). In Athens there were, for most offences, no public prosecutors, but any citizen who wished was allowed to prosecute in a public case (see DIKE 2. § 2). Some individuals made a habit of bringing prosecutions, either to gain the financial rewards given to successful prosecutors in certain types of case (notably *phasis* and *apographe*; see DIKE 2. § 3 (f) and (g)), or to gain money by blackmailing a man who was willing to pay to avoid prosecution, or to earn payment from someone who had personal reasons for wanting a man to be prosecuted, or to make a political or oratorical reputation. Such persons came to be called *sykophantai* (literally 'fig-denouncers'; the origin of the usage is obscure). The word is often used as a term of disparagement or abuse in Aristophanes and the Attic orators.

The Athenians wished to check *sykophantai*, especially blackmailers, but not to discourage public-spirited volunteer prosecutors. Therefore the rewards for successful prosecution were not abolished, but penalties were introduced, in most kinds of public case, for a prosecutor who dropped a case after starting it, or whose case was so weak that he failed to obtain one-fifth of the jury's votes (see DIKE 2. § 2 (d)). In addition, being a *sykophantes* was an offence for which a man could be prosecuted. *Graphe, eisangelia, proboule, apagoge*, and *endeixis* (see DIKE 2. § 3) are all said to have been possible methods of accusing *sykophantai*, but it is not known how the offence was legally defined.

R. J. Bonner and G. Smith, *The Administration of Justice from Homer to Aristotle* n (1938), 39 ff. D. M. M.

SYLE (ἡ σύλη, τὸ σύλον) was (1) robbery, cattle-reiving in general; (2) an act of reprisal by an injured person or his kinsmen for a deed of violence or a default on a debt. In early Greece this was often the only means of obtaining satisfaction from members of another tribe or city, and was therefore sanctioned by custom. In time of war *syle* was permitted against all enemy traders. From the sixth century it was gradually circumscribed by commercial treaties and by grants of *asylia* (q.v.) to certain individuals, cities, or sanctuaries. But even in Hellenistic times belligerent States still licensed privateering, and *syle* did not disappear until the Roman era.

H. A. Ormerod, *Privateering in the Ancient World* (1924), ch. 2. M. C.

SYMBOLON (σίμβολον, συμβολή), originally a 'mark', 'sign', or 'tally' as a material indication of identification or agreement. Such were used for identification in inter-State relations, as in IG² ii. 141. 19 between Athens and a king of Sidon; or between an individual and a ruler, as in Lysias 19. 25: a gold *phiale* given by the Great King of Persia for this purpose. Agreed *symbola* between Athens and her tribute-paying allies are mentioned in the Decree of Kleimias (IG² i. 66) to be used for sealing purposes to prevent fraud in the conveyance of the tribute. A distinction must be made between the related word *συμβόλαιον* (adj. *συμβόλαιος* or *συμβολιμαῖος*) which came to mean a contractual relation or obligation (in writing a *συγγραφή*) and the plural term *σύμβολα* (*συμβολαί*) meaning an inter-State agreement dealing with contractual and other legal relations between individuals of different States, and between a State and an individual. The need for these arose when, for trading and other reasons, individuals travelled

abroad and needed the protection from personal injury and distraint (*ἀσφάλεια* and *ἀστυλία*) which traditional guest-friendship and *προξενία* could not give. The position is well demonstrated in the treaty between the Ozolian Locrian States of Oiantheia and Chaleion (Tod, *GHI*² 34). If in earlier times treaties secured only basic protection from *σύλαι* exercised by private persons or a State, the need developed in the fifth century B.C. for a regulation of disputes arising from contracts of all sorts, and especially trading. Particularly desired were the expediting of decisions and the protection of the interests of the States concerned. The possible confusion of interpretation should be noted between *συμβόλαιαι δίκαι* (relating to *συμβόλαια*) and *δίκαι ἀπὸ συμβόλων* (based on *σύμβολα*), as in Thucydides 1. 77. 1 and the treaty between Athens and Phaselis (Tod, *GHI*² 32).

It would appear from [Demosthenes] 7. 12-13 that the normal practice was for *σύμβολα* to provide for cases to be settled in the courts of the State of the respondent, and for the plaintiff to present himself to these. It might also be implied here that such settlements were based on a code of law agreed in the *σύμβολα*. *Σύμβολα* existed in the Delian League, and it is clear that they were subject to revision, and might be modified in spirit and practice, if not in theory, according to the relationship existing between Athens and the State in question. They were not necessarily uniform and could be felt to be oppressive, if they contained, e.g., compulsory appeal to the Athenian courts (*ἐφέσεις*) or removed the right of appeal to a third State.

In the fourth century, when Athens had no dominant position, and was, indeed, forced to placate merchants in particular, the *ἐμπορικαὶ δίκαι* (described in [Demosthenes] 7. 12-13 as *ἀκριβεῖς* and *κατὰ μῆνα*) in part replaced *σύμβολα* as far as mercantile cases were concerned, and had the additional advantage that they were dealt with where the contract was made, which benefited Athens as a banking centre. The same speech, however, seems to show that *σύμβολα* were still used. The Thesmothetai, who administered the *ἐμπορικαὶ δίκαι*, also had the duty of supervising the conclusion of *σύμβολα* (which were confirmed by a special court according to a special *nomos*) and of introducing cases under them. It is clear from the evidence that *σύμβολα* might cover a wide range of property and other legal relations. They functioned as a check on primitive 'self-help', and as a stage on the road to legal equality of foreigners, later secured by *isopoliteia*.

Jones, *The Law and Legal Theory of the Greeks* (1956), 55 ff., A. R. W. Harrison, *CQ* 1960, 248 ff., G. E. M. de Ste Croix, *CQ* 1961, 94 ff., full details and discussion in A. W. Gomme, *Commentary on Thucydides* 1 (1945), on 1. 77. 1.

SYMMACHIA (*συμμαχία*, 'fellowship in fighting') was used with several meanings: informal co-operation in war, a treaty of alliance, and a confederacy of allies. Treaties of alliance, of which the earliest Greek example preserved dates from the sixth century, could be of two kinds: defensive (*epimachia*) or offensive and defensive. The latter generally included a clause pledging the signatories to have the same friends and enemies. In such treaties the contracting States frequently had equal rights, but the clause could be so expanded as to subordinate one partner to the other. Thus in 404 B.C. Athens promised to have the same friends and enemies as the Lacedaemonians and follow their leadership. *Symmachia* has been used in a special sense as the name for a confederacy of allies under the *hegemonia* (leadership) of one State. The *hegemonia* included command in war and generally also the presidency of the assembly of the allies. Such leagues were not federal States but recognized the freedom of their members and could

continue to exist even under the King's Peace. The Peloponnesian and Delian Leagues are described in separate articles. More advanced was the Second Athenian League organized c. 378 B.C., when a congress or constitutional convention of allies of Athens met and adopted by decrees (*δόγματα*) the principles or constitution of the League, which was ratified by treaties between Athens and the members. Athens next in the spring of 377 issued a decree inviting States to join on the terms of freedom, self-government, and exemption from garrisons and the payment of tribute. Other documents show that the entire war-policy of members was controlled by the League. Athens held the *hegemonia*, and the members of the assembly (*synedrium*) of the allies, in which each State cast one vote, remained permanently in Athens so that meetings could be called on short notice. The policy of 'the Athenians and their Allies' was determined by agreement between the *synedrium* and the Athenian *ekklesia*. The *synedrium* also exercised some judicial authority. The reference in a decree to a Theban serving as chairman makes it likely that the *synedrium* had a presiding committee similar to the *proedroi* of the later Hellenic League. The guarantee against tribute (*phoros*) did not prevent the collection of contributions (*auxotaxis*) from members. The League finally was dissolved in 338 B.C. A special variety of *symmachia* is constituted by the Hellenic Leagues of Philip II, Antigonos Monophthalmus, and Antigonos Doson, in which the *hegemonia* was held by kings, while a committee of five *proedroi* presided over the assembly.

SYMMACHUS (1) (fl. c. A.D. 100) wrote a commentary with *ὑποθέσεις* on Aristophanes which owed much to Didymus and was one of the main sources of the oldest scholia to Aristophanes. He probably produced the first edition of the latter's select plays.

SYMMACHUS (2), QUINTUS AURELIUS (c. A.D. 340-c. 402), belonged to a distinguished family. Trained by a Gallic *rhetor*, he became the greatest orator of his day, and thus attained the highest positions in the State. He had a knowledge of Greek, but his culture was almost purely literary. His acquaintance with philosophy was superficial. In 369 he was sent on deputation to Gaul and there won the close friendship of Ausonius (q.v.). In 373 he was appointed proconsul of Africa. Holding fast to the pagan religion, he proved the most prominent opponent of Christianity in his time. The influence of Julian had in part re-established paganism, and a storm arose over the removal of the altar of Victory in the senate-house at Rome, when Gratian in 382 by imperial edict disestablished and disendowed the pagan religion. The pagan party struggled for the restoration of the altar and the repeal of the edict, especially when Symmachus was *praefectus urbi* (384, 385), but was defeated largely through the efforts of Ambrosius (q.v.). Symmachus nevertheless attained the consulship in 391 and lived till about 402.

During this last period he wrote the greater part of the numerous letters that have come down to us. Fragments of his carefully composed speeches are also preserved. The letters, in ten books, are addressed to leading persons of the day; their arrangement imitates that of the Younger

Pliny, nine books private, one official correspondence. His literary circle was conspicuous in the pagan scholarship of the period, e.g. in editing Livy (see SUBSCRIPTIONES, LATIN).

Dudden, *Life and Times of St. Ambrose* (1915); *The Conflict between Paganism and Christianity in the fourth century* (ed. A. Momigliano, 1963), ch. 8 (H. Bloch), bibliography relating to Symmachus' prose style, in K. Polheim, *Die lat. Remprosa* (1963), 235. A. S., F. J. E. R.

SYMMORIA. An official group of taxpayers in Athens in the fourth century B.C., which performed certain public services as a corporate body. The law of Pericles (357/6 B.C.) introduced a reform of the *trierarchy*, which was later improved by Demosthenes. It divided the twelve hundred wealthiest citizens into twenty equal *symmorai*. The upkeep of a number of ships was allotted to them on a proportional basis. Their *epimeletai*, who were, perhaps, identical with the *symmoriarchai*, the wealthiest members of a *symmoria*, divided the *symmoria* into *synteleia* of members according to their wealth, so that each *synteleia* found one ship.

Earlier in date than Pericles' law were the *symmorai* created in 378/7 in connexion with the reform of the *eisphora* (q.v.). These included practically all Athenian taxpayers and special *symmorai* of *metoikoi*. They seem to have been organized in the same way as the trierarchic *symmorai*. Outside Athens, in Teos and possibly Nysa, the term meant bodies analogous to the Attic *γέρη*, and in later antiquity private clubs. See DEMOSTHENES (2); EISPHORA; LITURGY; TRIERARCHY.

SYMPHOSIUS (perhaps 4th-5th c. A.D.), the reputed author of a series of a hundred riddles, each consisting of three hexameters, claimed in the preface to have been composed *ex tempore* during the *Saturnalia*. The work was regarded as a model for the poetic riddle and had an important influence on medieval books of riddles, e.g. Aldhelm's. See also RIDDLES.

SYMPLEGADES (Συμπληγάδες, sc. πέτραι), the Clashing Rocks through which the Argonauts (q.v.) had to pass into the Hellespont. The story is essentially the same as that of the Planctae (*Πλαγκταί*, *Odyssey* 12. 59 ff.), i.e. the Wandering Rocks, which not even the doves which carry ambrosia to Zeus can get through without losing one of their number; these, however, are not definitely located. The Argo is said there to have passed them, whence it seems that Planctae is the older name, though later authors (as Ap. Rhod. 4. 860 ff.) suppose two sets of clashing or moving rocks, one to the east and the other to the west of the Mediterranean. There is no need to seek a rationalizing explanation of either, see J. Bacon, *Voyage of the Argonauts* (1925), 79.

II. J. R.

SYMPOLITEIA (the sharing of citizenship or political life) is employed—as it was by Polybius—as a descriptive name for a federal State. The earliest-known use of the word in this sense is in a Lycian inscription of about 180 B.C. The word commonly used in documents as a part of the name of a federal State is *koinon*, which can also be used about a *symmachia* (q.v.) or almost any association or corporation. In English federal States are best called confederacies rather than leagues. Characteristic is a division of power between the central and local govern-

ments and a double citizenship and allegiance, local and federal, symbolized at times by such identifications as 'an Aetolian from Naupactus'. To the federal government belonged foreign affairs, the army, and jurisdiction in cases of treason; in local government and institutions there was a tendency to uniformity. While a citizen normally could exercise political rights only in one community, he apparently possessed civil rights, including the right to acquire real property (*enctesis*), in all communities within the confederacy. Exceptions were the Thessalian Confederacy organized by Flamininus and other confederacies founded under Roman influence. (For accounts of the chief *sympoliteiai*, see ACHAEAN CONFEDERACY, AETOLIAN CONFEDERACY, and FEDERAL STATES.) *Sympoliteia* is applicable also to any merging of citizenship, and the related verb is used in a Phocian inscription of the second century B.C. referring to the absorption of the city of Medeon by Stris. Similar expressions are common in connexion with the union of cities in Asia Minor.

ANCIENT SOURCES. *Kanon* in names of confederacies: SIG 653. 'Aetolian from Naupactus' ibid. 380 and 500; Stris-Medeon ibid. 647 (cf. 546 B). *Sympoliteia* SIG XVIII. 570, line 62.

Lawson, *Greek Federal States* (1968). The nature of federal citizenship is discussed by W. Kolbe in *Sav. Zeitschr.* 1929 and Larsen in *Symb. Oslo* 1957. Anatolian *sympoliteiai*, by I. Robert, *Billets d'Asie mineure* (1962), 54 ff. J. A. O. L.

SYMPOSIUM (συμπόσιον). A symposium was a Greek drinking-party that followed the evening meal. After libations had been poured and a hymn sung there was drinking according to an agreed procedure; the wine was diluted with water in various proportions. The participants were garlanded and many used perfume. Some did not drink; others displayed riotous intemperance. In addition to conversation the guests told riddles and fables, and sang capped drinking-songs (see SCOLIA), and pieces of verse from traditional classics or recent drama. Games were played, particularly *κάρταβος* (see GAMES). There was usually a woman pipe-player, and displays of dancing, acrobatics, and miming were often given by hired performers.

At *Resp.* 1208-64, Xen. *Symp.*, Athenaeus, esp. 15, P. Jacobsthal, *Göttinger Lusen* (1912), 33 ff. M. C.

SYMPOSIUM LITERATURE. Descriptions of the conversations at symposia made up a loosely defined literary genre. Precedents were sought in Homeric descriptions of banquets, but the masterpiece of the genre was the *Symposium* of Plato, in which a drinking-party is the setting for a series of contrasting speeches on a single philosophical topic diversified by exchanges of dialogue and the arrival of an unwelcome guest. The other important 'Socratic symposium' (cf. Hermog. *Rhet.* 2. 455 f. Spengel) is that of Xenophon, possibly later than Plato's; here more than one topic is discussed, and there are long descriptions of the entertainments provided. Aristotle's *Symposium* is generally identified with his *Ἠθικὴ μέθης*.

Dialogues with the same name were used particularly by Academics and Peripatetics as a framework for philosophical discussions and also by Epicurus, whose *Symposium* was criticized by Ath. (186 c) for lack of artistry. The genre was used, often in the form of unconnected symposiac questions, as a vehicle for miscellaneous learning and lore, e.g. in the *σύμμεκτα συμποτικὰ* of Aristoxenus on musical problems (Ath. 632 a). The *Symposium* of Heraclides of Tarentum dealt with the medical effects of food and drink (Ath. 64 a).

Maccenas wrote a *Symposium*, in which Virgil, Horace, and other contemporaries appeared (Serv. on *Aen.* 8. 310). Plutarch's *Symposiaca* are miscellaneous topics

discussed on various occasions; his *Conv. sept. sap.* describes a single gathering of the Seven Sages and their discursive and sometimes gnomic discussions. Later examples of the symposium framework for literary and antiquarian exposition are the *Deipnosophists* of Athenaeus and the *Saturnalia* of Macrobius (qq.v.).

The serious philosophical symposium was parodied by Menippus (q.v.) and also by Lucian in his *Symposium*.

A closely allied form is the *δειπνον*, or description, with or without mockery of the feast itself. Philoxenus, Hegemon of Thasos (Ath. 5 b), and Matron of Pitane (Ath. 134 d) wrote about banquets in verse which parodied high poetry. The early Hellenistic *δειπνητικαὶ ἐπιστολαὶ* by Hippolochus and Lynceus described sumptuous banquets (Ath. 128 c). Censorious descriptions of vulgar banquets are found in Roman satire, notably Hor. *Sat.* 2. 8 and the *Gena Trimalchionis* of Petronius.

SYNCRETISM, a word with a curious history, for which see J. Moffatt in Hastings, *ERE*, s.v. It is now used to denote a phenomenon very common in the later stages of ancient religion. While in the earlier periods the theory of the identity of the gods of different nations (cf. *INTERPRETATIO ROMANA*) was prevalent, in practice each community normally continued to worship its own deities, or if it imported those of another, regarded them as foreign and often gave them a more or less foreign cult. But from about the generation after Alexander it became more and more usual to identify gods of various nations in practice, thus producing cults of a mixed nature, and also to blend together deities of the same racial or national origin but different functions. Perhaps the earliest example of the former process is the Alexandrian cult of Sarapis (q.v.). Here we have an Egyptian god, Usar-Api, i.e. Osiris-Apis, himself no doubt the result of a certain amount of blending of native worship. But his cult-legend represents him as coming from the Black Sea, the foundation of his Alexandrian ritual was partly due to the Eumolpid Timotheus, the initiative in the matter was taken by Ptolemy I, the god was variously identified with Asclepius, Zeus, and Pluto (Tac. *Hist.* 4. 83 f.), and the statue was a Greek work, a Hades with some attributes foreign to him on Greek soil. All this was a State cult, intended perhaps to reconcile Greek and Egyptian elements in the mixed Ptolemaic kingdom. It does not appear to have excited any opposition or nationalistic feeling, at all events among Greeks, it only because earlier movements had tended somewhat in the same direction (see Kern, *Relig. d. Griech.* iii. 145 ff.). Certainly the spread of similar mixed cults was rapid, and current theological speculation at least kept pace with the facts of actual worship. At once an example of these movements and an instance of syncretism involving comparatively little but the blending of native elements is the very common Hellenistic identification of Apollo (q.v.) with Helios, and hence with various non-Greek sun-gods.

Naturally, syncretism is most conspicuous in those worships which never had been national within the classical area, for instance that of Isis. The *locus classicus* for this is Apuleius, *Met.* 11. 5, where a long speech put into the goddess's mouth identifies her with ten different figures of Mediterranean or Anatolian cult. Mithraism (q.v.) manifestly had syncretistic elements; indeed, solar religions seem to have lent themselves especially to it, see, e.g., the long and fantastic list of identifications of the 'Heracles' of Tyre, Nonnus, *Dion.* 40. 360 ff., while theoretically the tendency in late times to identify all gods with the sun (Macrobius, *Sat.* 1. 17. 2) worked in the same direction. Two incidental results were the occa-

sional formation of compound names for deities, as *Κουραφροδίτη* (Proclus, *Hymn* 5. 1), and the not uncommon occurrence of late statues showing one god with the attributes of one or several others. Syncretism is perhaps especially characteristic of magic (q.v.); see S. Eitrem in *Symb. Oslo.* 19 (1939), 57 ff.

LITERATURE. No one important work is devoted to the subject, but all treatises on Hellenistic and imperial cults have chapters or sections dealing with it. The latest is Nilsson, *GGR* 1² 602 and n. 555 ff., who tends to regard all identification of Greek and foreign deities whether in early or late periods as a form of syncretism. Cf. also F. C. Grant et al., *Hellenistic Religions, The Age of Syncretism* (U.S.A. 1951). H. I. R., H. W. F.

SYNESIUS of Cyrene, c. A.D. 370–413, Christian Neoplatonist. He was a pupil of Hypatia at Alexandria, but more an orator and poet than a thinker and scholar. He is at his best in his 9 hymns, 156 letters, and rhetorical discourses on Kingship and Dion, the latter being a powerful attack on the contemporary decline of humane culture, whether in the exaggerated asceticism of Christian monks or in the superstitious theurgy of pagans. He shared Neoplatonic interest in the or cult (e.g. the Chaldaean oracles, q.v.) and wrote on divination by dreams. His wife and brother were Christians, he was probably a catechumen as early as 399 when he visited Constantinople to win tax remission for Libya. Partly because of his ability to deal with government authorities he was elected bishop of Ptolemais (Libya) in 410. He accepted the charge after six months of hesitation, since the decision required surrendering the cultivated life of a sporting gentleman and accepting doctrines like the resurrection which to him were symbol rather than plain prose.

Opuscula and hymns, ed. N. Terzaghi (1904–41), Letters, ed. R. Hercher, *Epist. Gr.* (1873) II. I. Marrou in A. Momigliano (ed.), *The Conflict between Paganism and Christianity in the fourth century* (1963). H. C.

SYNOECISMUS (*συνοικισμός*), the joining of several communities into one city-state (see *POLIS*). According to the common Greek opinion it was a single act, performed by a single person, as in the case of the most famous synoecismus, that of Athens by Theseus. In fact, the unification of Attica into one State was produced by a long-continued development, and so it may have been in many other instances. There were different kinds of synoecismus. (1) Several towns of a district effected a political union, the government being centred in one of them, or in a newly founded city. (2) In districts containing only one town the rural population was gathered into this as the only fortified place. (3) Two cities were amalgamated into one, perhaps by the will of some superior authority, e.g. a Hellenistic king. (4) In a tribal State a city was founded as a political centre for the districts occupied by villages and farms. In the second and third type of synoecismus the population was actually transplanted; in most cases the synoecismus was a merely political act (cf. Thuc. 2. 15). It was the most important means by which a tribal State could turn into a *polis*, and it always meant the common recognition of one or more city gods.

V. Ehrenberg, *The Greek State*³ (1969).

V. E.

SYPHAX (*Σόφαξ*), chief of a Numidian tribe, the Masaesyli, in north Africa, with capitals at Siga and Cirta. He wore a diadem like a Hellenistic monarch, while Phoenician, not Berber, was his official court language. In a war against Carthage (ending in 212 B.C.), he received some support from the Scipios in Spain. He overran part of the territory of his neighbour Masinissa (q.v.) and tried to retain the friendship of both Rome and Carthage, but was won over to the latter by Sophonisba (q.v.). He fought against the Roman expeditionary force led by Scipio, who burnt his camp. Defeated at Campi

Magni, he fled to his kingdom where he was beaten in battle and captured by Laelius and Masinissa (203). He died in imprisonment in Italy.

For coinage see J. Mazard, *Corpus Nummorum Numidiae Mauritanique* (1955), 17 ff.

SYRACUSE (*Συράκουσαι*, modern *Siracusa*), on the east coast of Sicily, was founded by the Corinthians, led by the *oikistes* Archias, c. 734 B.C. Its early government was aristocratic, the *gamoroi* forming an élite whose lands were worked by underprivileged natives (*killyrioi*). Seventh- and sixth-century prosperity is attested by colonies at Acrae and Camarina (qq.v.) and at Casmenae (*Monte Casale*), as well as by surviving architectural remains. Defeated by Hippocrates (q.v. 1), the *gamoroi* were expelled in a democratic revolution. Gelon (q.v.) espoused their cause, making himself tyrant of the city of whose empire he thus became the founder. His brother Hieron (q.v. 1) confirmed Syracusan primacy and added a cultural splendour.

Soon after Hieron's death Syracuse regained democratic freedom but lost her empire. The democracy operated through an assembly and council (*Bouλή*); annual *στρατηγός*, whose number varied, formed the chief executive. For a short time a device resembling ostracism (q.v.), called *περὶ λαμῶς*, sought to check abuse of power. In 412, after Athens' defeat, the democracy became more complete by the reforms of Diocles (q.v. 1), but Dionysius I (q.v.) soon established his tyranny, preserving nevertheless the accepted organs of the constitution.

The new democracy after 466 had difficulties with the tyrants' ex-soldiers and new citizens, and faced wars with Acragas and with the Sicels under Ducetius (q.v.). But these were surmounted, as later were the wars with Athens (427-424 and 415-413), in which the statesmanship of Hierocrates (q.v.) was influential. After 406 Carthage was the chief enemy. Dionysius I fought three Carthaginian wars, and more than once the Syracusans were reduced to great straits. But the early fourth century was a period of great prosperity. Rigorously but astutely guided by her tyrant, Syracuse controlled the greater part of Sicily and much of south Italy. Dionysius II enjoyed ten peaceful years before Dion (q.v.) challenged his rule (356); thereafter Syracusan affairs became increasingly anarchic, and the city's power and population declined. Timoleon (q.v.) restored the situation, introducing a moderately oligarchic government on the Corinthian model, but after twenty years this was overthrown by Agathocles (q.v.), who made himself first tyrant (317) and later king (305/4).

At Agathocles' death (289) a further period of instability ensued. A new tyrant Hicetas (288-278) was defeated by Carthage; Pyrrhus (q.v.) remedied the situation but was unable to revive the empire of Dionysius and Agathocles. After his withdrawal, conflict with the Mamertini in Messina produced a new leader who as King Hieron II (q.v.) led Syracuse into a prosperous Indian summer. By now, however, Syracusan independence existed by courtesy of the Romans, and when in 215 Hieronymus, Hieron's successor, preferred Carthage to Rome its end was at hand. After a long siege (213-211), in which Archimedes (q.v.) played a substantial part, M. Claudius Marcellus sacked the city.

Under Rome Syracuse became a *civitas decumana* and the governmental centre, retaining both its beauty and a comparative importance. It suffered at Verres' hands, and in 21 B.C. received an Augustan colony, but its prosperity continued beyond the Frankish spoliation of A.D. 280 to its capture by the Arabs in A.D. 878. Extensive catacombs attest its importance in the early Christian period.

The original foundation lay on the island of Ortygia

but soon spread to the mainland (Achradina), the two sections being linked by a causeway and bridge. Further expansion took in the districts of Tyche and Temenites, also referred to as Neapolis, where the theatre and other monuments survive. Dionysius I's great fortifications included the plateau of Epipolae within the defended area.

SYRIA. This country (often called by the Greeks *Coele Syria*, to distinguish it from 'Syria between the rivers' or Mesopotamia) was a satrapy ('Beyond the River') of the Persian Empire till in 332 B.C. it was conquered by Alexander. On his death (323) it was assigned to Laomedon, who was in 319-318 ejected by Ptolemy I. Thereafter it was disputed between Ptolemy and Antigonus, till on the latter's death in 301 it was partitioned between Seleucus I, who occupied the north (Syria Seleucia), and Ptolemy I, who retained the south, to which the name *Coele Syria* was now restricted; the boundary was the river Eleutherus. Despite the three Syrian wars this arrangement remained substantially unchanged till in 201 Antiochus III conquered *Coele Syria*. During this period the four Phoenician dynasties which had ruled most of the coast were suppressed, and the maritime towns became republics, governed by *suffetes*. The Seleucids, especially Seleucus I, colonized their area intensively, founding at least eight cities and six military colonies of Macedonians. Aradus (q.v.) became a vassal State within the Seleucid empire as early as 259 B.C. Antiochus IV (175-163) encouraged the hellenization of the upper classes, which had already made some progress, and its corollary, civic autonomy. He allowed both the principal Greek colonies and the chief Phoenician towns to issue their own coins, and granted civic charters to many native towns in the interior. The Ptolemies seem to have founded no colonies and governed the interior on a bureaucratic system like the Egyptian.

After Antiochus IV's death the Seleucid power gradually declined owing to constant wars between rival claimants to the throne, complicated by Ptolemaic interventions. Taking advantage of the weakness of the central Government, many of the cities obtained their freedom (Tyre, 126 B.C.), and scores of local chiefs carved out principalities for themselves, while four native dynasties, those of Commagene, the Ituraeans, the Jews, and the Nabataeans (qq.v.), built up considerable kingdoms. The two branches of the Seleucid house were gradually pushed back to Antioch and to Damascus and its neighbourhood, to which the term *Coele Syria* was now restricted. Finally, in 83, Tigranes of Armenia occupied the country, and on his defeat Pompey made Syria a Roman province (64-63). Pompey re-established a number of cities which had been subdued or destroyed by dynasts, notably those subject to the Jewish kingdom, but in general confirmed the existing situation. The province of Syria thus comprised besides the cities, a few of which were free, the client kingdoms of Commagene and Arabia, the chnarchy of the Jews, the tetrarchy of the Ituraeans, and many minor tetrarchies in the north. The Parthians invaded Syria in 40 and were ejected by Ventidius in 39. Antony gave to Cleopatra the Ituraean tetrarchy, the coast up to the Eleutherus (except Tyre and Sidon), Damascus and *Coele Syria*, and parts of the Jewish and Nabataean kingdoms.

Syria (which probably included Cilicia Pedias from c. 44 B.C. to A.D. 72) was under the Principate an important military command; its legate, a consular, had down to A.D. 70 normally four legions at his disposal.

The client kingdoms were gradually annexed. Commagene (q.v.) was finally incorporated in the province in A.D. 72, Ituraea partly in 24 B.C., partly (Agrippa II's kingdom) c. A.D. 93. Judaea, at first governed by procurators, became in A.D. 70 a regular province ruled by a praetorian legate, who commanded a legion withdrawn from Syria; under Hadrian the province, henceforth usually known as Syria Palaestina, became consular, a second legion being added. The Nabataean kingdom became in A.D. 105 the province of Arabia, ruled by a praetorian legate with one legion. Septimius Severus divided Syria into a northern province with two legions (Syria Coele) and a southern with one legion (Syria Phoenice). Urbanization made little progress under the Empire. Commagene and Arabia were on annexation partitioned into cities, but much of Ituraea was added to the territories of Berytus, Sidon, and Damascus, and in the rest the villages became the units of government. In Judaea the centralized bureaucracy established by the Ptolemies and maintained by the Seleucids, Maccabees, and Herodians survived in some areas throughout the Principate; in others cities were founded by Vespasian, Hadrian, and the Severan Emperors. Of the minor principalities some, such as Chalcis ad Belum, Emesa, and Arca, became cities, but most seem to have been incorporated in the territories of existing towns. Cities being so scarce, Syria remained a predominantly rural country—hence its importance as a recruiting-ground both for the local legions and for many auxiliary units—and only superficially hellenized: not only the peasants of the wide city territories but even the proletariat of the towns always continued to speak Aramaic.

Wine was grown for export in many parts, chiefly along the coast. Other agricultural products of commercial importance were nuts, various fruits, such as the plums of Damascus or the dates of Jericho, and vegetables, e.g. Ascalonite onions. The principal industries were linen-weaving (at Laodicea and in several Phoenician and north Palestinian towns), wool-weaving (at Damascus), purple-dyeing (on the Phoenician and Palestinian coast), and glass-blowing (at Sidon). The country was greatly enriched by the transit trade from Babylonia, Arabia Felix, and the Far East, much of which passed by caravan over the Arabian desert to such emporia as Palmyra, Damascus, Bostra, and Petra, and thence to the coastal ports.

Seleucid Rulers:

Seleucus I Nicator 305–281; Antiochus I 281–261; Antiochus II 261–246; Seleucus II 246–226; Ant. Hierax, usurper 241–227; Seleucus III 226–223; Antiochus III the Great 223–187; Achaeus, usurper 220–213; Seleucus IV 187–175; Antiochus IV Epiphanes 175–164; Antiochus V Eupator 164–162; Demetrius I Soter 162–150; Alexander I Balas 150–145; Demetrius II Nicator first reign 145–140; Antiochus VI Dionysus 145–141; Tryphon, usurper, 141–138; Antiochus VII Sidetes 138–129; Demetrius II Nicator, second reign 129–125; Alexander II Zabinas 128–123; Seleucus, son of Demetrius II and Cleopatra was promptly killed by his mother when he declared himself king as Seleucus V; Cleopatra Thea 126; Cleopatra and Antiochus VIII Grypus 125–121; Antiochus VIII Grypus 121–96; Antiochus IX Cyzicenus 114–95; Seleucus VI Epiphanes Nicator 96–95; Demetrius III Philopator 96–88; Antiochus X, Eusebes 95–92; Antiochus IX Philadelphus 93; Philopator I Philadelphus 93–84; Demetrius III Philopator 86–88; Antiochus XII Dionysus 87–84; Tigranes 83–69; Antiochus XIII Asiaticus 69; Philippos II 67–66.

SYRIAN DEITIES. Almost all the deities worshipped in Greek and Roman Syria were Semitic. In spite of regional differences, a few main types of cult can be distinguished. One group comprises the cults of high places, of waters and springs, of trees and of stones, especially meteorites. Secondly, the close associations between some animals and certain anthropomorphic deities—particularly the bull, lion, horse, camel, snake, dove, and fish—may imply earlier identifications. The largest group comprises the deities of human form. These are often divinities of agriculture and fertility, of the sky and thunder; they may be protectors, or bringers of military or commercial success; they may represent the sun, moon, or stars. Annual death and resurrection occur in some cults. Most characteristic of Syrian religion were the 'Lord' and 'Lady', the Baal and his consort the Baalat (or El and Elat), pairs of deities who could take many of the above-mentioned forms. Each pair originally protected a Semitic tribe; when the tribe settled, the pair owned the territory, and sometimes their influence spread beyond it.

Certain religious developments reveal the continuing influence of the Babylonian astrologers, the Chaldaei. Deities may be grouped into triads (god, goddess, son; Bel, sun, moon, etc.). Furthermore, when the eternity of astral revolutions was recognized, deities of the skies and stars (e.g. Baalshamin) became omnipotent masters of the universe and eternity, and so of the whole of human life and after-life. Finally, in the Roman period, the Chaldaean syncretistic doctrines tended to weld the Syrian deities into one eternal and omnipotent power, manifest in the Sun.

Worship included ritual banquets, processions in which symbols or statues of the deity were carried, dancing, libations, and sacrifices, divination, sacred prostitution, and mysteries. Imposing temples still stand at Palmyra and Baalbek; others stood at Hierapolis-Bambyce, etc.

The deities of human form are usually depicted in Hellenistic or Roman guise, although many symbols and occasional items of costume survive from earlier periods. Armour and military equipment often aid deities in protection.

Many Semitic deities received approximate Greek or Roman identifications: Bel-Zeus, Allat-Athena, Nergal-Heracles, etc. The Baal was often romanized as Jupiter (Dolichenus, Heliopolitanus, Damascenus; Baalshamin as J. Caelestis). Syrian cults were carried west mostly during the Roman and especially the Severan period, usually by soldiers, slaves, and merchants. Elagabalus and Aurelian (qq.v.) attempted to establish Syrian solar cults as supreme in Rome. SYRINX (Σύριγγ), a nymph loved by Pan (q.v.). She ran away from him and begged the earth, or the river

nymphs, to help her; she became a reed-bed, from which Pan made his pipe (σύριγξ).

Ov. Met. 1. 689 ff.; *Servius* on *Verg. Ed.* 2. 31.

SYRTES, the shallow waters lying between Tunisia, Tripolitania, and Cyrenaica. The Greater Syrtis (*Gulf of Sidra*) formed the south-east corner of this ill-reputed Mediterranean bay, the Lesser Syrtis (*Gulf of Gabès*) the south-west. Legends, possibly propagated to protect Phoenician trade-monopoly, exaggerated the dangers of the Syrtic Sea, which failed to hamper the commerce of the Phoenician Tripolis to the south or the Greek Pentapolis to the west; to the west Meninx (*Djerba*), the mythical island of the Lotus-eaters, did a prosperous trade in purple dye, and Tapace (*Gabès*) and Taparura (*Sfax*) were flourishing ports.

W. N. W.

SYSSITIA (συσίτια; technically ἀνδρεία or φιδίτια) were mess-companies, among which the citizen body was apportioned at Sparta and in the cities of Crete. At Sparta membership (obtained by co-optation) was a necessary qualification for full citizenship, and each mess-mate was bound to provide from his allotted estate a fixed ration of food on pain of disfranchisement. On their size ancient opinion varied between about fifteen and about 300. How they were related to other social institutions (see SPARTA) is unknown. The Cretan *syssitia* were formed by voluntary grouping round a leader of good family; their upkeep was at State cost.

According to Aristotle (*Pol.* 1272^b33) *syssitia* also existed at Carthage. These probably were confined to the aristocracy.

T

TABELLARI, freedmen or slaves employed as couriers by the State and by companies and private citizens of importance. To reduce costs, friends might share their services; and under the Republic the couriers of the State and of the *publicani* would carry private mail for important men. An eminent Roman, when abroad, would put someone in Rome in charge of forwarding (as Caesar did when in Gaul). But for reasons of security—especially in times of trouble—it was essential to have one's own trusted letter-carriers for confidential messages. A good messenger, in the best conditions, could apparently cover 60 Roman miles or more in a day. In the Principate, the *cursus publicus* (see POSTAL SERVICE) used highly organized imperial *tabellarii*, but did not carry private mail. These *tabellarii* disappear by the third century A.D. Their functions were in the main taken over by *frumentarii* and later *agentes in rebus* (q.v.).

The word is also used (cf. *ILS* 23) for stones showing subdivisions of a mile on Roman roads (q.v.).

E. B.

TABULA BANTINA is a bronze tablet found in the eighteenth century near Bantia (q.v.). On one side is inscribed the Oscan text of a local law which is of great importance for the study of Oscan; on the other the fragmentary Latin text of a Roman law. The only extant clauses of the Roman measure concern the prescription of penalties for failure to obey and the imposition of an oath of obedience upon magistrates and senators. The demand for a senatorial oath strongly suggests that the measure was the work of a *Popularis* (q.v.) in the post-Gracchan years. Precise identification is more difficult, but the law's almost certain provision for the appointment of non-senatorial *iudices* and its apparently extensive publication lend weight to the view that it was one of a series of measures regulating the operations and composition of the extortion court (see REPETUNDAE). The *lex Servilia* of Glaucia (101 or 100 B.C.) is a possibility; so is the *lex Acilia* (perhaps of c. 111 B.C.).

E. S. S.

TABULA HEBANA is a bronze tablet found in 1947 at Magliano in the Tiber valley near the site of the ancient township of Heba. It is probably the second tablet of at least three on which was inscribed the text of a *rogatio* of A.D. 19 conferring honours upon the dead Germanicus

(cf. *Tac. Ann.* 2. 83). The *rogatio* is worded in the form of a senatorial decree, and its publication in this form on permanent tablets suggests that its projected presentation to the people for conversion into a *lex* was viewed as purely ceremonial. The inscription is important chiefly for the light which it throws on the conduct of consular and praetorian elections in the early Principate and for the details which it provides of the procedure known as *destinatio* (q.v.). Other major issues upon which it has with less justification been claimed to have some bearing include the procedure of voting in the reformed centuriate assembly of the Republic, and the nature and structure of the newly reorganized *ordo equestris* (see EQUITABLES).

Text Not Scav. 1947, 49 ff.; *AJPhL* 1954, 225 ff.; Ehrenberg and Jones, *Documents* (1954). 70 ff.

COMMENT. PP 1956, p. 151; G. Tablotti, *Principe e magistrati repubblicani* (1953), passim, with accompanying bibliography. See also under DESTINATIO.

E. S. S.

TABULA PONTIFICUM, a whitened board set up yearly by the Pontifex Maximus in the Regia, with the magistrates' names, recorded by the day events in which the pontifical college took ceremonial action, e.g. dedications, festivals, triumphs, eclipses, famines, prodigies; political events entered solely in their sacred connexion. The use of the *tabula* may date from the fifth century B.C., but—to judge from Livy's records of prodigies and the state of the *fasti* (q.v.)—its material was not given systematic archival form until c. 300 B.C., presumably on the Ogulnian reform of the pontifical college. In due course it formed the basis for the composition of the *Annales Maximae* (c. 123 B.C.).

TABULAE IGUVINAE. At Gubbio (Iguvium, q.v.), there were discovered in 1444 nine bronze tablets of varying sizes (the largest now surviving measures 33 by 22 in., the smallest 16 by 12), engraved on one or both sides partly in the native, partly in the Latin alphabet. Two of them were taken to Venice in 1540 and lost; the remaining seven are still at Gubbio. These are the famous Iguvine Tables. The oldest was written c. 200 B.C. and the latest probably after the conclusion of the Social War in 89 B.C. The text contains the proceedings and liturgy of a brotherhood of priests, the *frater attineur* ('Fratres

Atiedii', apparently in origin a *nomen gentilicium*), not unlike the Roman Arval brethren. This religious corporation was connected with one of the original ten divisions of the Iguvine people (cf. the Roman *curiae*) and in it certain *gentes* (Petroni, Vucii) were prominent.

The ceremonies include the purification of the Fisian Mount (the city of Iguvium), in which sacrifice is offered to the triad Jupiter Grabovius, Mars Grabovius, and Vohonus Grabovius (cf. the Roman triad Jupiter, Mars, Quirinus) before the three gates of the city and to Treba Jovia, Fisis Sancius (cf. Dius Fidius, Sancus), and Tefer Jovius (god of the hearth) behind the three gates of the city; the lustration of the people of Iguvium in which sacrifice is offered to the triad Cereus Martius (a male equivalent of Ceres), Prestota Cerfia daughter of Cereus Martius (cf. Persephone-Hecate), and Torsa Cerfia daughter of Cereus Martius (cf. Core) and a threefold circuit of the assembled people is made (cf. the Roman *lustratio* in which sacrifice was offered to Mars), sacrifices in the event of unfavourable auspices offered to Dicanus Jovius, Ahtus Jupiter, and Ahtus Mars (Jupiter and Mars as oracles; cf. Latin *Aus*); a private sacrifice of a dog on behalf of the *gens* Petronia (? part of an ancestor cult) to Hondus (cf. *Ἥδωνος*) Jovius; sacrifices at the festival of Semo on behalf of the ten 'decuries' of the Iguvine people offered to Jupiter Sancius; the procession through the fields to the grove (of Jupiter) where sacrifice is made to Pomonius Popdicus (cf. Etr. *Fufuns* = Bacchus-Dionysus) and Vesona Pomoni Popdici (a spring-time vegetation ritual for which cf. the Roman *floralia* and the Oscan bronze tablet from Agnone). In scope, content, and antiquity the Iguvine Tables surpass all other documents for the study of Italic religion. In many details they show resemblance to Roman ritual and cult but such analogies must be used with extreme caution, particularly since the Tables record a relatively developed stage of Iguvine religion. See LUSTRATION. They are also the main source of our knowledge of Umbrian.

F. Buecheler, *Umbria* (1883), is still important. C. D. Buck, *A Grammar of Oscan and Umbrian* (1928), texts and glossary, A. von Blumenthal, *Die igurischen Tafeln* (1931), discusses numerous details, but is prone to dubious conjecture, G. Devoto, *Tabulae Iguvinae* (1962), gives much attention to matters of religion; I. Rosenzweig, *Ritual and Cults of Pre-Roman Iguvium* (1937), is a usable compilation, J. W. Poulney, *The Bronze Tablets of Iguvium* (1959), A. J. Puhlig, *Religio Iguvina* (1964). See also the bibliography to the article RELIGION, ITALIC.

TABULARIUM. (1) The record-office at Rome, probably serving chiefly the adjacent *aerarium Saturni*, built by Q. Lutatius Catulus (q.v.) in 78 B.C. (*CIL* vi. 1314-15). The building is trapezoidal in plan and lies between the two summits of the Capitol; its main front was towards the Campus Martius. On the opposite side, closing the west end of the Forum, the elevation consisted of a massive substructure of ashlar masonry with an arcade of eleven arches flanked by Doric half columns above it. A second story of Corinthian columns, now disappeared, was probably added in Flavian times. A stairway from the Forum climbed through the ground-floor of the substructure to the front hall of the building. The first floor contained a service corridor, leading from the top of the *Porticus Deorum Consentum* to two floors of eastern strong-rooms. The arcade with shops or offices masks two inaccessible vaulted undercrofts suggestive of two large asymmetrical halls, now vanished, at the level of the upper story. See ARCHITECTURE II. 1.

R. Delbrueck, *Hellenistische Bauten in Latium* (1907), i. 23 ff.; Nash, *Pict. Dict. Rome* ii. 402 ff.

(2) Other *tabularia* in Rome were the Aventine *Templum Cereris*, for plebiscites and *senatus consulta*; *Atrium Libertatis*, the censors' registry of punishments and citizen-rolls; *Aedes Nympharum*, the censors' tax-

registry; *Tabularium Caesaris*, for cadastral records; *Tabularium castrense*, for the imperial household.

(3) Taxation sub-offices (*CIL* vi. 8431).

(4) *Tabularium Caesaris* in provinces for imperial rescripts, etc. (*CIL* x. 7852).

(5) *Tabularium Caesaris* in provincial capitals for tax-returns, census, imperial domain-land, birth-registration (S.H.A. *Vit. Marc.* 6).

(6) Military *tabularia* in legionary fortresses and frontier forts (*CIL* viii. 2852).

(7) *Tabularia civitatum* for municipal or cantonal records and local taxation.

See for (2-7). O. Hirschfeld, *Die kaiserlichen Verwaltungsbeamten* (1903); J. Mauquardt, *Römische Staatsverwaltung* 1, ii (1881, 5); Mommsen, *Ges. Schr.* (1905-11), v. 329. I. A. R., D. E. S.

TACFARINAS, a Numidian, formerly an auxiliary trooper, took to brigandage and stirred up a serious insurrection in Africa (A.D. 17). Despite victories won by three proconsuls in succession, Furius Camillus, L. Apronius, and Q. Junius Blaesus (the last of whom was acclaimed *imperator* by the troops), the elusive enemy prosecuted his depredations until trapped and killed at Auzia by P. Cornelius Dolabella (24). The dedication of Dolabella to *Victoria Augusta* has been found at Lepcis (AE 1961, 107).

R. Syme, *Studies in Rom. Econ. and Soc. Hist. in Honour of A. G. Johnson* (1951), 113 ff. R. S.

TACHYGRAPHY. (1) GREEK. Diogenes Laertius (*Vit. Xen.* 2. 48) says that Xenophon was the first to use signs to represent spoken words (*πρῶτος ὑποσημαίνων τὰ λεγόμενα*); but whether this represents anything like systematic tachygraphy is quite uncertain. The same may be said of the word *ὀλιγράμφοι* in the LXX version of Ps. xlv. 2. Nothing is really known of Greek shorthand except from papyri and wax-tablets found in Egypt, which give specimens of tachygraphy from the second century A.D. onwards, and portions of manuals from the end of the third century. These show a fully organized system, composed of a syllabary and a (so-called) Commentary, consisting of groups of words, arranged in fours or occasionally eights, with a sign attached to each, which had to be memorized. The tetrads include some element of association (e.g. one sign represents *Γανυμήδης, οἶνοχοεῖ, νεκτάρ, μισοβάρβαρος*), but oftener it is not discernible. Such a system is referred to in Basil. *De Virg.* 31 (Migne, PG xxx. 733). The British Museum has a portion of two manuals (Papp. 2561, 2562), and a wax-tablet book with exercises; and this material is supplemented by papyri from Antunoe and elsewhere.

(2) LATIN. According to Plutarch (*Cato Mi.* 23), Cicero introduced shorthand at Rome, and as he refers to it by a Greek name (*διὰ σημείων*, *Att.* 13. 32) he probably derived it from Greece. The Latin system, which shows affinity with the Greek, is associated with the name of Cicero's freedman, Tiro, and the lists of symbols which have come down to us are known as *notae Tiromanicae*, but the medieval representations of them have been elaborated to an extent that would make them useless for actual reporting. They are sometimes used for scholia.

In the ancient systems of shorthand, as in the modern, one sign may have several interpretations, and in order to interpret shorthand records it is necessary to have a clue to the subject, and (often) to remember something of what was said. Thus stock phrases such as *ὦ ἄνδρες Ἀθηναῖοι* or *τί δεῖ μακρολογεῖν* were represented by single signs.

H. J. M. Milne, *Greek Shorthand Manuals* (1934), C. Wessely, *Ein System altgriechischer Tachygraphie* (1895), A. Mentz, *Arch. Pap.* viii. 34; F. W. G. Font, *JHS* xxi. 238; V. Gardthausen, *Griechische*

*Palaeography*² (1913), ii. 270 ff.; E. M. Thompson. *Intro. to Gr. and Lat. Palaeography* (1912), 71 ff., 11. Foerster, *Abriß Lat. Palaeographie* (1949), 191.

TACITUS (1), CORNELIUS (*PW* 395). We do not know Tacitus' parentage, year of birth or death, or even *praenomen*. He was born c. A.D. 56, probably of Gallic or north Italian stock, and began his official career under Vespasian. He married Agricola's daughter in 77, became *praetor* and *XVvir* in 88 (*Agr.* 9. 6, *Hist.* 1. 1, *Ann.* 11. 11). Away from Rome when Agricola died in 93, he returned to witness the last years of Domitian's savagery (*Agr.* 3. 2 and 44). *Consul suffectus* in 97, he pronounced the funeral oration over Verginius Rufus (q.v.), and in 100 led Pliny in prosecuting Marius Priscus for extortion. His reputation for eloquence was high, but he had already turned to historical writing, and the *Histories* appear to have been completed during the following decade. He may have governed a military province; he was proconsul of Asia, probably in 112/13. A sentence in *Ann.* 2. 61 has been taken as written after 115; but this may well be a false inference. It is not even known whether he lived to finish the *Annals*.

The *Dialogus* is no longer regarded as Tacitus' first work from about 80, but dated at least twenty years later. A few scholars still deny its Tacitean authorship; most accept it as exemplifying the difference of style required by a non-historical work. The author, discussing the decline of Roman oratory, reveals mastery of argument and characterization, and a rare sense of historical perspective. The *De vita Iulii Agricolae*, published in 98, describes the life of his father-in-law, the larger part being devoted to the scene of Agricola's greatest achievements, Britain. Basically a *laudatio* of the dead man, the work is at the same time an apology for the loyal administrator under the tyranny of Domitian—not least Tacitus himself, and the Emperor Trajan. The full narrative of affairs in Britain was to be given in the *Histories*.

To 98, too, belongs the *De origine et situ Germanorum*, a description of the various tribes north of Rhine and Danube. Again Tacitus employs a familiar genre, though as an ethnological treatise it is singularly incoherent and based on out-of-date material. Subsidiary themes are that of the noble savage, contrasted with the corruption of Rome, and of the constant threat to the Empire: 'tam diu Germania vincitur'.

These are short monographs. Two longer works narrate imperial history from A.D. 14 to 96. The first has no manuscript title, but is usually called the *Histories*; beginning in 69, it presumably ended with Domitian's assassination. Four books and twenty-six chapters of the fifth alone survive, but they give a comprehensive picture of Civil War, containing an extraordinary gallery of ambitious intriguers and incompetent rulers, with one Emperor who 'changed for the better', Vespasian. What Tacitus related of Domitian may be gauged from the *Agricola*, and from the portrait of him in 70—'nondum ad curas intentus, sed stupris et adulteriis filium principis agebat' (*Hist.* 4. 2).

The second is the *Annals*, a conventional title (cf. *Ann.* 4. 32, 13. 31), for in the MS. the heading is 'ab excessu diui Augusti'. We know of sixteen books, though parts of 5 and 6 and the whole of 7–10 are missing, and 16 breaks off in A.D. 66, before Nero's death. The number of books in *Histories* and *Annals* is uncertain: St. Jerome appears to know of thirty altogether (*Comm. in Zach.* 3. 14), but scholars do not agree whether the *Annals* contained eighteen books and the *Histories* twelve, or sixteen and fourteen respectively. The hexadic structure visible in the *Annals* supports the former division. The arrangement is basically annalistic, each year containing sections on home and provincial affairs; but often the doings of the Emperor take up virtually the whole year (e.g. *Ann.*

14. 1–19), while elsewhere a single provincial episode takes precedence (*Ann.* 6. 31–7), even running over the year's limit, with the characteristic reason, 'quo requiesceret animus a domesticis malis' (ibid. 38).

In composing these works, Tacitus drew partly on historical works now lost (of Aufidius Bassus, the Elder Pliny, Cluvius Rufus, Fabius Rusticus, Vipstanus Messalla), partly on public records and his own experience. Very rarely does he refer explicitly to conflicts between his sources (*Hist.* 3. 28; *Ann.* 13. 20, 14. 2); normally he appears to select and combine their evidence without acknowledgement, as if regarding controversy as unfitting to a serious work of history. His technique for the later books of the *Histories*, for which few written sources would be available, we must judge from the uncertain evidence of Pliny (*Ep.* 6. 16, 7. 33).

But his view is also coloured by his own experience. Reacting against the Principate, Tacitus looks back longingly on the 'free' institutions of the Republic ('libertatem et consulatum', *Ann.* 1. 1; cf. 4. 63); the Principate may have benefited the provinces and secured peace (*Ann.* 1. 2; *Hist.* 1. 1), but the overwhelming power thus centred in one man blunted the moral sense of even experienced rulers (*Ann.* 6. 48), and rapidly reduced the ruled to servility and flattery. Thus the Principate tended towards *regnum*, where Tacitus found 'fugas cunium, urbium eversiones, fratrum coniugum parentum nece aliaque solita regibus' (*Hist.* 5. 8; cf. *Ann.* 6. 1, and 12. 66) and even Augustus is damned with faint praise, or belauded only for contrast with his worse successors (e.g. *Ann.* 1. 46; 3. 5; 13. 3). Roman *virtus* had stagnated into an inactive and inglorious temper, Augustus had lured citizens into the Principate 'dulcedine otii' (*Ann.* 1. 2); *pax* merely cloaked *ignavia*. The Emperors had neglected military glory: Tiberius preferred diplomacy to arms (*Ann.* 2. 64 and 4. 32); Caligula's campaigns were a farce (*Germ.* 37 and *Hist.* 4. 15); Claudius had merely reconquered Britain (*Agr.* 13), and Nero's crimes had alienated the soldiery (*Ann.* 15. 67). Domitian had been warlike, but in the wrong way, and Tacitus shrinks from enumerating the Roman lives he lost (Orosius 7. 10. 4).

Nor was the vaunted *pax Augusta* fruitful or prosperous, at least in Rome (*Hist.* 1. 1; *Ann.* 1. 10); what galls Tacitus is the lack of independence and courage among those who should most have shown it. While lower ranks provided shining examples of loyalty and heroism (*Ann.* 13. 44 and 15. 57), most nobles and senators could only cringe to a despot, 'homines ad scrutitum paratos' (*Ann.* 3. 65; cf. 14. 13), and though L. Silanus *did* put up a fight (*Ann.* 16. 9), the 'patientia scruiis' of Nero's victims rouses Tacitus' scornful pity (*Ann.* 16. 16). Yet he disapproves the Stoic-minded and their theatrical gestures: his ideal was the prudence of Agricola (*Agr.* 42) or of L. Piso (*Ann.* 6. 10).

Throughout these eighty odd years, Tacitus discerns the wrath of the gods working, gods more eager to punish than to save (*Hist.* 1. 3; *Ann.* 4. 1; 16. 16). His task is gloomy, to record the suspicions of Tiberius, played upon by informers; Claudius the helpless tool of freedmen or wives; the vanity and vice of Nero—all resulting in baseless accusations and judicial murders. 'Primum facinus noui principatus' (*Ann.* 1. 6) is echoed by 'prima nouo principatu mors' (*Ann.* 13. 1) for the reign of Nero. Given the opportunity of recounting victories won by Germanicus or Corbulo, Tacitus can expand indeed (*Ann.* 2. 18; 13. 30); otherwise he feels a painful contrast with republican historians—'nobis in arto et inglorius labor' (*Ann.* 4. 32). Better times undeniably had come with Nerva (*Agr.* 3; *Hist.* 1. 1), but he fears that the past century, in his account, will seem a sombre period (*Ann.* 4. 33).

To dissipate this feeling of monotony and rivet the

reader's attention Tacitus marshals all his resources, forming a style unique and perfectly adapted to purpose. He keeps us continually on the alert. His vocabulary is large and varied: note the different phrases for dying or committing suicide or for 'evening was approaching'. To the classical word Tacitus prefers an older, a simple verb to the usual compound, new forms to hackneyed. Echoes of poetry, subtle reminiscences of Virgil, Graecisms, all make their appeal. Words are left uncoupled, grouped in strange and striking order ('tamen' pushed to the end; *Ann.* 2. 57), or thrust into violent prominence.

Though Tacitus can elaborate sentences of length and complexity, he prefers (like Sallust) rapidity and shortness; periodic structure is deliberately abandoned. Gone are the temporal clauses of Livy, gone the superlatives of Cicero. Instead we have intensity and brevity, gained by skilful use of Historic Infinitives, or adjectives that become practically Active Past Participles ('gnarus', 'certus', 'dubius'), by omission of verbs, by compression, the eventual effect being often to question the validity of the original assertion or to lead the reader unawares into accepting the least creditable of several alternative explanations of a character's action. So intensely personal is his style that he rarely quotes verbatim, save for damning effect—a phrase revealing Tiberius' tortured soul, a brutal joke of Nero's, a tribune's bluntness (*Ann.* 6. 6, 14. 59, 15. 67). His normal method of adaptation may be seen most clearly (and perhaps typically) in his version of a speech of Claudius in *Ann.* 11. 24, compared with the extant original (*ILS* 212).

Throughout shines the quality Pliny noted in Tacitus' speeches, elevation. Tacitus believes in the dignity and moral effect of history (*Ann.* 3. 65). He will not chronicle petty events (*Ann.* 13. 31): his unwillingness to mention spades and shovels (*Ann.* 1. 65), or a garden-cart (*Ann.* 11. 32) leads to circumlocutions recalling French tragedy, but he never drops into mere pomposity; he knows history is a great theme, to be adorned by *fides* and *eloquentia* worthy of it (*Ann.* 4. 34). This consciousness informs his whole manner, whether in comment on nobles who competed at Nero's bidding, 'quos fato perfunctos ne nominatum tradam, maioribus eorum tribuendum puto' (*Ann.* 14. 14), or sad reflection on the 'ludibria rerum mortalium cunctis in negotiis' (*Ann.* 3. 18).

The style, indeed, is inescapable, making its effect sometimes by long passages, sometimes by sentences, sometimes by one phrase of psychological insight. We may instance Agrippina's murder by her son (*Ann.* 14. 1-9), or the rise and collapse of the Pisonian conspiracy (*Ann.* 15. 48-71); Vitellians and Vespasianists fighting ferociously in the heart of Rome, while onlookers applaud (*Hist.* 3. 82-3), or Germanicus' visit to the Varian camp (*Ann.* 1. 61-2), or the terrible picture of Tiberius' end (*Ann.* 6. 50-1). Great and fatal characters stalk across the stage—Tiberius, Sejanus, the Younger Agrippina, Nero—and these are drawn at length, but Tacitus can in a phrase sum up person or situation: Galba, 'omnium consensu capax imperii nisi imperasset' (*Hist.* 1. 49); Vitellius, 'principatum ei detulere qui ipsulum non noverant' (*Hist.* 3. 86); Claudius Sanctus, pusillanimous leader of disgraced troops, 'effosso oculo dirus ore, ingenio debilius' (*Hist.* 4. 62).

Always the irony remains keen—'proprium humani ingenu est odisse quem laeseris' (*Agr.* 42), 'accerrima proximorum odia' (*Hist.* 4. 70), 'obliuione magis quam clementia' (*Ann.* 6. 14)—or we have Nero's admiral advising him to destroy Agrippina; and after?—'additurum principem defunctae templum et aras et cetera ostentandae pietati' (*Ann.* 14. 3).

His bias against the dynastic system is plain; yet his accuracy, though severely probed by modern criticism, can rarely be impugned. Though sometimes an unfavour-

able interpreter of his facts, he will not blacken even Tiberius or Nero by crediting stupid rumours about them (*Ann.* 4. 11; 16. 6). His picture of capital and court is terrible, but its general truth is incontestable. His gaze is focused upon Rome; when he looks further he approves the sturdy simplicity of north Italy and the provinces (*Ann.* 16. 5), and can pen a moving appeal for the preservation of the Empire (*Hist.* 4. 74). Though mistrustful of 'civilization' and of its debilitating effects, he never despairs of human nature—even the Civil War produced examples of heroism, loyalty, and friendship (*Hist.* 1. 3), and virtue is not confined to past ages (*Ann.* 3. 55). Napoleon called Tacitus a 'traducer of humanity', from one who spent his powers in annihilating humanity this verdict is interesting, but simply untrue. In independent selection and judgement, in essential truth, in the dramatic power and nobility of an enthralling style, Tacitus claims his place among the greatest historians.

Yet his survival hangs upon a slender thread. He was little read in succeeding centuries; later, Orosius (q.v.) and Sidonius (q.v.) appear to know him, and Jordanes paraphrases a passage from the *Agricola*. Then darkness falls, though in the ninth century monks at Fulda apparently possessed the early *Annals*, and the *Germania*. Even now we are dependent upon one manuscript (discovered about 1510) for *Annals* 1-6, and upon one manuscript (the Second Medicean, discovered about 1430) for *Annals* 11-16 and *Histories* 1-5; though the independence of Leidensis B.P.L. 16h has been argued by Mendell and exploited, with questionable success, in Koestermann's recent Teubner texts. See also LITERARY CRITICISM, LATIN, § 5.

TACITUS (2), MARCUS CLAUDIUS (*PW* 361), was chosen by the Senate to succeed Achaicus in Nov. A.D. 275, being then an elderly senator. He marched east and gained a victory over the Goths who had broken into Pontus, but succumbed to murder, or the threat of it, from his own troops at T'iana (c. June 276).

Tacitus certainly favoured the Senate, but he did not effectively restore its authority or give back to it the commands in the army. It was only the hopeful fancy of later historians that painted his reign as a late summer of constitutional government under the Senate.

H. M.; B. H. W.

TAENARUM (Ταίναρον, more rarely Ταίναρος). (1) The central peninsula of south Peloponnesus and its terminal

cape, near which stood a Temple of Poseidon of which scanty traces remain. Through a cave near by Heracles traditionally dragged up Cerberus from Hades. The sanctuary enjoyed a right of asylum (cf. Thuc. 1. 133), and private slaves were manumitted there, before an ephor (IG v. 1. 1228 ff.). In the later fourth century the district was an important headquarters for mercenaries. Iron was mined near the cape.

(2) A city on the west coast of the above peninsula, later a member of the Eleutherolaconian League (see LACONIA), alternatively known as Caenopolis.

A. M. W.; W. G. F.

TAGES, an important figure of Etruscan mythology, childlike in appearance but of divine wisdom. Tages was unearthed by a peasant in the fields near Tarquinii and revealed the Etruscan discipline (*libri Tagetici*) to the twelve *lucumones* of Etruria. See also TARCHON.

Cf. A. S. Pease on Cic. *Div.* 2. 50; S. Weinstock, *PHSR* 1950, 44; A. Piganiol, *Bull. Soc. Antiqu. de France* 1950, 1, 32; R. Herbig, *Charites E. Langlotz* (1957); J. Préaux, *Latomus* 1962, 370.

G. M. A. H.

TAGOS (ταγός), the official title borne by the chief magistrate of Thessaly. When a *tagos* was in office, he was the military and civil leader of the Thessalians and their *perioikoi*; but it was not unusual for the *tageia* to be left vacant for some years, and during these periods there was no central organization for the whole country. Although a *tagos* was most commonly appointed to deal with some emergency involving all Thessaly, the office was not a temporary one; once elected, a *tagos* retained his powers indefinitely. The term *tagos* is not used by historians except Xenophon, but the principal leaders, such as Thorax the Aleuad who negotiated the submission to Xerxes, certainly held the *tageia*. Jason (q.v. 2) revived the office in 374 B.C. to legalize his control of Thessaly, but Alexander (5), who claimed the *tageia*, cannot have been legitimately elected. When a new Thessalian Confederacy was formed under Theban influence (c. 369), the federal *tageia* ceased to exist, and the principal magistrate was an *ἀρχων*. A municipal *tageia*, as is attested by inscriptions, survived until Roman times.

H. D. W.

TALOS (Τάλως, Τάλος), perhaps originally a god (ταλῶς is the Sun and Talaios a Cretan title of Zeus, Hesych. s.v.), but in mythology the guardian of Crete (originally of Europa, Ap. Rhod., *infra*). He is generally said to have been made of bronze by Hephaestus, but animated; for other accounts see Roscher's *Lexikon*, s.v. He kept strangers off by throwing stones (Ap. Rhod.), or burned them (Simonides in schol. Pl. *Resp.* 337 a), or heated himself red-hot and then clasped them in his arms (Eustathius on Homer, 1893. 6). His vital fluid was kept in by a membrane in his foot; Medea (q.v.) cast him into a magic sleep and cut the membrane, thus killing him.

See Ap. Rhod. *Argon.* 4. 1638 ff., the most circumstantial account, and Cook, *Zeus* i. 719 ff.

H. J. K.

TALTHYBIUS, Agamemnon's herald (*Iliad* 1. 320). For some reason his name remains familiar in later writings, while his comrade Eurybates (*ibid.*) is forgotten. He was the eponym of a herald-clan at Sparta, the Talthybiadae (see Hdt. 7. 134. 1).

TAMIAI (ταμιαί) means 'treasurers'. In Athens the most important officials with this title were the *tamiai* of Athena. They were ten in number, appointed annually by lot, one from each of the ten *phylai* (q.v.). According to a law attributed to Solon (q.v.) only *pentakosiomedimnoi* (q.v.) were eligible, but by the fourth century B.C. this

rule was no longer enforced. Their year of office began and ended at the time of the Panathenaea (q.v.). They had charge of the money and treasures of Athena Polias, Athena Nike, and Hermes, on the acropolis. They kept the money in a building called the *opisthodomos* (the location of which is doubtful), and they received and made payments in accordance with the decisions of the people. They paid out money not only for religious purposes, but also for military use (especially during the Peloponnesian War) and to defray other secular expenses. Many of their records are preserved on stone, and are an important source of information about Athenian finance.

In 434 B.C. a similar board of ten *tamiai* of 'the other gods' was instituted to take charge of money and treasures belonging to other Attic shrines, which were now brought together into a single fund. It also was kept in the *opisthodomos*, but separately from the money of Athena. In 406/5 the two boards were replaced by a single board of ten *tamiai* of 'Athena and the other gods'. The two separate boards were re-established by 385, but by 341 they were again replaced by a single board.

After the abolition of the *kolakretai* (q.v.) and the *hellenotamiai* (q.v.) other *tamiai* were instituted to take charge of various funds: the *tamias* of the assembly (*ταμίας τοῦ δήμου*), the *tamias* of the board for the construction of triremes, the *tamias* of the military fund, and so on.

Inscriptions; Arist. *Ath. Pol.* 47. 1. W. S. Ferguson, *The Treasurers of Athens* (1932).

D. M. M.

TANAGRA, the chief town of east Boeotia, with a territory extending to the sea, was more closely bound with Attica, with which it had easy connexions, than was the rest of Boeotia (cf. Hdt. 5. 57). It was an early rival to Thebes; after the Persian Wars it probably stood at the head of the Boeotian Confederacy (Hdt., *Historia Numorum*², 348). In 457 the Athenians were defeated here by the Spartans and their allies, and the battles of Oenophyta and Delium were also fought in this district. In the fourth century Tanagra declined in importance, contributing only one boeotarch to the Confederacy, but it flourished in Hellenistic and Roman times (Strabo 403). It is now best known for the lively little Hellenistic terracotta figures, women and groups from daily life, found in its graves. It was the birthplace of the poetess Corinna. The walls are preserved, but little else. See also FEDERAL STATES, § 3.

PAUS. 9. 20, and Frazer, *ad loc.*; P-K, *GL* 1 i 514 f. T. J. D.

TANAÏS, the river Don, and a city at its estuary. The river was usually regarded as the boundary between Europe and Asia. A trade route to Central Asia, by which Ural gold came to the Black Sea, and Greek textiles were carried as far as Mongolia, probably followed the Tanaïs valley. But the Greeks knew little of the river: it was at first confused with the Phasis, and Aristotle and Alexander mistook it for a branch of the Jaxartes (q.v.).

Greek goods were passing up the Don by c. 600 B.C. but the city of Tanaïs was probably founded by Pantikapaeum c. 500 B.C. (to judge by the fairly rich finds beginning at that date). In the first century A.D. it was rebuilt higher up the river, near modern Rostov, but it lost its former prosperity.

E. H. Minns, *Sarmatians and Greeks* (1913), 566 ff. M. C.; J. H.

TANAQUIL, a woman of noble family of Tarquinii, may well be a historical character (cf. Etruscan *Θανχvil*, etc.). According to the Roman story she married Tarquinius Priscus, son of the Corinthian Demaratus who had settled in Tarquinii and married an Etruscan wife. Spurred on by her forceful character, Tarquinius

migrated to Rome where he gained the throne. After his murder by the sons of Ancus Marcius, her bold action secured the succession for her son-in-law Servius Tullius. Another tradition named Tarquin's wife Gaia Caecilia; Pliny (*HN* 8. 194) took this to be an alternative (Roman) name of Tanaquil. He adds that her distaff was preserved in the temple of Sancus, and the robe she made for Tullius in that of Fortuna. In his classic *Die Sage von Tanaquil* (1870) J. Bachofen argued, unacceptably, for matriarchy (*Mutterrecht*) in Etruscan society.

H. H. S.

TANTALUS (*Τάνταλος*), in mythology, king of Sipylus and the neighbourhood in Lydia, son of Zeus and Pluto (*Πλούτων*), Hyg. *Fab.* 82. 1; the name is variously corrupted in sundry authors (see Scheuer in Roscher's *Lexikon* v. 75. 25 ff. If Pluto was a minor being of the same kind as Plutus (q.v.), this would seem one of the numerous variants of a union of the sky-father with the earth-mother. It is natural, therefore, that their child should be proverbially wealthy (*Ταντάλου τάλαντα*, Anacreon in Photius, s.v., is an older equivalent of 'the riches of Croesus') and king of a fertile district. He is the ancestor of the Pelopidae (see *PELOPS*), the line being

and also father of Niobe (q.v.). His chief legends deal with his crime and its punishment. For one form of the former see *PELOPS*; there are various others, one of the best known being that he stole the food of the gods, to whose society he had been admitted, and gave it to mortals (Pind. *Ol.* 1. 60 ff.). All agree that in some way he abused the privileges which he had been granted. But he was immortal (Pind. *ibid.*), having eaten divine food, and so his penalty must be everlasting, for he could not be killed. In Homer (*Od.* 11. 583 ff.) and in most authors (it became almost proverbial for 'tantalizing' in our sense, see Plato, *Prt.* 315 c) he is hungry and thirsty; he stands in water up to his chin, with fruit-laden trees over his head, but when he tries to drink, the water disappears, and if he reaches for the fruit, the wind blows it away. Pindar (*ibid.* 57 ff.) says a great stone is hung over his head, always threatening to fall, so that the penalty is everlasting fear. Euripides (*Or.* 4 ff.) follows this version, putting Tantalus in the air, not, as usual, in Tartarus.

H. J. R.

TANUSIUS (*Πῦ 2*) **GEMINUS**, historian of the Late Republic, used by Plutarch (*Caes.* 22. 3) and by Suetonius (*Jul.* 9. 2). Seneca speaks of his Annals as 'ponderosi' (*Ep.* 93. 11), where 'quid vocentur' probably means that Catullus' description of Volusius' histories (36. 1) was applied in jest to Tanusius.

R. Syme, *Salust* (1964), 96.

C. J. F.

TAPROBANE (also *Palaesimundu*; later *Salice* and *Sielediba*), Ceylon. First described by Onesicritus and Megasthenes (c. 325–300 B.C.) as an island south of India, it was believed by many to be a large land-mass projecting towards Africa (Strabo 15. 690–1; *Peripl. M. Rubr.* 61). It was rediscovered by accident, probably late in the reign of Augustus who died in A.D. 14 (Pliny, *HN* 6. 81 ff.; D. Meredith in *JRS* 1953, 38; R. E. M. Wheeler, *Rome beyond the Imperial Frontiers* (1955), 150, 155 f., 162, 165, 168, 172, 175); Ceylonese envoys visited Rome, and Greek traders henceforth frequented the island.

Yet Ptolemy (*Geog.* 7. 4. 1 ff.), while giving considerable detail and the correct shape, made it fourteen times too large. Many Roman coins, dating from the third century, have been found in Ceylon, though western trade was now conducted intermediately through the Axumites.

Warrington, *Indian Commerce*, esp. 117 ff.; H. Colfron, *Ceylon Coins* (1924), Still, *Journ. R. Asiatic Soc.*, Ceylon Branch xix. E. H. W.

TARCHON, founder of Tarquinii and, according to some authorities, of the Etruscan dodecapolis. Tarchon is the son (or brother) of Tyrrhenus, the legendary leader of the Etruscans on their migration from Lydia (Strabo 5. 219), and an ally of Evander (Verg. *Aen.* 8. 506). He is shown on an Etruscan mirror in Florence, watching Tarchies (Tages?) examining a liver for omens (M. Pallottino, *Etruscologia* (1963), pl. xxvii). G. M. A. H.

TARENTUM (*Τάρας*, modern *Taranto*), in the 'instep' of the boot-shaped coastline of south Italy, lies on a promontory (now artificially made an island) between a tidal lagoon and a larger bay sheltered by protecting islets, and has a fertile agricultural hinterland. It was founded (traditional date 706 B.C.) by the Partheniae, Spartans supposedly the product of liaisons between Spartan women and Helots; the *oikistes* was Phalanthus. Pottery from Mycenaean date onwards suggests that the site had long been in continuous native occupation before the Greeks established themselves. Tarentine cults and archaic art emphasize the city's Spartan affinities.

Aristocratically governed in the archaic period, Tarentum became a democracy c. 475 B.C., perhaps as a repercussion of a heavy defeat at the hands of the Messapii, who had long been hostile neighbours. The decline of Croton after c. 450 left it as the leading Greek city in south Italy. In 433/2 it founded a colony at Heraclea (q.v. 1), which became the headquarters of a league of Italiot Greeks. Under the administration of the philosopher Archytas (q.v.) Tarentum reached its zenith in the fourth century. It had a great tradition of artistic and industrial activity, evidenced especially by the sixth-century krater of Vix, by the jewellery and coinage of the fourth and third centuries, and terracotta products throughout the period. Coinage distribution bears witness to considerable trade in the north Adriatic area.

However, the Tarentines had difficulty in maintaining themselves against pressure from the Italian tribes of the interior, and came to depend on the support of foreign mercenary leaders. King Archidamus II of Sparta was defeated by the Lucanians (338); Alexander I of Epirus defeated the Lucanians but quarrelled with his employers (334); Cleonymus of Sparta both quarrelled and was defeated (303). Finally, Pyrrhus (q.v.) of Epirus, at first successful, ultimately abandoned Tarentum to the Romans. The Tarentines, concerned at the Romans' southward advance, had pledged them by treaty (334 B.C.?) not to send warships into the Tarentine gulf. In 282 the Romans assumed a protectorate over Thurii and emphasized the fact by the dispatch of a fleet; the Tarentines forced on a war, relying on Pyrrhus' help. But despite early victories over Rome Pyrrhus went campaigning in Sicily and, on his return, was defeated by the Romans. He withdrew from Italy in 275 and his garrison left Tarentum three years later. Roman terms of surrender and alliance were generous, and Tarentum like the other Greek cities enjoyed greater security henceforward. Livius (q.v. 1) Andronicus, a Tarentine war captive, was a major figure of early Roman literature.

In 213 Hannibal took the city by treachery. Recaptured in 209, it was thoroughly plundered by the Romans. This disaster, and the foundation of a Latin colony at Brundisium (q.v.), led to its decline. Attempts by C. Gracchus

and Nero to revive it with Italian settlers largely transformed it into a purely Italian town. In 37 B.C. Antony and Octavian renewed the Second 'Triumvirate at Tarentum; but thereafter little is heard of it. Horace mentions it (*Carm.* 3. 5. 53-6) as a quiet country retreat suitable for a tired business man.

Bérard, *Bibl. topogr.* 104 ff.; P. Willeumier, *Tarente, des origines à la conquête romaine* (1919); Dunbabin, *Western Greece*; H. Klumbach, *Tarentiner Grabkunst* (1938). M. C.; A. G. W.

TARIUS (PW 3) RUFUS, LUCIUS, of very humble origin, perhaps from Picenum, served as an officer in Octavian's fleet at Actium, as proconsul of Cyprus, and (c. 27 B.C.) as a commander in the Balkans. Augustus rewarded him with the suffect consulship (16) and with gifts totalling ten million sesterces which he invested in land in Picenum. He was *curator aquarum* from A.D. 23 to 24, when he probably died. His clemency to his only son, who tried to murder him, is noted by Seneca (*Clem.* 1. 15).

Syme, *Rom. Rev.*, see index.

T. J. C.

TARPEIA, a legendary figure of early Rome. Daughter of the commander of the Capitol when it was attacked by the Sabines, she betrayed the citadel in return for a promise of what the Sabines had on their arms, but in place of their golden armlets (*armillae*) they rewarded her by hurling their shields on her. The legend took various forms (e.g. love for the enemy general replaced love of gold as her motive). It explained the name of the Tarpeian Rock (q.v.), the name being Etruscan (cf. Tarquinius, etc.).

Ogilvie, *Comm. Laty* 1-5, 74 ff.

H. H. S.

TARPEIAN ROCK. The site of this famous cliff (*rupes*), whence murderers and traitors were thrown, is located by Dionysius (7. 35. 4; 8. 78. 5) as overhanging the Roman forum, while Varro (*Ling.* 5. 41) and others, equating *saxum Tarpeium* with *rupes*, place it close to the temple of Jupiter Capitolinus. Lucan (3. 154) connects it with the temple of Saturn. This leads to the conclusion that the cliff was at the south-west corner of the Capitol.

H. Jordan, *Topographie der Stadt Rom* (1871), i. 2. 127 ff.; Nash, *Pict. Dict. Rome* ii. 400 ff. I. A. R.

TARQUINII (Etr. *Tarx(h)na-*; modern *Tarquinia*, formerly *Corneto*), the chief of the twelve cities of Etruria and the reputed home of two of the kings of early Rome, Tarquinius Priscus and Superbus (q.v.); and *TARCHON*, stood on a high plateau about 60 miles from Rome and 5 miles from the sea. The greatest glory of Tarquinii is the series of painted chamber tombs which starts in the mid-sixth century B.C. The wealth of material found in the extensive necropolis has made them basic to the study of the Villanovan and successive periods in southern Etruria. Tarquinii has produced the earliest orientaling tomb in Etruria, containing a vase with the cartouche of the Egyptian Pharaoh Bocchoris (reigned c. 718-712 B.C.) associated with local imitations of Proto-corinthian (see *ISCHIA, VILLANOVANS*). As at Veii and probably Capena (q.v.), the city walls, about 5 miles in circuit, may well reflect the mid-fourth-century hostility between Tarquinii and Rome. The chief surviving monument in the city is a fourth-century temple, the so-called *Ara della Regina*. In 1948 fragments of some late (Latin) inscriptions were published. These *Elogia Tarquiniensia* commemorate the careers and exploits of earlier famous citizens and thus reflect local Etruscan history.

TARQUINIUS (1) PRISCUS according to tradition was the fifth king of Rome (616-579 B.C.) and the son of Demaratus of Corinth, who is said to have migrated to Tarquinii in Etruria. Archaeological discoveries confirm both that in the era of the Tarquins Rome was under Etruscan sway and that cultural and trade relations between Etruria and Greece (chiefly Corinth) were then very active. The Tarquins, however, appear to have closer connexions with Caere than with Tarquinii (the latter link being due perhaps to homophony). The Tarquins are indisputably historical figures, though no clear differentiation and distribution of exploits between the two Tarquin kings Priscus and Superbus (q.v.) may have existed before the later annalistic tradition and manipulation developed, and though some stories of Priscus, e.g. about Tanaquil (q.v.), are probably late inventions. His Etruscan origins, apart from archaeology, are also indirectly proved by the story of Mastarna (q.v.) and confirmed by the Roman belief that Tarquin brought to Rome Etruscan customs, cults, and craftsmen. The foundation of the temple of the Capitoline Triad and other public works are attributed to Tarquin, and undoubtedly this building activity (e.g. the Circus Maximus, and draining the Forum) belongs to the period when he is said to have been king. His wars against neighbouring States also are probably historical, but they betray so much similarity with those fought by Tarquinius Superbus as to suggest that Priscus and Superbus are merely names attributed indiscriminately to members of the same Etruscan dynasty. Priscus is also said to have enlarged the Senate. He is said to have been murdered at the instigation of the sons of Ancus Marcius (q.v. 1), but they failed to secure the throne because Tanaquil helped Servius Tullius to power. Tarquin's two sons, Lucius and Aruns, are said later to have married daughters of Servius Tullius (see *TULLIA* 1), while of his daughters one married Servius Tullius, the other M. Brutus and thus became the mother of L. Brutus (q.v. 1).

A. Blakey, 'Demaratus', *JRS* 1915, 129 ff.; G. Pasquali, *Terze pagine stravaganti* (1942), 1 ff. (against him A. Alfoldi, *Early Rome and the Latins*, 1964, 118 ff.); Ogilvie, *Comm. Laty* 1-5, 145 ff. For a summary of Gjerstad's controversial views on the lower dating of the Tarquins (c. 570/525-c. 500 for Priscus) see E. Gjerstad, *Legends and Facts of Early Roman History* (Lund, 1962), esp. 50 ff. They are rejected by A. Momigliano, *JRS* 1963, 102 ff.; M. Pallottino, *Stud. Etr.* 1963, esp. 19 ff. P. T.

TARQUINIUS (2) SUPERBUS. The historicity of the last king of Rome (traditionally 534-510 B.C.) is probably proved by the tradition of his capture of Latin towns, of his dedication of the temple of Capitoline Jupiter, and of the treaty between Rome and Gabii ascribed to him, which survived in the temple of Semo Sancus till the time of Augustus (the forgery of such a document would be unintelligible). But, as the name 'Superbus' would not appear in its text (nor for that matter in any text), tradition proves only that a king Tarquinius existed, thereby supporting the surmise that the two Tarquins are merely names of members of the same dynasty. The records of the Tarquinian sovereignty were later embellished by borrowings from Greek history, both to find similarities between Greece and Rome, and in order to justify the surname of Superbus and to explain the fall of the monarchy. Popular legends or folktales or epic poems were combined with tales of probable or indisputable Greek origin, such as Tarquinius' conspiracy against Servius Tullius and the decapitation of the tallest poppies at Gabii.

For the story of his accession see *TULLIA* 1, for that of his fall see *LUCRETIA, BRUTUS* 1. After his expulsion from

Rome Tarquin is said to have fled to Caere, and to have persuaded Veii and Tarquinius to attack Rome. After their defeat at Silva Arsia, he appealed to Porsenna (q.v.) of Clusium to attack Rome. Next he took refuge with his son-in-law Mamilius Octavius of Tusculum who led the Latins against Rome at the battle of Lake Regillus. Finally, Tarquin escaped to Aristodemus (q.v. 2) of Cumae, where he died. The general pattern of these events may well be historical, but the part in them that legend assigns to Tarquin is much more doubtful.

Ogilvie, *Comm. Livy* 1-5, 194 ff. See also TARQUINIUS (1) on Gierstad's improbable lower dating (he would put Superbus' fall c. 450). P. T.

TARQUINIUS (3) COLLATINUS, LUCIUS, was traditionally the husband of Lucretia (q.v.). When her story was connected with the fall of the monarchy, Collatinus was regarded as a founder of the Republic, and one of the first consuls (509 B.C.). The legend of his consulship also served to harmonize the double tradition about the dedication of the temple of the Capitoline Triad, which was associated both with a Tarquin and with the beginning of the Republic: a consul Tarquinius replaced his royal namesake. It equally served in the post-Sullan age to supply evidence for and against the right of the people to abrogate a consul's *imperium*, while the story of Collatinus' self-imposed exile as a relative of the Tarquins is probably a borrowing from the story of Athenian ostracism.

Ogilvie, *Comm. Livy* 1-5, 232, 238 ff.

P. T.

TARQUITIUS (PW 7) PRISCUS is known to us only from a few scattered references. He is mentioned by Pliny (*HN* 1 in his lists of authorities for books 2 and 11,) as one of his sources for 'Etruscan lore', *Etrusca disciplina* (see RELIGION, ETRUSCAN), though it is not certain that Pliny had direct access to his writings. Macrobius (*Sat.* 3. 7. 2) quotes from a book of his, *Ostentarium*, a translation of an Etruscan work on prognostication, and from his *Prognostication from Trees*. The literary evidence, supported by *ILS* 2024, seems to indicate that he was an important intermediary for the transmission of Etruscan prognostic learning and ritual to the Romans. Probably he lived about a century earlier than the Tarquinius Priscus of Tac. *Ann.* 12. 59 and 14. 46, who may have been the dedicator of *ILS* 2924.

J. Heurgon, *Latomus* 1953, 402 ff.

A. L. P.; A. M. D.

TARRACINA, (modern *Terracina*), formerly Volscian Anxur, on the west coast of Italy 65 miles south of Rome. Rome made it a Citizen Colony (329 B.C.). Tarracina was the southern terminus of the Pomptine Marshes canal and an important station on the *Via Appia* (q.v.). Its spectacular ancient remains include the temple of Jupiter on the acropolis.

G. Lugli, *Forma Italiae, Regio I* 1 (Rome, 1926); O. A. W. and M. S. Dilke, *Greece and Rome* 1961, 172 ff.; G. Lugli, *La tecnica edilizia romana* (1957), 144 ff. E. T. S.

TARRACO (modern *Tarragona*), on the north-east coast of Spain, was placed on or near the Iberian Cese (*Kissa*, Cissis), city of the tribe Cessetani. In 218 B.C. it was the base of P. and Cn. Scipio, who fortified it (Pliny, *HN* 3. 21). The earliest stronghold and the largest mint of republican Spain, it became Colonia Iulia (? Victorii) *Triumphalis* under Caesar. Within the Scipionic walls it was virtually rebuilt by Augustus, to whom it dedicated an altar and, on his death, a temple—the first provincial institution of the emperor-cult. Under him it had superseded Carthago Nova as the chief city of the province, now called Hispania *Tarraconensis*; it was the governor's winter residence and the centre of the provincial *concilium*. It was sacked by the Franks in A.D. 264; although

Ausonius poetically praised its citadel, excavations show it still in ruins in the fifth century, and the primacy had passed to Barcino (q.v.). Its Roman remains include a large stretch of the walls and of the great 'Devil's Bridge' aqueduct, the so-called 'tomb of the Scipios' (cf. *Madr. Mitteil.* 1966, 162 ff.), and a big cemetery (partly Christian); the plan of the Augustan citadel, reminiscent of central Rome, can still be traced.

S. M. de Navascués, *Tarragona* (1929); A. Fick, *Arch. Anz.* 1933; J. S. Vilaro, *Revista di archeologia cristiana* 1937, on walls, J. S. Vilaro, *Archivo Español de Arqueología* 1949, 221 ff. M. I. 11.

TARSUS. Though Tarsus later claimed Triptolemus, Perseus, or Heracles as its founder, it was probably a native Cilician town. It was the capital of the Cilician kings and of the Persian satraps, but the Greek coins which it issued during the fifth and fourth centuries B.C. show that it was early hellenized and autonomous. It was renamed 'Antioch on the Cydnus' by Seleucus I or Antiochus I and issued municipal coins under this name from Antiochus IV's reign; on its later autonomous coins it used its old name. Annexed by Pompey in 66, it was granted freedom and immunity by Antony; it was the capital of the province of Cilicia from c. A.D. 72. Its constitution was timocratic, a fee of 500 drachmas being charged for admission to citizen rights. Thus disfranchised the mass of the population, the workers in the linen industry, on which the city's prosperity was based. During the first century B.C. Tarsus was the seat of a celebrated philosophical school and the birthplace of St. Paul. It retains its ancient name unchanged. A. H. M. J.

TARTESSUS, a region of south Spain, round the middle and lower Baetis (*Guadalquivir*). The name was also given to the river and to a town at its mouth. Probably visited by the Minoans, it was temporarily occupied by the Phoenicians. About 650 B.C. the Samian Colaeus was driven there; c. 600 Phocaeans came, making friends with the Tartessian ruler. The trade of Tartessus with Phoenicians and Carthaginians and (in tin) with Brittany and south-west Britain made it proverbially wealthy. About 500 the town was probably destroyed by the Carthaginians. Geographic writers confused it with Gades. Later poets used Tartessus of all Spain or all west Europe. Tartessus was probably the biblical Tarshish.

Hdt. 1. 163, 4. 152, 196; Strabo 3. 148-51; Mela 1. 2. 6; Avienus, *Ora Maritima* 224 ff. A. Schulten, *Tartessus* (1922), and in *PW*, s.v.; Thomson, *Hist. Anc. Geog.* 29, 53 ff.; J. M. Blázquez, *Tartessus* (Salamanca, 1968). E. H. W.

TASCIOVANUS, king of the British Catuvellauni (c. 20 B.C.-A.D. 5) and father of Cunobelinus, was perhaps the grandson of Cassivellaunus (qq.v.). His mint was at Verulam, where the Prae Wood site was no doubt his capital. Some of his coins were among the earliest in Britain to imitate classical designs, though his policy was not philo-Roman.

D. F. Allen, *Archaeologia* 1944; C. E. Stevens in W. F. Grimes (ed.), *Aspects of Archaeology in Britain* (1951), 332 ff.; Frere, *Britannia*, ch. iv. S. S. F.

TATIUS, TITUS, traditionally a Sabine king, who after the Romans had carried off the Sabine women is said to have captured the Capitol through the treason of Tarpeia (q.v.); after the women had effected a reconciliation, Tatius and Romulus ruled jointly over the two peoples. Tatius may have been a king of Rome, as there is evidence that he enlarged the city and established several cults (Varro, *Ling.* 5. 74). The suggestions that he was merely the eponym of the Roman tribe Titici, or that his connexion with Romulus was invented as a precedent for collegiate magistracy are equally uncertain.

Ogilvie, *Comm. Livy* 1-5, 72, 81.

P. T.

TAURISCUS (1), an anomalist grammarian, pupil of Crates (q.v. 3) of Mallos, first used *τροπος* (trope) as contrasted with *κυριολεξία*: cf. Sext. Emp. *Math.* 1. 248 f.

TAURISCUS (2) (1st c. B.C.), sculptor, son of Artemidorus, of Tralles. Works (owned by Asinius Pollio): 1. Hermerotes, probably a pair of herms (q.v.) with bodies and heads of Eros. 2 (with his brother, Apollonius). Marble group from Rhodes of Zethus, Amphion, Dirce, and the bull, inspired by a painting and by earlier sculpture. The Farnese bull from the baths of Caracalla (Winter, *KB* 357. 1) is a copy with the added figure of Antiope, etc. Heber, *Sculpt. Hellenist. Age*, 133 ff. T. B. L. W.

TAUROMENIUM (*Ταυρομένιον*, modern *Taormina*), in eastern Sicily above Naxos (q.v.), was established in 396 B.C. by the Carthaginian Himilco (q.v. 2), who planted there on the site of a small existing settlement the Sicels to whom Dionysius I (q.v.) had given the site of Naxos. Dionysius captured it and refounded it as a Greek city (392). In 358 Andromachus, father of the historian Timaeus (q.v. 2), gathered the Naxian refugees there and became tyrant. The Tauromenites gave prompt support to Timoleon (q.v.) and Pyrrhus (q.v.) in 344 and 278; c. 316 Tauromenium passed under the control of Agathocles (q.v.) and under that of a local tyrant Tyn-darion c. 285. Under Hieron II (q.v.) it again formed part of the Syracusan dominions, but at his death it submitted to Rome, becoming a *civitas foederata*. Seized by the rebels in the first Servile War it was recaptured with difficulty by Rutilius Lupus (132). In 36 Sex. Pompeius (q.v. 6) inflicted a near-fatal reverse on Octavian there. Becoming an Augustan *colonia* Tauromenium flourished in the imperial period.

Bérard, *Bibl. topogr.* 111 f., G. Manganaro, *Arch. Class.* 1967, 13 ff. A. G. W.

TAURUS MONS, properly the mostly well-wooded heights (average 7,000 feet) beginning in south-west Asia Minor, and continuing along the Lycian coast and through Pisidia and Isauria to the borders of Cilicia and Lycaonia. It then divides into: (1) Antitaurus, apparently the heights going north-east through Cappadocia (Mons Argaeus) and Armenia (Mons Capotes) towards the Caucasus; (ii) Abus or Macis (Massis), through Armenia towards the Caspian, keeping the name Taurus and sending southwards Mons Amanus (q.v.) and (beyond the Euphrates) Mons Masius. There were subsidiary ranges south of the Euphrates, and Mt. Zagrus separating Media from Assyria and Babylonia. The name Taurus was extended to include not only the heights of north Iran, but also the Paropamisus (*Hindu Kush*) and Emodus or Imaus (*Himalayas*); and was continued by hearsay to the Eastern Ocean at 'Tamus Headland'. The whole range was regarded as the backbone of Asia, and along it Dicaearchus (c. 300 B.C.) fixed for geographers a parallel or median in cartography, dividing the land mass into the cool and warm regions. E. H. W.

TAXILES, i.e. 'king Taxila', his personal name being Omphis (Ambhi), king of the country between the Indus and the Jhelum with his capital at Taxila. From fear of his neighbour Porus he welcomed Alexander; Taxila became Alexander's advanced base, and Taxiles fought for him against Porus. At first Taxiles was subjected to the Macedonian satrap Philippos; after Philippos' murder he ruled nominally as Alexander's governor but soon in complete independence. By 312 B.C. at latest the Taxila kingdom had become part of Chandragupta's empire. W. W. T.

TEANUM APULUM, a town in northern Apulia. Its site, known as *Civitate*, overlooks the Fortore valley

9 miles north-west of San Severo and lay on the main Adriatic coastal route between Larinum and Sipontum. As at Arpi and Canusium (q.v.), the course of its earthen rampart circuit shows that it supported a large population in the Daunian period but prosperity had apparently declined by late Republican times. A group of concrete tomb cores survives outside the town.

CIL ix. 67 ff.

G. D. B. J.

TECHNOPAIGNIA, poems intended to show the author's skill, especially by the shape which they make on the page. This art was popular at the beginning of the third century B.C., which produced Simmias' *Axe*, *Wings*, and *Egg*, Theocritus' *Pipe*, and Diosdorus' *Altar*. C. M. B.

TEGEA lay in the south-east Arcadian plain, across the roads from Sparta to the Argolid and the Isthmus. In this exposed position it developed politically before the other Arcadian towns. About 550 B.C. Sparta came to terms with Tegea after a long war; and for two centuries it followed the Spartan lead, though at times unwillingly, for the Tegeans were tough fighters (cf. Hdt. 9. 26). It was a favourite place of residence for Spartan and other exiles (Leontychidas; Micythus of Rhegium; King Pausanias). About 471 Tegea revolted and joined Argos, but submitted after a defeat (*Anth. Pal.* 7. 512; Hdt. 9. 35). Later, out of hostility to Mantinea (q.v.), Tegea was pro-Spartan. She looked unfavourably on the foundation of Megalopolis.

The temple of Athena Alea, burnt down in 395, was rebuilt with great magnificence, with Scopas as architect and sculptor (Paus. 8. 45. 5). On the borders of Tegean territory and Kynouria, on the Hill of the Analipsis (near Pourvoura) the remains have been discovered of a classical town (? Iasos), and also important Mycenaean finds.

IG v. 2. 1 ff. V. Bérard, 'Tégée et la Tégéaude', *BCH* 1802, 520 ff.; 1803, 1 ff.; Müller von Gaertringen, *PIW*, s.v. 'Tégée', C. Dugas and others, *Sanctuaires d' Alea Athena à Tégée* (1924), *BCH* 1921, 335 ff. (older temple). T. J. D.

TELAMON (1), in mythology, brother of Peleus (q.v.). On his banishment he settled in Salamis, and as a reward for helping Heracles against Troy received Hecione (q.v.) as his slave-concubine. He was a stern father to her son Teucer (q.v. 2), and on the latter returning from Troy without Aias (q.v. 1), Telamon banished him (*Eur. Hel.* 91 ff.). For his hero-cult see e.g. Hdt. 8. 64. 2. His name ('shield-strap') seems derived from the original notion of his son, Aias, as the bearer of a huge man-covering shield. H. J. R.; H. W. P.

TELAMON (2), modern *Talamone* on the coast of Etruria, mid-way between Rome and Pisa. Here the Romans annihilated the Celts of Cisalpine Gaul in 225 B.C. (Polyb. 2. 27-31). Here too Marius landed in 87 B.C. (Plut. *Mar.* 41. 2). Otherwise the village played little part in recorded history.

M. Santangelo, *L'Antiquarium di Orbetello* (1954), 92 ff.; P. Sommella, *Antichi campi di battaglia in Italia* (1967), 11 ff. E. T. S.

TELCHINES (*Τελχίνες*), semi-divine beings living in Rhodes who were skilled in all manner of metal-work, and so also in magic. Consequently they were dangerous, mischievous, and had the 'evil eye'. Our accounts of them are late and contradictory, but agree more or less in the above points, and also that they were finally destroyed by one of the greater gods, Zeus, Poseidon, or Apollo, or at least driven from Rhodes. They have a certain resemblance to the dwarfs or gnomes of northern European mythology.

See especially Strabo 14. 2. 7, 653-4; Eustathius ad *Iliad.* 771. 55 ff. (from Strabo and Suetonius); *Suda*, s.v.; more in Friedländer in Roscher, s.v., with literature; Herter in *PW*, s.v. See also MAGIC, § 4. H. J. R.

TELECLIDES, Athenian comic poet, won three victories at the City Dionysia, the first c. 445 B.C. (*IG* ii². 2325. 54), and five at the Lenaea, the first c. 440 (*ibid.* 119). We have eight titles (including *Eumenides* and *Ἡσιόδοι* [cf. CRATINUS]) and seventy fragments. The largest fragment, fr. 1 (*Amphictyons*), describes the Golden Age in extravagant terms; frs. 39 and 40 associate Socrates with Euripides, and frs. 42 and 44 attack Pericles.

FCG ii. 361 ff.; CAF i. 209 ff.; FAC i. 180 ff.

K. J. D.

TELEMACHUS (Τηλέμαχος), son of Odysseus and Penelope (qq.v.). He is prominent in the *Odyssey*, where his character develops throughout those parts of the poem in which he appears. At first he is an untried youth, a good and dutiful son but timid and unenterprising. At the behest of Athena he bids his mother's suitors depart, and when they will not, still with her help he takes ship, goes to the mainland, and then inquires after his father, first from Nestor and then from Menelaus (*Od.* 1-4). Athena warns him to return home and sail by a different route, since the one by which he came is beset by the suitors, who plan to kill him. He does so, and on the way takes the fugitive prophet Theoclymenus aboard. He shows from now on more energy and resource, even before meeting his father (*Od.* 15-16. 153); and, having met him, acts as an intelligent and even enterprising helper, astonishing his mother by taking command of the house (21. 343 ff.) and fighting valiantly against the suitors (22. 91 ff.).

Outside Homer he appears in a few episodes. Palamedes, to detect Odysseus' feigned madness, put Telemachus, then a baby, in the road of his father's plough (*Hyg. Fab.* 95. 2). After his father's death he married Circe according to the *Telegonia* (see EPIC CYCLES).

TELEMUS (Τήλεμος), in mythology, a prophet who foretold to Polyphemus the Cyclops that Odysseus (q.v.) would one day blind him; *Od.* 9. 507 ff.

TELEPHUS (1) (Τήλεφος), in mythology, son of Heracles (q.v.) and Auge, daughter of King Aleos, the eponym of Alea in Arcadia. She bore him in a shrine of Athena; a pestilence ensued, and Aleos when he discovered the matter had the child exposed and gave Auge to be sold overseas. She came into the possession of Teuthras, king and eponym of Teuthrania in Mysia, who married her; the child was suckled by a hind and picked up by shepherds, who called him Telephus (as if from "θηλάν", to suckle, and ἔλαφος, a deer or hind; *Apollod.* 2. 146). In the version preserved by Hyginus (*Fab.* 99. 3) Auge was adopted by Teuthras, who was childless. For some reason (accounts vary in different authors) Telephus when he grew up went to Mysia; here, according to Hyginus' story (very doubtfully traced to Sophocles), Auge was given him in marriage, and they discovered their relationship at the last moment. At all events he became king of Mysia, and here joins with the Epic tradition (post-Homeric), the first part of his story being apparently Tragic. In the *Cypria* the Greeks on their way to Troy mistook Teuthrania for it; Telephus resisted them and was wounded by Achilles. The wound would not heal, and he (at least according to Euripides, *Telephus*) made his way to the Greek camp at Aulis and in accordance with an oracle asked Achilles to cure him; this was done by applying the rust of the spear, for the oracle had said that the wounder should be the healer. He then guided the Greeks to Troy. His legend was adopted by the Attalids as a kind of foundation-myth for their own kingdom. See further Schmidt in Roscher, s.v.

H. J. R.

TELEPHUS (2) of Pergamum (2nd c. A.D.), a Stoic grammarian, teacher of the Emperor Lucius Verus, wrote on Homer, on the history of literature and of scholarship, on bibliography and antiquities, and on *Attic Syntax* (five books); he compiled an alphabetical lexicon of things in common use, and an *Ἰσχυρολογικόν* (in ten books) of adjectives for the aid of writers and orators. His works are lost.

C. Wendel, *PW* 9 A. 369 ff.

P. B. R. F.

TELES (Τέλης) (fl. c. 235 B.C.), Cynic philosopher, probably of Megara, is the oldest of the many authors of Cynic or Stoic *διατριβαί* (short ethical discussions), fragments of whose works have been preserved (in his case, in the pages of Stobaeus). His *διατριβαί* have no claim to philosophical distinction; they simply commend the Cynic way of life in popular language; but he is interesting because of his references to earlier writers like Bion of Borysthenes, Stilpon, and Crates the Cynic.

Ed. O. Hense² (1909).

W. D. R.

TELESILLA (Τελέσιλλα), Argive poetess of the fifth century B.C., famous for arming the women of Argos after its defeat by Cleomenes (*Hdt.* 6. 76 ff., *Polyaenus* 8. 33). Nine fragments of her work survive, and seem to come from Hymns, especially to Apollo and Artemis, with whom six are concerned. The *Telesilleion* (see ΜΕΤΡΗ, GREEK, III 9) or acephalous glyconic is called after her. She seems to have written mainly for women (*Paus.* 2. 20. 8). An Epidaurian Hymn to the Mother of the Gods sometimes ascribed to her seems to be a later imitation.

FRAGMENTS. Page, *Poet. Mel. Gr.* 372-4; J. M. Edmonds, *Lyra Graeca* (1952), II. 236-45.

CRITICISM. U. von Wilamowitz-Moellendorf, *Textg. d. gr. Lit.* (1900), 76, P. Maas, *Epidaurische Hymnen* (1933), 134 ff. C. M. B.

TELESPHORUS (Τελεσφόρος), a child-god associated with Asclepius (q.v.). He is commonly shown in art, but seldom mentioned in literature; his name occurs on several inscriptions in his honour, however.

See Schmidt in Roscher, s.v.; Schwen in *PW*, s.v.

II. J. R.

TELESTES, dithyrambic poet of Selinus (Ath. 616 f, *Diod. Sic.* 46. 6), won victory at Athens 402/1 B.C. (*Marm. Par.* 79). Titles of his Dithyrambs are *Argo*, *Asclepius*, and *Hymenaeus*, of which in all four fragments survive. The comedian Theopompus referred to him (Ath. 501 f). In style and music he resembled Timotheus and Philoxenus (*Dion. Hal. Comp.* 132). Alexander read him (*Plut. Alex.* 8), and the tyrant Aristarchus of Sicily put up a statue to him (*Pliny, HN* 35. 109).

Page, *Poet. Mel. Gr.* 419-22.

C. M. B.

TELETE (τελετή). Being related to τελεῖν as, for instance, ταφή to θάπτειν, this word properly means no more than 'accomplishment', 'performance', which suits its very rare non-sacral use (perhaps only *Batrachom.* 303, where it is equivalent to the usual Epic τέλος). But from a comparatively early date it was specialized (it does not occur in any sense earlier than Pindar) to mean the accomplishment of a religious or quasi-religious ceremony. So Pindar, *Ol.* 10. 52, uses it of the first celebration of the Olympic Games by Heracles; *Pyth.* 9. 97 and *Nem.* 10. 34, of Athenian festivals including athletic contests; *Ol.* 3. 40, of the celebration of *theoxenia* (q.v.). Only in the last case is the rite purely religious. In Euripides (Aeschylus and Sophocles use only τέλος) it repeatedly means a rite, and perhaps especially one somewhat out of the ordinary, as those of Dionysus, *Bacch.* 22, or any orgiastic ceremonies, *ibid.* 73. Aristophanes uses it for rites of any kind, as *Pax* 418-20. But

there seems to have been a growing tendency about this time to use it especially of mystic ceremonials; thus, Herodotus employs it in speaking of those of Demeter and Dionysus, Andocides (1. 111) of the Eleusinian Mysteries, while it is a favourite word of Plato to signify an initiation. After Alexander this tendency is accentuated, the word very frequently meaning a rite supposed to contain some hidden philosophic or gnostic meaning. It can also signify a magical or supernatural action or even force. This finally develops, especially in Philon of Alexandria, into the sense of 'inner meaning', even 'allegorical interpretation'.

C. Zijderfeld, *Teletē; Bijdragen tot de kennis der religieuze terminologie in het Grieksch* (1934). H. J. R.

TELLUS, the Roman earth-goddess, probably very old, though her temple on the Esquiline dates only from 268 B.C. (Platner-Ashby, 511). For the question of Greek influence on her ritual see F. Altheim, *Terra Mater* (1931); S. Weinstock in *PW*, s.v. 'Terra Mater'. She is associated in cult with Tellumo (Varro in August. *De civ. D.* 7. 23); with Altor ('Feeder') and Rusor ('Ploughman?'), *ibid.*; perhaps with the doubtful Tellurus (Mart. Capella 1. 49). No festival is named after her and she has no flamen; but she is the deity concerned in the *feriae sementivae* (Ovid, *Fasti* 1. 657 ff., whereon see Frazer); the *Fordicidia* of 15 Apr. (*ibid.* 4. 629 ff., whereon see Frazer); the offering, a cow in calf, is typical for powers of fertility; and the sacrifice of the *porca praecidanea* (Varro in Nonius, 163 M., Gellius 4. 6. 8, who adds Ceres), a sin-offering for neglect of rites, especially those of the dead.

See further Weinstock, *loc. cit.*

H. J. R.

TEMENOS (τέμενος), in Homeric usage, signifies either a king's or a god's domain, a space marked off and assigned to his use. In later times it is nearly always used of a god's domain.

In the narrower sense it is the sanctuary (ἱερόν) or precinct (περίβολος), the consecrated and enclosed area surrounding the god's altar, which was the centre of worship and the only indispensable cult structure. It usually included a temple also, whose primary purpose was to house the image and votive offerings. Larger precincts, like Apollo's at Delphi, or the Altis at Olympia, also enclosed the treasuries built to house the offerings of a single city, sacred groves, statues, theatres, and the temples of associated deities. The rules governing the sanctity of precincts varied from cult to cult; entrance was sometimes forbidden except to certain persons at certain times. In most cults whoever entered the precinct had to be purified first. The Roman *fanum* or *templum* (in the original sense) corresponds to *temenos* in this narrower meaning.

In the broader sense the *temenos* is all the land that belongs to a god's cult. Some cults owned large tracts of forest, pasture, cultivable land, and even factories and fisheries, from which they received revenues. Though sometimes cultivation of the god's domain was forbidden, it was usually worked either by the god's slaves or by contractors.

See *SIG* 977-94, and many of the inscriptions in von Prott-Ziehen, *Leges Graecorum sacrae et titulus collectae* (1896-1906), for cult-laws relating to this subject. P. Stengel, *Griechische Kultusaltertümer* (1920), 17 ff.; A. Fairbanks, *Handbook of Greek Religion* (1910), 65 ff. For Roman religion see Wissowa, *RE* 407 ff. J. E. F.

TEMENUS (Τήμενος), (1) king of Stymphalus, founder of the cult of Hera as Maid, Wife, and Widow, see *HERA*, *ARCADIA*; Paus. 8. 22. 2. (2) Son of Phaegeus king of Psophis; he and his brother Axion murdered Alcmaeon (q.v.), Paus. 8. 24. 10. (3) One of the Heraclidae (q.v.;

exact genealogy uncertain). After taking a prominent part in the Return of the Heraclidae, he got Argos for his portion of the conquered land. He had a daughter Hynetho, and favoured her husband Deiphontes (q.v.) above his own sons, who therefore murdered their father. The people then decided that Deiphontes and Hynetho should be king and queen (see Apollod. 2. 172 ff.). One of Temenus' sons (Perdiccas, according to Hdt. 8. 137; Archelaus, Hyg. *Fab.* 219; the latter account is somehow connected with Euripides, *Archelaus*) founded the royal house of Macedonia.

See further O. Waser in Roscher's *Lex.*, art. 'Temenos'. H. J. R.

TEMPE, a narrow valley, nearly 5 miles in length, in northern Thessaly, through which the Peneus flows between the massifs of Olympus and Ossa. The gorge was caused by erosion and not, as Greek tradition maintained, by an earthquake. Because it lay on the easiest route between Thessaly and Macedonia and was so narrow that it could be closed by a very small force, its strategic importance was considerable. There were, however, practicable routes over the mountains further inland, and armies not controlling both ends of Tempe normally chose to follow one of these. In 480 B.C. the Greeks sent troops to hold Tempe against Xerxes, but they evacuated it owing to distrust of the Thessalians. It was the scene of operations in 336, when Alexander overcame Thessalian opposition, and also in the Third Macedonian War.

P-K, *GL* i. 1. 111 ff.

H. D. W.

TEMPLE. The Greek temple was the house of the god. It was not an assembly place for a congregation of worshippers. The altar (q.v.) was normally outside to the east, opposite the front of the building (the commonest orientation was east-to-west). The basic element of the temple was a simple room, the *naos* or *cella*. This had various shapes, especially in the earlier period. It could be hairpin-shaped, or occasionally round or squarish; but the usual form, which may be akin to the Mycenaean *megaron*, was a rectangle, with the entrance at one end, and the side walls commonly continued to form a porch. On this the more elaborate forms of temple were based. Columns were placed between the projecting walls, or in a row in front. Small temples were commonly 'distyle in antis', i.e. with two columns between the antae or ends of the side walls. The 'treasuries', small temples dedicated by cities at shrines such as Delphi and Olympia (qq.v.), to display their wealth and piety, were mostly of this form. Other small temples were 'tetrastyle prostyle', i.e. with four columns in front. For symmetry a dummy porch, without an entrance door, could be placed at the back of the temple too, making it 'amphiprostyle' (for example, Athena Nike at Athens). The addition of a colonnade (*pteron*, see *ARCHITECTURE*) all round the nuclear building was not due merely to an extension of the porches; the *pteron* was a new and dominant element. It is seen, already fully developed, in the Heraeum at Olympia (c. 600 B.C.; see *OLYMPIA*). From the sixth century onwards most large temples are peripteral, usually with six columns at each end and twelve to fourteen on the sides. Some large temples were dipteral, with two rows of columns, or pseudo-dipteral (see *HERMOGENES* 1), i.e. with a single row in the same position as the outer row in a dipteral building. A few temples attained enormous size—the curious temple of Zeus at Acragas was over 173 by 361 feet (see also *OLYMPIEUM*)—but such colossi were very rare in comparison with more modest shrines. Besides the regular types, many temples had odd or complicated forms due to the peculiar requirements of the cult (see *ERECTHEUM*, for example).

The larger temples might have interior columns too,

both for decoration and support for the roof (on the subject of roofing, which presents many difficult problems, see A. T. Hodge, *Woodwork of Greek Roofs*, 1960). Sometimes, in the archaic period, there was a single central row, as in the so-called 'Basilica' at Paestum, but more often there were two rows, creating side aisles. The interior columns were commonly in two tiers as seen in the temple of Aphaea at Aegina or Poseidon at Paestum, and were occasionally carried round the back of the cult-statue at the far end. Some temples had an inner sanctum or *adyton*, or, as in the Parthenon (q.v.), a back chamber opening not into the main *cella* but the back porch. Several large temples were hypaethral, i.e. the *cella* or the greater part of it was open to the sky. In this case a small temple (*naikos*) might be placed within, as in the temple of Apollo at Didyma near Miletus; the interior then became something between a *cella* and a courtyard.

(For the orders and for sculptural and painted decoration see ARCHITECTURE.)

The cult-statue stood on a pedestal at the end of the *cella* opposite the door. More statues and other offerings might be placed between the side columns or in the porches.

The temple stood in a *temenos* or precinct, often with a wall entered through a *propylon* (columnar gateway; see PROPYLAEA). Many small shrines of course consisted of a mere enclosure with an altar and no temple. Offerings were placed about the *temenos*, and there might be a *stoa* (q.v.) on one or more sides. Before the Hellenistic period the relation of the temple to its surrounding structures was variable and usually informal and unsymmetrical.

Roman temples closely resembled Greek ones in external form and treatment, but the Corinthian Order, with steeper pediments and richly carved *friezes*, was generally used. The temple floor was on a raised platform enclosed by a wall-base (plinth) and this was thrust forward beyond the porch—which was given great importance—to enclose the entrance stepway. These ideas were probably borrowed from non-peripteral Etruscan temples, and Roman temples were often non-peripteral, or pseudo-peripteral (i.e. with engaged columns on the flanks). Internally, the architectural treatment sometimes given to the west end of the *cella* (e.g. in the Temple of Bacchus, Bualbek) is significant in its resemblance to the sanctuary element of the Christian church.

For bibliography see ARCHITECTURE, also H. Berve and G. Gruben, *Greek Temples* (Munich, 1961, London, 1963). T. F.; R. E. W.

TEMPLE OFFICIALS. A priest (q.v.) presided over every temple and sanctuary in the Greek and Italian States. No other official was needed in the numerous small cults. But at the larger shrines the priest received the assistance of minor officials.

In the administration of the cult and the performance of ritual he was assisted by *hieropoioi* (*ιεροποιοί*), who likewise received, as their due, portions of the sacrifices and other honours and perquisites. In Athens two boards of *hieropoioi* of ten each were chosen by lot: one (*οἱ ἐπὶ τὰ ἐκθύματα*) to perform all sacrifices appointed by oracle, the other (*οἱ κατ' ἐναϊστόν*) to administer the four-yearly festivals except the Panathenaea (Arist. *Ath. Pol.* 54). Directly charged with the offering of sacrifices were *θύραι*, among whom a higher rank was sometimes distinguished, the *ιεροθύται* or *ἀρχιεροθύται*. The larger and more important the cult, the more attendants were necessary at the sacrifices. We find mention of sacred heralds (*ιεροκήρυκες*), libation-pourers (*οἶνοχόοι*), overseers (*ἐπιμεληταί*).

In the care and management of the temple and precinct the priest was assisted by *ναοφύλακες*, *νεωποιοί*, or *νεωκόροι*. They guarded the sanctuary, kept it clean, and purified entrants.

In the administration of cult-finances, sacred treasures, votive offerings, and the revenue-producing parts of the god's domain, the priest was assisted by treasurers or stewards (*ιεροταμίαι*). In some cities, as Miletus, a board of *ιεροταμίαι* was appointed that looked after the properties of all State-cults.

Since there was no fixed hierarchy in Greek religion, and each State, even each cult, was a law to itself, the evidence shows great variety of practice and much overlapping of the functions of the three principal types of subordinate cult-official. There were also such minor functionaries as cantors (*ἀοδοί*), musicians, and *agonothetai*, who supervised the sacred games. See also AEDITUUS.

For inscriptions concerning Greek temple officials see *SIG³* 1002-54; C. Michel *Recueil d'inscriptions grecques* (1897-1927), 669-735, 810-39, 857-78, many inscriptions in von Prott-Ziehen, *Leges Graecorum sacrae et tituli collectae* (1896-1906). A. Fairbanks, *Handbook of Greek Religion* (1910), 76 ff.; P. Stengel, *Griechische Kultusaltertümer³* (1920), 31 ff.

TENES (*Τένες*), the eponym of Tenedos, for whose story, probably not very early, see Plutarch, *Quaest. Graec.* 28 (*Mor.* 350 d-f), with Halliday there and in *CQ* 1927, 37 ff. He was son of Apollo, but nominally of Cycnus king of Coloni; his stepmother accused him as Potiphar's wife did Joseph, and Cycnus set him and his sister Hemitheia adrift in a chest which landed at Tenedos. Later, Cycnus discovered the truth and tried to be reconciled, but Tenes with an axe cut the moorings of his boat when Cycnus visited Tenedos, hence the proverb 'Tenedian axe' for a rash deed. Tenes was finally killed by Achilles in defending Hemitheia; hence at his hero-shrine Achilles may not be named nor a flute-player enter, because a flute-player bore false witness against him to Cycnus. For the 'Tenedian axe', see further Nilsson, *Minoan-Mycenaean Religion²* (1950), 193 ff.

H. J. R.

TEOS (*Τέως*), one of the twelve cities of the Ionian League, on the coast north of Ephesus. Tradition said that it was founded first by Minyans from Orchomenus, then by Ionians and Athenians under the sons of Codrus. After the Persian occupation of Ionia the Teians sailed in a body to Thrace, where they founded Abdera; many soon returned and took part in the battle of Lade in 494 B.C. In the Delian League Teos was assessed at six talents, on a par with Ephesus. Antigonos proposed to synoecize Teos and Lebedus, but this was never carried out. About 200 B.C. Teos was chosen as the seat of the Artists of Dionysus, but these soon made themselves unpopular and were moved elsewhere. The ruins at Sigacık are only moderately well preserved; they include a theatre, an odeum, and the famous temple of Dionysus by Hermogenes. The city's two harbours, mentioned by Livy 37. 27-8, are identifiable on the north and south sides of the isthmus.

G. E. Bean, *Aegean Turkey* (1966), 136 ff.

G. E. B.

TERENCE: PUBLIUS TERENTIUS AFFR. A *Vita* has been preserved by Donatus (deriving from Suetonius *De poetis*). Born perhaps c. 190 B.C. in N. Africa, he came as a slave to Rome to the household of a senator, Terentius Lucanus (of whom nothing is known), and adopted his name when manumitted. Date of death is unknown: the last performance of a play was 160 B.C., and he is said to have died on a journey to Greece in 159 B.C. There was much speculation after his death about his relationship with certain Roman *nobiles*: it all derived from *Ad.* 15 ff., which is simply evidence of interest taken in him by important people.

CHRONOLOGY OF HIS PLAYS: this can be established

with certainty because the *didascaliae*, giving full details, have been preserved with all his plays:

166 B.C. <i>Andria</i>	<i>ludi Megalenses</i>
165 B.C. <i>Hecyra</i> (1st attempt—a failure)	" "
163 B.C. <i>Heautontimorumenos</i>	" "
161 B.C. <i>Eunuchus</i>	" "
161 B.C. <i>Phormio</i>	<i>ludi Romani</i>
160 B.C. <i>Adelphi</i>	<i>ludi funebres</i> for L. Aemilius
<i>Hecyra</i> (2nd attempt—a failure)	Paullus (<i>cos.</i> 182, 168 B.C.)
160 B.C. <i>Hecyra</i> (3rd attempt)	? <i>ludi Romani</i>

All of the plays were produced by Ambivius Turpio (who had produced for Caecilius (q.v. 1) also), and the music was written by a man called Flaccus, slave of Claudius.

Of these plays, *Hecyra* and *Phormio* were 'translated' from originals of Apollodorus of Carystus ('Ἐπιδιχαζόμενος and Ἐκρύπα), an admirer and imitator of Menander. The other four were 'translated' from plays of Menander, but in his adaptation of the *Andria* he added material from Menander's *Perinthia*; for his *Eunuchus* he took the characters of the parasite and the soldier from Menander's *Kolax*; and for his *Adelphi* (Menander wrote two plays of this name: the other supplied the original of Plautus' *Stichus*) he took a scene from Diphilus' *Synapothnescontes*. His critics condemned this procedure as *contaminare* (see CONTAMINATION). The *Hecyra* lost its audience at the beginning of the first two performances (to a rope-dancer and boxer, and to a gladiatorial combat) and succeeded only at the third attempt.

The technique and style of Terence differ widely from those of Plautus: (i) Most noticeable is a total absence of polymetric *cantica* and of opera-type scenes (such as lengthy meeting-scenes between slaves). In this respect Terence is close to Menander: a half of his lines are *senarii*, the rest are trochaic *septenarii* or iambic *octonarii* (only a very few lines in any play are lyric). (ii) Terence invented a new type of prologue, completely unrelated to the play and dealing with questions of literary criticism. He dispensed entirely with the type of prologue, invariable (so it seems) in New Comedy, that informs the spectators about the action. Instead Terence inserts essential information into the action of the play (e.g. *An.* 215 ff., *Hecyra* 572 ff.). With this goes an avoidance of any address by the actors to the audience such as breaks the dramatic illusion (such addresses are quite common in Greek New Comedy and in Plautus), and a restrained use of asides and comments by a hidden actor. He has also a distinct aversion to monologue, and has converted some scenes (e.g. the opening scene of *Andria* or *Eun.* 540 ff.) into a dialogue by adding a *πρόσωπον προτακτικόν*. (iii) Terence has a careful eye for the coherence of the plot as a whole, and his additions from other plays (often most complicated, as in *Eun.*) are integrated so well that agreement among scholars on the details is not yet attained. (iv) Terence preserves the Greek atmosphere both positively (e.g. in *Eun.* 540 ff. he invents a young man and a party—but it is a Greek-type party, *ἑσπας*) and negatively (in the sense that, unlike Plautus, he does not introduce Roman customs and objects). But he also avoids excessively abstruse Greek details (contrast *An.* 726 with, e.g., Plautus, *Aul.* 394 ff.; both refer to the rude statue of Ἀπόλλων Ἀγυεύς outside a house, but the passage of Plautus must puzzle an audience), and, e.g. in *Phorm.* 125 ff., he steers through the thorny Greek law of inheritance with great tact. (v) Terence's style is much closer to real everyday conversation than Plautus':

exclamations, interjections, interruptions, aposiopesis, ellipse—all the characteristic constructions of colloquial speech are freely used. For more solemn effects, in the long metres, coupled synonyms, anaphora, alliteration, asyndeton are all used, but on the whole without the boisterous, fantastic extravagance of Plautus. Clearly distinct in style from the actual dramas are the prologues, in which a deliberate use of all the artifices of rhetoric is obvious—a fact which harmonizes with the status of the prologues as addresses to the audience, completely outside the action of the drama. The general impression given by the drama of Terence is a deliberate step in the direction of realism on stage, not only as compared with Plautus but even with Menander (his two strongest criticisms of Luscius Lanuvinus concern the reproduction of stereotyped situations of Greek comedy: the running slave, *Heaut.* 30 ff., and the visions of the young man in love, *Phorm.* 6 ff.). On the problem of act-division, see PLAUTUS, § 5.

The importance and influence of Terence in later times was great: it can be seen in quotations in Cicero, imitations in Horace and Persius, in the grammatical activities of the first century A.D., in the Church Fathers, in the commentaries collected under the name Donatus (q.v. 2), in the early MSS. with scholia and miniature illustrations, in the dramatic rhyming dramas of Hirothswitha of Gandersheim, in the interest taken by the humanists, especially Petrarch, and in the way in which his text has attracted the attention of great scholars like Bentley.

TERENTIA (PW, 'Terentius' 95), first wife of Cicero (q.v. 1), wealthy and noble (related to the Fabii), frequently addressed and mentioned in his *Letters*, bore him Tullia (q.v. 2) and Cicero (q.v. 4) and is said to have had great influence over him, e.g. to have incited him against Clodius (q.v. 1) through dislike of Clodia (q.v.). During his exile she worked in his interest and was still on good terms with him on his return from Cilicia and early in the Civil War. During 48 B.C. he began to suspect her of financial dishonesty and soon divorced her, though he had great difficulty in repaying her dowry. She later married Sallust, then Valerius Messalla (q.v. 3), and lived to be 103.

G. Boissier, *Cicero and his Friends* (1897).

E. B.

TERENTIANUS MAURUS (late 2nd c. A.D.), grammarian and metrist. His *De litteris syllabis et metris Horatii* (ed. Keil, *Gramm. Lat.* vi. 325-413) is written entirely in verse (2,981 lines). See also SCHOLARSHIP, LATIN.

Schanz-Hosius, § 514.

J. F. M.

TERENTIUS SCAURUS, QUINTUS (early 2nd c. A.D.), grammarian. His *Ars grammatica* and his commentary (in at least ten books) on Horace are lost. The *Liber de orthographia* (ed. Keil, *Gramm. Lat.* vii. 11-33) attributed to him is probably genuine.

Schanz-Hosius, §§ 594-5.

J. F. M.

TERGESTE, modern *Trieste*, at the head of the Adriatic, is first mentioned in 104 B.C.; it was strengthened by Augustus and flourished in the Flavian-Trajanic period. Remains of a gateway (Augustan?), Capitolium (Claudian), forum with Trajanic basilica, and a theatre survive. It was an important point in the road system of north-east Italy.

V. Scnari, *Tergeste* (Rome, 1951).

H. H. S.

TERMINUS, a boundary-mark; in Roman religion, especially the *numen* of such marks, which were set up with ceremony, sacrifice being made and blood and other offerings, with the ashes of the fire, put into the hole which was to contain the *terminus* (Siculus Flaccus in *Gromat. Lat.* 141. 4 ff. Lachmann). This filling of the mark with power was reinforced by a yearly sacrifice and feast (Ov. *Fasti* 2. 638 ff.) by the neighbours, on 23 Feb. (Terminalia). It is therefore not remarkable that there was a god Terminus, a kind of concentration of the *numen* of all the boundary-marks. Traditionally, the Terminus on the Capitol had been there before the temple of Jupiter Optimus Maximus was built, and refused to move; he therefore was left inside the temple, with an opening in the roof above, as he must be under the open sky (Ov. *ibid.* 669 ff.), but this legendary explanation has been denied (see Latte, *RR* 80, n. 3).

Wisowa, *RK* 136 ff.; Frazer on Ovid, loc. cit. H. J. R.

TERPANDER (Τέρπανδρος) (fl. 647 B.C. Hieron.—Eus., 645 B.C. *Marm. Par.* 34), musician and poet, of Antissa in Lesbos (Timoth. *Pers.* 240), but worked in Sparta (Ath. 635 d) in the middle of the seventh century. He is said to have written: (1) *Nomes*, in which he set his own or Homer's lines to lyre-music (Plut. *Demus.* 3); (2) *Prooimia* or Preludes, which may have been of the same genre as the Homeric Hymns (*ibid.*); (3) *scolia* (*ibid.* 28). It is doubtful whether any of the fragments ascribed to him are genuine. Fr. 1 is a libation-song, but indicates a later date in its use of pure spondees, its theology, and its play on the word ἀρχή. Fr. 4 seems to be an adaptation of Pind. *Ol.* 13. 22–3. Fr. 2 and fr. 3 have been less disputed. But it may be doubted whether his works were known at Alexandria. See also MUSIC, § 10.

Page, *Poet. Mel. Gr.* 362–3, cf. frs. 941 and 1027 (c); Wilamowitz, *Timotheos* (1903), 92 f. C. M. H.

TERRA SIGILLATA, pottery of the Roman period, including moulded vessels with reliefs and plain wheel-made forms, is characterized by a red gloss-coat, often glaze-like. Handleless cups, bowls, and plates predominate. Both the forms and the decoration were often copies of metal-work. The general term includes pottery of widely different date and origin. (1) Arretine ware, and related Italian products, made from c. 30 B.C. to the mid first century A.D. were widely used in the Mediterranean and also popular in Gaul. Potters' stamps demonstrate frequent use of slave artisans. (2) Later Italian derivatives, mainly plain wares, such as *terra sigillata chiara*. (3) Eastern *sigillata*, although apparently with local Hellenistic precursors, belongs mainly to the first century A.D., when imitations of Arretine plain forms were made in Asia Minor (Tschandarlı) and possibly Samos (Pliny, *HN* 35. 160). (4) Gaulish *sigillata*, known in Britain as samian ware (q.v.). (5) Spanish ware of local distribution inspired by the Gaulish tradition. (6) Fourth-century A.D. stamped pottery from the Argonne (Marne ware). (7) North African and Eastern red wares, sometimes with stamped decoration, of the late Roman and Byzantine periods are now usually described as Late Roman A and B Wares.

TERRACOTTAS. The term properly includes all objects made of fired clay; commonly, vases and household vessels are treated separately. Fabricants (κοροπλάστai, κοροπλάστai) were originally potters; later they were specialists who occasionally inscribed shop or personal names. Earlier terracottas were modelled freehand; after the sixth century B.C. they were usually made in moulds. Decoration was at first in vase technique; from the mid sixth century onward figurative work was covered with a white slip and painted in earth colours and in copper frit green-blue.

ARCHITECTURAL. Terracotta was used for sarcophagi (Crete, Clazomenae, Etruria), ash-urns (Etruria), altars (arular), incense-burners (*thymateria*) and roofing. Revetment adorned all buildings in archaic times; it was somewhat superseded by stone in Greece, but survived in Italy and Sicily. Roof tiles (*εσφαμίδες*, *tegulae*) were commonly of terracotta, constructed on two systems: Laconian (curvilinear), Corinthian (rectilinear). Western colonies copied the system of mother cities. Ornamental elements, simas, metopes, antefixes, acroteria, etc., were gaily decorated with geometric and floral designs in vase technique. Modelled figures were added in pediments, water-spouts, and acroteria. These were especially popular in Italy and Sicily. Large tiles were employed in Roman heating systems: to support the flooring and to permit hot air to circulate through walls (*t. mammatae*). Large moulded relief plaques (Campanian) were set on the walls of Roman houses and bust modillions under their cornices.

FIGURATIVE. Representational terracottas of large size were sometimes made in Greece as votives (Olympia); in Etruria they were common. Corinth led Greek production, exporting widely and teaching the technique to Etruria, where a flourishing school developed (Vulci). Etruscan repertory was largely religious, but also included sarcophagi with life-size figures reclining on the lid. Sicily favoured large busts of the Eleusinian deities. Representational terracottas of small scale, masks, reliefs, and figurines, were made as votives for sanctuaries, graves, and house-shrines. Crude human figures appear in Greece in Neolithic times, steatopygous females, a few males, and animals. Rare in the earlier Bronze Age, female figures and animals recur in LH III. Primitive humans and bell figures, numerous horses and riders characterize the terracottas of the Late Iron Age. In the seventh century orientizing types (first with moulded heads), masks and horses move from Cyprus and Rhodes via Crete all over the classical world. Archaic local schools developed, particularly in Asia Minor, Boeotia, Corinth, Laconia, Argos, Magna Graecia, and Etruria. Relatively few and chiefly hueristic types were made in the fifth century B.C. Votive plaques (Locrian, Melian) were popular. In the fourth century the craft flowered, especially in Athens and Boeotia (Tanagra). The repertory contained few religious types (Aphrodite and Eros), and many of theatrical genre (actors and comic figures). Cemeteries near Tanagra supplied so many charming figures in the 1870s that Greek figurines became the craze in Europe under the name 'Tanagras'. During the third century these

types spread everywhere. Fine local shops developed in Alexandria, Sicily, south Italy (Tarentum). Later Hellenistic types were varied, including new religious themes, imaginative genre, and echoes of sculpture. The most active shops were in Asia Minor: Amisus, Troy, Pergamum, Priene, Myrina, Smyrna, Tarsus. Roman shops continued the Hellenistic repertory with local additions. Prolific centres were established in the Rhône and Rhine valleys during the first two Christian centuries. Figurines were also produced in the rest of the Empire, often adapting Mediterranean types to local cults, until c. A.D. 200. Thereafter they died out in the north, continuing in the south for another two centuries, particularly in Athens, Corinth, the Fayum, Jordan, Mesopotamia. With the establishment of Christianity, the craft ended completely in the fifth century A.D.

MISCELLANEOUS. Many minor objects were made in terracotta, often as substitutes for more expensive materials. These include ornaments applied to wooden furniture and sarcophagi. Relief decoration was used for vases imitating metal-work. It consisted of moulded figures affixed to the body or modelled vases in the form of animals or figures (plaquette ware, plastic vases). Cheap votives include miniatures of all sorts; jewellery, wreaths and flowers, furniture, implements, armour, vehicles, theatrical masks. Toys are numerous, particularly rattles and dolls. Categories that have been well classified are: lamps, loom-weights, spindle-whorls, stamps, scalings, tokens, metal-impressions, moulds. Excavators find these useful for dating stratification.

TERRAMARA derives from the Emilian dialect expression ('terra marna') for the rich black soil whose exploitation as a fertilizer first brought a distinctive type of settlement site to the notice of nineteenth-century archaeologists. It has given its name to an important culture of the Italian Middle and Late Bronze Age, concentrated west of the river Panaro in the modern provinces of Modena, Reggio Emilia, Parma, and Piacenza.

The *terramara* settlements consisted of open, or more usually protected, villages of huts rounded or occasionally rectangular in shape. In low-lying areas the villages had eventually to be built on piles after a deterioration in climate at the beginning of the first millennium B.C. brought about periodic inundations, of which the practical results were not fully overcome until Roman times.

The economy of the *terremare* seems to have been based on hunting (bear, boar, deer), cattle-raising (cows, goats, pigs, sheep), and agriculture. A highly developed bronze industry, no doubt controlled by specialist smiths, suggests trans-Alpine and trans-Adriatic contacts, with supplies of metal presumably being drawn from the Austrian Alps. The stylistic affinities of *terramara* pottery and bronzes must in fact be sought in the repertoire of the Hungarian Early and Middle Bronze Age, notable for its population movements and the consequent spread of cremation as a burial rite: an off-shoot could very well have been dispatched to northern Italy, where the presence of the horse in the *Terramara* Culture may be inferred from the presence of a Hungarian type of horn cheek-piece. These affinities, and the fact that the best

terramara pottery is also the earliest, confirm one aspect of the 'Pigorini theory': the *terramaricoli* were invaders, and appeared with their culture already fully formed. The extension of this theory—i.e. that the *terramaricoli* were the prehistoric ancestors of the Romans, and went south in the twelfth century B.C.—is now quite unacceptable.

Contact between the *Terramara* Culture and the peninsular Apennine Culture (q.v., known until 1931 as the *cultura extraterramaricola*) heralded the opening of the Italian Late Bronze Age and led ultimately to a complete fusion between the two cultures that was far-reaching in its shaping of the Italian Iron Age. The *terramara* impact on the south was made possible above all by metal, in which Apennine Italy was notoriously poor. *Terramara* products could now travel south as objects of trade: the many parallels between the finds from the *terremare* and from Scoglio del Tonno underline the role of the Tarentino in particular as an area specializing by then in East Mediterranean trade, well illustrated by the find in a LH IIIB house at Mycenae of a mould for casting a *terramara* type of winged axe.

TERTULLIAN (QUINTUS SEPTIMIUS FLORENS TERTULLIANUS) (c. A.D. 160–c. 240), born in or near Carthage, the son of a centurion, was trained in law, and early attracted to Stoicism. Disgust at pagan moral excesses, combined with admiration for the spirit of martyrs, brought him to Christianity (c. 195). From then on, he used his brilliant gifts of advocacy, rhetoric, and irony in favour of the rigorist party among the Carthaginian Christians. From the first he was steeped in the spirit of the martyrs. His *Ad Martyras*, *Ad Natones*, and *Apologeticus* (all written c. 197) combined embattled defence of Christianity against popular charges of atheism and black magic with the view that in martyrdom alone the Christian assured himself salvation. Next (198–205) he devoted himself largely to Christian moral and ethical problems. His *De Spectaculis*, *De Oratore*, *De Testimonio Animae*, *Ad Uxorem*, *De Paenitentia*, *De Baptismo*, and *De Praescriptione haereticorum* all show a zeal for a puritan interpretation of the Christian ideal. The *De Praescriptione* was also a brilliant attack both on those who hoped to absorb pagan philosophy into Christianity and on the Gnostic heretics, and contains much of the Western view of tradition and authority. It was followed by works directed against the Valentines and (between 207 and 211) five books against Marcion, in which Tertullian expounds the unity of God and identity of Jesus Christ with the Jewish messiah.

Meantime Tertullian, probably by now a presbyter in the Carthaginian Church, dissatisfied with his colleagues, and perhaps after a dispute with the clergy in Rome, joined the Montanist movement. This step involved only the hardening of attitudes previously held and fitted his constant conviction that the Last Days were rapidly approaching. The New Prophecy 'dispelled all previous ambiguities', and summoned the Christian to final battle against the world and its representatives. The transition seems to have taken place by 207. He now became more fanatical against 'idolatry' in every form, against those who counselled caution in face of the authorities, and against the traditions of the Roman Empire. His works of this period (*De Fuga in Persecutione*, *Ad Scapulum*, *De Corona Militis*, *De Jejunio*, *De Monogamia*) read like political journalism at its most virulent, characterized by topicality, debating power, and a superb sense of irony. Even his longer and more serious *De Carne Christi*, *De*

Resurrectione Carnis, *De Anima*, and *Adversus Praxeum* bear the stamp of the brilliant pleader. His open letter to the proconsul, Scapula, in 212, is a finely documented and biting protest against the official policy of repressing Christianity and a plea for religious liberty. His last surviving work, *De Pudicitia*, was most probably directed against measures by Callistus, Bishop of Rome (217-22), to relax the traditional Christian penitential system. In this Tertullian gives classic expression to the theology of the gathered Church and it is fundamental for the study of the Western doctrine of the Holy Spirit.

Tertullian seems to have lived to a ripe old age, and finally to have broken with the Montanists to found his own sect of Tertullianists more rigorous even than they. Despite his excesses and exaggerations, he remains the first Latin churchman. He turned Christian thought in the West into channels in which it has never ceased to flow. His *Adversus Praxeum* answered Patripassianism decisively and contributed towards the formulation of the doctrine of the Trinity. He may also be called the father of Donatism and of all Puritan nonconformity, of radical individualism and of political protest based on Biblical concepts. He is one of the founders of political and religious thought in the West. Thirty-one of his works survive. See also DONATISTS.

TESSERA, a ticket or token, used in Rome, as in all ages, for a great variety of purposes, and represented by small pieces, often circular, of lead, bronze, terracotta, bone, etc.

The *tesserae nummulariae*, formerly known erroneously as *tesserae gladiatoriae*, were tabs attached to bags of silver *denarii*, to show that they had been tested for genuineness (*specto*). The surviving examples belong to the last century of the Republic.

Under the Empire there were *tesserae frumentariae*, for the recipients of free corn, *tesserae* for games and public shows, and *tesserae* given in largess by the Emperor and exchangeable for various presents. Many of these *tesserae* bear types, similar to those of coins, but less often legends, and are often of lead. One series of bronze *tesserae* shows imperial heads on the obverse and numbers on the reverse. The attribution of *tesserae* to their particular uses is largely conjectural, but the principles of classification have been determined by Rostovtzeff.

Tesserae were, of course, used in private as well as in public life. Among private *tesserae* may be mentioned the *tesserae hospitales*, which established the claim of the bearer to hospitality on his travels abroad, and *tesserae lusoriae*, used for games.

M. Rostovtzeff, 'Römische Bleitesserae', *Klio*, Beiheft 3, 1905. H. M.

TESTAMENTUM PORCELLI, a satiric parody (3rd or 4th c. A.D.) of a will imagined to be by a pig, Grunnius Corocotta, just before being killed. It is mentioned by Jerome (praef. *Comment. in Isaiam*) as causing amusement in boys' schools.

Text at end of Bücheler's ed. of Petronius. A. d'Ors, *Rev. internationale des Droits d'Antiquité* 1955, 219 ff. J. W. D.

TESTIMONIUM signifies in its widest sense all types of evidence (Gai. 3. 131; Cic. *Top.* 19. 73); the term

instrumentum was later used in the same sense (Dig. 22. 4. 1). In a narrower sense the term signifies the testimony of a witness (*testis*), which was in ancient times the only evidence in legal proceedings. It maintained its importance also in the classical period, though documentary proof gained more and more ground. In the oldest law we already find another activity of witnesses: some solemn legal transactions and acts required for their validity the presence of witnesses, e.g. *manipatio* and other transactions *per aes et libram* (five witnesses), *confarreatio* (ten), also some important acts in civil procedure (as *in ius vocatio*, *litis contestatio*) and such legal acts as the opening of a will. When a crime (e.g. of *furtum*) was being investigated, some processes open to the parties to the case required the participation of witnesses. But the widest field of their activity was in testamentary law, because in all forms of will their presence was necessary for the validity of the act (see INHERITANCE, LAW OF). The two functions were closely connected, for presence at a legal transaction entailed an obligation on the witness to give evidence if there was litigation. Refusal of testimony made a man *intestabilis*, i.e. incapable of being a witness or calling a witness, and hence also of making a will.

In course of time various forms of written evidence (*instrumenta*, *documenta*) were developed. On the one hand, a transaction may itself be made in writing and attested by witnesses; on the other, some event or act may be recorded in writing and the truth of the record attested by persons who have been present at the occurrence; or again, a person may make some statement and other persons simply attest the identity of the deponent and the fact that he made the statement. The object of this last process is to make the evidence available in subsequent court proceedings, when it can be read aloud in the absence of the witness himself.

Some persons were generally excluded from testimony: slaves, *impuberes*, women (only from transactions), *intestabiles*, persons convicted of crimes, and those who followed an infamous profession. In particular cases all persons connected by a bond of kinship or moral obligation with a party interested in the lawsuit or in the transaction (*testimonium domesticum*) were excluded. Capacity to witness a will was regulated by special rules.

The deposition of a witness was made personally and usually under oath. Recitation of a written *testatio*, which became the later practice, carried less conviction. Apart from witnesses to legal transactions, persons could not be forced to give evidence except in criminal proceedings. Citation of a witness was called *denuntiatio*. In post-classical law, under the influence of the Hellenistic East, documents acquired greater evidentiary value than the evidence of witnesses, which became more and more distrusted. The testimony of one witness had no value at all.

False witness was severely punished (*Lex Cornelia testamentaria*); according to some laws even with death (XII Tables: 'deicere e saxo Tarpeio'; *Lex Cornelia de sicariis*).

S. Riccobono, *San. Zeitschr.* 1013, 231 ff.; L. Wenger, *Institutes of the Roman Law of Civil Procedure* (1940), 195 ff., 293 ff.; W. Hellbrand, *Das Prozesszeugnis im Rechte der Papiri* (1934). A. II.

TETHYS (Τηθύς), in mythology, daughter of Earth and Heaven, sister of Ocean (Hes. *Theog.* 136); becomes the consort of Ocean and bears the Rivers, also the three thousand Oceanids, whose work it is to aid the rivers and Apollo to bring young men to their prime, and Styx, chief of them all (ibid. 337 ff.). H. J. R.

TETRARCHY (τετραρχία, i.e. the fourth part of an ἀρχή) was first used to denote one of the four political divisions of Thessaly ('tetrad' being a purely geographical

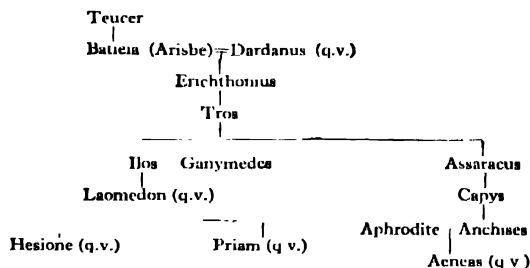

term). The tetrarchies were Thessaliotis, Hestiaeotis, Pelasgiotis, and Phthiotis. Their origin is obscure. Some scholars maintain that they were originally separate and independent tribal States which united to form the Thessalian *κοινόν*. It is much more likely that the *κοινόν* existed before the tetrarchies and that the latter were artificial divisions of Thessaly created to serve as the basis of its political and military organization. The rapid development of cities towards the end of the fifth century, together with the decay of the *κοινόν*, caused the tetrarchies to lose much of their importance. In 342 B.C. Philip of Macedon, now Archon of Thessaly, revived them in order to overcome the resistance of the cities through tetrarchs who were his partisans. How long this system lasted is unknown.

The term found its way to the Hellenistic East and was applied to the four divisions into which each of the three tribes of the Galatians was subdivided. In Roman times many hellenized princes in Syria and Palestine were styled 'tetrarch', but the number of tetrarchies in any political organization ceased to be necessarily four, the term denoting merely the realm of a subordinate dynast.

F. Gschmütz, *Hermes* 1954, 451 ff.; M. Sordi, *La lega tessala* (1958), 316 ff. H. D. W.

TETRICUS, GAIVS PIVS ESUVIVS (PW 1), governor of Aquitania, was made Emperor in Gaul on the death of his relative Victorinus. Ruling from A.D. 270 to 274, he was less successful than the preceding 'Gallic' emperors. He finally appealed to Aurelian and, when Aurelian invaded Gaul, deserted his army at the battle of Châlons. Led in triumph, he was afterwards appointed 'corrector Lucaniae'. His son, Tetricus II, shared his fortunes as Caesar and again as a senator of Rome. H. M., B. II W.

TEUCER (Τεύκρος), (1) ancestor of the Trojan kings, the genealogy being

For authorities, see Schmidt in Roscher, v. 406. Ramsay, *Asiatic Elements*, 225, identifies him with the Hittite god Tarku. (2) Son of Telamon (q.v. 1) by Hesione. Throughout the *Iliad* he is a valiant archer, and faithful comrade of his half-brother, the greater Ajax. This character is maintained in later works, e.g. the *Ajax* of Sophocles. He was absent at the time of Ajax's suicide (*Ajax* 342-3), but returned (974) in time to take a leading part in the struggle to secure him honourable burial. After his banishment (see TELAMON 1) he founded Salamis in Cyprus (Hör. *Carm.* 1. 7. 27 ff., and often). There is no consistent tradition of the manner or place of his death.

H. J. R.

TEUCER (3) of Cyzicus (1st c. B.C.) wrote on the Mithridatic Wars, Tyre, the Arabs, Jewish history, Byzantium, and Cyzicus, his work covering Pompey's settlement of the East, and reflecting the part played by Cyzicus at this time. His *Περὶ χυνοσφόρου γῆς* does not necessarily identify him with Teucer (q.v. 4) of Babylon.

FGH in A, 126; s. 314.

A. H. McD.

TEUCER (4) of Babylon (probably the Babylon in Egypt), astrologer, is conjectured to belong to the first century A.D. He expounded the traditional astrology of Egypt and united with it oriental and Greek elements. He had a great influence on Arabian and medieval astrology, through his description of the constellations. Fragments of his works have been preserved.

Ed. F. Boll, *Sphaera* (1903), 16, 31; CCAG vii. 194 ff., viii. 196 ff. ix. 2. 180 ff. W. D. R.

TEUTA, Illyrian queen and regent after Agron's death in 231 B.C. for his young son Pinnes by an earlier wife (see ILLYRICUM). She followed up Agron's victory over the Aetolians at Medeon by aggression against Epirus, and directed Illyrian piracy against Italian commerce with Greece. She refused Rome satisfaction for the murder of Italian merchants in 230 and even for an attack on the Roman envoys. In 229 she took Coreyra, defeating the Achaean, and was besieging Issa and Dyrrhachium when Rome intervened, in the First Illyrian War, and forced her to withdraw and submit (Polyb. 2. 2. 12).

Badian, *Stud. Gr. Rom. Hist.* 1 ff., N. G. L. Hammond, *JRS* 1968, 4. A. H. McD.

TEUTOBURGIENSIS, SALTUS, the district where, in A.D. 9, the army of Varus (q.v. 2) was destroyed on the march from summer to winter quarters, by the Cherusian prince Arminius (q.v.). Despite much discussion, the *Saltus Teutoburgiensis* has not been located, neither is it certain whether *saltus* here means a forest or a mountain pass. The Teutoburger Wald of modern maps is an archaizing name given in the seventeenth century. The site of the disaster must lie somewhere between the middle Weser and the upper Ems, between the Lippe and the Dümmer See. W. John has argued that by the phrase 'medio campi' Tacitus (*Ann.* 1. 61) places the last stand within the camp, on the parade ground where the survivors had dug themselves in; thus the site may one day be discovered by aerial photography.

W. John, *Die Örtlichkeit der Varusschlacht bei Tacitus* (1950), id. *PW* xxiv, 922 ff. O. B., J. J. W.

TEUTONES, a Germanic tribe, chiefly known from their migration in company with the Cimbri (q.v.), whose neighbours they had been in Jutland, to southern France, where Marius annihilated them in the battle of Aquae Sextiae in 102 B.C. The Aduatuci whom Caesar (*BCall.* 2. 29) defeated in Gaul claimed to be descended from the Cimbri and Teutones. From *ILS* 9377 *inter Toutonos*, etc., it has been inferred, perhaps hazardingly, that a remnant of them survived at Miltenberg on the Main. Curiously, Tacitus does not mention them or the Ambrones, who marched with them and the Cimbri. The name Teuton became a synonym for German and was used by Latin poets long after the Teutones became extinct.

E. A. T.

TEXTUAL CRITICISM, the technique and art of restoring a text to its original state, as far as possible, in the editing of Greek and Latin authors (for papyrus documents see PAPYROLOGY, for stone inscriptions see EPIGRAPHY). We know ancient texts only from a process of successive copying by hand (see PALAEOGRAPHY), which was subject to corruption by faulty transcription and emendation, before the resulting vulgate (*textus receptus*) was committed to print. The modern editor has to review this fallible process in the light of the surviving evidence, which is all too often inadequate. His task is usually defined as (i) *recensio*: to study the manuscript tradition; (ii) *examinatio*: to determine critically what may be taken as authentic; (iii) *divinatio*: to attempt the remedy of error by conjecture. In practice, however, the complexity of evidence may often involve all three phases at once in establishing a text.

The manuscripts representing an original text have a genealogy (*stemma*), but we may not be able to construct it. Copying causes the loss of earlier versions, scribal emendation obscures the line of tradition, inter-borrowing (*contaminatio*) mixes the relations of manuscripts, and the surviving evidence may defy analysis. Learned copying dates for Greek authors from Alexandrian times (3rd c. B.C.), for Latin authors from the fourth century A.D., and it continued for popular authors during the Middle Ages, in Byzantium and the West, to the scholarship of the Renaissance. The effect on transmission may vary according to time, place, and author, but it must be borne in mind; here the history of scholarship is relevant.

An editor should begin by looking for a *stemma*. The evidence is strictly limited to such significant errors as may indicate specific lines of descent; for authentic readings could survive in any line. P. Maas established a formula of analysis. Significant errors are *separative* or *conjunctive*. (i) *Separative*: if one manuscript shows an error where another preserves the authentic reading, the latter has descended independently of the former— but how does one distinguish an authentic reading from a plausible emendation? (ii) *Conjunctive*: two or more manuscripts may share an idiosyncratic error, that is, one which need not be attributed to coincidence in misreading, and it will associate them in a specific line of descent—but what if emendation has removed the evidence of association? Maas would not apply his formula where the manuscript tradition was subject to emendation or 'contamination', and this limits its use— rightly so, for it is unfair to a text to edit it on an uncertain 'stemmatic' basis. Further, the *stemma* must cover a 'closed tradition': otherwise any individual manuscript may contain variants—in text or margin— that come from an external source, not least in the Renaissance (as Pasquali argued) when scholars were searching for fresh manuscripts.

How far may one apply Maas's formula more freely in order to gain a general impression? There must be some evidence for the earlier stages of transmission ('vertically') and a large enough number of manuscripts to allow the possibility of grouping (to reduce the individual vagaries of 'contamination') and of reasonable argument in terms of probability: then it is worth the attempt, providing one heeds the warnings of Maas and Pasquali. There is little excuse these days for neglecting to examine a 'quorum' of the available manuscripts, even initially on a basis of selective collation.

For an increasing number of authors, however, as scholars study more of their manuscripts by stricter methods, the 'stemmatic' procedure shows its dangers: emendation and 'contamination' demand analysis of mutual interrelations ('horizontally'). Let us illustrate the problem by a diagram:

(The Roman capitals show extant manuscripts, the Greek letters their lost ancestors; italic *x* indicates lost intermediaries, some emended (*corr.*), the dotted lines mark 'contamination'.) We have a main group descended from α , which could only too easily be taken as the 'archetype' of a *stemma*, reconstructed from A and the descendants of β (though distorted by x 's borrowing from B); D and E could be eliminated as derived from A and B respectively, D more doubtfully in view of x (*corr.*). But there is a second line from λ , which appears late in J and by 'contamination' in H. In practice one might prove the relations of the α group but miss the λ evidence. But suppose—and this is no idle assumption—that the earlier manuscripts were lost and we had only D–J of varying dates? The 'stemmatic' analysis would not work: we should have to classify the manuscripts in groups, on evidence already distorted by emendation and 'contamination'. FGH might fit together, but H with some doubt, at a lower level; if α had significant errors we might also associate D and E, but loosely; and only a bold man would argue back from H's borrowings and J to a λ line, already corrected.

This is the kind of problem which editors, more often than not, have to face: no clear-cut 'stemmatic' procedure but the difficult examination of emended and 'contaminated' manuscripts. Such manuscripts may vary in date (especially among popular authors), from medieval Western and Byzantine to Renaissance times, and it is always important to know the conditions of scholarship. Too few manuscripts limit the evidence, too many complicate the method of analysis; and late manuscripts may preserve a newly discovered tradition: *recentiores non deteriores* (in Pasquali's words). It is hazardous, though often necessary, to argue from assumption about what could or could not have been soundly corrected. Intelligent men, whether scholarly or not, if they thought in the language, might well complete a context by conjecture. We should not underestimate Byzantine learning, the effect of medieval annotation, or the skill of Renaissance emendation. In any event the editor should control the escalation of hypotheses: it is better to plot the evidence and survey its indications. Modern bibliography and photographic copying gave him no excuse for not studying the general field of his manuscript tradition. Seven manuscripts of Aeschylus suggested a *stemma*, seventeen have destroyed it, and there are more manuscripts of Aeschylus! The moral is that one should not draw definite conclusions without examining the balance of the evidence. An editor of Polybius or Livy may show a *stemma* and a 'closed tradition' of the main line of descent, but only after collating *all* the known manuscripts; Polybius and Livy, however, were too voluminous to be continually popular. At the same time, as life is short and 'the best may be enemy of the good', there is a place for preliminary investigation, working up from the earlier manuscripts: an 'elenchus' of, say, 1,000 readings allows rapid collation and a choice of the manuscripts that merit closer study. It is no hardship to apply this method to 100 manuscripts, which would cover most lines of tradition.

The recension of manuscripts, even allowing for adequate evidence, may involve argument from probability, as a 'working hypothesis', and emendation and 'contamination' can baffle analysis. We must consider the technical expedients. A 'distribution chart' may assist—the variants plotted in relation to the manuscripts—so that one may discern their relationship. Or there may be recourse to statistical examination, a 'calculus of variants', which does not make any assumption about the authenticity of readings or their successive corruption. This method belongs to that of mathematical symbolism, recording the patterns of variants, and the 'calculus' indicates the possible choice of classes under which the manuscripts

may be studied. It is scientific in the sense that an editor should know the *possibly valid* classes rather than argue from a cumulative series of assumptions. Statistical work may now be handed to a computer, once the data are suitably prepared. The benefit here is not only to save time but to overcome human fallibility in judging the evidence: 'punch-cards' will produce their patterns. There is no short-cut in collation; for minor palaeographical differences, depending on the scribe and the script he is copying, could distort the statistical correlation and one must define the significant data: only then can the machine provide the reasonable answers. The result will be not a mechanical result but a context of judgement, as individual readings come up for consideration. The editor has then to use his scholarship and understanding of his author and the subject-matter and style.

A. H. McD.

THALES, son of Examyces of Miletus, perhaps of Semitic stock (Hdt. 1. 170), was universally accounted one of the Seven Sages and by Aristotle (*Metaph.* A 3, 983^b20) the founder of physical science. Stories were told of his versatility in many spheres, political (his advice to the Ionians to found a federal capital at Teos, Hdt. loc. cit.), economic, engineering, geographical, astronomical, and mathematical. The tradition that he foretold to within a year the solar eclipse which occurred during the battle of the Halys (28 May 585 B.C.) appears to be as old as Xenophanes (fr. 19 Diels, cf. Hdt. 1. 74, Eudem. fr. 144 Wehrli) but its basis is doubtful (Neugebauer, *Exact Sciences in Antiquity*² (U.S.A. 1957), 142). More plausible is the belief that he founded geometry by studying and generalizing Egyptian 'land-measurement'. He probably wrote nothing, but we must accept Aristotle's attribution to him of the view that the world not only originates from but returns to water, which is thus both eternal (and so divine) and the stuff of which everything consists. With this is connected his saying that 'all things are full of gods'. His cosmology has Egyptian and Semitic affinities.

Diels, *Vorsokr.*¹¹ i. 67-81, Burnet, *EGP* 40 ff.; Kirk-Raven, *Presocratic Philosophers*, 74 ff.; Zeller-Mondolfo, *La filosofia dei Greci* 1. ii (1918), 100 ff.; Guthrie, *Hist. Gk. Phil.* 1. 45 ff., A. H. C.

THALETAS, of Gortyn in Crete (Paus. 1. 14. 4), worked at Sparta in the seventh century B.C. ('Plut.' *Demus.* 9). He wrote songs which exhorted to law-abidingness (Plut. *Lyc.* 4) and paeans ('Plut.' *De mus.* 10, but cf. 42). Nothing of his work survives. He used paeonic and cretic rhythms ('Plut.' *De mus.* 10). C. M. B.

THALLUS published a chronological work in three books, from the Trojan War to Ol. 167 (112-109 B.C.) according to Eusebius; but on the evidence of the

fragments, from Belus to at least the death of Christ. If Eusebius is right, 'Thallus' work must have been later extended. Euhemeristic in character, it was used by the Christian apologists. He may, perhaps, be the Samaritan Thallus, Augustus' secretary or Tiberius' freedman.

EGH ii B, 1156; BD, 835.

A. H. McD.

THAMUGADI (modern *Timgad*), a settlement in Numidia 20 miles east of Lambaesis (q.v.). Founded in A.D. 100 by 'Trajan as a veteran colony (*ILS* 6841), the original town was designed on camp lines; *cardo* and *decumanus* intersected at right angles, *curia*, basilica, and forum were placed at this intersection, and smaller streets ran parallel to the two main roads. Thamugadi had many public baths and a theatre, and public-spirited citizens gave it a library and a market-place. When it outgrew its original rectangle, an enormous Capitoline temple was built outside the walls.

The fertile countryside brought great prosperity under the Septimian dynasty; in the fourth century it was still growing, and was a centre of the Donatist Schism in the African church. In the Vandal period, Saharan raiders sacked it; the Byzantines built a protecting fortress, but it fell to the first Arab invasion. Excepting Lepcis, 'Timgad' has the most complete Roman remains in Africa, and has been completely excavated.

A. Ballu, *Les Ruines de Timgad*¹ (1904); R. Cagnat, *Carthage, Timgad, etc.*² (1909); C. Courton, *Timgad, antique Thamugadi* (1951). W. N. W.

THAMYRIS (Θάμυρις) or **THAMYRAS** (Θαμύρας), a Thracian bard, who boasted that he would win a contest even if the Muses opposed him, whereat they blinded him and made him forget his skill (*Il.* 2. 594 ff.). Later authors attribute a multitude of musical inventions to him and add some unimportant tales.

Hoter in Roscher's *Lexikon*, s.v.

H. J. R.

THANATOS. Death, as a person, hardly rises to the level of a mythological figure, belonging rather to folklore or poetical fancy. Thus he is a healer (Eur. *Hipp.* 1373, i.e. only death will ease Hippolytus' pain); he keeps Polybus in the grave (Soph. *OT* 942); he begat the poison which kills Heracles (Soph. *Trach.* 833); he is the only god who loves not gifts (Aesch. in Ar. *Ran.* 1392, i.e. death is inexorable, and, incidentally, is not worshipped as a god). In Epic he is a little more concrete; he is the brother of Sleep, and the two carry away the body of Sarpedon (*Iliad* 14. 231; 16. 671 ff.). (Cf. Hesiod, *Theog.* 212 (Death, son of Night), 764 (he is unhearted, hated even by gods)).

In Euripides' *Alcester* he is a clearly defined figure, the 'dark-robed lord of the dead' (843), armed with a sword (76), and Euripides borrows him from Phrynichus (Serv. Dan. on *Aen.* 4. 604), who very likely had him from popular belief. Heracles rescues Alcester (q.v.) by literal physical wrestling with Thanatos. Except for its successful issue, this is not unlike the modern Greek stories of a hero contending with Charos.

A merry tale of Sisyphus (q.v.) is preserved from Phrynichus (fr. 119 Jacoby) by schol. *Iliad* 6. 153. Sisyphus told Asopus what had become of Aegina (q.v.), and Zeus therefore sent Thanatos against him; but Sisyphus bound Thanatos, so no one died until Ares rescued him and gave Sisyphus to him. Before dying, Sisyphus bade his wife Merope give him no funeral dues; she obeyed, and he got permission from Hades to re-ascend to earth and remonstrate. He neglected to return till he died of old age, and Hades set him to roll the rock to keep him from running away again.

For Thanatos in art see O. Waser in Roscher's *Lexikon*, s.v. H. J. R.

THARGELIA, an Ionian festival attributed to Apollo and celebrated the 7th Thargelion (May–June), also known from Asia Minor (Hipponax), Abdera, Massilia. The most discussed rite took place the day before. A man (the *pharmakós*) was fed, led around in the town, flogged with green plants, driven out, and sometimes stoned or killed. He is certainly a scapegoat, absorbing all evil and then removed. On the other hand, certain rites point to the conception of a spirit of vegetation whose power is to be reinforced. The festival is named after the *thárgēla* which were brought on the chief day, first fruits (q.v.) of the still-unripe crops cooked in a pot; the word signifies also the first bread baked of the new crop. The mixing of the two mentioned motifs is explained by the fact that the Thargelia were celebrated a little before the harvest, partly to protect and partly to promote the crops. The *thárgēla* rite has been interpreted as the breaking of the taboo on the unripe crops.

L. Deubner, *Attische Feste* (repr. 1959), 179 ff.; Nilsson, *Feste*, 105 ff.; J. E. Harrison, *Proleg. to the Study of Greek Religion* (1922), 77 ff. the *pharmakos* is much discussed, e.g. Frazer, *GP* ix; Nilsson, *GGR* i², 107 ff. M. P. N.

THASOS, an island of the north Aegean, colonized from Paros, probably c. 680 B.C. From the gold-mines in its soil (the first exploitation of which Herodotus (2. 44. 4) ascribed, probably without good reason, to the Phoenicians), and from others on the mainland under Mt. Pangaeus, it derived a revenue rising to 200–300 talents. A dispute with Athens about the mainland mines led to its secession from the Delian League (465), followed by its reduction (463). If we may judge by the fluctuations in the tribute of Thasos (3 talents in 454, and 30 in 446), it was deprived of the mainland mines in 463, but recovered them soon after. Despite a massacre of its Athenian partisans by Lysander (404), it again allied with Athens in 389 and was a permanent member of Athens' Second League. In 340 it was subdued by Philip, and it remained a Macedonian dependency until freed by the Romans in 196. After 300 its waning revenues from the mines were supplemented by the profits of a carefully regulated export of wine. The volume of this trade is attested by widely distributed finds of wine-jars (identified by an official stamp; see AMPHORA STAMPS) in the Balkan lands, where Thasian coinage also circulated freely.

Thasos had a flourishing school of sculpture from the seventh to the sixth century, and it was the home of the painter Polygnotus. It preserves impressive remains of its sixth- and fifth-century walls and several buildings of its Agora and a theatre have been excavated.

THEAETETUS (c. 414–369 B.C.) of Athens, mathematician, friend and pupil of Plato in philosophy and of Theodorus of Cyrene in mathematics, contributed much to the foundations (a) of Euclid book 10, by investigating the various species of irrationals (cf. *Pl. Th.* 147 d–148 b), and (b) of Euclid book 13, by constructing theoretically the five regular solids and discovering the methods of inscribing them in spheres.

THEAGENES (1) of Megara slaughtered the flocks and herds of the wealthy, secured a bodyguard, and made himself tyrant; constructed a tunnelled conduit and pillared fountain; married his daughter to Cylon of Athens, and supported Cylon's unsuccessful attempt to make himself tyrant. He was himself subsequently banished from Megara. The date of Theagenes' tyranny depends on that of Cylon (victor Olymp. XXXV, coup

before Draco), and in spite of recent questionings is probably to be put between 640 and 620 B.C.

THEAGENES (2) of Rhegium (fl. c. 525 B.C.), contemporary of Cambryses and author of a work *Ἐπεὶ Ὀμήρου*, was the first scholar to attempt an allegorical interpretation of Homer by suggesting that the names of the gods represented natural elements (see ALLEGORY).

Diels, *Vorsokr.* 3.1 51 f.; F. Wehrli, *Zur Geschichte der allegorischen Deutung Homers im Altertum* (1928). J. B. U.

THEAGES, pupil of Socrates. Plato refers in the *Republic* (496 b) to 'the bride of Theages', the bad health which kept him out of politics and saved him for philosophy. On the basis of this reference an imitator of Plato wrote a *Theages* dealing with the relation between philosophy and politics, and this is included in the corpus of Plato's works.

W. D. R.

THEANO is said to have been the wife of Pythagoras, but another tradition describes her as being among his pupils, and the wife of his disciple Brotinus or Brontinus. Several apocryphal books were ascribed to her in antiquity. Seven apocryphal letters are to be seen in Hercher, *Epistolographi*, 603–7.

W. D. R.

THEATRES, STRUCTURE. The Greek theatre consisted essentially of the orchestra, the flat dancing place used for the choral song and dance out of which grew tragedy (q.v.) and comedy (q.v.); and the auditorium (the *theatron* proper, Latin *cavea*), normally a convenient slope on which spectators could sit or stand. It may possibly have a forerunner in the theatral areas of Minoan palaces (see MINOAN CIVILIZATION). In some primitive theatres wooden stands were used for seating. Seats were sometimes cut in the rock; normally they consisted of stone benches of simple form, rising in tiers. The orchestra was normally, but not always, circular, and consisted of hard earth—paving was not introduced till Roman times. The *skene* (tent or hut) was in origin a simple structure for the convenience of the performers, which could also form a background for the plays. In the course of the fifth century it became a more solid building, ultimately acquiring a handsome architectural form with projecting wings. The fully developed auditorium was rather more than a semicircle in plan, opening out a little at the outer ends, where the line of seats was drawn on a slightly greater radius. The outer sectors required embankments and solid retaining walls, while the inner was hollowed out of the hill-side; there were no elaborate substructures as in Roman theatres. The auditorium did not link up with the *skene*, except perhaps by means of light gateways, and the intervening passages on either side were called *parodoi*. Stairways radiated from the orchestra, dividing the seating into 'wedges', and in large theatres there were horizontal passages too. The front tiers were sometimes provided with more elaborate and comfortable seating for priests and officials.

In the fifth century the action took place at orchestra level, with at most a low wooden platform, easily accessible by steps, in front of the *skene* (see TRAGEDY, COMEDY). In the late fourth century the *proskēnion* was introduced, a row of columns in front of the *skene* supporting a high platform (seen to good advantage at Oropus, where it has been recently reconstructed). This came to be used as a raised stage, a feature appropriate to New Comedy, which would have been out of place in the theatre of Sophocles or Aristophanes. *Proskēnia* were usual in Hellenistic theatres, and were added to old theatres at Athens and elsewhere.

Certain small theatres in the Attic demes (Icaria, Thoricus) gave a good idea of the primitive form. At Athens itself tradition speaks of an early theatre in the agora. The theatre attached to the shrine of Dionysus Eleuthereus on the south slope of the Acropolis developed from crude beginnings in the latter part of the sixth century B.C.; its peculiar and complicated history is the subject of much dispute. Architecturally it was still simple and undeveloped in the time of the great fifth-century dramatists. The theatre at the shrine of Asclepius near Epidaurus shows the perfection of design achieved in the fourth century. Even then the theatre was by no means standardized and there are many local variations.

Roman theatres conformed to a type which made a complete building, though, in larger examples, the auditorium—a semicircle—was probably only partly roofed. The stage, certainly roofed and close to the semicircular 'orchestra', was a wide and fairly deep raised platform, backed by a wall (*scenae frons*) as high as the top of the *cavea*, treated as an elaborate front towards the stage, with columns, niches, etc. Substructures of *cavea* and stage consisted of vaulted passages, etc., with staircases, and the outer walls enclosing the back of the *cavea*, sometimes squared, were of arched construction in tiers, with order treatments. Good examples are at Pompeii (small theatre), Orange, Aspendus, Miletus, Taormina, and Dougga (N. Africa). This type of theatre was favoured in Greece too in the Roman imperial period, though in some cases a natural slope was still used, avoiding the need for substructures (see ODEUM).

Müller-Wiener, *Das Theater von Epidaurus* (1961); see also ARCHITECTURE (all the books mentioned have sections on the theatre). T. F.; R. E. W.

THEBES (1) on the south edge of the east plain of Boeotia replaced, according to tradition, Orchomenus (q.v.) as leading city of Boeotia. It plays an important part in Greek saga in the generations before the Trojan War. The particular connexion with the Near East implied by the story of Cadmus has hitherto been discounted, though a portion of a Mycenaean palace in the centre of the modern town was excavated in 1909 and assumed to be the 'House of Cadmus', mentioned by Pausanias (9. 16. 5) as associated in tradition with the classical temple of Demeter Thesmophorus: τὸ δὲ τῆς Δήμητρος ἱερὸν τῆς Θεσμοφόρου Κάδμου καὶ τῶν ἀπογόνων οἰκίαν ποτὲ εἶναι λέγουσι. Recent excavations at Thebes (BCH 1964, 775 ff., ILN 1964, 859 ff.) have revealed a classical structure overlying a Mycenaean building to the south of the earlier discovery. Among the finds is a 'treasure' including Mesopotamian(?) cylinder-seals, one of them of the period of or at any rate referring to a Kassite king of 1381–1354. The associated objects are of diverse dates; the pottery is LH IIIB (13th c.). Not far away another find has revealed Middle Helladic cist graves and a Mycenaean building above them, with arms, ivories, and Linear B tablets associated with LH IIIB pottery. The find is of little aid in the vexed problem of Linear B dating; the same is true of the cylinder-seals, but some as yet unevaluated confirmation is given to the idea of an oriental connexion and so to saga-tradition, in which the gruesome fates of Theban princes were, next to the tale of Troy, the favoured material of Greek epic and tragedy. Thebes was destroyed by the Epigoni and laid waste. The Catalogue of the Ships (Il. 2. 505) names only Ὑποθήβαι, though, according to Thucydides (1. 12), the forerunners of invasion were already in the 'Cadmean land' whence they went to Troy.

When the 'Boeotian' invasion was completed Thebes outstripped the other Boeotian towns, but was never strong enough to combine them into a unitary State.

It was friendly with the Pisistratids (Hipparchus made a dedication to Apollo Ptoos, BCH 1920, 237 ff.); its hostility to Athens dates from the Athenian reception of the Plataeans in c. 519 B.C. (see PLATAEA). As a punishment for the support which it gave to the Persians in 480–479, Thebes lost its predominant position in the Boeotian Confederacy, and recovered it only in 446. During the Peloponnesian War it grew at the expense of its small neighbours. Its territory, with subject towns, was nearly half Boeotia, and it elected four of eleven boeotarchs (Hell. Oxy. xii. 3). Dissatisfied with the Spartan peace in 404, Thebes joined Athens and Argos in the Corinthian War. The peace of 387 enabled the Spartans to detach the other Boeotian towns from Thebes, and in 382 they garrisoned the citadel. The Thebans retook it in 378, and at Leuctra in 371 drove the Spartans out of central Greece. For a brief period Thebes, led by Epaminondas (q.v.), was the chief power of Greece, but its hegemony did not survive him. Thebes joined Athens in resisting Philip; it was punished by destruction for a revolt against Alexander, and though refounded was never again a great city. Thebes was a pleasant place, with trees and fresh water ([Dicaearchus] 1. 12 ff. in FHG II. 258). The temple of Apollo Ismenios, where Herodotus (5. 59) saw the ancient tripods bearing Κυδμῖα (? Mycenaean) ὑπόμματα (and other inscriptions in Greek?), has been excavated. See also FEDERAL STATES, § 3.

P.-K., GL I. n. 501 ff. passim. L. Ziehen, PW s.v. 'Thebai'; A. W. Gomme, BS 4 1910 11, 29 ff. (topography) T. J. D., R. J. II.

THEBES (2), formerly capital of Egypt, was still an important city at the Greek conquest, but suffered considerably during revolts in 206 and 88 B.C. of which it was the centre. It was sacked by Cornelius Gallus in 30 or 29 B.C.; Strabo found it a group of villages. The temples prospered under the Ptolemies: building was done on the east bank, and the temple of Deir-el-Medineh on the west was begun under Philopator. Occasional records of works occur till c. A.D. 150. Thebes had then become a tourist centre, the great attractions, as shown by graffiti, being the statue of 'Memnon' and the Pharaonic tombs. Papyri and numerous ostraca have been found there, almost all dealing with finance or taxation.

The fullest account of the buildings is in A. F. P. Weigall, *Guide to Antiquities of Upper Egypt* (1913), 60 ff., cf. also Baedeker, *Egypt* (1929), 287 ff. For details see Porter and Moss, *Topographical Survey of Ancient Egyptian Hieroglyphic Texts, Reliefs and Paintings* (1. 11), 'Theban Necropolis' (1904), II, 'Theban Temples'. For the Graeco-Roman period see A. Bataille, *Les Memnonia* (1952), and (for the colossus of 'Memnon') A. and E. Bernard, *Les Inscriptions grecques et latines du Colosse de Memnon* (1960). J. G. M.

THEMIS, a goddess originally akin to or even identical with Gaea (Aesch. *Eum.* 2; *PV* 209–10). In the former passage the oracle at Delphi was once hers; in the latter, she is still a prophetess, and warns her son Prometheus of the future. The same powers are shown in Pindar, *Isthm.* 8. 34 ff., cf. *THETIS*. In all probability, her name means 'steadfast' (root *the*). In Hesiod, *Theog.* 135, she is a daughter of Earth; *ibid.* 901 ff. she is Zeus' second consort, mother of the Horae and Moerae. But, as her name is used also to mean 'firmly established custom or law, justice', she tends to become an abstraction, Justice or Righteousness. For example, Medea, when betrayed, invokes her as guardian of oaths (Eur. *Med.* 160 ff.); Plato, *Leg.* 936 e, suggests an oath by Zeus, Apollo, and 'Themis'. Her several cults may be supposed to have originated with her earlier nature for the most part.

Weniger in Roscher, s.v.; V. Ehrenberg, *Die Rechtstide im frühen Griechentum* (1921). II. J. R.

THEMISON of Laodicea, pupil of Asclepiades and precursor of Thessalus of Tralles, lived in Rome under

Augustus (31 B.C.–A.D. 14). His views being most inconsistent, his system is no unity. He agreed with Asclepiades in the theory of corpuscles. On the other hand, he introduced into medicine the conception of the *communio* ('status strictus, fluens, et mixtus'), referring to excretion which is either too much or too little, or too much from one part, too little from another. This defect, which he probably thought of as hindering the free movement of the atoms, he tried to remedy by an alteration of the state of the body as the physician finds it. Moreover, he was the first to study methodically the problem of chronic diseases and to encourage their treatment by physicians.

TEXT. Fragments, not collected. *Περὶ τῶν ὀρίων καὶ χρυσίου νοσημάτων* (R. Fuchs, *Rh. Mus.* 1903) not Themison but Herodotus, M. Wellman, *Hermes* 1905, 1013.

THEMISTIUS, Greek philosopher and rhetorician, was born in Paphlagonia c. A.D. 317 of a cultured family of pagan landowners, and studied in the eastern provinces and in Constantinople, where he opened a school (c. 345). Attracting the attention of the imperial government, he was soon appointed to an official chair and became a member of the Constantinopolitan Senate. His eloquent and often constructive exposition of the ideology of monarchy in a succession of panegyrics and other speeches won and returned for him the favour of every Emperor from Constantius II to Theodosius I, who appointed him prefect of the city (383–4) and entrusted him with the education of his son, the future Emperor Arcadius. He travelled widely in the Empire, in attendance on the imperial court and on official missions, such as that to the Roman Senate in 357. He died in Constantinople about 388.

In spite of his professed admiration for Plato, Themistius found the pragmatic and realistic approach of Aristotle more congenial, and he was little influenced by contemporary Neoplatonism, with its other-worldly overtones. In his early years as a teacher he wrote explanatory paraphrases of many of Aristotle's works, setting a pattern of exegesis which continued to be followed throughout the Middle Ages. A convinced pagan, he yet refrained from overt attacks on Christianity except in an address to Julian, now lost, which evoked from the Emperor the celebrated letter (253–67 Spanheim) setting out the principles of his proposed restoration of paganism.

Of his numerous works there survive: thirty-four speeches, mainly official addresses to Emperors, but including an interesting funeral oration on his father (*Or.* 20); and paraphrases of Aristotle's *Posterior Analytics*, *Physics*, *De Anima* (in the Greek original), *De Caelo* and *Metaphysics XII* (in a medieval Hebrew translation made from an Arabic version). Themistius was neither a great philosopher nor a great statesman, yet his speeches are valuable as sources for the history of his time and as specimens of pagan political ideology in the Christian empire, and his Aristotelian paraphrases embody material from lost commentaries.

Orations, ed. W. Dindorf (1828); ed. G. Downey, vol. i (1965); Paraphrases, ed. M. Walies, H. Schenkl, R. Heintze, and S. Landauer, in *Commentaria in Aristotelem Graeca* v (1899–1900). R. B.

THEMISTO, name of several heroines, the only one of importance being the daughter of Hypseus (Nonnus, *Dionys.* 9. 305 f.), wife of Athamas (q.v.). Herodorus, in schol. Ap. Rhod. 2. 1144, makes her his first wife and mother of several children, including Phrixus and Helle.

See Höfer in Roscher, s.v.

H. J. R.

THEMISTOCLES (c. 528–462), Athenian democratic statesman, was a member of the ancient Lycomid family but, it is said, base-born, perhaps of a non-Greek mother. If so, he owed his unquestioned citizenship to the reform of Cleisthenes (q.v. 1). The tradition about him is predominantly anti-democratic and hostile; Thucydides almost alone gives a more favourable picture of him. Herodotus' informants accused him of corruption, and said that in 480 he had 'newly come to the front'; yet he had been elected eponymous archon in 493 (Dion. Hal. 6. 34) and general of his tribe in 490. As archon he began the development of Piraeus as a port.

The fall of Miltiades (q.v.) in 489 was followed by repeated resorts to ostracism (q.v.). Of nearly 1,500 known ostraka, mostly of these years, no less than 542 bear Themistocles' name. It looks as if rival leaders tried to get rid of him as dangerous; but Themistocles was able to direct enough votes to get rid successively of Hipparchus the friend of Hippas, Megacles the Alcmeonid, Xanthippus, and the middle-class leader Aristides (qq.v.). He was then (483) able to secure the application of a large surplus revenue from the silver mines of Laurium (q.v.) to building up the navy from 70 to 200 triremes, just in time to save Greece from Xerxes' invasion. During his rise to supremacy (487; though no source connects his name with it), a very important reform took place: the opening of the archonships to 'knights' in good standing, *by lot*; which at once transferred the leadership in war to the *strategoi* (who could be re-elected, thus gaining experience), and was bound in time to reduce the prestige of the conservative Aeropagus, recruited from ex-archons.

As *strategos*, then, Themistocles commanded Athens' fleet in 480. He secured the Spartan high command's support for his strategy of fighting as far forward as possible, at Artemisium (q.v.). But for this, the Persians could have avoided disastrous storm-damage on the Thessalian coast by passing it in squadrons able to use the small beaches. He was also responsible for the decisive battle of Salamis (*see PERSIAN WARS*) being fought 'in the Narrows, which most obviously saved our cause' (Thuc. 1. 74). For this he received unprecedented honours at Sparta.

In 479, the chief Athenian commands went to his rivals, recalled from exile in 481 (*see ARISTIDES, XANTHIPPOS*); but Themistocles was still important in the next winter, when he 'spun out the time' at Sparta while the Athenians refortified their city, against Sparta's wishes. Piraeus was also powerfully fortified, on his motion. But in the following years he lost influence to a coalition of the more conservative leaders. About 471 he was ostracized and went to live at Argos, 'also visiting other places in the Peloponnese', where several States were moving towards democracy. Sparta grew alarmed, and (c. 468?) claimed to have evidence that he was involved with Pausanias (q.v. 1) in intrigues with Persia. Themistocles escaped to Asia after an adventurous flight by way of Corcyra, Epirus, and Macedonia; he was condemned to death at Athens in absence. King Artaxerxes I made him governor of Magnesia-ad-Maeandrum, where he died, of sickness, Thucydides believed, though he knew also a report of his suicide.

THEMISTOGENES of Syracuse, quoted by Xenophon (*Hell.* 3. 1. 2) as the author of an *Anabasis* of Cyrus.

The *Suda's* vague notice accepts this statement, but it is unlikely that there was a third account of the expedition in addition to those of Xenophon and Sophanes. Themistogenes was probably the pseudonym under which Xenophon published his *Anabasis*.

FGH II B, 108.

G. L. B.

THEOCRITUS (c. 300-c. 260 B.C.?) was a native of Syracuse, but seems to have lived mostly outside Sicily, first perhaps in southern Italy and later in Cos and at Alexandria. He made several unsuccessful attempts to find a patron. These are mentioned in 16, addressed to Hieron of Syracuse probably in 275/4. However, recognition soon came from Ptolemy Philadelphus, for whom before 270 he composed a panegyric (17). 270 is also the latest possible date for 15 (*Adoniazusai*), which is set in Alexandria.

A few autobiographical details can be gathered from 7 (*Thalysia*) if we may identify the Simichidas of that poem with Theocritus himself. The setting is Cos, and the incident described seems to occur at a moment (perhaps 274/3) when Ptolemy knows of Theocritus' compositions, but has not yet issued an invitation (91-3). From this poem it is clear that Theocritus in Cos has close friends and well-connected acquaintances. He has also won a reputation as a composer of bucolic poems. It is these that have attracted Ptolemy's notice, and it was these presumably that had accompanied his appeals to Hieron and others.

Although the theme of 6 and 11 is Sicilian, and the setting of 4 and 5 ostensibly that of southern Italy, there is little reason to think that any of the bucolic poems were written before Theocritus left the West. Most of them contain details, often botanical, that connect them with Cos and other parts of the East, and most, if not all, may have been composed in Cos.

Subsequently Theocritus was occupied with other forms of composition. 15 was composed for an Alexandrian clientele and may have been closely followed by the other non-bucolic mimes, 14 (which pays a compliment to Ptolemy) and 2. Several pieces are hymns or short epics (13, 22, 24, 26: the distinction is not always easy to draw). Another, written like the mimes in Doric, is an epithalamium addressed to Helen (18). None can be securely dated. A problem of priority arises in connexion with 13 (*Hylas*) and part of 22 (Polydeuces and Amycus), where Theocritus handles episodes from the Argonaut legend. These have been thought to be his contribution to a controversy in which he sided with Callimachus against Apollonius in the latter's attempt to revive the long epic. But there are doubts about Theocritus' position in the controversy, and it is by no means certain if the *Argonautica* preceded his compositions, or even if the quarrel was of this nature at all.

Three poems, 28-31, the last of which is a fragment, are written in Aeolic dialect and metres. In 30 Theocritus is no longer young, and the whole group is probably late. Epigrams, such as 17 and 22, which presuppose a wide reputation, may likewise be late. Whether Theocritus ever left Alexandria for Cos or elsewhere is unknown, and so too is the date of his death.

Theocritus shares with other poets of his age a preference for the short, highly finished poem, for fresh and sometimes exotic themes, and for new forms or old forms used in new ways. Nevertheless, he transcends his age in his ability to select and concentrate his material, in the freshness of his observation of people and scenes, in the vivacity of his narratives and descriptions, in his imagery and lyricism, and above all in his dramatic power. Displays of erudition are normally avoided by him. Two instances, however, are instructive, and possibly were

meant to be. In 7 topographical knowledge is used effectively for cajoling and threatening Pan (107-14), while in 12 two glosses and an *aition* are used, perhaps less naturally, to imply that the love affair is of a kind long sanctioned by custom.

Most of Theocritus' outstanding qualities, dramatic, descriptive, and lyric, are displayed in his bucolic poems. In 1 (*Thyrsis*) the courteous opening dictates the tone while it sets the scene, the description of the cup is dramatized, and the song is concentrated upon Daphnis' predicament and shows no concern for its cause. In 4 a series of changes in the emotional temperature is skilfully conveyed, the offensive-defensive opening leading eventually to a friendly close. In 5 mutual antipathy is gradually intensified until it explodes in the triumph of Comatas. 10 in its dialogue and in its songs vividly contrasts the dreamy lover Bucaeus with the hard-working, hard-headed, bluff but not unkindly Milon. The theme of 6 and 11 is the love of Polyphemus for Galatea. In 11 Theocritus no doubt enjoyed the difficult feat of presenting the physically repulsive Polyphemus as an acceptable lover. 7 is baffling. Its beginning and end are splendidly conceived with a wealth of evocative detail, but the songs, the kernel of the poem, have little immediate appeal. Their full significance no doubt escapes us. Theocritus may have meant to imply that Simichidas, who is presumably the writer himself, is not a rustic turned poet, like Lycidas, but a townsman writing about the countryside, and not exclusively about that. Simichidas' song could have formed the plot of a non-bucolic mime.

The non-bucolic mimes share many of the features of the bucolic. 2, like 3, is a lyrical monologue; 14, like 4, is entirely a dialogue; 15, like 1, consists of a dialogue followed by a song. 2 and 14, like 3 and 10, and the Aeolic poems 29 and 30, pursue the theme of unhappy love. 2 (*Pharmakeutria*) is notable for a contrast of moods—feverish tension and then calm recollection—and for the sympathy which Simaetha wins against all the odds. When we have heard her story, we know that, although she has no one to blame but herself, her lover is vain, selfish, and plausible, while she is credulous and unprotected. In 15 the characterization in a comic situation is no less skilful: Praxinoa is nervous, voluble, and scatterbrained; Gorgo enterprising, phlegmatic, and observant. Theocritus' use of the hexameter for his mimes was a bold stroke, perhaps facilitated by its long association with popular modes of thought in the shape of *gnomai*.

Of the epic narratives, the most strongly characteristic are, first, 13, where Heracles and Hylas occupy the scene almost in isolation, stress is laid on Heracles' affection for Hylas, and Hylas' fall is described in a powerful but non-heroic simile; and secondly, the fight between Polydeuces and Amycus in 22, where again the two chief characters monopolize the drama, and where the setting is pastoral and the fight preceded by a passage of stichomythia, a unique feature. Here the technique of drama is transplanted into epic.

In 16, an appeal to Hieron, the manner and the matter of the choral lyric are transposed into hexameters. The poem reproduces some of Pindar's resonance, and the imagery is moving. Theocritus' poems are depicted as crouching, dejected and reproachful, at the bottom of their chest after a fruitless search for patronage. Appropriately they are personified as Graces.

THEODECTES (c. 375–334 B.C.), born at Phaselis (in Lycia), probably lived mainly at Athens, where he studied under Plato, Isocrates, and Aristotle and won fame as an orator (Cicero, *Orat.* 172, praises his polished style), a writer on rhetorical subjects, and a composer of popular riddles in verse. As a tragic poet he composed 50 plays and in 13 competitions won 8 victories (*Suda*, s.v.), of which 7 were at the Great Dionysia (*IG*² ii. 2325). He died at the age of 41 and was buried on the way to Eleusis ([Plut.] *Xorat.* 837 d, Steph. Byz. s.v. *Φασηλίας*); his monument at Phaselis was honoured by Alexander the Great, his fellow student under Aristotle (Plut. *Alex.* 17). His plays included a *Lynceus* (the crisis of which is praised by Aristotle, *Poet.* 11), a *Mausolus* (in honour of the late king of Caria, but the treatment is unknown), and a *Philoctetes* (Aristotle, *Eth. Nic.* 7. 7, refers to the hero's brave resistance to pain; his hand, not, as in Sophocles, his foot, had been bitten by the serpent). The fragments consist mainly of rather commonplace but well-expressed reflections, and suggest that the poet was in the Euripidean tradition (*TGF* 801–7). Aristotle's *Theodectea* was a work on rhetoric so named in his honour.

THEODORET, c. A.D. 393–466. After a good education he became a monk and from 423 bishop of Cyrrhus, Syria. From 428 he was involved in the Christological controversy between his friend Nestorius and Cyril (q.v. 1) of Alexandria. He became Cyril's leading critic. Deposed by the monophysite Council of Ephesus (449) he was rehabilitated at Chalcedon in spite of strenuous protests (451), but his attacks on Cyril received posthumous condemnation under Justinian at the council of Constantinople (553). His well-composed letters, written in elegant prose, are informative about both secular and ecclesiastical matters. His *Graecarum Affectionum Curatio* is painstaking and thorough in contrasting Christianity and paganism. His *Church History* from Constantine to 428 contains many invaluable documents. The *Religious History* contains biographies of ascetics. The rest of his work is biblical exegesis and theological controversy, both of which he conducted well.

THEODORIC 'the Great', Ostrogothic king of Italy (A.D. 493–526), served when young as a hostage in Constantinople, where he received a Roman upbringing, though it is said that he never learned to write. On the death of his father Theodemer (471) he became king of the Ostrogoths, who were then living in Pannonia. From 471 to 489 he and his followers were involved in the confused and complex politics of the Eastern Empire. In 484 he was consul, and in 489 the Emperor Zeno sent him and his people to Italy to supersede Odoacer (q.v.), whom he defeated and treacherously killed at Ravenna (493). Although in many ways an independent ruler thereafter, he recognized the overlordship of the Eastern Emperors. He retained the Roman civil administration in Italy, though the army there was now Gothic. Intermarriage between Romans and Goths was still forbidden by Roman law. Himself an Arian, his religious policy was tolerant. He was on friendly terms with the barbarian kingdoms of the West, and confirmed his peaceful policies by a series of matrimonial alliances with the various barbarian royal houses. His declining years were darkened by tension with Constantinople, and by the execution of Boethius. He died in 526. His tomb at Ravenna still survives.

E. A. T.

THEODORIDAS (second half of 3rd c. B.C.), Syracusan

poet, wrote poems against his contemporaries in the form of sepulchral epigrams, against Mnasaes (*Anth. Pal.* 13. 21), and Euphorion (ibid. 7. 406). Also genuine epitaphs (ibid. 7. 282, 439, 527, 528) and dedications (ibid. 6. 155, 156). Also poem to Eros (*Ath.* 475 f), dithyramb *The Centaur* (id. 609 c), iambic and hexameter poems (id. 229 b, 302 c), cmaedic songs (*Suda*, s.v. 'Sotades').

THEODORUS (1), of Samos, a Greek artist of c. 550 B.C. He made a silver bowl for Croesus, and an emerald seal for Polycrates. He was said to have invented the line, rule, lathe, and lever, and to have been associated with Rhoecus in inventing, or introducing into Samos, the arts of modelling in clay and of casting images in bronze and iron. Pliny describes a bronze self-portrait by him, and includes him in his list of notable painters. Athenagoras (*Legatio*, ch. 17) says that he and Telecles made the Pythian Apollo at Samos; and Diodorus (1. 98) that they brought back the canon of proportion for the human figure from Egypt. Pausanias mentions a building called 'Scias' at Sparta, apparently an assembly hall, which was attributed to him; and Vitruvius cites a book by him on the Heraeum at Samos which (according to Herodotus) was built for Croesus by Rhoecus, and which is probably identical with the 'Labyrinth' which Pliny attributes to Theodorus himself. Diogenes Laertius (2. 103) says that he advised the inclusion of a layer of charcoal in the foundations of the Artemisium at Ephesus.

H. W. R.

THEODORUS (2) of Cyrene (b. c. 460 B.C.), mathematician, teacher of Plato and Theaetetus (Pl. *Th.* 147 d–148 b), was originally a pupil of Protagoras but turned early to mathematics. Plato represents him as proving separately that $\sqrt{3}$, $\sqrt{5}$, and the roots of the other non-square numbers up to 17 are irrational (the irrationality of $\sqrt{2}$ being known already).

W. D. R.

THEODORUS (3) of Gadara (fl. 33 B.C.), rhetor. He taught Tiberius at Rhodes (Suet. *Tib.* 57, Sen. *Suas.* 3. 7), and was an important teacher, the principal rival of Apollodorus (q.v. 5), from whom he differed in allowing more freedom in the arrangement and composition of speeches. It has been held that the differences between the two are symptomatic of a real difference of outlook on literature, but this is an exaggeration.

Some evidence in Anonymus Seguerianus (q.v.), but see esp. Quintilian. discussion by G. M. A. Grube, *APPhil* 1959, 337 ff.

D. A. R.

THEODOSIUS (1) Count, a wealthy landowner of Cauca in Spain, was a general of Valentinian I. In A.D. 367 he recovered Britain which had been overrun by Saxons, Picts, and Scots; the invaders had reached the vicinity of London. From 373 to 375 he was active in Africa and suppressed the revolt of the local chieftain Firmus. He was put to death for unknown reasons in Carthage in 376.

E. A. T.

THEODOSIUS (2) I, 'the Great', the son of Count Theodosius (q.v. 1), was born c. A.D. 346. He was promoted early, serving as *dux* of Moesia Superior in 374. On his father's sudden disgrace and execution in 376 he retired to Cauca, but in 378, after the defeat and death of Valens (q.v. 2), Gratian (q.v.) appointed him *magister militum* to fight the Goths, and shortly afterwards (19 Jan. 379) proclaimed him Augustus of the Eastern parts including the dioceses of Dacia and Macedonia. For the next few years Theodosius conducted campaigns against the Visigoths, basing himself at first at Thessalonica

(379–80), then at Constantinople. He failed to eject them from the Empire, and on 3 Oct. 382 signed a treaty with them, recognizing them as federates and assigning them lands in Thrace. In about 386 he signed a treaty with Persia, whereby the long-disputed kingdom of Armenia was partitioned between the two empires. When the usurper Magnus (q.v. 2) Maximus killed Gratian in 383 and occupied the Gauls, Theodosius recognized him, but when in 387 Maximus expelled Valentinian II from Italy, he marched west, defeated Maximus at Siscia and Poetovio, and put him to death at Aquileia. He stayed in Italy for three years. Valentinian II was established in Gaul. Theodosius' elder son Arcadius, whom he had proclaimed Augustus in 383, was left in nominal charge of the East. Theodosius returned to Constantinople in 391, but again had to move west in 394 to subdue the usurper Eugenius, who had succeeded Valentinian II in 392. He again left Arcadius in charge of the East, and took with him to the West his younger son Honorius, proclaimed Augustus in 393. He defeated Eugenius at the Frigidus on 6 Sept. 394, but died at Milan 17 Jan. 395.

Theodosius was a pious Christian and a bigoted adherent of the Nicene creed. He was baptized very early in his reign, during a serious illness. On 27 Feb. 380 he issued a constitution declaring that the faith professed by Pope Damasus and Peter, bishop of Alexandria, was the Catholic faith. He deposed Demophilus, the Arian bishop of Constantinople and recognized the Nicene protagonist, Gregory Nazianzen. On 10 Jan. 381 he ordered that all churches be surrendered to the Catholic bishops as defined by himself. This done he called a council of about 150 bishops at Constantinople, and this council duly ratified Theodosius' action, but refused to accept Gregory Nazianzen. Theodosius asked them to produce a short list and himself chose Nectarius as bishop of Constantinople.

Theodosius was very severe against heretics, issuing eighteen constitutions against them; he even ordained the death penalty for some extremist sects. Towards the pagans his policy was at first ambivalent. He did not forbid sacrifice, but was so severe against divination as to prevent it. He did not close the temples, but he allowed fanatical Christians to destroy them or granted them to petitioners. In 391 he abruptly closed all temples and banned all forms of pagan cult. This step was probably taken under the influence of Ambrose, bishop of Milan, who had obtained a great ascendancy over him since 387. In 388 Ambrose forced him to leave unpunished the bishop of Callinicum, who had burnt down a synagogue. In 390, when Theodosius had ordered a massacre at Thessalonica to avenge the killing of the general Butheric, he refused him communion until he had done penance.

E. Stein, *Histoire du bas-empire* i (1959), 191 ff.; Jones, *Later Rom. Emp.* 156 ff.

A. H. M. J.

THEODOSIUS (3) II, son of Arcadius, born in A.D. 401, was proclaimed Augustus in 402. He succeeded his father in 408 and reigned rather than ruled the Empire until his death in 450. He was very piously educated by his elder sister, Pulcheria, who exercised a strong influence over him until the early 440s. He was also much influenced by his wife Eudoxia, whom he married in 421, until the two of them fell from favour in the early 440s. During the earlier part of his reign the Empire was in fact governed by Anthemius, praetorian prefect of the East from 405 to 414, and then probably by Helio, master of the offices from 414 to 427. From the early 440s the Emperor was controlled by Chrysaphius, an imperial eunuch, and Nomus, master of the offices.

The chief military events of the reign were two successful Persian wars (421–2 and 441), the defeat of the usurper John in the West, and the installation of Valen-

tinian III at Rome (425), an unsuccessful naval expedition against the Vandals (441), and a series of wars and negotiations with Rua and Attila, kings of the Huns. The Roman armies proved helpless against the Huns, and peace was obtained only by paying ever increasing subsidies (350 lb. gold per annum from 422, 700 lb. from 434, 2,100 lb. from 443).

The chief ecclesiastical events were the condemnation of Nestorius, bishop of Constantinople, by the Council of Ephesus in 431, and of Flavian, bishop of Constantinople, by the second Council of Ephesus in 449; Cyril and Dioscurus, bishops of Alexandria, were moving spirits in these two councils.

In 429 a commission was appointed under Antiochus, praetorian prefect and former quaestor, to codify all laws issued since 312. This attempt to reform the law failed, but in 435 a second commission under the same Antiochus carried out the task and in 438 the Theodosian Code was promulgated in both parts of the Empire (see CODEX, legal).

J. R. Bury, *A History of the Later Roman Empire* (1923); F. Stein, *Histoire du bas-empire* i (1959).

A. H. M. J.

THEODOSIUS (4) of Bithynia (probably between 150 and 70 B.C.), mathematician and astronomer, mentioned by Strabo, is probably to be identified with Theodosius the inventor of a sun-dial for use in any locality, mentioned by Vitruvius, and with an author Theodosius mentioned by the *Suda*.

WORKS: extant (1) *Σφαῖρικά*, the oldest extant Greek work on sections of the sphere, a compilation of earlier discoveries, (2) *Περὶ οἰκήσεων* (astronomical tables for different parts of the earth), (3) *Περὶ ἡμερῶν καὶ νυκτῶν*; lost (1) *Ὑπόμνημα εἰς τὸ Ἀρχιμήδους ἐφόδιον*; (2) *Ἀστρολογικά*; (3) *Διηγησάται οἰκίων*.

Sphaerica, ed. J. L. Heiberg, 1927.

W. D. R.

THEOGNETUS, one of the later poets of the New Comedy. Fr. 1 ridicules excessive preoccupation with philosophy, fr. 2 mentions Pantaleon, whom Chrysippus describes as *ὁ πλάσιος*.

FCG iv. 549 f.; CAF iii. 364 f.

THEOGNIS (1) (fl. 544–541 B.C.; *Suda*, s.v. *Θέογνης*), elegiac poet, of Megara. Some 1,389 lines survive in good MSS. under his name, and there is much dispute about their authenticity. The chief difficulties are: (1) among these lines are passages written by other poets, or only slightly altered from them, notably Mimnermus (795–6, 1020–2), Tyrtaeus (935–8, 1003–6), Solon (227–32, 315–18, 585–90, 1253–4), Euenus (465–96 and possibly 667–82, 1345–50). These are not cases of the practice of 'paradiorthosis', by which a line was taken and slightly altered in a different sense, as in most cases they are either unaltered or altered in some quite trivial way. (2) In the text of Theognis there are repetitions, which look like variations of the same theme, and it is hard to believe that both sets were written by the same man. (3) There are chronological difficulties. 894 refers to the Cypselids, who disappear from history c. 580 B.C., while 773–82 is a prayer to Apollo to keep the Medes away from Megara and cannot be much earlier than 490 B.C. (4) The existing text does not agree with either of the two books mentioned by the *Suda*, the *Maxims* in 2,800 verses and the *Gnomology to Cyrrus*. It seems therefore probable that the original work of Theognis has been supplemented, especially as we find many variations on a given theme, which suggest that the book is a collection of *σκόλια* intended for the use of singers who had to cap one song with another on a similar subject. A clue for detecting the authentic Theognis ought to lie in 19–23, where the poet speaks of a 'seal' on his work which cannot be stolen

or replaced by a substitute, but there is no agreement on what this seal is. It has been thought to be the excellence of the work, the name 'Theognis' in 22, the name Cynos, which appears in many poems. If the last is right we may perhaps have a means for restoring at least the *Gnomology to Cynos* which the *Suda* mentions. Otherwise the problem seems insoluble. The poems to Cynos show marked individuality. Their poet has a strong aristocratic bias, is very frank about his emotions, uses bold and vivid metaphors, went into exile (1197–2000), believed in traditional tenets of Greek morality, and was not without some worldly wisdom. The whole collection agrees with this section in its political temper, and we may conjecture that it was popular, if not composed, in aristocratic circles in Athens in the fifth century. The separate poems are sympotic elegies, and the book may have been a song-book used by those who did not wish to improvise when called on for a song over the wine. Book II, which consists of love-poems, seems to be Athenian, and the whole collection begins with four introductory pieces whose themes recall those of Attic *σκόλια*. But otherwise it is hard to mark breaks in the collection, though some regard the promise of immortality to Cynos, 237–54, as the end of one section and 753–6 as the end of another. The section 1–254 is much more quoted by fourth-century writers than the rest of the book, and may perhaps have had a separate circulation. The whole collection is interesting as being the poetry of a small class with clear ideas about morals and politics and a strong interest in personal relations. Reference in it to Simonides (469, 667, 1349) and to Onomacritus (503) may be to the familiar bearers of these names.

TEXT: D. Young, *Theognis* (1961).

COMMENTARY: F. Hudson Williams, *The Elegies of Theognis* (1910).
CRITICISM: E. Harrison, *Studies in Theognis* (1902); T. W. Allen, *Theognis* (1913); F. Jacoby, *Theognis* (*Sitz d. Preussischen Akademie d. Wissenschaften* 1931); J. Kroll, *Theognis-Interpretationen* (1936); C. M. Bowra, *Early Greek Elegists* (1938), ch. 5. C. M. B.

THEOGNIS (2), a tragic poet spoken of contemptuously by Aristophanes (*Ach.* 11, 140; *Thesm.* 170) as one who *ψυχρὸς ὡν ψυχρὸς ποιεῖ*. He is identified by some with the Theognis who was one of the Thirty Tyrants (q.v. 1). If so, he resembled Critias in combining 'tyranny' with poetry.

1 GF 760.

A. W. P.-C.

THEOI PATROOI, PATRIOI: DI PATRII (*θεοὶ πατρώοι, πατριοί*). Of the two adjectives, the former means *connected with a father, or fathers*, as *οὐσία πατρώα*, an estate inherited from one's father; the latter, in dialects (such as Attic) which use both, is vaguer, meaning *ancestral, time-honoured, traditional*. Applied to gods, the former has therefore the more intimate meaning; a *θεὸς πατρώος* is at least the god whom the speaker's father, or his ancestors generally, worshipped, while a *πάτριος θεός* may be merely one whom it is customary to worship in his community, or in the Greek world generally.

The narrowest and most exact meaning of *πατρώος θεός* is a god from whom descent is claimed. Aesch. fr. 162 Nauck may serve as an example:

οἱ θεῶν ἀγχισποροὶ
οἱ Ζηνὸς ἐγγύς, ὧν κατ' Ἰδαίου πάγον
Διὸς πατρώου βωμὸς ἵστ' ἐν αἰθέρι,
κοῦτω σφὲν ἐξέτηλον αἶμα δαιμόνων.

'Those near akin to the gods, close to Zeus, whose altar of Zeus Patroos lies on Ida's heaven-kissing slope, in whose veins the blood of the deities is yet fresh.' The exact context is unknown, but clearly the poet is speaking of heroes who are but a generation or two from their ancestor Zeus. It is in this sense that Athenians worshipped Apollo Patroos. Every candidate for the archon-

ship was tested, and one of the questions put was whether he had a cult of Zeus Herkeios and Apollo Patroos. The former question was meant to ensure that he belonged to a respectable family, having its own proper domestic cult; the latter, to make it clear that he was, what all Athenians claimed to be, a good Ionian, since Ion (q.v. 1) is son of Apollo and ancestor of the Ionian stock. See Arist. *Ath. Pol.* 55. 3. Another not uncommon use of *πατρώος* is in such a context as Ar. *Nub.* 1308 (paratragic), *καταιδέσθηναι π. Δία*. Here Zeus is named by a father appealing to his son's sense of duty. He is evidently the god who cares for fathers and their rights. When Orestes (Eur. *El.* 671) says *ὦ Ζεῦ πατρώε καὶ τροπαί' ἐχθρῶν ἐμῶν*, he may very well be combining the two senses, for Zeus is his ancestor (see TANIAIUS) and he wants his help to revenge the murder of Agamemnon.

But that *πατρώος* cannot always have this sense is clear from the fact that it is used as a title of Artemis at Sicyon (Paus. 2. 9. 6), where her rude and archaic image attested the antiquity of her cult, but clearly, being virgin, she was not an ancestress. Again, the epithet is applied to Hestia, *IG* xiv. 980 (from Rome), and certainly Hestia is a virgin in all our sources; the dedicator perhaps meant to differentiate her from the Roman Vesta (q.v.). In much the same manner, other inscriptions in the same collection (nos. 971, 962, 972) apply the title to the Palmyrene gods and the (Thracian?) Ares. This is in contrast, on the one hand with *πατρώος* applied to the obscure Eumelos as ancestor-god of the Eumelidae (ibid. 715), on the other hand with the use, not of *πατρώος* but of *πάτριος* of Aeneas in an inscription from Ilum, *CIG* 3606, where the dedicators might certainly claim him as an ancestor. A long list of examples will be found in Roscher's *Lexikon* iii. 1688–9, of gods of all sorts, from (probably) actual ancestors thought of as deified to ordinary gods traditionally worshipped by the persons in question, who seem to be called quite indifferently *πατρώοι* or *πατριοί*, with one or two instances of *θεοὶ πατρώοι*, whether deified maternal ancestors or gods worshipped in the household of the dedicator's mother.

In Rome, *di patrii* manifestly cannot have the narrower sense of *θεοὶ πατρώοι*, at least in official cult, since no Roman god was officially an ancestor; the theories, e.g., about the identity of Romulus and Quirinus (qq.v.) had no effect on the State cult of the latter. A good example of its use is in Verg. *G.* 1. 498, '*di patrii Indigetes et Romule Vestaque mater*'. The expression is ambiguous, but either he calls the Indigetes, Quirinus and Vesta, all *patrii*, or he uses that epithet of the first of these only; the former is the more likely. Since no one, even mythologically, seems to have claimed the Indigetes (q.v.) for ancestors, and certainly no one laid such a claim to Vesta, the sense 'worshipped by our fathers, ancestral' is perfectly clear. Nor does it mean only those gods to whom the epithet *pater* (or *mater*) is applied, for while such titles are known for Quirinus and Vesta, no such collocation as *Indigetes patres* is to be found. There is, however, a somewhat specialized sense in which the word is used; it applies above all to the Penates. In this sense *paternus* is once or twice employed; the evicted tenant in Hor. *Carm.* 2. 18. 26 goes his way '*paternos* (*πατρώους*) in *sinu scirens deos*'. These would be his *di penates*, represented by images or other symbols, which he piously takes away as Anchises did his in leaving Troy (Verg. *Aen.* 2. 717), though here they are called *patrii*, appropriately, for they are not merely the gods of the individual house but the future objects of national Roman worship, the *Penates publici*, which are not venerated because they formed part of anyone's *sacra domestica*, but because they had been adored by Rome and the States supposedly her ancestors from time immemorial, cf. PENATES. Examples of this use are: Cic. *Har.* 37, '*patrii penatesque di*';

Dom. 144; cf. Dion. Hal. *Ant. Rom.* 1. 67. 3, some say *di penates* means Πατρῶν (θεοί).

Roscher's *Lexikon*, arts. 'Patrii di' (J. Ilberg), 'Patrioi theoi', 'Patroa' (Höfer), 'Patrooi theoi' (Ilberg). H. J. R.

THEOLOGUMENA ARITHMETICAE. This work has been thought to be by Iamblichus (q.v. 2), because he apparently wrote about the properties of the Monad. But it does not bear the name of Iamblichus in the MSS., and is merely a compilation from Anatolius and Nicomachus (q.v. 3).

Ed. V. de Falco (1922).

W. D. R.

THEON (1) of Alexandria (1st c. B.C.), son of Artemidorus of Tarsus, and successor of Apion (q.v.) at Alexandria. He wrote, *inter alia*, alphabetical lexica of Tragedy and Comedy, probably based (mainly) on the unalphabetical collections of Didymus. His main claim to fame, however, lies in his exhaustive commentaries on the chief Alexandrian poets, which dominated all subsequent scholarship in this field and which form the basis of the surviving scholia. He also wrote one of the first treatises on Greek syntax.

C. Giess, *De Theone eiusque reliquiis* (1867); C. Wendel, *PW* 10 A, 2054 ff. P. B. R. F.; R. B.

THEON (2) of Smyrna (fl. c. A.D. 115-40), Platonist, author of an extant work *Tὰ κατὰ τὸ μαθηματικὸν χρῆσιμα εἰς τὴν Πλάτωνος ἀνάγνωσιν*, and of a lost commentary on the *Republic* and a lost work on the order of Plato's writings. The extant book is an elementary work on arithmetic (especially on the types of numbers), the theory of musical harmony, and astronomy.

Ed. E. Hiller (1878).

W. D. R.

THEON (3, *PW* 5), APLIUS, of Alexandria (2nd c. A.D.), rhetor, wrote *ὑπομνήματα* on Xenophon, Isocrates, and Demosthenes, as well as a *Τέχνη* and other rhetorical works, of which the sole survivor is the *Progymnasmata* (q.v.), a teacher's manual which proved very popular.

TLXT. Spengel, *Rhet.* ii. 59 ff.

D. A. R.

THEON (4, *PW* 15) of Alexandria, mathematician and astronomer (fl. A.D. 364). Extant works are (1) a commentary on Ptolemy's *Almagest* (the sections on book 11 and parts of other books are lost); (2) large commentary on the *Handy Tables* of Ptolemy; (3) small introduction to the *Handy Tables*. He is also important for his 'editions' (i.e. reworkings) of (a) Euclid (*Elements*, *Data*, and *Optics*); (b) Ptolemy's *Handy Tables*. The latter are extant only in Theon's version. Theon was a competent but completely unoriginal mathematician. His importance lies in the historical data he preserves. It was in his version and under his name that Ptolemy's astronomical tables were known to Islamic science, whence they passed to medieval Europe.

EDITIONS. *Comm. on Almagest*: books 1-4 ed. A. Rome, *Studi e Testi* 72 and 106 (1936, 1943). For the remainder it is still necessary to consult the 1538 Basel edition of the *Almagest* ('apud Ioannem Vualderum'). The *Handy Tables* in the Theonic version were published by Halm in 3 vols. (Paris, 1822, 1823, 1825, with French trans.), the 'small introduction', 27 ff. of the first volume. The 'large commentary' has never been published.

COMMENT. On Theon's 'edition' of Euclid. Heiberg, *Litterargesch. Studien über Euklid* 1882). General: Heath, *Hist. of Greek Maths.* i. 58 ff., ii. 526 ff. See also the introductions of Rome, op. cit., and to his edition of Pappus' commentary, *Studi e Testi* 54 (1931).

G. J. T.

THEOPHANES of Mytilene, the historian of Pompey, after a pro-Roman part in home politics, accompanied him in the Third Mithridatic War, and, receiving Roman citizenship, fought in the Civil War. His work appears to have treated only Pompey's campaigns, which he com-

pared to those of Alexander, and was written probably in 63/2 B.C. to further Pompey's cause in Rome.

FGH ii B, 919; BD, 614.

A. H. McD.

THEOPHILUS (1), Athenian comic poet; he won a victory in 329 B.C. Eight titles and twelve fragments survive (frs. 6 and 12 are gnomic).

FCG iii. 626 ff.; *CAF* ii. 473 ff.; *FAC* ii. 566 ff.

K. J. D.

THEOPHILUS (2) of Alexandria, patriarch A.D. 385-412, was no thinker but a zealous pastor who vigorously suppressed Egyptian paganism and advanced the power of Alexandria against Constantinople by opposing John Chrysostom. He appears in a kind light in Synesius' letters.

Migne, *PG* lxx. 33 ff.; M. Richard, *DTC* xv/1 (1946), 523 ff.

H. C.

THEOPHRASTUS (c. 370-288/5 B.C.) of Eresos in Lesbos, pupil, collaborator, and successor of Aristotle. In spite of a tradition that he had been a pupil of Plato, it is more probable that he first joined Aristotle while the latter was at Assos (see W. W. Jaeger, *Aristotle* (L.T. 1948), 115). From Asia Minor he accompanied Aristotle to Macedonia and thence to Athens (335). From the beginning of this association came the researches, especially in botany (and perhaps also in political science; Philod. *Rhet.* ii, p. 57 Sudhaus), which were later to form the basis of his lectures and published work. Upon Aristotle's retirement to Chalcis (322), he succeeded him as scholar of the Peripatos.

He is said to have lectured to 2,000 students. His lectures were continually revised (Diog. Laert. 5. 37) and chronological indications in the extant works show that they received their present form in the period of his scholarship. His most famous pupil was Demetrius of Phaleron, through whose influence he, though a metic, was allowed to own property, the disposition of which he treats in his Will. After the end of Demetrius' regime, he left Athens for a period when a law moved by Sophocles was passed forbidding the operation of philosophical schools without the permission of the Athenian demos. The law was soon repealed. He was also on friendly terms with Cassander and Ptolemy I. He was succeeded as a scholar by Straton.

WORKS

Four catalogues of his writings (with some duplication and pseudigrapha) are preserved in D. L. 5. 42-50. It is certain that at least the first two and longest of these originated in the Alexandrian library but the traditional (since Usener's *Analecta Theophrastea* (1859) 23) ascription of them to Hermippus (q.v. 2) is based on weak evidence (see *Hermes*, forthcoming). Some of the writings were later edited by Andronicus of Rhodes. The text of all the extant works is notoriously defective, and they are not all yet well represented in modern editions.

Only a minuscule amount of Theophrastus' total output has been preserved. *Plant-researches* (Περὶ φυτῶν ἱστορίας: 9 books) followed by *Plant-aetiology* (Περὶ φυτῶν αἰτιῶν: 6 books), the first a description and classification, the second a physiology of plant-life. They are a counterpart of and methodologically influenced by Aristotle's biological works. *Characters* (Χαρακτῆρες), a collection of thirty descriptive sketches of types exhibiting deviations from proper norms of behaviour; the preface and some of the contents are Byzantine interpolations. In modern times, they are Theophrastus' most famous and most imitated work. Although they were formerly interpreted as moral essays, influenced by Aristotle's classification of virtuous qualities in *Ethics*, recent scholarship stresses their utility for rhetorical handbooks

or comic poetics. *Metaphysics* (τῶν μετὰ τὰ φυσικά), a brief discussion of some problems of first philosophy. Theophrastus shows himself capable of criticizing weaker points in Aristotle's *Metaphysics*, but otherwise marks no advance on Aristotle. A number of short essays scientific subjects, the first three perhaps extracts from the *Physics*: *On fire*, *On winds*, *On stones*, *On weather-signs*, *On odours*, *On weariness*, *On swooning*, *On sweat*, *On paralysis*. The treatise *On sense-perception* is part of the *Phys. Dox.*

His two most valuable and influential works are preserved only in fragments: the *Doctrines of natural philosophers* (Φυσικῶν δόξαι) and the *Laws* (Νόμοι), each in eighteen books. The first was the standard history of opinions about the major problems of science and philosophy, in which he systematized the material used by Aristotle for his own criticism of his predecessors. The *Laws* was a comparative collection of laws and customs of Greek States, and was based on the material used by Aristotle in his *Constitutions* and *Politics* 4-6.

Theophrastus' place in the history of philosophy can be summed up in Cicero's (*Fin.* i. 6) remark that he tractat locos ab Aristotele ante tractatos. A scientific researcher and scholar rather than a speculative philosopher, he pursued his researches on topical and methodological lines already laid down by Aristotle. His occasional disagreement on points of doctrine (e.g. a more 'naturalist' ethics; a reaction against excessive teleology in natural processes) or fact are due to his emphasis on science and empirical observation. After Aristotle, he was the most prolific and most famous member of the Peripatetic school, and his works continued to be influential until the first centuries of the Christian era (Cicero, Seneca, Plutarch, Porphyry, commentators to Aristotle).

LIFE AND WORKS. Diogenes Laertius 5. 36-57; Zeller, *Phil d. Gr.* ii. 2. 806; Ueberweg-Praechter, *Grundriss* 401; O. Regenbogen, s.v. 'Theophrastus' *PW* Suppl. vii. 1354; O. Gigon, *Lex. d. Alten Welt* 3957.

TEXTS (selection). J. G. Schneider, 5 vols. (1818-21); F. Wimmer, with fragments (very incomplete) and Latin transl. (1866); *de igne*, A. Gercke (1896).

WITH COMMENTARY OR TRANSLATION (a selection, generally restricted to recent works). *Hist. Plant.* (with *de odor, de sign. temp.*): A. F. Hort, 2 vols. (Loeb, 1916); *Caus. Plant.*: R. F. Dengler, book I (Diss. Penn., 1927); B. Einarsson-G. Link (Loeb, in preparation); *Char.*: R. G. Usher (1906); P. Steinmetz, 2 vols. (1906-2); *Met.*: W. D. Ross-F. H. Fobes (1929); *de sens.*: G. M. Stratton (1927); J. B. McDiarmid (in pr.); *de lap.*: D. Eicholz (1965). FRAGMENTS. *Major Fragments*, D. Eicholz (Loeb, in pr.); *Minor Fragments*, W. Pötscher (1964); Φυσ. δόξ., II. Diels, *Doxographi Graeci* (1879); *Nomoi*: H. Hager, *JournPhil* 6 (1927) 1.

STUDIES. The following list includes only studies appearing since the full survey article of Regenbogen in *PW*. Botany: G. Senn, *Die Pflanzenkunde des T. von Eresos* (1956); *Ethics*: C. O. Brink, *Phronesis* 1 (1956) 123; *Physics*: P. Steinmetz, *Die Physik des T. von Eresos* (1964); H. B. Gottschalk finds the teaching of Theophrastus in *Meteor.* 4 (CQ 1961, 67) and in *de coloribus* (*Hermes* 1964, 50), both ascribed to Aristotle. *Met.*: G. Reale, *Trofrasto e la sua aporia tua metafisica* (1964); *Logic*: M. Bochenski, *La Logique de Theophraste* (1947). *Epistem.*: E. Barbouin, *La Theorie aristotelicienne de l'intellect d'après Theophraste* (1957); Φυσ. δόξ.: J. B. McDiarmid, *Harv. Stud.* 1953, 85; *Laws*: H. Bloch, *Harv. Stud.* 1940, 357; A. E. Raubitschek, *Classica et Mediaevalia* 1958, 78 (on ostracism). Important but neglected fragments of a political work were discovered in a Vatican palimpsest and published by W. Aly, *Fragmentum Vaticanum de eligendis magistratibus* (*Studi e testi*, 104 [1943]). another discussion by F. Sbordone, *PP* 1948, 260. J. J. K.

THEOPOMPUS (1), Eurypontid king of Sparta from c. 720-? c. 670 B.C. and leader in the First Messenian War ('Irytaeus fr. 4; see MESSENIAN). He was credited by fourth-century writers with two constitutional reforms—a stricter control of the assembly by the kings and Gerousia (see APPELLAI 1), and the institution of the ephorate. It is possible that the ephorate was of earlier origin (see EPHORS), but that it obtained wider powers under Theopompus. W. G. F.

THEOPOMPUS (2), Athenian comic poet, was active

from c. 410 B.C. (probably not earlier) to c. 370. Twenty-four plays were ascribed to him; we have twenty titles (including *Odysseus*, *Penelope*, and *Sirens*) and 100 fragments (many of them only glosses).

FCG ii. 792 ff.; CAF i. 733 ff.; FAG i. 848 ff.

K. J. D.

THEOPOMPUS (3) of Chios (b. c. 378 B.C.), historian, banished with his father Damasistratus c. 334 for Spartan sympathies and restored by Alexander as a supporter against the pro-Persian oligarchy. On the latter's death he fled to Egypt.

Theopompus, a contemporary of Ephorus, was a pupil of Isocrates and adopted his view of history as the handmaid of politics. Little remains of numerous writings except fragments from the two works on which his fame rests, the *Hellenica* (Ἑλληνικαὶ ἱστορίαι) and *Philippica* (Φιλιππικά). The former, a continuation of Thucydides from 411, reached the battle of Cnidus, 394, in twelve books, and took the supremacy of Sparta as its main theme. Our knowledge of the *Hellenica* is meagre unless we accept R. Laqueur's arguments (*PW*, s.v. 'Theopompos') for the identification of the author of the Oxyrhynchus *Hellenica* (see OXYRHYNCHUS, THE HISTORIAN FROM) with Theopompus. These arguments rest on style, methods, and the evidence of personal views and research embodied in the papyrus agreeing with characteristics of Theopompus.

Theopompus was able to view events in Greece from a detached standpoint, as is shown by his choice of Philip of Macedon as the connecting theme of the fifty-eight books of *Philippica*. Beginning with Philip's accession, this prolific work was a world history depicted in a series of extensive digressions. Certain of these acquired separate titles (Τὰ θαυμάσια, Περὶ δημογραφῶν, etc.). Theopompus was remarkable for wide and critical research and for the harshness of his verdicts. See also HISTORIOGRAPHY, GREEK, § 4.

THEORIKA, State allowances made to the poorer citizens of Athens to enable them to visit the theatres, introduced, it is said, by Pericles. Two obols were paid per head at each performance to all persons registered for the purpose on the roll of citizens. Later, allowances were paid on other occasions also. In the fourth century B.C. a regulation was made that all surpluses of the State should be used for *theorika* (except during wartime, as an enactment of Demosthenes provided). Another law of the same period punished with death anyone suggesting the use of these funds for army purposes during times of peace. The administrators of the *theorika*, οἱ ἐν τῷ θεωρικόν, were elective magistrates who had considerable, and during the time of Eubulus (q.v. 1) even a controlling, power over financial administration.

The term occurs in Roman Egypt, too, where it seems to mean funds for religious local festivals, which had to be supplied by taxation.

A. M. Andreades, *A History of Greek Public Finance* (1933), index; J. J. Buchanan, *Theorika* (1962); G. Busolt-II Swoboda, *Griechische Staatskunde* i, ii (1920-6), index; Michell, *Econom. Anc. Gr.* 360 ff.; W. Schwab, *PW*, s.v.; S. L. Wallace, *Taxation in Egypt from Augustus to Diocletian* (1938), 454. F. M. H.

THEOROI (θεωροί, 'observers', a word originally applied to sight-seeing travellers and to the attendants at festivals of distant cities. It became an official title given to a city's representatives at another city's festival. The great panhellenic festivals were attended by theoric delegations (θεωρία) from every Greek State. Cities to which *theoroi* regularly came assigned the duty of

receiving them to official *theorodokoi* (θεωροδόκοι). At the festivals the *theoroi* offered sacrifices in the name of their cities, and so the title was likewise given to the envoys that a city sent to a distant shrine to offer sacrifice in its name and to the envoys that it sent to consult a distant oracle. The envoys that were sent round to announce the coming celebration of a festival and, after the creation of new panhellenic agonistic festivals in the third century B.C. and later, to announce the new games to all the Greek States were also called *theoroi*. It thus became the accepted title of all sacred envoys. The religious functions of *theoroi* eventually obscured the original purpose of their office, and as early as Thucydides several cities gave the title to annually elected religious magistrates. At Thasos the *theoroi* were eponymous magistrates.

F. Poland, *De legationibus Graecorum publicis* (Leipzig, 1885); C. P. Bill, *TAPA* 1901, 196 ff.; P. Bloesch, *Θεωρός* (1908); A. Boethius, *Die Pythais* (Uppsala, 1918). J. E. F.

THEOS (θεός) denotes a god, especially one of the great gods, from his anthropomorphic aspect; from the aspect of power he is also called δαίμων (see DAIMON). When there is no room for doubt, θεός often takes the place of the proper noun: thus ἡ θεός is at Athens Athena. There is no reason for assuming anonymous gods. At Eleusis τῶ θεῷ are Demeter and Kore, ὁ θεός and ἡ θεά Pluto and Persephone. Noteworthy is the predicative use of θεός in phrases like: 'Recognition of your own kin is *theos*.' The indefinite expressions θεός τις, θεοί alternate in Homer with δαίμων to denote some unknown divine power; in later authors τὸ θεῖον is an equivalent. This abstraction becomes finally an expression for the irrational in human life, that which cannot be explained by natural causes. No plausible etymology exists.

H. J. Rose *et al.*, *La Notion du divin* (Entretiens sur l'ant. class. I 1952). M. P. N.; J. H. C.

THEOXENIA (Θεοξένια), or **THEODAISIA** (Θεοδαΐσια), a Greek rite 'held on certain fixed days on the supposition that the gods in person were visiting the cities' (schol. Pind. *Ol.* 3, 105, 14 ff. Drachmann). The statement of Hesych., s.v., that it was 'a festival in common for all the gods', may go back to a gloss relating to a particular (unknown) example. The characteristic feature was that a god or gods were considered to be present as guests at a banquet given by their worshippers. This might apparently be a public or private ceremony; if the former, it was often an important one, hence the fairly common occurrence of a month called Theoxenios or Theodaisios. The best known was at Delphi, in Theoxenios (Mar.-Apr.); for this the sixth Paean of Pindar (q.v.) was written. Here Apollo (q.v.) appears to have acted as host to the other gods: θεῶν ξενία (Pind., *op. cit.* 60); for an indication that Leto was present cf. *Ath.* 372 a. The meal was shared by human beings, witness the setting aside, as late as Plutarch's time (*De sera* 557 f), of a portion for Pindar's descendants. Another was that in honour of the Dioscuri and Helen (qq.v.) at Acragas, Pind. *Ol.* 3; this seems to have been rather a domestic feast of the Eumenidae on a magnificent scale than a public festival proper. Several other instances are recorded; see F. Pfister in *PW*, s.v. 'Theodaisia', 'Theoxenia'.

Nilsen, *GGR* 12, 135, 409.

H. J. R.

THERA, one of the Sporades, a treeless semicircular island, forming part of the cone of an ancient volcano, and famous for its wine. It had been colonized from Minoan Crete before the disastrous eruption in c. 1500 B.C. which reduced it to its present state. Later came colonists from Laconia, who built the temple to

the Carnean Apollo. Its importance in the Archaic period is shown by its rich cemeteries and early sculpture, but in the 630s it had to dispatch part of its population to colonize Cyrene. The islanders took no part in the Persian wars, but, though Dorians, appear as allies of Athens in the Peloponnesian war. The island was a Ptolemaic naval base during the third and part of the second century B.C.

German archaeological excavations (1895-1902) have revealed a fine capital city, with a theatre, of Hellenistic and Roman times. A Minoan colony of pre-eruption days is being excavated.

P.-K., *GI* iv, C vii (c); *JG* xii, 3; *Thera*, ed. H. von Gaertringen (1899-1904). Pfuhl, *Ath. Mitt.* 1903, 1 ff. (tombs, etc.). Dorpfeld, *Ath. Mitt.* 1904, 57 ff. (theatre); Kontoleon, *Arch. Eph.* 1939-41, 1 f. *AM* 1958, 117 l. W. A. L., J. B.

THERAMENES (d. 404/3 B.C.), Athenian statesman. He was one of the principals in establishing the Four Hundred (q.v.). Four months later he was active in overthrowing them and establishing the Five Thousand. When full democracy was restored in 410 he was in the Hellespont, assisting in the recovery of Athens' naval supremacy (see PELOPONNESIAN WAR). At Arginusae (406) he commanded only a single ship. The abandonment of survivors from ships wrecked in the battle was probably due only to bad weather, but later at Athens the blame was disputed between Theramenes and the generals, and after a largely illegal trial six generals were put to death. Xenophon blames him for this appalling miscarriage of justice; but Aristophanes in the *Frogs* next spring treated him lightly, merely as an adroit politician. In 404 he was sent to negotiate with Lysander (q.v.), and Xenophon (*Hell.* 2. 2. 16) said that he deliberately wasted three months while the hunger at Athens grew; but he was then sent to Sparta and brought back the final terms of peace. He was appointed one of the 'Thirty Tyrants' (q.v. 1), but soon quarrelled with the extremists, especially Critias (q.v.), who had him condemned and executed.

His frequent changes of side were censured both by democrats like Lysias and by oligarchs like Critias, but for Aristotle and for others in the fourth century he was a moderate seeking a genuine political mean. If he was sincere, he must nevertheless bear much of the blame for the internal troubles which lamed Athens in the last phase of the war. A. A.

THERAPNE, the site of a sanctuary (the Menelaum) Polyb. 5. 18. 3; the temple of Menelaus, Paus. 3. 19. 9, on a steep cliff on the left bank of the Eurotas, to the south-east of Sparta. Some scanty remains of an extensive Late Helladic settlement, destroyed in LH IIIB-C, were excavated in 1910. Votive offerings attest a cult from the late Geometric period to the fourth century B.C. The massive remains of a fifth-century building (excavated in 1909) represent the altar (and temple?) of Helen, who was worshipped here together with the Dioscuri and Menelaus. The cult of the Twins was later transferred to Sparta itself.

BSA 1908-9, 108 ff., 1900-10, 4 ff.; J. M. Cook, *Νέκρως Ἀρτεμιδος Κεραινοπιλλαν* (1951), 112 ff.; H. Waterhouse and R. Hope-Simpson, *BSA* 1960, 72. A. M. W.; W. G. F.

THERMOPYLAE ('Hot Gates', from its hot sulphur springs) was probably the original meeting-place of the famous Amphicliony (q.v.), whence the delegates were called Pyl-agonai. As a defence position, where the road defiled between fierce cliffs and the sea, then hard by, its weakness was that there is easy ground above, 'along the spine of the mountain' (Hdt. 7. 216), could an invader but find his way to it; and thus the pass was outflanked repeatedly, by sixth-century Thessalians, by the Persians,

by the Gauls in 279 (Paus. 10. 22), and by Cato in 191 (Plut. *Cato Maior* 13).

W. K. Pritchett, *AJArch.* 1958; Burn, *Persia and the Greeks* (1962), 407 ff. (G. B. Grundy, *The Great Persian War* (1901), 298 ff., is misleading.) A. R. B.

THERMUM, religious centre of Aetolia. Situated north-east of L. Trichonis on a natural rock-castle, it commanded the central plains of Aetolia and formed the meeting-place for the Aetolian Confederacy. Extensive excavation has revealed its occupation from the Bronze Age and its importance as a cult centre for the worship of Apollo Thermios, Apollo Lyseios, and Artemis; oval houses, early type of *megaron*, three temples of c. 600 B.C., and terracotta metopes and antefix heads revealing Corinthian influence are the most important discoveries. Its historical importance coincides with the Aetolian Confederacy, until its sack in 218 B.C. by Philip V of Macedon.

Arch. Eph. 1900, 167 f.; *Arch. Δελτ.* 1915 and 1916; W. I. Woodhouse, *Aetolia* (1897), 252 f.; P-K, *GL* 2. 2. 342. N. G. L. H.

THERON, tyrant of Acragas (488–472 B.C.), married his daughter Demarete to Gelon (q.v.), whose firm ally he became. In 483 he seized Himera from its tyrant Terillus, whose appeal to Carthage resulted in the expedition of 480, when Theron and Gelon won a crushing victory. On Gelon's death Theron supported Polyzelus, younger brother of Hieron I (q.v.), but conflict with Syracuse was avoided and Hieron warned Theron of a plot against his regime. Theron's building programme and patronage of the arts made Acragas one of the most beautiful and renowned of Greek cities.

Dunbabin, *Western Greeks*, ch. 14; A. Schenk, Graf von Stauffenberg, *Tinnakria* (1903), 176 ff.; H. Berve, *Die Tyrannen bei den Griechen* (1967), 13–14, n. 595 ff. A. G. W.

THERSANDER (Θέρσανδρος), name of five mythological persons, for whom see Hofer in Roscher, s.v.; the one of most genealogical importance is son of Polyneices and Argeia (see ADRASTUS), from whom Theron of Acragas claimed descent (Pind. *Ol.* 2. 43 ff.); he was one of the Epigoni (q.v.). H. J. R.

THERSITES, in mythology, an ugly, foul-tongued fellow, who rails at Agamemnon (*Iliad* 2. 212 ff.), until beaten into silence by Odysseus. Evidently, from his description, he is of low birth; but in post-Homeric tradition (schol. *Il.* *ibid.*) he is of good family, son of Agrios brother of Oeneus (q.v.), therefore akin to Diomedes (q.v. 2). Hence, when Achilles slays him for railing at him when he mourns for Penthesilea (*Aethiopis*), a quarrel arises and Achilles goes to Lesbos to be purified.

H. J. R.

THESEUS (Θησεύς), son of Aegeus (q.v.) or Poseidon, i.e. of a sea-god, and national hero of Athens. This explains his prominence in ancient, especially Attic, literature; the chief surviving continuous accounts of him, however, are Plutarch, *Theseus*, and Apollod. 3. 216 ff., continued by *Ephit.* 1. His legend had manifestly been influenced by that of Heracles (q.v.); encounters with brigands and monsters; campaign against the Amazons, and it is not surprising that he is made Heracles' friend and contemporary. There is no proof that any real person lies behind the legend, but that is not impossible.

Childhood and youth. When Aegeus departed from Troezen, he left instructions with Aethra that when her son was able, he should lift a certain rock, under which Aegeus had hidden a sword and sandals. Meanwhile, the boy was educated by Pittheus, his tutor being a

certain Connidas, a hero honoured in Attica the day before the Theseia (Plut. *op. cit.* 4). On reaching young manhood (sixteen years old, Paus. 1. 27. 8) he lifted the rock easily (Plut. 6) and determined not to sail to Athens to find his father but go the more dangerous way by land. He thus encountered Periphetes, or Corynetes, Sinis, Sciron, Procrustes, Phaea the sow of Crommyon (qq.v.), and other dangerous men and beasts; the exact numbers and names vary in different accounts. Plutarch (9) says that Theseus was eager to emulate Heracles, and in fact this is one of the most obvious places in which the latter's legend has influenced his. The difference (emphasized by Nilsson, *Cults, myths, oracles and politics in Ancient Greece* (1951), 51 ff.) is that Heracles conquers folk-tale monsters, Theseus mostly human enemies of travellers.

Attic and Cretan adventures. Arrived in Attica, he was in danger from Medea (q.v.), who persuaded Aegeus to send him against the Marathonian bull, which in some accounts was Pasiphae's bull brought from Crete by Heracles (q.v.). On the way there, an old woman named Hecale hospitably entertained him; having killed the bull, he found her dead on his return, and ordered that her memory should be honoured (Callim., *frs. of Hecale*, 230–177 Pf.; Plut. 14). Coming back to Athens, he narrowly escaped an attempt of Medea to poison him (Apollod. *Ephit.* 1, 5), thanks to Aegeus' recognizing him in time. He now heard of the tribute yearly sent to the Minotaur, and volunteered, or was specially chosen by Minos (q.v.), to be one of the youths included in it (Plut. 17). On the voyage to Crete he proved his divine ancestry by leaping overboard and coming back safely from the palace of Amphitrite with a gold ornament which Minos had thrown in (Bacchyl. 16). In Crete he killed the Minotaur by the help of Ariadne (q.v.), who gave him a clue of thread to find his way out of the Labyrinth and afterwards fled with him. He left her at Dia (Naxos); in the original story this was probably due to some magical forgetfulness (cf. Theoc. 2. 45–6), but, this detail having fallen out, various reasons were given for his ingratitude (Plut. 20). Thence he sailed to Delos, where he and his comrades danced a complicated figure, in commemoration of the Labyrinth, said to be preserved in the traditional Delian dance known as the 'crane' (Plut. 21). This may serve as an example of the numerous ceremonies, Attic and other, said in later times to commemorate some part of his adventures. For his return see AEGEUS.

Kingship. Theseus succeeded his father and is supposed to have brought about the *συνοικισμός* or union of the various communities of Attica into one State with Athens for the capital (Plut. 24). The event is itself historical, but its age and author unknown. He took part with Heracles in the expedition against the Amazons, or went against them on his own account, and won Antiope, or Hippolyte (cf. HIPPOLYTUS 1) for himself; the Amazons in their turn, invaded Attica, held the Areopagus against Theseus, and were finally defeated in a desperate battle. Pirithous the Lapith raided Marathon, was met by Theseus, and became his friend and ally; Theseus came to his wedding-feast and took part in the resultant fight with the Centaurs (q.v.), and later helped Pirithous to invade the lower world in an attempt to carry off Persephone (q.v.). According to the most familiar of the many versions of this story, Theseus was ultimately rescued by Heracles from imprisonment, but Pirithous remained below. Theseus also carried off Helen (q.v.) while she was very young, and consequently Attica was invaded by the Dioscuri (q.v.).

Death and posthumous honours. Apart from the variant of his permanent detention by Hades (Verg. *Aen.* 6. 617–18, perhaps already in *Od.* 11. 631) his reign is generally said to have been ended by a rebellion (headed by Menestheus, a descendant of Erechtheus, q.v., Plut.

32), which led to his banishment; he went to Scyros and was there murdered by King Lycomedes (Plut. 35). Long after, some bones alleged to be his were brought from Scyros by Cimon (Plut. 36), and a hero-shrine built for them (not the temple now popularly called the Theseum).

Contact with other legends. Besides Heracles, Theseus is said to have been one of the helpers of Meleager (q.v. 1) in the boar-hunt (Plut. 29), and an Argonaut (q.v., *ibid.*); he brought about the burial of the bodies of the Seven against Thebes (Eur. *Suppl.*), and kindly received Oedipus (q.v., Soph. OC).

The Minotaur adventure appears widely in Greek art from the seventh century. Other deeds, individually or as a cycle, became very popular in Athenian sculpture and vase-painting from the later sixth century. He is generally shown as a youth, but the elder statesman of Attic tragedy is anticipated on a vase by Execias of the third quarter of the sixth century (see J. D. Beazley, *Development of Attic Black-figure* (1951), 68 and pl. 27. 3).

Steuding in Roscher's *Lexikon*, s.v. (abundant references to ancient literature and art); H. Heiter in *Rh. Mus.* 1936 and 1938-9; C. Dugas and R. Flacelière, *These, images et récits* (1958); Brommer, *Vasentisten*, 151 ff. H. J. R.; H. W. P.; C. M. R.

THESMOPHORIA, a women's festival in honour of Demeter (q.v.) common to all Greeks, regularly celebrated in the autumn. In Athens it took place on the 11th-13th Pyanopsion (Oct./Nov.). The women (men being strictly excluded) erected bowers with couches of plants and sat on the ground. The second day was a fast. The name of the third day, *Kalligeneia*, hints at the fecundity of mankind also, but the chief purpose of the festival was to promote the fertility of the corn which was about to be sown. Pigs had been thrown down into subterranean caves (*μέγαρα*), probably at the Scirophoria (q.v.); the putrefied remains were brought up, laid on an altar, and mixed with the seed-corn. The myth of Eubuleus, the swineherd swallowed up by the earth when Pluto carried off Kore, is an *aition* to account for this custom.

Nilsson, *Feste*, 313 ff.; L. Deubner, *Attische Feste* (1932), 50 ff. M. P. N.

THESMOTHEAI (*θεσμοθέται*) in Athens were the six junior of the nine *archontes* (q.v.), appointed annually. They were instituted not later than the seventh century B.C., but nothing is known for certain about their functions at that time. Later their duties were mainly legal. Acting together, as a college, they were the magistrates responsible for many types of case, including most sorts of *graphe* (q.v.), cases arising from *eisangelia* (q.v.), *probole*, or *dokimasia* (q.v.), some other public cases, and some private cases (see DIKE). Their court was the *heliaia* (q.v.). They also presided over juries which ratified, on behalf of Athens, legal regulations concerning trade between Athens and other States, and tried cases which arose from them (see SYMBOLON). Sometimes they could impose penalties without reference to a jury: in particular, they could authorize the execution without trial of persons exiled for homicide who were afterwards found in Attica. In the fourth century they had to examine the laws for anomalies and inconsistencies, and, if necessary, ask for the appointment of *nomothetai* (q.v.); and, after magistrates ceased to sit regularly in the same courts, it was the *thesmothetai* who allotted courts to magistrates and fixed the days of trials (see DIKASTERION). Finally, they drew the lots for the appointment of *archontes* and other officials for the next year.

The Attic orators; Arist. *Ath. Pol.* 59.

D. M. M.

THESPIAE, near the east foot of Mt. Helicon, was the chief town of south Boeotia. The Thespians, alone of

Boeotians, fought in full strength at Thermopylae and Plataea. They took a prominent part in the restored Boeotian Confederacy after 446 B.C., providing two boeotarchs. The Spartans used Thespieae as a base for their anti-Theban policy after 382, and it remained important after their expulsion. It was in Roman times still one of the chief Boeotian cities (Strabo, 403, 410). Visitors came to see the Eros of Praxiteles (Cic. *Verr.* 2. 4. 135), and the sanctuary and games of the Muses (see HELICON).

Fiehn in *PW*, s.v. 'Thespiea'; P-K, *GL* 1. ii. 452 f., 507; G. Roux, 'Le Val des Muses et les musées chez les auteurs anciens', *BCH* 1954, 22 ff. T. J. D.

THESPIS won the prize when tragedy was performed for the first time at the Dionysia at Athens in one of the years 535-533 B.C. (*Marm. Par.* 43, T. J. Cadoux, *JHS* 1948, 109). His invention of the speaking actor must have been made some time before this, and the story which brings him into contact with Solon (Plut. *Sol.* 29, Diog. Laert. 1. 59), though suspect, is not impossible. His invention of the actor who delivered prologues and conversed with the chorus-leader was vouched for by Aristotle (ap. Themistius 26. 316 d) and probably in the previous century by (?) Charon of Lamprus (FGH 262 F 15). He may have introduced improvements in the mask, but that he invented it (*Suda*, s.v.) is incredible. The same source gives a few titles of plays including a *Pentheus*, but those which circulated under his name in the fourth century B.C. were forgeries (Diog. Laert. 5. 92). Horace's description of him (*Arts P.* 275 ff.) as taking his plays about on wagons, with a chorus whose faces were stained with wine-lees, probably rests on a confusion of early tragedy with early comedy. See also TRAGEDY.

TGF 832-3; Pickard-Cambridge-Webster, *Dithyramb*, 60 ff. A. W. P. C., D. W. L.

THESPROTI, a people mentioned in the *Odyssey* with a king at Ephyra in the Acheron valley (in this region a tholos-tomb and Mycenaean weapons have been found) and probably extending over Epirus in the Late Bronze Age. Later confined to south-west Epirus, their territory included for a time Dodona (q.v.) and always the Nekyomanteion or Oracle of the Dead. The Thesproti formed a tribal State (*koinon*), which entered the Epirote Alliance and the Epirote Confederacy, sided with Rome in 170 B.C., and survived under the Roman settlement.

S. I. Dakaruz, *Antike Kunst*, Beiheft 1 (1963); Hammond, *Epirus*. N. G. L. H.

THESSALONICA, a city of Macedonia, founded by Cassander, who synoecized the small towns at the head of the Thermaic Gulf; perhaps on the site of Therme (Strabo, fr. 24). It was named after Cassander's wife. It stood at the junction of the Morava-Vardar route from Europe with the route from the Adriatic to Byzantium (the later Via Egnatia). An open roadstead sheltered by Chalcidice, Thessalonica became the chief Macedonian port, displacing Pella when its harbour was silted up. Strongly fortified, it withstood the Roman siege, surrendered after the battle of Pydna, and became the capital of the Roman province (146 B.C.); in the Civil War it served as Pompey's base. A free State and the main station on the Via Egnatia, it enjoyed great prosperity, shown by its prolific coinage, and was made a Roman colony by Decius c. A.D. 250. The population included a large Roman element and a Jewish colony, visited by St. Paul, one of whose disciples, Aristarchus, became the first bishop of Thessalonica. Second city to Constantinople in the Byzantine Empire, Thessalonica reached a height of prosperity to which the extant walls and early Byzantine churches bear witness, until it was sacked by Saracens in 904.

N. G. L. H.

THESSALUS (1) of Cos (fl. c. 421–411 B.C.), the more famous of Hippocrates' two sons. Galen considered him to be the author of books 5 and 7, and the part-author of books 2 and 6, of the Hippocratic work on epidemics, and thinks he may have been the author of the *Kar' iŋrpeiov*.

W. D. R.

THESSALUS (2) of Tralles, the *Iatronikes* as he styled himself, lived in Rome and died before A.D. 79. Pliny the Elder quotes his epitaph. The new medical school to which he laid claim in a letter to Nero was that of the 'Methodists'.

Thessalus accepted Themison's doctrine of the *communia* but did not understand them as a dogmatic conception. He rather took them to mean the morbid change visible in the patient, indicating what, of necessity, the physician should do: change the existing state into its opposite. In short, he interpreted the *communia* as a true sceptic would (Sext. Emp. *Pyr.* 1. 236). The degree of the necessary change he determined by considering the size of the *communia*, the locality affected, and the seasons, so that his treatment did not much differ from the usual one. Medical theory, however, was greatly simplified in this way. Thessalus' school was the only new sect seriously to compete with the older Hellenistic schools. Galen's attacks are such as one would expect from a convinced dogmatist without understanding of the modernist attitude of Nero's time.

TEXT Fragments not collected. The treatise on remedies (F. Cumont, *Rev. Phil.* 1918) probably not by Thessalus.

LITERATURE. H. Diller, *PW* vi A. 168 (but he did not merely reconstitute the Methodical School, but is its founder), cf. L. Edelstein, *PW*, Suppl. vi. 358, s.v. 'Methodiker'. The dependence of the Methodical doctrine on those of Themison (q.v.) had been acknowledged by the 'Methodists' from the beginning (e.g. Celsus, *Proemium*). The fact that later surveys trace the origin of the school to Asclepiades and Themison (e.g. Galen 14. 684) expresses this dependence in the usual historical categories of beginning and perfecting. Medical doctrine, Th. Meyer-Stenag, *Das medizinische System d. Methodiker*, Jenaer med.-hist. Beiträge (1916); T. C. Allbutt, *Greek Medicine in Rome* (1921).

L. E.

THESSALY, a district of northern Greece. Thessaly proper, comprising the four tetrads, Thessaliotis, Hestiaeotis, Pelasgiotis, and Phthiotis (q.v. for the distinction between Thessaly and its Perioecis), consists of two large and level plains separated by hilly country. Mountain barriers impede communication by land with neighbouring areas, and the only outlet to good harbours is a low pass leading to the Bay of Volo. Because of the extent of its plains Thessaly was richer in grain, horses, and cattle than other parts of Greece, but extremes of temperature discouraged the cultivation of olives and vines.

Although the archaeological picture of early Thessaly is incomplete, it is evident that in the Late Helladic period Mycenaean influences spread from Iolcus (q.v.) over most of the country. During the twelfth century invaders from the north and north-west infiltrated into Thessaly. Most of these pressed on southwards, but the Thessali, who migrated from Thesprotia, remained and dominated the plains, reducing the conquered to serfdom or driving them into the mountains. A few baronial families gradually became supreme, and their enterprise in organizing a loosely-knit national State headed by a *tagos* (q.v.) made Thessaly a formidable power in the sixth century. At this time the Thessalians dominated northern Greece, partly by controlling the Amphictionic League (see AMPHICTIONIES) through the votes of small tribes on their borders owing allegiance to them. The rivalries of aristocratic houses and the mediocrity of the Aleuadae (q.v.) soon caused a decline, which was intensified during the fifth century by social unrest, as the urbanization of this backward district gradually broke down baronial domination. In the wars between Athens

and Sparta the Thessalians favoured the former but rendered little assistance, and the foundation of a Spartan colony at Heraclea (q.v. 4) Trachiniae illustrates their impotence.

Late in the fifth century Lycophron (q.v. 1) established a tyranny at Pherae, and a protracted struggle began between the Pheraeans tyrants and the bulk of the Thessalians led by Larissa, where the Aleuadae had become a city aristocracy. This conflict was disastrous, because both sides enlisted external support from powers whose chief aim was to secure advantages for themselves by exploiting Thessalian disunity. It was only during the tyranny of Jason (q.v. 2), who revived the national State and had himself elected *tagos*, that Thessaly was united and formidable to the rest of Greece. Anarchy returned under Alexander (q.v. 5) of Pherae and his successors, and Thessaly fell an easy prey to Philip of Macedon, who adroitly turned local quarrels to his own advantage. In theory the Thessalians retained their independence, but the kings of Macedon held the archonship of the Thessalian League for life, and Thessaly remained virtually a Macedonian province. Its contingent of cavalry was invaluable to Alexander in Asia. An unsuccessful attempt was made in the Lamian War to throw off Macedonian suzerainty, and in the Hellenistic period Thessaly was often overrun by rival powers, some parts falling under Aetolian control.

In 196 Rome liberated Thessaly from Macedonian rule and established a new Thessalian Confederacy, which was maintained even after 148, when Thessaly was absorbed in the Roman province of Macedonia.

GEOGRAPHY AND TOPOGRAPHY. F. Stahlin, *Das hellenische Thessalien* (1924); P. K. GL. 1. 1.

HISTORY. H. D. Westlake, *Thessaly in the Fourth Century B.C.* (1935); M. Sordi, *La lega tessala* (1958).

POLITICAL AND SOCIAL DEVELOPMENT. U. Kahrstedt, *Gött. Nachr.* 1924, 128 ff.; G. Busolt, *Griechische Staatskunde* II (1926), 1478 ff.; J. A. O. Larsen, *Greek Federal States* (1968), 12 ff., 283 ff. H. D. W.

THESTIUS, in mythology, king of Pleuron, father of Lynceus and Idas (Argonauts and hunters of the Calydonian boar) and of Althaea, wife of Oeneus (q.v.); *Ov. Met.* 8. 304, 446 and elsewhere.

THESTOR (Θέστωρ). Of the five persons so called (Höfer in Roscher, s.v.), the least obscure is the father of Calchas (q.v.); *Iliad* 1. 69). He has no legend, the tale in Hyginus, *Fab.* 190, being manifestly late romance.

THETES (Θήτης), hired labourers, the humblest class of free men in a Greek city. At Athens, after Solon (q.v.), the lowest of the four census-classes, men with an estimated annual income of less than 200 *medimnoi* of corn or the equivalent in other produce or money. Solon admitted them to the *ekklesia* and *Heliaca* (qq.v.), but not to magistracies nor, presumably, to his *boule* (q.v.). This limitation was never formally abrogated, but towards the end of the fifth century it came to be ignored in practice. Because they could not afford a suit of armour, Thetes did not serve in the hoplite ranks; but when Athens became mainly a naval power they had even more important duties as rowers, sailors, marines, and naval officers, the State providing any equipment necessary. On land they probably furnished bowmen and 'light-armed' men (*psiloi*), including peltasts and unarmed pioneers. For their numbers see POPULATION (GREEK).

A. W. G.; T. J. C.

THETIS (Θέτις), a Nereid, who was fated to bear a son mightier than his father. This being revealed by Themis to the gods, *Pind.* *Isthm.* 8. 34 ff. (in Aesch. *Prom. Bound* and *Prom. Unbound* she reveals it to her son Prometheus, who discloses it as the price of his liberation; cf. *PROMETHEUS*), Zeus and Poseidon gave up all

thoughts of possessing her, and instead gave her to Peleus (q.v.), as the most deserving of mankind. Their wedding was attended by all the gods, who brought various gifts (Pind. *Pyth.* 3. 92 ff.; Catullus 64. 31 ff., etc.). She bore one child, Achilles (q.v., *Iliad* 18. 55 ff.; Pind. *ibid.* 100); Lycophron, 178, says there were seven, of whom the rest perished in the fire when she tried to make them immortal, cf. PELEUS.

The capture by Peleus and her wedding to him are exceedingly popular in art from the sixth century. She is also shown getting the arms from Hephaestus for Achilles; and very often bringing them to him, helped by her sister Nereids, from the mid fifth century riding dolphins and other sea creatures. She balances Eos in pictures of the *psychostasia* and combat with Memnon.

Roscher's *Lexikon*, s.vv. 'Peleus', 'Thetis'. In art, Brommer, *Vasenlisten*², 241 ff., 270 ff. H. J. R.; C. M. R.

THEVESTE (modern *Tebessa*), an old Berber town, at the east end of the High Plateaux, commanding the upper Ampsaga. Hanno conquered it for Carthage in the third century B.C. Early in the first century A.D. the Legio III Augusta was stationed near Theveste, which became a *colonia*, probably under Trajan, when the legion moved to Lambaesis. Connected with Carthage by one of the main roads in N. Africa, it became the economic centre of a wide area covering part of southern Algeria and Tunisia. Substantial and impressive ruins, mainly from the Late Empire, include an arch of Caracalla, temple of Jupiter, a large basilica of the fourth and later centuries, and a complete set of Byzantine fortifications.

R. Cagnat, *Carthage, Timgad, Tibessa*² (1909); S. de Roch, *Tebessa, antique Theveste* (1952). B. H. W.

THIASOS (*Θίασος*), a group of persons (*Θιασῖται*, *-ῶται*) associated in the worship of a particular deity or deities, Greek or foreign. Such groups already existed at Athens in the time of Solon, who guaranteed their rights of association; and the epigraphic evidence, mainly of Hellenistic date, reveals them as a common feature of the private life of both Greeks and aliens in the Greek cities of the Aegean and Pontic areas. Their organization resembled that of Greek private societies in general (see CLUBS, GREEK). The term *thiasoi* was also used for the small groups into which some, and perhaps all, of the Attic phratries (q.v.) were divided by the early fourth century B.C., and possibly for analogous subdivisions of the citizen-body in other cities.

F. Poland, *Geschichte des griechischen Vereinswesens* (1913), see indexes; Busolt-Swoboda, *Griech. Staatsk.* 1 (1920), II (1926), see indexes; W. S. Ferguson, *Harv. Theol. Rev.* 1944, 61 ff., A. Andrewes, *JHS* 1961, 1 ff. T. J. C.

THIBRON, a Spartan sent to Ionia in the autumn of 400 B.C. with a force of 5,000 Peloponnesians and Helots, in response to an appeal for aid from the Greek cities in the area, who were threatened by the Persian satrap Tissaphernes. He captured Magnesia and was unsuccessful at Trales, but eventually augmented his forces by enlisting most of the surviving Greeks who had served with the Younger Cyrus. In the following year he received the adherence of Pergamus and some minor cities of Aeolis, took several more by storm, but his siege of Egyptian Larissa was a failure, and the ephors ordered him to attack Caria instead. At Ephesus, however, in the midst of his preparations, he was superseded in command by Dercyllidas (q.v.). On his return to Sparta, he was prosecuted on a charge of allowing his men to plunder friendly Greek cities, condemned, and sent into exile. Subsequently he procured his recall, and in 391 was again sent to Asia Minor with a force of 8,000 men, this time to operate against Struthas the new Persian officer appointed

to administer Ionia and the Aegean seaboard. Basing himself on Ephesus and the cities of the Maeander valley, Thibron did little more than conduct plundering expeditions in an incompetent and reckless manner. Struthas, observing this, surprised him one morning with a body of cavalry as he headed a disorderly raiding party, and in the ensuing fight Thibron and a large number of his men were killed. Such was the fate of the last ever Spartan campaign in Asia. Remiss, inefficient, and a poor disciplinarian, Thibron differed from the average Spartan commander and during his stay in Asia achieved virtually nothing.

Xen. *Anab.* 7. 6, 1, 7. 8. 24; id. *Hell.* 3. 1. 4-8, 4. 8. 17-19; Diod. 14. 36, 37. 4, 38. 2, 99. 1-3. E. I. McC.

THIRTY TYRANTS (1). At the end of the Peloponnesian War (Apr. 404 B.C.) the oligarchs at Athens already had the upper hand, Critias leading the extremists, Theramenes the moderates. Both sections joined in asking Lysander for help against the democrats; under pressure from him the *ekklesia* was compelled to appoint thirty *ἐγγράφοις* to draw up a new constitution *κατὰ τὰ πάτρια*. The Thirty at once seized full power, constituted a new *boule* under their control, and a board of Ten to rule Piraeus, abolished the dicasteries, and began the removal of obnoxious democrats and *sykophantai* (June). This developed into a reign of terror, many respectable citizens and metics being executed and their property confiscated; a Spartan garrison was stationed on the Acropolis; no new constitution was promulgated. To meet the protests of Theramenes, Critias agreed to draw up a list of 3,000 to constitute the citizen body; he never published it, and he stifled further opposition from Theramenes by executing him. 1,500 men in all are said to have been executed; many were exiled or fled. But the Thirty failed to prevent the capture of Piraeus by a band of exiles under Thrasybulus (q.v.), and Critias was killed in a battle (Dec.-Jan. 403/3). They were now deposed by the moderate oligarchs, who constituted themselves as the 3,000 and appointed a board of Ten, who eventually became reconciled with Thrasybulus' party by the good offices of the Spartan king Pausanias (q.v. 2). The full democracy was now restored (late summer 403), and the remnant of the Thirty, who had retired to Eleusis, were exterminated there two or three years later.

Xen. *Hell.* 2. 3. 4; Arist. *Ath. Pol.* 34. 1-41. 1 (less trustworthy than Xenophon, especially in chronology); Diod. 14. 3. 6 (from Ephorus). Details in Lysias (esp. Or. 12 and 13), Andocides, and Isocrates. Hignett, *Hist. Athen. Const.*, ch. 11 and app. xiii-xiv. A. W. G.

THIRTY TYRANTS (2), the name given in the *Historia Augusta* (Pollio) to the pretenders who arose in the provinces in the mid third century A.D. The author's original plan was to write on twenty, but the number was raised to that of the 'thirty tyrants' of Athens by admitted padding; thirty-two names appear in the collection, including two women. The object was to denigrate Gallienus, in whose reign most of the pretenders are said to have lived; in fact only nine are authenticated for his reign. Of the others, some were children of pretenders, some certainly never wore the purple, others are almost certainly fictions, and a few occurred in other reigns. The whole collection is worthless as a historical source. In the list which follows (not in the order of the *Historia*) italicized names are known from coins or other sources.

In Gaul: *Postumus* (q.v.) = M. Cassianus Latinus Postumus Aug., 259-68; Postumus Junior, said to be Caesar, and son of Postumus; *Lollianus* = C. Ulpianus Cornelius Laelianus Aug., 268, rebelled against Postumus; *Marius* = M. Aurelius Marius Aug., 268; *Victorinus* = M. Plavonius Victorinus Aug., 268-70; Victorinus Junior, said to be son of Victorinus, existence

doubtful; *Tetricus* (q.v.) = C. Pius Esuvius Tetricus Aug., 270-4; *Tetricus Junior*, Caesar, son of Tetricus.

In Illyricum: *Ingenius*, full name unknown, c. 259; *Regalianus* = P. C.... Regalianus Aug., c. 260; *Aureolus*, full name unknown, 268.

In Greece: Piso, 261, an invention; *Valens*, 261.

In Isauria: Trebellianus: highly dubious.

In Syria: *Cyriades* = Marceades, c. 258, never emperor; *Macrianus* = (Fulvius) Macrianus, 260, never emperor; *Macrianus* (q.v.) *Junior* = T. Fulvius Macrianus Aug., 260-1; *Ballista* (q.v.), 260-1, never emperor; *Quietus* = T. Fulvius Junius Quietus Aug., 260-1; *Odaenathus* (q.v.) = Septimius Odaenathus, 260-7, never emperor; Herodes, Herennianus and Timolaus, c. 268 ff., said to be sons of Odaenathus, never emperors; *Maconius*, c. 268, a relative of Odaenathus, never emperor.

In Egypt: *Aemilianus* = L. Mussius Aemilianus, c. 261.

Others: Celsus and Saturninus, both fictions; *Victoria*, mother of Victorinus; *Zenobia* (q.v.), wife of Odaenathus; *Valens Superior*, at Rome in 250; *Titus*, probably = *Quartinus*, 238; *Censorinus*, a fiction.

R. Syme, *Ammianus and the Historia Augusta* (1968).

B. H. W.

THOMAS MAGISTER (*Theodulos* in religion) of Thessalonica was the Secretary of Andronicus II (A.D. 1282-1328), but withdrew to a monastery, where he devoted himself to scholarship.

WORKS. (1) *Ecloga Vocum Atticarum* (Ἐκλογία ὀνομάτων καὶ ῥημάτων Ἀττικῶν), based especially on Phrynichus, Ammonius, Herodian, and Moeris, but with much added material that is less valuable, drawn from his own reading, e.g. in Herodotus, Thucydides, Aelius Aristides, and Synesius.

(2) Texts, with scholia, of Aeschylus, Sophocles *Aj.*, *El.*, O.T., Euripides *Hec.*, *Or.*, *Phoen.*, Aristophanes *Plut.*, *Nub.*, *Ran.*, and *Pindar*. These give an insight into the oral instruction provided by a late Byzantine teacher. Thomas is well informed on *realien*, tolerably knowledgeable on rare words, and totally ignorant of metre. Lives of these poets appear under his name in some MSS.

(3) Declamations on set themes in the manner of the ancient orators, e.g. *De Regis Officiis* (Π. βασιλείας); panegyrics on famous personalities of earlier date, e.g. Gregory Naz.; eulogistic addresses to contemporaries; deliberative discourses on questions of the moment.

(4) Letters.

Ecloga, F. Ritschl (1832), I. P. Migne, *PG* cxlv, F. W. Lenz, *Fünf Reden Th. M.* (1961), T. Hopfner, *Sitz. Wien. Akad.* 1912, A. Turyn, *The Manuscript Tradition of the Tragedies of Aeschylus* (1941), 67 ff., id. *Studies in the Manuscript Tradition of the Tragedies of Sophocles* (1952), 31 ff., J. Lugon, *Histoire du texte de Pindare* (1952), 186 ff., A. Turyn, *The Byzantine Manuscript Tradition of the Tragedies of Euripides* (1957), 165 ff. J. F. L., R. B.

THRACE. The boundaries of Thrace varied at different times; in the fifth century B.C. the kingdom of the Odrysae, the leading tribe of Thrace, extended over present-day Bulgaria, Turkish Thrace (east of the Hebrus), and Greece between the Hebrus and the Strymon, except for the coastal strip with its Greek cities, i.e. from the Danube on the north to the Hellespont and the Greek fringe on the south, and from Constantinople to the sources of the Strymon in south-west Bulgaria, whereas the Roman province of Thrace was bounded on the north by Haemus, on the east by the Euxine, on the south by the Propontis, Hellespont, and Aegean, and on the west by the Nestus.

By ancient writers the Thracians (who were of Indo-European stock) were considered as a primitive people, consisting of the warlike and ferocious tribes dwelling in the mountains of Haemus and Rhodope, and the

peaceable dwellers in the plain, who came into contact with the Greek colonies on the Aegean and Propontis. Until classical times the Thracians lived in open villages; only in Roman times was urban civilization developed. Herodotus remarks (5. 3) that, if they could have been united under a single king, they would have been invincible, a view corroborated by Thucydides (2. 95-101); in fact, unlike the Macedonians, the Thracians never achieved a national history. From the eighth century B.C. the coast of Thrace was colonized by Greeks at Abdera (q.v.), Maroneia, Aenus, Perinthus, Byzantium (qq.v.), Apollonia, and Mesambria, but the Thracians resisted Greek influence.

We have very little historical information about the Thracians, except when they were brought into contact with the Greeks. (For the prehistoric period, as revealed by excavation, see S. Casson, op. cit. *infra*, 102 ff.) The Thracians were subdued by the Persians c. 516 B.C., and some of them fought against the Greeks under Xerxes (q.v.) in 480 B.C. Shortly afterwards the first king of the Odrysae, Teres, attempted to carve an empire out of the territory occupied by the Thracian tribes (Thuc. 2. 29), and his sovereignty extended as far as the Euxine and the Hellespont. His son Sitalces (q.v.) enlarged his kingdom, subjugating the tribes of Rhodope as far as the Strymon, and the Getae, north of Haemus. Thenceforward the king of the Odrysae called himself king of the Thracians. Sitalces allied himself with the Athenians against the Macedonians, but his invasion of Macedonia in 429 B.C. achieved nothing. Sitalces was succeeded by Scuthes, his nephew, who married Stratonice, sister of Perdiccas (q.v.). In 382 B.C. Cotys succeeded to the monarchy and made war on Athens, assisted by his son-in-law Iphicrates (q.v.), the Athenian. After Cotys' death in 358 B.C. three princes claimed the succession, Cersobleptes (q.v.), his son, Berisades, and Amadocus.

On the collapse of the Odrysian power in mid fourth century, Philip II (q.v.) of Macedon invaded Thrace and made its princes tributary; he founded Philippopolis (q.v.) in his own honour. After the death of Alexander (q.v. 3) the Great, who had left Thrace under his generals, Thrace fell to Lysimachus (q.v.), who founded Lysimacheia in 308 B.C., and thereafter it was a protectorate of the successive rulers of Macedonia. After the Roman victory at Pydna in 168 B.C., Thrace west of the Hebrus was incorporated in Macedonia, and in 129 B.C. the coastal cities were included.

For the religion of the Thracians, see RELIGION, THRACIAN; RIDER-GODS AND HEROES; MACEDONIAN CULTS.

THRACE AND ROME. The Romans were slow to realize that the destruction of the Macedonian monarchy would involve them with the Thracians, but when Andriacus (q.v.) revolted (149 B.C.) he drew most of his support from Thrace (Florus 1. 30), and the subsequent annexation of Macedon made Rome responsible for the eastern border of Macedon with Thrace. Later raids by Thracian tribes into Macedonia and punitive campaigns by Roman proconsuls of Macedonia are regularly attested. Some peoples in Thrace, however, made alliances with Rome. The Dentheletae had long been faithful allies when wantonly attacked by Piso (q.v. 5), and Cicero calls Rabocentus, chief of the Bessi, a faithful ally, although hitherto they had been troublesome (Cic. *Pis.* 84). Later

Thrace was consolidated into a kingdom ruled by a dynasty from the Sapaei, who lived in the south close to Macedonia. The first-known ruler was Rhascuporis (or Rhescuporis), son of Cotys, who helped Pompey against Caesar and later Brutus and Cassius against Antony and Octavian, while his brother Rhascus supported the latter. He was succeeded as king by his son Cotys (IG iii. 552, 553), who strengthened the dynasty by a marriage alliance with the Astae, whose capital was at Bizye in eastern Thrace. A Cotys of this family had sent his son Sadalas to help Pompey; later Sadalas' widow Polemocratia entrusted his infant son Cotys to Brutus, who seized the royal treasure and sent the boy to Cyzicus. This Cotys, who was restored to his kingdom apparently while still a boy, married the daughter of Cotys the Sapaeian. The latter acted as regent for his son-in-law and he was followed by his son Rhoemetalcus, who acted as regent for his nephews, the sons of Cotys, when the latter died. When the Bessi, already subdued by M. Lollius (19-18 B.C.), broke away from the Astae (c. 11 B.C.) and killed Rhascuporis, the only surviving son of Cotys, the Romans awarded the kingdom to Rhoemetalcus, Rhascuporis' uncle and guardian, who later ruled the whole of Thrace. When Rhoemetalcus died (A.D. 12) Augustus partitioned the kingdom between his son Cotys, who received the civilized coastal area, and his brother Rhascuporis, who received the barbarous interior with only the title of dynast (Tac. *Ann.* 2. 64). In A.D. 19 Rhascuporis killed Cotys and Tiberius deposed him, dividing the kingdom between Rhoemetalcus, son of Rhascuporis, as dynast, and the sons of Cotys under a Roman guardian, Trebellianus Rufus. One of these sons, Rhoemetalcus, was made king of his father's portion by Gaius in A.D. 38. Later the kingdom was reunited, since in A.D. 46 a certain Rhoemetalcus was murdered by his wife and his kingdom became the Roman province of Thrace.

The province was governed by procurators until the reign of Trajan when they were superseded by praetorian legates, assisted by procurators, both of whom were based at Perinthus. Although defence was in the hands of the legate in Moesia, some troops were maintained; late in Nero's reign there were 2,000 (Joseph. *H. J.* ii. 16. 4). With very few cities Thrace was administered on a centralized system, the province being divided into *strategiæ*, each under a *strategos* appointed by the governor. Colonies were founded at Aprus (*colonia Claudia Aprensis*) by Claudius or Nero, and at Deultum (*colonia Flavia Pacensis Deultum*) under Vespasian. Reorganization under Trajan produced at least seven new cities, based mostly on older settlements, although the mass of the population continued to live in villages. Under Diocletian Thrace was split into a number of small provinces, and more cities were founded. From the third century A.D. onwards Thrace was periodically ravaged by barbarian invaders. After the reconstruction of the defences under Justinian there were 100 forts in the Thracian provinces (Procop. *Aed.* 4. 11).

See bibliography above and, on the chert kings, R. M. Dawkins and F. W. Hasluck, *BSA* 1905/6, 175-7; H. Dessau, *Eph. Epigr.* 1913, 696 ff. A. Stein, *Römische Reichsbeamte der Provinz Thracia* (Sarajevo, 1920); Jones, *Cities E. Rom. Prov.* 1 ff.

THRASEA PAETUS, PUBLIUS CLODIUS (*cos. suff.* A.D. 56), Stoic, renowned for his uprightness and republican sympathies. He modelled himself on Cato Uticensis, of whom, utilizing Munatius Rufus, he composed a *Life* which Plutarch consulted (*Cato Min.* 25, 37). Condemned under Nero (A.D. 66), he ended his life in noble fashion. See also ARRIA (2) MINOR.

Tac. *Ann.* 13. 49; 14. 12, 48-9; 15. 20-1; 16. 21-35. Syme, *Tacitus*, 556 ff.

THRASYBULUS (d. 388 B.C.), son of Lycus, Athenian general and statesman. In 411 he was a leader of the democratic State formed by the navy at Samos in opposition to the Four Hundred. He was responsible for the recall of Alcibiades and contributed largely to the naval success of the following years.

He was banished by the Thirty and fled to Thebes where he organized a band of seventy exiles and occupied Phyle (late autumn, 404). When his followers had increased to a thousand, he seized the Piraeus and defeated the troops of the Thirty. Thanks to an amnesty proclaimed at the instance of Sparta, he led his men to Athens, and the democracy was restored. In the Corinthian War he played a prominent part, and in 389/8 he commanded a fleet which gained many allies but suffered from lack of financial support. At Aspendus his troops plundered the natives, who murdered him in his tent.

Thrasybulus showed ability and gallantry as a military leader. He was a staunch champion of democracy but was wise enough to make concessions in order to restore Athenian unity. In his last years he failed to appreciate that the imperialistic policy to which he gave his support was far beyond the material resources of Athens at that time.

Thuc. bk. 8; Xen. *Hell.* bks. 1-4; Diod. bks. 13-14. H. D. W.

THRASYLLUS of Alexandria (d. A.D. 36), astrologer. Tiberius made his acquaintance during his stay in Rhodes (6 B.C.-A.D. 2) and came to believe in him implicitly; Thrasyllus remained till his death in close contact with the Emperor, who granted him Roman citizenship. He was a man of good education and a serious student of astrology.

WORKS: (1) a work or works on astrology, epitomized later in a *Συγκεφαλαίωσις τοῦ Ἱεροκλέα Θρασύλλου πίνακος*; (2) *Περὶ τῶν ἑπτα τόνων*. In addition he was, with Dercyllides, responsible for the division of Plato's works into tetralogies.

J. Cumont, *CCAG* viii 3, 90 ff. F. H. Cramer, *Astrology in Roman Law and Politics* (U.S.A. 1954), 92 ff. W. D. R.

THRASYMACHUS of Chalcedon (fl. c. 430-400 B.C.), sophist and rhetorician, is best known from his defence, in the *Republic*, of the thesis that justice is the interest of the stronger. He played an important part in the development of Greek oratory, by his elaboration of the appeal to the emotions by means of elocution and 'action', and in the development of prose style by his attention to rhythm and to the building up of periods.

Testimonia and fragments in Diels, *Vorsokr.* 11 2. 319-26. W. D. R.

THRASYMEDES (Θρασημέδης), a son of Nestor who takes a minor part in the *Iliad*: 10. 255; 16. 321 ff., and elsewhere. In the Wooden Horse, Quint. Smyrn. 12. 319.

THUBURSICU(M) NUMIDARUM (modern *Khamissa*), a market-town on the road from Hippo Regius (q.v.) to Theveste. Lying in the richly phosphated Bagradas valley, it became a prosperous centre of the agricultural life which Masinissa introduced into his territory. Under Roman rule it was the centre of one of the tribes called Numidae, which continued a separate existence after the town obtained higher status. After being administered jointly by native chieftains and military prefects, it was made a *municipium* by Trajan, and became a colony before A.D. 270. Its extensive ruins have yielded many excellent specimens of Greek and Roman art.

S. Gsell and C. A. Joly, *Khamissa, Mdaourouch, Annouma* (Paris, 1922). W. N. W.; B. H. W.

THUCYDIDES (1), son of Melesias, Athenian politician. He was of good family, connected by marriage with Cimon (q.v.), and according to Plato active both in war and peace and influential in Athens and Greece generally. A formidable speaker, he replaced Cimon as 'leader of the rich' and political rival of Pericles, whose building-programme he attacked. The issues between them were resolved by his ostracism (443 B.C.). He seems to have returned after the statutory ten years, but further activity on his part is not well attested; though he was prosecuted in his old age by one Cephisodemus (c. 426). He had two sons Melesias and Stephanus and a grandson Thucydides, son of the former, a young man about 420; by which time he himself was dead. He may have been the historian's maternal grandfather.

THUCYDIDES (2), author of the (incomplete) History of the War between Athens and Sparta, 431-404 B.C., in eight books.

LIFE. He was born probably between 460 and 455 B.C.: he was general in 424 (4. 104) and must then have been at least 30 years old; while his claim in 5. 26. 5 that he was of years of discretion from beginning to end of the war perhaps suggests that he was not much more than grown up in 431. He probably died about 400. He shows no knowledge of fourth-century events. The revival of Athenian sea power under Conon and Thrasybulus, from 394 on, made the decision of Aegospotami less decisive than it seemed to Thucydides (compare e.g. 5. 26. 1 with Xen. *Hell.* 5. 1. 35). Of the three writers who undertook to complete his History, only Xenophon took his view that the story ended in 404 (or 401). Theopompus took it down to 394, and so probably did Cratippus (Plut. *Mor.* 345 d). If, as seems likely, the very respectable author of the *Hellenica Oxyrhynchia* is Cratippus, q.v., then both his work and Theopompus' are on a very much larger scale than Xenophon's, a scale like Thucydides' own. This fact, as well as considerations of language and outlook, makes it likely that Xenophon, q.v., wrote his continuation (*Hell.* books 1-2) earlier than the others, and indeed, before the battle of Coronea in 394. But if this be so, then Thucydides cannot have lived more than a year or so into the fourth century. Marcellinus, in his *Life*, c. 34, says that Thucydides was 'over 50' when he died. If he was born about 455 and died about 400, this will be true. The figure may be from Cratippus, who evidently gave some biographical data: Marcellinus quotes him just before (33) for the view that Thucydides died in Thrace.

Thucydides, then, was part of that ardent youth whose abundance on both sides seemed to him to distinguish the war he wrote of. Something of his ardour may be felt in 2. 31: his pride in the soldier's profession and his devotion to the great commander, Pericles.

He caught the Plague, some time between 430 and 427, but recovered, and in 424 failed in the task of saving Amphipolis from Brasidas. Not to have been a match for Brasidas does not prove him a bad soldier: from his history one receives the impression of a first-rate regimental officer, ashore or afloat, who saw war as a matter of style; perhaps his defence of the generals before Megara in 4. 73. 4 (cf. 108. 5) says worse of his judgement of problems of high command than his failure against Brasidas. He was exiled for this (424 winter) and returned twenty years later, after the war was over, and died within a few years.

He had property and influence in the mining district of Thrace (4. 105. 1). His father's name was Olorus

(4. 104. 4), the name of Cimon's Thracian grandfather; his tomb was in Cimon's family vault. It is almost certain he was related by blood to Cimon, and probably to Thucydides the statesman (*JHS* 1932, 210); born in the anti-Pericles opposition, he followed Pericles with a convert's zeal.

PARTS OF THE HISTORY. The incomplete history falls into five parts: A, an introduction (book 1). B, the 10 years war (2. 1-5. 24) C, the precarious peace (5. 25-end). D, The Sicilian war (6 and 7). E, fragment of the Decelean war (8). It is convenient to take first B and D, the two complete wars.

B is enclosed between two statements that 'the continuous war has herein been described'. It was therefore provisionally finished (if these are 'Thucydides' words). It contains one allusion to the fall of Athens (2. 65. 12) and several allusions to events late in the 27 years: these are no doubt additions made to an already existing narrative, since one passage certainly (2. 23. 3) was not written as late as the last decade of the century. The narrative gets rather more summary after Thucydides' exile (424) e.g. after the futile embassy to Artaxerxes I (4. 50) nothing is said of the important negotiations with Darius II.

D is the most finished portion. As it stands it is adapted to a history of the whole war (6. 7. 4, 6. 93. 4, 7. 18. 4, cf. 7. 9 etc., also 7. 44. 1, 7. 87. 5), and twice at least refers to events of 404 or later (7. 57. 2, 6. 15. 3-4). But these may be revisions and it has been suggested that Thucydides published it separately; and this opinion, though little held now, is not disproved. B and D are connected by C, sequel to B and introduction to D, and provided accordingly with a second preface. For symptoms of incompleteness, see below. C covers 5½ years, very unequally. Its two outstanding features are the description of the Mantinea campaign, and the Melian Dialogue. The former should perhaps be regarded, with B and D, as a third completed episode. The latter foreshadows the dramatic style of D; but if we read 5. 111 with 8. 27 we shall draw no facile moral (see 8. 27. 5).

E has the same symptoms of incompleteness as C and, moreover, stops abruptly in the middle of a narrative. It is very full, covering barely two years in its 109 chapters.

A consists of (i) 1. 1-23, a long preface, illustrating the importance of Thucydides' subject by comparison with earlier history (the so-called 'archaeology') and stating his historical principles: (ii) the causes of the war—that is, for the most part, an account of the political manoeuvres of 433-432; he adds important digressions, especially 1. 89-117, a history of the years 479/8-440/39, partly to illustrate his view that the war was an inevitable result of Athens' power, partly to make his history follow without interval on that of Herodotus (1. 97. 2). The second motive perhaps explains the length of another digression (1. 128-38) on the fate of Pausanias and Themistocles.

INCOMPLETENESS. E stops in mid narrative, in winter 411: Thucydides intended to go down to 404 (5. 26. 1). It shares with (roughly) C two peculiarities, absence of speeches and presence of documents, which are thought to show incompleteness; for these see below. The plan to make of BCDE a continuous history of the 27 years is only superficially achieved, even to 411: e.g. there is nothing of Atheno-Persian relations between 424 and 412, vital though these were (2. 65. 12). We shall see below that Thucydides kept his work by him and revised continually; so he left double treatments of the same theme, one of which he meant no doubt to suppress—e.g. the tyrannicides (1. 20, 6. 54 59); possibly 1. 23. 1-3 is a short early variant of 1. 1-19; 3. 84 of part of 82-3 (Schwartz 286 f.). It may be even suspected that 8. 82. 2 is a less accurately informed version of 86. 4-5 and the two have been merely harmonized by 85. 4. If

this last suspicion were just, it would be good evidence that 'Thucydides' remains were put into shape by an editor, whose hand may be further suspected in the misplacement of 3. 17, in 1. 56-7 (whose author—as it stands—surely misconceived the course of events), perhaps even in 1. 118. 2 (where the last sentence seems to leap from the 50s to 432); an editorial hand has, indeed, been suspected wholesale. Though no single case is quite decisive, it is unlikely Thucydides left his unfinished work in need of no editing. If we look for an editor, one thinks naturally of Xenophon, who wrote the continuation (it seems) immediately after 'Thucydides' death; the suggestion was made in antiquity (Diog. Laert. 2. 57). His soldierly (if not his intellectual) qualities might commend him to 'Thucydides', but if it was indeed he, he worked with extreme piety, and his hand is very little apparent. Xenophon's limits and virtues alike disqualify him for the authorship of 1. 56-7.

SPEECHES AND DOCUMENTS. Ancient craftsmen, and Thucydides notably, aimed at exactness; but in his speeches, Thucydides admits (1. 22. 1) that exactness was beyond his powers of memory. Here, then, as in reconstructing the far past (1. 20-1), he had to trust to his historical imagination, whose use generally he planned to avoid (*ὡς ἂν εἰδόμενοι ἐποιοῦν εἰπείν*: this meant applying to the speeches the sort of rationalizing schematism that, e.g., Hecataeus applied to geography); and even here, he promises he will control its use as rigorously as he can by the tenor of the actual words. It is much debated whether he made this profession early or late; and it has been much explained away. But it is unreasonable to doubt that from the start Thucydides took notes himself, or sought for hearers' notes, of the speeches he considered important. But since he used speeches dramatically, to reveal the workings of men's minds and the impact of circumstance, it is clear that verbatim reports would not have served even if he could have managed to get them, and he was bound to compromise (unconsciously) between dramatic and literal truth. It is likely that, as his technique developed, dramatic truth would tend to prevail; it is tempting to put his profession of method early, a young man's intention. Even so, while we cannot suppose that, at a moment when morale was vital, Pericles used the words in 2. 64. 3; while it is unlikely that the Athenian debater at Melos developed exactly the same vein of thought as Phrynichus before Miletus (5. 111-8. 27); while Pericles' first speech (1. 140 ff.) is perhaps composite, and hard to assign to a single occasion; it is yet dangerous to treat the speeches as free fiction: their dramatic truth was combined with the greatest degree of literal truth of which Thucydides was capable. He tried to recreate real occasions.

There are no speeches in E, and (except the Melian Dialogue) none in C: Cratippus (a younger contemporary) says Thucydides had decided to drop their use. Modern critics treat their absence as a symptom of incompleteness; they would have been added had he lived. But it is possible that these parts without speeches are experiments in new techniques. Thucydides may have felt, as many readers do, that the narrative of the 10 years is a compromise between the methods of tragedy and of a laboratory notebook, so that between the profoundest issues and the particular detail, the middle ranges (e.g. an intelligible account of strategy) are neglected. In the later narrative the methods are more separated. The Sicilian war was capable of almost purely dramatic treatment; C and E evidently not. And in consequence in E at least a new technique is developed, less like either drama or chronicle, more of an organized narrative, with more of the writer's own judgements of values and interpretations of events. It is questionable if E would be improved by speeches, that is, could be profitably (or at all?) trans-

formed into the style of B or D: was Cratippus perhaps right about Thucydides' intention?

This would not prevent some of the speeches in books 1-4 being composed (or revised) very late. The new experiment would not entail eliminating the dramatic from those books; Thucydides experimented to the end and never solved his problem. It is commonly thought that the Funeral Speech was written or rewritten after Athens' fall; and 2. 64. 3 surely was. The Coreysa debate (1. 31-44), on the contrary, has good chances of being an actual report, written up soon after delivery. Though some speeches aim at dramatic characterization (Gorgias, 4. 61. 7: Laconic, 1. 86), all are in 'Thucydides' idiom. But the personalness of this idiom is often overestimated (Finley, *op. cit. infra*).

It is noteworthy that those portions which lack speeches have (instead?) transcriptions of documents: that is, E and (roughly speaking) C.* If, then, we take C and E as experiments in a new method, the experiment begins in the latter part of B. These documents are usually thought (like the absence of speeches) a sign of incompleteness, since they offend against a 'law of style' which forbids the verbatim use of foreign matter in serious prose. We need not debate the general validity of this law: with so inventive a writer as Thucydides, his laws of style are to be deduced from his practice, and 5. 24. 2 (cf. 2. 1) suggests that the end of B is provisionally finished. Are they part of the experiment? One may be surprised (though grateful) that Thucydides thought the full text of the Armistice (4. 118-19) worth its room. One of the documents (5. 47) is extant in fragments (IGⁱ 2. 86) and confirms the substantial accuracy of the copies. One conflicts gravely with the narrative (5. 23, 5. 39. 3): it would seem the narrative was written in ignorance of the exact terms, and has not been revised.

'EARLY' AND 'LATE'. Thucydides says (1. 1. 1) he began to write his history as soon as war started; and it is at least arguable that much of the existing narrative, in all five parts of the work, was written, substantially as we have it, very soon after the events. But he worked slowly, and, as he says at 1. 22. 3, laboriously; correcting in the light of better information (we only detect this process where it is incomplete; e.g. 5. 39. 3 was due for correction in the light of 5. 23) or of later events (1. 97. 2; 4. 48. 5, where the qualification *ὅσα γὰρ* may have been put merely *ex abundanti cautela*, but more likely when the troubles started again in 410). If his point of view, or his method, changed materially during this process, it becomes of importance to know from which point of view this or that portion is written. More than a century ago, Ullrich called attention to this, believing that an important change of approach came with his discovery (announced in the second preface, 5. 26) that the war had not ended in 421.

Two criteria have been used to determine earliness or lateness: (a) reference to, or ignorance of, datable events or conditions; (b) the stage in Thucydides' own development which a passage reveals.

(a) References to late events cannot be written early, but they may be inserted in early contexts: e.g. those who think D early regard 6. 15. 3-4 and 7. 57. 2 as additions. Ignorance of late events is very much harder to establish: those same who think D early may suspect in 6. 41. 3 ignorance of Dionysius' tyranny, or even (a very slippery question) in 6. 54. 1 ignorance of Herodotus' history—but cannot prove their suspicions; yet where such ignorance is certain (see below), we may be sure that the narrative (or line of thought) which warrants them was conceived early. The results of this method are modest:

*Not exactly C: C ends with the Melian Dialogue (which in colour belongs to D?) and B has documents instead of speeches in its latter part, i.e. after the occasion of Thucydides' exile.

e.g. (i) 1. 10. 2 was not written after the catastrophe of 404: therefore the war against which earlier wars are being measured is not the completed 27 years, and the 'end of war' mentioned in 1. 13. 3-4, 1. 18. 1, is presumably 421; (ii) 2. 23. 3 was not written after the loss of Oropus in 411: therefore some of the narrative of B was written much as we have it before 411; (iii) 2. 65. 12 refers to the fall of Athens: therefore B received additions down to 404 at least.

(b) More has been hoped from the second method. Thucydides worked from his twenties to his fifties, his material growing under his eyes: there must surely be some intellectual or spiritual growth, some change of outlook. The best exponent of this method is Schwartz, who gives (op. cit. *infra* 217-42) an eloquent account of 'Thucydides' growth. The danger of this method is evident: in the ablest hands it yields quite different results (Meyer, Schwartz), and its first postulate may be doubted, namely, that 'Thucydides' opinion on the 'true cause' of the war (1. 23. 6) was not formed till after the fall of Athens. No doubt that was his view after 404; no doubt 1. 23. 6 and 1. 88 were written (inserted?) pretty late. But much the same view is expressed by the Coreyran envoy in 1. 33. 3 (cf. 42. 2); and whether the envoy said it or not it was surely Pericles' view. Pericles believed that if Athens used her opportunity in 433 she was bound to provoke in Sparta an enemy that must be faced; all his career, against Cimon and his successors, he had fought for his conviction that Athens and Sparta were natural enemies and Greece not large enough for both. His admirers held that this clear principle (1. 140. 1) was obscured in debate by the irrelevant particulars (1. 140. 4-1. 151. 1). We have not to consider whether Pericles was right: rather, the effect on Thucydides. The devout disciple saw the story unfold in the terms his master had foreseen (2. 65). How far such a 'Pericles-fixation' may have warped Thucydides' judgement, see below.

If this first postulate go, the second will follow it, viz. that only after 404 was Pericles given the importance he now has in books 1-2, since after 404 Thucydides started to rewrite his history as a 'defence of Pericles' (Schwartz 239). It hardly needs to be said that many hold to these postulates and the present writer's disbelief is as subjective as their belief. If these are untrue, truer postulates may be found: the attempt to recreate 'Thucydides' experience should (and will) never be dropped.

TRUTHFULNESS. Perhaps no good historian is impartial; Thucydides certainly not, though singularly candid. His tastes are clear: he liked Pericles and disliked Cleon. He had for Pericles a regard comparable to Plato's for Socrates and an equal regard for Pericles' Athens. These things were personal: but in principle, concentrations of energy (like Athens or Alcibiades) were to his taste. Their impact on a less dynamic world was likely to be disastrous—but whose fault was that? 'The world's, he says, consistently (1. 99; 1. 23. 6 etc.; 6. 15; 6. 28; cf. 2. 64. 3-5): and though this consistency may surprise us, we need not quarrel with it. Such judgements are rare, since Thucydides conceives his task as like medical research (see below, and cf. 3. 82. 2) where blame is irrelevant; the disconcerting simplicity of 2. 64. 3 (power and energy are absolute goods) is the more striking.

We need not here investigate Thucydides' possible mistakes. The present writer believes that Pericles (having planned an offensive war) lost his striking power, first because Potidaea revolted, next because of the Plague. Forced to the defensive, he left that as his testament. Thucydides was reluctant to face the fact of this failure, and accepted the testament, siding with the defeatist officer class against the revived offensive of Cleon (4. 27. 5, 28. 5, 65. 4, 73. 4; cf. 5. 7. 2). This is why Pericles' huge effort against Epidaurus (6. 31. 2; motive, cf. 5. 53)

is recorded as a minor futility (2. 56. 4); why Phormion's first campaign in Acarnania (2. 68. 7-9; of 432?) is left timeless, why we hear nothing of the purpose of the Megara decree; why, when that nearly bore fruit at last, Thucydides suggests that the capture of Megara was of no great moment (4. 73. 4; but cf. 72. 1).

Such criticisms hardly detract much from his singular truthfulness. Readers of all opinions will probably agree that he saw more truly, inquired more responsibly, and reported more faithfully than any other ancient historian. That is a symptom of his greatness, but not its core. Another symptom is his style: it is innocent of those clichés of which Isocrates hoped to make the norm of Attic style; in its 'old-fashioned wilful beauty' (Dionysius) every word tells. Like English prose before Dryden and Addison, it uses a language largely moulded by poets; its precision is a poet's precision, a union of passion and candour. After Thucydides history mostly practised the corrupting art of persuasion (cf. Isocr. 4. 8): his scientific tradition survived in the antiquarians, of whom he is the pioneer (1. 8. 1, 2. 15. 2, 3. 104. 4-6, 6. 55. 1), but the instinctive exactness of early Greek observation was lost. To combine his predecessors' candour of vision with his successors' apparatus of scholarship was a necessity laid on him by his sense of the greatness of his subject: he could no more distort or compromise with what he wished to convey than Shakespeare or Michelangelo could.

Thucydides would no doubt prefer to substitute, for these great names, the practice of any honest doctor. He was not modest, but in his statement of his principles he is singularly unaware of his unique equipment, and claims rather that he has spared no pains. The proper context for this statement (1. 20-2) is, first, his very similar statement about his own account of the Plague (2. 48. 3), and then the physician Hippocrates' maxim, 'ars longa vita brevis'. The 'art' which outlasts individual lives is the scientific study of man: the physician studied his clinical, Thucydides his political, behaviour. To know either so well that you can control it (and civilization is largely made up of such controls) is a task for many generations: a piece of that task well done is something gained for ever (1. 22. 4).

H. T. W.-G.

STYLE. In a famous sentence (*Thuc.* 24) Dionysius gives as the four 'tools' in 'Thucydides' workshop τὸ ποιητικὸν τῶν ὀνομάτων, τὸ πολυειδὲς τῶν σχημάτων, τὸ τραχὺ τῆς ἀρμονίας, τὸ τάχος τῶν σημασιῶν. The first, third, and fourth of these criticisms are undoubtedly true. 'Thucydides' style has a poetical and archaistic flavour (it is often difficult to distinguish clearly between the two), as a reader sees at once when he turns from Thucydides to Andocides and Lysias. His consistent use of αἰεὶ for αἰεί, ἔνν for ἑν, and σσ for ττ is one of the signs of this tendency. 'Roughness' is to be seen in his bold changes of construction and his violent hyperbata, in which he wrests an emphatic word from its natural place in the sentence to give it more prominence (1. 19 κατ' ὀλιγαρχίαν, 1. 93. 4 τῆς θαλάσσης). 'Speed' is perhaps the most striking of all his characteristics. He achieves an extreme concision, hardly to be paralleled in Greek prose except in the gnomic utterances of Democritus. A sentence like δοκί . . . καταστροφῇ (2. 42. 2) is gone in a flash, and no orator, composing for the ear, could have risked such brevity. At 2. 37. 1 (μέτρεται . . . προσημαίνεται) two antitheses are telescoped into one. τὸ πολυειδὲς τῶν σχημάτων is much more open to question, especially as Dionysius has just before credited Thucydides with the use of the θεατρικὰ σχήματα (pariosis, paronomasia, and antithesis) affected by Gorgias and other writers of the sophistic school. Thucydides' thought is, it is true, markedly antithetical in cast (e.g. 1. 70. 6), and antithesis

is sometimes strained (e.g. 2. 43. 3). But, unlike the Gorgianists, he has no affection for merely external antithesis, and he often deliberately avoids formal balance (e.g. 4. 59. 2). He eschews almost entirely certain other common adornments of style. He is too austere to use metaphor at all freely, or asyndeton (more suited to the spoken word). He does employ certain devices of assonance, neither, like Gorgias, as *ῥόδαματα*, nor, like Demosthenes, for emphasis pure and simple, but for the emphasizing of a contrast (3. 82. 8 *εὐσέβεια* . . . *εὐπρεπεία*, 6. 76. 2 *κατοικίσαι* . . . *ἐξοικίσαι*, 76. 4 *ἀξυνετωτέρου* . . . *κακὸς ἀξυνετωτέρου*). He has a strong leaning, as Dionysius observed (*Amm.* 2. 5), towards abstract expression (e.g. 3. 82-3), sometimes carried to the length of personification (*πόλεμος* 1. 122. 1, *ἐλπίς* 5. 103. 1). He probably coined abstracts (especially in *-σις*) freely, as Euripides did, according to the fashion of the late fifth century, and sometimes used them out of season (7. 70. 6 *ἀποσπέρησιν*, and the odd-looking negatived abstracts, 1. 137. 4 *οὐ διάλυσιν*, etc.). Like Antiphon, he experimented freely with the use of neuter adjective, or even participle (1. 142. 8 *ἐν τῷ μὴ μελετῶντι*), to convey an abstract idea. His periods are usually loosely constructed (e.g. 3. 38. 4-7), of clauses longer in actual words, and far richer in content, than those of other Greek prose-writers (e.g. 2. 43. 2-6). J. D. D.

INDEX. M. H. N. von Essen, *Index Thucydideus*, 1887.

THUGGA (modern *Dougga*), a hill-town of Africa pro-consularis west of the military road from Carthage to Theveste. The site was occupied in neolithic times. Under Masinissa and his successors it was the seat of a native chieftain and much influenced by Carthaginian civilization; a mausoleum, the most notable pre-Roman building in North Africa, survives. Marian colonists were settled in the vicinity, and in the first century members of the *colonia* of Carthage had lands near by. A curious double community of native *civitas* and Roman *pagus* existed till they were united by Septimius Severus, and became *Colonia Lucinia Septimia Aurelia Alexandriana Thugga*. The Roman remains are among the finest in North Africa, and include a beautiful Capitoline temple, temples of Caelestis and Saturn, a theatre, and Byzantine fortifications.

C. Poinssot, *Les Ruines de Dougga* (1958); A. Golffetto, *Dougga* (Basile, 1961).

THULE (Θούλη), a northern land first heard of and described by Pytheas (q.v.). It lay six days' sail to north of Britain. At midsummer the sun's and the Bear's

paths, as seen at Thule, coincided, and neither set. The inhabitants ate berries, 'millet' (oats?) threshed in barns because of the dampness and lack of sun, herbs, fruits, roots, and honey. Round Thule everything was held in an impalpable mass (perhaps thick freezing fog?) which Pytheas himself saw. (On this consult Hyde, 131; Nansen, *In Northern Mists* (1911), i. 66 f.; Thomson, 149; Deman, *Latomus* 1958, 364.) It is uncertain whether Thule was Iceland or Norway. Beyond Thule was the frozen sea; and in fact the sea does freeze now round the north-east of Iceland. Nothing further was discovered about it, but it was henceforth regarded as the northernmost part of the inhabited world. Eratosthenes drew a parallel through Thule at 66° (Arctic Circle) which remained for long on maps. Ptolemy gave Thule a north-south extension of 55 miles and located it at Mainland (Shetland), though he retained the belief in its midsummer midnight sun. The land of Thule which Agricola's fleet claimed to have seen (*Tac. Agr.* 10) was no doubt a Shetland island, but not necessarily Foula, the name of which is Norse 'Fowl-island', not derived from Thule.

It may be that Procopius of the sixth century A.D. was right in a wrong way when he called the Scandinavian 'island', old home of the Goths, 'Thule', ten times as large as Britain and far to the north of it, most being desolate, but the rest containing the Gauri and twelve other large tribes. Other writers also seem to mean Scandinavia by 'Thule'. For earlier knowledge of Scandinavia, see Mela 3. 3. 31-2; Pliny 4. 96; *Tac. Germ.* 44; *Ptol.* 7. 5. 2.

Strabo 61. 4, etc.; Pliny, *HN* 2. 187. 4, 104; Diod 5. 26. Cleomedes, *Cycl. Theor.* 1. 7. 37. 8, etc.; Geminus, *Elem. Astron.* 6. *Ptol. Geog.* 2. 3. 14, 2. 6. 32, 8. 3. 1. *Procop. Goth.* 2. 15. 48. Cary-Warmoning, *Explores*, 30 ff.; (Polhem) 50 ff.; C. F. Broche, *Pytheas le Massaliote* (1936), 145 ff., to be used with caution. See also Thomson, *Hist. Anc. Geog.* 145 ff., 235 ff., 321, 326, 330, 355, 358, 373 ff.; Hyde, *Greek Mariners*, 128 ff.; D. R. Dicks, *The Geographical Fragments of Hipparchus* (1960), 179 ff., 190 ff.; V. Nimck, *Die Entdeckung von Europa durch die Griechen* (1945), 222, 275. E. H. W.

THURII (Θούριοι), Pericles' panhellenic foundation (443 B.C.), which Herodotus and Lysias reputedly joined. It replaced, and occupied a site close to, Sybaris (q.v.) see H. Philipp, *PIH* vi A. 646 f. It was originally inhabited by Messapii (q.v.) (J. Whatmough, *Foundations of Roman Italy* (1937), 336). Despite *status*, quarrels with other Greeks, and Lucanian wars, Thurii flourished for a time, but finally became voluntarily a Roman dependency, and as such opposed Pyrrhus (q.v.). To revive Thurii after its spoliation by Hannibal Rome founded the Latin colony of Copia here, 193 B.C. (*App. Hann.* 57; *Livy* 34. 53; 35. 9). But, although remaining strategically important, Thurii gradually declined and ultimately was abandoned (*App. BCiv.* 1. 117; 5. 56. 58, *Diod.* 12. 91, *Strabo* 6. 263).

V. Ehrenberg, *APPhil.* 1048, 149 ff. (= *Polis und Imperium* (1965), 208 ff.), K. Freeman, *Greek City States* (1950), 21 ff. *And see* bibliography s.v. MAGNA GRAECIA. E. T. S.

THYIA (Θυία), apparently the same word as *θυιάς*, a Bacchante. There being a spot so named at Delphi (*Ildt.* 7. 178. 2), she is occasionally heard of (as *ibid.*) as the nymph of the place.

THYMOETES (Θυμοίτης) (1), a brother of Priam, *Hom. Il.* 3. 146; *Verg. Aen.* 2. 32, whereon see Servius for his quarrel with Priam; *Diod. Sic.* 3. 67. 5. (2) Son of the above, *Diod. Sic.* *ibid.*

THYSDRUS (modern *El Djem*), a Tunisian market-town, lying inland south of Hadrumetum. A not very significant *oppidum liberum* in the first centuries B.C. and A.D., it subsequently obtained the rank of *colonia* and became the centre of a prosperous agricultural district, its

amphitheatre, of which striking ruins survive, was built for 60,000 spectators and is the largest Roman building in North Africa. The elder Gordian (q.v.) was proclaimed Emperor at Thydrus in A.D. 238. W. N. W.

TIBER rises as a creek in the Apennines near Arretium, develops into central Italy's greatest river, meanders south to Narnia (confluence with the Nar), then south-west past Rome (where it divides about the *Insula Tiberina*), and enters the Tyrrhenian Sea at Ostia (q.v.). The silt it carries down with it on its 250-mile journey accounts for its tawny colour ('flavus Tiberis'); it accumulates at its mouth to choke the harbour works (*portus*) built by Trajan and others (Claudius even excavated a separate, artificial mouth), and constantly advances the coastline at Ostia. Tributaries: Tinea-Clitumnus, Clanis, Nar, Anio, Allia (qq.v.) and numerous brooks (Pliny's 42 is actually an underestimate). Navigation, although possible as far as Narnia (q.v.), was hazardous owing to the swift current. Inundations are first recorded in 241 B.C. (Oros. 4. 11), but were frequent in all periods, even after Augustus instituted 'curatores riparum et alvei Tiberis', (Suet. Aug. 37). The salt deposits at its mouth were worked in very early times, although the settlement at Ostia which traditionally dates from Ancus Marcius' period is not demonstrably older than the fourth century B.C. The Tiber formed the eastern border of Etruria (and hence is frequently called *Tyrrhenus* or *Lydius*) and the northern boundary of Latium. In imperial times opulent villas studded the banks of its lower course.

Strabo 5. 218, 212 f.; Pliny, *HN* 7. 53 f.; Dion Hal 3. 44 S. A. Smith, *Tiber and its Tributaries* (1877); J. Le Gall, *Le Tibre* (1953). E. T. S.

TIBERIANUS, a poet of the fourth century A.D. whose best-known piece is the *Amnis Ibat*, 20 trochaic tetrameters. Its feeling for nature prompted Baehrens's suggestion that Tiberianus also composed the *Pervigilium Veneris* (q.v.). For his other brief poems and fragments (text and tr.) see Duff, *Minor Lat. Poets*. J. W. D.

TIBERIAS, on L. Galilee, was founded by Herod (q.v. 2) Antipas. Despite its Greek constitution, it was a completely Jewish city. It was the capital of a toparchy, and also of Galilee, till Nero gave Galilee to Agrippa II. In the Jewish war the proletariat was anti-Roman, but the aristocracy on the whole loyal to the king and to Rome; it surrendered to Vespasian and was spared. After the Second Jewish War Tiberias was paganized by Hadrian, but it later became once more a thoroughly Jewish city, the seat of a rabbinical school and of the Jewish patriarch. A. H. M. J.

TIBERIUS (1), the Emperor (TIBERIUS JULIUS (PW 1 54) CAESAR AUGUSTUS), was the son of Ti. Claudius Nero and Livia, born in 42 B.C. His mother was divorced, in order to marry Octavian, early in 38 shortly before the birth of her second son Drusus. From 20 B.C., when, accompanying Augustus to the East, he received back the standards lost to the Parthians at Carrhae, until A.D. 12, when he returned to Rome after retrieving the situation on the Rhine after the disaster of Varus, Tiberius had a brilliant military career (interrupted only from 6 B.C. to A.D. 4). Between 12 and 9 B.C. he reduced Pannonia. From 9 B.C. (after the death of his brother) to 7 B.C. and again from A.D. 4 to 6 he campaigned in Germany. From A.D. 6 to 9 he was engaged in suppressing the great revolts of Pannonia and Illyricum. (See, for details of these campaigns, R. Syme, *CAH* x, ch. 12.)

After Agrippa's death Tiberius was forced in 12 B.C. to divorce Vipsania Agrippina, mother of his son Drusus, in order to marry Augustus' daughter, Agrippa's widow,

Julia. A son born of this—most unhappy—marriage died in infancy. In 6 B.C. Tiberius was granted *tribunicia potestas* for five years and invited to carry out a diplomatic mission in the East. Augustus hoped, however, to be succeeded by one of his young grandsons, Gaius or Lucius, and, perhaps through pique on that account, Tiberius retired to Rhodes in 6 B.C. He returned to Rome, though not to Augustus' favour, in A.D. 2. In A.D. 4, both his grandsons having died, Augustus was forced to recognize Tiberius as his likely successor. He adopted him, together with Agrippa Postumus, forcing Tiberius to adopt his nephew Germanicus. Tiberius was given *tribunicia potestas* for ten years, and this was renewed in A.D. 13 for a further ten years. He was also, at the time of his adoption and again in A.D. 13, given *imperium proconsulare*, like that held by Augustus.

Augustus died on 19 Aug. A.D. 14 and Tiberius, in virtue of the *imperium* which he already possessed, was able to discharge urgent administrative duties in the interval before Sept. 17, when (*Past. Amtern.*, CIL 1. 12. 244), after an embarrassing and unprecedented debate (*Tac. Ann.* 1. 10–13) he was, on the proposal of the consuls, proclaimed Emperor. He reigned until his death on 16 Mar. A.D. 37.

Loyalty to Augustus was the keystone of Tiberius' policy. While Augustus was consecrated and a *templum divi Augusti* was built at Rome, Tiberius refused to accept any extravagant honours for himself (*Tac. Ann.* 4. 37 f.; cf. the inscriptions from Gythium, *SEG* xi. 922–3). In foreign policy he followed the '*consilium coercendi intra terminos imperii*' bequeathed to him by Augustus (*Tac. Ann.* 1. 11) and, when Germanicus was recalled from the Rhine at the end of 16, the project of conquering Germany was at last abandoned. Cappadocia was made a province on the death of its king Archelaus in 17. The revolt of Florus and Sacrovir in Gallia Lugdunensis in 21 was suppressed with little difficulty by the Upper German army. Trouble with Parthia threatened on two occasions, but was settled by diplomatic negotiation, by Germanicus in 18 and by L. Vitellius at the very end of Tiberius' principate. Tiberius' only innovation in provincial administration lay in lengthening the tenure of office of imperial *legati* in the provinces, whether from slackness or of set purpose (see Marsh, op. cit. *infra*, 157 ff.). In finance Tiberius exercised rigid economy, built little, gave donations sparingly and games hardly at all; he therefore bequeathed great wealth (more than 2,000 millions of sesterces; Suet. *Calig.* 37, Dio Cass. 59. 2).

Tiberius' difficulties in administration were many. His accession coincided with legionary revolts in Pannonia and in Lower Germany, the German legions being ready to proclaim their commander, Germanicus, Emperor. In the Senate he was persistently irritated and insulted by such men as L. Arruntius and Asinius Gallus (q.v.). Within his own family there was jealousy concerning the selection of his prospective successor. After the death of Germanicus in 19 and of Tiberius' son Drusus in 23, the way lay open to the sons of Agrippina and Germanicus: Nero, Drusus, and Gaius. Nero and Drusus fell through the schemes of Sejanus, and Gaius, while his life was saved, received little preparation for government from Tiberius.

The reign of Tiberius was disfigured (cf. *Tac. Ann.* 1. 72 f.; 4. 6, '*legesque, si maiestas quaestio eximeretur, bono in usu*') by the heavy incidence, especially after 23, of trials, chiefly before the Senate, for *maiestas* (q.v.). There is record of more than 100 such prosecutions, of which those of M. Scribonius (q.v. 2) Libo Drusus in 16 and of Cn. Calpurnius Piso (q.v. 7) in 20 were outstanding. Tiberius' own responsibility is hard to assess. Though he showed no vindictiveness or cruelty (cf. *Tac. Ann.* 3. 51), a stronger man might have checked the

abuse. There is no evidence that he was ever in serious danger of assassination; yet he had a morbid fear of it, and was encouraged in this fear by L. Aelius Sejanus (q.v.), prefect of the Praetorian Guard and, after 23, Tiberius' chief adviser. Tiberius was encouraged by him to leave Rome for Capreae in 26; he did not return to Rome again, but corresponded by letter with the Senate. Agrippina and Nero were arrested in 29, Drusus in 30, and were all subsequently put to death or committed suicide. Sejanus himself was arrested and executed in Rome on the charge of conspiracy, in 31. His death was followed by that of many of his supporters.

While stories of Tiberius' vice on Capreae may be discounted, his mind was almost unhinged in the last six years of his life (cf. Tac. *Ann.* 6. 6). Lacking the affability ('civile ingenium') of his brother Drusus and nephew Germanicus, apt to speak in language of obscure and, it was thought, sinister ambiguity (cf. especially Dio Cass. 57. 1), austere, not even possessing, like his son Drusus, the pardonable and popular weakness of fondness for games, he neither sought popularity nor won it; in Rome itself the news of his death was welcomed.

ANCIENT SOURCES. We have a contemporary account of Tiberius' campaigns under Augustus and of the first sixteen years of his reign in Velleius Paterculus 2. 94-131. This account (published in A.D. 30) is favourable to Tiberius (and also to Sejanus). It is in sharp contrast to the other Roman accounts of the reign, viz. Tacitus, *Annals* 1-6 (most of book 5, with its account of the arrest and trial of Sejanus, is lost), Suetonius, *Tiberius*, and Dio Cassius, bks. 57 f. Tacitus' bias against Tiberius, displayed often in strikingly inept comment and innuendo, has been variously explained. Possibly he saw in Tiberius the prototype of Domitian; though, for a different explanation, see T. S. Jerome, *Aspects of the Study of Roman History* (U.S.A. 1923), chs. 15-17. Without doubt Tacitus' chief sources, the historians who wrote at the end of the Julio-Claudian period, whose works have perished (e.g. Servilius Nonianus, Aufidius Bassus, and, in her memoirs, to which Tacitus once refers, *Ann.* 4. 53, the Younger Agrippina), gave an extremely unfavourable account of Tiberius. See, on Tacitus' sources and his treatment of them, P. Fabia, *Les Sources de Tacite* (1893), F. B. Marsh, *The Reign of Tiberius* (1911), appendix 1, and Syme, *Tacitus*. The Jewish writers, Philo—a contemporary—and Josephus, are friendly to Tiberius and unfriendly to Sejanus.

MODERN LITERATURE. F. B. Marsh, *The Reign of Tiberius* (1911), with full bibliographies; C. E. Smith, *Tiberius and the Roman Empire* (U.S.A. 1942); E. Ciaceri, *Tiberius* (1944); D. M. Pridi, *Autour de Tibère* (1944); G. Maratton, *Tiberius, a Study in Resentment* (1956: the reconstruction of a psychologist); K. Kornemann, *Tiberius* (1960); on the Gythium inscriptions, M. Rostovtzeff, *Ret.* hist. 1930; see also bibliography s.v. MESSALLA. J. P. B.

TIBERIUS (2) JULIUS (PW 156) CAESAR GEMELLUS, one of twin sons born in A.D. 19 to Drusus, son of Tiberius, and Livia. Tiberius made him joint heir with Gaius to his personal property. Though the Senate annulled the will, Gaius adopted Tiberius Gemellus and allowed him to be hailed as *princeps iuventutis*. He was put to death, however, during the first year of Gaius' principate. J. P. B.

TIBERIUS (3) JULIUS (PW 59) ALEXANDER, of an opulent Jewish family of Alexandria, nephew of Philon (q.v. 4), but a renegade from the ancestral faith, rose high in the service of Rome. He was procurator governing Judaea (c. A.D. 46-8), when he executed the sons of Judas the Galilean; general staff officer under Corbulo in Armenia (63) and soon after Prefect of Egypt. His long edict, published soon after Galba's accession, has been preserved (*OGI* 669). Tiberius Alexander made his troops take the oath in the name of Vespasian on 1 July 69, which date was adopted as the 'dies imperii'. Enjoying high favour with the new dynasty, he was present with Titus at the siege of Jerusalem in the same function as he had held under Corbulo, but he now held the title of *praefectus praetorio* as appears from *Phib.* ii. 215. He vainly tried to have the Temple preserved.

E. G. Turner, *JRS* 1954, 54 ff.; V. Burr, *Tiberius Julius Alexander* (1955); G. Chalon, *L'Édit de Tiberius Julius Alexander* (1964). R. S.

TIBULLUS, ALBIUS (*PW* 1), born between 55 and 48 B.C. Little is known of him except what can be gathered from his poetry and from references in Horace and Ovid. An anonymous and corrupt *Vita*, possibly derived from Suetonius, tells us also that he was of equestrian rank, won *donna militaria*, and was something of a dandy. It is preceded by an epigram of Domitius Marsus, which fixes the date of Tibullus' death in 19 B.C.

Tibullus implies that his patrimony was diminished, presumably by confiscation (1. 1. 41 f.), but his complaints of *paupertas* belong to the conventional picture of the poetic lover. He is contradicted by Horace, who suggests that he was well-off and had a villa at Pedum, between Tibur and Praeneste (*Epist.* 1. 4). He refused or did not attract the patronage of the *princeps* and Maecenas, and celebrated instead the exploits of M. Valerius Messalla (q.v. 3) Corvinus. He set out to the East in Messalla's entourage, but fell ill at Coreyra and returned to Italy (1. 3); it is uncertain whether he served under him in Gaul (1. 7. 9 and *Vita*).

Tibullus' MSS. contain three books, of which the third was divided into two by Italian scholars of the fifteenth century; these are commonly called the *Corpus Tibullianum* and only the first two belong to Tibullus himself. The dates of publication are uncertain: book 1 refers to Messalla's triumph (25 Sept. 27 B.C.), book 2 to the installation of his son as one of the *quindecimviri sacris faciundis* (perhaps not long before Tibullus' death).

The first book deals impartially with his love for a mistress, Delia (1. 2, 3, 5, 6), and for a boy, Marathus (4, 8, 9). Apuleius tells us that Delia existed and that her name was Plania (*Apol.* 10); we need not doubt this, though her attributes (and those of Marathus, for that matter) are largely conventional. Book 2 celebrates a different mistress, whom the poet calls Nemesis (3, 4, 6). Apart from the love poems, the books contain poems in honour of Messalla (1. 7, 2. 5), an elegy on the blessings of peace (1. 10), and a charming representation of a rustic festival and the poet's song at it (2. 1). Book 2 is only just over 400 lines long, and may be either defective or posthumous.

The third book is a collection of poems from the circle of Messalla. It begins with six elegies by Lygdamus (q.v.), and also contains the *Panegyricus Messallae* (q.v.), five poems on the love of Sulpicia for Cerinthus (known as the Garland of Sulpicia), and six short poems by Sulpicia herself (q.v. 1). The poems on Sulpicia are conceivably by Tibullus himself. The elegy and epigram which conclude the book are certainly by somebody else, and have nothing to do with the fictitious Glycera mentioned by Horace (*Carm.* 1. 33).

In Quintilian's view, Tibullus was the most *tersus atque elegans* of the Roman elegists (10. 1. 93). The judgment is justified by the smooth finish of his poems and by the choice, though limited, vocabulary that makes his style a model of the *genus tenue*; no other Roman poet writes with such refined plainness. Yet his simplicity is sometimes deceptive: the transitions by which he glides from one scene or subject to another often baffle analysis. The total loss of his predecessor, Cornelius Gallus (q.v.), makes it difficult to estimate his originality, but it was probably considerable. He rejects myth, both ornamental and structural, and replaces it by pictures of an idealized, but actual, countryside. This owes something to Virgil's *Eclagues*; yet there is novelty in the fusion of an Italian landscape with the Hellenistic and urban themes of elegy.

Appreciation of Tibullus is not constant, and many critics of Latin poetry write him down; he deserves more attention than he currently gets. See also ELEGIAC POETRY, LATIN.

TIBUR, modern *Tivoli* with numerous monuments. Famed for fruits, building-stone (travertine), and cults (e.g. Hercules, Vesta, Albunea), it lies 18 miles east-north-east of Rome, where the Anio (q.v.) leaves the Sabine mountains (Strabo 5. 238). Founded before Rome, possibly by Siculi, Tibur was a powerful member of the Latin League with several dependent towns (Pliny, *HN* 16. 237; Dion. Hal. 1. 16; Cato fr. 58 P.). In the fourth century B.C., aided occasionally by Gauls or Praenestines, it frequently fought Rome until deprived of territory in 338 (Livy 7-8. 14). Tibur, however, remained independent and could harbour Roman exiles (Dessau, *ILS* 19; Livy 9. 30). Acquiring Roman citizenship c. 90 B.C. (App. *BCiv.* 1. 65), it became a fashionable resort: Catullus, Horace (possibly), Augustus, and Hadrian had Tiburtine villas. Propertius' Cynthia and captive potentates like Syllax (201 B.C.) and Zenobia (A.D. 273) also sojourned here.

Catullus 44; Prop. 3. 16; Livy 30. 45, S.H.A. *Trig.* 30. 27; J. Mancini, *Inscriptiones Italiae* (1936), 1. 1. E. Bourne, *A Study of Tibur* (U.S.A. 1916); G. Cascioli, *Bibliografia di Tivoli* (1923); C. Carducci, *Tibur* (Rome, 1940); S. Aurigemma, *The Villa Adriana near Tivoli* (Rome, 1955). E. T. S.

TICIDAS, one of the *neoterici* (see ALEXANDRIANISM, LATIN), wrote erotic poems to 'Perilla', i.e. Metella (Ov. *Tr.* 2. 433; Apul. *Apol.* 10). See Baehr, *FPR* 325; Morel, *FPL* 90.

TICINUM, in northern Italy near the confluence of the Ticinus and Padus (q.v.). Hannibal defeated the Romans here (218 B.C.), but Ticinum itself is unrecorded until imperial times. In the Late Empire it was an important fortress which Attila sacked, Theodoric strengthened, and the Lombards made their capital, calling it *Papia* (modern *Pavia*). E. T. S.

TIFATA, mountain overlooking Capua (q.v.) in Campania: the name allegedly means oak-grove (Festus 503 L.). The basilica of *Sant'Angelo in Formis* has occupied the site of its famous sanctuary to Diana (*ILS* 6306; Vell. 2. 25. 4) since the tenth century.

A. Mauri, *Passeggiate Campane* (1957), 150 ff.; D. Mustilli, *Enc. Ital.* 1950, s.v. 'Tifata'; J. Heurgon, *Capoue préromaine* (1942), 299 ff. E. T. S.

TIGELLINUS, GAIUS (?) OFONIUS (see *PW*), a low-born Sicilian, was brought up in the households of the Emperor Gaius' sisters, and in A.D. 39 was exiled for adultery with them. Under Claudius he lived in obscurity, but Nero (q.v. 1) made him first *praefectus vigilum* and then in 62 *praefectus praetorio*. He recommended the numerous executions of the following years; and for his part in unmasking the Pisonian conspiracy of 65 he was given triumphal ornaments and other distinctions. He deserted Nero at the last, but after Nero's death he was removed from his prefecture by his colleague Nymphidius (q.v.) Sabinus. Through the influence of Vinus (q.v.) he lived unharmed through Galba's reign, but under Otho he was forced to suicide (Tac. *Hist.* 1. 72). G. E. F. C.

TIGRANES (1) I 'the Great', son of Artavasdes; king of Armenia. Shortly after 100 B.C. he was set on the throne of Armenia by the Parthians (with whom he had been

a hostage for some years) in return for the cession of 'seventy valleys' in Armenia (Strabo 11. 14. 15). He rapidly consolidated his power, forming an alliance with Mithridates of Pontus, whose daughter, Cleopatra, he married. The interference of the two kings in Cappadocia led to Roman intervention and a *démarche* by Sulla. Tigranes turned his attention to expansion at the expense of Parthia, temporarily weakened by invasions on its eastern frontier. He ravaged Media as far as Ecbatana and Assyria as far as Arbela, deprived the Parthians of northern Mesopotamia and made vassals of the kings of Gordyene, Atropatene, and Osroene. In 83 he occupied Syria, Phoenicia, and Cilicia, ejecting warring Seleucid rivals. Greek cities that sided with him were given autonomy and coinage rights, but others, e.g. Soli in Cilicia and Cappadocian Mazaca, were destroyed and their inhabitants transferred to his new southern metropolis, Tigranocerta (q.v.). The empire of Tigranes the Great, 'King of Kings', proved to be an ephemeral affair. In 69 his alliance with Mithridates of Pontus involved him in war with Rome. Lucullus captured Tigranocerta, but the issue remained undecided until Pompey in 66 succeeded in separating the Armenian and Pontic kings. Tigranes' son rebelled and fled to Pompey; together they marched on Artaxata and Tigranes finally surrendered. He lost all his territories except Armenia proper. Henceforward, though engaging in frontier disputes with Parthia, he remained a peaceful vassal of Rome until his death in c. 56.

H. Sevrin, *Syria* (1950); B. M. Cat. *Seleucid Kings of Syria*, 103 ff. (coin portraits), see also ARMENIA, LUCULLUS 2, POMPEY. E. W. G.

TIGRANES (2) II (*PIV* 3) (20 B.C.-c. 6 B.C.) son of King Artavasdes of Armenia. Captured and sent to Egypt by Antony, he lived for many years in Rome. After the murder of his brother Artaxes, the Armenians sent a request to Augustus that he be sent to reign instead (Tac. *Ann.* 2. 3; *Res Gestae* 27). Tiberius accompanied him with an army, and Tigranes was crowned without opposition. Armenia was thus restored to the ostensible control of Rome, although 'Tigranes' coins bear Parthian titles.

E. T. Newell, *Numism. Notes and Monogr.* n. 30, 13 ff. M. S. D.; E. W. G.

TIGRANES (3) III (*PIV* 4) (c. 6-2 B.C.), son of Tigranes II. On his father's death he was crowned by the pro-Parthian party in Armenia, to reign jointly with his sister-consort Erato. He was expelled by the Romans, but returned after the murder of the Roman nominee a few years later. Attacked by Augustus' adoptive son C. Caesar, he made overtures for peace, but died fighting on his eastern frontier.

PW, s.v. 'Erato'. M. S. D.

TIGRANES (4) V (*PIV* 6), great-grandson of Archelaus of Cappadocia (Tac. *Ann.* 14. 26). In A.D. 60 he was sent from Rome to replace Tiridates (q.v. 4) on the throne of Armenia. When he proceeded to lay Adiabene waste, Vologeses of Parthia sent his general Monaeses to invade Armenia, and Tigranes was shut up in Tigranocerta; but the siege was raised after negotiations. He was withdrawn by the Romans in 62 and disappeared from history.

M. S. D.

TIGRANOCERTA (modern *Silvan*), city in Armenia, in Arzanene; later rechristened Martyropolis. It was founded by Tigranes I (App. *Mith.* 67) as a southern metropolis to balance the northern capital Artaxata (q.v.). He swelled its citizen body by netting the cities of conquered Cappadocia, Adiabene, and Gordyene (Plut. *Luc.* 25 f.; Strabo 12. 2. 27). Its fortifications were incomplete when Lucullus (q.v. 2) defeated Tigranes nearby in 69 B.C. and easily secured its capitulation. The captured

exiles were sent home, but Tigranocerta was still an important fortified city, e.g., in A.D. 59 when Corbulo (q.v.) occupied it. In the wars of Sapor II against Rome and Armenia in the fourth century A.D. it was destroyed by the Sassanians, but it emerges again in the fifth century as Martyropolis, site of a famous Church of the Martyrs.

The site of Tigranocerta has been much disputed: T. Rice Holmes, *Roman Republic* (1923), I. 409 ff., but see C. F. Lehmann-Haupt, *Armenien einst und jetzt* (1910-31), and *PW*, s.v. E. W. G.

TIGRIS, the more easterly of the Two Rivers of Mesopotamia. Rising in Armenia, it flows south-east through Assyria and Babylonia to the Persian Gulf. On its left bank it receives three main tributaries, the Greater and Lesser Zab and the Diyala. At Seleucia it is only c. 18 miles from the Euphrates (q.v.) and the rivers were joined in antiquity by a network of canals. At the double mouth of the Tigris was the kingdom of Mesene of Characene. Both rivers frequently change their course. The Tigris is the faster; the journey downstream could be made on rafts, Seleucia being the limit for shipping.

M. S. D.

TIMACHIDAS of Lindus in Rhodes composed the list of dedications to Athena (the *Anagraphe* of Lindus) which was commissioned in 99 B.C., and subsequently discovered in the excavations there. He also wrote commentaries on several Greek authors, a *Δείπνα* (in eleven books or more—Ath. I. 5a) and a miscellaneous glossary.

FGH III. 532.

TIMAEUS (1) of Locri in Italy, Pythagorean, the chief speaker in Plato's *Timaeus*. We have no knowledge of him independent of this, and he may have been a fictitious character. The work in ps.-Doric dialect *Περὶ φύξης κόσμου καὶ φύσιος*, which passes under the name of Timaeus Locrus, is a late (probably 1st c. A.D.) paraphrase of the *Timaeus*: ed. (with Plato's *Timaeus*) C. F. Herman (Leipzig, 1852).

Testimonia in Diels, *Vorsokr.* I. 441. *PW* VI A. 1203. W. D. R.

TIMAEUS (2) of Tauromenium (c. 356-260 B.C.). His father Andromachus was ruler of Tauromenium where the Naxians expelled by Dionysius II were settled (358), and by his moderate rule and friendship with Timoleon succeeded in retaining his position after the latter's liberation of Sicily (343). However, Timaeus fled to Athens perhaps as late as 317, when Agathocles drove his enemies from Syracuse to Agragras, or when he seized Tauromenium (312). There he remained for fifty years, studied rhetoric under Philiscus, pupil of Isocrates, came into contact with the Peripatetic School, and probably returned to Sicily under Hieron II.

The *History* (*ἱστορίαι*) in thirty-eight books was primarily concerned with Sicily, and its importance was great in standardizing previous accounts of Sicilian history and origins. Timaeus aimed to focus attention on the importance of the Greeks in Sicily and their contribution to Hellenism. The *History* dealt mainly with events in Sicily, Italy, and Libya, but included references to events in Greece and reached its conclusion either with Pyrrhus' death (272) or before the Romans attacked Carthage in Sicily (264). The books on Agathocles and Pyrrhus (34-8) seem to have been added to the original plan, perhaps after Timaeus' return. He is also credited with a treatise on the Olympic victors.

Timaeus is praised by Polybius (12. 10. 4) for his accuracy in chronology and research, qualities to which Cicero's description, *longe eruditissimus*, may also refer (*De Or.* 2. 58). His work remained popular at least until the first century A.D. and played an important part as a

basis for Roman historical writing. Timaeus' failings as an historian largely resulted from his rhetorical training and were common to most of his contemporaries. He showed little critical ability in his fondness for rationalizing myths and reliance on etymologies. But charges of wilful ignorance or falsification (Diod. Sic. 13. 90; Polyb. 12. 25) cannot be substantiated; and we must recognize in him the cultivation of wide interests characteristic of the Peripatetics, diligence in collecting information, and a reasonable impartiality, except in the case of Agathocles.

FGH III B. 566; T. S. Brown, *Timaeus of Tauromenium* (1958); A. Momigliano, *Terzo contributo alla storia dei studi classici* (1966), 23 ff. G. L. B.

TIMAEUS (3) (probably 4th c. A.D.), under the influence of Neoplatonism, compiled an extant lexicon of Plato.

Editions. Ruhnken (1789); Koch (1833); Dübner (in *Baier's Plato*, 1839).

TIMAGENES of Alexandria, captured and brought to Rome in 55 B.C., where he taught rhetoric and knew Augustus, but subsequently fell out of favour with him. He was a friend of Asinius Pollio, at whose villas he lived. The reference to him in Hor. *Epist.* 1. 19. 15 is obscure. He wrote a *History of Kings* (*Βασιλείς*), which was used by Pompeius Trogus.

FGH III. 317-23, *FGH* II. 88, *PW*, s.v. (2).

J. D. D.

TIMANTHES (late 5th c. B.C.), painter, of Cythnus, later of Sicyon, contemporary of Zeuxis; famed for his *ingenium*. In his 'sacrifice of Iphigenia' he showed degrees of grief culminating in the veiled Agamemnon (reflections on late reliefs, Pfuhl, figs. 638-9). He also painted an ideal Hero, and a sleeping Cyclops with a tiny Satyr beside him.

Overbeck, 1734-44, Rumpf, *Malerei u. Zeichn.* 120. T. B. L. W.

TIMBER had an important place in the economies of Greece and Rome. Sea power depended on access to forests; ambitious architecture required strong wood, often in long lengths. Less selective but more continuous was the need for timber for house-building, furniture, tools, and charcoal for cooking. The more rainy western side of Greece still carries a fair supply, though not of the best quality, but rainfall in eastern Greece is inadequate to sustain forests, except on the higher hills and mountains. By the Classical Period the more accessible stands had been overcut and the States near the isthmus were probably the worst sufferers, Athens, Megara, and Corinth. Corinth could draw supplies from the mountains of Achaia and from the north-west through her colonies; and Megara could probably rely on the same sources, except when she was at war with Corinth. Athens looked primarily to the north-east.

Theophrastus (q.v.), who wrote knowledgeably about trees, knew that the finest timber for ship-building came from Macedonia and Thrace. Mount Ida, the south coast of the Euxine, south Italy, and Sicily were alternative sources but the silver firs and pine of Macedonia were nearer to Athens and relations with the Macedonian kings, who exercised a royal monopoly, became important. In an alliance with Athens in the fifth century Perdiccas pledged himself by oath to allow the export of oars only to Athens. Alcibiades had the western forests in Sicily and south Italy in mind when he pressed for action against Syracuse; when her fleet was destroyed Athens depended for survival on the friendship of Archelaus the Macedonian king. Most of the timber used in temple construction at Athens also had to be imported; a decree survives praising the people of the island of Carpathos for sending a specially fine cypress for the

restoration of a temple on the Acropolis. In the Hellenistic Period forests continued to be important objectives of policy, military and diplomatic; Macedonia, Syria, Cyprus, and Cilicia held the main reserves. Cleopatra's fleet was built from forests in Cilicia, presented to her by Antony.

In Rome the timber shortage was never so acute as in Greece. The hills of Latium were well stocked with firs, pine, chestnut, and beech, and local supplies could be supplemented by timber floated down the Tiber from the forests of Etruria. When the need for ship timber arose in the third century, there were ample resources near the western coast. Timber was recognized as a useful farm crop and some towns owned woods to ensure the supply of timber for the construction and maintenance of public buildings and for the furnaces that heated water in public baths. In the Empire, as wealth increased, the Roman timber trade became more ambitious and went further afield to satisfy more sophisticated demands. Larch, whose special qualities were first discovered by Caesar, became a favourite timber for building, though it did not grow in central Italy. Under the Emperor Tiberius a large parcel of larch was shipped to Rome from the Rhaetian Alps (in the neighbourhood of the Brenner Pass). It was specially ordered by the Emperor for the restoration of the deck on the lake where mock naval battles were fought, and the tallest of the trees produced a beam more than 100 feet in length. Among exotic timbers the most valuable was the Numidian tree known to the Romans as *citrus* and to the modern trade as African Thuya. It was valued for its distinctive grain and tables made from it fetched record prices. In the Republic Rome had been mainly satisfied with native timber; under the Empire she drew on all the finest timbers from the eastern and western Mediterranean including pine from Paphlagonia, cedars from Syria and Cyprus, and even teak from India.

R. M.

TIME-RECKONING. The ancients, like all civilized peoples, were faced with a grave difficulty in the reckoning of time, apart from the incidental ones which must have confronted their earliest attempts to observe its passage accurately. For reasons of 'ancestral custom', quite as much religious as scientific or practical, they tried 'to conduct their years in accordance with the sun, their days and months in accordance with the moon' (Geminus of Rhodes, 8. 7). Now the three natural divisions of time, day, lunar month, and solar year, are incommensurables. Taking the day as 1, the lengths of the other two are approximately 29½ and 365½ respectively, but these last two figures are far from accurate, and the inaccuracy is bound to show itself in any calendar, however carefully reckoned, which tries to combine them.

2. **TIME** (χρόνος). In the Homeric Epics, the word for 'time' (χρόνος) had a very definite and limited meaning (H. Fränkel, 'Die Zeitauffassung in der frühgriechischen Literatur', *Wege und Formen frühgriechisches Denkens* (1955), 1 ff.). It is never a point of time or in time, but always a 'duration', and indeed a lengthy duration—'much time'. If a short duration is to be indicated, it has to be expressed by 'not much time'.

3. **THE DAY** (ἡμαρ, ἡμέρα, dies). Although the Babylonians divided day and night (24 hours, *νοχθήμερον* in Greek) into twelve periods (double hours, cf. Hdt. 2. 109, 3, but see J. Enoch Powell, *CR* 1940, 69 f.), the Greeks made little use of this measurement for any but purely scientific calculations till Hellenistic times (cf. **CLOCKS**).

Ordinarily, in classical times, they did not speak of hours but of 'cock-crow', 'time of full market' (i.e. mid-morning), 'noon', 'lamp-lighting', 'time of first sleep', and the like. When hours were used, they were not of fixed length, but each 1/12 of the day (or night), consequently varying with the season. Our hour is the *ὥρα ἰσημερινή*, *hora aequinoctialis*, 1/12 of the day or night at the equinox. Besides the natural reckoning of the day from dawn, it was common in Greece to reckon it officially, for calendar purposes, from sunset to sunset; the Romans reckoned from midnight.

4. **THE WEEK** was little used, save, in Hellenistic times, by believers in astrology (see **ASTROLOGY**). It is a grouping of days in accordance with the supposed governing of the first hour of each by the planet whose name it bears; for details see F. H. Colson, *The Week* (1926; not always quite accurate, but the fullest and best account in English). Strictly speaking, neither Jews nor Christians observe a week, since both officially reject astrology, but a festival (Sabbath and Sunday respectively) which occurs at intervals of seven days. The planetary week becomes important about the third century A.D., and is called *ἐβδομάς*, *septimana*. In Italy it was customary to have market-days (*nundinae*) at intervals of eight days (a *nundinum*). This might loosely be called a week, but was of very small importance for reckoning time. On calendars it was marked by a continuous series of letters, A–H, the first being the day of the *nundinae*.

5. **MONTIS** (see further **CALENDARS**) were (except as noted below) lunar, more or less accurately reckoned. They always consisted of an integral number of days, which varied slightly so that the average length approximated to 29½ days in any given calendar. It was early noticed that while 12 of these months were about equal to a (solar) year (354 or 355 days as against 365½) the difference was great enough for such a calendar to be about three months too short in eight years. Hence the practice of inserting extra months (*μήνες ἐμβόλιμοι*). Astronomers, beginning with Meton and Eudoxus (1) (qq.v.), constructed elaborate and accurate cycles (see, e.g., Geminus 8. 50), but the influence of these on the civic calendars was apparently slow and slight.

6. **THE YEAR** (ἔτος, ἐνιαυτός, *annus*) consequently was unsatisfactory, since it never exactly coincided with the solar year. As the chief industry of antiquity was agriculture, a demand existed, and was met by the above-named astronomers and others after them, for a perpetual calendar which should show the astronomical facts* and the supposed meteorological events (prevailing winds, etc.) connected with them. Examples of these are the calendar at the end of Geminus (see bibliography, *infra*), the fragments of a calendar found at Miletus in 1899 (W. Kubitschek, *Grundriss der antiken Zeitrechnung* (1928), 173), and the so-called Italian rustic calendars (ibid. 120). They are founded upon the signs of the zodiac, not on civic months. Since a movable pin often enabled the owner to note the day of the local calendar alongside the day given on the perpetual one, the name *παράπηγμα* was commonly given to such a device. But in Egypt, from very early times, there had been in use a calendar beginning with the rising of Sirius (considered as the sign of the coming rise of the Nile) which consisted of 365 days divided into 12 months having nothing to do with the moon but consisting of 30 days each, with 5 extra days (*ἐπαγόμεναι* in Greek) at the end of the year. This, of course, meant that in four years the calendar was a day wrong, and in 1,460 years (a Sothis-period, so called from the Egyptian name of Sirius) it righted itself. This

*The Greek peasant was a tolerable practical astronomer from the days of Hesiod and earlier, see, e.g., *Op.* 383, so must the Italian farmers have been.

difference was well known and its reform proposed (Decree of Canopus, 238 B.C.; see Kubitschek, 89) by the insertion of a day every fourth year. On this basis Caesar's reform was founded (see CALENDARS), and adopted by Romans and to some extent by others.

7. SEASONS. A method of dating by the natural seasons of the solar year was widespread among Greek authors: G. Husolt, *Griechische Geschichte* (1893-1904), iii. 675 ff. A. W. Gomme (*Commentary on Thucydides* iii (1956), 699 ff.) believes that Thucydides had in mind fixed dates for the beginning of his spring and winter, and W. K. Pritchett and van der Waerden (*BCH* 1961, 17 ff.) have suggested that these dates were those of Euctemon's *parapegma*: vespertinal rising of Arcturus (Mar. 6) and the setting of the Pleiades (Nov. 8). Efforts to date events in Thucydides later than these termini have proved inconclusive, but since the historian nowhere explains his system, the theory of astronomical exactitude must rely primarily on the interpretation of the passage in Thuc. 5. 20. 1-3.

8. GENEALOGIES. The most ancient sort of chronology was by genealogies. The three stages of the development have been traced by W. den Boer, *Laconian Studies* (1954). The first is linked with the name of Simonides (c. 556-468 B.C.). Its time-reckoning connects with undated lists of kings. The second phase is linked with the name of Herodotus, who, however, does not use the genealogical system to the exclusion of all others. His normal method is to reckon with three generations in the century. But he also uses a 'generation' of forty years which probably derived from a Spartan list of kings. The third phase is linked with the names of Eratosthenes (c. 275-194 B.C.) and Apollodorus (b. c. 180 B.C.). It introduces dated lists of kings, a dating made possible by the development of time-reckoning by means of the Olympiads.

9. ERAS. Ancient years, however calculated, were not numbered on any generally understood system, as with us, but merely named ('in the archonship of so-and-so', 'in the consulate of X and Y', 'in the tenth year of the reign of A', etc.), which was next to useless for chronology. This defect was felt, especially by historians, and several eras were proposed. The most familiar were the Olympiads (first celebration of Olympic games, traditionally 776 B.C., thereafter every four years), used quite commonly by chronologists from the fourth century B.C. on; the years from the foundation of Rome, A(ppo) V(rbis) C(onditae) or A(b) V(rbe) C(ondita), an event reckoned by Varro (q.v. 2) at 753 B.C. in our dating; and some important local eras, as that of the Seleucidae, from 312 B.C.; several Roman provinces had eras of their own, see Kubitschek, 76 ff. Chronographers from Eratosthenes (q.v.) to the great Christian historian Eusebius of Caesarea and his Latin adapter St. Jerome (see Rose, *Handbook of Lat. Lit.* 492) also used, for earlier dates, such events as the fall of Troy (1183 B.C., Eratosthenes) or the birth of Abraham (2016 B.C., Eusebius). Our era was introduced by the abbot Dionysius Exiguus (d. c. A.D. 540); the practice of reckoning early dates backwards from it is quite recent and a little complicated by the fact that astronomers do and historians generally do not insert a year 0 between 1 B.C. and A.D. 1.

LITERATURE: mostly cited in text. The most convenient summary of relevant facts, with good account of earlier works, is E. Bickerman, *Chronology of the Ancient World* (1968). See also Nilsson, *GGR* 15, 561 ff., 644 ff. who overstates the influence of Apollo and Delphi. Latre, *RR* 1 ff. and 36. The most important ancient author, Geminus of Rhodes, is best edited by Manitius (1898; critical text and German version). See also CALENDARS.

H. J. R.

TIMESITHEUS, GAIUS FURIUS (PW 89) SABINUS AQUILA, rose from the ranks and entered the equestrian service by way of the centurionate. His career is remarkable for its accumulation of vicarial procuratorships held

under Severus Alexander, Maximinus, and Gordian III. In A.D. 241 he was appointed Praetorian Prefect by Gordian and till his death at Nisibis in the winter of 243/4 exercised virtual control over the young Emperor.

JLS 1330, and see under GORDIAN III.

H. M. D. P.

TIMOCLES, Middle Comedy poet, late in the period, but he practised with wit and originality the *ιαμβική ιδέα* of the Old Comedy, attacking, among many others, Demosthenes and Hyperides. Almost one-half of the fragments are personal references. He won the first prize once at the Lenaean between 330 and 320 (IG ii². 2325. 158): the latest datable reference (fr. 32. 3) in his work is mention of the *γυναικονόμοι* instituted (317-307 B.C.) by Demetrius of Phaleron. Of twenty-seven known titles four denote mythological burlesques (*Ἡρώες, Κένταυρος*), two refer to characters (*Ἐπιχαιρέκακος, Πολυπράγμων*). An original formation is *Ὁρестаυτοκλειδής*, i.e. Autocleides suffering the fate of Orestes—obsessed, however, not by Furies, but by old women. Fr. 1, the strange gods of Egypt; fr. 6, consolation from Tragedy, which outdoes human woes; fr. 8, defence of the parasite's life; fr. 12, Demosthenes 'never uttered an antithesis'.

FCG iii. 590 ff.: CAF ii. 451 ff.: FAC ii. 600 ff.

W. G. W.; K. J. D.

TIMOCREON (first half of 5th c. B.C.), lyric and elegiac poet of Ialysus in Rhodes (frs. 1-3 P. — Plut. *Them.* 21). He probably took the Persian side when they occupied Rhodes, went to Susa as the guest of the Great King (Ath. 10. 415 f), engaged in controversy with Themistocles after 479 for failing to take him home, and mocked him for his failure to win favour at the Isthmus, and, apparently, for not being made general, c. 477 B.C. He also had interchanges with Simonides, who criticized his style (fr. 162 D.) and character (fr. 99 D.). He was a pentathletic victor and a great glutton (Ath. loc. cit.). He wrote *σκόλια* (fr. 5 P.; with a possible reference to his taking money from the Persians) and epigrams (fr. 6 D.; with a possible reference to Themistocles) in a mixture of colloquial and literary language.

CRITICISM. C. M. Bowra, *Greek Lyric Poetry*² (1961), 349 ff. C. M. B.

TIMOLEON (d. c. 334 B.C.), a Corinthian who liberated Greek Sicily from the domination of military dictators and Carthaginian invaders. After overthrowing the tyranny of his brother, he lived in retirement for many years until in 345 the Corinthians sent him to Sicily with a small mercenary force in response to an appeal by Syracusan aristocrats for help against Dionysius II, who had become tyrant of Syracuse once more. Timoleon had also to contend with Hicetas, an ambitious adventurer who planned to supplant Dionysius and was supported by a strong force of Carthaginians. By a mixture of bold strategy and somewhat unscrupulous diplomacy Timoleon got the better of his opponents and liberated Syracuse. He initiated a programme of political and social reconstruction at Syracuse, where dictatorial powers were conferred on him, and he also began a crusade against the tyrants ruling other cities. When in 341 the Carthaginians sent a large army to Sicily, he took the offensive and, seizing the opportunity to attack them while they were crossing the river Crimissus, gained a decisive victory. Losing the initiative when the tyrants and the Carthaginians allied against him, he was for a time in great difficulties. Eventually he made peace with Carthage and was able to crush the tyrants separately and to extend his programme of reconstruction throughout Greek Sicily. Retiring from public life when his eyesight began to fail, he passed his last years at Syracuse as its most honoured citizen.

The extravagant eulogies of Timoleon by the Sicilian

Timaeus, and perhaps the success of his own propaganda, render suspect the extant records of his career. He must, however, have been an inspiring leader and an astute negotiator. He succeeded, where Dion failed, in bringing peace to Greek Sicily and providing a basis for the revival of its prosperity.

TIMON (Τίμων) (1) of Athens, the famous misanthrope, a semi-legendary character. He seems to have lived in the time of Pericles. Aristophanes is the first to allude to him. He became known to Shakespeare through Plutarch (*Ant.* 70) and Lucian's dialogue.

Prosop. Att. 13845.

V. E.

TIMON (2) of Phlius (c. 320–230 B.C.), sceptical philosopher, follower of Pyrrho. After a period of poverty in youth, when he earned a living as a dancer, he studied in Megara with Stilpo and then in Elis with Pyrrho, and later worked as a sophist in Chalcidion. When he had enough money he went to Athens where he lived until his death.

Only fragments of his numerous writings survive. He wrote (1) *Silloi* (lampoons) in hexameters, against the dogmatic philosophers, including a dialogue between himself and Xenophanes; (2) *Ἰνδαλμοί* (Images? Fantasies?) in elegiacs; (3) tragedies, satyr-plays, *kinaidoi*; (4) prose works—*The Funeral Feast of Arcesilaus*, *On Sensations*, *Against the Physicists*; (5) *Python*—a dialogue between Pyrrho, on his way to Delphi, and someone called Python.

Fr. in H. Diels, *Posteriorum Philosophorum Fragmenta* (1901), 171 ff. V. Brochard, *Les Sceptiques grecs* (1923). D. J. F.

TIMOSTRATUS, one of the latest comic poets of Athens whose fragments survive. A man of good Athenian family, Timostratus obtained in 188 B.C. fifth place with *Αντιποικίλος*, in 183 third place with *Φιλοκίκεος* (*IG* ii². 2323, lines 141, 155). His son Antiston and grandson Poses seem also to have been comic poets (E. Preuner, *Rh. Mus.* 1894, 362 ff.).

PCG iv. 595 f.; *C&F* iii. 355 ff.

W. G. W.; W. G. A.

TIMOTHEUS (1) (c. 450–c. 360 B.C.; *Marm. Par.* 76), dithyrambic poet, of Miletus. After failures in Athens he succeeded with the *Persae*, a lyric nome, for which Euripides wrote the prologue (*Satyr. Vit. Eur.* fr. 39, col. 22) c. 419–416 B.C. Large portions of this are preserved in a papyrus of the fourth century B.C. It is an account of Salamis, in which a crude realism is combined with a grotesque imitation of the high style. It closes with the poet's claim to have revolutionized music. Though written out as prose, the *Persians* is constructed on easily distinguishable metrical principles. It is astrophic and composed of various *metra*. His works were collected in eighteen books, but few other fragments are of interest except fr. 20, in which he proclaims the newness of his art. He is said to have influenced Euripides, and parallels have been noted between the speech of the Phrygian in *Persians* 152 with that of the Phrygian in Eur. *Or.* 1365 ff. See MUSIC, § 10.

Text. Page, *Poet. Mel. Gr.* 190–18.

COMMENTARY. U. von Wilamowitz-Moellendorf, *Timotheos: Die Perser* (1903). C. M. B.

TIMOTHEUS (2), son of Canon and pupil of Isocrates. Elected *strategos* in 378 B.C., when the Second Athenian League was founded, he won many members for the League by his tour of north-west Greece in 375. Recalled in 374, he broke the peace just concluded with Sparta by restoring democratic exiles in Zacynthus, and

was given the command against Sparta in 373. Paralyzed by lack of funds, he was impeached but acquitted; to restore his fortunes he served for Persia against Egypt. Upon the fall of Callistratus in 366 he returned to power with an imperialist policy, which alienated Persia and the League; in spite of Epaminondas' naval campaign he achieved considerable success, but failed repeatedly to capture Amphipolis. Discontent among the allies, which his policy evoked, resulted in the Social War; in 356 Timotheus, Iphicrates, and Chares, sharing the command at Embata, failed to co-operate, and, impeached by Chares, he was sentenced to a fine of 100 talents, left Athens, and died in 354. A wealthy aristocrat with little sympathy for the *demoi*, he pursued an individualist and short-sighted policy with outstanding ability.

(P. Clodé, *La Politique étrangère d'Athènes 404–118 av. J.-C.* (1934). N. G. L. H.

TIMOTHEUS (3), Greek sculptor, active during the first half and middle of the fourth century B.C. He took part in two important monuments of which sculptural remains survive—the temple of Asclepius at Epidaurus and the Mausoleum at Halicarnassus. His share in the sculptures at Epidaurus is attested by the building inscription in which his name appears as having contracted to furnish *typoi* (reliefs?) and acroteria. The style of some of these extant sculptures, with their transparent draperies and massive folds, resembles that current in the late fifth century B.C. Pliny (36. 80) mentions Timotheus along with Scopas (q.v.), Bryaxis, and Leochares (q.v.) as having produced the friezes of the Mausoleum. It has not been possible, however, to attribute to him any specific slabs of these friezes with any confidence, though attempts have been made. Nor have any convincing identifications been made of the single statues—athletes, an Artemis, an Asclepius, etc.—which Pliny and Pausanias ascribed to him. G. M. A. R.

TIN, as a component of bronze, occurs very early in Mesopotamia, apparently derived from a distant source, probably Drangiana. Bronze is found sporadically in the later Early Minoan period, and regularly from Middle Minoan times; it probably reached the rest of Europe at a rather later date. Tin was smelted in Nigeria by the second century A.D., but seems not to have been used for bronze. The principal sources available to the classical world were the Erzgebirge (cf. Scymnus 493) and western Europe. Small quantities were mined in Etruria in pre-Roman times, and tin was worked near Delphi. The Phoenicians tried at times to monopolize the western sources, but by the third century Massilia established an overland route. The main Punic source was probably Galicia. Breton tin was worked at an early date, but not much in Roman times; the mines of central Gaul closed soon after the Roman conquest. Cornish tin was hardly known before the Late Bronze Age; it was worked all through the Roman period under native supervision. In Cornwall must be located the Cassiterides. They were known to Massiliots from the fifth century, but the sea-route thither from Spain was discovered by P. Crassus (q.v. 2) probably about 95 B.C. See also CASSITERIDES.

Metallic tin must have been known to alloy in exact proportions with copper; little has survived, mainly owing to oxidation, but also because it was not of great use unalloyed. Classical writers confuse tin and lead, because they had no clear idea of the atomic difference of metals. Mining was largely in placers; in Cornwall vein-mining was not started before late medieval times.

See especially Strabo 3. 175–6, Polyb. 34. 10. H. Hencken, *Archaeology of Cornwall and Scilly* (1932). W. C. Horlase, *Tin-mining in Spain Past and Present* (1897); O. Davies, *Roman Mines in Europe* (1935); *Proc. Belfast Natural History Society* 1931/2, 41; Forbes, *Stud. Anc. Technol.*, vol. ix. O. D.

TINCOMMIUS, son of Commius (q.v.), and king of the British Atrebates, c. 25 B.C.–A.D. 1. His coinage suggests that he came under Roman influence, and he may have been supported by Augustus to counterbalance growing Catuvellaunian power north of the Thames. Before A.D. 7 he had been driven into exile by his brother Eppillus and his name appears on the Monumentum Ancyranum (ch. 32).

D. F. Allen, *Archaeologia* 1944, 1 ff.; C. E. Stevens in W. F. Grimes (ed.), *Aspects of Archaeology in Britain* (1951), 332 ff.; Frère, *Britannia*, ch. iv, S. S. F.

TINGI(S) (modern *Tangier*), a seaport nearly facing Gibraltar across the Straits. It was a Phoenician settlement in the fifth century B.C. or before. It received Roman citizenship from Octavian, being detached from the client kings of Mauretania. On the provincialization of the latter under Claudius, it became the capital of the procurator of Mauretania Tingitana. It was cut off from Rusaddir (*Melilla*) by the Riff mountains, but was connected with Volubilis (q.v.) and Sala by military roads. Its importance as a naval base lasted till the Arab conquest.

L. Teutsch, *Das Stadtwesen von Nordafrika* (1962), 191 ff., 205 ff. W. N. W.; B. H. W.

TIPASA, a Roman town on the Algerian coast. A Carthaginian settlement, it was given Latin rights by Claudius and was a *colonia* before A.D. 200. Substantial defences survive from the fourth century when it was important in the control of dissident tribes in the Kabylie mountains. There are also numerous remains of Christian character, in particular the chapel of St. Salsa.

P. Cintas, *Fouilles puniques à Tipasa* (1949); J. Baradez, *Tipasa* (Algiers, 1956). B. H. W.

TIRESIAS (*Τειρεσίας*), a legendary blind Theban seer, so wise that even his ghost still has its wits (*φρένες*, cf. SOUL) and is not a mere phantom (*Odyssey* 10. 493–5). Later legends account for his wisdom and blindness chiefly thus: (a) He saw Athena bathing; since his mother was her friend, she did not cause his death, but blinded him and gave him the power of prophecy by way of compensation (Callim. *Laus. Pall.* 57 ff.). (b) He one day saw snakes coupling and struck them with his stick, whereat he became a woman; later the same thing happened again and he turned into a man. Being asked by Zeus and Hera to settle a dispute as to which sex had more pleasure of love, he decided for the female; Hera was angry and blinded him, but Zeus recompensed him by giving him long life and power of prophecy. So Hyginus, *Fab.* 75, see Rose, ad loc. His advice was sought throughout the times of the Labdacidae, and he finally died after the evacuation of Thebes when besieged by the Epigoni, from drinking of the spring Tilphussa (Apollod. 3. 84, cf. Athenaeus 41 c). H. J. R.

TIRIDATES (1) **I**, the supposed brother, partner in revolt and successor in rule of Arsaces I, founder of the Parthian Empire, is apocryphal.

Wolski, *Hist.* 1959, 222 ff.

E. W. G.

TIRIDATES (2) **II**, a pretender to the Parthian throne in revolt against Phraates IV (q.v.) shortly before 31 B.C. and temporarily successful in dislodging him. On Phraates' recovery both contestants sought the support of Octavian. In 30/29 B.C. Octavian let Tiridates stay as a refugee in Syria, retaining for himself as a hostage a son of Phraates kidnapped by Tiridates, but making no open offer to assist the latter. In 26 and 25 B.C. Tiridates carried out spring offensives as far as Babylonia with at least the connivance of Augustus; but Augustus had no further use for Tiridates after his final ejection by Phraates (by May 25 B.C.), when he made an appeal for help to

Augustus in Spain. Augustus' failure to eject Phraates through the instrumentality of Tiridates is ignored in his *Res Gestae*.

N. C. Debevoise, *A Political History of Parthia* (1938), 135 ff. E. W. G.

TIRIDATES (3) **III**, grandson of Phraates IV, was sent by Tiberius to contest the Parthian throne, with the military support of L. Vitellius, governor of Syria (Tac. *Ann.* 4. 32). Expelling Artabanus II, he was welcomed by the pro-Roman faction in the cities of Mesopotamia, and was crowned at Ctesiphon (A.D. 35); he was subsequently again driven out by Artabanus. M. S. D.

TIRIDATES (4), brother of Vologeses I (q.v.) of Parthia, who set him on the throne of Armenia (A.D. 54). He fled before the Romans and was temporarily displaced by Tigranes V (q.v.), but was reinstated by Vologeses. By a compromise with Corbulo (q.v.) Tiridates agreed to journey to Rome and receive the crown of Armenia ceremonially from Nero (A.D. 66). In c. A.D. 72 nomad Alani overran his kingdom. Tac. *Ann.* 12 ff.; Joseph. *Bj* 7. 244–51. M. S. D.

TIRO, MARCUS TULLIUS (*PIV* 52), confidential slave, secretary, and literary adviser of Cicero (q.v. 1), who freed him in 53 B.C., perhaps on his fiftieth birthday. Ailing after 51, he survived Cicero, published some of his speeches and letters and wrote a biography of him. He also wrote works on grammar (*De usu atque ratione linguae Latinae*) and miscellaneous questions (Gell. *NA* 13. 9. 1). For his system of shorthand (usually called *notae Tironianae*) see TACHYGRAPHY.

See especially Cic. *Fam.* 16.

E. B.

TIRYNS occupies a rocky hill in the Argive plain, 2½ miles north of Nauplia and 1 mile from the sea. A few neolithic fragments show that the site was early inhabited, and with the Early Bronze Age (c. 2800–2100 B.C.) it became important. A round house, perhaps that of the chief, stood on the summit with huts clustered round, and the main settlement spread in the plain below. In the Middle Bronze Age a settlement on the hill with the pottery, houses, and tombs characteristic of the age seems to have been fortified. Its inhabitants belonged to what was probably the first wave of Greek-speaking people in Greece. To this succeeded (1600–1400) in the Late Bronze Age a prince's house of which only a few fresco fragments remain. About 1400 Tiryns began to assume its present form. In the first stage a great wall was built round the south of the hill with a gate on the east. In the second stage the fortress was enlarged at a higher level created by terracing. The wall was extended to the north to include the middle part of the hill, and on the east a great gate, like the Lion Gate at Mycenae, was built. In the third stage the vaulted galleries with store chambers on the south and east were added. A bastion with a side gate was thrown out on the west and a massive wall was built round the north of the hill to protect flocks and herds and refugees. Within the south citadel arose a complex of buildings comprising an earlier and a later royal residence. The earlier palace on the east is well built though small, and is approached through a court. The west or great megaron was a noble hall entered through two courts with propylons, and the inner court contained an altar and a colonnade. It was richly decorated with frescoes, like its predecessors, and by the hearth was a place for a throne. At the side were a bathroom and chambers with upper stories. The lower town on the plain developed similarly, and Tiryns at this time was a rich and powerful State. Attempts to reconcile the plans of the palace and the two megara with the Homeric house

divided into men's and women's apartments are based on the false assumption that the two megara were contemporaneous and parts of one homogeneous structure. Like other Mycenaean centres (Mycenae, Athens) Tiryns had cause to fear attack and siege at the end of the thirteenth century, and the same preparation as at Mycenae and Athens, a fortified spring approached from within the walls, has been found at Tiryns (*BCH* 1963, 751 ff.). The palace perished by fire at the end of the Late Helladic IIIB, but Tiryns continued to be inhabited through the geometric and archaic periods, and a temple seems to have arisen on the ruins of the palace. Late Helladic IIIC sherds show continued or renewed occupation after the disaster. Tombs from sub-Mycenaean to geometric have been found south of the acropolis, one of which has produced a unique sub-Mycenaean bronze helmet (*BCH* 1958, 707). Tiryns survived into the classical period as an independent town and sent a contingent to Plataea, but was destroyed by Argos c. 470 B.C. The refugees went to Halicis (*Porto Cheli*) where remains have recently been found from the second quarter of the fifth century on into the fourth.

TISIAS of Syracuse (5th c. B.C.), an early teacher of rhetoric (q.v.), pupil of Corax (q.v.). Plato (*Phaedrus* 267 a ff.) provides evidence for his having discussed probability (εἰκός) and the power of speech to revalue things.

L. Rademacher, *Artium Scriptores* (1951), 28 ff.; G. A. Kennedy, *The Art of Persuasion in Greece* (1963), 58 ff. D. A. R.

TISSAPHERNES, satrap of the Anatolian coastal provinces from 413 B.C., after he had suppressed the revolt by Pisuthnes of Lydia. In 412, prompted by Alcibiades, he began the policy of intervention in the Peloponnesian War, though his support for Sparta was intermittent and half-hearted, his real objective being the exhaustion of both sides. The conspiracy of his brother Tentuchmes against Darius II may have been a contributory factor in Tissaphernes' relegation to Caria in 408, when Cyrus initiated a vigorous pro-Spartan policy. In 401 Cyrus began to mobilize his army, and Tissaphernes, who had previously denounced him on Artaxerxes' accession, rode post-haste to warn the Great King. At Cunaxa his cavalry charge decided the day. He was restored to his command of the coastal provinces, and had to bear the brunt of the Spartan offensive which followed. Though he diplomatically diverted most of the attacks against Pharnabazus, he was crushingly defeated by Agesilaus near Sardis in 395. The hatred of Parysatis (Artaxerxes' daughter) had long made his position insecure, and after this disaster Artaxerxes decided to remove him. He was lured by Tithraustes to Colossae and assassinated.

W. Judeich, *Kleinasiatische Studien* (1902), ch. 2. For coin portraits. C. M. Kraay, *Greek Coins* (1966), nos. 621, 622. D. E. W. W.

TITAN (Τίταν, -ήρ), one of the older gods who were before the Olympians, children of Heaven and Earth. Hesiod (*Theog.* 132 ff.) lists Oceanus, Coeus, Crius, Hyperion, Iapetus, Theia, Rhea, Themis, Mnemosyne, Phoebe, Tethys, and Kronos (q.v.). These names are an odd mixture of Greek and non-Greek, personal names and abstractions. For the battle between them and Zeus see KRONOS. The etymology of Τίτῆες is highly uncertain; Hesiod (ibid. 209) fancifully derives it from τιταίνω, to strain, and τίσις, vengeance, in allusion to their relations with their father. Later poetry often uses Titan and Titanis for Hyperion and Phoebe, Sun and Moon.

On the problem of their origin, Nilsson, *GGR* 1², 510 ff. See also ORPHISM.

H. J. R.

TITHE, δεκάτη, the tenth part of a revenue offered as thank-offering to a god; the sense is often the same as that of votive offering, ἀπαρχή (q.v.). For example, a certain Aeschines offered a statue to Athena as δεκάτη (*IG* 1², 543). Best known are the tithes which the Athenians brought to the Eleusinian goddesses and in a decree exhorted all Greeks to bring (*IG* 1², 76; *SIG* 83).

M. P. N.

TITIANUS, JULIUS (*PW* 512) (2nd c. A.D.), writer of fictitious letters of famous women (Ciceronian in style), miscellanist, and grammarian. His studies of Virgil are mentioned by Servius ad *Aen.* 10. 18. His son wrote prose fables. The elder Titianus was nicknamed 'ape of the orators' (*oratorium simia*, Sid. Apoll. *Ep.* 1. 1. 2) by his fellow *Frontoniam* (q.v.) in disapproval of his copying Cicero's epistolary style. In *Historia Augusta* (*Maximus Duo* 27. 5) he is referred to as one *qui dictus est simia temporis sui quod cuncta esset imitatus*.

Schanz-Horsus, § 136.

J. W. D., G. B. A. F.

TITINIUS (1), Latin poet; earliest known composer of *fabulae togatae* of the type called *tabernariae*, in lively popular Plautine style. He survived Terence, with whom he was classed in character-drawing, especially feminine.

FRAGMENTS. O. Ribbeck, *CRF* 133 (3rd ed. Teubner, 1897).

E. H. W.

TITINIUS (2) **CAPITO**, GNAEUS OCTAVIUS (*PW* 80), a Roman knight who after a successful army career held the post of *ab epistulis* continuously under Domitian, Nerva, and Trajan, and later became *praefectus vigilum* (*ILS* 1448). He was a friend of the Younger Pliny, whom he advised to write history and received a notable reply (*Ep.* 5. 8). A painstaking patron of literature (ibid. 8. 12), he himself wrote of the deaths of famous men; he also commemorated the traditional Republican 'martyrs' by keeping statues of Brutus, Cassius, and Cato in his house.

G. E. F. C.

TITIUS (1, *PW* 7), GAIUS (2nd c. B.C.), orator and tragic writer. The abundance of *argutiae* in his speeches is mentioned by Cicero, *Brut.* 167.

TITIUS (2, *PW* 18), MARCUS, was apparently proscribed with his father Lucius in 43 B.C. The father made his way to Sextus Pompeius; the son raised a private fleet. In 40 he was captured by Menodorus (q.v.), but spared by Sextus for his father's sake; in 39 he was restored under the terms of the Pact of Misenum. He served as a quaestor under Antony in the Parthian expedition; in 35, sent by him to Asia to apprehend Sextus, he put him to death at Miletus, perhaps on Antony's instructions; subsequently he became proconsul of Asia (35/4?). In 32 he and his maternal uncle Plancus (q.v. 1) deserted Antony for Octavian. In 31 he was *consul suffectus*, and fought in the campaign of Actium. Later he was governor of Syria (13-9 B.C.?). He has been identified with the subject of the *elogium* *ILS* 918 (see *QUIRINIUS*). His wife Paullina was a daughter of Q. Fabius Maximus (*cos. suff.* 45 B.C.); the origin of his own family is not known.

T. Corbishlev, *JRS* 1934, 43 ff.; L. R. Taylor, *JRS* 1916, 161 ff.; Syme, *Rom. Rev.*, see index, K. M. T. Atkinson, *Iud.* 1058, 315. G. W. R.; T. J. C.

TITIUS (3, *PW* 27a) **ARISTO** (c. A.D. 100), a Roman jurist, friend of the Younger Pliny, who warmly praises him (*Ep.* 1. 22; cf. 5. 3, 8. 14). He was active both as a respondent jurist and as an advocate, and he was perhaps

a member of Trajan's *consilium*, but he is not known to have held any public office (possibly because he was a freedman or descended from a freedman). His writings are known only through citations by other jurists in Justinian's *Digesta* (q.v.).

B. N.

TITUS (T. FLAVIUS (*PW* 207) VESPASIANUS), Emperor A.D. 79–81, was born 30 Sept. 39, the elder son of Vespasian (q.v.), and was educated along with the Emperor Claudius' son Britannicus (q.v.). After serving in Germany and Britain as military tribune he became quaestor (? 65), but had held no other office in the *cursus* when in 67 he accompanied his father to Judaea and was made legate of Legio XV Apollinaris. Late in 68 he was sent to bear Vespasian's congratulations to Galba (q.v. 1), but at Corinth he turned back on hearing of Galba's death; he consulted the priest at Paphos on his return journey, and brought encouraging advice to his father and Mucianus (q.v.); in all the subsequent negotiations which led to Vespasian's coup on 1 July he played a most active part. After the Flavian victory he was made consul (in absence) for 70 and given supreme command over the Jewish war. In Aug. 70 he captured Jerusalem.

His troops saluted him 'imperator', and on his way home he was crowned at Memphis during the celebrations of a new Apis. The legions at Alexandria begged him to take them with him, and at this point it is not surprising that he was accused of aiming at more power than Vespasian was prepared to concede him. But he returned alone; and though the independent triumph which the Senate had voted him was converted into a joint triumph with his father, he was quickly made a partner in Vespasian's rule. Like his brother he became *princeps iuventutis*; but unlike him he received a *tribunicia potestas* (dated from 1 July 71), became his father's colleague in all the consulates the latter subsequently held, and accumulated imperatorial salutations with his father.

He also became praetorian prefect, in succession to his brother-in-law Arrecinus Clemens. This made him the military arm of Vespasian's regime, and by his ruthlessness in suppressing disaffection he incurred unpopularity. This was enhanced by his liaison with Berenice (q.v. 4), which had begun while he was in Judaea. She came to Rome c. 75, and perhaps remained for three or four years, but before his father's death he was compelled to dismiss her. About the same time he had Eprius (q.v.) Marcellus and Caecina (q.v. 3) Alienus executed for alleged conspiracy.

At Vespasian's death on 23 June 79 he succeeded without challenge; and when Berenice returned to Rome he promptly, though reluctantly, sent her away once more. All fears which Roman society had entertained of him were soon dispersed. Affable, and possessed of remarkable good looks, he also won a reputation for generosity, some of which represented personal largess but much of it lavish expenditure from public funds. He repaired the two great disasters of his short reign, the destruction caused by Vesuvius in 79, and the plague and fire in Rome in 80; but he also completed the Colosseum and built the Baths which carry his name. It was a further source of popularity that these months saw no executions or trials for *maiestas*, and that certain informers were scourged or exiled. With his brother Domitian (q.v.), who was eventually suspected of poisoning him, relations were uneasy. But Titus' death, which occurred outside Rome on 13 Sept. 81, was almost certainly due to natural causes. He was immediately deified: a generation later he was described as 'amor ac deliciae generis humani' (Suet. *Tit.* 1).

His first wife was Arrecina Tertulla, daughter of the Emperor Gaius' praetorian prefect. On her death he married Marcia Furnilla, whose father was almost cer-

tainly a senator, and who bore his only child Julia (q.v. 5); but he divorced her c. 64.

Suet. *Tit.* (ed. G. Mooney, 1930); Dio (in Epitome) 66. J. Crook, *APPhil.* 1951, 162 ff.; G. Townend, *JRS* 1961, 54 ff.; M. Fortuna, *L'Imperatore Tito* (1955). G. E. F. C.

TITYUS, a son of Earth, whom Odysseus saw in Hades, covering nine acres of ground, while two vultures tore at his liver, as a punishment for assaulting Leto (*Od.* 11. 576–81). The seat of desire is appropriately punished. He was killed by Zeus (*Hyg. Fab.* 55), Apollo (Ap. Rhod. 1. 759 ff.), Artemis (Pind. *Pyth.* 4. 90; in Euphorion, fr. 105 Powell, she was defending herself, not her mother), or Apollo and Artemis (Apollod. 1. 23). For variants in his story, which are numerous, see Waser in Roscher, s.v.

H J. R.

TMOLUS (Τμῶλος), the deity of the Lydian mountain so named. He appears, with Midas, as judge of the contest between Apollo and Pan (Ov. *Met.* 11. 156 ff.), and as a coin-figure.

TOGA. The toga was the formal and official civilian dress of the Roman citizen, and also his shroud. The *toga praetexta* with a purple hem was worn by curule magistrates and also by boys until they received the plain *toga virilis* on reaching manhood. Mourners wore a *toga pulla* of dark grey wool. In early times the toga had been worn also by women, but later it was reserved for prostitutes and other *infames*.

The toga was a heavy, expensive garment of fine white wool which needed frequent cleaning. The shape of the material before it was draped is uncertain. Most probably it was semicircular (Dion. Hal. 3. 61), or more precisely a segment of a circle slightly less than a semicircle. The area no doubt varied according to the size, taste, importance, or self-importance of the wearer. Normal dimensions may have been a straight edge of c. 18 feet with a maximum depth of c. 7 feet.

The straight edge was folded lengthwise and placed on the left shoulder, with a third of its length falling in front of the wearer: the curved outer edge rested on the lower left arm. The rest of the straight edge was drawn across the back, under the right arm, and again over the left shoulder so as to hang behind. Correspondingly, the curved outer edge passed down the back to the right leg, and up again to the left arm and shoulder before falling down the back.

Sculptures show that towards the end of the Republic styles, at least for a time, became more elaborate. The straight edge was often passed over the right shoulder, and not under the right arm, which was thus enclosed as if in a sling. A curving, projecting pocket (*sinus*) could be formed in front. To facilitate this, the straight edge may have been replaced by a slightly curved one.

The toga was dignified, but difficult to drape and keep in place, certainly stuffy, and probably draughty. Several Emperors had to issue decrees so as to enforce its use on public occasions.

Quint. 11. 3. 137–42; Tert. *De Pallio* 5. L. Wilson, *The Roman Toga* (1924). D E L.

TOGATA (sc. *fabula*). Terence seems to have so fully exploited the resources of Greek New Comedy that new impetus was given to attempts to found a native comic drama, based on Italian resources (as Naevius had tried to do for tragedy with the *praetexta*). Hence the *togata* and the literary *Atellana* (q.v.). Three writers of this genre are known: Titinius, L. Afranius, and T. Quinctius Atta (died in Rome, 77 B.C.). The scenes of the plays seem to have been Italian towns (as with the *Atellana*): a title of Afranius is *Brundisinae*, of Titinius, *Ferentinatis*, *Setina*, and *Veliterna*. Roman names, both *gentilicia*

and *cognomina*, occur in the fragments, and some interesting differences from *palliat*a are reported: Donatus on Ter. *Eun.* 57 *concessum est in palliata poetis comicis servos dominis sapientiores fingere, quod idem in togata non fere licet*, and Quintilian (10. 1. 100) remarks on the pederastic themes in the plays of Afranius (they are more or less excluded from plays of New Comedy and *palliat*a). But, like those of *Atellana*, the dramatic motifs seem often to have been derived still from Greek New Comedy (Afranius declares his debt to Menander in prol. to *Comptalia*, quoted by Macrobi. *Sat.* 6. 1. 4: here he followed the prologue-technique invented by Terence), and some details can still be traced in the fragments (see Leo, *op. cit. infra*), including the use by Afranius of Menander's method of introducing a play by means of a divine creature or an abstract concept, so, e.g. *Remeligo* (= Goddess of Delay) or *Sapientia*. The fragments suggest that these poets made use of polymetric *cantica* and in this respect disregarded Terence and went back to the practice of Naevius, Plautus, and Caecilius.

FRAGMENTS O. Ribbeck, F. Leo, *Gesch. d. röm. Lit.* (1913), 374 ff.; W. Beare, *The Roman Stage* (1964), 128 ff. G. W. W.

TOILET. Most of the aids to beauty known today were to be found in ancient times on a lady's toilet table; and both in Greece and Rome men gave much more attention to their bodies than is usual with us. The Greeks were constantly rubbing themselves with olive-oil, and the Romans under the Empire devoted much time to massage and bathing: dandies went further and would remove the hair from every part of their body with tweezers, pitch-plaster, and depilatories.

Many specimens have been found of ancient toilet implements, such as mirrors, combs, razors, scissors, curling-tongs, hair-pins, safety-pins, nail-files, and ear-picks. Mirrors were usually made of burnished metal, for though glass was known it was seldom used. Combs were of the tooth-comb pattern, with one coarse and one fine row of teeth. Razors, made of bronze, were of various shapes, the handle often beautifully engraved. Safety-pins (*fibulae*) and brooches had many forms elaborately inlaid with enamel and metal. Ear-picks—*auriscalpia*—were in general use at Rome.

Cosmetics and perfumes were freely used. Athenian wives attached importance to white cheeks, as distinguishing them from sunburned working women; they applied white lead, and also used a rouge made from orchid. Roman ladies also had a great variety of salves, unguents, and hair-dyes, kept in a toilet box with separate compartments for powders, paints, and tooth-pastes. Several recipes for these commodities are given by Ovid in his mock-didactic poem *De medicamine faciei*, the strangest being one for a lotion 'halcyon cream', made apparently from birds' nests and guaranteed to cure spots on the face.

Greek women usually wore their hair arranged simply in braids, with a parting in the middle, drawn into a knot behind; and the same style was frequently adopted in Rome. But under the Empire a fashion arose of raising a structure of hair on the top of the head, painfully arranged by a lady's maid. Blondes were fashionable in Rome, and brunettes could either dye their hair or use the false hair which was freely imported from Germany.

Men in early Greece and Rome wore beards and allowed the hair of the skull to grow long. From the fifth century the Greeks cut the hair of their skulls short, and from the time of Alexander they shaved their chins. The Romans followed suit in the third century B.C., but from the time of Hadrian they again wore beards.

Ov. *De medicamine faciei*. Forbes, *Stud. Anc. Technol.* iii 24 f. F. A. W.

TOLOSA, town in Gallia Narbonensis, modern *Toulouse*, a typical river-plain site (of pre-Roman origin), which under Augustus completely superseded the important Halstatt-La Tène oppidum of Vieille-Toulouse. In 106 B.C. Tolosa was wantonly sacked by the consul Caepio (q.v. 1), who carried off a huge spoil. Under the Empire Tolosa possessed *ius Latini* and perhaps the title of colony (Ptolemy 2. 10. 6). Famous for literary culture, its most famous son was, however, the warrior Antonius Primus (q.v.). From 418 it was the capital of the Visigothic kingdom (*regnum Tolosanum*). Its ancient remains are scanty.

M. Labrousse, *Toulouse antique* (1970).

C. E. S.

TOMIS (*Θόμις*, *Τόμας*; Tomi; modern *Constanta*) was a Milesian colony, perhaps as early as the sixth century. It had a trade route to the Danube across the Dobruja, but until the third century it played a subordinate part to its neighbour Istria (q.v.). It was brought under Roman rule by M. Lucullus (72 B.C.), but continued to suffer from raids by the hinterland peoples until it was incorporated in the province of Moesia. Under Roman rule, if not before, it was the head of a league of neighbouring Greek cities. The poet Ovid, who was relegated to Tomis by Augustus, held rank there as *ἀγαμέμνων*.

C. M. Danoll, *PW* Suppl. ix. 1397 ff.

M. C.

TORCH-RACE, a relay race in which sacred fire was carried by competing teams from one altar to another. At Athens it formed part of the Prometheia, Hephaestea, and Panathenaea, and was extended to other cults, as that of Pan (Hdt. 6. 105). In the festival of Bendis at Piraeus it was a horse-race (Pl. *Resp.* 328 a) but for Athenians of the fifth century this was apparently a Thracian novelty. The contest probably originated in the belief that fire through use loses its purity, and that fresh fire must be periodically fetched from the altar of a fire-god. The ritual was common to many cults in all Greece and maintained its sacred character throughout antiquity.

See articles 'Lampadodromia' in *PI* and *Dai - Sag*.

F. R. W.; R. L. H.

TORQUATUS (1), TITUS MANLIUS (*PW* 57). Popular tradition and annalistic speculation made Manlius a striking embodiment of Roman virtue. He reputedly killed a gigantic Celt in a duel and despoiled him of his collar (*torques*), thereby winning the *cognomen* Torquatus (361 B.C.); the story is probably an aetiological myth invented to explain the surname Torquatus borne by a branch of the Manlii. His piety was displayed in saving his father from prosecution, and his stern justice in sentencing his son to death, while he was consul for the third time (340), as the son engaged the enemy against his father's orders. We may believe the accounts of Manlius' successful campaign as dictator against Caere (353), and against the Latins, whose subjugation, the main object of his policy, he secured by the battle of Trifanum (340).

P. T.

TORQUATUS (2), TITUS MANLIUS (*PW* 82), as consul (235 B.C.) campaigned in Sardinia and celebrated a triumph. He closed the Temple of Janus, a symbol of restored peace, on the only occasion between Numa and Augustus. Censor 231, but abdicated because *ritus creatus*. Consul II (224), he defeated the Boii, crossed the Po, and attacked the Insubres. He deprecated ransoming Roman prisoners after Cannae. Granted *imperium* in 215 he defeated a Carthaginian expeditionary force in Sardinia, celebrated games as dictator (208), and died in 203.

H. H. S.

TORTURE was applied in the Roman criminal procedure at an early time, but only to slaves to make them

confess when accused or to force the truth out of them as witnesses. The procedure was called *quaestio*; a slave's evidence was never *testimonium*. In Republican times the use of torture was fairly common, but the Emperors of the first two centuries A.D. tried to restrict it by admitting it only in cases of grave crime and when the delinquent was so near conviction, 'ut sola confessio seruorum deesse . . . uideatur'. (See the discussion in *Dig.* 48. 18.) From the time of Tiberius the application of torture extended to free persons (to witnesses in the second century), except the *honestiores* (q.v.). Stricter provisions were introduced with regard to some special crimes such as adultery and *crimen maiestatis*, where slaves could be examined under torture against their *domini*, though normally they were not allowed to give evidence against them. In post-classical times torture was extended to civil proceedings (*Cod. Theod.* 2. 27. 1. 2 a), and even Justinian with his distrust of witnesses maintained it, though with restriction to low-born and suspected individuals. A. B.

TOWNS. I. GREEK AND HELLENISTIC. Greek towns grew on a great variety of sites. Many spread around an acropolis or citadel, or on one side of it. Some occupied the top of a hill or a plateau. Maritime towns were built on peninsulas, or fanned out from a good harbour. Some important cities were the successors of Mycenaean settlements; many grew on new sites. Defensibility, commerce, and water-supply were amongst the factors which decided which of the villages of early archaic times were to grow into cities. Interesting examples of simple early towns have recently been investigated at Chios (*JHS* 1954, 163; 1955, *Arch. Rep.* 20 f.; 1956, *Arch. Rep.* 35) and Smyrna (*BSA* 1958-9, 1 ff.).

The old acropolis tended in time to become a religious centre, though still used on occasion as a fortress or refuge. Temples (q.v.) frequently occupied other dominant sites too. Small modest shrines were ubiquitous. The form of the city followed no fixed pattern. Its centre was the agora, an open space devoted to religious, political, social, and commercial life, and surrounded by shrines and public buildings. Here the assembly (see *ΕΚΚΛΕΣΙΑ*) originally met; later it found a special meeting-place (see *ΠΝΥΧ*) or used the theatre. Amongst the public buildings was the Bouleuterion (see *ΒΟΥΛΗ*, *ΠΡΥΤΑΝΙΣ*) or Council-House, which might take the form of a covered hall of moderate size, or a simple stoa. The stoa (q.v. 2) or open colonnade was a constant feature of the agora and other public places. The extensive commercial sections of the agora had a bazaar-like character.

The streets in most old towns were narrow and tortuous, with little systematic paving or drainage. Water supply depended mainly on wells and cisterns in the courtyards of the houses, and on fountain-houses in the agora and elsewhere. The houses (q.v.) had severely plain outer walls and gave little monumental character to the streets.

Increasingly from early archaic times a powerful outer wall was built, following an irregular course in search of defensible terrain. Fortified gates were placed in the line of the most important streets, and well-constructed towers were strategically inserted (see *ARCHITECTURE*).

The theatre (q.v.) was usually placed on a convenient slope, often at the foot of the acropolis. The gymnasia (q.v.) and the stadium (q.v.), needing plenty of space, were commonly out in the suburbs. The streets leading from the main gates were lined by cemeteries (see *DEAD, DISPOSAL OF*).

The foundation of numerous colonies and other new cities, often on virgin sites, gave the Greeks ample opportunity to develop more regular and systematic methods of town-planning. They adopted the rectangular or

'gridiron' system; in its Greek context this is called 'Hippodamian', after the famous fifth-century architect (see *HIPPODAMUS*), but it is increasingly clear that the use of a simple rectangular layout goes well back into archaic times (cf. *Arch. Anz.* 1964, ii. 214 ff.). Its development can be particularly associated with Ionia and especially Miletus (q.v.), but recent evidence tends to show that the method was used quite early in the West too. It was ingeniously applied, with little concession to the terrain, even on hill-slopes and ridges.

In these planned towns the streets tended to be given somewhat greater width, especially certain selected main thoroughfares, but they were still architecturally plain. Long colonnaded streets were not built till late Hellenistic times. Shrines, gymnasia, and other buildings were ingeniously incorporated, and in the process more compact and standardized forms were evolved. The stoas of the agora developed into a rectangular complex; most typically, three continuous stoas were built along three sides of the square, while an important street, with a detached stoa beyond it, occupied the fourth side. The city wall still went its own way independent of the grid.

Miletus itself, replanned with extraordinary foresight after its destruction by the Persians early in the fifth century, offers an outstanding example of the method. The excavations of Olynthus (q.v.; see also *HOUSES*) have provided a good example of the late fifth and fourth century. Priene (q.v.), replanned in the latter part of the fourth century, is a model Greek city. In the West, Agrigentum, Selinus, and Metapontum (*Rend. Linc.* 1959, 49 ff.) are noteworthy.

In the Hellenistic period the pattern was extensively and somewhat mechanically reproduced throughout the hellenized east. Dura-Europus (q.v.) is a good example. But at the same time more spectacular modes of planning were developed, notably at Pergamum (q.v.) where a series of monuments rose in terraces along a crescent-shaped ridge. Meanwhile, Athens and most of the ancient cities of Greece proper remained for the most part obstinately old-fashioned in architectural character.

R. F. W.

II. ROMAN. Roman town-planning was of mixed parentage. The dominant strain was the established Graeco-Hellenistic tradition, based on an orthogonal grid of streets and *insulae*, as already widely represented in south Italy. A secondary but powerful influence was that of military architecture, particularly in north Italy and the provinces, where so many of the new urban foundations were military colonies. Good examples of this are Aosta (2 B.C.) and Timgad (A.D. 100). If there was also an Etruscan strain, this did not come from a native Etruscan tradition (the old Etruscan cities were as formless as Rome itself) but at second-hand from Greece, through such Etruscan colonial foundations as Marzabotto (q.v.) and, presumably, Capua. Yet another formative influence was that of the land-surveyors (*agrimensores*), whence the terms *cardo* and *decumanus* for the north-south and east-west streets respectively. Compared with the earlier, Greek foundations, those of the Roman period are marked by a tendency towards more compact, centralized planning, focused upon the forum at the intersection of the two main streets; by a closer integration of street-plan and defences; and by a greater flexibility in adapting the plan to the terrain (contrast Cosa, in Etruria (273 B.C.), with Hellenistic Priene or Dura). But these are developments within a single tradition rather than major innovations. The differences between the Greek cities and those of the Roman world lay rather in the introduction of new constructional techniques, new types of building, and new amenities, such as improved water-supply and drainage, than in new principles of planning.

In Italy Pompeii, a busy market-town, and Herculaneum, a seaside residential resort, present a vivid picture of town-life still developed horizontally in the Hellenistic manner, whereas Ostia, later in date, reflects the very different conditions of Rome itself, where high land values and a developed technology (see ARCHITECTURE) led to streets with continuous blocks of houses three stories high. A notable Roman innovation in the cities of the eastern provinces was the use of streets flanked by monumental colonnaded streets (e.g. Antioch, Ephesus, Palmyra).

III. GENERAL. The fundamental distinction, in classical as at all other times, is not between Greek and Roman but between those cities which grew up spontaneously and unplanned, as did Athens and Rome, and those created *ex novo* on some specific historical occasion.

TOYS (παίγνια, ioculi). Specimens from children's tombs, and representations on Greek painted vases (in particular on small Attic red-figure jugs, which are surmised to have been presents to children on the feast of Choes) provide our knowledge of ancient toys, which did not differ essentially from modern ones. For the infant there were clappers and rattles (πλαταγή, *crepitaculum*), hinged surfaces of wood or revolving circles with bells or rings of metal, or in animal form with loose pebbles inside. *Crepundia* (γυμνάσματα) were miniature objects and charms hung around the infant's neck; in literature these often served to identify abandoned or kidnapped children. Bells (κώδων, *tintinnabulum*) served the double purpose of amusement and of averting the evil eye. For a more advanced age the doll of rag, bone, wood, or clay was the customary plaything; the limbs were often movable (νευρόσπαστα). Doll's house furniture, chairs, couches, toilet and kitchen utensils, were used as toys as well as for votive offerings; it was customary for girls on marriage and for boys on arrival at puberty to dedicate their playthings to deities. Animals, chariots and horses in wood or clay, go-carts, and whip-tops are represented in museums, while the use of the ball (σφαίρα, *pila*) and hoop (τροχός, *trochus*) is illustrated on vase-paintings, as are the swing and see-saw. Regular games were played with knucklebones (ἀσπράγγος, *talus*), dice (κύβος, *tessera*), and other pieces.

TRABEA, QUINTUS, Latin writer of *comediae palliatae*, contemporary with Caccilius; could stir the emotions, says Varro. Two fragments in O. Ribbeck, *CRF*² 31 (3rd ed. Teubner, 1897).

TRAGEDY, GREEK (Introductory). At the beginning of the fifth century B.C. tragedy at Athens formed part of the Great Dionysia, the spring festival of Dionysus Eleuthereus, probably organized some decades earlier by Pisistratus and reorganized towards the turn of the century by Cleisthenes. Three poets competed, each presenting three tragedies and one satyric play. In the former, the actors—originally one only, but Aeschylus introduced

a second very early in the century—and the chorus all presented human beings or divine beings in human form; in the latter the chorus were disguised as satyrs, mainly human in form but with characteristics of horses and goats and wearing the phallus, and the play presented parts of ancient legend which were grotesque in themselves or could easily be made so. Contests of dithyrambs, danced by fifty singers in circular formation (whereas the tragic chorus was arranged in a rectangle), were performed at the festival before the end of the century; the addition of the satyric plays to the tragedies probably took place about 500 B.C.

2. The scenes of a tragedy consisted of set speeches or dialogue as might be required; in Aeschylus dialogue is mostly between an actor and the chorus leader and, even in some of his later plays, there is little conversation between two actors. The scenes are separated by choral odes of considerable length and of high excellence as lyric poetry. This suggests that tragedy sprang from a performance which was entirely lyric, and in fact the introduction of a single actor, delivering a prologue and set speeches, is attributed, on what seems to be good authority, to Thespis (q.v.), who gave a performance at Athens about 534 B.C. and probably began the use of the iambic trimeter metre for such speeches, though the trochaic tetrameter was never entirely abandoned for dialogue. The actors and chorus in tragedy wore masks (the actor's mask is credited to Thespis, but it is generally believed that masks were a part of Dionysiac ritual from early times), and must have had some kind of σκηνή or tent to change in. The number of the chorus employed by Thespis and by Aeschylus in his early days is disputed; some scholars think that it was fifty, as in the dithyramb (Poll. 4. 110), but now that the *Supplines* with its chorus representing Danaus' fifty daughters is no longer believed to be an early play, it becomes harder to accept that the chorus numbered fifty, and the argument is weakened; others, who doubt the derivation of tragedy from dithyramb, point to the fact that the chorus in other plays consisted of twelve, or later, fifteen singers.

3. The attempt to trace back the development of tragedy before the fifth century is beset with uncertainties at every point. Phrynichus, indeed, a slightly senior contemporary of Aeschylus, seems to have written plays predominantly lyric and not unlike the early plays of Aeschylus himself. But of Thespis nothing more is certainly known than what has been stated above, though one account brings him to Athens from Icaria (in Attica), where his performances may have been connected with the autumn festival of the vintage; and some scholars, relying upon late and doubtful notices, think that these or some similar performances may have been in a grotesque affair, which, developing in different directions, gave rise to both tragedy and comedy. No ancient authority attributes satyric plays or satyr-choruses to Thespis. We hear (Poll. 4. 123) of a time 'before Thespis' when 'someone' got up on a table and answered the chorus, and Thespis may have turned this 'someone' into a regular actor, impersonating a character. A late notice (*Suda*, s.v. *Ἀρίων*) ascribes to Arion of Corinth (about 600 B.C.) the invention of the τραγικός τρόπος, i.e. probably the style or mode in music which afterwards belonged to tragedy, and a statement (Joannes Diaconus in *Hermogenem*) attributed to Solon's elegies says that Arion composed the first δράμα τῆς τραγωδίας, though these cannot be Solon's actual words. Further, Herodotus (5. 67) records that at Sicily the τραγικοί χοροὶ commemorating the sufferings of the hero Adrastus were transferred by the tyrant Cleisthenes to the worship of Dionysus, and very late sources (*Suda*, s.v. *Ἀρίων* and οὐδὲν πρὸς τὸν Διόνυσον) mention a 'tragic poet' Epigenes of Sicily, who was upbraided for introducing into the worship of Dionysus themes which

had nothing to do with the god. It may have been some such originally Dorian performance into which Thespiis imported an actor. Some scholars believe that the story of 'Thespiis' performances in Icaria was a late invention, intended to deprive the Dorians of the credit for an Athenian institution. The connexion of early tragic lyrics with Dorian people is supported by language. The language of tragedy is, in its main substance, Attic, but not only is there a considerable infusion of Epic and Ionic forms (due to a tradition from days when 'Homer' in a broad sense was the only literature), but in the lyric portions the use of α for η is probably Doric in origin. A considerable number of Doric words and forms is also to be found in the iambic, as well as in the lyric, portions of tragedy. The explanations which treat these forms as old Attic are less probable (see Pickard-Cambridge-Webster, *Dithyramb*², 111, and refs. there given). Such forms (as well as the Ionic) doubtless came naturally to a poet who was moved to express himself in language possessing greater distinction than ordinary speech. The theory of the origin of tragedy which is probably still most popular is based mainly on the literal acceptance of statements made by Aristotle (*Poet.* 3-5). According to this theory, the original lyric performance was identical with dithyramb, and its chorus was composed of satyrs, exhibiting some of the physical characteristics of goats (*τράγοι*). The actor was developed out of the leader (*ἐξάρχων*) of the dithyramb (cf. Archil. fr. 77 D.); the abandonment of the grotesque language and dancing of the satyrs coincided with the introduction of the iambic trimeter, a more serious metre than the trochaic tetrameter, and the plots, originally short, became longer. The *Suda*'s statement that Pratinas of Phlius (about 500 B.C.) was the first to compose satyric plays is explained away by supposing that the original satyr-plays of tragedies (there being at first *ex hypothesi* no difference) had been drifting too far from Dionysus and subjects connected with him, and that what Pratinas really did was to re-introduce from Phlius the old type of satyric play, which now or shortly afterwards became a pendant to three non-satyric tragedies. (The date at which tragedy on this view discarded the satyric dress for its chorus is not specified.)

4. In support of this theory are usually adduced the names *τραγωδία* and *τραγωδοί* (goat-singers), explained as referring to the goat-like satyrs, and transferred, it is supposed, to the horse-tailed satyrs of Attica; and the fact that the *Suda* ascribes to Arion the composition of literary dithyrambs and the production of satyrs speaking verse, as well as the invention of the *τραγικός τρόπος*, it being assumed that in all three points one and the same type of composition is referred to—an assumption for which there seems to be no ground. It is also the fact that in the fifth century satyric plays were always the work of the same composers as tragedies, and were generally like tragedies in structure.

5. But this theory presents great difficulties. There is no clear evidence that a dithyramb was ever danced in satyr-costume (see Webster in Pickard-Cambridge, op. cit. 34, 96), nor is there any trace of dramatic elements in dithyramb before Bacchylides (well on into the fifth century); the dithyrambic chorus was circular, the tragic rectangular. The *Suda*'s notice about Pratinas is more naturally interpreted to mean that he introduced satyric plays for the first time into a festival of non-satyric tragedies; the names 'dithyramb' and 'tragedy' or 'tragic chorus' are never interchangeable in the Classical Period, and Arion's 'tragic' song and the tragic choruses of Sicyon were probably quite distinct from dithyramb; the word *τραγωδοί*, 'goat-singers', may mean, not singers in goat-costume (a meaning inappropriate to the mainly equine satyrs of Attica), but singers competing for the

goat as a prize (such as Thespiis received), or at the sacrifice of a goat (as perhaps at Icaria, though the evidence is not very satisfactory). Possibly, therefore, Aristotle was theorizing, inferring that the more crude and primitive satyr-drama must have preceded the finer tragedy, and that both might have sprung from the dithyramb, which had come by his own day to include dramatic elements, and which was also known once to have had more riotous forms than later, so that it would not be absurd to connect it with satyr-play. It is difficult to imagine that the noble seriousness of tragedy can have grown so quickly, if at all, out of the ribald play of satyrs. It is far from certain that Aristotle possessed reliable evidence from any period before the late sixth century. On the other hand, it is strange if he invented a development of tragedy which fits so ill with the definition of tragedy in ch. 6 of the *Poetics* as fundamentally serious.

6. If it is assumed that Aristotle was guessing and that his account has no authority, then we seem to be left with the following probabilities: (1) The conditions of performance in the precinct of Dionysus at Athens and the intimate association of tragedy with the unquestionably Dionysiac satyr-play confirm the connexion between tragedy and the cult of Dionysus. It may well be relevant that Dionysus was peculiar among Greek gods in taking possession of his worshippers and that the masked actor surrenders his own personality. (2) Since the lyrical element is increasingly dominant as we trace the development of tragedy back towards its source, there is no reason to doubt that it arose, at least in part, from a purely lyric performance and that Thespiis introduced the speaking actor. The *τραγικός τρόπος* may have been connected with the dithyramb, and Arion may have been concerned in the development of both. (3) The Dionysiac element is conspicuously lacking in the subject-matter of tragedy, which, like the *τραγικός χορός* at Sicyon, was about mythical heroes. So it would make sense if a non-choral mummery in honour of the Attic Dionysus of Eleutheræ were combined with 'tragic' choruses of Peloponnesian origin, which, in part at least, were or had been non-Dionysiac, to form tragedy. But the traces of any Attic cult of the required nature are faint indeed. (For a full presentation and discussion of the evidence and of the main theories see Pickard-Cambridge-Webster, *Dithyramb*².)

7. The history of tragedy in the fifth century will mainly be found in the articles on Aeschylus, Sophocles, and Euripides (see also AGATHON, ION, IONIION). The present article deals mainly with some general aspects of tragedy, its subjects, form, production, etc.

8. Tragedy in Greece was a religious ceremony in the sense that it formed part of the festivals of Dionysus, and that it dealt with the myths which were the medium of early religious thought; but it was not an act of worship in the same way as was dithyramb, in which the chorus represented the Athenian people itself paying honour to the god, and its members remained in their own persons. The tragic chorus was always dramatic and 'in character', and from the first the action and the lyrics had most commonly no reference to Dionysus, but presented in dramatic form themes chosen freely from the whole range of epic story and floating legend, gradually settling down, as Aristotle says (*Poet.* 14) to a narrower range (largely non-Dionysiac) as it was found that the legends of certain houses furnished better material than others for dramatic treatment. If the chorus sings an ode to Dionysus, it is because the dramatic situation suggests it (as in Sophocles, *Ant.* 1115), not as an Athenian act of worship. But the tragedy of the three great poets and their contemporaries was always religious, until the closing years of the fifth century, in the sense that the interest was not simply in the action as an exciting series of events, nor simply in the study of striking characters (though both these

interests were strong), but in the meaning of the action as exemplifying the relation of man to the powers controlling the universe, and the relation of these powers to his destiny. In the choral odes, and implicitly in the action, the character of these ultimate powers is set forth, and even if (as often with Euripides) the conclusion drawn or to be inferred is a sceptical one, the spectator or reader is usually in contact with the ultimate problems of human life and world-order. (The articles on the three great tragedians will illustrate this.) At the same time, tragedy shows a growing interest in the character of human beings as such. The personages of Aeschylus, though they include some very striking individuals, tend to be types or embodiments of a principle; Sophocles devotes himself mostly to displaying the effect upon certain noble and well-marked, but not abnormal, characters, of some terrible crisis or strain; the characters of Euripides are less raised above ordinary human life; his plays are often studies in distracted or abnormal mentality; he specializes and analyses with a minuteness entirely foreign to Aeschylus and almost absent from the plays of Sophocles.

9. With the growing interest in individual character went an increasing attention to art. Aeschylus is never entirely free from the crudities of primitive drama; in Sophocles we find the perfectly balanced and controlled use of all the resources of tragedy; in Euripides an indulgence, highly skillful, but in the judgement of many critics excessive, in more sensational effects both in action and in language. The importance of the actor's art grew correspondingly, until in the fourth century Aristotle (*Rhet.* 3. 1 (1403^b33)) could say that the actors now counted for more than the poets. Where attention is concentrated on the performer there is less attention to the message; and whereas Aeschylus was a teacher and a prophet, and Sophocles always maintained the highest religious and moral earnestness, and Euripides was taken so seriously as to provoke strong antagonism, there is no reason to suppose that tragedy was so taken in the fourth century. It was simply a form of art, and perhaps not a particularly successful one; and the chorus, which had embodied the essence of the poet's teaching a century before, came to be, very often, only a singer of interludes. Aristotle does not allude to the religious interest of tragedy at all.

10. The poets were free to vary the legends which they found current, for the sake either of their moral or of dramatic art. Aeschylus made some modifications for the sake of religious truth; Euripides, for whom the legends had little religious value and were merely human inventions, himself invents freely; but it was Agathon who first composed a tragedy in which both characters and plot were entirely invented (Arist. *Poet.* 9). Very rarely a subject might be taken from contemporary or recent history: Phrynichus' *Phoenissae* and *Taking of Miletus*, Aeschylus' *Persae*, Theodectes' *Mausolus*, and Moschion's *Men of Phœae* are instances.

11. The poets might also indicate political views, though only to a subordinate extent. In Sophocles, indeed, there is little discernible allusion to contemporary issues, and he keeps wholly within the limits of his heroic plot. But in Aeschylus the contemporary reference and the moral are often unmistakable, while Euripides sometimes offers political discourses out of all proportion to their dramatic appropriateness, and alludes frequently to events and questions of his own day. Indeed, hatred of Sparta sometimes leads him to insert passages suggested as much by the contemporary as by the dramatic situation. That in all three poets there should be passages in praise of Athens is natural enough, and both Aeschylus and Euripides like to trace back to a legendary source the beginnings of some honoured institution, religious or political. The poets tend also to modify in the direction

of constitutional monarchy or democracy the legendary traditions of absolute power.

12. The presentation of tragedies at the Great Dionysia in groups of three, followed by a satyric play, was regular throughout the fifth century, though the satyric play might be replaced by a play which, if not a tragedy, was at least of a serious kind, like the *Alkestis* of Euripides, few of whose satyric plays survived till the Alexandrian age. From about the middle of the fourth century the satyric play dropped out, except for the performance of a single one at the beginning of each festival. (This is first recorded for 341 B.C. (*IG* II². 2320)) Aeschylus often presented groups of plays, trilogies or tetralogies, connected in subject; the practice was probably his invention and was little followed by other poets, but Polyphradmon composed a *Λυκούργεια*, dramatizing the story of Lycurgus, Sophocles (possibly, but not certainly) a *Τηλέφεια*, Philocles a *Πανδονίς*, and Meletus an *Ὀδipodeia*; and now and then there seems to have been a looser connexion of subject between a group of plays exhibited by Euripides, as, for instance, between the *Alexander*, *Palamedes*, and *Troades* in 415, and between the *Chrysippus*, *Oenomaus*, and *Phoemissae* about 400. It was only occasionally that the satyric play presented a lighter version of part of the same story as the preceding trilogy, as did the *Sphinx*, *Lycurgus*, and *Anymane* of Aeschylus.

13. The addition of an actor to the original chorus was attributed to Thespis (see above), and Aristotle in his brief summary (*Poet.* 4) says that Aeschylus increased the number of actors to two, diminished the part taken by the chorus, and made the dialogue predominant; Sophocles introduced a third actor and scene-painting. (Both these innovations were adopted by Aeschylus in his latest plays.) In the *Oedipus Coloneus*, written in his last years, Sophocles probably required four actors. As the importance of the actor's part increased, tragedy passed from oratorio into drama, but not completely; for the lyric element long remained an essential part, and there was never a complete presentation of the action. The critical or fatal act took place, with the rarest exceptions, off the scene or even outside the play; the dialogue and the speeches of the actors lead up to it or develop its consequences, but on the scene itself there is very little action. Exceptions will be found at the end of Aesch. *Agam.*, and in the *Supplices* and *Eumenides*; in Soph. *OC*, and Eur. *Andr.* and *Heracleidae*. Obviously the interplay of characters and motives was impossible until there were more actors than one, and on this side of dramatic art Aeschylus himself only gradually acquired the consummate skill which he shows in the *Oresteia*. The single actor could do little more than narrate or ask and answer questions. (The name *ὑποκριτής* by which he was called probably means interpreter (of the situation to the chorus), though some prefer 'answerer', which hardly fits the speaker of the prologue.)

14. In Aeschylus the chorus never loses its importance as the vehicle of his most profound reflection and the lessons which he draws from the action; when not itself the leading personage (as in the *Supplices* and *Eumenides*) it is always closely connected with the hero and his fortunes, and may take a not unimportant share in the development of the action. In Sophocles, though it takes no part in the action, it is intimately interested in it and usually attached closely to one of the leading personages, though the choral odes may lack some of the religious intensity of those of Aeschylus, and their reflections may be rather those of a wise and right-minded spectator, not deficient in relevance or appropriateness. In some plays of Euripides, on the other hand, the chorus seem to be on the spot accidentally and may even be in the way; they may be detached from the hero and the action, and their chants may at times seem to be almost

callously irrelevant; but in the *Ion* the chorus intervenes decisively. Neither in Sophocles nor in Euripides have the choral odes the magnitude which they regularly display (except in the *Prometheus*) in Aeschylus. With Agathon (according to Arist. *Poet.* 18) the chorus is said to have been reduced to the singing of interludes unconnected with the play, and this may often have happened in the fourth century. The entry of the chorus is very commonly made to the accompaniment of marching anapaests, and these with the lyric ode which follows when the chorus is in position for dancing (or the lyric or semi-lyric passage substituted for it) form the *parodos* or entrance-song. The succeeding choral odes are termed *stasima*; but there is a form of lyric dialogue between the chorus and a principal actor, the *κομμός*, which often takes the place of a *stasimon* and probably reproduces a traditional form of lamentation such as is recorded in Homer (e.g. *Il.* 18. 49 ff., 24. 720 ff.), though it is not, in tragedy, confined to lamentations. The *parodos* is regularly preceded (except in two plays of Aeschylus) by a speech or a scene forming a prologue, and after the *parodos* the normal structure may be said to be a regular alternation of *episodes* or Acts (in which the actors take the main part, though the chorus-leader may join in dialogue or make brief comments on the speeches) and *stasima*. The number of *episodes* and *stasima* may be as small as three of each or as many as five or six, according to the view taken of the composition of the particular play. But the limits of variation in this typical structure are very wide. In Aeschylus in particular there are frequently scenes which are mainly lyric, with brief speeches by an actor or snatches of dialogue between the lyrics, the whole sometimes forming a more or less (though not completely) symmetrical structure of the type known as epirrhematic (lyrics and *epirrhemata* of speech or dialogue), and in most plays of Sophocles and several of Euripides there are similar reminiscences of what may have been an original epirrhematic form. This form is also not rare in the *κομμός*. Again, an *episodion* (particularly if long) may be broken up by the insertion of lyrics or anapaests, or (more rarely) the strophe and antistrophe of a choral ode may be separated and interlaced with the parts of an *episodion*. The structure of some plays of Euripides (e.g. the *Hippolytus*, *Hercules Furens*, and *Troades*) is in parts very free, though the normal alternation of *episodes* and *stasima* is always observed in considerable parts of the play. Rarely in Aeschylus or Sophocles, much more commonly in Euripides, an anapaestic or lyric monody by one of the actors may be introduced, and in such monodies (and more rarely in choral lyrics), the regular antistrophic form of composition (in strophe and antistrophe, with or without epode) may be abandoned for free lyrics (*μέλος ἀπολελυμένον*) in which the music as well as the words was highly emotional (see EURIPIDES). Scholars differ as to the extent to which the choral lyrics written continuously in our manuscripts were divided up, particularly at moments of excitement or uncertainty, between several members of the chorus; but there was certainly the possibility of expressing conflicting views through the two halves of the chorus. In some plays there was a secondary chorus (for instance in the *Suppliants* and *Eumenides* of Aeschylus, the *Hippolytus* of Euripides and some lost plays), which might play a not unimportant part (see Lammers, *Die Doppel- und Halb-Chöre in der antiken Tragödie*, 1931). The beginning and end of an *episodion*, or the entrance of a character, were often marked, particularly in Aeschylus, by a passage in anapaestic dimeters. The play concluded with a final scene (*exodos*) very variable in structure; but there was never a great choral finale, like that of a modern oratorio; the chorus at most utter a few quiet words.

15. It is certain that the several metres used by the poets possessed different emotional values, though they can no longer be fully appreciated. In dialogue the trochaic tetrameter usually implies greater excitement than the iambic trimeter in which dialogue and set speeches are mainly composed. The anapaestic dimeter is used either in marching (and in similar movements at the beginning and end of a scene), or, with less strict metrical rules, in lamentation; in the latter case, and possibly in the former, the words were sung. Hexameter passages are very rare; there is a remarkable lament in elegiacs in Euripides' *Andromache*. Of purely lyric metres, the dochmiac expresses the greatest emotional excitement or distress.

16. The plot of an ancient tragedy, partly because it was shorter, displays far less variety than a play of Shakespeare, and Aristotle regards as the ideal plot one in which each step arises out of what precedes it as its necessary or probable consequence, and everything irrelevant to the main causal sequence is excluded, though the poet's skill is shown in so arranging the sequence that pity, fear, and amazement are aroused in the highest degree. So he prefers plots in which the crisis is a *περίπτεσις*, in which the action brings about just the reverse of what the agent expects, or an *ἀναγνώρισμός*, the revelation at the critical moment of a close relationship, unsuspected until some dreadful deed was done or about to be done, or events had reached an impasse. (Many forms of recognition are classified in *Poetics* 16.) Best of all is a plot in which *περίπτεσις* and *ἀναγνώρισμός* are combined. It is noteworthy that Aeschylus, whom Aristotle almost leaves out of account, seems to have made little use of either.

17. The fact that the chorus was normally present throughout the action imposed certain conditions upon tragedy from which the modern dramatist is free. The action must take place out of doors, and change of place is very rare, though it occurs, e.g., in Aeschylus' *Eumenides* and Sophocles' *Ajax*, the chorus having been sent away for sufficient reasons; interiors of houses, otherwise invisible, may be displayed by means of the *ἐκκύκλημα* or the throwing open of doors. It might be expected that the constant presence of the chorus would also require that the action should be continuous in time; but in fact this so-called 'Unity of Time' was not strictly observed. Aristotle (*Poet.* 5) notes that it was the usual practice to represent (in a play lasting up to 3 hours) events which could fall within about 24 hours, so that considerable intervals of time might be supposed to elapse during a choral ode, and if usually the intervals were not long enough to cause any trouble with audiences accustomed to the convention, they might if required be much longer, as in Aeschylus' *Agamemnon* and *Eumenides*; there is great compression of the events happening off the stage in Sophocles' *Trachiniae*, Euripides' *Andromache* and *Suppliants*, and in some other plays; the choral ode separated the scenes as effectively as a modern curtain, and less abruptly. In a number of plays, all, of course, acted in broad daylight, the action is supposed to take place at early dawn or even at night. There is no reason to suppose that a Greek audience was more troubled by this than an Elizabethan.

18. Tragedy in Athens was probably performed at first in a circular orchestra in the precinct of Dionysus with no fixed background, except possibly the tent or shelter in which the actors dressed. In the earliest plays of Aeschylus all the scenery that is needed is a raised structure on the far side of the orchestra from the audience, to serve in the *Persae* as the Tomb of Darius; in the *Septem* as an altar, with statues of gods; in the *Suppliants* as a stepped altar, with the statues of a number of gods grouped round behind it; and in all three plays the

plain background (probably the side of the actors' *σκήνη*) could represent whatever the play required—the Persian council chamber (*Pers.* 140–1), possibly the palace of Eteocles (or any building on the Theban acropolis) in the *Septem*, the wall of Artemis' sacred precinct (*Supp.* 144–6). There can have been no raised stage, as is shown by the movements of the chorus, and the orchestra must have been large enough to accommodate considerable crowds. It is probable, but not certain, that a few stones still remain to mark the position of this early orchestra. By the date of the *Oresteia* Aeschylus had evidently adopted the background representing a palace or temple-front with a practicable roof, and this remained the normal setting of tragedy to the end of the classical period. In the *Ajax* of Sophocles the background represents the tent of Ajax, though there are difficult scenic problems connected with the play; special scenery must have been arranged for the *Philoctetes* and *Oedipus Coloneus*, Sophocles' two last plays, and stagecraft had doubtless developed considerably by the end of the century. In the satyric *Ichneutae* a very simply decorated background may have represented the *χλωρός ὕλῳδης πάγος*, with the entrance to Cyllene's Cave, and the *Cyclops* of Euripides, with the cave of Polyphemus, may have been somewhat similarly staged. Possibly there was a satyr-play set which was used also for tragedies of which the scene was the country. The normal façade suffices for most plays of Euripides, with additions or modifications when required, e.g. in the *Electra*, in which the front is that of a peasant's cottage, and in the *Andromache*, in which the shrine of Thetis as well as the palace of Neoptolemus was required. In four plays the scene was laid before a temple (*Heracleidae*, *Supplices*, *Ion*, *Iphigenia in Tauris*), in front of which in the *Heracleidae* must have been a large stepped altar, while the *Iphigenia* and probably the *Ion* need a portico. In other plays the background consists of one or more tents.

It is generally agreed that there was no high stage until after the great period of Greek Tragedy was ended. The action frequently requires that there shall be easy contact between players and chorus, and none of the remains suggest foundations for a stone platform at this date. On the other hand, a low wooden stage would present no obstacle to movement and would leave no visible remains. The stage building could hardly have risen direct from the level of the orchestra, and we may suppose one or more steps of which the top level must have been large enough to take the *ἐκκύκλημα*, and it may have been extended to cover an appreciable area in front of the back-scene. In the fourth century and subsequently theatres were constructed in many parts of Greece and Asia Minor, and the loftier stage may have been introduced in different places at different times, but probably not before the second century B.C.

19. The Athenian poets made use of various somewhat crude mechanical devices, the *μηχανή* to display actors (usually gods) in the air, the *ἐκκύκλημα* to reveal the interior of a house or temple, and others; it is often impossible to tell whether a deity was hoisted in on the *μηχανή* or stood on the *θεολογείον*, a high platform on or near the roof. Probably Aeschylus experimented freely; Sophocles used the *μηχανή* little if at all; Euripides certainly used the *μηχανή* or *θεολογείον* in many plays, though perhaps he employed the *ἐκκύκλημα* less often than is sometimes supposed.

20. *Tragedy at the City Dionysia*. Immediately after his election soon after midsummer the Archon Eponymus appointed the three *choregoi* for the tragic poets (see CHOREGIA); it is not known when he 'gave a chorus' to the three poets whom he selected. It is inferred from Plato (*Leg.* 817 d) that the aspiring poets read their plays to the Archon, who on one occasion refused a chorus to

Sophocles (Cratinus, fr. 15). The actor was originally the poet himself; when a second actor was introduced the poet supplied him and, if he did not perform himself, the protagonist as well. The next development was that the State supplied a protagonist to each poet, and the protagonist supplied the subordinate actors. This may have coincided with the introduction of prizes for actors in 449 B.C. Finally, in the mid fourth century the acting talent was shared equally and each protagonist performed in one tragedy of each poet.

The festival took the form of a contest with prizes, and great pains were taken to ensure a fair verdict. Names of judges from each of the ten tribes were sealed in an urn and one name drawn for each tribe on the day of the contest. At the end the judges each produced an order of merit, but only five of the lists were used to determine the verdict (*Isoc.* 17. 33–34, *Lys.* 4. 3). According to Plato the decisions of the judges were determined mainly by the applause (*Leg.* 650 a, 700 c). The victorious poet was crowned with a wreath of ivy, but there were probably money prizes as well. At a dithyrambic contest at the Piraeus established in the fourth century the prizes were 10, 8, and 6 minae.

21. *Tragedy at the Lenaea and Rural Dionysia*. The arrangements at the Lenaea were similar except that the Archon Basileus was in charge, and metics could take part in the performance. Tragedy was introduced c. 432; in 419 and 418 two poets competed, each with two tragedies (no satyric play) (*IG* ii². 2319); an Agathon won the victory in 416 (*Ath.* 5. 217 a). There are many records of Lenaeian tragedy for the fourth century (*IG* ii². 2325; *Diod. Sic.* 15. 74; *Plut. X Orat.* 839 d) and among the victors named are Dionysius of Syracuse, Aphareus, Theodectes, and Astydamos. At the Rural Dionysia there were frequent performances of tragedy, which may have helped to familiarize the inhabitants of Attica with the great masterpieces. The festivals at the Piraeus and at Salamis seem to have been of special importance. We hear also of festivals at Collytus, Eleusis, and Icaria, and an inscription from Aixone records the exhibition of tragedies (including Sophocles' *Τηλέφεια*) and comedies there (see A. W. Pickard-Cambridge, *Dramatic Festivals of Athens*², 45 ff., and Powell and Barber, *New Chapters* iii. 69 ff.).

22. *Later Tragedy*. In the century after his death the influence of Euripides on the drama was probably stronger than it was in his lifetime, and a certain inferiority of contemporary writers to the great three of the fifth century seems to have been acknowledged: old plays were sometimes performed (*IG* ii². 2318, Wilhelm, 23), and from about 341 B.C. one such play was regularly exhibited at the beginning of the festival after the single satyric play (*IG* ii². 2320). Dramatic festivals now came to be held all over the Greek world and theatres sprang up everywhere, though we have little evidence as to the plays presented. Aeschines acted in the *Oenomaus* and *Antigone* of Sophocles, which Demosthenes (18. 180, 19. 246) speaks of as often exhibited. The extant *Rhesus*, ascribed to Euripides, is possibly a fourth-century play, in which some of the characteristic idioms of all three of the great tragedians are imitated; but if not strong in character-drawing, it is a good acting play with an impressive final scene. The century was more famous for great actors than great poets (see above); but the reputation of Theodectes, Astydamos, and others must have had some foundation. Apart from the historical plays mentioned above, mythological subjects unknown to the fifth century were sometimes chosen, such as the stories of Adonis and of Leda. There may have been experiments in form, such as the *Centaur* of Chaeremon (q.v.), and Chaeremon and others either wrote to be read, not acted, or at least are regarded by Aristotle as better fitted

for reading (*ἀναγνώστικοι*), being characterized by a vivid descriptive style (*γραφικὴ λέξις*, as opposed to *ἀγωνιστικὴ*) (Arist. *Rh.* 3. 12 (1413^b13)). The fact that several of the poets of the century were rhetoricians as well as (or more than) poets may be connected with this. In the third century, when Alexandria was the chief literary centre of the world, we hear of the *Pleiad* of seven tragic poets at the court of Ptolemy Philadelphus (285–247 B.C.); five of these were Homerus, Lycophron (2), Philicus, Sositeus, and Alexander (8) Aetolus (qq.v.); for the remaining two places various names are given. Over 60 names of tragic poets of the Hellenistic period are preserved; the titles of their plays suggest that they often took subjects seldom, if at all, treated in the classical period.

23. In the fourth and third centuries satyric plays were sometimes composed which were more like comedies in their topical and personal allusions. (See PYTHON, LYCOPHRON 2, SOSITEUS.) There seems to have been some revival of this form of composition under the influence of Sositeus, and it did not die out entirely, at least outside Athens, before the Christian era.

24. It appears that new tragedies were occasionally composed down to the second century A.D., but not later (see Haigh, *Tragic Drama*, 444).

TRAGICOCOMOEDIA (*τραγικοκωμῆδία*), a play blending tragic and comic elements (Plaut. *Amph.* 50–63).

TRAJAN (MARCUS ULPIUS TRAIANUS), Roman Emperor A.D. 98–117, was son of M. Ulpian (q.v.) Traianus and a Spanish mother. Born at Italica in Baetica in 53 (less probably 56), he served his vigintivirate c. 70, and spent the next ten years as military tribune, accompanying his father to Syria c. 75; he was subsequently quaestor and (before 86) praetor. During a legionary command in Spain, he was called to counter the revolt of Saturninus (q.v. 3) in Upper Germany c. 88; he was *cos. I ord.* in 91. Governor of Upper Germany in 97, he there learned of his adoption by Nerva (q.v. 1). The choice reflected Nerva's need to placate the Praetorians and legions. Trajan was Spanish born, his family was 'new'; he had seen little of Rome; and Nerva had collateral kinsmen. But Trajan was an experienced soldier, respected but popular as a general, and probably possessing influence at Rome (see SURA).

After Nerva's death on 27 or 28 Jan. 98, Trajan, *cos. II ord.* with him since 1 Jan., was unwilling to hasten to Rome or to stress his Nervan connexion, which he honoured but never emphasized. He preferred to inspect and organize the Rhine and Danube frontiers. This, with

his discharge or execution of the mutinous Praetorians (Dio. 68. 5. 4; see NERVA 1), and his halving of the normal donative, showed his capacity to deal firmly with the troops. Senatorial privileges were at once confirmed. Early in 99 he returned to Rome, amid general welcome, and in 100 held his third consulship (refused in 99; others in 101, 103, 112). Pliny's (q.v. 2) *Panegyric*, delivered in that year, elaborated on his excellent character. Popular with the army, affable to senators, protector of the people, he was *princeps*, not *dominus*; a natural leader, he did not abuse his powers. Personally modest and simple like his wife Plotina (q.v.), he nevertheless insisted on traditional forms.

His social and financial policy, however, was the reverse of reactionary. *Congiarium* (presumably of 75 *denarii* a head) were given in 99 and 102. Free distributions of corn continued, with more recipients, and the corn supply received special attention. The system of *alimenta* (q.v.) was probably initiated by him rather than by Nerva (q.v. 1); accession-gifts were remitted; the scope of the inheritance tax was narrowed; provincial burdens were lightened. There was an ever-increasing programme of public works; at first mainly repairs, supervision, and sundry road-building, but after 107 new building increased; this (with the vast *congiarium* paid in 107 of 500 *denarii* a head) was doubtless financed by the treasure won in the Second Dacian War (5 million pounds of gold and twice as much of silver; the figures are not easily disproved). New baths, the Aqua Traiana, the Naumachia, the magnificent Forum Traiani (q.v.), and new roads and bridges, at home and abroad, were constructed after 107, when there were also sumptuous games celebrating the Dacian conquest.

For Trajan's Dacian and Parthian wars there was justification. Domitian's arrangement with Decebalus (q.v.) rendered the Danube and Moesia unsafe. Trajan left Rome in 101, crossed the Danube at Lederata and marched by way of Bersovia and Aizis (Prisc. *Inst.* 6. 13) to Tibiscum, to be joined perhaps by a parallel column proceeding via Tsierna (cf. *ILS* 5863) and the Teregoia Keys pass. At Tapae he fought an apparently indecisive battle, and retired to winter on the Danube. In 102 he advanced up the Aluta valley to the Red Tower pass, and, helped by Lusius (q.v.) Quietus, finally forced the surrender of Decebalus and of his capital Sarmizegethusa. Trajan returned to Rome to claim his triumph and the title *Dacicus*. The peace was short; by 105 Decebalus had attacked the Iazyges and besieged the Roman garrisons left in Dacia. Trajan, proceeding through Illyricum to Drobetae, relieved the garrisons. In 106 he crossed Apollodorus' (q.v. 7) great new bridge at Drobetae, recaptured Sarmizegethusa, and drove Decebalus to suicide. Dacia was annexed as a province, with its capital at Sarmizegethusa, now a colony. The gold- and salt-mines were quickly opened; one legion, XIII Gemina, soon sufficed as a garrison, with *auxilia*. Dacia thus became a bastion protecting the lower Danube. Monuments and a town called Tropaeum Traiani at Adamklissi (q.v.) commemorated Trajan's triumph.

In Numidia Roman occupation was quietly strengthened by the founding of Thamugadi and Lambaesis (qq.v.). In the East, too, Trajan began modestly in 105–6 with the annexation of Arabia Petraea or Nabataea (q.v.) by Palma (q.v.); thus the Flavian eastern frontier was rounded off. But Parthia was still a menace, and when, after 110, its king Osroës dethroned Axidares, Rome's Parthian vassal in Armenia, Trajan set out in Oct. 113, probably intending to annex Armenia. He advanced to Elegeia; Armenia fell easily into his hands in 114 and was incorporated with Cappadocia and Lesser Armenia. Trajan (now officially *Optimus*), perhaps elated by effortless conquest, moved south into Upper Mesopotamia

to take Nisibis and (through Lusius Quietus) Singara. Coins proclaimed *Armenia et Mesopotamia in potestatem p. R. redactae*. In 115 he crossed and descended the Tigris, and captured Ctesiphon, the Parthian capital, while a parallel force descended the Euphrates. Winter found him (now *Parthicus*) at the Tigris mouth. With Mesopotamia and its valuable trade-routes captured, consolidation and organization became essential. But in 116 southern Mesopotamia revolted, while Parthian forces successfully attacked Trajan's base-lines in Armenia, Adiabene, and northern Mesopotamia. Trajan suppressed the revolt, making Parthamaspates client-king at Ctesiphon (cf. on coins, *Rex Parthis datus*). Lusius Quietus repelled attacks in the north. But the Empire was restless; since 115 Jews had been in savage revolt in Cyrene, Egypt, Cyprus, and the Levant; Trajan himself was infirm. Leaving his new and precarious conquests, he turned homeward in 117, but died at Selinus in Cilicia c. 8 Aug. (see HADRIAN). While the Dacian wars had brought solid gain, the expense of the Parthian campaigns was out of all proportion to their material advantages; so much so that his judgement may have been warped by delusive megalomania.

Trajan's administration was economical and strict, but humane and progressive. Provincial governors, lax under Nerva, were now well chosen; provincial and local finances, often unsound, were entrusted to special administrators, such as Pliny (q.v. 2) in Bithynia and Maximus (q.v. 1) in Achaia, and to local *curatores* (q.v.). *Equites* continued to replace freedmen in the Civil Service; more provincials—eastern as well as western—were made senators. But, as Pliny's correspondence shows, Trajan personally directed the administration and discouraged local initiative on the part of governors or provincials. His rulings on problems presented to him by Pliny, notably that on the Christians (*Ep.* 10. 97), illustrate the combination of firmness and humanity which also characterizes such of his general legislation as is preserved. Trajan was fully conscious of his imperial mission to secure *Felicitas, Securitas, Aequitas, Iustitia*—in short, *Salus Generis Humani*. The Principate was a burden laid by heaven upon an earthly vicegerent (cf. Pliny, *Pan.* 80. 3), the servant of mankind, a public exemplar. The title *Optimus*, used unofficially as early as 100, emphasized by the great *Optimo Principi* coin-series of 103 onwards, and official from 114, rehabilitated the Principate in the mystical aura (second only to that of Jupiter *Optimus Maximus*) originally enjoyed by Augustus but since dissipated.

Trajan's ashes were deposited in the base of the column in his Forum. His consecration was no mere compliment; in the Late Empire it is reported by Eutropius (8. 5. 3) that the Senate acclaimed Emperors as *felicio Augusto, melior Traiano*.

ANCIENT SOURCES. *Literary*: Dio Cass. bk. 68; Pliny, *Pan.* (ed. M. Durré, 1938) and *Epp.* esp. bk. 10. One sentence of Trajan's *Dacian Commentaries* is preserved in Priscian, *Inst. Gramm.* 6. 13. Critique of sources, A. Passerini, *Il regno di T.* (1956).

TRALLES (Τράλλεις), a city sometimes attributed to Lydia, sometimes to Caria, on a strong position on the north side of the richest section of the Maeander valley; its wealth and commercial advantages are inherited by the modern Aydın. First mentioned by Xenophon (*Hell.* 3. 2. 19), it belonged to the Hecatomnids in the mid fourth century and was an important city in the Hellenistic period (being called Seleucia while under the kings of Syria before 188 B.C.) it was restored by Augustus after an earthquake and given the name Caesarea. Its organization and cult are relatively well known from numerous coins and inscriptions, Zeus Larasios being the principal deity. Its Church received a Letter from Ignatius.

TRANSMIGRATION. Although the belief that the soul after the death of the body passes into some other corporeal substance is widespread, cogent evidence is lacking that it existed in Greece otherwise than as a philosophical tenet or theological doctrine of non-popular origin. There is even less trace of it in Italy. Pherecydes of Syros is the earliest to whom the theory is attributed (*Cic. Tusc. Disp.* 1. 38). It was certainly taught by the Pythagoreans and regarded as one of their most characteristic dogmas, e.g. *Hor. Carm.* i. 28. 10, where see commentators; cf. Empedocles, 375, *Pind. Ol.* 2. 56 ff. It is also Orphic, as Pindar, fr. 127 Bowra. Hence opinions as to its ultimate origin must vary with the theories held as to the sources of these systems. From one or both of them it passes into Platonism (e.g. *Pl. Resp.* 10. 614 d ff.), and so, e.g., to the mixed eschatology of Verg. *Aen.* 6. 713 ff. Its existence outside the then civilized world was remarked, e.g., among the Druids (*Caes. BGall.* 6. 14. 5; *Luc.* 1. 454 ff.).

Nilsen, *GRG* i. 691 ff.

H. J. R., H. W. P.

TRAPEZUS, a colony of Sinope (q.v.), traditionally founded in 756 B.C. as a trading-post on the south-east coast of the Euxine. Its mediocre harbour and inhospitable neighbours retarded its development, so that in 399 it was still a small town tributary to Sinope. It formed part of the kingdoms of Mithridates VI, Deiotarus I (qq.v.), and the line of Polemon, and grew steadily in importance in the early Empire, since it was the nearest port to the Armenian frontier. It became a free city in A.D. 64, when Eastern Pontus was annexed, and received harbour works from Hadrian. Its prosperity was destroyed when it was sacked by the Goths in 259, although it remained a garrison town of some importance.

F. Cumont, *Studia Pontica* ii (1906), 362 ff.; Jones, *Cities E. Rom. Prov.*; *Magie, Rom. Rule Asia Min.*, see index. T. R. S. B.

TRASIMENUS LACUS, the largest lake in Etruria, where Hannibal ambushed and destroyed the consul Flaminius (q.v.) and his army (217 B.C.). It is not a water-filled volcanic crater, but a shallow depression amid olive-covered hills with artificial *emissaria*. The Roman disaster probably occurred at its northern end. E. T. S.

TRAVEL. From the very earliest times the Greeks were great travellers by sea. But travel was not undertaken for

pleasure. Indeed, it was strenuous and dangerous, in view of the nature of ancient ships and the constant risk of meeting with pirates (see SHIPS, PIRACY). Most sailors were either pirates themselves, or merchants and their crews, running the risk for the sake of large profits. Others were emigrants travelling to new homes. In all cases, sailing was a means of making a living or searching for a place where a living could be made (see COMMERCE, COLONIZATION). These men, though they often reached distant countries, never ventured far inland. Travel by land was, in fact, considerably more difficult and dangerous, with means of conveyance, supplies, and safety posing major problems. In most parts of the world, travel by land was possible only in large and well-protected caravans, and was confined to long-established routes (often following river valleys), where traders were known to be welcome. Widely travelled men, like Thales and Solon, generally had a commercial background.

The Persian Empire, establishing a system of policed roads with staging-posts, opened up the possibility of land travel even to distant parts, and men like Hecataeus and Herodotus took advantage of the opportunity, travelling partly from curiosity and partly for pleasure: they are perhaps the first tourists. In fifth- and fourth-century Greece, travel began to be taken for granted. There was much coming and going—even as far as the Persian court—of diplomatic missions; mercenaries travelled freely; and ordinary citizens (e.g. of Athens) saw much service in distant parts. The great festivals attracted large crowds from wherever Greeks lived. After Alexander, in the far-flung and fairly closely-knit Hellenistic world, travel, even over long distances, became still more common. Artists and athletes were now added to those who regarded it as a normal part of their lives, and educated men were expected to travel widely, both to see famous men and places and to study at recognized centres of learning, or to work, at least for a while, at Alexandria or Athens. Even the poor could travel more widely than ever as mercenaries, and an occasional trip to a famous sanctuary or festival must have been within the reach of most Greeks, to judge by the large-scale preparations made at such places for their reception and entertainment. Travel had become much safer and a little more comfortable. Important families had far-flung networks of guest-friends, and for ordinary people inns (of varying quality) could easily be found (see CARRIAGES, INNS).

Roman customs easily fitted into those developed in the Hellenistic world, and Hellenistic developments were simply taken much further under Roman rule. From the third century B.C. Italian businessmen had begun to appear all over the Mediterranean; and Roman aristocrats soon began to visit famous centres of art, learning, and religion, when they went out to fight Rome's wars or govern her provinces. They rarely returned without substantial souvenirs, acquired by purchase or less legitimate means. Gradually—and especially after the coming of the Empire—both the need and the opportunities for travel multiplied further. Commerce and administration now embraced the known civilized world: many men had frequent business at provincial capitals and in Rome itself. When an Emperor appeared in a province, immense crowds would flock to see him. For travel on official business the *cursus publicus* (see POSTAL SERVICE) provided efficient transport. But for everyone there was a network of good roads, with troops stationed on them to keep them safe, and the safety of the seas was guaranteed by the imperial fleets. A regular tourist industry on quite a modern scale seems to have developed in times of peace and prosperity. Inns, mules, and carriages, under legal regulation, were available in all civilized places: means of conveyance could be hired in one city and left at the gate of the next. While travel for serious study, as well as

exploration and trade even beyond the frontiers, continued and flourished, travel for pleasure became part of the well-to-do pattern of life. At the more famous sites guides and guide-books specially written for the tourist could be obtained, and the souvenir and art-reproduction trade became an important industry. Hadrian's villa at Tivoli is only an extreme example of the influence of travel on upper-class life. Travel—especially to famous spas and places with special climatic features—was also prescribed for health, as medical works attest. Even at lower social levels, the army made men travel widely, and the names of Roman soldiers are engraved on the pyramids.

Even in Roman times, though, safety and comfort never reached modern standards, and such standards were probably not even thought attainable. The ancients never knew sprung carriages, and useless luxury seems to have taken the place of comfort (see CARRIAGES). Travel was always very slow. Except in the Postal Service (q.v.) and by private couriers (see TABLETARI), 40 Roman miles seems to have been a very good day's journey at the best.

The troubles of the third century brought this fully developed tourism to an end, as prosperity declined and the roads became unsafe again. But as long as the Empire lasted, the upper class, at least, remained ready and accustomed to travel.

L. Friedländer, *Roman Life and Manners* (E.T. 1911), i, chs. 6-7; Cary-Warrington, *Explorers, Discoverers, &c.* (with cross-references), i, chs. 1-11.

TREBATIUS (PW 7) TESTA, GAIUS, a Roman jurist, younger contemporary and protégé of Cicero, who dedicated his *Topica* to him. Recommended by Cicero to Caesar as legal adviser, he enjoyed his favour, and later that of Augustus (cf. also Hor. *Serm.* 2. 1. 74 ff.). His writings are known to have included works *de religionibus* and *de iure civili*. No excerpts survive, but his opinions are frequently cited by subsequent jurists. He was the teacher of Labeo (q.v. 1), who regarded him highly, and his reputation rested partly on this fact, but he was evidently an independent and constructive jurist.

A B ; B N.

TREBIUS NIGER (date doubtful: perhaps 1st c. A.D., see Cichorius, *Röm. Stud.*) is several times quoted on points in natural history by Pliny (e.g. 9. 80; 89; 93; 10. 40; 32. 15).

TREBONIANUS GALLUS, GAIUS VIBIUS (PW 58), of Perusia (Emperor A.D. 251-3), was proclaimed Emperor by the army in Moesia, of which he was *legatus*, after Decius' death in battle against the Goths near Abrittus. An uneasy peace was arranged with the invaders. In 253 the Persians launched an attack on Syria, while the Goths again raided Thrace. The latter attack was successfully resisted by the legate of Moesia, Aemilianus (q.v.), who was then hailed as Augustus by his army. Trebonianus, who had hoped for peaceful conditions and had lost influence with the troops, was murdered with his son and colleague Volusianus at Interamna. The Empire was ravaged by a severe plague at this time.

A. T. Olmstead, *CPhil.* 1942, 398 ff.

B. H. W.

TREBONIUS (PW 6), GAIUS, quaestor c. 60 B.C., *tribunus plebis* in 55, when he carried the *Lex Trebonia* conferring five-year commands on Pompey and Crassus. As *legatus* he did good service in Gaul (55-50) and in 49 conducted the siege of Massilia. Praetor in 48, he was sent next year to Spain, but failed against the Pompeians.

Though appointed *consul suffectus* by Caesar in 45, he is said to have plotted against him in that year, and he took part in the actual assassination in 44, detaining Antony outside. Proconsul of Asia in 43, he was treacherously murdered by Dolabella at Smyrna. He published a collection of Cicero's witticisms. C. E. S.

TREES, SACRED. Tree worship, characteristic of primitive religion, took a prominent place in Minoan religion. Not only growing trees, often seen inside the doors of shrines or behind walls, but also boughs were the objects of adoration and sacrifice (orgiastic dancing apparently belonged to the ritual). Prehistoric Crete knew trees as deities (epiphanies of goddesses are recognizable in some tree-cults); the connexion of Helena and Ariadne with trees is a survival; to the Greeks, however, trees (and groves) were simply sacred objects. The tree 'having its own soul' (Sil. Ital., cf. *δρῦς* and art. *NYMPHS*), was only the abode or the property of a deity (just as springs, mountains, etc. were): so in the story of the Thessalian king, Erysichthon (q.v.), who cut down the holy oak (or attacked the holy grove of poplars) and was correspondingly punished by Demeter. In general it seems to have been a common custom, when clearing a virgin forest, to leave a tree or a clump of trees unhewn, as 'holy' (often dedicated to Artemis). The oak (cf. the mantic oak of Dodona) was mostly associated with Zeus (an inheritance from Indo-European times), the olive-tree with Athena, the laurel with Apollo (cf. the metamorphosis of Daphne), the plane sometimes with Dionysius (cf. his epithet *δενδρέτης*), the cedar and the nut-tree with Artemis (cf. the metamorphosis of the Caryatids), the myrtle with Aphrodite, the *agnus castus* (important for medicine) with Asclepius. But trees and plants were often sacred to a deity simply because they grew near to the temple or altar (cf. the wild olive used for crowns at Olympia. Cypress, elms, white poplar may have adorned burial places and were accordingly characteristic of the infernal regions. Sacrifices and all sorts of gifts to sacred trees are known from Homeric times. Greek mythology knows the Tree of Life (the Gardens of the Hesperides), but not the originally Oriental World-tree.

In the Forum of Rome the sacred *figus Ruminalis* or fig-tree of Romulus was one of the most holy emblems of the Eternal City (cf. the cornel-tree on the Palatine, Plut. *Rom.* 20).

TREVERI, a Gallic tribe in the Moselle basin. Strong Germanic admixture is attested by ancient authors, who are supported by archaeological evidence of German penetration c. 200 B.C. They furnished cavalry to Caesar, but gave him much trouble to subdue; and were active in rebellion under the early Empire (29 B.C., A.D. 21, A.D. 70), so that they lost their privilege of 'libertas'. Nevertheless, the presence of the Rhine army as a market tempted them to loyalty; and the second century shows an era of great prosperity based on large-scale agricultural organization (cf. the Igel-Säule of the Secundinni). The invasions of the third century destroyed this culture, but the land recovered somewhat with the establishment of the Emperor's and prefect's court at Trier (Augusta Treverorum, q.v.). Trier fell finally to the barbarians c. 430.

J. Steinhausen, *Siedlungskunde des Triererlandes* (1936). C. E. S.

TRIARIUS, GAIUS VALERIUS (PW 363), defeated Lepidus (q.v. 2) in Sardinia (77 B.C.). He successfully served as legate of Lucullus (q.v. 2) against Mithridates, taking several cities and winning a naval victory at

Tenedos, but in 67 suffered a disastrous defeat at Zela (q.v.). E. B.

TRIBONIANUS (PW 1) (d. A.D. 542-5), a confidant and the most intimate collaborator of the Emperor Justinian (q.v.) in the composition and publication of his legislative works. His birth-place was (probably) Side in Pamphylia. He began as an advocate, but soon he rose to the high offices of the *magister officiorum* and *quaestor sacri palatii*. As a lawyer of great learning, especially in the legal literature of the past centuries (Justinian mentions this in particular praise of him) he was invited by the Emperor to assist in the work of codification, first in the composition of the first *Codex* (q.v.) as an ordinary member of the Commission and subsequently, when he had given proof of his quality in this task, as the director (*gubernator*) of the work on the compilation of the *Digesta* (q.v.). For this mighty undertaking he was allowed to choose his collaborators himself. He was likewise given the direction of the work on the *Institutiones* and the second *Codex* (qq.v.).

Tribonian was evidently a man of the greatest ability and versatility (though he is said to have been irreligious and avaricious: he was temporarily removed from the office of *quaestor sacri palatii* in 532 as a concession to popular hostility in the 'Nike' riots (see JUSTINIAN)). It is impossible to determine what part he played in the inspiration and conception of Justinian's compilation, but in its execution he was obviously pre-eminent. It is with some reason therefore that the interpolations (see DIGESTA) in the work have been in modern times called *emblemata Triboniani*.

There are notices of Tribonian in Procopius (*Pers.* 1. 24-5), Hesychius, and the *Suda*. The last named has articles on two distinct Tribonians. If the identity of these two persons is assumed (as B. Kubler tried to demonstrate), Tribonianus might be the author of some philosophical writings and of dissertations about planets, prosody, and various other topics.

B. Kubler, *Acta cong. univ. internat.* (Rome, 1935), 1, E. Stein, *Bull. Acad. Royale de Belgique, Classe des Lettres*, 1936. A. B., B. N.

TRIBUNI AERARII were the magistrates or officials who collected the war-tax and distributed pay to the soldiers of the several tribes (although they were soon superseded in this office by the *quaestores*). Whether they originally were the heads of the tribes is doubtful, as these officials later were named *curatores*. In the first century B.C. the tribunes appear as a class somewhat similar to, but less wealthy than, the knights, and from them the third *decuria* of judges was taken (70 B.C.). A *Lex Iulia* (46) exempted them from this task.

Mommsen, *Staatsr.* 18 ff., 532 f., T. Rice-Holmes *The Roman Republic*, (1923) I. 391 ff. P. T.

TRIBUNI MILITUM in the Republican army were the senior officers of the legions. Elected by the people they ranked as magistrates, and six were assigned to each legion. They were attached directly to the legion and not to its subdivisions, hence they never functioned as mere tactical sub-commanders with fixed duties to attend to. When the number of legions was increased, only the tribunes of the four *legiones urbanae* were elected by the people (*tribuni militum a populo*); the remainder were nominated by the commanders-in-chief.

In the Caesarian period the tribunes were mainly of equestrian origin and their importance declined with the rise of the *legati*. Under the Principate the tribunate was divided into two groups according to birth, the *laticlavii* of senatorial, the *angusticlavii* of equestrian descent. The *tribunus laticlavius* was a young man embarking on a senatorial career, the *angusticlavus* was usually somewhat older and had already shown administrative ability

in municipal life. From the time of Nero onwards the regular equestrian career was that of the *tres militiae*—*praefectus cohortis*, *tribunus militum*, *praefectus alae*.

Tribuni also commanded cohorts in the Household Troops and *cohortes miliariae* in the *auxilia*. In the Constantinian army the title is borne by officers of the imperial guard and the *vexillationes*, *auxilia*, and legions of the field army, and also of the cohorts of the *limitanei*.

J. Suolahti, *The Junior Officers of the Roman Army in the Republican Period* (1955), 35 ff.; Eric Birley, *Roman Britain and the Roman Army* (1953), 133 ff.; G. L. Cheesman, *The Auxilia of the Roman Imperial Army* (1914), 36, 94; Jones, *Later Rom. Emp.* 640 ff.

H. M. D. P.; G. R. W.

TRIBUNI PLEBIS (or **PLEBI**, *δῆμαρχοι*) were officers of the *plebs* first created in 500–450 B.C. The name is evidently connected with *tribus*, but it is uncertain whether the tribunes were at first chiefs of the tribes, who later became officers of the *plebs*, or whether the name simply imitated that of the *tribuni militum* already existing. The original number of the tribunes is variously given as two, four, or five; but the only certain fact is that before 449 B.C. it had risen to ten. The tribunes were charged with the defence of the lives and property of the plebeians. Their power was not derived from any statute, but from an oath of the plebeians to uphold their *sacrosanctitas* or inviolability—an oath which the patricians never effectually challenged. The tribunes asserted a right of veto (*intercessio*) against any act performed by the magistrates, against elections, laws, *senatus consulta*. The only magistrates exempted were (until c. 300 B.C.) the dictator, and perhaps the *interrex*. The tribunes further summoned the *plebs* to assemblies (*concilia plebis*, more usually called *comitia plebis tributa*), elicited resolutions (*plebiscita*), and asserted a right of enforcing the decrees of the *plebs* and their own rights (*coercitio*). *Coercitio* probably could go as far as the infliction of death. Connected with the *coercitio* was a certain amount of jurisdiction. Tribunes were elected by the *concilium plebis*. Each tribune could stop the action of his colleagues by veto. Thus the office was better equipped for obstruction than for getting things done.

This revolutionary power was gradually recognized by the State. The tribunes became indistinguishable from magistrates of the State, although without *imperium* and insignia. The full acknowledgement of their power coincided with the recognition of *plebiscita* as laws with binding force (c. 287 B.C.). The tribunes were first admitted to listen to the debates of the Senate; at least from the third century B.C. they obtained the right of convening the Senate; in the second century the tribunate became a sufficient qualification for entry to the Senate. From the fourth and third centuries B.C. the tribunate became partially an instrument by which the Senate could control the magistrates through the veto. In certain trials of public interest the tribunes conducted the prosecution in the *comitia centuriata*. They normally confined their activities to the city of Rome and to the first mile outside it. But the tribunate never forgot its revolutionary traditions. In this period a custom sprang up which rendered re-election to the tribunate unconstitutional; but this custom was broken by C. Gracchus. From the time of Gracchus the tribunician veto was curtailed by special clauses of laws and *senatus consulta*. Sulla excluded the tribunes from the magistracies of the Roman People and abolished or curtailed their power of moving legislation and their judicial powers. In 75 B.C. they were re-admitted to the magistracies, and in 70 the tribunician power was restored to its full extent. The builders of the Principate appreciated the value of the tribunician power in the construction of their personal power. Caesar assumed at least the tribunician *sacrosanctitas*. Augustus, probably in three steps (36, 30, 23 B.C.), obtained a per-

manent *tribunicia potestas*. The Republican tribunate remained, but lost all its independence and nearly every practical function. Until the third century A.D. the tribunate remained a step in the senatorial career for plebeians alternatively with the aedileship. There is still evidence for the tribunate in the fifth century A.D.

TRIBUS. In Rome the tribe was a division of the State. An analogous division existed in Etruscan Mantua (Serv. ad *Aen.* 10. 202). The *tribu* of the *Tabular Iguvinae* is on the contrary the whole community. The connexion of *tribus* with *tres* is uncertain. The three original Roman tribes were *Titienses* (Tities), *Ramnenses* (Ramnes), and *Luceres*. It is nearly certain that these tribes were originally ethnic and not local; they probably included the *plebs* from the first.

The ethnic tribes were virtually eliminated by the creation of new local tribes, which consisted of four urban tribes and an increasing number of 'rustic' tribes. The urban tribes were traditionally ascribed to Servius Tullius; but this tradition is not universally accepted by modern scholars. The sixteen oldest rustic tribes bore the names of patrician families, who evidently owned a large part of their territory. The location of most of the oldest tribes is uncertain. The newer tribes included territories in which settlements of Roman citizens were founded, or citizenship was conferred on the native inhabitants. The number of thirty-five, which was attained in 241 B.C. by the progressive addition of rustic tribes, was never exceeded. Later enrolments of citizens into tribes were made without necessary reference to geographic contiguity.

All citizens were probably registered at all times in the local tribes, but with the censorship of Appius Claudius (312 B.C.) the registration of the lower social orders, and especially of the freedmen, in the rustic tribes became a serious political issue. The punishment of 'expulsion from a tribe' (*tribu movere*), which the censors possessed, had by the second century come to mean relegation to an urban tribe.

The extension of the Roman franchise to a great part of Italy after the Social War introduced the question of the balance between new and old citizens. The attempt to confine new citizens to a few tribes in order to check their importance in the *comitia* ultimately failed. But in general freedmen were admitted only to the urban tribes. From the Ciceronian age the name of the tribe in abbreviated form had a regular place in the citizen's full name (the first instance of a regulation of the matter is *CIL* i². 583). Provincials, both individuals and *civitates*, who in imperial times received the Roman citizenship, had to be enrolled in some specified tribe. No absolute rule was followed, but, for instance, people or *civitates* of Gallia Narbonensis were enrolled by preference in tribus Voltinia, the Orientals in the Collina and Quirina.

The territorial tribes were the units for census, taxation, and the military levy. Officials called *tribuni aerarii* (q.v.) long had charge of the financial obligations of the tribe. The relation between the *tribuni aerarii* and other officers called *curatores tribuum* is uncertain. The assemblies of the *plebs* and special less important assemblies of the whole people were arranged by territorial tribes (see

COMITIA). If a tribe was small the value of the individual's vote increased. It has been maintained (L. R. Taylor) that the ruling nobility of the Republic derived advantage from controlling the expansion of certain tribes.

There is evidence also for the tribes as a voting section of the citizens in some *municipia* (Lilybaeum) and *coloniae* (Genetiva Urso, Iconium).

TRIBUTE LISTS at Athens are the records of the firstfruits (*ἀμάρχαι*: one sixtieth, a mina on the talent) presented to the goddess Athena from the annual contributions (*δόποι*) of the members of the Athenian League (or Empire). These audited accounts of the *hellenotamiai* (q.v.) began in 454/3 B.C., when the treasury of the Delian League (q.v.) was moved to Athens, and were inscribed annually until 406/5. No tribute was collected in 449/8, after the signing of the Peace of Callias with Persia, or in the years 414/13 to 411/10, when a five per cent tax (*εἰκοστή*) on allied shipping was substituted (Thuc. 7. 28. 3-4). The payments of the first fifteen years (454/3-440/39) were published on the four sides of a block (*lapis primus*) of Pentelic marble 3.583 m (minimum) in height, 1.109 m in width, 0.385 m in thickness; 180 fragments are known. For the next eight years another block (*lapis secundus*), 2.192 m (minimum) × 1.471 m × 0.34 m, was used, of which 73 fragments are known. Henceforth each year had its own *stèle*. The two large monuments, reconstructed, stand in the Epigraphical Museum at Athens. A prescript numbers each list (except 7) serially by the ἀρχή of the *hellenotamiai* from 454/3; the archon Aristion in List 34 (421/20) establishes the dating. The names (usually ethnics) of the tributaries, preceded by the amounts of quota (in List 1 the order is reversed), are arranged in columns of 30 to 35 lines, normally one entry to a line, cut in the pattern called *stoichedon*. The tribute-records, collectively, include 341 States but no more than 170 paid in any one year. List 1 is unique in that a summation of the quotas, representing a tribute of 306-406 talents from about 140 States, is added on the right lateral surface; in 444/3 some 163 States paid a tribute of over 376 talents. From 443/2 the tributaries are recorded in geographic panels under the headings Ionic, Hellespontine, Thracian, Caric, Nesiotic; in 438/7 Ionic and Caric panels were merged when Athens abandoned about forty inland Caric states. No list can be restored in its entirety, although a few (7, 12, 13) fall little short; but some complete geographic panels (e.g. Thrace in List 23, 432/1 B.C.) allow identification of defaulters. Assessments (from 300 drachmai to the 30 talents of Aegina and Thasos), changing little in scale before the Peloponnesian War, were revised, on average, every four years. Payments normally remained constant within an assessment-period. Regularity of payment, the *stoichedon* pattern, and the geographic order make possible extensive restoration, which assists in the reconstruction of Athenian finances during the Empire. We know 44 fragments of the great assessment ('Cleon's') of 425 with its accompanying decrees (the *stèle* has been rebuilt in the Epigraphical Museum); we have three fragments of the assessment of 421 and five from 410/9. Craterus apparently quoted from the first and last assess-

ments; five excerpts have been allocated to 454 and seven to 410/9.

The standard work on the tribute-records is B. D. Merritt, H. T. Wade-Gery, and M. F. McGregor, *The Athenian Tribute Lists*. Volume 1 (1939) includes bibliography, commentary, photographs, and drawings, fragment by fragment, of lists, assessments, and certain pertinent decrees, along with 1 estimate, a Register of payment and non-payment, and a Gazetteer. Volume II (1949) is primarily a revision of the texts and an expanded collection of decrees. Epigraphic and historical problems are studied in volume III (1950), which is devoted chiefly to the naval Confederacy and Empire. Volume IV (1951), in addition to indexes, contains an exhaustive bibliography, printed chronologically, from 1752 to 1951. Since 1951 questions have been raised about the missing list and the original appearance of the *lapis primus*. Description of the counter-versions and pertinent bibliography may be found in M. F. McGregor, *Phoenix* 1962, 267 ff., *GRBS* 1967, 103 ff. M. F. M.

TRIBUTUM was a direct tax paid by individuals to the Roman State. Until 167 B.C. the citizens of Rome were liable to pay a *tributum*, which was raised only in exceptional circumstances and might be repaid. Thereafter the word applied only to direct taxes raised in the provinces, either in the form of a land-tax (*tributum soli*) or poll-tax (*tributum capitis*). These were paid by all inhabitants of the provinces, whether Roman citizens or not, except by citizens of *coloniae* (see COLONIZATION, ROMAN) which normally possessed the *ius italicum* (q.v.) and were consequently exempt, usually from both taxes (*Dig.* 50. 15. 1 and 8), by citizens of *civitates immunes* or *iudicatariae* (see IMMUNITAS) or by persons specifically exempted by a *lex*, *senatus consultum*, or imperial decree (*SEG* ix. 8. 3). Under the Republic the *tributum soli* was normally either a fixed sum (*stipendium*), as in Spain and Africa, or a tithe (*decumae*, q.v.) paid in kind and leased by the censors (q.v.) in Rome to *publicani* (q.v.), as in Asia after the *lex Sempronia* (App. *BCiv.* 5. 4. 17-20); Sicily retained the system established by the *lex Hieronica*, and the *decumae* there were contracted for locally (Cic. 2 *Verr.* 3. 6. 12-15). The system of *decumae* contracted for by *publicani* was already disappearing in the late Republic (it seems never to have been introduced in the Tres Galliae), and under the Empire we find almost universally a fixed *tributum* based on the *census* (q.v.) and collected by local magistrates (e.g. Joseph. *BJ* 2. 405) who were responsible for paying it to the provincial officials. The *tributum capitis* seems first to have been imposed, along with *tributum soli*, in Africa in 146 (App. *Lib.* 135). Thereafter it is most fully attested in inscriptions from the Greek provinces; it is probable, but not quite certain, that it was levied in all provinces. Nothing is known of the rate at which it was levied before the statement of Ulpian (*Dig.* 50. 15. 3; cf. App. *Syr.* 50) that the inhabitants of Syria and Cilicia paid 1 per cent of their census valuation annually, from age 14 for men and 12 for women to 65.

In Egypt the Romans raised a complex pattern of taxes in cash and kind (especially in grain) on the land and its produce, and also imposed a poll-tax (*laographia*) paid by native Egyptian males from 14 to 60 or 62, by the inhabitants of the *metropoleis* at reduced rates, but not by the citizens of the Greek cities.

TRICLINIUM. Civilized Greeks dined reclining on a couch (*κλίνη*, *lectus*) and the Romans, who had originally dined seated round the hearth, imitated them. In Greece there were usually two (sometimes more) places to a couch; that on the left was the place of honour. In Rome an arrangement of couches with three places each round three sides of a square table became usual. This was the *triclinium*, and the name was also transferred to a room built to accommodate the arrangement. The diner would lean on his left elbow (supported by a cushion), his feet

sloping away from the table and perhaps supported by a footstool. Each couch and seat had its significance: the left couch was the lowest in rank, where the family would dine, the host at the top (i.e. on the left); the guests would recline on the other two, the middle one (next to the host) being more honourable: the place on the right was the position of chief honour (*locus consularis*—see Plut. *Mor.* 619 a f.). The first couch had a head-rest, the third a foot-rest. Couches with backs appear from the first century B.C. By the late Republic, the *sigma* (a single horseshoe-shaped couch, going with a round table) was gaining popularity in place of the three traditional couches: it admitted of greater comfort and informality and was favoured for open-air meals.

A wealthy family would have several *triclinia*, including some with folding doors opening on the garden, both for large-scale hospitality and for use in different seasons. Vitruvius gives precise specifications. Cushions, blankets, bedspreads, and precious ornaments were lavishly used on dining-couches in rich households: luxurious dining-couches were a sign of elegant living. Slaves and the poor dined on pallets or sitting upright, and the class of inns (q.v., e.g. at Pompeii) can be gathered from the sort of dining accommodation provided.

TRICLINIUS, **DEMETRIUS** (early 14th c.), one of the most important scholars of his day, lived probably at Salonica. He prepared editions of numerous classical poets, using his knowledge of metre to improve the text, and in some cases he also revised the accompanying corpus of scholia. A number of his emendations are generally accepted; but though he was a better metrician than his contemporaries many of his alterations to the text are violent and unnecessary. He is known to have worked on Aeschylus, Sophocles, Euripides, Aristophanes, Pindar, Hesiod, Theocritus, and Babrius. Several autograph MSS. survive. His scientific interests are demonstrated by a recently published treatise on lunar theory.

TRIERARCHY. A liturgy (q.v.), for naval purposes, the trierarchy was of special importance at Athens, from which a few other States copied the institution. From the early fifth century the Athenian *strategoi* chose for one year from the wealthy adult citizens a number of trierarchs corresponding to the number of triremes to be manned. Furnished with the hull and tackling of a trireme, along with the pay and food of the crew, the trierarch, who acted also as captain, bore all expense of maintenance and repair, totalling some forty to sixty *minae* (Lysias 21. 2, 32. 26-7). After 411 B.C. two citizens usually shared each trierarchy; revisions in 357 and again, at the urging of Demosthenes (*De Corona* 102 ff.), in 340 spread the burden more equitably. Demetrius of Phalerum abolished the liturgy in 317-307 B.C. Elsewhere in Greece the term 'trierarch' denoted merely captain of a trireme; in the Hellenistic and Roman periods, a trierarch might command any warship.

¹ Orations of Demosthenes, especially 14 (*On the Symmories*) and 51 (*On the Crown of the Trierarchy*). M. Brilliant, *Dar.-Sarg.*, s.v. 'Trierarchia' (1918). C. G. S.

TRINOVANTES, a British tribe in Essex, probably of Belgic origin. Mandubracius, their prince, fled to Caesar from Cassivellaunus' aggression; the tribe later surrendered (54 B.C.) and brought over other tribes, making a turning-point in Caesar's British war. The Trinovantes

were protected in Caesar's peace-terms; they maintained an independent monarchy under Addedomarus and Dubnovellaunus down to Cunobelin's accession, c. A.D. 5. In 43 they were freed from Caruvellaunian rule, but in 49 suffered deprivation of territory on the foundation of the *colonia* at Camulodunum (q.v.). Aggravated by the subsequent behaviour of the colonists, in 60 they joined Boudicca's rebellion, and the colony was destroyed. After its refoundation, the primacy of Camulodunum as an emporium and provincial capital became eclipsed by London, but the provincial centre of the imperial cult remained there. The *caput* of the Trinovantes possibly lay at Caesaromagus (*Chelmsford*). The *civitas* was mainly agricultural with important timber and pottery industries, and salt-boiling and oyster-fisheries along the coast, which from the late third century was defended by the Saxon Shore fort of Othona (*Bradwell*).

TRINUNDINUM (or **TRINUM NUNDINUM**) was the interval between three *nundinae*, i.e. the space of twenty-four days (by inclusive reckoning), required between moving and voting a resolution, or between the nomination of candidates and the polling, or between the promulgation and execution of a sentence, etc. The legal force of this measure of publicity, which also guaranteed the legislative power against any abuse on the part of the executive, was confirmed by the *Lex Quinctia Didia* (98 B.C.).

Roman Republic* (1967), 191 ff. P.T.

TRIOPAS (*Τρίοπας*), in mythology, father (Callim. *Cer.* 79) of Erysischthon (q.v.); the latter's sin and punishment are sometimes ascribed to him, as Hyg. *Poet. Astr.* 2. 14. Triopas (occasionally called Triops, *Τρίοψ*) is usually Thessalian, but appears in bewildering and mutually contradictory genealogies (see Mayer in Roscher's *Lexikon*, s.v.). There seems to be no doubt that he is somehow connected with the place Triopion in Caria (Steph. Byz. s.v.). It is also possible that his name ('Three-eye') covers an old sky-god, cf. the three-eyed Zeus in Paus. 2. 24. 3. H. J. R.

TRIPOLIS (1). The three cities of Sabratha, Oea, and Lepcis (qq.v.) on the north African coast. Founded as Phoenician or Punic *emporia*, they were havens on an inhospitable shore but owed their importance largely to the trans-Saharan trade. For long dependencies of Carthage, they were annexed by Masinissa and remained loosely subject to the Numidian kings until the Jugurthine War. Under Augustus they became part of Africa Proconsularis, which extended eastward as far as the Arae Philaenorum on the Greater Syrtis. Their southern frontier zone was given to the Legate of Numidia by Caligula. The Tripolis had bishops by the mid third century. Diocletian constituted the whole area into the new province of Tripolitana, governed from Lepcis. It fell to the Vandals in 455 and was recovered by the Byzantines in 533. Under Justinian Lepcis was the seat of the *Dux limitis Tripolitanae provinciae*. Fierce Berber revolts occurred during the mid sixth century and were suppressed by John Troglita. After the Arab invasion (643-4) Sabratha and Lepcis disappear as towns; Oea, now called *Tripoli* (Trablus al-Gharbi), and Tacapae (Gabes) on the western border of the province, survived.

J. M. Reynolds and J. B. Ward-Perkins, *Inscriptions of Roman Tripolitania* (1952); D. E. L. Haynes, *The Antiquities of Tripolitania* (1956); R. W. Hull, *A Bibliography of Libya* (1959). O. H.

TRIPOLIS (2) (in Phoenicia) is said to have been a joint foundation of Tyre, Sidon, and Aradus. Between 104 and 95 B.C. it obtained its freedom from Antiochus IX, but it later fell under a tyrant, who was executed by Pompey; its autonomy was then restored. Its territory produced a noted wine.

A. H. M. J., H. S.

TRIEMME. The earliest type of Greek warship, the simple *pentekontor* with twenty-five oarsmen on a side, was supplanted in the sixth century B.C. by the more complex trireme, which remained the standard war-galley throughout the ancient period, except in Hellenistic times (see *QUINQUEREME*). Light in structure, undecked, and slim in comparison with merchant craft, the Athenian trireme of the fourth century B.C., probably standard, measured about 120 ft. by 20 ft. The prow of the galley, rising into a lofty prow-post which was given a hooked shape by the Greeks and was voluted by the Romans, bore a ram of wood and bronze. On each side of this was painted a large apotropaic eye. A cross-beam, introduced in the Peloponnesian War, strengthened the prow and projected from the sides sufficiently to protect the 'oar-box', an outrigger construction which compensated for the curving sides of the galley.

The trireme in part sacrificed seaworthiness for efficiency in battle. During storms and at night it was often beached, for its crew (about 200 men) had but cramped quarters. It made an average speed of some four to five knots, aided by a square sail. In battle the mast was lowered or put on shore, and the trireme, formidable chiefly for its ram (see *DIEKPLUS*), was propelled by the easily directed force of oarsmen.

The arrangement of these rowers, which marks the great advance of the trireme over the *pentekontor*, has been much debated, for the ancient evidence is obscure. The long-accepted view that the rowers sat in three superimposed banks is now generally rejected; it seems probable that, the rowing-benches being slanted forward, the rowers sat three on a bench, each rower pulling an individual oar.

F. Assmann, *Seetoten* in A. Baumeister's *Denkmäler des klassischen Altertums* (1888; full reproduction of ancient representations); W. W. Tarn, 'The Greek Warship', *JHS* 1905, and *Hellenistic Military and Naval Developments* (1910); C. G. Starr, 'The Ancient Warship', *CPhJ* 1940; J. S. Morrison and R. T. Williams, *Greek Galleys* (1968).

TRITON (*Τρίτων*), the merman of Greek, or rather pre-Greek mythology. The meaning of the name is unknown, but since the syllable *trit-* recurs in the name of the sea-goddess Amphitrite, also non-Greek, it is permissible to suppose that it is a pre-Hellenic vocable meaning something like 'water'. The Tritons remain quite vague figures, mostly appearing as a decoration of sea-pieces and other works of art, but they sometimes play a subordinate part in a legend. For example, a Triton in human form appears to the Argonauts (q.v.) at Lake Tritonis and gives them the clod of earth which was the pledge of future possession of Cyrene; Virgil (*Aen.* 6. 171 ff.) has a story of a Triton who, furious at the presumption of the human trumpeter Misenus in daring to challenge him to a contest (Tritons are commonly represented as playing on conches), drowns him. Pausanias (9. 20. 4; 21. 1) had seen what were represented as bodies of Tritons, possibly sea-beasts of some kind.

H. J. R.

TRITOPATORES (*Τριτοπάτορες*), **TRITOPATREIS** (*Τριτοπατρείς*), obscure figures of Attic cult, worshipped at Marathon on the eve of the Skira (Deubner, *Att. Feste* (1932), 44). Their name seems to mean 'great-grand-fathers', and they are said to be wind-gods, also the first ancestors of mankind, and to be prayed to for children

before a marriage (Photius, s.v.), perhaps an Orphic practice, cf. Cook, *Zeus* III, 112 ff.

H. J. R.

TRITYTES (*τριτῦτες*), 'thirds', divisions both of the old and of the new *phylai* (q.v.) at Athens. Of the twelve old *tritytes* little is known; alternative guesses in antiquity were that they were identical with the *phratrhai* (q.v.) and that they were territorial divisions each containing four of the *naukrarai* (q.v.). They still existed in the late fifth century. The thirty new *tritytes* were territorial divisions made by Cleisthenes (q.v. 1); each of his ten new *phylai* contained three, one from each of his three regions of Attica. We know the approximate locations of all of them and the names of more than half. Each was subdivided into a number of *demoi* (q.v.). They did not become active corporations to the same extent as the *demoi* and *phylai*, but served as mustering-units for the navy, apparently under officers called *trityarchs*, and helped to spread the choice of Councillors (see *NOUPLI*) and of some minor officials over the whole of Attica.

TRIUMPH, the procession of a victorious Roman general to the temple of Jupiter Capitolinus. Originally Etruscan, later affected by Hellenistic influences, it remained subject to strict rules and retained its ritual character. The route, in classical times, passed from the Campus Martius through the *Porta triumphalis*, the Circus Flaminius and Circus Maximus, round the Palatine, along the Via Sacra and to the Capitol. The procession comprised, basically, the magistrates and Senate, the spoils (including eminent captives) and sacrificial animals, the *triumphator* and his army. Increasingly costly and elaborate details were added at suitable points, including banners, paintings and allegorical groups, musicians, and torch-bearers. The *triumphator*, preceded by his lictors, stood on a four-horse chariot, with a slave (murmuring apotropaic words) holding a crown over him, his family usually accompanied him. He was dressed in *tunica palmata* and *toga picta* (chiefly gold and purple) and adorned as a god-king. The army shouted 'Io triumphe!' and sang apotropaic verses (see *FESCIENNINI*).

The prerequisites were victory over a foreign enemy, with at least 5,000 of them killed, by a magistrate with *imperium* and his own *auspicia* (q.v.), and the presence of the army, to show the war was won. These rules were gradually relaxed, to admit pro-magistrates (by the first century even *privati* with special *imperia*, like Pompey, and after 45 B.C. *legati*), and to allow a mere token presence of the army. But there was always room for intrigue and favour in their interpretation. Where they disallowed a triumph, an *ovatio* (q.v.) would usually be granted. But—we cannot tell precisely in what conditions—an unofficial triumph in *monte Albano* (see *ALBANUS MONS*), at the *triumphator's* expense, was possible. These would be officially recorded together with proper triumphs.

Under the Empire, triumphs soon became a monopoly of the Emperor or—with his permission—his family. The victorious general was granted 'triumphal ornaments'; but these were deliberately cheapened and even in the first century A.D. lost all connexion with military exploits.

Mommsen, *Röm. Staatsr.* I, 412; Dar-Sag, s.v. 'Triumphus'. *Fausti triumphales in Inscriptiones Italiae* 13. 1.

E. B.

TRIUMPHAL ARCH, the term generally used to denote the honorific arch (*forum*, *arcus*; *ἀφίς πύλη*) which was one of the most characteristically Roman of classical buildings. Though regularly erected to commemorate

military victories, such arches often had religious or topographical associations that reflect the complex origins of the type, e.g. the posthumous Arch of Titus on the Via Sacra, with its representations both of his Jewish triumph and of his apotheosis; or the frequent use of such arches on bridges or to mark provincial or city boundaries. The earliest recorded examples were built in the first years of the second century B.C. in Rome itself, and the principal subsequent development took place in Rome and Italy (over 100 known arches, many of early imperial date), Gaul (36) and Africa (118); but examples are recorded from every province of the Empire. The earliest surviving arches, of Augustan date, are simple rectangular masses of masonry, with a single archway framed between a pair of half-columns or pilasters and a trabeated entablature (Rimini, 27 B.C.; Susa, 8 B.C.) and surmounted by an attic, which served as the basis for the statuary (frequently a chariot group) which was an integral and essential feature of the monument. The subsequent architectural development was towards a steadily greater elaboration of the decorative framework and in certain cases (e.g. the arches of Severus, A.D. 203, and of Constantine, A.D. 312, in Rome) the addition of two smaller lateral arches. A specialized form, the tetrastylon, with two carriageways intersecting at right-angles, though represented in Rome (arch in the Forum Boarium), was especially common in Africa (e.g. Lepcis Magna, Trajan, Septimius Severus; Tripoli, M. Aurelius; Tebessa, Caracalla).

Systematic lists of all known arches in *PW*, s.v. 'Triumphbogen', and in *Enciclopedia dell'arte antica*, s.v. 'Arco Onorario'. J. B. W.-P.

TRIUMVIRI (properly **TRESVIRI**), in Roman public life, a board of three, usually appointed by the People. For the annual *tresviri monetales* and *capitales* see *VIGINTISEXVIRI*. Land-commissioners were normally, and if founding a colony always, boards of three (*tresviri agris dandis adsignandis, coloniae deducendae*), appointed as required (see *AGER PUBLICUS* and *COLONIZATION*, ROMAN). Some *tresviri* appear once only, e.g. the *mensarii* of 216 B.C. (Liv. 23. 21. 6, cl. 7. 21. 5) and the *tresviri legendi senatus* of A.D. 4 (Suet. *Aug.* 37, Cass. Dio 55. 13. 3). The office of *tresviri recognoscendi turmas equitum*, also instituted under Augustus (Suet. *ibid.*), lasted at least into the next reign. The *epulones* (q.v.) were originally *tresviri*. *Tresviri* also appear as officials of Italian and other Western towns.

The triumvirate of Antony, Lepidus (qq.v.), and Octavian (see *AUGUSTUS*), though unique, resembled the single dictatorship of Sulla in that they were *tresviri 'rei publicae constituendae'* and had practically absolute powers (probably *imperium maius*), including, at least implicitly, inappellable criminal jurisdiction (see *PROSCRIPTION*). They were appointed to this office by the *lex Titia* of 27 Nov. 43 for five years, retained it after its legal termination (31 Dec. 38), and after the Pact of Tarentum (q.v.) renewed it for a second quinquennium, probably reckoned from 1 Jan. 37. Lepidus was deposed in Sept. 36. Antony continued to use the title after 33; Octavian appears to have dropped it.

The coalition formed between Caesar, Pompey, and Crassus in 60 B.C. was wholly unofficial, and it is misleading to call them triumvirs and to speak of the 'First' and 'Second' Triumvirates.

Mommsen, *Röm. Staatsr.* ii. 504 ff., 624 ff., 702 ff. (*Dröit publ. rom.* iv. 301 ff., 336 ff., 426 ff.); T. Rice Holmes, *Architect of the Roman Empire* i (1928), 72 ff., 231 ff.; Syme, *Röm. Rev.*, see index; F. de Visscher, *Nouvelles études de droit romain public et privé* (1949), 1 ff.

TRIVIA, Latin translation of *Tpoδίτις*, title of Hecate (q.v.) as goddess of cross-roads. Since the identification of Hecate with Artemis and Selene was popular in

Hellenistic times and Diana (q.v.) was identified with Artemis, the epithet is often used of Diana, as Lucretius 1. 84; Catullus 34. 15; cf. Verg. *Aen.* 6. 35 (Hecate and Diana). H. J. R.

TROAS, the mountainous north-west corner of Asia Minor forming a geographical unit dominated by the Ida massif and washed on three sides by the sea. Its name derives from the belief that all this area was once under Trojan rule. The interior is inaccessible, and the more important cities were situated on the coast. The historical significance of the Troad derives from its strategic position flanking the Hellespont (a factor which may already have weighed with the Achaeans in their attack on Troy). From the sixth century Athens became increasingly interested in holding the straits, but after Aegospotami Persia nonnally controlled the Troad. It became the battlefield in the struggle between east and west when Alexander routed the Persian first line of resistance at the Granicus. Later the Troad was ruled by Antigonos, who founded Antigoncia—afterwards Alexandria Troas—and from him the country passed successively under the power of Lysimachus, the Seleucids, and Attalus I of Pergamum. The Attalids bequeathed it to Rome, and the Troad suffered severely in the wars of the Republic; but under the Empire it enjoyed a long period of tranquillity until the Arab incursions of the eighth century.

W. Leal, *Strabo on the Troad* (1923); J. M. Cook, *Greek Archaeology in Western Asia Minor* (*Arch. Rep.* 1959-60), 20 ff. D. E. W. W.

TROGODYTAE (*Τρωγοδύται*) were a primitive people of 'Ethiopia', in particular northern Sudan. In MSS. of classical authors we frequently find a reading which, by inclusion of the letter *l*, gives or implies the name Troglodytae, 'cave-enterers', 'cave-dwellers'. This latter name may be applied rightly to people with that name placed by classical writers on the northern side of the Caucasus, where 'Troglodytes' lived in caves because of the cold; to a people in north-western Africa; to a people in the interior of northern Africa; and possibly to peoples on the eastern coast of the Red Sea. But when the people concerned are located in Egypt and to the south of it, the name Troglodytae must be taken as false, reflecting no doubt a common confusion, the true name, as various MSS. and papyri show, being Trogodytae with no reference to caves. Trogodytae included the whole coastline from Suez to the Straits of Bab-el-Mandeb; and the Trogodytes ranged southwards to the Abyssinian escarpment. There were and are no natural caves in the eastern deserts of Africa; and it is probable that the Trogodytes lived in huts of wickerwork as the Bega do now. Their lands on the Red Sea coast were explored by agents of Ptolemy II and III. They mostly went naked, ate the bones and hides as well as the flesh of their cattle, and drank a mixture of milk and blood. They squeaked like bats, talked gibberish, and buried their dead by pelting them with stones. They kept women in common, and were governed by 'tyrants'.

Hdt. 4. 183; Diod. 3. 32-3 (from Agatharchides); Strabo 16. 775-6. E. H. W.

TROGUS, POMPEIUS (*PII* 142), the Augustan historian, a Vocontian from Gallia Narbonensis, whose grandfather was enfranchised by Pompey and whose father served under Caesar, wrote zoological, and perhaps botanical, works, used by the Elder Pliny, and a Universal History in forty-four books, entitled *Historiae Philippicae*. Beginning with the Ancient Orient and Greece (books 1-6), he treated Macedon (books 7-12) and the Hellenistic kingdoms to their fall before Rome (books 13-40). Books 41-2 contained Parthian history to 20 B.C., books 43-4 the

kingly period of Rome, and Gallic and Spanish history to Augustus' Spanish victory. His main source, which is independent of the patriotic Roman tradition, was probably Timagenes of Alexandria. The narrative was elaborate, in the Hellenistic fashion, with dramatic presentation and a moralizing tendency; speeches were as a rule reported indirectly (Just. 38. 3. 11; but note Mithridates' speech, 38. 4). This character is reflected in the epitome of Justinus (q.v.) by which, in addition to the *prologi* (tables of contents), the work is preserved.

L. E. Hallberg, *De Trogo Pompeio* (1869); F. Seck, *De Pomp. Trog. sermone* (1881); E. Schneider, *De Pomp. Trog. hist. Philipp. consilio et arte* (1913); A. Momigliano, *Athenaeum* 1934, 56 ff.; O. Seel, *Pompeii Trogi Fragmenta* (1956). A. H. McD.

TROILUS (*Τρωϊλος*), son of Priam (q.v.), mentioned *Iliad* 24. 257 as dead. Later accounts, as the *Cypria* (Proclus), specify that he was slain by Achilles (q.v.; cf. Verg. *Aen.* 1. 474 and Servius thereon; more in Mayer in Roscher, s.v.). 'Troilus and Cressida' (i.e. Chryseis) is a purely medieval fiction, having no connexion with antiquity.

Achilles' ambush of Troilus (accompanied by Polyxena) at the fountain, the pursuit, the slaughter of the boy on the altar of Apollo, and the battle over the mutilated body, are among the most popular themes in archaic art from the early sixth century and found occasionally later (Brommer, *Vasenlisten*², 264 ff.). H. J. R.; C. M. R.

TROPHIES (*τρόπαια*, *trophaea*, from *τροπή*). The act of dedicating on the field of battle a suit of enemy armour set up on a stake is a specifically Greek practice. Originally intended as a miraculous image of the *theos tropaïos* who had brought about the defeat of the enemy, a trophy marked the spot where the enemy had been routed. Trophies were also dedicated in the sanctuary of the deity to whom victory was ascribed. They appear in art at the end of the sixth century B.C. and were certainly in use during the Persian Wars.

The trophies of the fourth century became permanent monuments. The Battle of Leuctra (371 B.C.) was commemorated by a tower surmounted by a trophy of arms, and from this period onwards the name was applied to various kinds of towers and buildings commemorating military and naval victories. Trophies became a common motif of art; sculptured trophies accompanied by statues of captives and victors decorated the buildings of Hellenistic kings and took an important place in Roman triumphal art from the first century B.C. The word trophy is also applied, though not with strict accuracy, to the masses of arms on sculptured monuments which appear first at Pergamum and later on a number of Roman commemorative monuments. The best-known Roman trophy monuments are those of Augustus at La Turbie and of Trajan at Adamklissi (q.v.).

G. C. Picard, *Les Trophées romains* (1957).

D. E. S.

TROPHONIUS (*Τροφῆνιος*), apparently 'the Feeder', a Boeotian oracular god (description of his shrine at Lebadea, P. Philippson, *Symb. Ost.*, fasc. suppl. ix. 11 ff.). Of him and his brother Agamedes practically the same story is told as that of the architect of Rhampsinitus (q.v.; Paus. o. 37. 4 ff.). His oracle was held in great reverence. Pausanias (who had himself made an inquiry there) describes the elaborate preliminary ritual, after which the inquirer was supposed to be snatched away underground and given direct revelations (*ibid.* 39. 5 ff.); for its legend see *ibid.* 40. 1 ff. As Nilsson suggests (*GGR* II. 450), the ceremonies may have been modified to suit later developments.

H. J. R.; H. W. P.

TROY (modern *Hissarlık*). In north-western Asia Minor, some 4 miles from the Aegean Sea and slightly nearer the Hellespont on the north, are the ruins of the ancient

stronghold, called by the Turks Hissarlık, which was identified as the site of Troy by H. Schliemann. Between 1870 and 1890 he excavated much of the mound which had grown to a height of 50 feet and more through gradual accumulation of debris from human habitation. After his death renewed digging by W. Dörpfeld in 1893 and 1894 and by the University of Cincinnati from 1932 to 1938 contributed much to supplement what had previously been learned. The earth cover was not a single uniform deposit; it was composed of forty-six recognizable strata which could be grouped in ten major layers, each obviously representing a period of occupation.

Layers I to V, counting from the bottom, belong to the Early Bronze Age; Layer VI to the Middle and much of the Late Bronze Age; Layers VIIa and VIIb to the remainder of the Late Bronze Age.

From the outset Troy I, seat of a ruler, was a fortified stronghold which lasted through ten phases. Three successive stone walls supported battlements of crude brick; an entrance gate was flanked by projecting towers. Within were free-standing rectangular houses built of crude brick set on a stone socle, one house comprised a portico and doorway and a long room containing a hearth, an early example of the 'megaron' type. Copper was known; stone and bone were used for tools and weapons. A stele of limestone bearing a human face carved in relief displays progress in art beyond the primitive. Abundant pottery was made without use of the wheel. Close connexions with Lesbos and Lemnos and some with the Aegean existed.

Troy II, showing a marked advance in grandeur, survived through seven phases. Three successive fortification walls were erected, each surpassing its predecessor; imposing gates and towers built of stone and crude brick evince engineering skill. Inside the citadel, facing a court, stood a palatial hall or 'megaron' and many other similar buildings. Wealth and luxury are demonstrated by the gold jewellery and vessels of gold, copper, and bronze and the bronze and stone weapons recovered in the celebrated 'treasures' found by Schliemann. The potter's wheel appears in Phase IIb. Vessels of distinctive shapes were exported; and relations with the Aegean were maintained. Troy II ended in a devastating fire which laid the whole town in ruins.

Three towns of less importance, III, IV, and V, followed. Each, expanding over an enlarged area, had a defensive wall, though little is left of them. From Troy I to V there was evidently a continuity of people and culture with no unmistakable signs of new elements in the population. The Early Bronze Age at Troy, extending over the greater part of the third Millennium, terminated shortly after 2000 B.C.

Troy VI ushers in the Middle Bronze Age. People of a new stock, who brought the horse, took over the citadel. They were great builders: remains of three successive fortification walls of increasing strength and magnificence survive. The third with smoothly sloping outer face was constructed of large neatly squared blocks of hard limestone. There were at least four gateways, two protected by massive towers. Inside the citadel the ground rose in concentric terraces: the royal palace no doubt stood at the summit, but no remains are left, since the whole top of the hill was sliced away in Hellenistic times to make room for the temple of Athena. Spacious free-standing houses occupied the lower terraces, many equipped with stone bases for interior wooden columns. Outside the acropolis to the south was a cremation cemetery containing remnants of some 200 cinerary urns. In its eighth phase, about 1300 B.C., Troy VI was utterly demolished by a violent earthquake—far beyond the destructive power of man in the Bronze Age.

Survivors maintaining the same culture patched the defensive walls and built modest new houses inside the fortress. This was Troy VIIa which lasted a generation or two only to be razed again probably about the middle of the thirteenth century. This time it was a great fire which reduced the town to ruins. Remnants of human bones found in houses and streets suggest that violence accompanied the disaster.

Some of the inhabitants escaped, and once more the town was rebuilt and reoccupied for a time in a phase called Troy VIIb 1. In a still later stage, Troy VIIb 2, a primitive people, evidently coming from Thrace, seized and held dominion over the region to the end of the twelfth century. Thenceforth the site seems to have been virtually deserted for four centuries until early Greek colonists settled on the old ground. The ensuing period, Troy VIII, maintained itself in a small way and was ultimately succeeded by Troy IX which endured through the Hellenistic and Roman eras.

The situation of Hissarlik fits reasonably well with the account of Troy in Homer, Greek tradition, and folk memory. Searching exploration has discovered no rival capital site in north-west Troad. The destruction of Troy VIIa in the mid thirteenth century coincides with the flourishing period of the great royal palaces in Mycenaean Greece. Leadership, manpower, and wealth were there abundantly sufficient to organize a coalition. If there ever was a Troy of Priam with some basis of reality it must have stood in this place and at this time. Archaeological and linguistic discoveries during the past twenty years have convinced many scholars that there is a residue of historical truth in many Greek traditions and legends, and Schliemann's identification of Troy has surely been confirmed.

H. Schliemann, *Troy and its Remains* (1875), *Ilios* (1880), *Troja* (1882), *Bericht* ... 1890 (1891), W. Dorpfeld, *Troja und Ilios* (1902), W. Lef, *Troy* (1912), Blegen, Boulton, Caskey, Rawson, Sperling, *Troy I-IV* (1950-58); D. L. Page, *History and the Homeric Iliad* (1959); C. W. Blegen, *Troy and the Trojans* (1961). C. W. B.

TRYPHIODORUS, correctly **TRIPHODORUS** (3rd or 4th c. A.D.), epic poet, native of Egypt. He wrote *Marathoniana*, *The Story of Hippodameia* (cf. PIRITHOUS), an *Ὀδυσσεὺς Λεπτογυμνιστὸς* (cf. NESTOR 2), a paraphrase of Homer's similes, and *The Capture of Troy*. Only the last, in 691 verses, survives, showing a style midway between that described under NONNUS and the more Homeric manner adopted by Quintus Smyrnaeus.

TEXT. Weinberger, 1896 (Teubner, with Colluthus). With translation and brief notes: A. W. Mair, 1928 (Loeb, with Oppian and Colluthus).

M. L. W.

TRYPHON (1, *PW* 7) was the name adopted by a slave called Salvius, who led a slave revolt in central Sicily in 104 B.C. Collecting a large army and gaining the help of another slave leader, Athenion, he took a fortress and defeated a Roman army. He died in 102 and Athenion succeeded to his power.

E. B.

TRYPHON (2, *PW* 25), son of Ammonius, an important Greek grammarian at Rome under Augustus. His works, which were used by his contemporary Didymus, by Apollonius Dyscolus, and very freely by Herodian, included musical, botanical, zoological, and important dialect glossaries; as Atticist and analogist (see GLOSSA (Greek) and CRATES (3) OF MALLOS) he wrote *Περὶ Ἑλληνισμοῦ, Περὶ ὁρθογραφίας*, on disputed breathings, and on etymological pathology, which 'science' (including, for him, dialectal variation) he founded. His works are lost. Our Tryphon *Περὶ παθῶν* is a late abridgement.

A. von Velsen, *Tryphonis grammatici Alexandrini fragmenta* (1859). P. B. R. F.

TUBERO (1), LUCIUS AELIUS (*PW* 150), friend of M. Cicero and *legatus* to Q. Cicero in Asia, engaged in writing history; but of publication we have no proof. It possibly descended as material to his son, Q. Aelius Tubero (q.v. 2), who shared his father's interest both in history and in the Pompeian cause.

J. W. D.

TUBERO (2), QUINTUS AELIUS (*PW* 156), jurist and annalist, who fought on Pompey's side but became reconciled with Caesar, left politics after an unsuccessful prosecution of the Republican Q. Ligarius in 46 B.C., and wrote on jurisprudence and history (Pompon. *Dig.* 1. 2. 2. 46). He was reputed to be an expert in public and private law; he published several legal works which, however, did not enjoy a great popularity because of his *sermo antiquus*. In at least fourteen books, he treated Roman history from the origins to his own times; these fragments, however, may be from a monograph addressed to Oppius (Gell. 6. 9. 11). Livy cites him with Macer (4. 23. 1; 10. 9. 10). Pliny cites a Q. Tubero for astronomical data (*HN* 18. 235).

Peter, *HRRel.* 12. cccxvi and 308; Beloch, *Rom. Gesch.* 106; Ogilvie, *Comm. Livy* 1-5, 16 ff. A. H. McD.

TUDER, modern *Todi* with well-preserved pre-Roman and Roman walls, 62 miles due north of Rome in Umbria. First mentioned c. 100 B.C., when already under Roman domination (Plut. *Mar.* 17. 4), it became a *colonia* c. 30 B.C. (Pliny, *HN* 3. 113). Tuder has bequeathed a large bronze statue inscribed in Umbrian of Mars, the god it especially worshipped (Sil. 4. 222; 8. 462). E. T. S.

TUDITANUS (1), PUBLIUS SEMPRONIUS (*PW* 96) (cos. 204 B.C.), military tribune at Cannae (216), curule aedile in 214, praetor in 213, commanding at Ariminum until 211, became censor in 209. A leading diplomat, he closed the First Macedonian War by the Peace of Phoenice (205). Consul in 204, he won a success over Hannibal near Croton, dedicating a temple to *Fortuna Primigenia* (194). His Greek experience placed him on the embassy to Greece, Syria, and Egypt in 200, which opened the new Roman policy in the East, with the Second Macedonian War.

F. W. Walbank, *Philip V of Macedon* (1940), 102 ff., 305, 313. A. H. McD.

TUDITANUS (2), GAIUS SEMPRONIUS (*PW* 92), consul in 129 B.C. when he triumphed over the Iapydes, wrote *Libri magistratum* in at least thirteen books, treating intercalation, the *maius* and *minus imperium*, the origin of the tribunate, and the *mundinae*. Fragments about the Aborigines, the books of Numa, the death of Regulus, and (probably) Flaminius' triumph, indicate an historical work.

Peter, *HRRel.* 12. cci; 143. Cf. C. Cichorius, *Wien Stud.* 1902, 588 ff. A. H. McD.

TULLIA (1), the younger daughter of Servius (q.v. 1) Tullius, was said to have impelled her brother-in-law, the future Tarquinius Superbus, to murder her husband, Aruns Tarquinius, and subsequently her father, in order that she might marry him and become his queen. Tullia then drove her chariot over her dead father's body, in a street thereafter named *Vicus Sceleratus*. The story, for which a Greek origin has been claimed, merely because it was cast by Roman authors into the mould and technique of Greek tragedy, is probably best explained as an aetiological myth invented to explain the street name and the gesture of a statue, which was popularly believed to represent Servius Tullius.

Ogilvie, *Comm. Livy* 1-5, 185 ff.; A. Alföldi, *Early Rome and the Latins* (1964), 152 f. P. T.

TULLIA (2, *PW* 'Tullius' 60), Cicero's daughter, born c. 79 B.C.; first (by 63) married to a C. Piso (quaestor 58), who died in 57; then (56) to a Furius Crassipes (quaestor 51), who divorced her c. 51; finally, to Dolabella (q.v. 3) (50, in Cicero's absence). This marriage—never a success—ended late in 46. In Feb. 45 Tullia died, shortly after bearing a son who did not long survive her. Her death was a heavy blow to Cicero, who (though he loved her) had taken little account of her happiness during her life, but now proposed to build a shrine to her. He had to abandon the project and turned to philosophy for consolation.

E. B.

TULLIANUM, the underground execution-cell of the prison at Rome, flanking the *comitum*, and connected with Servius Tullius (Varro, *Ling.* 5. 151; Festus 356). The derivation from **tullus*, a spring, is more attractive, for the existing work is a well-chamber, once circular, built in coursed peperino (Tenney Frank, *Buildings of the Roman Republic* (1924), 39 ff.) of the third century B.C. The room above it has a travertine front repaired in A.D. 22 or 45 (*CIL* vi. 31674; cf. *ILS* iii. 342). The frontal orientation, as of the *comitum*, is by the cardinal points. A spring still rises in the present floor, higher than the original. Here were executed most State prisoners, including Jugurtha, the Catilinarian conspirators, and Verregetorix.

Nash, *Pict. Dict. Rome* i. 206 ff.

I. A. R.

TULLUS HOSTILIUS, traditionally the third king of Rome (673–642 B.C.), is probably an historical figure, and the suggestion that he is a duplication of Romulus can be dismissed. His capture and destruction of Alba Longa, which ceased to be an independent city during the regal period, and his founding of the *Curia Hostilia*, may be accepted as facts. The *Curia* was indisputably built by an eponymous king, because no Hostilius is mentioned as consul in the early Fasti, nor does the gens Hostilia seem to have come to the forefront till the end of the second century B.C. But most of his wars were related, or imagined, merely to explain his name and as examples of his *ferocitas*; and his story was almost lost in folkloric tales such as the battle of the Champions (*see* HORATII), and the punishment of Mettius Fufetius.

Ogilvie, *Comm. Livy* 1–5, 105 ff.

P. T.

TUMULTUS was the state of fear (*timor*) and confusion resulting from a war fought on the frontiers of Italy (or, originally, near the walls of Rome). Cicero (*Phil.* 8. 1. 3) attests that there were only two examples of *tumultus*, namely *tumultus Italicus* (i.e. war in Italy and, later, civil war) 'quod erat domesticus' and *tumultus Gallicus* (as Gaul was the only province that had a common frontier with Italy), 'quod erat Italiae finitimus'. The term probably came into use after the Gallic capture of Rome (387 B.C.). When the *tumultus* was announced, business and the administration of justice stopped (*iustitium*), army leave was cancelled, and all the citizens, wearing the military dress called *sagum*, were levied, even if previously exempted from service, to form a supplementary corps named *tumultuarii milites*.

F. Pottier, *Dar.-Sag.* s.v.; Kromayer-Veith, *Heerwesen u. Kriegsführung* (1928), 285, 305.

P. T.

TUNIS (or **TUNES**), a Libyan town on the site of modern Tunis. It is frequently mentioned in connexion with fighting in the vicinity of Carthage in the campaigns of Agathocles, Regulus, and Scipio Africanus. Although overshadowed by Carthage, situated only a few miles away, it remained a separate community to the end of the Roman period.

B. H. W.

TURBO, QUINTUS MARCIUS (*PW* 107), bears on inscriptions also the succeeding names *Gallmucius* (?) *Fronto Publius Severus Iulius* (?) *Priscus*, though the full series does not occur in any one inscription. He was born in Dalmatia and possibly began his career as a centurion (*CIL* iii. 14349. 2). In A.D. 114, he was prefect of the fleet at Misenum (*CIL* xvi. 60). Trajan (q.v.) sent him, probably in 116 or 117, to quiet Jewish disturbances in Egypt and Cyrene (Euseb. *Hist. Eccl.* 4. 2. 4). Hadrian (q.v.), whose confidence he enjoyed (S.H.A. *Hadr.* 4. 2), sent him in 117, probably to succeed the consular Larisus (q.v.) Quietus, as a procuratorial governor to quiet one or both the Mauretanas (*Hadr.* 5. 8). In 118, Hadrian put him in charge of Pannonia and Dacia with a rank which the S.H.A. equates with the prefecture of Egypt (*Hadr.* 6. 7. 3), and, probably in 119, made him *praefectus praetorio* with Septicius Clarus in succession to Attianus (q.v.) (*Hadr.* 9. 3–5). Though as prefect Turbo was loyal and vigorous (Dio 69. 18), Hadrian in his later years became suspicious of him (as of others, *Hadr.* 15. 7) and dismissed him from office, probably not as early as he did Clarus (c. 122) but perhaps before the date (136) at which Dio gives a retrospective estimate of Turbo, although S.H.A. *Ael.* 6. 4–5 may refer to Turbo as the prefect whom Hadrian discharged (after 136) for publicizing his regret over the adoption of the ailing Aelius. Whether Turbo survived Hadrian is not known.

S.H.A. *Hadr.* for his origin and early career, Dio bk. 69. 18; *AE* 1955, 230, no. 225, R. H. Lacey, *The Equestrian Officials of Trajan and Hadrian* etc. (Diss. Princeton, 1917), 17, no. 39, A. Stejneger, *Die Reichsbeamten von Dazien* (1944), 14 ff. and *Die Praefekten von Aegypten* (1950), 50 ff.; R. Syme, *JRS* 1962, 87 ff., who assigns the inscription from Caesarea (*Ann. Epigr.* 1946, 198, no. 113) to another Turbo, active under Antoninus, H. G. Pflaum, *Les Carrières procuratoriennes* etc. (1960), i. 199 ff. M. H.

TURIA, wife of Q. Lucretius Vespillo (cos. 19 B.C.), concealed her husband during the proscriptions of 43–42 until his pardon was obtained. She has been identified with the subject of the so-called *Laudatio Turiae* (*ILS* 8393).

W. Waide Fowler, *CR* 1905, 261 ff.; F. Weiss, *PW* xii. 995 ff.; M. Duvy, *Une Éloge funèbre d'une matrone romaine* (1950) (text, trans., and comm.) A. F. Gordon, *ATArch* 1950, 223 ff.; F. della Corte, *Giornale italiano di filologia* 1950, 146 ff. G. W. R.

TURNUS (1), Italian hero, son of Daunus and the nymph Venilia, and brother of the nymph Juturna; king of the Rutulians, whose capital was Ardea. He was the accepted suitor of Lavinia, daughter of Latinus (q.v.), but Latinus subsequently betrothed her to Aeneas against the will of his wife Amata. The Latins, roused by Juno, join with the Rutulians to make war on the Trojans. Turnus fights bravely, leads the attack on the Trojan camp and defends Lavinium. He slays Pallas, son of Evander, and is twice saved by Juno from Aeneas, who finally pursues and kills him (*Aen.* 7–12). C. B.

TURNUS (2), satirist under Domitian, brother of the tragic poet Scaeva Memor (q.v.), and credited with 'ingentia pectora' by Martial (7. 97. 7; 11. 10; Probos (Vallae) *ad Iuven.* 1. 20; Rut. Namat. 1. 603–4; Lydus, *Mag.* 1. 41).

TURPILIUS, SEXTUS (died old, 103 B.C.), Latin composer of *comediae palliatae*, livelier and more popular than Terence's. Of thirteen surviving titles six come from Menander.

Fragments: O. Ribbeck, *CRF* 2. 85 (3rd ed. Teubner, 1897).

E. H. W.

TURRANIUS GRACILIS (of uncertain date), an authority on Spain, used by the elder Pliny (*HN*, books 3, 9, and 18, *index auctorum*).

TURRINUS, **CLODIUS**, name of two rhetoricians, father and son, discussed by the Elder Seneca (*Controv.* 10, *pr.* 14–16). The senior lost force in speaking by too strict adherence to Apollodorean rules: he held a distinguished position in Spain. The son, in whom Seneca saw high promise, was treated as one of his own sons.

J. W. D.

TUSCULUM, a city near *Frascati* 15 miles south-east of Rome. Its extensive remains occupy a strong, bracing site 2,108 feet above sea-level. Myths shroud its origin, but Tusculum was certainly powerful in early Latium. Its dictator Octavius Mamilius allegedly supported his son-in-law Tarquinius Superbus (508 B.C.); but traditions associating Tusculum with Etruscans may be mere aetiological fictions to explain its name. More credibly, Tusculum reputedly led the Latins at Lake Regillus (q.v.) c. 496, when Mamilius himself fell. Thereafter, however, being exposed to Aequian attacks via Algidus, it became Rome's ally and staunchly resisted Aequi, Volsci, and Gauls. Tusculum, the first Latin city to obtain Roman citizenship (381), supplied Rome with several illustrious families (Mamilii, Fulvii, Fonteii, Juventii, Porcii). Some Tusculans joined the Latin revolt in 340 B.C. but usually Tusculum remained loyal (e.g. against Hannibal). A *municiplum* under late Republic and early Empire, Tusculum was a fashionable resort where wealthy Romans sojourned: Lucullus, Maecenas, and especially Cicero, who composed several philosophical treatises in his Tusculan villa (at *Poggio Tulliano*?). Subsequently Tusculum is seldom mentioned, but was still an important stronghold when destroyed in medieval times. Cato the Censor was born here.

Strabo 5. 239, Livy 1. 49, 2. 151, 3. 71; 4. 33 f.; 6. 21; 8. 7 f.; 26. 9, Dion. Hal. bk. 10 *passim*. G. McCracken, *A Short History of Ancient Tusculum* (U.S.A. 1939). E. T. S.

TUTICANUS, friend of Ovid from youth, whose name could not appear in elegiac verse without the playful scanions of *Pont.* 4. 12. 10–11; cf. 4. 14. He retold Homeric themes in Latin.

TWELVE TABLES, the earliest Roman code of laws, and the starting-point in the development of Roman law. The circumstances under which it was drawn up are not clear, and the authenticity of the XII Tables has therefore been called in question by some scholars. But it may be regarded as certain that the XII Tables were actually drawn up by a special commission of *decemviri legibus scribundis* in 451–450 B.C. (see *DECENVIRI*). Enacted by the *Comitia Centuriata* as a statute (*lex duodecim tabularum* appears often in the sources), the XII Tables were published in the Forum on tablets of bronze (or wood). The original Tables perished when Rome was burnt by the Gauls. The object of the code was to collect the most important rules of the existing customary law, the knowledge of which had been till then confined to the patrician *pontifices*, and to reduce patrician privilege. It is unlikely, however, that the *decemviri* departed much from the customary law, though certainty is impossible, in default of authentic sources about the law in pre-decemviral times and for lack of a complete text of the Code, which is known only through quotations and references in legal and lay literature. The surviving text (a collection of very brief and abrupt imperatives) is mostly in a later and modernized Latin, but it contains a few passages in archaic language, whose meaning is not always clear. Some few similarities to Greek institutions may possibly be attributable to the embassy to Athens which, according to tradition, preceded the decemviral work. The XII Tables contained rules from all spheres of law: private and criminal, sacred and public, but procedure seems to

have been dealt with in more detail than substantive law. The statement of Livy (3. 34. 6) that they were 'fons omnis publici priuatiq[ue] iuris' is an exaggeration. We cannot tell what proportion the surviving fragments bear to the whole, but their scale suggests that only the more salient rules were expressed. The XII Tables were never abolished (even in Cicero's youth schoolboys learnt them by heart); but the later development of Roman law made much of them obsolete. Some fundamental rules nevertheless remained operative until Justinian. See also *LAW AND PROCEDURE, ROMAN, I*.

Reconstructions of the decemviral code have been attempted since the sixteenth century; the one now generally accepted (for convenience) is that of R. Schoell, *Legis duodecim tabularum reliquae* (1866). Modern editions are to be found in the collections of *Pontes iuris Romani* by Bruns–Mommsen–Gradenwitz, and Riccobono (second edition 1, 1941).

II. F. Jolowicz, *Hist. Intro. to the Study of Roman Law* (1952), and other works on History and Sources cited s.v. *LAW AND PROCEDURE, ROMAN, I*. F. Wieacker, *Entretiens Hardt* xii (1966), 293 ff. A. B.; B. N.

TYCHE, formed from the verb *τυγχάνειν*, and reflecting its varied use, can mean either 'success' or 'fortune', 'happencence': what a person 'attains' on his own, or whatever 'befalls' him of good or bad. The two ideas are not necessarily distinct: to 'Saviour Tyche, child of Zeus the Deliverer', Pindar ascribes not only good fortune divinely bestowed, as in the liberation of Himeria, but also success won by skill, in matters such as navigation, warfare, and government (*Ol.* 12. 1–5); Aleman calls Tyche 'sister of Order and Persuasion, and daughter of Forethought' (Plutarch, *De fort. Rom.* 4. 318 a). Most often, however, *tyche* is merely 'luck', divorced from human effort, and like the English word it may be either neutral or favourable: '*tyche* and *moira* give everything to man', says Archilochus (*Stob.* 1. 6. 3), meaning one's 'luck' and one's 'lot'; Eudore and Tyche, 'Bounty' and 'Luck', are named together as Oceanids (Hes. *Theog.* 360; Tyche appears beside 'Flockgrazing', a special form of Bounty, at *Hom. Hymn to Demeter* 420).

Tyche works obscurely, lifting up one man and pushing down another (*Soph. Ant.* 1158 f.), and is finally heard as 'chance', a principle ruling all of human life (Demetrius of Phaleron *apud* Polybius 29. 21; cf. Plato, *Leg.* 709 b); such *tyche* is 'a blind and wretched thing' (Menander *apud* Stobaeus 1. 7. 3), and—wearing the aspect of the old gods whom it supersedes—even jealous (Polyb. 39. 8. 2) or punitive (id. 23. 10. 2). In stricter usage of the fourth century pure chance was *automaton*, distinguished from *tyche*, good or bad 'fortune' (Arist. *Ph.* 2. 4–6). Conceived absolutely, *tyche* excludes belief in the gods (*Jr. trag. adesp.* 169; cf. Eur. *Cycl.* 606 f.). No use praying for riches or distinction, because all that man gets is *tyche* (*Theognis* 129 f.). In pious language, to be sure, the gods are 'masters' of *tyche* (Eur. *El.* 890 f.); we hear that *tyche* depends on 'the goodwill of the gods' (Demosthenes 2. 22), or that 'god has awarded to each' his own *tyche* (id. 18. 208). Tyche herself is invoked in a lyric hymn of early Hellenistic times (Stobaeus 1. 6. 13), and praised as 'noblest of the gods', all-powerful, wise, and gracious. Menander sees in Tyche 'a divine breath or understanding that guides and preserves all things' (Stobaeus 1. 6. 1). But the plain meaning of the word defies such moral glozing.

Feeling for *tyche* is strongest in risky situations: in athletic contests (Pind. *Isth.* 8. 66), in the drawing of lots (Eur. fr. 980), in love (on vases Tyche is named among the attendants of Aphrodite), and above all in seafaring (Aesch. *Ag.* 664), whence Tyche's commonest attribute in art, the rudder (cf. Pindar *apud* Plutarch, *loc. cit.*). But a man may see his whole life governed by *tyche*:

Oedipus calls himself 'the child of Tyche', for mere luck, not royal parentage, has made him eminent (Soph. *OT.* 1080-5). *Tyche* was used to form personal names of good omen, like Eutyches; such names, always current (Tycheus at *Il.* 7. 220), are immensely common from the first century B.C. onwards. In popular belief each person has a separate *tyche*, which is born with him, and appears in all the particulars of his life (Demosthenes 18. 252-66, weighing his own *tyche* against Aeschines'; Philemon *apud* Stobaeum 1. 6. 11). So *tyche* is much like *daemon*, and sometimes both are invoked together as personal deities (Soph. *Ichn.* 73; Eur. *IA.* 1136; cf. Plato, *Leg.* 877 a). In a household cult of the third century B.C. offerings are prescribed for the *agathos daemon* of a married couple, and for the *agathe tyche* of the man's parents. The *tyche* of a Hellenistic king or Roman Emperor was a power to be adored and even worshipped—often, no doubt, out of flattery more than faith; but it is clear that the *fortuna* of magnates like Sulla and Caesar could be the object of popular superstition.

Cities too were subject to *tyche*. Melos relies on 'the saving luck conferred by heaven' (Thuc. 5. 112); from the early fourth century onward the formula 'with good luck' was usually prefaced to records of Athenian decrees, and above a decree from Tegea *Tyche* is represented with her rudder, adorning a trophy. The Thebans, in the years of their supremacy, founded a cult of *Tyche*, the earliest known; the statue showed her holding, like Eucene, the child Plutus, and was thus an allegorical creation, no less than all later types of the goddess. In the same century Agathe *Tyche* received sacrifice at Athens, on one occasion together with Erene; her statue, by Praxiteles, stood near the Prytaneion. A city, like a man, might have its special *tyche* (the oracle at Dodona affirmed that the *tyche* of Athens was 'good', while the *tyche* of mankind, in the same period, was 'hard and terrible', Demosthenes 18. 253), and in the third century this idea too issued in cult, first evident at Antioch and Alexandria: at the outset it seems that only the *tyche* of a great city, as of a great man, was honoured, but during imperial times many towns large and small, especially in Asia Minor and the East, worshipped their own Luck, that is *Tyche* designated by the place-name in the genitive.

G. Heitzog-Hauser, *PIF* 5 v. *Tyche*, II. Herter, *Gh. k. und Verh. ang. ant. Über die allegorische Tyche*, *Millan* 1963, 1 fl. N. R.

TYDEUS (*Τυδεύς*), in mythology, father, by Deipyle daughter of Adrastus (q.v.), of Diomedes (q.v. 2), and son of Oeneus (q.v.) (Apollod. 1. 75). He was a small but powerful and valiant man (*Iliad* 5. 801). Being sent on an embassy to Thebes by the Seven, he took part in sports there and defeated all the rest; the Thebans laid an ambush for him, but he killed all but one of the fifty who composed it (4. 384 ff.). Later poems, drawing more or less on the *Cyche* Thebaid, and still later ones which use the *Thebais* of Antimachus, tell of his part in the attack on Thebes, his furious battle-rage (as Aesch. *Sept.* 377 ff.), and the manner of his death (see MELANIPPOS). A sixth-century vase shows Tydeus killing Ismene, as in the story told by Mimnermus (Brommer, *Vasenlisten*², 345).

H. J. R.

TYNDAREOS (*Τυδάρεος* or -ος), in mythology, husband of Leda and father, real or putative, of Helen, Clytemnestra, and the Dioscuri (qq.v.). He was king of Lacedaemon (Apollod. 2. 145, and often), brother of Leucippus (q.v. 1), and of Aphareus and Icarius (Apollod. 1. 87); for his varying genealogy, see Roscher's *Lexikon* v. 1406 f. He has not much legend of his own; Hesiod (fr. 93 Rzsch) says that when sacrificing to the gods he forgot Aphrodite, who therefore made his daughters light

and unfaithful. He is also associated with Heracles (q.v. 2) the hero had a serious quarrel with Hippocoon and his sons, wherefore he invaded Lacedaemon, their kingdom, overcame and killed them in a desperate battle in which he lost his brother Iphicles (q.v. 1), and gave Lacedaemon to Tyndareos (Alcman, fr. 1. 5 Diehl; Apollod. 2. 143 ff.).

H. J. R.

TYNNICHUS, poet of Chalcis, whose reputation rested on a single poem, a paean to Apollo, of which nothing survives, but which was admired by Aeschylus (Porph. *Abst.* 2. 18) and mentioned with high praise by Plato.

Page, *Poet. Mel. Gr.* 707.

TYPHON, TYPHOEUS (*Τυφών, Τυφωεύς*), a monster, often confused with the Giants (q.v.), as Horace, *Carm.* 3. 4. 53, but originally and properly distinct from them. He was born by Earth to Tartarus after the defeat of the Titans (Hes. *Theog.* 820 ff.). He had a hundred heads of dragon-shape, which uttered the sounds of all manner of beasts, also mighty hands and feet (presumably a hundred, or a hundred pairs, of each, though Hesiod does not say so) and would have done enormous harm if Zeus had not at once attacked him with his thunderbolts, overthrown him, and cast him into Tartarus, setting Aetna on fire by the way (in Homer, *Il.* 2. 783, he lies in the land of the Arimi; cf. Verg. *Aen.* 9. 715-16, and commentators on both passages). His shape suggests oriental rather than Greek myth, and this is confirmed by his regular connexion with Cilicia. The story, therefore, in Apollod. 1. 41-4 Nonnus, *Dion.* 1. 154 ff., may be eastern and ancient. Typhon strove with Zeus, stole his thunderbolts, and cut out his sinews with his own sword; but Hermes and Aegipan stole all back (or Cadmus, q.v., disguised as a shepherd, beguiled Typhon with his music), so Zeus was finally victorious, and buried Typhon under Aetna.

H. J. R.

TYRANNIO (1) the Elder (early 1st c. B.C.). Theophrastus, son of Epicetides, of Amusis (where his teacher nicknamed him 'Tyrannio'), afterwards a pupil of Dionysius Thrax, was brought by Lucullus as prisoner to Rome, where he was freed and enjoyed the patronage of Pompey, being the first Aristarchan to teach in the city. He was a friend of Cicero, Caesar, and Atticus, and interested in the Latin language, which he regarded as derived from an Aeolic Greek dialect. He was among those who examined the MSS. brought by Sulla from Athens, 86 B.C. His works, on metre (a comparatively rare topic), on Homeric and other criticism and exegesis, and on grammar (which, under Atticist influence, he defined as *θεωρία μνήσεως*), have perished.

C. Wendel, *PIF* 7 A. 1811 ff.

P. B. R. F., R. B.

TYRANNIO (2) the Younger, son of Artemidorus, a Phoenician, was brought as a prisoner to Rome and freed by Terentia, the widow of Cicero. He was a pupil of Tyrannio the Elder, and became an eminent grammarian at Rome, Strabo being among his pupils. He wrote on accents and other grammatical topics, but his works have been confused with those of the elder Tyrannio, the fate of which they have shared.

C. Wendel, *PIF* 7 A. 1810 f.

P. B. R. F.

TYRANNY (*τυραννίς*, perhaps a Lydian word) was the illegal monarchy which was usurped by individuals in many oligarchic city-states of the seventh and the sixth centuries B.C., the 'age of tyrants'. The earliest occurrence of the word is in Archilochus (fr. 22 D.). It was not a special form of constitution or a reign of terror; that bad sense was attached to it later, especially

by the democratic *polis* of the fifth century which glorified the tyrannicide, and by the political philosophers, e.g. Plato, to whom tyranny meant the worst constitution possible. Tyranny hardly ever lasted more than two generations. The best known of the tyrants were Pheidon, Polycrates, Cypselus and Periander, Cleisthenes of Sicyon, Pisistratus (q.v.). The last representatives of the early period of tyranny were the Sicilian tyrants Theron, Gelon, and Hieron, who rose to power mainly as military leaders. A second epoch of tyranny was introduced by Dionysius I (q.v.). Tyranny of the older type mostly arose from political and economic leadership of the lower classes, and often prepared the rise of democracy. The outlines of the constitution did not change, but the tyrants used laws and institutions as instruments of their own policy. They fostered popular cults, and generally contributed greatly to the enrichment and civilization of their States; without being 'business men' they actively participated in the great economic changes of their time. Later tyrants, though military dictators, inaugurated a new age of monarchy (q.v.).

V. L.

TYRE (Τύρος, Tyrius), HELLENISTIC AND ROMAN, an important city on the Phoenician coast, some 20 miles south of Sidon. In 332 B.C. it offered an obstinate resistance to Alexander and was captured only after a famous siege. Though destroyed, it made a rapid recovery and became a Ptolemaic possession, at first under a native dynasty till 274, then as a republic, ruled by *Suffetes*. Conquered by the Seleucids in 200 B.C., it became free in 126. It early struck a *foedus* with Rome. It was made a colony by Septimius Severus, who granted it the *ius Italicum*, and also made it the capital of Syria Phoenice. It revolted under Elagabalus. It was a great commercial city, maintaining a *statio* at Puteoli and at Rome during the Principate, and was the seat of a famous purple-dyeing industry. It ruled a large territory, stretching to the upper waters of the Jordan.

A. H. M. J., H. S.

TYRRHENUS (Τυρρηνός), eponym of the Tyrrhenians (Etruscans, q.v.). Dion. Hal. *Ant. Rom.* 1. 27. 1, where he is son of King Atys and comes from Maeonia (Lydia); in schol. Pl. *Ti.* 25 b, he is Atys' grandson; son of Heracles, Dion. Hal. 1. 28. 1, or of Telephus (q.v. 1), *ibid.*; apparently god of the Tyrrhenian Sea (Valerius Flaccus 4. 715). He invented trumpets (Hyg. *Fab.* 274. 20).

H. J. R.

TYRTAEUS, elegiac poet of the seventh century B.C., said by some to be an Athenian schoolmaster, who was sent to Sparta as the result of an oracle (Pl. *Leg.* 629 a, Paus. 4. 15. 6). It seems more likely that he was really a Spartan, since he was a general (Ath. 14. 630 f, Diod. Sic. 8. 36), and his fragments show him giving orders (frs. 1 and 8), which would hardly be tolerated by Spartans in a foreigner. He led the Spartans in the second Messenian War and helped to take Messene (*Suda* s.v. *Tyrtaeos*). His poems were collected at Alexandria in five books and contained: (1) war-songs, of which two specimens have been recognized in pieces of undoubted Spartan origin but not necessarily his (frs. 15-16 Bergk = *Carm. Pop.* 18-19); (2) exhortations in elegiac verse; and (3) a poem called *Πολυτεία* for the Lacedaemonians. Most of the existing fragments seem to belong to the second class.

Fr. 1 seems to be concerned with some definite occasion in war, since it gives orders for tactical arrangements and is concerned with a siege. Fr. 6-7 is a single poem which begins by praising the virtue of dying for one's country and ends by urging the young men to valour. Fr. 8 begins with a general praise of courage at a time that seems to be after a defeat and ends with specific advice on conduct in battle. Fr. 9 is more elaborate; it is concerned with the nature of ἀρετή and of the ἀνὴρ ἀγαθός, whom Tyrtaeus finds in the brave fighter. There is no good reason to suspect the authenticity of these pieces, since the type of warfare which they describe belongs to the seventh century, and all show a similar use of language, even of repeated phrases. Other fragments may belong to the third class, notably fr. 2 on the origin of the Spartans, fr. 3 on the alleged Delphian origin of their constitution, frs. 4 and 5 on the First Messenian War. Tyrtaeus was certainly connected with the political reforms of his time, though he was not necessarily a prophet of the so-called Lycurgan constitution. He writes in an epic language, with many echoes of Homer, and at times he is unskilful in his adaptation of a Homeric motive to new uses (fr. 6-7, 21-6 and *Il.* 22. 71-6, fr. 8. 20-34 and *Il.* 16. 215-17). His importance is more political than literary, though he seems to have influenced Solon. The Spartans are said to have sung his songs on the march (Ath. 630 e).

C. M. B.

TZETZES, JOHANNES (12th c. A.D.), a copious, careless, quarrelsome, Byzantine polymath. In his youth he wrote (A.D. 1143) a commentary on the *Iliad* of which the greater part is still unpublished, followed by *Allegories on Iliad and Odyssey* (in 10,000 verses), and other verse works on *Antehomerica*, *Homeric*, and *Posthomeric*. His other writings included scholia on Hesiod, Aristophanes, Lycophron, and others, and a poem on prosody. His chief work, *Βίβλος Ἱστορικὴ*, by its first editor named Χιλαδῆς, is a review (in 12,674 verses) of Greek literature and learning, with quotations from over 400 authors. In regard to his poverty and slighted merits Tzetzes displays an engaging lack of reticence. He was not always without taste or discretion; e.g., once, when reduced to selling the rest of his library he retained his Plutarch; nor is felicity of expression lacking in (for example) his ob- jurgation of Thucydides' cross-word style (λοξοσυστροφίος λόγους). Generally, however, his manner is dull, and he is extremely inaccurate (perhaps owing to his frequent separation from his books). His uncorroborated evidence is accordingly viewed with much suspicion. Nevertheless, he preserves much valuable information from ancient scholarship, and offers an engaging glimpse of the life of a Byzantine scholar in a period of intense interest in ancient Greek literature.

U

UBII, a German tribe on the east of the Rhine, between the Main and the Westerwald, which besought Caesar's help against the Suebi (q.v.) in 55 B.C. Under renewed Suebic pressure in 38 B.C. Agrippa brought them across the river at their own request, and settled them on land formerly belonging to the Eburones, in which Cologne was later to rise (*see* COLONIA AGRIPPINENSIS). The Ubi furnished recruits to the Roman army; they only joined Civilis in A.D. 70 under duress and returned to their allegiance to Rome at the earliest possible moment. O. B.

ULPIANUS (1), DOMITIUS (PW 88), one of the last great Roman jurists, born of a family long established at Tyre. He was, with Paulus (q.v. 1), assessor to Papinian (q.v.) as *praefectus praetorio*, and at some time held the office of *libellis*. He is said to have been banished, like Paul, by Elagabalus, but already in A.D. 222 he is *praefectus annonae*, and in the same year *praefectus praetorio*. He had great influence as adviser of the young Emperor, but was killed (223) by the mutinous Praetorians, ostensibly for his severity and some plans of reform unfavourable to this privileged corps. Like Paul, Ulpian was pre-eminent as an encyclopedic compiler and synthesizer. (It is possible to see a rivalry between them: both cite other jurists freely, but never cite each other, and their major literary works are parallel.) Ulpian was perhaps less original and acute than Paul, but he had greater clarity and ease of exposition. His aim seems to have been to sum up the learning of his predecessors so well that direct reference to previous authorities would be unnecessary, and his citations of earlier literature are accordingly numerous and thorough. Justinian's compilers paid him the compliment of using him far more than any other writer: nearly a third of the *Digesta* (q.v.) is taken from his works (more than twice as much as from Paul, his nearest competitor). The original extent of his writings was very great—we know of nearly 280 books—and is the more remarkable because his literary activity seems to have been almost entirely confined to the reign of Caracalla (212–17). His principal works: *Ad edictum libri 81*, a long commentary on the Praetor's Edict, with an annexe in two books on the Edict of the *archiles curules*; a comprehensive work *Ad Sabinum* in fifty-one books (perhaps unfinished, and certainly subsequently re-edited) with several supplementary monographs on various *Leges* or on special branches of the private law (*sponsalia*, *judicis commissio*); general works for practitioners (*disputationes*, *Responsa*); short textbooks: *Institutiones*, *Regulae* (seven books); monographs on various magistracies. The work known as *Tituli ex corpore Ulpiani* (or *Epitome Ulpiani*), which is preserved independently of the *Digest*, is probably a fourth-century epitome of a *Liber singularis regularum*, itself also attributed to Ulpian but more probably compiled by an unknown writer from edited texts of Gaius, Ulpian, and other jurists. The *Opiniones*, known only from the *Digest*, are probably also spurious.

See bibliography s.v. JURISPRUDENCE. For date of his death, POxy xxxi. 2665. F. Schulz, *Sabinus-Fragmente in Ulpianus Sabinus-Kommentar* (1906). On the *Epitome* and *Liber singularis* F. LAW AND PROCEDURE, ROMAN, I. A. B.; II. N.

ULPIANUS (2) of Ascalon taught rhetoric at Emesa and Antioch in the reign of Constantine (A.D. 324–37) and wrote a number of declamations and rhetorical works.

He is the reputed author of scholia to eighteen speeches of Demosthenes; they are of little independent value. He was a teacher of Libanius and Prohaeresius.

ULPIUS TRAIANUS, MARCUS, father of the Emperor Trajan (q.v.), was a native of Italica in Baetica, of which province he later became governor. He commanded Legio X Fretensis in the Jewish War c. A.D. 67–8, and became consul (the first of his family to reach this rank) soon afterwards. In 73–4 he was created a patrician, Governor of Syria c. 73–6 (cf. *AE* 1933, no. 205), he won *ornamenta triumphalia* (ILS 8970), doubtless due to his wise handling of Parthian threats, and became proconsul of Asia c. 79–80. He died before 100 (cf. Pliny, *Pan.* 89); consecrated c. 112, he was honoured on his son's coinage as *Divus Pater Traianus*.

UMERIANS. The word 'Umbrian' has been used by ancient and modern authors to denote a variety of ethnic, linguistic, cultural, and geographical entities. Pliny (*IIN* 3. 14. 112) refers to the Umbrians as the *gens antiquissima Italiae*, and derives their Greek name of Ombrioi from their having survived the flood. Attempts to equate the Umbrians of the ancient sources with a range of archaeological terms extending from the Villanovans (q.v.) to the Germanic Ambrones have brought little save confusion or a clarity that is at best illusory. Evidence for the Indo-European Italic dialect known as Umbrian is found in that part of central Italy where the urnfield and inhumation rite overlapped; it is closely related to Oscan, from southern Italy (outside the urnfield area), and is written in a script derived via Etruscan from the western Greek alphabet. The longest documents are the ritual texts known as the Tabulae Iguvinae (q.v.).

Umbria, together with Ager Gallicus, formed the Sixth Regio of Italy (q.v.) under Augustus. As such, it included territory bounded by the Adriatic, the Crustumium, and the Aesis on the east, and by Sabine territory and the Tiber to south and west. Important towns included Iguvium, Camerinum, Asisium, Tuder, Sentinum, Spolegium, Carsulac, Amerina, Interamna Nahars, Narnia, Oriculum (qq.v.), and Hispellum, and in Ager Gallicus Pisaurum and Sena Gallica.

USURY. Loans at interest were not customary in Greece and Italy during the Early Iron Age, except perhaps for cattle and seed. Our earliest records come from Megara, and from Athens, where Solon removed all restrictions of interest, and made provisions for all types of loans. Usury with or without security became a profitable business during the Classical Period, both for private individuals and for temples and State institutions. Athens, from Solon's time, most Hellenic States, and Rome forbade lending on the security of the debtor's person, a practice prevalent in the East until the Hellenistic age, which was a period of large borrowing transactions throughout the civilized world. Usury was absolutely forbidden at Rome in, perhaps, 342 B.C., but the law became inoperative from the second century. The pitiless treatment of debtors by the upper classes at Rome during the later Republic is only too well known. After 51 B.C. interest might not exceed 12 per cent, except for seed loans; but usury by legal subterfuge is attested by authors and papyri. These evasions were gradually made more difficult, under the impact of Aristotle and the Judaeo-Christian tradition, until in the Late Roman period a limit was fixed (50 per cent), extending to seed loans. Unlimited usury was henceforth illegal.

F. M. H.

UTICA (modern *Utique*), traditionally the oldest Phoenician settlement on the north African coast, some 30 miles north-west of Carthage; its earliest remains

appear to be of the eighth century B.C. Though now lying 5 miles inland, in antiquity it was a port on the mouth of the Bagradas river. Within the Carthaginian Empire it always retained a special position. Utica was besieged by Scipio (204) and supported Masinissa (q.v.) against Carthage in 149. Rome rewarded Utica with lands of the fallen city and made her the capital of the Roman province of Africa; Italian financiers and merchants settled in the Free City. Pompey made the port his base for the swift campaign which won Africa from the Marians (81). Later Utica remained loyal to the Pompeian cause against the forces of Curio and Caesar, and was the scene of Cato's suicide. Heavily fined for its senatorial sympathies, Utica lost ground as Roman Carthage became important, but received municipal rights under Augustus and colonial under Hadrian. A substantial part of the residential section of the Roman town has recently been uncovered.

Excavation reports in *Karthago* 1951, 1954, 1958, etc. L. Teutsch, *Das Städtchen in Nordafrika* (1962), see index, A. Lévy, *Carthage. Utique* (1968).
W. N. W.; B. H. W.

UXELLODUNUM, an *oppidum* of the Cadurci. In 51 B.C. it was the scene of the last Gallic resistance to Caesar who, after Drappes and Lucterius had been defeated while out foraging, finally took it by diverting the spring which supplied it. The place is generally identified with *Puy d'Issolu* (near *Vayrac*), where in 1862 Cessac discovered diversionary works at a spring on the west side of the hill-fort, but other details do not fully agree and *l'Impérial* (*Lusech*) and *Murcens* (north-east of *Cahors*) still claim some adherents.

V

VABALLATHUS, SEPTIMIUS, or in Greek ATHENODORUS, the son of Odaenathus (q.v.) by his second wife Zenobia (q.v.), was an infant when his father was killed but was his titular successor, under the guardianship of his mother. He at first assumed the title of king of kings and *corrector totius orientis*. In A.D. 270 Aurelian recognized him as *vir consularis*, *rex*, *imperator*, *dux Romanorum*. In 271 he was proclaimed *Imperator Caesar Vaballathus Athenodorus Augustus*. In 274 he was apparently not carried in Aurelian's triumph, and may have died before.

A. H. M. J.; H. S.

VACUNA, a Sabine goddess, Horace, *Epist.* 1. 10. 49. He probably puns on her name, as if she were 'uacationis dea' (so Cruquius' commentator ad loc.), but her real functions were already forgotten. Varro identified her with Victoria (q.v.; 'Acron' ad loc.), others with Bellona, Diana, Minerva, and Venus (qq.v.; *ibid.* and Porphyrio ad loc.). She had groves at Reate and by the Lacus Velinus (Pliny, *HN* 3, 109).

E. C. Evans, *Cults of the Sabine Territory* (1939), index s.v.
H. J. R.

VAGELLIUS, Neronian poet and friend of Seneca (*QNat.* 6. 2. 9). Morcl, *FPL* 124. The same name is accepted by Ribbeck and others, but queried by Schanz, for the doubtful 'Vallegius' mentioned by Donatus (auctarium, Suet. *Vit. Ter.*) as a witness to the Younger Scipio's share in Terence's plays.
J. W. D.

VALENS (1), **FABIUS** (*PII* 151) (*cos. suff.* A.D. 69), born at Anagnina of equestrian family, 'procax moribus neque absurdus ingenio' (Tac. *Hist.* 3. 62). Commander of Legio I in Germania Inferior, he supported Galba, suppressed the governor Fonteius Capito, and incited Vitellius to proclaim himself Emperor. An army-commander in the invasion of Italy and at Bedriacum, and honoured by Vitellius, he was impeded by ill health from reaching northern Italy in time to oppose the troops of Antonius Primus. Learning of the fall of Cremona, he made his way to Galia Narbonensis, but was captured there and subsequently put to death.
R. S.

VALENS (2), Eastern Emperor (A.D. 364-78), was elevated by his brother Valentinian I (q.v.) to rule the East. The chief event of his reign was the crossing of the Danube by the Visigoths, who completely defeated Valens in the battle of Adrianople (9 Aug. 378); his body was never recovered. He was an ardent Arian and was considerably less tolerant in religious matters than his brother.
E. A. T.

VALENTIA (modern *Valencia*), on the south-east coast of Hispania Citerior. Decimus Brutus settled the former soldiers of Viriathus (138 B.C.) either here or at another Valentia (? *Valença do Minho* in Portugal). Its inhabitants supported Sertorius' cause even after his death. Its Roman name was known to Sallust in connexion with the Sertorian war. It became a full Roman colony at

some time in the first century B.C. The prosperity of the city is proved by Iberian ceramics, Ibero-Roman coins, numerous inscriptions, and the fact of Byzantine occupation.

J. J. VAN N.; M. I. II.

VALENTINIAN (1) I, Roman Emperor (A.D. 364–75), a Pannonian, was an army officer who was elevated by the troops at Nicæa in Feb. 364 after the death of Jovian. At Constantinople in March he elevated his brother Valens (q.v. 2) to rule in the East, while he himself took over the government of the West. Most of his reign was spent in the defence of the northern frontiers. In this work he showed great skill and energy. In 367 he proclaimed his son Gratian (q.v.) as Emperor. Although cruel and irritable he showed consistent toleration in religious matters. He died at Brigetio (375).

E. A. T.

VALENTINIAN (2) II, Roman Emperor (A.D. 375–92), was the son of Valentinian I. He was elevated by the troops at Aquincum (375) without the consent of Valens or Gratian (qq.v.), but they gave him Italy, Africa, and Illyricum to rule. Expelled from Italy by Magnus Maximus (q.v. 2) he was restored by Theodosius I. He was found dead, perhaps murdered, at Vienne in 392.

E. A. T.

VALENTINIAN (3) III, Western Roman Emperor (A.D. 425–55), was the son of Constantius III and Placidia (qq.v.) and was born in 419. First Placidia and then Actius were the effective rulers of his part of the Empire, for he never took much interest in public affairs; but in 414 he issued his famous Novel 17 which gave the bishop of Rome supremacy over provincial churches. He murdered Actius with his own hands in 454; but two barbarian retainers of Actius avenged their master by murdering Valentinian in 455.

E. A. T.

VALERIANUS, PUBLIUS LICINIUS (PW 173) (Emperor A.D. 253–60). A senator of distinguished origin, he held an important military command in Raetia under Trebonianus Gallus. The troops he collected to help Gallus against Aemilianus hailed him as Emperor on the death of Gallus. When Aemilianus was killed by his own troops, Valerian and his son Gallienus were universally recognized as Augusti. During their reigns, the Empire nearly collapsed under external attacks and internal revolts, but the chronology is exceptionally obscure.

Probably about the beginning of his reign, the Borani ravaged the coast of Pontus; a few years later, perhaps c. 256, the Goths, who were also settled on the Sea of Azov, raided south by land and sea, sacking Nicomedia, Nicæa, and other Bithynian cities. A few years later again another Gothic raid plundered the Ionian cities, destroying the Artemision at Ephesus.

The success of these raids was due to lack of city walls, an unarmed populace, and the concentration of troops on the frontiers, especially the Euphrates. Here Sapor (q.v.) was increasingly aggressive, launching attacks into Syria. The important frontier fort of Dura fell in 256, and even Antioch was captured, or its territory ravaged, perhaps twice. Valerian, who was probably in the East from 256, was able to do little, and the final catastrophe came in 260 when he was captured by the Persians at Edessa. His subsequent fate is unknown. Christian writers perhaps exaggerate his defects because he issued edicts of persecution, but Valerian seems to have been quite overwhelmed by the series of disasters in the East.

G. Walker and Th. Pekáry, *Die Krise des römischen Reiches* (1962), 28 ff.; A. T. Olmstead, *CPhil.* 1942, 241 ff., 398 ff.; Magie, *Rom. Rule Asia Min.* 705 ff.

B. II. W.

VALERIUS (1, PW 302) POPLICOLA, PUBLIUS, traditionally one of the first consuls in 509 B.C., is a

figure of doubtful historicity, despite the objectively attested connexion of the Valerii with the Velia. His story rests mainly on the account of Valerius Antias, who claimed descent from him, and was the main source of Plutarch's biography. His alleged victories over Rome's neighbours, his work as a popular lawgiver (e.g. a *Lex Valeria*, establishing the right of *provocatio*), his consequent *cognomen* Puplicola (*populum colere*), his raising of the number of senators, and his institution of the quaestorship are all suspect.

Ogilvie, *Comm. Livy* 1–5, 250 ff.

P. T.

VALERIUS (2, PW 304) POTITUS, LUCIUS, and M. Horatius Barbatus, the consuls who are said in 449 B.C. to have replaced the Decemvirs, were traditionally patrician benefactors of the *plebs* who reconciled the Orders. In all likelihood they acted as peacemakers, although their programme of appeasement probably consisted (apart from the restoration of the consulship) in the *de facto* recognition of the measures taken by the plebeians for their government (tribal assemblies) and their defence (the appointment of plebeian magistrates). The laws ascribed to Valerius and Horatius (Livy 3. 55) were: (1) the recognition that *plebiscita* were binding on the whole community; (2) the restoration of the right of appeal (*provocatio*); (3) the sacrosanctity of plebeian magistrates. Their historicity should be seriously doubted or rejected outright because *plebiscita* were given force of law only by the *Lex Hortensia* (c. 287 B.C.); the right of appeal had already been secured by the XII Tables; and the recognized sacrosanctity of plebeian magistrates, however welcome, juridically meant nothing except that they were now magistrates of the Roman community. They were attributed to the consuls of 449 because the fall of the Decemvirs seemed a landmark in the plebeian advance, or rather because the annalists liked to connect the basic elements of the Roman constitution with either the beginnings of the Republic (laws attributed to Valerius Puplicola) or the restoration of the consulship.

P. T.

VALERIUS (3, PW 137) CORVUS, MARCUS. Roman hero of the fourth century B.C., traditionally a simple farmer who lived to be a hundred. He was consul in 348 (when only 22 years old), 346, 343, 335, 300, 299 (*suffectus*), dictator in 342, 301; altogether he occupied the curule chair twenty-one times. When military tribune (349) he engaged a giant Gaul in single combat: a raven (*corvus*), by flapping in the Gaul's eyes, presented Valerius with victory and a cognomen. Valerius is also said to have defeated Volsci (346), Samnites (343), the inhabitants of Cales (335), Aequi (300), Etrusci (299), and to have quelled a mutiny (342) and promulgated a law of appeal (300). Even Livy (cf. 7. 42; 10. 3) hesitated to ascribe all these exploits to him. Some of the exaggerations in surviving accounts probably derive from Valerius Antias. Modern writers are more critical.

Livy, bks. 7–10; Val. Max. 8. 13. 1; 8. 15. 5; App. *Gall.* 10; *BCiv.* 3. 88; Aul. Gell. 9. 11; Zonar. 7. 25; [Aur. Vict.] *De vir. ill.* 29. F. Munzer, *De gente Valeria* (Diss. Berlin, 1891).

E. T. S.

VALERIUS (4, PW 95) AEDITUUS (fl. c. 100 B.C.), like Lutatius Catulus and Porcius Licinus, wrote epigrams, often erotic, after Greek models. Gellius (19. 9. 10) praises the verses of all three as unequalled for neatness and charm.

Morel, *FPL*.

J. W. D.

VALERIUS (5, *PW* 98) **ANTIAS**, the Roman annalist of the immediate post-Sullan period, wrote a history of Rome in at least seventy-five books, from the origins to his own times. Book 2 included Numa, book 22 Mancinus at Numantia, book 45 (probably) the year 110 B.C.; the latest date preserved is 91 B.C., the latest book 75. This shows an increase in scale for contemporary events, but even for early times he wrote more fully than the records justified (*Livy* 3. 5. 12). He represents the rhetorical fashion in historiography, elaborating battle-scenes, inventing casualty figures, and composing reports of debates and speeches. To information often false he added confusion and misrepresentation, under the political and family influences of his time, e.g. on early Valerian tradition. He glorified Scipio Africanus (*Livy* 38. 50–60) and admired Sulla. *Livy* criticizes his numbers (26. 49. 3; 33. 10. 8; 36. 38. 6), but followed him throughout his work. His style was vigorous and rhetorical, if without grace, bringing annalistic history to its highest literary point before *Livy*.

Peter, *HRRel.* i². cccv; 238; K. W. Nitzsch, *Die röm. Annalistik* (1873), 149; F. Münzer, *De gente Valeria* (1891); Oglivie, *Comm. Livy* 1–5, 12 ff. A. H. McLD.

VALERIUS (6, *PW* 345) **SORANUS** (i.e. of Sora), *QUINTUS*, *trib. pleb.* 82 B.C. was a linguistic and antiquarian scholar often quoted by Varro, *Ling.*: cf. Gell. 2. 10. 3; Cic. *De Or.* 3. 43; *Brut.* 169. Two hexameters of his on the fatherhood of Jupiter are quoted from Varro by St. Augustine, *De civ. D.* 7. 9.

Mörel, *FPL*. Schmekel (*Die Philosophie der mittleren Stoa* (1892), 446) placed him in the Scipionic Circle, and Büttner (*Porcius Licinus u. der litter. Kreis des Lucius Catulus*, 123) sought to identify him with Valerius (q.v. 4) Aedutius. J. W. D.

VALERIUS (7, *PW* 117) **CATO**, *PUBLIUS*, scholar and poet, born in Cisalpine Gaul probably c. 100–90 B.C. Almost all our knowledge of him comes from Suetonius (*Gram.* 11) and nothing has survived from his writings. They included, besides works of scholarship (in which a special interest in Lucilius may have appeared), an *Indignatio*, in which he repudiated aspersions on his birth and complained of the loss of his patrimony in the time of Sulla, and two poems, *Lydia*, probably amatory, and *Diana* or *Dictynna*, a narrative poem on the story of Britomartis. He was an outstanding teacher of whom it was said 'solus legit ac facit poetas'. Cinna, Tivida, and Furius Bibaculus were among his pupils: their complimentary references to his poetry and his teaching show that he embraced the ideals and standards of the Alexandrian school and suggest that its development owed something to his inspiration. C. J. F.

VALERIUS (8, *PW* 239) **MAXIMUS**, a Roman historian in Tiberius' reign with strong rhetorical and philosophical bias. A poor man, he was befriended by Sextus Pompeius (*cos.* A.D. 14), and accompanied him to his governorship in Asia about A.D. 27. After his return Valerius composed a handbook of illustrative examples for rhetoricians, *Factorum ac dictorum memorabilium libri IX*. This is dedicated to Tiberius, to whom constant flattery is addressed; and the violent denunciation of Sejanus (9. 11 Ext. 4) suggests that it was published soon after his downfall in 31. The subject-matter of the nine books has no clearly defined plan, but is divided under headings mostly moral or philosophical in character (e.g. Omens, Moderation, Gratitude, Chastity, Cruelty), which are usually illustrated by Roman (*domestica*) and foreign (*externa*) examples. The latter, chiefly Greek, are admittedly less important, and in keeping with the strongly national spirit of the compilation are outnumbered by the *domestica* by two to one. The work is shallow, sententious, and bombastic, full of the boldest

metaphor and rhetorical artifices of the Silver Age, especially forced antitheses and far-fetched epigrams, only occasionally relieved by touches of poetic fancy or neat passages of narrative or dialogue. His chief sources seem to have been Livy and Cicero, but there are indications of many others, such as Varro, Coelius Antipater, Pompeius Trogus, and several Greek writers. His use of this material is almost entirely non-critical, and varies greatly in extent and accuracy. Yet the variety and convenience of the compilation ensured some measure of success in antiquity, and considerably more in the Middle Ages. It is referred to by Pliny the Elder, Plutarch, and others. Most significant, however, is the existence of two later epitomes. The first is by Julius Paris (4th c. ?) and has attached to it a summary on Roman names, *De praenominibus*, ascribed to a certain C. Titius Probus and elsewhere erroneously included in MSS. as book 10 of Valerius' own work. The second, by Januarius Nepotianus (5th c. ?), breaks off early in book 3.

EDITIONS. A. Torrenius (1726; notes and index); C. Kempf (Berlin, 1854; Teubner, 1888). P. Constant (1935. Fr. trans.).

STUDIES. C. Bosch, *Die Quellen des Val. Max.* (1929); A. Klotz, 'Studien', *Sitz. Wien* 1942. 5; D. M. Schullian, 'A Prelim. List of MSS.', in *Studies in Honor of Ullman* (1960). G. C. W.

VALERIUS (9, *PW* 106) **ASIATICUS**, *DECIMUS* (?), born at Vienna (q.v.), and *consul suffectus* in A.D. 35, was rich, proud, and athletic. Used by Gaius with contemptuous familiarity, he publicly approved his murder and was thought to have been in the plot. Under Claudius he served in Britain and held a second consulship (46). In 47, through the contrivance of Messalina, he was condemned by Claudius on charges of treason and adultery and committed suicide. Claudius attacked his memory in a famous speech (*ILS* 212. 2. 14–17).

P. Fabia, *La Table claudienne de Lyon* (1929), 104 ff. T. J. C.

VALERIUS (10) **FESTUS**, C. CALPURNIUS (*PW* 2) *RANTIUS QUIRINALIS*, *cos. suff.* A.D. 71, was legate of the African legion in 69. He arranged the murder of the proconsul L. Piso (q.v. 10). It was alleged that, as a relative of the defeated Vitellius, he wanted to demonstrate his loyalty to the new Emperor Vespasian. He then campaigned against the Garamantes, and was given consular decorations. After his consulship he became curator of the Tiber, legate of Pannonia (73), and of Tarraconensis (79–80). He died, still an *amicus* of the Emperor, early in Domitian's reign (Mart. 1. 78). G. E. F. C.

VALERIUS (11, *PW* 170) **FLACCUS**, *GAIVS*, a poet. Nothing is known of his life save that he was a *quindecimvir sacris faciundis* (1. 5, 8. 239–41), that he probably began his poem in A.D. 80 (see references to Titus and his *Templum Dvii Vespasiani*, 1. 13–16, and to the eruption of Vesuvius, 3. 208–9, 4. 507–9), and that premature death overtook him before he completed the eighth book of his *Argonautica* in 92 or 93; for the only certain reference to him in Roman literature is Quintilian's brief expression of regret at his demise (*Inst.* 10. 1. 90).

His only known work is the *Argonautica*, which is indebted to but not a close imitation of the similar work of Apollonius (q.v. 1) Rhodius. The poem takes the reader in the company of the Argonauts from Iolcos to Colchis, where Jason secures the Golden Fleece and escapes with Medea. Nearly all the well-known incidents of the myth are described in detail—the story of Hypsipyle and the Lemnian women, the tragic battle at Cyzicus, Hercules' loss of Hylas to the Nymphs, the boxing-match between Pollux and Amycus, the passage of the Argo between the Clashing Rocks, the meeting with Medea, who helps him to sow the dragons' teeth. But the poem breaks off abruptly with the pursuit of the Argo by her brother Absyrtus. Valerius' Jason is a much more

successful character, as a leader of heroes, but his *Medea* is a less subtle psychological study, than *Apollonius*.

Valerius is strongly influenced by Virgil, like the other epic writers of the early Empire, but is a better poet than they, in so far as he is less excessively rhetorical than Lucan and a more original genius than Statius. Unlike them, however, he was unknown in the Middle Ages until the Florentine humanist Poggio Bracciolini discovered at St. Gall in 1416 a MS. (now lost).

STUDIES. K. Schenkl, *Stud. z. d. Argonautica* (1871); W. C. Summers, *A Study of the Argonautica* (1894); F. Mehmel, *Valerius Flaccus* (1934). R. J. G.; A. K.

VALERIUS (12) LICINIANUS, LUCIUS, from Bilbilis (Mart. 1. 61. 11; 4. 55. 1), an advocate whom Martial considered a Spanish Cicero, was exiled by Domitian, but permitted by Nerva to settle in Sicily, where he professed oratory (Pliny, *Ep.* 4. 11).

VALGIUS (PW 7) RUFUS (cos. suff. 12 B.C.), one of the poetic circle patronized by Maecenas (Hor. *Sat.* 1. 10. 82), was consoled by Horace (*Carm.* 2. 9) on the death of a favourite slave, Mystes, whom he had himself commemorated in elegiac laments. Besides elegies he composed epigrams, translated Apollodorus' rhetorical precepts (Quint. *Inst.* 3. 1. 18), wrote on grammatical questions and on herbs.

Schanz-Hosius, Bachrens, *FPR*, Morel, *FPL*.

J. W. D.

VALLIUS SYRIACUS, a distinguished rhetorician in the Elder Seneca's *Controversiae* (1. 1. 11 and 21; 2. 1. 34 ff.; 7. 6. 11; 9. 4. 18). He proclaimed himself a pupil of Theodorus (q.v. 3), and therefore not a slavish employer of *narratio* (q.v.) in his speeches.

VANDALS, a Germanic people, who left their original homes in southern Scandinavia before the beginning of the Christian era, and settled on the south coast of the Baltic Sea. Pliny speaks of the *Vandilii*, as he and Tacitus call them, as including various other peoples, e.g. the Goths and Burgundians, who at any rate in later times would by no means have considered themselves to be Vandals. At least as early as the second century A.D. they were divided into two sections, the Asdings and the Silings. Before the year 200 they had moved southwards into the lands lying east of the Tisza, where they became the western neighbours of the Visigoths (see *GOths*) when the latter occupied Transdanubian Dacia (c. 270). The Vandals frequently raided, and were raided by, the Visigoths and also attacked the Roman provinces in the third and fourth centuries. But they did not seriously affect the Romans until on 31 Dec. 406, having probably been driven westwards by the advancing Huns, they crossed the Rhine near Mainz in company with the Alans (q.v.) and Suebi. For three years they severely devastated wide areas of Gaul and in 409 crossed into Spain. Here, too, they ravaged extensively, but then settled down apparently with the intention of living there permanently. The Silings occupied Baetica, the Alans Lusitania, and the Asdings and Suebi Gallacia. The Silings were all but exterminated by the Visigoths, who were acting under Roman instructions. Those Alans who escaped the Visigoths joined the Asdings, whose kings henceforth were known as the 'kings of the Vandals and Alans'. Under King Gunderic they moved into southern Spain, leaving the Suebi in Gallacia (where their kingdom lasted until 585). Gunderic died in 428, and in the following year the Asding Vandals and the Alans,

numbering in all 80,000 persons, crossed into Africa. For their subsequent history see S.V. GAISERIC, GELIMER.

L. Schmidt, *Geschichte der Wandalen* (1942); C. Courtois, *Les Vandales et l'Afrique* (1955). Article in *PA* is concluded in Suppl. 2. 957 ff.

E. A. T.

VARGUNTEIUS, QUINTUS (2nd c. B.C.), junior to Lampadio (q.v.) among early lecturers on old Latin poets, expounded Ennius in public lectures, attracting large audiences (Suet. *Gram.* 2).

VARIUS (1, PW 7) 'HYBRIDA', QUINTUS, of Sucrio in Spain, as tribune in 90 B.C. unsuccessfully attacked Scaturus (q.v. 1) and irregularly passed a law setting up a special court with equestrian jurors, which tried and convicted several of the supporters of Drusus (q.v. 2) for having incited the Italians to revolt. Trials continued even after the other *questiones* had been suspended owing to the war. In 89, in circumstances not clear (but perhaps connected with the jury reform of Plautius, q.v. 1), he was convicted under his own law and went into exile (Cic. *Brut.* 305).

E. S. Gruen, *JRS* 1965, 122 ff.; E. Badian, *Hist.* 1969, 447 ff.

E. B.

VARIUS (2, PW 21) RUFUS, a distinguished elegiac, epic, and tragic Augustan poet, friend of Virgil (*Catal.* 7; *Ec.* 9. 35), Maecenas, and Horace (*Sat.* 1. 5. 40; 6. 55), who praises his epic highly (*Carm.* 1. 6; *Sat.* 1. 10. 43). His epics included a *De morte* based on Epicurean principles, with special reference to Julius Caesar's death) and perhaps a *Panegyric* on Augustus. His tragedy *Thyestes*, performed at the games after Actium (29 B.C.), won deep admiration and comparison with the Greek masterpieces (Quint. 3. 8. 45, 10. 1. 98; Tac. *Dial.* 12). Assisted by Plotius Tucca (q.v.), he edited the *Aeneid* by Augustus' orders after Virgil's death.

Morel, *FPL* 100-1; Ribbeck, *TRF* 220.

G. C. W.

VARRO (1), GAIUS TRENTIUS (PW 83) (cos. 216 B.C.), was represented in the hostile aristocratic tradition (deriving probably from Fabius Pictor) as of humble origin (a butcher's son) and as a radical demagogue opposed to the Senate (cf. C. Flaminius), whereas his career shows that he enjoyed the Senate's confidence, while his father may have been a rich merchant. He was praetor in 218 B.C. As consul he commanded at Cannae (q.v.); he was probably no more responsible than his colleague, L. Aemilius Paulus, for the subsequent disaster, after which he was thanked by the Senate for not despairing of the State. He served as proconsul in Picenum (215-213), and with *imperium pro praetore* held Etruria against Hasdrubal's advance (208-207), and went as an ambassador to Africa in 200.

Scullard, *Rom. Pol.* 49 ff.; *BICS* 1955, 10 f.

H. H. S.

VARRO (2), MARCUS TERENCEIUS (PW 84, Suppl. vi) (116-27 B.C.), was born probably at Reate in Sabine country (Symmachus, *Ep.* 1. 2. 21; according to Augustine, *De civ. D.* 4. 1, 'Romae natus et educatus'). He was a pupil of the first Roman philologist L. Aelius Stilo, who made himself known by his researches into the genuineness of the comedies bearing Plautus' name. At Athens his teacher of philosophy was the Academic Antiochus of Ascalon. In public life Varro rose to be a praetor. He fought as a partisan of Pompey in Spain in 49, but without success. Caesar restored him to favour and appointed him keeper of the future public library in 47. After Caesar's death he was outlawed by Antony in 43, but escaped death. His libraries, however, were plundered. When the Civil War was over he was allowed to devote himself entirely to peaceful study. According to Gellius (3. 10. 17) he had already edited 490 books at the

beginning of his 78th year. We know the titles of fifty-five works, a catalogue of Varro's writings (but not of all) having been preserved in a fragment of Jerome (Ritschl, *Opusc.* iii. 522 ff.). We possess only two of his works substantially: *De lingua latina* (in part) and *Rerum rusticarum libri III*.

WORKS

1. *De lingua latina libri XXV*, of which books 5-10 are partly extant (only 5 and 6 entirely). Book 1 contained an introduction, probably a general view of the subject, books 2-7 explained how words had originated and were applied to things and ideas, 8-13 treated declension and conjugation, 14-25 dealt with syntax. Books 2-4 were dedicated by Varro to his quaestor Septimius, but starting from book 5 the remaining books are dedicated to Cicero. The work was published before Cicero's death, probably in 43 B.C. The derivations are often fanciful, but the work has preserved many quotations, especially from the old Latin poets.

2. *Rerum rusticarum libri III* (37 B.C.); book 1 treats of agriculture in general; 2 of cattle- and sheep-breeding; 3 of the smaller livestock kept on a farm, such as birds, bees, fishes, etc. Varro's aim was to rouse the diminished interest in country-life. The author has a tiresome tendency to group subject-matter under various headings and divide these again into subdivisions, but his prefaces are enjoyable and his book is not without wit.

Of Varro's lost works we may mention:

1. *Saturarum Menippearum libri CI*, probably between 81 and 67 B.C., humorous essays seasoned with verses, in which Varro followed, but in his own original way, the dialogues of the Cynic philosopher Menippus of Gadara (first half of 3rd c. B.C.). Varro proves himself here an enemy to the luxury and other foibles of his time. Ninety titles and 600 fragments have come down to us.

2. *Antiquitatum rerum humanarum et divinarum libri XLII* (47 B.C.). The first twenty-five books dealt with *res humanae*, and the last sixteen books with *res divinae* (Augustine, *De civ. D.* 6. 3). To arrange his subject-matter he put the questions: Who? Where? When? What? After an introductory book, 2-25 were divided into four parts: 2-7 treated of persons (e.g. inhabitants of Italy), 8-13 of places (e.g. Rome, Italy), 14-19 of the times, 20-25 of the actions of men.

The sixteen books that contained the *res divinae* began with an introductory book; the rest were divided into five parts: 27-9, priests; 30-2, temples, etc.; 33-5, festival days, games, etc.; 36-8, *sacra*; 39-41, the gods.

3. *Logistoricon libri LXXVI* (44 B.C.-?), a collection of dialogues on various subjects—education of children, madness, chastity, etc. Every book took its name from a celebrated character, e.g. *Marius de fortuna*, *Tubero de origine humana*.

4. *Hebdomades vel de imaginibus* (libri xv; 39 B.C.). This work treated of famous Romans and Greeks, and contained 700 portraits illustrating the text (Pliny, *HN* 35. 11). It was called *Hebdomades* (Gell. 3. 10. 1), because the number 7 played an important part throughout.

5. *Disciplinarum libri IX*, an encyclopedia of the *artes liberales*, i.e. of the branches of learning essential for a freeborn man (cf. ENCYCLOPEDIA LEXICON).

Varro's writings cover nearly every domain of science—history (*De vita populi Romani*, 'a social history of the Roman people'; *De gente populi Romani*, on primitive Rome and chronology), geography, rhetoric, jurisprudence (*De iure civili lib. XV*), philosophy, music, medicine, architecture, literary history (*De scaenicis originibus lib. III*; *De comoediis Plautinis*). He was the greatest scholar among the Romans; as to his method, he was a pupil of the Greeks, but he collected his matter

largely himself. His works were a mine of information for pagan and Christian authors, and even for medieval compilers. See also GRAMMAR; SCHOLARSHIP, LATIN.

Varro (Entreten. Hardt ix) includes bibliography of Varro 1950-62. P. J. E.

VARRO (3) ATACINUS, PUBLIUS TERENTIUS (*PW* 88), was born in the Atax valley in Gallia Narbonensis in 82 B.C. Nothing is known of his life, and his work is represented only by fragments. His *Bellum Sequanicum* was a historical poem, presumably in the Ennian tradition, on Caesar's campaign of 58 B.C.: later he seems to have come under the new Greek influence (see ALEXANDRIANISM) in his *Argonautae*, a translation or adaptation of Apollonius Rhodius (*Ov. Am.* 1. 15. 21, Quint. 10. 1. 87), in amatory verse (probably elegiac) addressed to one 'Leucadia' (*Prop.* 3. 34. 85, *Ov. Tr.* 2. 439), and in two didactic works, *Chorographia*, a geographical poem, and *Epimenis* (? the title is uncertain), in which he used Aratus' *Phaenomena* and on which Virgil drew in the *Georgics*. (The passage *Georgics* 1. 374-89 closely follows some lines of Varro quoted by Servius.) That he wrote satires we know from a passing reference in Horace (*Sat.* 1. 10. 46).

Fragments in Morel, *FFL*.

C. J. F.

VARRO (4) MURENA, AULIUS TERENTIUS (*PW* 92), probably a Lucius Murena adopted by an A. Terentius Varro, was brother-in-law of Maecenas (q.v.) and known to Horace (*Sat.* 1. 5. 38; cf. *Carm.* 3. 19). In 25 B.C. he ruthlessly subdued the Salassi of the Val d'Aosta (see AUGUSTA PRAEFORIA). While consul with Augustus in 23 he defended M. Primus, ex-governor of Macedonia on a charge of *maiestas* and then joined Fannius Caepio (q.v. 3) and others in a conspiracy and was condemned and executed.

Syme, *Rom. Rev.*, see index; W. C. McDermott, *TAPA* 1941, 255 ff.; K. M. T. Atkinson, *Hist.* 1960, 440 ff.; F. Millar, *A Study of Cassius Dio* (1964), 88 ff.; D. Stockton, *Hist.* 1965, 18 ff.; S. Jameson, *Hist.* 1969, 204 ff. T. J. C.

VARUS (1), PUBLIUS ATTIVS (*PW* 32), of undistinguished family, praetor and then governor of Africa before 51 B.C., took Pompey's side in the Civil War. In 49, after failing to hold Caesar in Picenum, he established himself in his old province of Africa (see LIGARIUS). Assaulted by Curio (q.v. 2) at Utica, he was relieved by Juba (q.v. 1). After Pharsalus he had to yield the supreme command to Metellus (q.v. 11) Scipio, and served under him in the Thapsus campaign, from which he escaped to Spain. He fell at Munda. T. J. C.

VARUS (2), PUBLIUS QUINTILIUS (*PW* 20) (*cos.* 13 B.C.), of a patrician family that had been of no importance

for centuries. He owed his career to the favour of Augustus, being the husband of Claudia Pulchra, the grandniece of the Princes, and was able to acquire some political influence (his two sisters made good marriages, cf. the table in *PW* xvii. 870). Varus became proconsul of Africa (? 7-6 B.C.), and then legate of Syria. When Judaea revolted after the death of Herod the Great he marched rapidly southwards and dealt firmly with the insurgents (Joseph. *Bj* 2. 39 ff., etc.). Varus is next heard of as legate of the Rhine army in A.D. 9. When marching back with three legions from the summer-camp near the Weser, he was treacherously attacked in difficult country by Arminius (q.v.) whose professions he had trusted. The Roman army was destroyed in the *Salus Teutoburgensis* (q.v.); there has been much debate on the site and Varus took his own life (Dio 56. 18-22; Vell. Pat. 2. 117-20; Florus 2. 30). Varus was made the scapegoat for the signal failure of Augustus' whole German policy. He is alleged to have been grossly extortionate in Syria, torpid and incompetent in his German command—'ut corpore ita animo immobilior, otio magis castrorum quam bellicae adsuetus militiae' (Vell. Pat. 2. 117. 2).

VARUS (3), QUINCTILIUS, son of (2) above, was as a speaker trained under the pre-Tiberian rhetor Cestius Pius from Smyrna.

VARUS (4), **ARRIUS** (*PIV* 36), a Roman knight, served with distinction as *praefectus cohortis* under Corbulo, but later is said to have defamed his old commander to Nero. In A.D. 69, when a *primus pilus* in one of the Danubian legions, he lent vigorous help to Antonius Primus on the Flavian side in the invasion of Italy, being rewarded after the final victory with the office of *praefectus praetorio*. Mucianus, however, soon arrived at Rome, put a check upon his ambitions (cf. the treatment of Antonius Primus), and reduced him to the post of *praefectus annonae*. He is not heard of afterwards.

VASE-PAINTING. Vase-painting not only records the development of Greek Painting (q.v.), but is also a prime source for the Greek conception of gods and heroes through their history and for the external appearance of everyday life.

MYCENAEAN. In the early period Mycenaean vases are strongly influenced by naturalistic Minoan vase-painting. After the fine fifteenth-century Palace Style vase-painting gradually becomes increasingly formal and abstract, although many interesting pictures survive till the end of the period.

ELEVENTH TO TENTH CENTURY B.C. The new Proto-geometric style with precise shapes and simple geometric ornaments including compass-drawn concentric circles starts in Attica and spreads rapidly to other areas.

NINTH TO EIGHTH CENTURY B.C. The ornament gradually becomes more complicated and spreads over more of the surface of the vase. By the mid eighth century in Attica (and rather later and more sparingly elsewhere) the pattern bands are interspersed with bands of animals and human figures in silhouette—battles, dances, funerals, including some scenes which are certainly mythical and suggest a similar interpretation for all.

SEVENTH CENTURY. Orientalizing. From c. 725 B.C. patterns become more naturalistic and the decoration less orderly, with larger figures in partial outline; later the black-figure style (silhouette with incised inner markings) comes in. Athenian vases are divided into Early Proto-Attic (reminiscent of geometric), 'black and white', Late Proto-Attic (predominantly black-figure). In

Corinth Middle and Late Proto-Corinthian, 700-625 (neat and orderly; some small polychrome vases of superlative merit), is followed by Early Corinthian, 625-600 (black-figure; animal friezes and heroic scenes). Median vases have large, untidy, heroic scenes. East Greek vases have processions of animals on white ground; figure-scenes are rare.

SIXTH CENTURY. Black-figure. In Athens two lines can be traced: 1. *Vigorous style.* Massive figures and often violent scenes. Originates in seventh century with Nessus painter. Continued by Soplulus, c. 570, the C painter, 575-550, Execcias (q.v.), Andocides (q.v. 2) painter, 560-530 and Leagrus group, c. 515. 2. *Delicate style.* Drawing, neat and fine, sometimes formal. Begins with Chitias, 560, and painters of Little Master cups, c. 550, then Amasis (q.v. 2) painter and Menon painter (see ANDOCIDES 2).

Corinthian vase-painting continues till about 550, with some excellent pictures, e.g. 'Departure of Amphiaras'. Chalcis carries on the best Corinthian tradition until 520, but the later Plumeus group shows Ionian influence. The finest Laconian vases, e.g. Arcesilas cup, are produced 590-550. The chief East Greek styles are Fikellura, 570-500 (derives from Rhodian, drawing often witty), Clazomenian, 560-530, including Northampton group (formal and decorative), Caertan, 540-525 (lively scenes of 'Heracles and Busiris', etc., possibly made in Italy, but, unlike Pontic and allied groups, shows no Etruscan influence).

530-400. Red-figure. Figures reserved against black background, inner markings in black or brown. In Athens starts with Andocides (q.v.) painter and Menon painter. The vigorous style is continued by Euphronius Euthymides (qq.v.), Cleophrades painter (see EPICETUS 1), Panactius painter (see EUPHRONIUS), Brygus (q.v.) painter; and the delicate style by Epictetus (q.v. 1), Phintias (formal and elaborate), Berlin painter (rhythmic line and quiet beauty), Pan painter (mannerist), Duris (q.v.). After 480 Niobid painter and Pentesilea painter (see EUPHRONIUS) reflect composition of Micon and Polygnotus (q.v.); Chicago painter and the Phiale painter are quieter. White-ground vases, particularly *lecythia*, are now common; Achilles painter, 460-440, develops tradition of Berlin painter; Reed painter (430-410) is more passionate. In red-figure Eretria painter (440-420) begins a rich style which Meidias painter elaborates (see MEIDIAS); Dinos painter is realistic and vigorous. Red-figure painting starts in south Italy about 440 and at first is strongly influenced by Athens.

FOURTH CENTURY. In Athens the rich style continues in the work of Meidias painter's successors. The vigorous style can be traced through successive groups of Kertch vases. In south Italy local groups, Lucanian, Apulian (including Gnathia), Paestan, Campanian, Sicilian, Etruscan, develop on their own lines; their subjects are often interesting. Gnathia ware has echoes of Sicyonian painting. Vase-painting ends in the third century with the magnificent polychrome ware of Centuripe.

VATICAN, originally the district on the west bank of the Tiber extending from the territory of Vei to the reaches below Rome, but later forming the northern sector of the last of the fourteen regions into which Augustus divided the city of Rome. Its most distinctive feature was the *Mons Vaticanus*, descending sharply to a valley on the south and, on its east side, adjoining the Tiber, to the *Campus Vaticanus*. The region was noted for its clay (Juv. *Sat.* 6. 344), for the poor quality of the wine from its vineyards (Mart. *Epigr.* 6. 92. 3, etc.), and for its unhealthy air (Tac. *Hist.* 2. 93). Here lay the *Naumachiae* and the *Circus Gai et Neronis* (the traditional scene of St. Peter's martyrdom), the latter, in the *Vallis Vaticana*, probably being situated within the bounds of an imperial park, the *Horti Agrippinae* (Pliny, *HN* 16. 201; 36. 74; Tac. *Ann.* 14. 14; 15. 39, 44; Suet. *Claud.* 21). *Vaticanus* is also associated with a shrine of the Magna Mater (*CIL* xiii. 1. 1751; xiii. 2. 1, 7281), whose altars (*CIL* vi. 497-504) have been found on the site of St. Peter's façade. The two Roman highways that crossed this suburban area, the *Via Cornelia*, running from east to west, and the *Via Triumphalis*, running from south-east to north-west, were lined with tombs. Just to the north of where the former road must have lain there came to light under St. Peter's, during World War II, two rows of richly decorated mausolea all facing south and dating from the second century: predominantly pagan, they contain a few Christian burials and are aligned with some first-century graves and with the shrine that, from c. 160 onwards, marked the reputed site of the Apostle's resting-place. Of the tombs, found since the War on the Vatican City car-park site, which bordered the *Via Triumphalis*, a number date from the first century.

For books that deal in part with Vatican topography and cemeteries, see J. M. C. Toynbee and J. B. Ward-Perkins, *The Shrine of St. Peter and the Vatican Excavations* (1956), E. Kuschbaum, *The Tombs of St. Peter and St. Paul* (1950). I. A. R.; J. M. C. T.

VATINIUS (*PW* 3), **PUBLIUS**, tribune 59 B.C., sponsored the bills granting Caesar (q.v. 1) Cisalpine Gaul and Illyricum, and confirming Pompey's Eastern settlement; he also figures prominently in attacks on Bibulus and in the affair of Vettius (q.v. 3). In 56 Cicero, defending Sestius (q.v.), delivered the invective *In P. Vatinius testem interrogato*, but in 54, obedient to the triumvirs, successfully defended Vatinius (who had been praetor in 55) on a bribery charge. After serving with Caesar in Gaul, Vatinius won a victory in the Adriatic in 47, and in December received the consulate, an office he had always boasted he would hold. His proconsulate, in Illyricum, was recognized by a *supplicatio* in 45; and though he surrendered to Brutus (q.v. 5) in 43 he triumphed in 42. Vatinius was made an easy butt by his personal disabilities, weak legs, and scrofulous swellings; but he took raillery well, and in later life was genuinely reconciled with Cicero, to whom in 45 he wrote *Fam.* 5. 10. (Cf. Catull. 14. 3 and 52-3.)

L. G. Pocock, *A Commentary on Cicero In Vatinius* (1926). G. E. F. C.

VECTIGAL meant primarily revenue derived from public land, mines, saltworks, etc., and in general rents derived from State property. Such sources provided the basic revenues of the early Republic, and remained the most important forms of income for the *municipia* and *civitates* of the Empire. The term was also extended to cover indirect taxes, of which the only ones in the Republican period were the *portoria* (q.v.) and the *vicesima libertatis*, a tax of 5 per cent on the value of manumitted slaves. In the Principate the number of the *vectigalia* was increased, and they provided a considerable part of the State revenue. Only *vectigalia* were paid by the inhabitants of Italy, who

were exempt from *tributum* (q.v.). The most important of the *vectigalia* were the *portoria*. In order to raise revenue for the provision of discharge-donatives for veterans Augustus founded the *aerarium militare*, into which was paid the yield of two new taxes. The *centesima rerum venalium*, a tax of 1 per cent on sales by auction, was reduced to $\frac{1}{2}$ per cent by Tiberius and abolished, in Italy, by Gaius. The *vicesima hereditatum* was a charge of 5 per cent on significant sums bequeathed to persons other than near relatives (see Pliny, *Pan.* 37-40). The death-duties were paid by citizens only, and their introduction was resented by Italians, who objected to any form of taxation. The extension of the citizenship had the effect of increasing their yield. The *quinta et vicesima venalium mancipiorum*, a 4 per cent tax on sales of slaves, was established by Augustus in A.D. 7 to provide the pay of the *vigiles* (q.v.). A number of minor *vectigalia* were established by Gaius (Suet. *Cal.* 40); one of them, on prostitutes, is attested in the second and third centuries. The collection of *vectigalia* was in the early Principate let out to companies of *publicani* (q.v.). In the second, and occasionally in the first, we find imperial *procuratores* (q.v.) of the *vicesima hereditatum* and *vicesima libertatis*; their precise function is unknown. *Portoria* came in the second century to be collected by individual *conductores* (q.v.) and then *procuratores*. G. H. S.; G. F. B. M.

VEDIOVIS, VEIOVIS, VEDIVS, an ancient deity, worshipped at Rome on the Capitol and on Tiber island (Platner-Ashby, 548 f.) and at Bovillae. His offering was a she-goat, sacrificed *ritu humano* (Gell. 5. 12. 12), whether that means on behalf of the dead (cf. Festus, 91. 24 Lindsay) or as a surrogate for a human victim (Preller-Jordan, *Röm. Mythol.* 1. 265). This suggests a chthonian god, but his name is puzzling. The ancients, deriving *Iuppiter* from *iuuare*, took Vedivus as 'the non-helper' (Gell. *ibid.* 8), i.e. harmful, or as 'little Iuppiter', on the analogy of *uegrandis* (Ov. *Fasti* 3. 445-8, cf. Festus, 519. 22 Lindsay, both from Verrus Flaccus); Wissowa, *RK* 237, as a sort of anti-Iuppiter, a god of the dead; C. Koch, *Der römische Juppiter* (1937), 68, as meaning an abnormal form of Iuppiter, Latte (*RR* 81) as a Iuppiter who disappoints. His festival was on 21 May. The temple, which stood behind the Tabularium between the two summits of the Capitol, was discovered in 1939. The excavated temple is a restoration of 78 B.C.; below it are traces of the first temple, dedicated in 192 B.C., and of a temple of the mid second century. See Nash, *Pict. Dict. Rome* ii. 490 ff. The marble cult-statue of Apolline type (probably 2nd c. A.D.), found at the same time, replaced an earlier one of cypress wood. H. J. R.

VEDIUS (*PW* 8) **POLLIO**, **PUBLIUS**, a freedman's son and friend of Augustus, attained equestrian rank. Rich and cruel, he used to punish slaves by throwing them alive to his lampreys. He was one of Augustus' influential private assistants and appears to have been active in Asia both in an official capacity and as a private benefactor. He died in 15 B.C., leaving to Augustus much of his property, including his villa Pausilypon (see PAUSILYPUS MONS) and his immense town house on the Esquiline, on the site of which Augustus built the Porticus Liviae.

VEGETIUS RENATUS, FLAVIUS, is the author of an *Epitoma rei militaris* in four books, which is the only ancient manual of Roman military institutions to have survived intact. Written between A.D. 383-Gratian is called *divus* (1. 20)—and 450, when a critical revision was produced by Eutropius at Constantinople, it is

addressed to a single Emperor. If, as seems probable, Theodosius the Great is meant, the work may be dated to the years 383–95, and perhaps even more closely to Theodosius' stay in Italy from Aug. 388 to June 391.

The plan of the treatise is simple: book 1 deals with the recruit, book 2 with organization, book 3 with tactics and strategy, and book 4 with fortifications and naval warfare. Not quite so simple, however, is its composition. Vegetius himself was neither a historian nor a soldier: he was a bureaucrat by profession—he may have been *comes sacrarum largitionum*—and in temperament he was an antiquary. The result is a compilation carelessly constructed from material of all ages, a congeries of inconsistencies. To impress the reader with the weight of his authority he names some of his sources—Cato the Elder, Frontinus, and Paternus, and the *constitutiones* of Augustus, Trajan, and Hadrian. It is naive to assume that these were the only sources he used, or even that he used these always at first hand. Schenk's view was that Paternus was his most recent source: it followed that all later additions must be from Vegetius' own day and experience. This led him to refer the *antiqua legio* of book 2, which is clearly not from Vegetius' own time, but from something which he has read, right back to the age of Hadrian: the majority of scholars have concurred in placing it in the third century, though details differ.

The real importance of Vegetius' work lies perhaps not so much in the mass of information which he gives us about the Roman army, for much of this is unfortunately unstratified, as in the very considerable influence which he had upon the military thinking of the Middle Ages and Renaissance.

VEIENTO, AULUS DIDIUS GALLUS FABRICIUS (*PW* 15), was consul three times under the Flavian Emperors (his second tenure, in A.D. 80 under Titus, is the only one securely dated), and was evidently one of the most powerful senators of the period. Under Nero he had been exiled for circulating libels on eminent persons and for selling honours (*Tac. Ann.* 14. 50). But to Juvenal (4. 113; see also Schol. to line 94) he is 'prudens Veiento', prominent in Domitian's council; and he retained imperial favour under Nerva (*Pliny, Ep.* 4. 22), though his influence was then challenged (*ibid.* 9. 13. 13 ff.). He is not heard of after 97.

G. E. F. C.

VEII, founded by Villanovan settlers from the coast in the ninth–eighth century B.C., was Rome's nearest neighbour among the Etruscan cities, only 9 miles to the north. Relations with Rome were at first close and friendly, but the expansion of Roman power in Latium led to rivalry; after a long siege the city was destroyed in 396 B.C. (*Livy* 5. 1–22; *Plut. Cam.* 2–6) and its territory annexed, the population being grouped into four new rustic tribes. A small urban nucleus survived and shortly before 2 B.C. became the *municipium Augustum Veiens*; but the Roman town was of little importance and was progressively deserted in later antiquity. The site, about 480 acres in extent, was enclosed in the late fifth century B.C. by a powerful wall and rampart; but although the cemeteries have been extensively explored, little is known of the city itself. Etruscan Veii was famous for its statuary. *Pliny (HN* 35. 157) records the name of Vulca, commissioned to furnish statues for Jupiter's temple on the Roman Capitol. His school was responsible for the terracotta statues of Apollo and other divinities from one

of the temples of Veii, now in the Museo di Villa Giulia at Rome.

VELABRUM was the low ground between the Capitol and Palatine in Rome, originally a swamp open to Tiber floods. The Cloaca Maxima (q.v.) passed riverwards through it, and by draining made of it one of the busiest centres in the city (*Macrobi.* 1. 10. 15), contained between the Vicus Tuscus and Vicus Iugarius and carrying all traffic between the Forum and the river. Here lay Acca Larentia's shrine.

I. A. R.

VELIA, now a narrow ridge or spur connecting the Palatine and Oppian hills of Rome at the head of the Via Sacra (q.v.). The summit was probably modified by levelling for the vestibule of Nero's *Domus Aenea* (q.v.) in A.D. 64, where later stood the temple of Venus and Roma, built under Hadrian. The saddle was crowned by the Arch of Titus.

I. A. R.

VELITES. In the early Republican army the light-armed troops were recruited from citizens unable to provide themselves with hoplite armour and were called *rorarii*. By the Second Punic War their title had been changed to *velites*. The number in each legion was the same as that of *hastati* or *principes*. In battle they were employed probably as *iaculatores* (*υποσφομάχους*) in conjunction with cavalry to open the attack. The chief period of their use was in the second half of the Second Punic War. During the succeeding century their importance declined with the increasing use of foreign contingents (e.g. Balearic slingers), and they were perhaps finally abolished by Lucullus.

J. Kromayer and G. Viett, *Heerwesen und Kriegführung der Griechen und Römer* (1928), Parker, *Roman Legions*, M. J. V. Bell, *Hist.* 1965, 419 ff. H. D. M. P., G. R. W.

VELITRAE (modern *Velletri*): Volscian town on the southern rim of the Alban hills in Latium. It frequently fought early Rome, until annexed by the latter (338 B.C.). It still spoke Volscian then, but was soon completely latinized. Augustus originated from Velitrac. Claudius made it a *colonia*.

E. T. S.

VELIUS LONGUS (early 2nd c. A.D.), scholar, who interested himself in the language of Republican authors, and wrote a commentary on the *Aeneid*. Only his *De orthographia* (ed. Keil, *Gramm. Lat.* vii. 46–81) is extant.

Schanz-Hosius, § 596, Conington–Nietzsche, *The Works of Virgil* (1898) i. lxxxvii ff.

VELLEIUS (*PW* 5) PATERCULUS (c. 19 B.C.–after A.D. 30), was of Campanian descent. All our information concerning his life and writing is derived from his own works, in which he inserts references to the loyalty to Rome of his maternal ancestors, the Magii, and to the distinction of his grandfather and father as adherents of the Elder and Younger Tiberius Nero respectively. The historian, after several military campaigns, served under the latter for eight years in Germany and Pannonia, was quaestor in A.D. 7 and praetor, together with his brother, in A.D. 15. We learn nothing of his career during the following fifteen years, but he probably failed to reach the consulate. His adulation of Sejanus (2. 127–8) suggests that he may have been involved in the prefect's fall in the following year. However, two Vellei Paterculi appear as suffect consuls in 60 and 61, probably sons of the historian. The *praenomen* of the senior, Gaius, confirms the uncertain evidence of the text concerning his father's names.

The *Historiae Romanae* is a compendium of Roman history addressed to Velleius' friend M. Vinicius (who married Julia, daughter of Germanicus) on attaining the consulship, A.D. 30. Book 1, of which the opening and the part dealing with the period from Romulus to the battle of Pydna are missing, begins with the history of the Orient and Greece and ends with the fall of Carthage and Corinth (146 B.C.); book 2, covering the period 146 B.C. to A.D. 30, becomes more detailed as it approaches the author's own day, doubtless because, as he tells us, he projected a fuller history from the Civil War onwards. He inserted two historical excursuses, on Roman colonization (1. 14-15) and on the Roman provinces (2. 38-9), and three on literary topics, one on early Latin literature (2. 9), and another on the Ciceronian and Augustan period (2. 36), in which he couples Virgil with the minor poet Rabinus, while a third (1. 16-17) points out that the flourishing periods in Greek and Latin literature were confined within very brief limits. He shows some knowledge of Greek literature, mentioning Homer, Hesiod, tragic and comic writers, Isocrates, Plato, Aristotle. He cites only Cato and Hortensius among his sources (1. 7. 3; 2. 16. 3). A considerable controversial literature discusses authors possibly used by him and his general reliability (see Dihle in *PH'* and Schanz); but most recent work on Velleius has been concerned only with the elucidation of particular historical problems.

Velleius as a historian is enthusiastic rather than critical and has all the pretentiousness of the novice who has fallen under the spell of contemporary rhetoric. Though his work is one of the earliest extant specimens of post-Augustan prose, his style has all the characteristics of the Silver Age. His attempts at pointed phraseology, though occasionally effective, are often puerile. He indulges in lengthy sentences which are not periods but mere strings of clauses interspersed with parentheses, and he has an irritating fondness for exclamations and interrogations. He admits that he wrote hurriedly, and the stream of his narrative, if it sometimes carries the reader along with it, certainly lacks profundity. His interest is chiefly in individuals, and he portrays, often with some skill, the lesser lights as well as the protagonists of history. His admiration for his old chief Tiberius and for the whole imperial house is unbounded; even Tiberius' ministers, such as Sejanus, can do no wrong. His work is a valuable source for the reigns of Augustus and Tiberius; but generally represents the adulatory type of history condemned by Tacitus (*Hist.* 1. 1), who ignores Velleius, as do all ancient authorities.

The text, derived from single lost MS. from Murbach, is thoroughly corrupt.

VENAFRUM, modern *Venafrò*, on the Latium-Campania border. It spoke Oscan in the third century B.C. and was probably a Samnite town brought under Roman domination c. 290 B.C. The Social War insurgents

captured it and slaughtered its Roman garrison (90 B.C.). Famous for its olives, it became a flourishing *colonia* in imperial times.

E. Vetter, *Handbuch der italischen Dialekte* (1953), i. 135. E. T. S.

VENANTIUS HONORIUS CLEMENTIANUS FORTUNATUS (c. A.D. 540-c. 600), born near Treviso in northern Italy and educated at Ravenna, left Italy in 565 and subsequently lived in Poitiers, where he ultimately became bishop. A versatile poet, he wrote numerous poems on both secular and religious themes (including the great Passion hymns *Pange lingua* and *Vexilla regis*); he also wrote in prose. Fortunatus has been termed both the last of the Roman poets and the first of the medieval.

Tkkt. F. Leo (poems) and B. Krusch (prose), *MGH, AA* iv. A. H.-W.

VENATIONES. Fights of man against beast or beast against beast were introduced into Rome in the second century B.C. They grew more elaborate, until under the Empire the whole world was ransacked for animals, which were transported (as illustrated in mosaics of Piazza Armerina in Sicily) to Rome and to amphitheatres all over the Empire. Lions, panthers, bears, bulls, hippopotami, crocodiles were matched against each other or against *bestiarii*. Five thousand wild and four thousand tame animals were slaughtered when the Flavian amphitheatre was opened; eleven thousand when Trajan celebrated his triumph over the Dacians.

Friedlander *Rom. Life* ii. 62-74, J. P. Baisdon, *Life and Leisure in Anc. Rome* (1960), 302 ff. F. A. W.; J. P. B.

VENETI (1), Gallic tribe occupying modern *Morbihan*. Their strongly 'Atlantic' culture was but slightly touched by Celticism in the La Tène period, but they themselves strongly influenced south-west British cultures by their trade, which stimulated their resistance to Caesar. They were defeated by D. Brutus in a naval battle (56 B.C.). Under the Empire their commerce declined, but a prosperous agricultural life is indicated by villa-funds. The region was occupied by emigrant Britons in the fifth century.

Caes. *B.Gall.* 3. 8-16. C. Julian, *Hist. de la Gaule* (1907 26), ii. 486 ff., vi. 437 ff. C. L. S.

VENETI (2) inhabited fertile country about the head of the Adriatic. Chief cities: Ateste in prehistoric times, Patavium in historic (see *ANILNOR* 1). They may be of Illyrian extraction (cf. *Hdt.* 1. 196), although their surviving inscriptions (5th-1st c. B.C.) are not demonstrably in an Illyrian language. Archaeological evidence reveals that they immigrated into north Italy c. 950; here they preceded and later successfully resisted Etruscans and Gauls. They were highly civilized, preferred horse-breeding and commerce to war, and early organized the Baltic amber (q.v.) trade. They particularly worshipped a goddess of healing, Rehtia. Always friendly to Rome, the Veneti aided her against Gauls (390 B.C.) and Hannibal. Later from allies they became subjects, though retaining local autonomy. Presumably they obtained Latin rights in 89, full citizenship in 49 B.C. Their romanization ensued.

Strabo 5. 212; Polyb. 2. 17 f.; Livy 1. 1; 5. 33; 10. 2. R. S. Conway, *Prac-Italic Dialects* 1 (1931), 210; I. Wharmouth, *Foundations of Roman Italy* (1937), 171 (with bibliography); M. S. Beeler, *The Venetic Language* (U.S.A. 1949). For their alleged Paphlagonian origin see Serv. ad *Aen.* 1. 242, *Hom. Il.* 2. 852; Strabo 12. 543. E. T. S.

VENILIA, a goddess of forgotten nature and functions. It is implied by Varro (*Lang.* 5. 72) that she is associated with Neptunus (q.v., cf. August. *De civ. D.* 7. 22). Some insignificant stories, patently late inventions, are told of her by poets.

VENNONIUS, an early Roman author, now lost, whose history Cicero greatly regrets not to have at hand (*Att.* 12. 3. 1; cf. *Leg.* 1. 6). He is cited by Dionysius of Halicarnassus, 4. 15.

Peter, *HRRel.* 1. 142.

VENTA SILURUM, a town of Roman Britain in South Wales (modern *Caeerwent*), the *caput* of the *civitas* of the Silures (*It. Ant.* 485. 9; *Rav. Cosm.* 48). A dedication to T. Claudius Paulinus, former commander of Legio II Augusta (. . . *ex decreto ordinis respublica*) *civit(at)is Silurum*; Collingwood-Wright, *RIB* 311) forms important evidence for the character of local government in Britain. Founded in the late first century A.D., the town was defended by earthworks in the late second and a town wall was added in the late third century; this was supplemented with external towers probably by Count Theodosius (369). These defences enclosed only 44 acres. The town survived into the fifth century, but much of it was finally destroyed by fire, possibly by Irish raiders.

Archaeologia LVIII-LXII (early excavations 1892-1910); V. E. Nash-Williams *ibid.* 1930, 229 ff. (defences); *Bull. Board of Celtic Studies* 1953, 150 ff.; *A Hundred Years of Welsh Archaeology* (1946), 86 ff.

S. S. F.

VENTIDIUS (PII' 5), *PUBLIUS* (*cos. suff.* 43 B.C.), the proverbial upstart of the Roman revolutionary wars: probably of quite reputable municipal origin. Captured in infancy at Asculum and led in the triumph of Pompeius Strabo (89 B.C.), he made his livelihood with difficulty. Abusively designated as a *mulio*, he was probably an army-contractor (cf. Gell. 15. 4, the best account of his early life). Like other representatives of the defeated and impoverished Italians, he became an adherent of Caesar, through whose patronage he entered the Senate. Praetor in 43, Ventidius, who had been raising three legions in his native Picenum, reinforced Antony, after his defeat at Mutina. As a reward, he became consul later in the year. In 41-40 B.C. he intervened indecisively in the *bellum Perusinum*. After the Pact of Brundisium he was sent to drive the Parthians out of Asia and Syria, in which task he won brilliant victories at the Cilician Gates and at Mt. Amanus (39), and at Gindarus (38). Superseded by Antony (there were allegations of taking bribes from the king of Commagene), he returned to Rome to celebrate his Parthian triumph (38), and died soon after, being honoured with a public funeral. His Parthian triumph was long remembered (cf. Tac. *Germ.* 37. 4: 'infra Ventidium delectus Oriens'). No official or contemporary evidence gives P. Ventidius the *cognomen* 'Bassus'; nor can he quite be proved identical with Sabinius, the *mulio* of Virgil, *Catal.* 10.

Syme, *Rom. Rev.*, see index.

R. S.

VENUS, an Italian goddess, not originally Roman (Varro, *Ling.* 6. 33: 'curius nomen ex antiquis litteris . . . nusquam inueni'). Her cult was later widespread in Italy (see Latte, *RR* 183 ff.). She is so obscure that the only clues to her functions are her name, a few passing remarks of antiquaries, and her identification. The name should by all analogies be neuter and apparently is feminine merely because it denotes a female; as a common noun it means 'charm, beauty', and so may be compared to Charis (cf. CHARITES). Varro (op. cit. 6. 20) says that on the *Vinalia Rustica* (a day mistakenly supposed to be her festival) gardeners keep holiday. Cf. *Rust.* 1. 1. 6, Venus has *procuratio hortorum*; Festus, 322. 19; 366. 35 Lindsay; Pliny, *HN* 19. 50. Naevius, *fr. com.* 122 Ribbeck, speaks of eating 'Venus that has felt Vulcan's power', i.e. boiled vegetables. We may therefore suppose that she was the *nimen* whose power made herb-gardens look 'charmingly' prosperous and fertile. There is no evidence that she had anything to do with animal fertility, including that of

mankind. However, perhaps through the association of Aphrodite (q.v.) with Charis, or the Charites, she somehow became identified with her at an unknown date. It would seem that the cult of Aphrodite of Eryx (Venus Eruca) was the first point of contact (temple on the Capitol in 217 B.C.). To classical Rome Venus was Aphrodite; so much so that the Greek metonymies (Aphrodite = love-making, highest throw at dice, luck, etc.) were taken over by her. As Venus Genetrix (= mother of the *gens Iulia*) she was prominent in imperial cult.

Wissowa, *RR* 288 ff.; Kcune in Roscher's *Lexikon* . . . For the temples of Venus in Rome see Platner-Ashby, 551 ff. See also Nash, *Piet. Diet. Rome* 1. 491 (Venus Eruca dedicated in 181 B.C.; outside the Porta Collina, later called Venus Hortorum Sallustianorum); 1. 424 ff. (Venus Genetrix, dedicated in 46 B.C. by Caesar, in the Forum Iulium), II. 496 ff. (Venus et Roma on the site of the vestibule of Nero's Golden House, built by Hadrian and consecrated in A.D. 130 or 137; rebuilt by Maximian after a fire in 307, apart from the podium, all the surviving remains belong to the rebuilding), II. 424 ff. (Venus Victrix, built by Pompey in his theatre and dedicated in 55 B.C.).

H. J. R.

VENUSIA, a town, probably of Peucetian origin, in Apulia near the Lucanian border, famed as Horace's birthplace (*Sat.* 2. 1. 34); modern *Venosa*. When Rome took Venusia it was probably Samnite and certainly populous, 292 B.C.; it received a Latin colony one year later (Dion. Hal. 17-18. 5 incredibly numbers the colonists at 20,000). Venusia immediately became a military stronghold and important station on the Via Appia (Strabo 5. 250). Resisting Hannibal, it harboured the fugitives from Cannae, thereby repeating the role it had probably played in 280 after Heraclia (Polyb. 3. 116. 1; Zonar. 8. 3). In 200 Rome reinforced Venusia (Livy 31. 49). Roman arrogance presumably provoked its defeat in the Social War (Malcovati, *ORF*² 192; App. *BCiv.* 1. 39). In 43 the Triumvirs settled veterans here and Venusia remained a *colonia* in imperial times (App. *BCiv.* 4. 3).

N. Jacobone, *Venusia* (1909).

E. T. S.

VER SACRUM, literally, consecrated (produce of the) spring. In times of distress, or merely when the population was superabundant, Italian communities and others, including Greek also (Dionysius, Strabo), used to consecrate to a god, often Jupiter, all that should be born in the spring. The beasts were apparently sacrificed, but the human beings (*sacra*), when twenty years old (Festus, 150. 21), were veiled and sent out of the country. They might go where they would and found a new settlement. The ceremony (without human participation) was revived in 217 B.C.

Festus, 150. 224, 519 Lindsay; Dion. Hal. *Ant. Rom.* 1. 16; Strabo 5. 4. 12, 250; Livy 22. 10, 33. 44, 34. 44. J. Heurgon, *Tron Études sur le Ver Sacrum* (1957).

H. J. R.

VERCELLAE, modern *Vercelli*, town of the Libici near the gold-mines of north-western Cisalpine Gaul (q.v.), which attained consequence in imperial times. The *Campi Raudii*, where Marius and Catulus annihilated the Cimbri (101 B.C.), although usually sought near here, possibly lay much further east: J. Zennaro, *I Vercelli dei Celti e l'invasione celtica* (1956).

E. T. S.

VERCINGETORIX, son of Celtillus, formerly king of the Arverni, raised the revolt against Caesar in 52 B.C., and was acclaimed king of the tribe and general of the confederates. Defeated by Caesar's cavalry at Noviodunum Biturigum, he adopted 'Fabian' tactics, hampering Caesar's supply by systematic destruction. With this was combined the strategy of tempting Caesar to attack or ingloriously decline the attack on impregnable ground. The policy succeeded admirably near Avaricum, where Caesar did not attack, and at Gergovia, where he did. Vercingetorix was led to risk another attack on Caesar in

the field, which was badly defeated, so that he retreated to another prepared fortress, Alesia (q.v.). Caesar had an unexpected weapon, the circumvallation, with which he beat off not only Vercingetorix but the Gallic army summoned from outside to break it. Vercingetorix surrendered and was put to death after Caesar's triumph (46).

Caes. *B.Gall.* bk. 7. C. Julian, *Vercingetorix* (1921). C. E. S.

VERGILOMASTIX, 'the scourge of Virgil', is a bombastic name given to critics of Virgil.

Servius ad *Ecl.* 2, 23; *Aen.* 5, 521; Ribbeck, *Proleg. ad Verg.*, ch. 8 (1866); Donatus 16, 61-2 (E. Diehl, *Die Vitae Vergilianae u. ihre antike Quellen*, 1911); Conington-Nettlehip, *Works of Virgil* (1898), p. xxix-lxxx; C. G. Haidie, *prae. to Vita. Vergilianae Antiquae* (1954). R. M.

VERGINIA was traditionally killed by her own father to save her from the lust of the decemvir Appius Claudius. This murder is said to have precipitated the revolution leading to the overthrow of the decemvirs (449 B.C.). The poetical details of the legend show that the story, although probably based on that of Lucretia, was not invented by jurists as a precedent for the protection of individual liberty, or by annalists desirous of explaining the fall of the decemvirs. The lateness of the connexion of the legend with the story of Appius Claudius' lust and tyranny is proved by the fact that the so-called plebeian heroes Verginius and Verginia in fact belonged to a family that was indisputably patrician. However 'devoid of historical foundation', the story of Verginia is a landmark in the development of national consciousness and historical writing at Rome.

A. Alföldi, *Early Rome and the Latins* (1964), 153 ff.; Ogilvie, *Comm. Livy* 1-5, 476 ff. (with bibliography). P. T.

VERGINIUS (1, *PW* 29) **FLAVUS**, a famous Neronian teacher who had Persius for a pupil. His renown brought exile on him (Tac. *Ann.* 15, 71). Quintilian held his authority in great respect, mentioning him in several passages.

VERGINIUS (2, *PII* 27) **RUFUS**, LUCIUS, from Mediolanum, consul A.D. 63, became legate of Upper Germany in 67. In 68 he was prepared to make a deal with Vindex (q.v.), but, being compelled by his own soldiers to fight, he crushed the rebel. He refused to be hailed as Emperor and recognized Galba, who, still suspicious, replaced him in Germany. Consul II under Otho, he again refused the sovereignty after Otho's death. He became an example of loyalty to the State, and Nerva chose him as his colleague in the consulate (97). He died that year or a little later. His panegyric was pronounced by Tacitus, and his memory was celebrated by Pliny the Younger, whose *tutor* he had been (*Ep.* 2, 1). His epitaph is preserved (Pliny, *Ep.* 9, 19):

*Ille nitus est Rufus, pulso qui Vindexe quondam
Impetum non dedit non sibi sed patriae.*

C. M. Kraay, *Num. Chron.* 1040, 120 ff.; P. A. Brunt, *Latomus* 1959, 531 ff.; D. C. A. Shouter, *CQ* 1967, 370 ff. A. M.

VERONA, a town on the river Athesis in Cisalpine Gaul (q.v.), astride the routes to the Brenner Pass in fertile wine-producing country (Verg. *G.* 2, 94). Although probably founded by Raeti, it is first mentioned in history as a town of the Cenomani (Pliny, *HN* 3, 130; Livy 5, 35). Prior to imperial times little is known of Verona except that it was Catullus' birthplace. A large, flourishing city, Verona had the title of *colonia* in A.D. 69 (Strabo 5, 212; Tac. *Hist.* 3, 8). Numerous Roman remains (including magnificent first-century amphitheatre, third-century walls, etc.) and the fact that Constantine (312), Theodoric (499), and the Lombards

(568) thought it worth while to occupy it, demonstrate its importance.

P. Marconi, *Verona romana* (1938); I. A. Richmond-W. G. Hollard, 'Roman Verona', *PBSR* 1935, 691; G. Radke, *PW* 8 A, 2, Nachtrag 2426 ff. For its Raetic origin see J. Whitmough, *Harv. Stud.* 1937, 181. E. T. S.

VERRES (*PW* 1), GAIUS, perhaps the son of one of Sulla's new senators who, as an *ex-divisor* (see CANDIDATUS), had considerable influence. As quaestor in 84 B.C., he deserted from Carbo (q.v. 2) to Sulla, appropriating his *fuscus*; as legate (eventually *pro quaestore*) of Dolabella (q.v. 2) in Cilicia, he plundered Cilicia and Asia with him, but on their return helped to secure his conviction. As *praetor urbanus* (74) he flagrantly sold justice; as proconsul (73-71) in Sicily, he exploited and oppressed the province (except for his ally Messana), and even some Romans living there, by force and chicanery. Unwisely offending several senators and ill-treating clients of Pompey, he yet evaded the effect of Senate disapproval (see GELLIIUS 1) through his father's influence. On his return, he used his great wealth and his connections, as well as the hostility of powerful nobles (especially the leading Metelli) to Pompey, to win strong support. Hortensius (q.v. 2), consul designate with the friendly Metellus (q.v. 8), defended him against the prosecution launched by Cicero as a patron of the Sicilians (70), and tried to drag the case on into his consulate. Outwitted by Cicero's speed and forensic tactics, and seeing Pompey's full influence used against him, amid Popular agitation for jury reform (see COTTA 3), Hortensius advised his client to anticipate conviction by fleeing to Massilia. Cicero nevertheless published the second *actio* (for *comperendinatio* see REPETUNDAR), to drive home the extent of Verres' guilt and advertise his own skill; and the evidence, though presented *ex parte*, seems overwhelming. Having won, Cicero conciliated Verres' powerful friends by agreeing to a low *litis aestimatio*. His *Verrines* give us our best insight into provincial administration and its abuses in the late Republic. Verres later died at Massilia, proscribed (for his art treasures, we are told) by Antonius (q.v. 4).

Cic. *Verr.*

E. B.

VERTUMNUS (**VORTUMNUS**), an Etruscan god (Varro, *Ling.* 5, 46; Prop. 4, 2, 4, who says he came from Volturnus). A statue of him stood in the *Vicus Tuscus* in Rome, and Propertius (*ibid.* 13 ff.) indicates that the tradespeople there made frequent offerings to him. Nothing is known of his functions; his name may be connected with the Etruscan family *ultimni*, latinized Veldumnus. The Romans etymologized it from *uertere*, e.g. Prop. *ibid.* 21 ff. Dedications, of imperial times, have been found at Tuder, Ancona, Canusium, etc.

See Wissowa in Roscher, s.v.; Latte, *RR* 191 f.

H. J. R.

VERULAMIUM, a town in Britain near modern St. Albans (Herts.). After a short military occupation the town grew up in the valley below the site of 'Asciovanus' capital (*Verlamio*) and was probably accorded the status of *municipium* by Claudius (Tac. *Ann.* 14, 33). The earliest shops were half-timbered multiple buildings in quasi-military style, suggesting the employment of army architects. After the sack by Boudicca (A.D. 60) rebuilding was delayed some fifteen to twenty years; but by 79 a new masonry forum of Gallic design was dedicated, under Julius Agricola, as the inscription (*JRS* 1956, 147) shows, and the half-timbered shops were rebuilt. The earliest defensive earthwork (perhaps pre-Flavian) enclosed 119 acres; it became obsolete early in the second century and the town expanded over it. Stone public buildings of the late first and early second centuries include two temples

of non-classical type and a market hall; but domestic building was still in half-timber h of the town, including the forum in the restoration a theatre and p nasonry were built. Late in the second century a new earthwork defence was begun, but was replaced before 250 town wall on a different line enclosing 200 acres, monumental arches in the main street now marked vanished original boundary, and a third was added the theatre c. 300. There was much building early in the fourth century, continuing here and the its end and beyond. At least one large house was after c. 370 and structural activity on its site traced to perhaps c. 450. Here Alban was martyred haps under Severus; in 429 Germanus visited his s (*Script. rer. Meroving.* 7. 262). The site became des in the late fifth or sixth century and the ruins were pillaged for the monastic buildings of St. Albans in early Middle Ages.

Summary of earlier information *ICH, Herit.* 1. 125 ff.; R. and T. V. Wheeler, *Verulamium* (1936). K. M. Kenyon, *Archaeol.* 1935, 213 ff. (theatre). *Ant. Journ.* 1937, 28 ff.; *Trans. St. Architect. Archaeol. Soc.* 1953, 13 ff.; S. S. Frere, *Ant.* 1956-62 (interim reports 1955-61), *Bulletin Institute of Archaeology* (London) 1964, 61 ff., *Antiquity* 1964, 103 ff. (general summary).

VERUS, LUCIUS, Roman co-Emperor A.D. 161-9, was born in 130 and named L. Ceionius (*PW* 8) Commodus. He was son of L. Aelius (q.v. 2). On the death of Aelius, Hadrian (q.v.) in 138 required Antoninus (q.v. 1) to adopt his son along with the ten years older Marcus Aurelius (q.v. 1). Antoninus as Emperor did not, however, advance him equally with Marcus. The youth assumed the *toga virilis* in 145, became quaestor in 153, and consul in 154, with a second consulship in 161. On Pius' death in 161, Verus lacked the special standing of his adoptive 'twin', Marcus Aurelius. Marcus, however, at once created him (as 'L. Aurelius Verus') *Augustus* and colleague with tribunician power. Thus for the first time the imperial powers, except for the position of *pontifex maximus*, were fully shared. In 164 Marcus married Verus to his daughter Lucilla (q.v.), some eighteen years younger. Verus was weak and indulgent, and a poor administrator. Nevertheless, he commanded in the East in 164-6 and celebrated a triumph, though Avidius (q.v. 2) Cassius probably did the real work. Verus joined Marcus on the Danube in 168. His death on their return to Rome early in 169 was probably a benefit for the Empire and perhaps a relief to Marcus.

VESONTIO (modern *Besançon*), capital of the Sequani, a Celtic tribe of Gallia Comata, was occupied by Caesar in 58 B.C. and in A.D. 68 was the scene of a decisive battle between the forces of Vindex (q.v.) and Verginius (q.v. 2) Rufus. Included in Gallia Belgica by Augustus, the Sequani were transferred under the Flavians to Germania Superior, and in the Late Empire Vesontio became the provincial capital of Maxima Sequanorum. The site is accurately described by Caesar, in a bend of the river Dubis (modern *Doubs*). The most important surviving monument is the Porte Noire, but the forum and amphitheatre are also known.

Caes. *B.Gall.* 1. 38-9; Plut. *Galba* 6; Dio Cass. 63. 24; Grenier, *Mamel.* i. 560 ff. (Porte Noire), iii. 353 ff. (forum), ibid. 692 ff. (amphitheatre). A. L. F. R.

VESPAE IUDICIUM COCI ET PISTORIS IUDICE VULCANO, contest between baker and cook in ninety-nine hexameters by a travelling rhetorician Vespas. Witty and full of puns, the poem is familiar with mythology

and Roman folklore, and shows no trace of Christianity but cannot be older (and may well be later) than the third century A.D. because of its prosody (*in caccabo, Meleager*). Metre pleasing, although final syllable is admitted in the fifth rise, and hiatus and *syllaba anceps* at the main caesura.

Bachrens, *PLM* iv. 326; F. Pint, Rome, 1958 (text, transl., comm.). See V. Tandoi, *Atene e Roma* 1960, 198 ff. O. S.

VESPASIAN (TITUS FLAVIUS (*PIU'* 206) VESPASIANUS), Emperor A.D. 69-79, was born in A.D. 9 at Sabine Reate. His father Flavius Sabinus (for his elder brother of the same name see SABINUS 3) was a tax-gatherer, his mother also was of equestrian family, but her brother had entered the Senate. After his praetorship in 40 his career was advanced by the freedman Narcissus (q.v. 2). Legate of II Augusta in the Claudian invasion of Britain, he commanded the left wing in the subsequent advance (43-4), and for his distinguished services was awarded triumphal ornaments and two priesthoods. He became suffect consul in 51, and was later proconsul of Africa (c. 63) his lack of employment in the interval was perhaps due to Narcissus' death. In 66 he accompanied Nero to Greece, and fell into disfavour for sleeping during the Emperor's singing; but in Feb. 67 he was appointed as special commander to suppress the Jewish rebellion. By Nero's death he had largely subdued Judaea apart from Jerusalem itself, but he then stopped campaigning.

He decided to accept Galba (q.v.—see also TITUS), but he reconciled himself with the governor of Syria, Mucianus (q.v.), and on the news of Galba's murder these two Eastern legates considered action. They ostensibly supported Otho against Vitellius (q.v. 1), but after Otho's suicide they began collecting force. On 1 July 69 the two Egyptian legions, under their prefect Tiberius (q.v. 3) Alexander, acclaimed Vespasian Emperor, and the legions in Judaea and Syria quickly followed. Mucianus set out with an expeditionary force to threaten Italy while Vespasian held up the corn ships at Alexandria. But in August the Danubian armies joined the Flavian cause, and Antonius Primus (q.v.) entered Italy. It was alleged that he had done so against orders, and that Vespasian's victory could have been bloodless. However this may be, Antonius after winning a crushing battle at Cremona pressed on to Rome, and entered the city on 21 Dec., the day after Vitellius' death. Vespasian was immediately adopted by the Senate, though he continued to date his rule from 1 July.

His recognition was accompanied by the formal grant of miscellaneous powers, for some of which the Julio-Claudian Emperors had not sought explicit sanction. Whether similar grants had been made to Galba, Otho, and Vitellius—or were to be made to Vespasian's successors—is not clear; but it so happens that in Vespasian's case a fragment of the enabling law has survived (*ILS* 244). More important, however, than any legal enactment was the acquisition of *auctoritas* by the members of an upstart house, and Vespasian was careful to publicize a number of divine omens which portended his accession. Later measures to achieve the same end included frequent tenure of the consulate, for brief periods of the year, by himself and his sons, and the accumulation of numerous imperial salutations. Throughout his reign Vespasian insisted that the succession would devolve on his sons (see TITUS and DOMITIAN). Controversy over the dynastic principle may have caused his quarrel with doctrinaire senators like Helvidius (q.v.) Priscus, who was executed c. 76.

Vespasian returned to Italy c. Oct. 70. While at Alexandria he had been concerned with raising money, and his sales of imperial estates caused discontent in Egypt. He announced that 40,000 million sesterces were

needed to put the State to rights, and both before and after his return he promoted his financial programme. He increased, and sometimes doubled, provincial taxation, and revoked imperial immunities. Some such measures were essential after the deficit incurred by Nero and the devastation of the civil wars, but contemporaries inevitably charged Vespasian with 'avarice'. How much he collected for public funds is unknown, but he was able to restore the Capitol, to build his Forum and Temple of Peace, and to begin work on the Colosseum. He probably also left a considerable surplus to his successors.

It was probably in part for financial reasons that in 73 he assumed the censorship with Titus. But in this office he also recruited many new members, both Italian and provincial, to the Senate, and conferred Roman and Latin rights on communities abroad. Chief among these grants was that of Latin rights to all native communities in Spain.

He effectively restored discipline to the armies after the events of 68-9. Before his return Mucianus had reduced the praetorian guard, greatly enlarged by Vitellius, to approximately its old size; and the legions were soon regrouped to ensure that Vitellian troops would not occupy dangerous positions. In the East Vespasian substituted three armies, with a total of six legions, in Syria, Cappadocia, and Judaea, for the single army (until Nero's time only four legions) in Syria. After the Jewish and Rhineland rebellions (see *TITUS, CIVILIS*) had been suppressed, Vespasian was able to undertake some rectification of the frontiers: most significantly in Britain, with the annexation of northern England and the pacification of Wales, and an advance into Scotland (see *AGRICOLA* 1); but to some extent also in southern Germany.

On his death on 23 June 79 (his last words are reported as 'Vae, puto deus fio') he was immediately accorded deification. By his unassuming behaviour he had largely conciliated the aristocracy (but see *EPHRIUS MARCELLUS*), and Tacitus (*Hist.* 1. 50) says he was the first Emperor who changed for the better. He was industrious, and the simplicity of his life was taken as a model by contemporary senators. Matching his rugged and uncompromising features he cultivated a bluff manner, characteristic of the humble origins he liked to recall. His initial appointments (see e.g. *PAETUS CAESERNIUS*, *PETILLIUS CEREALIS*) reflect his astuteness in building a powerful party, of which the core was his own family. The policies of his reign do not reveal any great break with tradition. But to have ended the civil wars was no mean achievement, and *PAX*, with some reason, was a principal motif on his coinage.

He had married one Flavia Domitilla, who was believed to be of only Latin status until her father Flavius Liberalis successfully proved her Roman citizenship. She bore him two sons, and a daughter also named Flavia Domitilla (later deified); but both wife and daughter died before he became Emperor. He then lived with an earlier mistress named Caenis, who had been a freed-woman of Tiberius' sister-in-law Antonia.

SOURCES. Vespasian's rise to power is excellently documented by Suetonius, as well as by Tac. *Hist.* 2-4. But after this point Suetonius' 'Life' (ed. A. W. Braithwaite, 1927) tends to degenerate into a series of interesting anecdotes designed to illustrate Vespasian's character; and the absence of a chronological framework is little remedied by the Epitomes of Dio Cassius, 65-6. Epigraphical and numismatic evidence is of prime importance: see M. McCrum and A. G. Woodhead, *Documents of the Principates of the Flavian Emperors 68-96* (1961). See also Syme, *Tacitus*, index; A. Hoesmann, 'Tacitus und das flavische Geschichtsbild', *Hermes, Einzelschr.* 10 (1955). G. E. F. C.

VESTA, VESTALS. Vesta is the Roman hearth-goddess, the etymological equivalent of Hestia (q.v.), as

she is in cult. She was prominent in family worship (see *WORSHIP, HOUSEHOLD*; *PENATES*), and is sometimes depicted in *lararia* (as G. K. Boyce, *Amer. Acad. Rome* 1937, plate 24) with her favourite beast, the ass ([Verg.] *Copa* 26). Not much is known of her domestic ritual, but see Cato, *Agr.* 143. 2.

For her as for Hestia it is evident that the royal hearth-cult must have been supremely important in early times. Hence it is very natural that her State worship (*Vesta publica populi Romani Quiritum*) should not be in a temple but in a round building near the Regia, doubtless an imitation in stone of the ancient round hut (the modern *capanna*). This contained no image (Ov. *Fast.* 6. 295-6), but a fire which never was let out ('ignis inextinctus', *ibid.* 297; 'ignem illum sempiternum', Cic. *Dom.* 144). Curtained off from the rest of the building was the *penus* (Festus, 296. 12 Lindsay), which was opened for some days at the Vestalia, 9 June, a time of ill-omen, for the building was cleaned then and the days were *religiosi* and *nefasti* till the dirt had been disposed of on 15 June, *Quando ST(ercus) D(elatim) F(as)*. The *penus* contained various sacred objects, but as none but the Vestals might enter it, their nature was never known but widely guessed at (e.g. Livy 26. 27. 14; cf. Dion. Hal. *Ant. Rom.* 2. 66. 3). This cult, though old (founded by Numa, Dion. Hal. *ibid.* 1 and other authors), was not primitive, for the Forum is not part of the oldest Rome. Preceding it was the cult of Caca, on the Palatine (Servius on *Aen.* 8. 190), of like character.

Vesta was served by the Vestal Virgins, representing the daughters of the royal house (see H. J. Rose, *Mnem.* 1926, 2 ff.). They are said to have been originally two, then four, but in historical times normally six (Plut. *Num.* 10). They served originally for five years (Dion. Hal. 1. 76. 3), in historical times for thirty, during which time they must remain virgin, but after which they might marry, though few did, as it was supposedly unlucky (Plut. *ibid.*). Candidates must be between the ages of six and ten, and were chosen by the *pontifex maximus*, with the formula *te, Amata, capio*, from a total of twenty (if so many offered). They were not necessarily patricians. They received numerous honours, including emancipation from their fathers' tutelage, but were under the control of the *pontifex*, who could scourge any who let the sacred fire out or committed other offences short of unchastity; for that the culprit was entombed alive (obviously a judicial ordeal; Vesta might set her free if she was innocent). See Plut. loc. cit.; Gell. 1. 12.

Not much is known of the ritual, save that it was old-fashioned, not using water from mains and relighting the fire, if ever it went out, by friction of wood (Wisowa, 254). The Vestals wore the old sacral dress otherwise used by brides only. See *MIRACLES, ATRIUM VESTIAE*.

Wisowa in Roscher's *Lexikon*, s.v. Latte, *RR* 108 ff.; A. Brelich, *Vesta* (Zurich, 1949), gives an 'unconvincing picture of Vesta' (S. Weinstock, *JRS* 1950, 150). For her temples near the Regia and on the Palatine, see Platner-Ashby, 557 f.; Nash, *Pict. Dict. Rome* u. 505 ff., 511 ff. H. J. R.

VESTINI, a central Italian tribe living near the *Grano Sasso*, highest peak of the Apennines (q.v.). They spoke an Oscan-type dialect. Chief towns: Pinna, Aternum. They became allies of Rome before 300 B.C. but joined their close associates, the Marsi, Marrucini, and Peligni (qq.v.) in the Social War rebellion against her. Their romanization quickly ensued.

A. la Regina, *Mém. del'Arc.* 1968, 360 ff.

E. T. S.

VESUVIUS, the famous volcano on the Bay of Naples, rises isolated out of the surrounding plain of Campania (q.v.). Its base is some 30 miles in circumference, its central cone over 4,000 feet high, and its general appearance picturesque since the mountain-sides have been

largely blown away. Vesuvius is mentioned only twice during the Roman Republic, in the Latin War of 340, where the allusion (Livy 8. 8. 19) seems erroneous, and in the revolt of Spartacus (q.v.) who used its crater as a stronghold in 73. It appeared extinct (Diod. 4. 21. 5), and its fertile slopes were extensively cultivated, with vineyards mostly (Strabo 5. 4. 8, 247). On 5 Feb. A.D. 63 a damaging earthquake presaged the first recorded eruption, the severe one of 24 Aug. 79 that buried Pompeii (q.v.) in sand, stones, and mud, Herculaneum (q.v.) in liquid tufa, and Stabiae (q.v.) in ashes, asphyxiated Pliny the Elder (q.v.), and is described by Pliny the Younger (q.v.), an eyewitness, in letters to Tacitus (*Ep.* 6. 16, 20). Antiquity witnessed three subsequent eruptions (in 202, 472, and 512), and violent activity still periodically recurs. E. T. S.

VETERA, near Birten, on the Rhine, was a major base for the Augustan invasions of Germany and became the station of two legions. The fortress had been completely rebuilt before it was destroyed by Civilis (q.v.) in A.D. 70. A new fortress for one legion was subsequently erected on a new site, was occupied till c. 260, and may have been refortified by Julian. A colony (*colonia Ulpia Trajana*), fortified from the beginning, was founded (between 98 and 107) near by at Xanten on a site which continued to be occupied apparently into the fifth century.

H. v. Petrikovits, *Bonner Jahrb.* 1952; *Das römische Rheinland* (1960), and *PW* s.v. H. Hinz, in (*Gymnasium Germania Romana* I, *Konstanz in Deutschland* (1960)). P. S.

VETTIUS (1, *PW* 13) **PHILOCOMUS**, a friend of Lucilius, on whose satires, like Laetius Archelaus, he lectured and commented (Suet. *Gram.* 2).

VETTIUS (2, *PW* 16) **SCATO**, PUBLIUS, as Marsic 'praetor' in the Social War in the summer of 90 B.C. won several victories, finally killing the consul P. Rutilius Lupus; when driven back by Rutilius' legate Marius (q.v. 1), he marched on Aesernia, which he captured after defeating the other consul Caesar (q.v. 2). In 89 he tried to negotiate with the consul Pompeius (q.v. 3) Strabo through his guest-friend Sextus Pompeius, the consul's brother. (Cicero, q.v. 1, serving under Pompeius, was present.) Later, defeated by Pompeius, he was surrendered by his army and asked a slave to kill him. E. B.

VETTIUS (3, *PW* 6), LUCIUS, an *eques* from Picenum, served under Pompeius (q.v. 3) and Sulla and became a friend of Catiline. Involved in his conspiracy (63 B.C.), he turned informer and gave Cicero useful help, but came to grief trying to denounce Caesar. In 59—apparently now Caesar's agent—he denounced an Optimate 'plot' against Pompey, involving many prominent men, including the Curiones (see CURIO 1 and 2) and Lucullus (q.v. 2). Disbelieved, he was gaoled and mysteriously killed. The facts remain obscure.

C. Meier, *Hist.* 1961, 88 (with bibliography).

E. B.

VETTIUS (4, *PW* 67) **VALENS**, astrological writer of the second century A.D.

Ed. W. Kroll, 1908.

VETULONIA (Etr. *Vetluna*), in the hills to the west of the bay that is now the Grosseto plain, was one of the twelve cities of Etruria. Excavation has been mainly confined to the extensive necropoleis. The earliest material comes from Villanovan *pozzo*-graves, the most notable from a series of wealthy orientalizing 'circle tombs', consisting of trenches surrounded by stones and covered by a tumulus. The *Circolo dei Leleti* contained bronze cauldrons with sirens' heads and griffin protomes that have Greek and oriental parallels respectively. The

Pietrera tumulus contained a single chamber with a corbelled dome supported by a central pillar: it has produced the earliest stone statuary in Etruria. According to Silius Italicus (8. 484–8) the Romans assumed the Etruscan royal insignia of *fascies*, *sella curulis*, etc., from Vetulonia: an axe bound with iron rods was found in an early tomb there.

I. Falchi, *Vetulonia e la sua necropoli antichissima* (1891), *Stud. Etr.* 1931, *passim*; G. Renzetti, *ibid.* 1950–1, 291 ff.; A. Talocchini, *ibid.* 1961, 437 ff.; G. Campanale, *ibid.* 1964, 3 ff.; id., *La tomba del Duce* (1967); id., *I commerci di Vetulonia in età orientalizzante* (1968); Scullard, *Etr. Cities*, 134 ff.

D. W. R. K.

VEXILLUM. In the Republican army *vexilla* were the standards of the legionary cavalry. Hence, *vexilla* were carried by cavalry units, such as *alae*, at all periods. The *vexillum* was used also as the standard of a detachment (*vexillatio*), or, in the first century A.D., of a corps of veterans after their period of service under the *aquila* had been completed. Hence, *vexillum* itself was often used for a detachment. The flag of a general or an admiral was a scarlet *vexillum*. See also SIGNA MILITARIA.

M. Rostovtzeff, *JRS* 1942, 92 ff.

G. R. W.

VIA AEMILIA, named after its builder M. Aemilius Lepidus, *cos.* 187 B.C. (Livy 39. 2), and subsequently repaired by Augustus and Trajan, ran from Ariminum 176 miles north-west to Placentia (with later extensions to Augusta Praetoria, to Segusio, to Aquileia, all somewhat inaccurately called Via Aemilia). The Aemilia helped to romanize Cisalpine Gaul rapidly: with its extensions it touched every important city of the district (still called Emilia) except Ravenna.

It is to be distinguished from the Via Aemilia Scauri (q.v.).

1 Strabo 5. 217. N. Lamboglia, *Athenaeum* 1937.

E. T. S.

VIA AEMILIA SCAURI, highway built by M. Aemilius Scaurus, censor 109 B.C., linking the Viae Aurelia and Postumia (qq.v.). It ran from Vada Volaterrana through Pisae, Genua, and Vada Sabatia and thence inland to Dertona. From Vada Sabatia the Via Julia Augusta (built by Augustus) continued along the coast to beyond Albintimilium (*T'entimiglia*).

E. T. S.

VIA ANNIA (1), highway built in northern Italy, perhaps by T. Annius Luscus, *cos.* 153 B.C. It probably linked Bononia with Aquileia via Patavium, Altinum, and Concordia.

(2) The extension of the Via Appia (q.v.), which ran from Capua through Nola, Nuceria, Consentia, and Vibò to Rhegium, may also have been a Via Annia (not Via Popillia, q.v., as usually stated), built perhaps by T. Annius Rufus, praetor 131 B.C.

(3) Road near Faleri in Etruria.

T. P. Wiseman, *IBSR* 1964, 21 ff. F. T. Hinrichs, *Hist.* 1967, 167 ff.

E. T. S.

VIA APPIA, the Romans' principal route to south Italy and beyond (Strabo 6. 283). Appius Claudius Caecus, censor 312 B.C., built and named the 132-mile section from Rome to Capua (Livy 9. 29). It had probably been extended by 244 through Beneventum, Venusia, and Tarentum to Brundisium (234 miles). Paving of the Appia commenced in 295 and apparently was complete by Gracchan times (Livy 10. 23; Plut. *C. Gracch.* 7; reject Diod. 20. 36). In imperial times a praetorian *curator* kept the road in order. Its exact line can be traced most of the way to Beneventum, but not beyond, since the shorter route to Brundisium via Canusium and Barium, which the Via Traiana (q.v.) later used, led to neglect of the Appia. Between Rome and Beneventum, however, one can still see roadside tombs (e.g. the

Scipios', Caecilia Metella's), the ancient pavement (c. 20 ft. wide at *Itri*), a rock-cutting (at Tarracina), embankments (e.g. at Aricia and *Itri*), bridges (three between Caudium and Beneventum), and milestones. One of these proves that, even though travellers preferred the 19-mile-long ship canal, the Appia from its earliest days crossed the Pomptine marshes (q.v.) (C. Hülsen, *Röm. Mitt.* 1889, 83 ff.). Various branches, e.g. the one to Rhegium [see VIA ANNIA (2)], were also somewhat inaccurately called Via Appia.

T. Ashby, *Roman Campagna* (1927), 174 ff.; A. Maiuri, *Passeggiate Campane* (1957), 347 ff.
E. T. S.

VIA AURELIA, important highway (Cic. *Phil.* 12. 9) of unknown date, but presumably built before its extension, the Via Aemilia Scauri (q.v.) of 109 B.C. It was 175 miles long, running from Rome north-west to Alsium, thence along the Etruscan coast to Vada Volaterrana. Later prolongations to Dertona and to Arelate are also called Via Aurelia in the Itineraries. See also VIA POSTUMIA.

D. Anziani, *Mélanges d'arch.* 1913; F. Castagnoli (ed.), *La Via Aurelia* (1968).
E. T. S.

VIA CASSIA, highway running north from Rome through Sutrium, Volsinii, and Clusium in central Etruria to Arretium, whence the Via Flaminia Minor (187 B.C.) led across the Apennines to Bononia. It was apparently built in the late third or early second century B.C. Between Veii and Sutrium it diverged from the older Via Amerina which continued to Nepes, Faleri Novi, and the North. The Via Cassia was ultimately prolonged from Arretium to Florentia and Mutina with an extension to Pistoria, Luca, and Luna.

Cic. *Phil.* 12. 22; F. Martinori, *Via Cassia e sue derivazioni* (1910); and see s.v. VIA CLODIA.
E. T. S.

VIA CLODIA, highway running north from Rome through western Etruria, of uncertain, but evidently republican date (3rd c. ?), though in part following older Etruscan roads. Its course is often confused with that of the Via Cassia (q.v.), which probably followed the same line to near Veii; thence Via Clodia turned north-west and certainly touched Blera, Tuscania, and Saturnia (q.v.).

J. B. Ward-Perkins, *JRS* 1957, 139 ff.; id. *PBSR* 1955, 44 ff.; 1957, 67 ff.
E. T. S.

VIA DOMITIA, a very ancient route from the Rhône to Spain, improved by the Romans apparently before the death of Polybius (124 B.C.; cf. 3. 39. 8), but owing its name to the conqueror of Narbonensis, Cn. Domitius (q.v. 2) Ahenobarbus (121); a milestone of Domitius survives (Degrassi, *ILLRP* n. 460a). It was repaired by M. Fonteius (c. 75), and under the Empire by Tiberius (A.D. 31-2), Claudius (41), Antoninus Pius (145), Maximinus (235-8), and Diocletian (284-305).

Grenier, *Manuel* ii. 26 ff.

C. E. S.

VIA DOMITIANA, highway built by Domitian (A.D. 95), running from Sinuessa on the Via Appia (q.v.) through Volturnum, Linternum, and Cumae to Puteoli, where it joined a road to Neapolis (q.v.).

Stat. *Silv.* 4. 3.

E. T. S.

VIA EGNATIA, Roman road built c. 130 B.C. from the Adriatic coast to Byzantium; named after Egnatia on the Apulian coast, where the corresponding road from Rome to Brundisium touched the sea, the Via Egnatia was the main route from Rome to the East. Two branches of the road, starting respectively from Dyrrhachium and Apollonia, united in the Skumbi valley, crossed the Balkan range by Lake Lychnidus (*Ochrida*), and descended to Thessalonica via Heraclea, Eordaea, Aegae,

and Pella, whence it followed the Thracian coast to Byzantium. It followed the line of a trade-route through the Balkan range which Corinth had exploited.

N. G. L. H.

VIA FLAMINIA, the great northern highway of Italy, built 220 B.C. by C. Flaminius, when censor (Livy, *Epit.* 20; reject Strabo 5. 217). It was 209 miles long from Rome via Narnia, Mevania, Nuceria, and Helvillum to Fanum Fortunae (q.v.), where it turned north-west and followed the Adriatic coastline via Pisaurum to Ariminum (q.v.). After A.D. 69 the section between Narnia and Nuceria was provided with an alternative, 6-mile longer route via Interamna (q.v.), Spolietum, and Fulginium. From its earliest days the Flaminia was much frequented; its importance was, if anything, enhanced in late imperial times when the imperial court was at Milan or Ravenna. Large towns grew up along its tomb-lined course. The road was often repaired: by C. Gracchus, Augustus (parts of whose bridge at Narnia (q.v.) and whose honorific arch at Ariminum survive), Vespasian (whose tunnel through Intercisa Pass still exists near Calles), Trajan, Hadrian. Various branches, e.g. from Nuceria to Ancona, were also inaccurately called Via Flaminia.

T. Ashby-R. A. L. Fell, *JRS* 1921.

E. T. S.

VIA LABICANA, highway running south-east from Rome to Labici and the country of the Hernici (q.v.). Avoiding the Alban Hills, it joined the Via Latina (q.v.) near Anagnina.

E. T. S.

VIA LATINA, one of the arterial highways radiating from Rome, is not named after its builder—a fact suggesting high antiquity. It ran south-east and, after surmounting the outer rim of the Alban Hills at Algidus, followed the Treverus valley through the Hernici country where the Via Labicana (q.v.) joined it near Anagnina. It crossed the Liris at Fregellae, then proceeded via Aquinum, Casinum, V. nafrum, Teanum, and Cales across the Volturnus to Casilinum where it merged with the Appia. (A later short cut via Rufrae avoided Venafrum.) The 135-mile Latina was much frequented (Strabo 5. 237); important branches ran from it into Samnium. Pyrrhus and Hannibal both used it, presumably because it followed an easier line than the Appia. Its exact line can still be traced without much difficulty.

T. Ashby, *Roman Campagna* (1927), 153 f.

E. T. S.

VIA POPILLIA, highway in northern Italy, linking Ariminum, Atria, and Altinum with Aquileia, built by P. Popilius (q.v. 2). *cos.* 132 B.C. (Dessau, *ILS* 5807). The road from Capua to Rhegium in southern Italy is also often attributed to him, but probably incorrectly: see VIA ANNIA (2).

E. T. S.

VIA POSTUMIA, north Italian highway centring on Cremona, whence it ran in one direction through Placentia and Dertona to Genua, and in the other through Bedriacum, Verona, Vicetia, and Opitergium to Aquileia. Built by Sp. Postumius Albinus (*cos.* 148 B.C.), it consolidated the conquest of the Transpadane region (see CISALPINE GAUL). The Itineraries regard its western section as part of the Via Aurelia. Ancient authors virtually ignore it.

Dessau, *ILS* 5806, 5946; Tac. *Hist.* 3. 21.

E. T. S.

VIA SACRA, the street connecting the *Forum Romanum* with the Velia, affording access to the Palatine. The name probably comes from the hallowed buildings which the street passed, connected with the shrines of Vesta and the Regia. The earliest-known monument at its end

is the *formix Fabianus* (JRS 1922, 27 f.) of 121 B.C., whence the road straggled towards the Velia, passing many private houses and shops, its pavement being still visible. In A.D. 64 Nero planned the street anew as a noble colonnaded avenue flanked by large bazaars for jewellers, florists, and luxury-traders. The northern bazaar was smaller and was obliterated by the basilica of Maxentius; the southern, though curtailed by Hadrian's extensions of the Atrium Vestae (q.v.), occupied the considerable space between that house and the Arch of Titus.

Nash, *Pict. Dict. Rome* ii. 284 ff.

I. A. R.

VIA SALARIA, highway built in prehistoric times to facilitate the salt trade from the Tiber mouth. It ran north-east from Rome to Reate (q.v.) in the Sabine country. Later extensions, (1) through Amiternum and (2) through Asculum, carried it to the Adriatic. E. T. S.

VIA TRAIANA, highway built (A.D. 109) by Trajan, which replaced the Via Appia (q.v.) as the usual route between Beneventum and Brundisium. It touched Aequum Tuticum, Aeclae, Herdoniae, Canusium, Barium, and Gnathia. Its identification with the Republican Via Minucia mentioned by Cicero (*Att.* 9. 6. 1) and others is very dubious.

T. Ashby-R. Gardner, *PBSR* 1914, 104 f.

E. T. S.

VIA VALERIA, important highway running eastwards from Rome to Aternum on the Adriatic. Its first 18 miles comprised the very ancient Via Tiburtina. This was prolonged, possibly c. 300 B.C., to Carsoli, Alba Fucens, and apparently Cerfennia (Livy 10. 1. 3; Diod. 20. 90, emending *Σερβία*; Livy 9. 43 records a road-building Valerius, censor 306 B.C.). This extension later became a paved highway, perhaps in the censorship of M. Valerius Messalla (154 B.C.), and was the Via Valeria proper (cf. Strabo 5. 238). Finally, the Emperor Claudius continued the road as the Via Claudia Valeria from Cerfennia to the Adriatic. Pliny's estimate of 136 miles as the breadth of Italy is based on the Valeria (*HN* 3. 44).

T. Ashby, *PBSR* 1906, 84 ff. (Via Tiburtina); C. C. van Essen, *ibid.* 1957, 22 ff. (centuriation); R. Gardner, *ibid.* 1920, 75 ff. (Via Claudia Valeria).

E. T. S.

VIATORES were public bailiffs, mostly freedmen or of low birth, whose chief business was to run errands for the magistrates and summon senators to meetings. They also seized confiscated goods, made arrests, and executed the commands and sentences issued by their respective magistrates. They formed a corporation divided into several *decuriae* according to the rank of the magistracies (the first was therefore the *decuria consularis*). Municipal magistrates also employed *viatores* chiefly to collect taxes.

Mommisen, *Röm. Staatsr.* iv. 760 ff.; A. H. M. Jones, *Stud. in Rom. Government and Law* (1906), 154 ff.

P. T.

VIBENNA, CAELIUS, an Etruscan who, according to Roman tradition, came to help Tarquinius Priscus (Tac. *Ann.* 4. 65; Romulus, according to Varro, *Ling.* 5. 46) and, as a reward, settled on the hill later known as the Caelius Mons (q.v.). He is also known from Etruscan tradition: the François tomb-painting at Vulci depicts him being rescued by his brother Aulus Vibenna and Mastarna (q.v.) from Cn. Tarquinius. According to the Emperor Claudius (*ILS* 212, representing a romanized version of the Etruscan tradition?), Mastarna, Caelius' friend and fellow adventurer, driven from Etruria, settled with the remains of Caelius' army on the Caelian hill and changed his name to Servius Tullius. The name of A. Vibenna appears on a mid-sixth-century *bucchero*

vase, dedicated at Veii (M. Pallottino, *Stud. Etr.* 1939, 456 ff.).

A. Momigliano, *Claudius* (1961), 10 ff., 84 ff.

H. H. S.

VIBIUS (1, *PW* 39) **MARSUS**, CAIUS, of unknown descent, *consul suffectus* in A.D. 17, was a *legatus* of Germanicus in the East and after his death conducted Agrippina back to Rome (19). From 27 to 30 he was proconsul of Africa. In 37 he was accused of treason and adultery but saved by the death of Tiberius. As *legatus* of Syria (42-45) he was hostile to Agrippa (q.v. 1), and checked the designs on Armenia of Vardanes, king of Parthia.

T. J. C.

VIBIUS (2, *PW* 48) **RUFUS**, CAIUS (*cos. suff.* A.D. 16), a declaimer of Tiberius' reign. His arguments are often cited in the Elder Seneca's *Controversiae* (e.g. 2. 1. 2 and 28; 2. 3. 8; 2. 6. 10; 7. 3. 4; 9. 2. 2).

VIBIUS (3, *PIW* 28) **CRISPUS**, QUINTUS, born at Vercellae in Transpadane Italy, was *cos. suff.* under Nero, and twice more before A.D. 83. He was *curator aquarum* 68-71, probably proconsul of Africa in 71, and legate of Tarraconensis in 73. His wit and oratory are praised by Quintilian (see also Suet. *Dom.* 3, Dio 65. 2. 3), and were probably the source of his great influence with Vespasian (Tac. *Dial.* 8, 13): his tact (Juvenal 4. 81 ff.) enabled him to survive where others, like Epirus (q.v.) Marcellus, came to grief. Yet Tacitus (*Hist.* 2. 10, 4. 41-2) regarded him as a sinister character.

R. Syme, *Rev. Ét. Anc.* 1956, 256 ff.

G. E. F. C.

VIBIUS (4, *PII* 40) **MAXIMUS**, CAIUS, *praefectus coh. III Alpinorum* in Dalmatia A.D. 94 (*CIL* iii. 859), prefect of Egypt from Apr. 103 to Mar. 107, was a friend of both Martial (11. 106) and Statius, whose *Silv.* 4. 7 was written in his honour. Its close suggests that Vibius produced some kind of handbook of world-history with an epitome of Sallust and Livy.

W. Keil, *B. phil. Woch.* 1910, 1075; H. A. Musurillo, *The Acts of the Pagan Martyrs* (1954), 150 ff.; R. Syme, *Hist.* 1957, 480 ff.

J. W. D., G. B. A. F.

VICA POTA, a goddess, whose shrine lay on the Velia in Rome (Livy 2. 7. 12). Though it existed in his time, her functions were unknown, some explaining her as Victoria (q.v.); *uncere, potiri*; Cic. *Leg.* 2. 28), some as goddess of food and drink (*iuctus, potus*; Arn. *Adv. Nat.* 3. 25).

H. J. R.

VICARIUS. During the first two centuries A.D. *vicarius* meant a substitute for an absent or deceased provincial governor. In the third century *vicarii* were equestrian procurators who were specially appointed by the Emperor to administer provinces in place of the regular senatorial governors. When Diocletian divided the Empire into dioceses, each was entrusted to a *vicarius*, officially a deputy of the praetorian prefects (*vices agentes praefectorum praetorio*). They acted as judges of appeal from the courts of the provincial governors of their dioceses and had a general supervision over their administration. As the powers of the prefects continued to increase, the position of *vicarii* tended to decline in importance. (See DIOCESES.)

II. M. D. P., D. H. W.

VICOMAGISTRI were presidents of sub-districts (*vici*) in town or city wards (*regiones*) charged with the upkeep of local cults, particularly the cult of the *lares compitales* and the organization of the *ludi compitales* (Wissowa, *RE* 171 ff.). They are attested by republican inscriptions (Degrassi, *ILLRP* 701-4), and in the political

strife of the late Republic their organization attained notoriety, being abolished by *senatus consultum* in the middle 60s and revived by Clodius in 58 (Asc., p. 7 C; Cic. Pis. 4. 9; cf. *Red. Sen.* 13. 33; *Sest.* 15. 34, 25. 55). The institution was probably not abolished again (cf. J. V. A. Fine, *CPhil.* 1932, 268) though Augustus transformed it in 7 B.C. (Dio Cass. 55. 8: *CIL* vi. 343, 2222) or perhaps earlier (*ILS* 3617, 3620), apparently in connexion with his creation of the fourteen regions (see REGION); each *vicus* now elected four *magistri* and their cults included those of the *lares Augusti* and the *genius* of the Emperor (*ILS* 3613-21); they also had some responsibility for fire-fighting (cf. Dio loc. cit.) until A.D. 6. Whereas earlier the *magistri* had been freeborn, though of low social standing, by Hadrian's time they were all freedmen (*ILS* 6073, of A.D. 136). Pliny (*HN* 3. 5. 66) gives the number of *vici* as 265; there were therefore 1,060 *magistri* in his day, but by the fourth century the number had been reduced to 48 to a *regio*.

I. A. R.; J. N.

VICTIMARIUS. At a Roman sacrifice, the officiant did not, at least normally and in the classical epoch, kill the victim himself; this was done by a *victimarius* or sacred slaughterman. These formed a *collegium* in imperial times, attendant (*CIL* vi. 971) on the Emperor, priests, and magistrates.

II. J. R.

VICTORIA, the Roman equivalent of Nike (q.v.). There is no evidence that she is anything more, mentions of an early cult of Victory being referable to Vacuna or Vica Pota (qq.v.; Dion. Hal. *Ant. Rom.* 1. 15. 1; Asc. Pis., p. 13. 15 Clark). She is associated in cult with Jupiter (Victor), as in the *acta Arualium* (p. xcvi Henzen), oftener with Mars (as *ibid.*, p. clxv), also with other deities. She was worshipped by the army, as was natural (Domaszewski, *Rel. des rom. Heeres* (Westd. Zeit. 1895), 4 ff.), and hence is given surnames associating her with particular legions and more commonly still with Emperors (list in Roscher, vi. 299; cf. J. Gagé, *Rev. Arch.* 1930, 1 ff., *Rev. Hist.* 1933, 1 ff.). Her temple on the Clivus Victoriae leading up to the Palatine dates from 294 B.C. (see Platner-Ashby, 570; Nash, *Pict. Dict. Rome* i. 257). Her most famous monument was perhaps her altar in the senate-house, put there by Augustus in 29 B.C., removed under Constantius, replaced by the pagan party in Rome, removed again by Gratian in 382, replaced for a short time by Eugenius and perhaps once more by Stilicho, and finally vanishing with the other vestiges of pagan cult (Ambrosius, *Epp.* 17; 18; 57. 6, cf. Paulinus, *Vit. Ambros.* 26; Symmachus, *Relat.* 3 Claudian; 28. 597).

Latte in Roscher, s.v. and *RR*, see index; S. Weinstock, *Harm. Theol. Rev.* 1957, 211 ff.

II. J. R.

VICTORINUS (1), GAIUS MARIUS (4th c. A.D.), was the author of philosophical (Neoplatonic), rhetorical, and grammatical works. His reputation was such that a statue in his honour was set up in the forum Traianum. After becoming a Christian, he wrote theological treatises. Most of his *Ars grammatica* (ed. Keil, *Gramm. Lat.* vi. 3-184) has been ousted in our MSS. by the *De metris* of Aphthonius (q.v.). His translations of Plato, Aristotle, and Porphyrius are lost, as is his commentary on Cicero's *Topica*; but his *explanations* of the *De inventione* of Cicero are preserved (ed. Halm, *Rhet. Lat. Min.* 155-304). His Christian writings (in Migne, *PL* viii) included commentaries on some Pauline epistles, *De trinitate contra Arium*, *De óποποιή recipiendo*, and possibly a work against the Manichaeans.

Schanz-Hosius, §§ 828-31 a.

J. F. M.

VICTORINUS (2), MAXIMUS, grammarian of unknown date, author of a *De ratione metrorum* (ed. Keil, *Gramm. Lat.* vi. 216-28). Certain other treatises: *Ars Victorini*, *De metris*, *De finalibus metrorum* (ed. Keil, *Gramm. Lat.* 6. 187-205; 206-15; 229-242) are attributed in MSS. to an unspecified 'Victorinus'.

Schanz-Hosius, § 829.

J. F. M.

VI(C)TORIUS MARCELLUS, the man to whom Quintilian dedicated his *Institutio Oratoria* as a manual for Marcellus' son and for his own boy, of whom, however, he was bereaved before his work was half completed (*Inst.* 1, *prooem.* 6; 6, *prooem.* 1-16). Statius addresses *Silvae*, book 4, to him (*prooem.* 1). He was *consul suffectus* in A.D. 105.

R. Hanslik, *PW Suppl.* ix. 1744.

J. W. D.

VICUS was the smallest agglomeration of buildings forming a recognized unit, either a country village or a ward of a town. The former were subordinate to a *pagus* of the *civitas* in which they lay, the latter directly to the municipal authority. *Vici* could also exist on private or imperial estates withdrawn from the municipal system, where they depended upon the local landlord or imperial procurator. They were administered by *magistri* or *aediles* elected by the villagers. Priestly officials, *dicatores*, are also known. *Vici* in towns, too, had their *vicomagistri* (q.v.). Those of Rome, revived by Augustus, had charge of the street shrines, and for a while of the fire-brigade. A *vicus* could be a *praefectura* (q.v.) but was normally subordinate to an intermediate authority.

For bibliography see under MUNICIPIUM (REPUBLIC). A. N. S.-W.

VIENNA, town in Gallia Narbonensis, modern *Vienne*; capital of the Allobroges. Perhaps created *colonia Latina* by M. Antonius (43 B.C.); given probably by Gaius the title of *colonia civium Romanorum*. In the third century A.D. it possessed *vis Italica*. In 69 it narrowly escaped destruction from Vitellius' army, encouraged by its jealous neighbour Lugdunum. A large straggling town with Augustan *enceinte* is partially preserved. Its most notable surviving building is the temple of Rome and Augustus, enlarged and rededicated by Tiberius. Like Lugdunum, it was an important seat of early Christianity.

CIL xii. 217; Grenier, *Manuel* i. 323 ff.; J. Formigé, *Le Théâtre romain de Vienne* (1950).

C. E. S.

VIGILES (νυκτοφύλακες). Except for the existence of *triumviri nocturni*, about whose function little is known, the city of Rome under the late Republic possessed neither fire-brigade nor police force. After the fire of 23 B.C. Augustus established a fire-brigade of 600 slaves commanded at first by the *aediles* but after 7 B.C. (when Rome was divided into 14 *regiones* and 265 *vici*, each with four *vicomagistri*) by the *vicomagistri* (q.v.). After another serious fire (A.D. 6) Augustus effected a lasting reorganization. He created a corps of 7,000 *Vigiles*, all freedmen, who were organized in seven cohorts, each consisting of seven centuries, and each commanded by a tribune. Over the whole body was set a *Praefectus Vigulæ*, who was appointed directly by the Emperor; he was an *eques* and ranked below the *Praefectus Annonae* and *Praefectus Praetorio* (Dio Cass. 55. 26; Suet. *Aug.* 30). From Trajan's time he was assisted by a Sub-Prefect. To his original duties were added later those of a judge, and he presided over trials for incendiarism and petty larceny (*Dig.* 1. 15. 3); in the third century A.D. the office, like that of *Praefectus Praetorio*, was held by eminent jurists.

Each cohort of *Vigiles* was responsible for two *regiones* of the city. The troops were quartered at first in private

houses (Dio Cass. 57. 19. 6; cf. Suet. *Tib.* 37), but later had sub-stations, *excubitoria*, one in each *regio*. They were occasionally called on in emergencies to perform military duties, e.g. in A.D. 31, at the time of the arrest of Sejanus (q.v.), when Macro (q.v.), their commander, was promoted to the praetorian Prefecture, and in A.D. 69. In such emergencies they normally came, with their prefect, under the command of the *Praefectus Urbi*.

P. K. Bailhe Reynolds, *The Vigiles of Imperial Rome* (1926).

J. P. B.

VIGINTISEXVIRI. This collective denomination embraces twenty-six Roman civil *magistratus minores* who had no special official titles, being indicated only by their functions and number (*duoviri*, *tresviri*, *quattuorviri*). Some of them were endowed with particular juridical competence, notably the *decemviri stlitibus iudicandis* (q.v.). Another group were the four *praefecti (ure dicundo) Capuam Cumas*, exercising the delegated jurisdiction of the *praetor urbanus* in these and eight other Campanian towns. The remainder had administrative functions: the *tresviri (triumviri) monetales* (more precise title: *tresviri aere argento auro flando feriundo*), the masters of the mint; the *quattuorviri viis in urbe purgandis*, and the *duoviri viis extra urbem purgandis*, who provided for the maintenance of the streets in Rome and in the environs respectively; and finally the *tresviri capitales* responsible for prisons (*carceris custodia*) and executions. In their capacity as guardians of nocturnal peace they were also called *tresviri nocturni*. Under Augustus the number of these magistrates was reduced to twenty, six of them (four *praefecti Capuam Cumas* and *duoviri viis extra urbem purgandis*) having been abolished. Hence their new collective name: *vigintiviri*. One of these magistracies was, as it seems, a necessary preliminary to the quaestorship.

On the *tresviri capitales* see W. Kunkel, *Untersuchungen zur Entwicklung des röm. Kriminalverfahrens* (1962), 71 ff.; G. Pugliese, *Processo civile romano* 1 (1962), 211 ff.

A. B., B. N.

VILLA was the Latin name for a rural dwelling associated with agriculture. The traditional Italian farm of this kind is described in detail by Varro (*Rust.* 1. 11–13) and Vitruvius (6. 6. 1) as a courtyard edifice comprising house, stables, and workshops, run by slave labour for the benefit of an urban proprietor. Such farms, however, were always matched by those of smallholders and yeomanry, and Campanian examples of both kinds have been studied (R. Carrington, *JRS* 1931, 110 f.) and may be compared with Istrian farms of the same type (Gnirs, *JÖAI* 1915, Beiblatt 101). See **AGRICULTURE**. The residential villa, or country seat of the well-to-do, is a later development of the second century B.C., wherein are seen the first relations of architectural design to landscape or vistas and the development of large courtyard houses or seaside palaces.

In the provinces the development of country houses is primarily of the imperial age, our knowledge of republican examples being negligible. Local types of house undoubtedly existed, though understanding of their development is very uneven as between provinces. In Syria the age-old eastern type of courtyard house (*hivan*) existed side by side with smaller flat-roofed dwellings, while in Africa mosaics attest a two-story house based upon a corridor, with larger tower-like rooms at either end. This type of house occurs very widely throughout the north-west provinces on estates of medium size, while larger houses there follow the more Roman courtyard type or the open-fronted style associated with landscape architecture. In Britain and Belgica there were hybrids between large courtyard houses and the open-fronted corridor-house, while the so-called 'basilican' house—a barn-like building of nave and aisles, also appears.

Socially, most of the provincial villas known to us are the dwellings of large landowners or smallholders, and there is little trace of the Italian *latifundia*.

I. A. R., A. L. F. R.

VILLANOVANS. The word 'Villanovan' derives from the small town near Bologna where in 1853 Gozzadini found the first of many Iron Age cemeteries in the modern provinces of Bologna, Faenza, Forlì, and Ravenna. The name is now used to denote the period and people represented not only in these cemeteries but also in those of Etruria, where they precede the cemeteries of the great Etruscan cities; it may also be applied to the cemeteries of Pontecagnano and Sala Consilina near Salerno, and to the isolated cemetery of Fermo in the Marche. It is convenient to retain the distinction between 'Northern' and 'Southern' Villanovans. Both are characterized above all by biconical ossuaries with incised decoration. Although many archaeologists have argued that the Villanovans came to Italy from north of the Alps, they do not seem to have been immigrants: their material culture, like that of the other cultures of the Italian Iron Age, derives ultimately from a combination of the Terramara and Apennine cultures (qq.v.) of the Bronze Age, via an independent ('proto-Villanovan') Italian version of the European Urnfield culture typified in central Italy at Tolfa and Allumiere.

An alternative to the old chronology of the Northern Villanovans (i.e. San Vitale, Benacci I and II, and Arnaldi periods, or more simply Villanovan I–IV: see Chevalier, *Latomus* 1962, 120 ff.) has recently been suggested by Muller-Karpe. His Bologna I invites comparison with certain typological aspects of contemporary central and southern Italy and is datable in general to the ninth century B.C., starting perhaps in the tenth. There are even more secure central Italian parallels for his eighth-century Bologna II, especially at Tarquinii (q.v.), the starting-point for any discussion of the Iron Age in Etruria. Unlike their Northern counterparts, the Southern Villanovans, situated between the Tiber and the Tyrrhenian seaboard, were open to influences from outside. These began to arrive in the first half of the eighth century with the Greek prospectors who landed on Ischia (q.v.) and at Cumae presumably on their way to the metal-rich regions of north-west Etruria: their effect on the Southern Villanovans is clearly seen in the infiltration into southern Etruria of painted pottery imitating Greek Geometric which accompanies an increased awareness of the industrial possibilities of iron. These early Greeks heralded the great colonizing movements from the east Mediterranean of which we see an early sign in the form of the Bocchoris vase at Tarquinii (q.v.), matched now by a Bocchoris scarab from a late-eighth-century context on Ischia. In southern Etruria, at least, the transition from Villanovan to orientaling, and so eventually to Etruscan, was complete. The fact that from the mid eighth century onwards there is a considerable amount of material in the north (including some orientaling) that would be equally at home in the south indicates a northward transmission

of artistic—and doubtless other—influences. At the same time, it should not be forgotten that at least some complementary influences were crossing the Apennines in the opposite direction to certain sites in southern Etruria, notably Vetulonia (q.v.).

Unfortunately, our knowledge of the Villanovans is based almost exclusively on the evidence of their cemeteries: a Villanovan habitation has, however, recently been excavated at San Giovenale (q.v.). It seems safe to conclude that Villanovan economy was based on agriculture, stock-raising, and hunting; an extensive use of the horse is indicated by the numerous horse-bits found in both Northern and Southern tombs. By at least the middle of the eighth century the fine quality both of pottery and of cast and sheet bronze indicates that their production had passed into the hands of professional craftsmen. The density of the Villanovan concentration around Bologna must surely mean that it was playing an important part in commercial expansion to the north long before it passed into the Etruscan orbit with the foundation of Felsina (q.v.) in the sixth century.

VILLIUS (*PW* 5), LUCIUS, tribune of the *plebs* in 180 B.C., carried the first *lex annalis*, which established minimum age-limits for tenure of the curule magistracies (42 for the consulship). It was possibly this same law which required an interval of two years between curule magistracies. These provisions remained largely unchanged until the Principate, when the minimum ages were lowered. See also *CURSUS HONORUM*.

VIMINACIUM, modern *Kostolac* on the Danube east of Belgrade, was a Celtic settlement which became a legionary fortress and city in Moesia Superior. Its permanent garrison (probably from A.D. 56/7) was Legio VII Claudia; for a period under Trajan it was also occupied by Legio IV Flavia. The civil settlement became a *municipium* (*Aelium*) under Hadrian and a *colonia* under Gordian III. J. J. W.

VINDELICI, a people of mainly Celtic origin but including Illyrian and other elements, inhabited the Schwabian-Bavarian plateau and reached from the northern slopes of the Alps up to the Danube. They were conquered by Tiberius and Drusus (15 B.C.). Later they occupied the eastern part of the province of Raetia (Vindelicia) and their name was commemorated in the city of Augusta Vindelicorum (q.v.) which became a *municipium* under Hadrian. J. J. W.

VINDEX, GAIUS JULIUS (*PW* 534), of regal Aquitanian family, son of a Roman senator (who had presumably been adlected by Claudius), rebelled against Nero (early spring, A.D. 68) when legate of Gallia Lugdunensis, for unknown reasons. He sought to inveigle other provincial governors, vainly, except Sulpicius Galba (q.v. 1), whose claims to the throne he promised to support. Masses of native Gauls, the notables, and their clients joined

Vindex. The city of Vienna in Narbonensis declared for him, but the Roman veteran colony of Lugdunum refused to admit him. In the meantime, Verginius (q.v. 2) Rufus mustered the army of Germania Superior and marched to crush the rising. Vindex was defeated and killed in a great battle at Vesontio. Much remains uncertain about this important episode.

P. A. Brunt, *Latomus* 1959, 531 ff.; J. B. Hainsworth, *Hist.* 1962, 86 ff. R. S.

VINDICATIO was the action by which the owner of a thing (including, in early law, persons in *patria potestas* (q.v.)) could assert his title against anyone having *possessio* (q.v.) of the thing (*rei vindicatio*), or, more widely, the actions by which title was asserted to *servitutes* (q.v.) (*vindicatio servitutis, ususfructus*), or by which the freedom of a supposed slave was asserted by an *adsertor libertatis* (*vindicatio in libertatem, causa liberalis*). The term signified in the early Roman process the formal assertions of the right of ownership made by both the parties (Gai. *Inst.* 4. 16; see *SACRAMENTUM*). When the plaintiff was not quiritary owner, a *rei vindicatio* would not lie, but if he were in *via usucapiendi* (see *DOMINIUM*) the Praetor would allow a variant (*utlis*) form of the action with the fiction that the time necessary for *usucapio* had elapsed (*actio Publiciana*; Gai. *Inst.* 4. 36). In the formulary procedure the successful plaintiff in a *rei vindicatio* could not compel the defendant to return the thing (see *LITIS AESTIMATIO*), but the plaintiff was allowed to swear to its value by *iurandum* (q.v.) *in litem* and thus by judicious over-valuation to encourage its return. R. N.

VINDOBONA, modern *Vienna* on the Danube, lay in the territory of the Boni, a Celtic people included within Pannonia (Superior). In the first century A.D. it was garrisoned by the *Ala Flavia Domitiana Augusta Britannica milliaria civium Romanorum* (under Domitian *CIL* iii. 15197). At the beginning of Trajan's reign, probably on the occasion of his visit in 98, Legio XIII Gemina was moved there from Poetovio (q.v.) and began the construction of a legionary fortress before it departed for the Dacian Wars. In its place came Legio XIV Gemina Martia Victrix which remained until the end of Trajan's reign when it moved to Carnuntum (q.v.), while Legio X Gemina was moved from Aquincum (q.v.) to become the permanent garrison at Vindobona.

At some date in the third century the civil settlement became a *municipium* (*CIL* in. 4557) while Vindobona was also a *statio* of the *classis Histriae* (*Not. Dign. [oc.]* xxxiv. 28). Though not in administrative terms the equal of Carnuntum, Vindobona was an important fortress, especially in the Marcomannic Wars, during which it was apparently destroyed, though rebuilt almost immediately. M. Aurelius died there. In 395 part of the fortress was burnt down, and later (perhaps c. 400) Vindobona was abandoned by the Romans.

A. Neumann, 'Die Fortschritte der Vindobonaforschung 1948 bis 1954', *Carinthia* i. 146 (1956), 453 ff., id. *Forschungen in Vindobona* 1948-67 (1968). F. A. W. S., J. J. W.

VINDONISSA, modern *Windisch*, Switzerland, a prehistoric site on the lower Aar, occupied c. A.D. 12 by Legio XIII, which was replaced in 45-6 by Legio XXI Rapax, whose violent behaviour to the Helvetii in 69 induced Vespasian to send it elsewhere. Its place was taken by Legio XI Claudia Pia Fidelis, until c. 100 when it was realized that Vindonissa was too far from any theatre of war. A considerable civil population remained for whom the military fortress was reconstructed c. 260 under pressure of Alamannic attacks. The fortress and the *forum* of the *canabae* have been partially excavated. It was an important centre of lamp manufacture.

R. Laur-Belart, *Vindonissa, Lager und Vicus* (1935). C. E. S.

VINICIANUS, ANNIUS (*PW* 98), son of Vinicianus who conspired in A.D. 42, and son-in-law of Corbulo (q.v.), was legate of Legio V Macedonica in 63 when he was not yet quaestor. In 65 he escorted Tiridates to Rome. He gave his name to a plot against Nero at Beneventum (66). A. M.

VINICIUS (1, *PW* 6), **MARCUS** (*cos. suff.* 19 B.C.), a *novus homo* from Cales in Campania, is first mentioned as legate of Augustus in Gaul (25 B.C.). In Illyricum (13, perhaps as proconsul) he and Agrippa began the *Bellum Pannonicum* terminated by Tiberius (12–9). Vinicius is next (and last) heard of in A.D. 1 or 2 as commander of the Rhine army. The acrophalous clogium from Tusculum, recording operations against Transdanubian peoples (*ILS* 8965) is now generally attributed to Vinicius, but the details and dating of that campaign are uncertain (14–13, 10, and c. 1 B.C. have been suggested). The historian Velleius Paterculus enjoyed the patronage of the Vinicii, dedicating his work to the grandson, M. Vinicius.

R. Syme, *CQ* 1933, 142 ff.; *Hist.* 1962, 148; A. v. Premerstein, *JÖAI* 1934, 66 ff. R. S.

VINICIUS (2), **PUBLIUS** (*cos. A.D.* 2), Augustan orator and declaimer; an admirer of Ovid, he combined originality with good taste (*Sen. Controv.* 7. 5. 11, 10. 4. 25). He was son of (1) above and father of M. Vinicius (*cos. A.D.* 30 and 45 and husband of Julia, q.v. 4, who fell a victim to Messalina in 46).

VINICIUS (3), **LUCIUS** (*cos. suff.* 5 B.C.), Augustan orator and declaimer; famous for his quick wit (*Sen. Controv.* 2. 5. 20).

VINIUS (*PH* 5) **TITUS**, close adviser of Galba (q.v. 1) and his colleague as consul in A.D. 69, had been imprisoned after a scandal when military tribune in Germany in 39. Released by Claudius he became praetor and legionary legate, but he again met disgrace when the emperor accused him of stealing some gold plate. Emerging from a retarded career as proconsul of Narbonensis, he was in Spain at the time of Galba's rising, though it is uncertain what post he held. Later he urged Galba to adopt Otho (q.v.), but he was murdered along with Galba by Otho's troops in Jan. 69. Tacitus (*Hist.* 1. 48) says he was then aged 57, but this is hard to reconcile with the date of his military tribunate. G. E. F. C.

VIRGIL (**PUBLIUS VERGILIUS MÄRO**; 70–19 B.C.), poet. The spelling with an 'i' is traditional; contemporary inscriptions give the name Vergilius. It was corrupted into all vernaculars. A 'Life' of Virgil was included in Suetonius' *de Poetis*. This survives in various forms: expanded by Donatus (q.v. 1), abbreviated by Servius, Phocas, and others, and expanded again into 'Donatus auctus' (early 15th c.). Though these *Lives* may attribute poems of the *Appendix Vergiliana* (q.v.) to Virgil, they make no use of them for biographical purposes. Varius (q.v. 2), who edited the *Aeneid* after Virgil's death, wrote something about Virgil (Quint. 10. 3. 8). A reference in Gellius (*NA* 17. 10. 2) to *amici familiaresque* who wrote on Virgil may mean no more than Varius. Legend soon grew about Virgil, and anecdotes are attributed to recollections long after his death (e.g. of Eros, his amanuensis, in extreme old age: Donat. 34). As information was lacking, allegorization was applied to the *Eclogues* to supply it.

Virgil was born on 15 Oct. 70 B.C. (in view of the dislocation of the pre-Julius calendar, Dante by the words 'nacqui sub Julio' (*Inf.* 1. 70) may mean that

Virgil was really born in July), at Andes, a *pagus* near Mantua. Tradition has identified this much-disputed site with Pietole, south-south-east of Mantua (see B. Nardi, *Mantuanitas Vergiliana* (1963), 69 ff.). The gentle *nomen* Vergilius is widely distributed, mostly in Etruscan regions; the *cognomen* Maro may be Etruscan rather than Greek (*Od.* 9. 197): see M. L. Gordon, *JRS* 1934, 188. Virgil himself stresses the Etruscan element in Mantua (*Aen.* 10. 198 ff.). There is no reason to think that he was in any way Celtic. His father, though described as of humble origin (Macrob. *Sat.* 5. 2. 1), as a potter or courier who married his master's daughter, was probably an *eques*, a landowner rich enough to give his son an excellent education and to prepare him for a senatorial career. He had married a Magna, whose family, like the Vergili, achieved several magistracies in Rome, though not the consulship.

2. Virgil was presumably brought up in Mantua and at his father's suburban villa and farm, but for his higher education he went to Cremona. He assumed the *togā virilis* on his fifteenth birthday (Donatus 6 wrongly says seventeenth). Tradition had it that Lucretius (q.v. 2) died on the same day. From Cremona Virgil proceeded to Milan, and soon after to Rome, where he studied rhetoric under prominent teachers. He seems to have entered what survived of the circle of Catullus (q.v. 1), as his friendship with Pollio (q.v.) and the admiring reference (*Ecl.* 9. 35) to Cinna (q.v. 3) show. He was deeply influenced by Catullus and by Alexandrian ideals of poetry (see ALEXANDRIANISM, LATIN). Some of the poems in the *Catalepton*, if they are his, belong to this period. He made one appearance as an advocate in the courts, but abandoned all thought of a political career, perhaps when the civil war broke out (49 B.C.) and retired to Naples to study philosophy under the Epicurean Siro (*Catal.* 5, variously dated), whose small villa and holding of land he seems to have inherited before 41 B.C. (*Catal.* 8).

3. When land in Italy was distributed to war veterans in 41 B.C. (see AUGUSTUS), Virgil's father was expropriated and took refuge with his son near Naples (*Catal.* 8). The *Lives* and Commentators assert that *Ecl.* 1 celebrates the subsequent restoration of the estate to Virgil by Octavian owing to the intercession of his friends, but *G.* 1. 198–9 surely implies that the loss was permanent. (In *Ecl.* 1 the situation of Meliboeus, a free citizen who loses his ancestral estate, fits Virgil much more closely than that of Tityrus, an old slave who is granted his liberty and his *peculum*: Virgil is Tityrus in *Ecl.* 1 only in the sense that both are pastoral poets, as *Ecl.* 6. 4 shows.) Appian's account shows that the alleged *triumviri agris dividendis*, (by a happy coincidence all Virgil's friends, Pollio, Alfenus Varus, and Cornelius Gallus) could not have existed, since Antony's friends complained that Octavian kept the whole distribution in his own hands (App. *BCiv.* 5. 14. But cf. Broughton, *MRR* ii. 377).

The *Lives* and Commentators also assert that Virgil began the *Eclogues* when he was 28 (i.e. 42 B.C.) and finished them in three years. This is based on the certain dating of four *Eclogues*: 1 and 9 to 41 B.C.; 4 to 40; and 8 to 39. But 2, 3, and 5 (and probably 7) are earlier than 9 (itself earlier than 1, as a comparison of 9. 50 with 1. 73 shows) and can scarcely be crowded into 42. 10 may belong to 38 or 37. Pollio's encouragement of Virgil to transpose the Theocritean pastoral into Latin (*Ecl.* 8. 11–12) was more probably due to a renewal of personal contact, interrupted since 49, than to correspondence. But Pollio was not in Italy from 49 until late 45, when he was probably praetor. Later he was in Spain (44), returned to Italy (July 43), and was made governor of Cisalpine Gaul by Antony. If then 45 is the most likely year for him to reassemble his literary circle, the *Eclogues*

are to be spread over eight years (45–37). Their probable order is 2, 7, 3, 5, 9, 1, 4, 6, 8, 10 (but 7 is put later by some). Their present order is due to artistic reasons of symmetry and alternation. They were appreciated more widely than by the circles which admired Alexandrianism, and, adapted as mimics to the stage (Donat. 27; Servius on *Ecl.* 6. 11), made Virgil a popular, though elusive (Donat. 39), figure. The salutations of the crowd in the theatre (*Iac. Dial.* 13) must have been due to the *Eclogues*.

4. Virgil came into contact with Horace (q.v.) and gained his friendship (*Carm.* 1. 3, 8), probably in 41 (if *Ecl.* 1. 70–1 seems to heighten, and therefore to quote, the bitter words of *Epode* 16. 9–14; the *Epode* and *Ecl.* 4 have common elements). Despite social and temperamental differences, the two poets had much in common, in their poetic ideals, in the loss of their patrimony, and in their (later) admiration of Augustus. When the *Eclogues* were collected and published under Virgil's name, Maecenas (q.v.) seems to have captured Virgil for Octavian from the Antonian Pollio. But earlier, as Servius says (on *Ecl.* 1. 12 and 70), *Ecl.* 1 had not been unqualified praise of Octavian (and it is too lightly assumed that the *iuvenis* of 1. 42 must be Octavian, see J. Liegle, *Hermes* 1943, 209 ff., and the context of 'Caesar's star' in *Ecl.* 9 shows that the hopes it aroused were delusory). Virgil recommended Horace to Maecenas, who nine months later admitted him to the circle which included Varius and Plotius Tucca. In this company the famous journey to Brundisium (*Sat.* 1. 5) was made in 37.

Virgil is said to have spent seven years on the *Georgics*. The possibility of a free poetic handling of this topic may have been suggested by the publication of Varro's *Res Rustica* in 37. The reference (*G.* 2. 161–4) to the Portus Iulius near Avernus, completed in 37, provides the earliest date, the reference (*G.* 4. 560–2) to Octavian in the East after Actium (31) gives the latest. After Octavian's return in 29, Virgil read the poem to him in his villa at Atella (Donat. 27). Virgil was then living at Naples (*G.* 4. 563–4). If the Vergilius of Horace *Carm.* 1. 3 is the poet, a journey to Greece may be reflected in the references to Greece in the poem of *G.* 3. The poem honoured Maecenas, to whom each book is addressed (1. 2; 2. 41; 3. 41; 4. 2: a symmetrical arrangement).

5. The *Aeneid* does not seem to be the epic that is projected in *Georgics* 3. 8–48. Ancient tradition asserts that it took eleven years to write, viz. 29 to 19, but Donatus himself (31) supplies the evidence to disprove this: when Augustus wrote to Virgil from Spain in 26, he had not seen either the first outline (*ὑπογραφή*) or any episode (*κῶλον*) of the poem, though he had been in Italy in 27. Virgil (quoted by Macrobi. 1. 24. 11) refused to send any specimen to Augustus, saying that he needed 'much profounder studies' (i.e. than those of the years 29–27) and that he must have embarked on his epic task 'in a moment of aberration' (*paene vitio mentis*). The *Life* by Probus confirms this dating: *Aeneida ingressus bello Cantabrico*, and Propertius (2. 34 B, 63–6, 91–2), writing after Gallus' death in 26, salutes the birth of the *Aeneid*, a poem greater than the *Iliad*.

Later, however, Virgil read books 2, 4, and 6 (the last after the death of Marcellus in 23, since lines 860–6 caused his mother, Octavia, to faint) to Augustus and his circle. In 19 he left Italy to travel in Greece and Asia for three years, during which he would complete and polish the *Aeneid*, and afterwards devote himself to philosophy. At Athens, however, he met Augustus and was persuaded to return home with him. He fell ill at Megara, and was brought back as far as Brundisium, where he died on 20 Sept. His body was brought to Naples and buried within 2 miles on the road to Puteoli (the tomb now shown as Virgil's is more than 2 miles from the ancient

city). No doubt he had built the tomb for himself, and is said to have dictated the inscription for it on his death-bed:

Mantua me genuit, Calabri rapuere, tenet nunc
Parthenope; cecini pascuæ rura duces.

Before leaving Italy, Virgil—for whatever reason—had made Varius, his literary executor, promise to burn the *Aeneid*, if anything should happen to him. Augustus ordered that this wish should be disregarded and the poem published in its unfinished state.

6. Virgil is described as tall and broad, with a dark complexion; cf. the mosaic from Hadrumetum (q.v.). An attempt has been made to establish a Virgilian type among portrait busts of Augustan date (V. Poulsen, *Vergil*, Bremen, 1959). He suffered from ill health (Donat. 25). He never married, and homosexual tendencies were inferred from this and from the appearance in the *Eclogues* of that traditional Greek theme. Gifts from his friends (presumably Augustus and Maecenas) made him a rich man, with houses in Rome and near Naples, and a villa in Nola (Servius on *G.* 2. 224).

7. WORKS

(1) *Early Poems*. Fourteen short poems (**Catalepton**) and five longer, **Culex**, **Ciris**, **Copa**, **Moretum**, and, more doubtfully, **Aetna**, were attributed to the youth of Virgil. But in modern times the attribution of almost all has been disputed and generally rejected. See **APPENDIX VERGILIANA**.

(2) *Eclogues* (*Ἐκλογία*, a single 'selected' occasional poem, including odes and epistles of Horace, not a collection of such); in the Middle Ages and up to Spenser the word was taken to mean 'goat-song' (*αἰγῶλον*); more properly *Bucolics* (*βουκολικά*, songs of cowherds), a title taken from Theocritus: all Virgil's poems have Greek titles.

With the exceptions of 4 and 6, the *Eclogues* are modelled on the *Idylls* of Theocritus and Pseudo-Theocritus. Sometimes an *Eclogue* is a transposition of a single *Idyll*, as *Ecl.* 9 is of *Id.* 7; the two halves of *Ecl.* 8 are based on *Id.* 1 and 2. *Ecl.* 5 and 10 grow out of the situation of *Id.* 1. The 'amoebaeon' competitions of 3 and 7 reflect *Id.* 4 and 5. *Ecl.* 1 has no Greek model, as the situation is new and Roman. *Ecl.* 2 (Corydon to Alexis) uses *Id.* 11 (Cyclops to Galatea), but the name of Corydon comes from *Id.* 4 and of Alexis from epigrams of Plato and Meleager, and the homosexual theme from *Id.* 7, 8, 12, 23, etc. *Id.* 20 provides the contrast of country and city. As *Id.* 11 provides the moral 'poetry is the medicine of love' (cf. Callim. *Epigr.* 46 Pf.), so it provides most of the verbal echoes, but in company with several other *Idylls* and other Hellenistic poems, especially epigrams. *Ecl.* 2. 24 seems pure Greek, but is not Theocritean; its hiatus and line-ending are also Greek. Sometimes the translation is close; sometimes Virgil is very free, or may adopt an idea to work it out independently. Already in *Ecl.* 2 Virgil enters seriously into the sentiments of Corydon, even identifies himself with him, without the ironical and patronizing distance of Theocritus. In general the names, the setting, and scenery are all Greek, Sicilian, or Arcadian. But Virgil infuses a realistic Italian element. Arcadian shepherds appear on the banks of the Mincius (*Ecl.* 7); in *Ecl.* 3 two Greek astronomers figure, and then suddenly Pollio, in person in contrast to the rival poets, Bavius and Maevius, and the riddle in 104–5 may have a Roman reference. *Ecl.* 5 may perhaps allude to the death and deification of Julius Caesar. His 'star' (the comet of July 44) and his name appear in *Ecl.* 9. 47, but the comet was interpreted also as pointing to the young Caesar (Pliny, *HN* 2. 22–3, 89–94). Mantua and Cremona, Varius and Cinna, are named also, and in *Ecl.* 1. 19 the name of Rome sounds for the first time. Gallus

forms the climax of *Ecl.* 6, and is the protagonist of 10. The dedications of 4 and 8 to Pollio and of 6 to (Alfenus) Varus are one thing: quite another is the occurrence of Roman persons and places within Greek settings, and is in itself enough to refute all identifications of the Greek names as masks for contemporary Romans. Menalcas in 9 and Tityrus in 1 are not simply Virgil, but personifications of some aspect of him, as Meliboeus is also in 1 or Lycidas in 9. They are not Virgil, but his creations and projections, carrying some of his personal experience of the evictions.

Ecl. 4 and 6 stand apart as 'paulo maiora', embodying an element of prophecy or revelation. The identity of the child in *Ecl.* 4, under whose rule peace and the Golden Age will be restored, has provoked age-long debate. If the boy is real and Roman, as he surely is, and not a god or a personification, he is more probably the expected child of Antony and Octavia, whose marriage was to seal the Peace of Brundisium, not the expected child of Octavian and Scribonia, who proved to be a girl, the unfortunate Julia. The Christian interpretation of the poem was launched, in a naive form, by Constantine at Nicæa in 325 (Euseb. *Oratio ad Sanctos*). Lactantius and St. Augustine adopt a carefully qualified attitude to it: St. Jerome is hostile. *Ecl.* 6 has in this century excited great interest. Silenus, like Proteus in *G.* 4, utters a prophecy to his captors. The cosmology with which he begins is Lucretian in language, but it is not Epicurean since the four elements compose a living and sentient universe. The enigmatic series of myths culminates in Gallus, and then lines 11, 75-7, and 81 are, with two small changes, quoted in the *Ciris* 59, 61, 51.

The *Eclagues*, thus blending Greek with Italian elements, and an idealized Arcadia with contemporary history, created a new and enchanting art, exquisite in its sentiment and in its music, endlessly imitated (see PASTORAL POETRY, LATIN): 'all the charm of all the Muses flowering in a lonely world'. In them Virgil develops from an Alexandrian into a Roman.

(3) **Georgics** (*Γεωργικά*, 'husbandry'; on the model of Nicander's *Γεωργικά*, *Θηροκάκ*, etc.), a poem of 2,188 lines, in four books. According to Donatus 22, Virgil dictated in the morning a large number of lines that he had rehearsed, and spent the day reducing them to a very few, 'licking them into shape'. If the poem took seven years (36-29), the rate of composition was less than one line a day. Book 1 deals with the cultivation of crops; book 2 with that of fruit-trees, especially the vine; 3 with the rearing of animals, and 4 with bees. The share of bees is out of all proportion to that of farmers' manuals: thus the *villaticae pastiones* (poultry and fish) of Varro's third book vanish.

Virgil describes his poem as 'Hesiodic' (2. 176, *Aeneid*), but it is not so in the sense that the *Eclagues* are Theocritean. He invokes Hesiod in the spirit of Callimachus, as the patron of didactic poetry, and in book 1 twice follows him directly in the description of the plough (160-75) and of the 'days' (276-86), and in an occasional phrase or precept. The loose and desultory, almost conversational, development of book 1 seems deliberately Hesiodic. In detail Virgil owes more to Alexandrian didactic poets; to the *Diosmeia* of Aratus (q.v. 1) for weather signs (1. 204 ff.), sometimes (esp. 375-87) adapting the Latin version of Varro Atacinus (not of Cicero), and to his *Phaenomena* for constellations (244-6); to Eratosthenes (q.v.) for the zones of sky and earth (233-51); and to Nicander, though the debt cannot be traced. The story of Aristaeus (4. 315-558), the *αἰτίων* of the *βουβορία*, is Callimachean, especially in the linking of myths together. It is an exquisite example of the Alexandrian 'epyllion', where the two stories of Aristaeus, and of Orpheus and Eurydice, are causally linked,

not merely juxtaposed as in Catullus' sixty-fourth poem. But it is also Homeric, in the direct borrowing of Proteus from the *Odyssey*, and it follows on the miniature epic of the first half of the book, like the *Batrachomyomachia* (pseudo-Homeric, but perhaps, to Virgil, Homeric), of the small animals treated heroically with affectionate humour. There are also imitations of Homer already in book 1: e.g. 104-10 cf. *Il.* 21. 257-62 (irrigation), 281-3 cf. *Od.* 11. 596 (Pelion on Ossa). What Virgil owes to prose writers on agriculture, whether Greek or Latin, cannot be determined. He ignores the basis of Cato's economy, the large estate run with slaves, and dwells on the smallholder. Varro made a systematic handling unnecessary, but perhaps his Ciceronian dialogue form suggested something of the tone, especially of book 1, and the culmination in a myth, as in Cicero's *de Republica* (*Somnium Scipionis*) and several dialogues of his model, Plato. The twelve gods of Virgil's invocation are a variant on the twelve *Di Consentes* of Varro's poem. A tragic incident of civil disorder at the end of Varro's first book may have pointed to Virgil's set piece on the civil war at the end of book 1. But Virgil's greatest debt is to the Latin didactic epic of Lucretius (q.v. 2), not only in the phrases of didactic argument and transition, in countless epithets and turns of style, in reminiscences of themes, which show how Virgil's mind was saturated with Lucretius, and in the all but naming of Lucretius in 2. 490-2, but also in the set pieces of higher tone which elevate and diversify the *Georgics* as they do the *de rerum natura*, notably the meditation on the power of love and the description of the plague in 3 (after Lucretius 4 and 6), and the fact that the *Georgics* are basically an answer to Lucretius, often in his own phrases. The naturalistic explanation in 1. 415-23 (from dense and rare, not *drumtus*) seems a concession to Lucretius, but 4. 219-27 offers a Stoic reply (as already in *Ecl.* 6). Virgil reasserts divine providence, and a religious attitude expressed even in the mystery of sacrifice, and the importance of death (contrast: *nihil igitur ad nos mors est*) and of the underworld. It is this implicit depth, and Virgil's sympathy with nature, animals, and men, that has led critics, like Dryden, to feel that the *Georgics* are 'the best poem of the best poet', whereas the *Aeneid* may seem too explicit and too Augustan. The more the poem is treated as a practical guide to husbandry, and Virgil's technical accuracy stressed, the less relevant must appear the 'set pieces' (and much less relevant than they are in Lucretius), some eleven of them of various lengths, making up a third of the whole poem, culminating in the longest, the 'episode' of Aristaeus. Already Seneca (*Ep.* 86. 15-17) detects an inaccuracy and suggests that Virgil's aim was to give pleasure, not instruction.

In style and metre, and in command of all resources of artistic expression, in control over long periods (1. 5-421) or brief (4. 445-56), in every device of 'rhetoric', in range of emotional tone, from solemn to playful, from lyrical to conversational, the *Georgics* are fully mature and show the freedom of a master.

(4) **Aeneid**, 'the story of Aeneas' (the title *Αἰνείας* is modelled on *Ἡρακλέης*), begun in 26 and left almost finished in 19, an epic in twelve books, of 12,847 lines according to the anonymous verses *Summa Vergili* (Baehrens, *PLM* iv, n. 182, p. 178), but our texts have 12,013 owing to the inclusion of the Helen-episode in 2. 567-88 and 1. 1 a-d, and to interpolations. If the *Aeneid* were the poem on Augustus explicitly projected in the *Georgics* (3. 8-48), Virgil might have begun it in 29, but Aeneas is not mentioned in this passage which glorifies Augustus, while in the *Aeneid* Augustus is hardly *in medio*. Why then the three-year delay (see above § 5)? And what attracted Virgil to his Aeneas (*Aeneas meus*)? Virgil must have come to see that a contemporary

epic of Ennian type (Ennius' epitaph is quoted in *G.* 3. 8-9) on Augustus could not give him adequate scope; only later did the imperial house accidentally provide in Marcellus an example of Virgil's type of tragedy, the young man who dies before his parents and before their eyes (*Ecl.* 5. 22-3; *G.* 3. 258-63; 4. 477; in *Aen.*, Euryalus, Lausus, Pallas). The matrimonial complexities of the *domus Augusta*, disastrous enough, were hardly the tragic theme of love that Virgil, in the spirit of *Ecl.* 10. 69, felt bound to graft on to Aeneas, in defiance of history and chronology, even of the legend of the chaste Dido, who killed herself to avoid a second marriage. For us the connexion of Trojan Aeneas with Rome first appears in Naevius (q.v.). Ennius developed the theme of Aeneas in Italy, and Cato (q.v. 1) too in his *Origines*. At first Virgil might well dismiss Aeneas as an exhausted theme, until he saw how to expand Fabius Pictor's prophetic dream (*Cic. Div.* 1. 21. 43) as an Odyssean and Orphic *κατάβασις* into book 6, to draw in Dido and place the Kingdom of Saturn in Latium and Arcadia on the Palatine and also to include the whole of Roman 'history' down to Augustus by means of various 'prophetic' devices (the unborn heroes of 6. 756 ff.; the scenes on the shield, 8. 626 ff. and utterances of Jupiter, 1. 257; 10. 6-15; even Dido's curse, 4. 625-9, and the boat-race, 5). Aeneas had been known and located in the West, 'Hesperia', not much, if at all, later than Heracles (*Aen.* 8. 185 ff.) or Odysseus (father of Latinus already in Hesiod, *Theog.* 1011-13), and he appealed more to the Romans. Numa was said to have imposed on Roman magistrates the obligation to sacrifice to Aeneas' *Penates* at Lavinium (*Luc.* 7. 394-6: cf. *Serv.* on *Aen.* 2. 296), and his other act of 'piety', in carrying Anchises from Troy, is depicted on vases and seals from Veii before 500 B.C. (cf. K. Schaubenburg, *Gymnasium* 1960, 176 ff.). But he excited a new interest when a family, transferred to Rome from Alba Longa on its fall, the gens Iulia of Bovillae (*Tac. Ann.* 2. 41), which for centuries had claimed descent from him, provided the first two Caesars.

Aeneas had always been unique in the *Iliad* (20. 307-8: cf. *Hymn. Hom. Ven.*, 196-7, and *Aen.* 3. 97-8) in that he has a future as well as a past, and a kingdom is prophesied for his descendants. Strabo (608) records without approval the Roman interpretation and reading in *Iliad* 20. 307 of *μῆναιον* for *Τρώεσσαν*: *Αἰνείας γένος μῆναιον ἀνάξει*.

The *Aeneid* was thus much more than the revival of a Greek myth; it was an epic of Rome, and, like that of Ennius, brought its action down to the present. It was not, however, annalistic, but Homeric and Aristotelian in its unity of action. It was a commonplace among ancient critics (*Donat.* 21; *Macrobius Sat.* 5. 2. 6) that the first half of the *Aeneid* was an *Odyssey*, the second half an *Iliad*, with Turnus as the new Achilles (6. 89; 9. 742; 11. 438), and correspondences between the two halves have been worked out, perhaps to excess. It seems true of both halves that the even-numbered books are more exciting and dramatic, the odd lower in tone but more cheerful (Conway). A tripartite division into the calling, the preparation, and the execution of the task, has some plausibility, as also has the contrast of luxurious, Epicurean (4. 34, 379) Carthage with the pastoral simplicity of Pallanteum (8. 362-5). 6 is usually seen as the turning-point in Aeneas' 'development', but 6, 7, and 8 form a series of arrivals, in Italy, in Latium, and in Rome. Virgil himself marks 7. 45 (*maius opus moveo*) as the ascent to a higher theme.

Virgil's debt to Homer ranges from over-all structure, the compositional device of retrospective narrative (in 2 and 3, where, however, it serves to impress on both Aeneas and Dido the impossibility of his permanence in Carthage, and so increases the tragic error of both, cf.

Tib. Donatus on *Aen.* 4. 172), the adaptation of whole episodes, games, *véκεια*, shield, catalogues, Doloneia (Nisus and Euryalus), to the transformation of incidents (Elpenor and Palinurus, Ajax and Dido, cf. *Macrobius* 5. 2. 14-15), the imitation of similes in particular, and of turns of thought or phrase.

Virgil drew on other Greek poets also (more than any Greek, according to *Macrobius* 5. 2. 2), Pisander for book 2 (*Macrobius* 5. 2. 4), and Apollonius Rhodius, especially for book 4 (*Serv.* on *Aen.* 4. 1: 'inde totus hic liber translatus est'), where Greek tragedy, whether directly or in Latin versions by Ennius, Pacuvius, and Accius, contribute also. Of Latin works, the *Annales* of Ennius contribute largely, also Lucretius and Catullus. The *Aeneid* commemorates the literature as well as the history of Rome, and preserved what was otherwise lost (cf. *Macrobius* 6. 5-6).

Virgil left the *Aeneid* uncompleted, but how seriously? Enough to require three years' work? It was known that Virgil, having drawn up a plan of the *Aeneid* in prose, composed it piecemeal (*Donat.* 23: *particulatim*) leaving transitions 'propped up by scaffolding' in the form of provisional lines or half-lines. Inconsistencies were observed, especially between book 3 and the rest (3. 256-7 and 7. 122-3; 3. 389-93 and 8. 47-8); its chronology can scarcely be extended beyond three years, yet elsewhere Aeneas' *Odyssey* takes seven years (1. 755-6; 5. 626). But *Servius*, who points out (on 5. 626) that these two passages are inconsistent (if in 1 seven years have passed, in 5 it should be the eighth year), concludes that this is one of the 'insoluble' passages (twelve in all, according to him on 9. 361). But too much can easily be made of such points, and a large change of plan, making 3 part of Aeneas' narrative instead of the poet's (curiously third person for first is found at 3. 686) and the games of 5 to occur on the anniversary of Anchises' death instead of at his funeral, seems unlikely. Speculation about the order of composition of separate books or parts of books is hazardous. The half-lines were always taken as proof of incompleteness, and attempts were made to complete them. Virgil may well have been at work on his various drafts for the Helen passage, when he died. 1. 1 a-d were probably added by an ingenious editor to introduce the poet's portrait in an *édition de luxe* (E. Brandt, *Philol.* 1927/8, 331 ff.).

Virgil's greatness was recognized by some of his contemporaries, and he was fairly soon established as 'the poet' *par excellence*, like Homer in Greek. The *Aeneid* became a school textbook, and the standard of Latin grammar and syntax and poetic propriety. But the poem was also the target of much criticism. At first, the extent of Virgil's adaptations of other poets, 'plagiarisms', filled critics with an almost dismayed amazement (even *Macrobius* speaks of Virgil's *studii circa Homerum imitatus*); one compiled eight books of what he called neutrally 'likenesses', but another called them '*furta*'. A third collected the '*vitia*': *Gellius* (*NA* 9. 9. 12), comparing 1. 494 unfavourably with *Od.* 6. 102, probably quotes one of them. A *Carvilius Pictor* wrote an *Aeneidomastix*, and is referred to by *Servius* as '*Vergiliomastix*'. *Vipsanius Agrippa* accused Virgil of a new kind of 'affectation' (*κακοζηλία*; *F. Marx, Rh. Mus.* 1925, 174 ff.), consisting in the misuse of ordinary words. *Horace* (*Ars P.* 46-7) praises this, and *Macrobius* (6. 6. 1-9) compiles the debris of the controversy, treating all his examples as merits. Modern, but not ancient critics, have attacked the character of Aeneas. His desertion of Dido has been blamed from the point of view of courtly or romantic love, but the ancient world blamed Antony for his infatuation with Cleopatra (Virgil associates her with Dido, 4. 644 and 8. 709) and commended Titus for leaving Berenice. No ancient critic had any doubt, such as many

moderns have, but that Aeneas was in love with Dido. The excuse urged on Aeneas' behalf, that obedience to the gods must override his personal preference, is turned into derision of his automatic 'piety'. Such critics have ignored Aeneas' repeated flouting of divine command in 2 (not to mention his doubts as late as 5. 700-3) and determination to fulfil the heroic ideal of a glorious death when the cause is lost. Virgil sympathizes indeed with Dido and Turnus, but also implicitly criticizes the old ideal. But it is very doubtful if any 'development' should be found in Aeneas' character. 'Piety', a warm devotion to his gods, his city, and his family (the English word has misleading associations), is his mark throughout, despite his forgetfulness and ferocity (10. 517-20).

It has been said that the poem fails as a story, 'partly perhaps through its length and the magnitude of the conception'. But it is shorter than the *Iliad* and the *Odyssey*, and if denser, also more tightly organized. Whereas Homer is concerned with only a personal fate, Virgil introduces into epic a theme of national, even world-shaking, importance, and it was just this religious view of Aeneas' mysterious vocation and Rome's function in the world that made the *Aeneid* an 'actual' and contemporary work. It has not the simplicity of primary oral epic, but the philosophical reflectiveness of a later age and an Alexandrian *labor limae* in every line and word. 'With Virgil European poetry grows up' (C. S. Lewis), and Aeneas is a man, an adult, whereas 'Achilles had been little more than a passionate boy'. For us perhaps the great books and climaxes come too early, in 2, 4, and 6, but for Virgil and the Romans the second half, as Iliadic, was '*maius opus*', and the abrupt, un-Greek, ending with Turnus' death is designed to preclude a thirteenth book such as Maffeo Vegio supplied. One of Virgil's own reasons for discontent with the poem was perhaps that he could not support his 'myth' with an adequate philosophy. The one great explicitly philosophical discourse, of Anchises (6. 721-51), expresses a Neopythagorean pessimism and other-worldly dualistic hostility to the body. But Virgil's view of the providential function of 'Roma aeterna' within the world, and of Augustus as a god in the flesh restoring the Golden Age in Italy, implies a philosophy of embodiment (not to say 'incarnation'). Furthermore, what is the *lógos* of the Descent into the Underworld, if the Gates of Hell remain dualistically impregnable to the Gods of Heaven (6. 552-4)? Dante expanded Virgil's *Descent* into the whole *Comedy*, giving it a Christian meaning by linking it with the celebration of Christ's Death, Harrowing of Hell, and Resurrection at Easter, but he puts his finger on two errors of Virgil, as excluding him from heaven: namely, his belief in the impregnability of Hell and his hostility to the body.

There are Stoic elements in Virgil: *G.* 4. 217-27; *exercite*, 3. 182 and 5. 725 (cf. Sen. *Dial.* 1. iv. 7 and 13); *praecipere*, 6. 103-5 (cf. Cic. *Off.* 1. 81); Sen. *Ep.* 76. 33, but the boast of 6. 103-5 is quickly refuted by events. The two rhyming stanzas *Ad Maronem Mausoleum* (by an anonymous poet at Paris in the twelfth-thirteenth century (?) — see B. Nardi, *Mantuanitas Vergiliana* (1963), 149 ff.) express what many have felt before and since: at Virgil's tomb St. Paul laments that the poet died a pagan:

'Quem te', inquit, 'reddidisse
Si te vivum invenissem
Poetarum maxime.'

8. THE PROGRESS OF CRITICISM

If the populace saluted Virgil as the writer of its most exquisite mimes, and Propertius (2. 34. 65) before the event, and Horace after (*Sat.* 1. 10. 44), saluted the *Aeneid*, the controversy about his plagiaristic and asso-

ciative method (like that of T. S. Eliot in our times) tended to obscure his originality and greatness, until 'purloining Hercules' club' and 'picking pearls out of dung-hills' was recognized as difficult, bold, and meritorious. In c. 28 B.C. Nepos (*Att.* 12. 4) mentions a L. Julius Calidus, not Virgil, as the successor to Lucretius and Catullus; and as late as A.D. 27 Valerius Paternulus (2. 36. 3) cites Rabirius with and before Virgil as '*principes carminum nostri aevi*'. Augustus' librarian, Hippius, wrote much about Virgil, but Gellius preserves chiefly unfavourable judgements. After Maecenas (Sen. *Suas.* 1. 12), the first defender in public was Asconius (Donat. 46), and under Nero Valerius Probus set himself to determine Virgil's text. When Virgil was established in the schools of the *grammatici* and *rhetoires*, the learning of the Greek scholiasts on Homer, the tragedians, and Alexandrians was transferred, not always aptly, to Virgil. Our surviving commentaries of the late fourth century, when the pagan opposition in Rome to the Church was using Virgil as its bible, draw on the first century of Virgilian criticism, ineptitudes may be suspected of lateness. Neoplatonic exegesis displaces the earlier Stoic. This dedication of Virgil begins in the first century A.D. with Calpurnius (*El.* 4. 70), Seneca (*Ep.* 108. 26: *tanquam missum oraculo*), and the cult by Silius Italicus of Virgil's work and tomb (Pliny, *Ep.* 3. 7. 8), Quintilian's veneration (1. 8. 5, etc.) and Statius' adoration of the 'divine' *Aeneid* from afar (*Theb.* 12. 816-17, cf. *Silv.* 4. 4. 54). Lucan alone refuses to take Virgil as a model for epic. Rhetoricians like Arellius Fuscus (Sen. *Suas.* 3. 5) and historians like Tacitus, especially in the *Germania*, show his influence. The archaizing fashion of the second century may have caused a slight recession, but the first consultations of the *Sortes Vergilianae* are attributed (possibly anachronistically) to Hadrian (S.H.A. *Hadr.* 2. 8, despite 16. 6!). Copies of the *Aeneid* were enshrined in temples for consultation (*Clod. Alb.* 4. 5. 4). Virgil was treated as the supreme poet, orator, philosopher, prophet, and theologian. Christian writers composed Virgilian centos to tell Bible stories, and pagans (Ausonius) for other purposes. St. Jerome (*Ep.* 53. 7) ridicules this 'christianizing' of Virgil, in words that Alcuin later uses to deprecate the epic lays of Anglo-Saxon paganism. But not much later the ideas as well as the words of Virgil were rendered innocuous by allegory in the work of Fulgentius (q.v.). This tradition of turning the *Aeneid* into an allegory of the stages of human life (*Aen.* 2 represents the trauma of birth; 6 the acquisition of philosophical enlightenment) persisted in Bernardus Silvestris (fl. c. A.D. 1150), John of Salisbury (1115-80), Dante (*Convivio* 4. 26 and *de Vulg. Eloq.* 2. 4, but not in the *Comedy*), and Petrarch. But Petrarch's unfinished Latin epic, the *Africa* on Scipio Africanus, shows a new appreciation of Virgil's art, especially in point of structure and unity of plot.

Domenico Comparetti's *Virgilio nel Medio Evo* (1872; Engl. Transl. 1895) remains a classic, but his view of the popular origin of the legends of Virgil the magician at his tomb in Naples needs to be corrected. The legends are the work of scholars such as Gervase of Tilbury, Alexander Neckam, Conrad of Querfurt, developing hints from Donatus and attributing alien stories to Virgil (see G. Pasquali, Preface in the 1943 reprint of Comparetti). Comparetti's work has been amplified by C. G. Leland, *The Unpublished Legends of Virgil* (1899), and J. W. Spargo, *Virgil the Necromancer* (1934), and continued by V. Zabughin, *Virgilio nel Rinascimento italiano* (1921-3).

As for Virgilian scholarship since the Renaissance, a word can perhaps be spared for the period since the date (1903-8) of Sandys's *History of Classical Scholarship*. R. Heinze's *Virgils Epische Technik* (1903) inaugurated a

new era of Virgilian studies and kindled a new interest for Virgil in Germany, which had been under the 'tyranny' of Greece (1903 is also the year of Norden's edition of book 6). Much of what is new in this century, especially on the *Eclogues*, has come from Germany. The continuity and unity of Virgil's work from *Eclogues* to *Aeneid* has been brought out (Klingner), and his art of cumulative imagery or symbolism (Pöschl) studied (see e.g. B. M. W. Knox, *AJP* 1950). Virgil's metre and language have been analysed, with a more precise discrimination of archaic and poetic language from that of ordinary life (Cordier, Axelson, Wilkinson).

VIRIATHUS, a Lusitanian shepherd, escaped from the massacre of Galba (q.v. 3), rallied his people, and became their commander-in-chief (c. 147 B.C.). Exploiting Roman commitments in Africa and Greece (until 145) and his superior knowledge of the terrain, he defeated a series of Roman commanders in both provinces, and won the co-operation of other tribes. He finally defeated Q. Fabius Maximus Servilianus, from whom he secured a favourable peace and recognition as an ally of the Roman people (140). But Fabius' brother Q. Caepio, succeeding him, persuaded the Senate to denounce the peace and, in the course of fresh negotiations, secured Viriathus' assassination. Viriathus received a splendid funeral, but the Lusitanians soon surrendered. He remains a national hero in Portugal.

VIROCONIUM (Uriconium), a town in Roman Britain, modern *Wroxeter* (Shropshire). The site was first occupied, perhaps in A.D. 48-9, by *Cohors I(?) Thracum equitata*; later, perhaps 52-8, the fortress of Legio XIV was established close by. The Twentieth replaced the

Fourteenth on the latter's withdrawal from Britain (66), and the site remained in military occupation until 87 or 90. After the loss of Scotland Legio XX moved to Deva (*Chester*), and Wroxeter was developed as the *caput* of the Cornovii. Late-first-century baths, perhaps intended for the legion, were left incomplete, to be swept away by Hadrian, in whose reign a normal forum-with-basilica replaced them: the forum is dated by a dedication to Hadrian of 129-30 by the *civitas Cornoviorum* (RIB 288). Big new public baths, architecturally combined with a shopping precinct and large public latrine, were built shortly after 150; they were provided with a great open-air swimming bath and a covered exercise hall. About 165 the centre of the town was damaged by fire, but was soon rebuilt. Air photographs have revealed numerous large private houses and an aqueduct. An earth rampart was provided towards the end of the second century, enclosing c. 200 acres, and a town wall was inserted in its front perhaps early in the third. Before 300 the forum was destroyed by fire and not rebuilt, but the town apparently prospered until late in the fourth century, when the withdrawal of Legio XX from Chester must have left the region exposed to Irish raiders. Two coins of Carausius with mint mark BRI have been claimed for a temporary mint at Viroconium (= Briconium) (*Num. Chron.* 5 v. 336; Sutherland, *Coinage and Currency in Roman Britain* (1937), 63).

VIRONUM, a city in southern Noricum near the river Glan at modern *Zollfeld*. It lay in the territory of the Celtic Norici, whose centre was on the Magdalenberg 1,058 metres south-east of Klagenfurt. At first the site of a Celtic *oppidum*, terraces on the hillside were occupied by more than three square kilometres of buildings, including a forum, a temple, and a centre for the imperial cult constructed by the Norican peoples under Augustus. Most of the buildings are in the classical style and date from the late first century B.C. to the reign of Claudius. From here the Norici were administered by a Roman *conventus* (q.v.) organization and the place was also the centre of the *concilium provinciae*. Under Claudius a *municipium* was established at Virunum (*CH* iii. 11555: *municipium Claudium Virunum*) enrolled in the voting-tribe Claudia. Until the establishment of the legionary fortress at Lauriacum (q.v.) under Marcus Aurelius, Virunum was the provincial capital and the residence of the governing procurator. Gradually the buildings on the Magdalenberg fell out of use as the centre of administration was transferred to Virunum. The forum, *capitolium*, baths, amphitheatre, and private dwellings of Virunum have been discovered while its street-grid occupied over one kilometre square. Destroyed by fire during the Marcomannic invasions (169-75), the city was later rebuilt. In the provincial reorganization of Diocletian it was the capital of Noricum Mediterranea.

R. Egger, *Die Stadt auf dem Magdalenberg* (1961).

VIS (Violence). (a) **POLITICAL VIOLENCE.** In the early history of the Roman Republic violence, where recorded, seems to have stemmed mainly from the self-help of the *plebs* in defence of their tribunes and the resistance of the patricians and their clients. From 133 B.C. until Caesar's dictatorship it dominated city politics. Here it was no mass revolutionary movement, but a political weapon employed for limited ends. The lack of a police

force weakened executive measures against it, and often the only counter was a state of emergency (see 'SENATUS CONSULTUM ULTIMUM'). From 78 B.C. violence against the State was an offence under the *leges Lutatiae* and *Plautiae*. Laws passed *per vim* were sometimes annulled by the Senate. Comprehensive legislation against all armed violence was provided by a *lex Iulia de vi publica* (probably of Augustus): practical security was afforded by Augustus' creation of the urban cohorts and the *vigiles*.

(b) PRIVATE VIOLENCE. 'Self-help' was generally regarded as a proper means of securing justice, when legal redress was unobtainable or slow. Certain forms were even incorporated into the XII Tables, e.g. for dealing with thieves and debtors. Violence was often employed in property disputes, but was limited by the interdicts concerning possession and *vis* (by 161 B.C. and 111 B.C. respectively). After Sulla interdicts were directed against the use of armed gangs, and the action for the recovery of property extorted by force was instituted. In addition to these measures providing restitution and compensation, a *lex Iulia de vi privata* (possibly the same bill as that of *vi publica*) established penalties, and the field of this law was extended during the Principate so that gradually violence was superseded by official action.

A. W. Lintott, *Violence in Republican Rome* (1968). A. W. L.

VITELLIUS (1), AULUS (A.D. 15-69), Emperor in A.D. 69, was a friend of Gaius and Claudius, being the son of their powerful *amicus* L. Vitellius (q.v. 2). He was consul in 48, proconsul in Africa and legate there under his brother. In 68 he was sent by Galba to command the legions of Lower Germany. On 2 Jan. 69 he was hailed as Emperor by his troops, at the instigation of his legates Caecina, Alienus and Fabius Valens, and was immediately recognized by the Upper German army, which had already revolted; he also obtained the adherence of Gaul, Raetia, Britain, and Spain. His expeditionary force to Italy had started before news arrived of Galba's death. Caecina (4) and Valens (1) (qq.v.) converged on north Italy and easily overcame Otho (q.v.). Vitellius was still in Germany when he heard of the victory. His march to Rome (Apr.-July) was like that of a conqueror. He posed as the successor of Nero and later adopted the title of *consul perpetuus*. He humiliated the defeated soldiers, and doubled his mistake by not dismissing them: he disbanded only the Praetorians and *cohortes urbanae* whom he replaced with a much larger force from among his own legionaries. He was allegedly incompetent and became notorious for his gluttony. The Eastern legions swore allegiance to him, yet immediately afterwards they hailed Vespasian (q.v.) as their Emperor. The Danubian troops, many of whom had fought for Otho, went over to Vespasian and invaded Italy under Antonius Primus. Valens was ill, and Vitellius had to rely on Caecina, who was plotting with the commander of the fleet at Ravenna. Vitellius, with four legions and detachments from four others, decided to hold the line of the Po at Cremona and Hostilia. The troops at Hostilia refused to support Caecina's treachery, and retired to Cremona after having arrested their commander. A battle before Cremona, with a demoralized army, was a defeat for the absent Vitellius (Oct. 69). Valens, who had recovered, failed to organize a second army in Gaul. In Germany Civilis (q.v.) rose in arms. The fleet at Misenum abandoned Vitellius. In Rome, Vespasian's brother, Flavius Sabinus (q.v. 3), had nearly persuaded Vitellius to abdicate, but the mob compelled him to remain. Vitellius had to attack Sabinus in the Capitol, where the temple of Jupiter was burned. Primus arrived and defeated the Vitellians after a desperate resistance. Vitellius was

discovered hiding, led through the Forum, and cruelly killed (20 Dec. 69).

Suetonius, *Vitellius*, etc. See further under ALBA, VESPASIAN A. M.

VITELLIUS (2, *PW* Suppl. ix, s.v. 7a), LUCIUS (cos. A.D. 34, cos. II 43, cos. III 47), son of P. Vitellius (a Roman knight from Nuceria, procurator of Augustus), was an intimate friend of the Emperor Claudius and the most successful politician of the age; when he died he was honoured with a public funeral and a statue in the Forum bearing the inscription 'pietatis immobilis erga principem' (Suet. *Vit.* 3). In fact, he links the political history of three reigns; and a close nexus can be discovered between Vitellius, Plautius, and Petronius. Legate of Syria from A.D. 35 to 37, he displayed great vigour, dealing firmly with Parthian affairs, inducing Artabanus to pay homage to Rome, and conciliating the Jews: 'regendis prouinciis prisca uirtute egi' (Tac. *Ann.* 6, 32). At Rome, however, he earned a different reputation — 'exemplar apud posteros adulatorum dedecoris habetur' (ibid.). But Claudius left him in charge of Rome when going away for the invasion of Britain in 43. He also chose him for colleague in the censorship (47). Vitellius had a large share in devising the ruin of Valerius Asiaticus; and, cleverly adopting the cause of Agrippina, he acted as the mouthpiece of a loyal Senate in advocating her marriage to Claudius. He probably died soon after (last mentioned in 51).

R. S.

VITICULTURE. The vine and its cultivation were known in Eastern Mediterranean countries as far back as the neolithic period. Minoan Crete had vines in plenty, as had the larger landowners of the periods of Homer and Hesiod. In many parts of Greece, and in Italy after 150 B.C. grapes were a more important crop than grain. Sour wine and vinegar were essential for improving the drinking water. Famous wines came from Cos, Cnidos, Thasos, Chios, Lesbos, Rhodes, Ephesus, and Aminea, Berytus and Laodicea, Tarraco in Spain, several districts of Sicily, the *Falerne mons* in Campania, etc. Plantations in which vines grew side by side with fruit-trees and vegetables were often preferred to those confined to the vine alone, though these became more usual after the Hellenistic age. The plantations were enclosed by walls or fences. The methods of Graeco-Roman culture are familiar to us from the recorded practice of Hellenistic Egypt and Roman Italy, which later spread to the Roman provinces.

Many species of vines were known, some being imported. In laying out a vineyard the land was first ploughed and dug over, and provision was made for irrigation. Then the vines were planted in long trenches and bound with bast to reeds or stakes or (as often in Greece and Italy) to trees, and subsequently pruned. The whole vineyard was next dug over and manured, and the soil was loosened (*ablaqueatio*) so as to lead more water to the roots. There followed a second digging, a picking off of young sterile shoots, a third digging, a second picking of shoots. The vines were tied up and a thorough irrigation undertaken before the crop was harvested. The vineyards had to be well guarded against thieves, a precaution as necessary then as it is today. In course of time new vines had to be planted to replace those that had died. An Italian model vineyard of c. 66 acres described by Cato needed 2 oxen, 3 asses, and many implements, with a slave overseer, his wife, and 16 slaves to work it.

States took a great interest in viticulture. A law of Thasos dating from the fourth century B.C. protected native growers by forbidding the import of foreign, and regulating dealings in home-produced wines. Rome

seems to have put restrictions on viticulture in certain areas outside Italy with a similar view. Ptolemaic Egypt introduced heavy duties on wine imports, together with State control of the culture of vines in the Nile country by imposing a special tax, the *apomoirā*.

See AGRICULTURE, CATO (1), COLUMELLA. For the Thasian wine law see BCH 1921, 46 ff.; R. Dion, *Histoire de la vigne et du vin en France des origines au XIX^e siècle* (1959); Frank, *Econ. VITRUVIUS POL(L)IO (or **MAMURRA** q.v.), a Roman architect and military engineer under the second triumvirate and early in Augustus' reign. He built a basilica at Fanum; but his fame rests chiefly on a treatise, *De architectura*, on architecture and engineering, compiled partly from his own experience, and partly from similar works by Hermogenes (q.v. 1) and other noted architects, mostly Greeks. His outlook is essentially Hellenistic, and there is a marked absence of reference to important buildings of Augustus' reign. *De architectura*, the only work of its kind which has survived, is divided into ten books. Book 1 treats of town-planning, architecture in general, and of the qualifications proper in an architect; ii of building-materials; iii and iv of temples and of the 'Orders'; v of other civic buildings; vi of domestic buildings; vii of pavements and decorative plaster-work; viii of water-supplies; ix of geometry, mensuration, astronomy, etc.; x of machines, civil and military. The information on materials and methods of construction in ii and vii, and on rules of proportion in iii and iv is of great value.

P. Thielscher (PW ix A. 427 ff.) identifies Vitruvius with Mamurra (q.v.), Caesar's *praefectus fabrum*. Following Choisy he rejects the cognomen Pollio by inserting a comma between *Vitruvius* and *Polio* in the passage *Vitruvius Polio alicuius auctores* which appears in Cetus Faventinus' epitome *ad mites*. This identification is contested by P. Ruffel and J. Sonbiran, *Pallas* 1962, 123 ff.

TEXT. F. Krohn (Teubner, 1912), with Fr. Transl. and com. A. Choisy (1909); with Engl. Transl. F. Granger (Loeb, 1931-4), with Germ. Transl. and notes C. Fensterbusch (1964); Transl. only: M. H. VOCONIUS ROMANUS, an able orator in Pliny's circle who wrote letters which read as if the Muses were speaking in Latin (*Ep.* 2. 13. 7)—a hint at the propriety of a poetic ingredient in letter-writing. A former president of the council of Hispania Tarraconensis, he was recommended by Pliny for equestrian and then senatorial status.

VOCONTII, a Celtic tribe of Gallia Narbonensis who, from at least the third century B.C. (Livy 21. 31) occupied the western foot-hills of the Alps south of the Allobroges (q.v.). Under Roman control they remained a *civitas foederata* with the unusual arrangement of two *capita* (Pliny, *HN* 3. 37), each enjoying *ius Latii*. These were Vasio (*Vaison-la-Romaine*) and Lucus Augusti (*Luc-en-Diois*), while Die became *Colonia Dea Augusta Vocontiorum* (CIL xii. 690). Vaison, extensively excavated, appears to have originated in a hill-fort south of the Ouvèze, but the Roman town lay mainly north of the river (crossed by a Roman bridge) and the structures

uncovered include a theatre (Tiberian), the so-called portico of Pompey, and two groups of houses. Prominent citizens of Vasio were Burrus, Trogus, and perhaps Tacitus himself (Syme, *Tacitus*, 613-24). Vocontian cavalry fought for Pompey in Spain and later contributed *alae* to the imperial *auxilia*.

Vaison: J. Sautel, *Vaison dans l'Antiquité* (1942); *FOR* vii (1930), 50 ff.; A. Grenier, *Manuel* iii. 194 ff. Luc: Sautel, *FOR* xi (1957), 39 ff. Die: *ibid.* 44 ff. A. L. F. R.

VOCULA, C. DILLIUS (PW 2), from Corduba in Spain, was legate of Legio XXII Primigenia in Upper Germany in A.D. 69. Placed in charge of the operations against Civilis (q.v.) he succeeded in relieving Vetera in the Lower province, but was forced back and had difficulty in holding his own camp Mogontiacum (*Mainz*). In spring 70 he was murdered at Novaesium by a Roman deserter on the orders of Classicus (q.v.). His earlier career, a normal senatorial *cursus*, is recorded on a dedication at Rome by his wife Helvia Procula (*ILS* 953). G. E. F. C.

VOLATERRAE (Etr. *Velaθri*; modern *Volterra*), one of the most powerful of the twelve cities of Etruria, and the capital of the metal-rich zone between the river Cecina, whose valley it dominates, and Massa Marittima, was established in Villanovan times on a hill 20 miles from the sea. Volterrae is notable for its carved funerary stelae, and for its production of alabaster, funerary caskets, carved with mythological scenes, dating from the third-second centuries. Tomb types include 'tholoi' with round chambers, domes, and central pillars. One tomb contained 109 cremations, the associated material ranging in time from local fourth-century red-figure craters to Arretine. Volterrae withstood a two-year (82-80 B.C.) siege by Sulla's army, and subsequently became a colony for his veterans; Cicero defended a native of the town against the loss of his rights of citizenship (Cic. *Caecin.*).

L. Consortini, *Volterra nell'antichità* (1940); E. Fiumi, *Stud. Etr.* 1957, 367 ff., 463 ff.; Scullard, *Etr. Cities* 146 ff. D. W. R. II.

VOLCACIUS (1) **SEDIGITUS** (fl. c. 100 B.C.) is the author of thirteen senarii, in which ten writers of the *comedia palliata* are enumerated and characterized by him with great self-confidence. Gellius (15. 24) quotes the verses from Volcacius' lost work *De poetis*. In his list Caecilius Statius is first, Plautus second, Naevius third, Lucinius fourth, Atilius fifth, Terence sixth, Turpilius seventh, Trabea eighth, Luscius ninth, and Ennius tenth 'causa antiquitatis' (cf. Suet. *Vit. Ter.* 7).

Baehrens, *FPR* (Teubner, 1886); W. Morel, *FPL* (Teubner, 1927). A. S.

VOLCACIUS (2) **MOSCHUS**, rhetor, a Greek from Pergamum (Porph. ad Hor. *Epist.* 1. 5. 9), who may have owed his name and citizenship to Volcacius Tullus, consul of 33 B.C. (Kiessling, *Hermes* 1891, 634 f.). Exiled after a trial for poisoning, he opened a school at Massilia, where he died about A.D. 25. A distinguished speaker, according to Seneca, but too much given to tricks of style (*Controu.* 10 pr. 10, 2. 5. 13; Tac. *Ann.* 4. 43). C. J. F.

VOLCANUS (**VOLKANUS**, **VULCANUS**), an ancient Italian fire-god, apparently of volcanic fire (this would explain why he is worshipped at Putcoli, near the *zolfatare*, Strabo 5. 246; perhaps also his association with Maia, Gellius 13. 23. 2, 'Maia Volcani', if her name is to be derived from the root *mag* and explained as the power which makes something, perhaps crops, increase; cf. also Pliny, *HN* 2. 240, fire comes out of the ground near Mutina 'statis Volcano diebus'), certainly

of destructive fire, which explains why his temple should always stand outside a city (Vitr. 1. 7. 1), on the authority of the Etruscan haruspices. He was worshipped at Rome from the earliest-known times, having a flamen (q.v.) and a festival, the Volcanalia, on 23 Aug. (calendars). His shrine, the Volcanal, stood in the Area Volcani in the Roman Forum at the foot of the Capitol; it may therefore go back to a time when the Forum was still outside the city (see Platner-Ashby, 583 f.; Nash, *Pict. Dict. Rome* ii. 517 ff.). A newer temple (before 214 B.C.) stood in the Campus Martius. His name is certainly not Latin, the nearest to it in sound being the Cretan *Φελγάρως* (for whom see Cook, *Zeus* ii. 946 ff.), who, however, seems to have no resemblance to him in functions. For Etruscan names suggesting Volcanus see F. Altheim, *Griechische Götter* (1930), 172. It is thus possible, but unproved, that he came in from the eastern Mediterranean, through Etruria. He seems to have been worshipped principally to avert fires, hence his by-name Mulciber ('qui ignem mulcet'), his title Quictus, and his association with Stata Mater (Dessau, *ILS* 3295, 3306), apparently the goddess who makes fires stand still. On the Volcanalia, when sacrifice was also made to Juturna, the Nymphs, Ops Opifera, and Quirinus, he was given a curious and (at least for Rome) unexampled sacrifice, live fish from the Tiber being flung into a fire (see calendars and Varro, *Lang.* 6. 20, Festus, 274. 35 ff. Lindsay). This also can be readily explained as an offering of creatures usually safe from him to induce him to spare those things which at so hot a time of year are particularly liable to be burned. He had a considerable cult at Ostia, where he seems to have been the chief god (R. Meiggs, *Roman Ostia* (1960), 337 ff.). In classical times he is fully identified with Hephaestus, q.v.

Wisowa in Roscher's *Lexikon*, s.v.; H. J. Rose, *JRS* 1937, 46 ff.; Latte *RR* 129 ff. H. J. K.

VOLOGESES I, King of Parthia, A.D. 51/52–79/80. His family belonged to Media Atropatene. Much of his reign was spent in wars with Rome and on his eastern frontier. In 54 Vologeses set his brother Tiridates (q.v. 3) on the throne of Armenia (Tac. *Ann.* 12. 50). Cn. Corbulo (q.v.), sent to re-establish Roman influence, was at first successful, Vologeses being occupied on his eastern frontier with a rebellion. Tiridates fled, and a Roman nominee Tigranes (q.v. 4) was crowned as king of Armenia. But Vologeses returned to continue the war, and at one time gained an advantageous treaty from Paetus (q.v.), after the latter's capitulation at Rhandaia. Finally, peace was made and Tiridates agreed (63) to go to Rome and pay homage to Nero for his throne: this he did in 66. Vologeses' later relations with Rome were friendlier; he sought Vespasian's help against the invading Alani (Suet. *Dom.* 2. 2). In his reign Zoroastrianism made great advances, and the books of the Avesta were collected. He founded Vologesia near Seleucia, as a commercial rival to Seleucia. In his reign began a strong reaction against Hellenic influences. Pehlevi first appears along with Greek on his coins.

For Vologeses II–V, see ARSACIDS.

On the wars with Corbulo see M. Hammond, *Harv. Stud.* 1934; A. Momigliano, *Atti del II° congresso naz. di studi romani* 1 (1931), 368 ff.; W. Sclur, *Klio* 1925, 75 ff., and 1926, 215 ff.; N. C. Debevoise, *Political History of Parthia* (1938), 174 ff.

M. S. D.; E. W. G.

VOLSCI descended from central Italy in the sixth century B.C. and by 500 had established themselves in the middle Liris valley and regions south-east of the Alban Hills. Chief towns: Sora, Arpinum, Atina, Privernum, Ecetra, Antium, Circeii, Anxur (= Tarracina), Velitrae, and possibly Pometia (qq.v.). Casual mention of Volsci in regal times is untrustworthy,

but thereafter they became, and for 200 years remained, a threat which Rome met by signing an alliance with Latins and Hernici c. 493 (see CASSIUS 1). The Aequi (q.v.) aided the Volsci. Fifth-century Volscian operations are known only from garbled Roman accounts, but Coriolanus' exploits and defensive Latin colonies at Signia (495), Norba (492), and Ardea (442) imply Volscian successes. In 431, however, the Latin allies defeated the Aequi, then repulsed the Volsci; Latin colonies at Circeii (393), Satricum (385), Setia (382) mark their advance. Volsci opposed Rome in the Latin War, but were defeated by C. Maenius (q.v.). By 301 all Volsci were subject to Rome and so rapid and complete was their romanization that their original civilization can scarcely be discovered. Their language resembles Umbrian (cf. Festus, 204 L.). Although often represented as a unitary nation, they were not cohesive. Some Volscian cities faced Rome singly (Pometia, Ecetra in the fifth century; Antium, Privernum in the fourth), and those in the Liris valley obviously acted independently of those near the Tyrrhenian coast.

Diodori Romische Annalen, ed. Drachmann xi. 77–xiv. 102, Lavy, bks. 2–8, Dion. Hal., bks. 6–11, 14 L. Pareti, *Storia di Roma* 1 (1952); E. Vetter, *Handbuch der italischen Dialekte* (1953), 1156. For the alleged Illyrian origin see Serv. ad *Aen.* 2. 842, J. Whitnough, *Foundations of Roman Italy* (1937), 300. E. T. S.

VOLSINII (Etr. *Velzna-*). The original Volsini has been identified variously with modern Orvieto by K. O. Muller since 1898 and with Bolsena by R. Bloch. The former is perhaps more probable, in view of the rich sixth-fifth-century Crocifisso del Tufo cemetery at Orvieto; little that is earlier than the fourth century has been found at Bolsena, or nearer to it than the Villanovan and Etruscan cemetery and habitation sites in the Civita and Gran Carro localities about 6 miles to the south. This could agree with the statement by Zonaras (8. 7. 8) that the survivors of the Volsinian rebellion of 294 B.C. were resettled elsewhere. Not far from the Etruscan city was Fanum Voltumnae, which was from the end of the fifth century the religious and political headquarters of the twelve cities of Etruria: it has yet to be identified archaeologically.

Etr.* 1962, 1 ff., *ibid.* 1966, 2 ff.; W. V. Harris, *BSR* 1965, 282 ff.; G. Colonna, *Stud. Etr.* 1967, 3 ff.; Scullard, *Etr. Cities*, 126 ff., on Bolsena, Castagnoli, *Stud. urb.* 71 ff. D. W. R. R.

VOLTACILIUS PITHOLAUS (?Plotus, Reifferscheid), LUCIUS, according to Nepos the first freedman to write history, opened a school of rhetoric, 81 B.C. He had as a pupil Pompeius Magnus, whose biography, as well as his father's, he wrote (Suet. *Rhet.* 3).

VOLTUMNA, an Etruscan goddess, at whose shrine the Etruscan federal council met (Lavy 4. 23. 5; 25. 7; 61. 2; 5. 17. 6; 6. 2. 2). Nothing more is known of her and the site of the shrine is uncertain (see VOLSINII). Some connexion with Vertumnus (q.v.) etymologically is likely.

L. R. Taylor, *Local Cults of Etruria* (1927), 210 ff.

VOLTURNUS, the principal river of Campania (q.v.), a considerable stream often mentioned in ancient accounts of Samnite and Hannibalic Wars. It rises in Samnium and flows southward past Aesernia, Venafrum, and Alifae (qq.v.) until joined by its tributary, the Calor, whereupon it turns abruptly westward to enter the Tyrrhenian about 20 miles below Casilinum (q.v.). E. T. S.

VOLUBILIS (modern *Oubili*), town in the Djebel Zerhoun plain in Morocco. It was already important

in the second century B.C. and under Juba II it became a flourishing town. The influence of Carthaginian civilization was pronounced and its magistrates were called *suffetes*. It was rewarded by Claudius c. A.D. 44 with the rank of *municipium* for its support of Rome against Aedemon's rebellion. Substantial remains survive, especially of Severan date. The town was near the frontier and sometimes threatened by the tribe of the Baquates; it was apparently evacuated when Diocletian reorganized the frontier.

J. Carcopino, *Le Maroc antique* (1940), i; L. Chatelain, *Le Maroc des Romains* (1944), 139 ff.; R. Thievenot, *Volubilis* (Paris, 1949), R. Etienne, *Le Quartier nord-est de Volubilis* (1960), A. Monaghan, *Claudius* (1961), 66 ff., 114, 139 f. B. H. W.

VOLUMNIUS, PUBLIUS, a philosopher who accompanied M. Brutus (q.v. 5) in his campaign against the triumvirs. He recorded, perhaps in a biography, prodigies which preceded Brutus' last battle (Plut. *Brut.* 48).

VOTIENUS MONTANUS, orator, from Narbo; prosecuted for treason in A.D. 25 and died in exile a few years later. He condemned the showiness of declamations (Sen. *Controv.* 9. *praef.* 1). His passion for repetitions which did not leave well alone led to his being called 'the Ovid of speakers'. J. W. D.

VOTING. (1) IN GREEK CITY STATES most resolutions of the Assembly, as well as elections of magistracies, were decided by show of hands (*χειροτονία*), in some rare cases by acclamation, e.g. in the election of the Spartan ephors. For questions concerning individuals (*ἐπ' ἀνδρῶν*), voting was accomplished by secret ballot (*κρήνημα* from *κρήνη* = voting-stone); but already in early times all decrees of people were so called. The same method was used for passing sentences by juries, and voting by sherds was similar (see OSTRACISM). V. E.

(2) AT ROME voting took place in the assemblies of the *curiae*, centuries, and tribes. In the curiate assemblies it very early became a mere formality, the voting units being represented by thirty lictors. The procedure in the centuriate and tribal assemblies followed a broadly similar pattern. Voting was generally preceded by a *contio* (q.v.). When the presiding magistrate dissolved this and ordered the voting to begin (*discedere*), non-citizens were summoned to withdraw (*populus summoeturi*), and ropes were stretched across the Assembly to divide it into as many enclosures as there were centuries or tribes. These enclosures, called at first *licium*, then *ovile*, and finally *saepia* (q.v.), were connected with the platform of the magistrate by galleries (*pontes*). Before 139 B.C. voters intimated their decision orally and singly to officials named *rogatores* who stood at the exit of the enclosures and recorded the votes by means of dots on special tablets (*ferre punctum*). From 139 to 107, however, a series of *leges tabellariae* were enacted instituting a secret ballot. The formulas used in the voting did not change: in legislation, *Uti rogas* (V) and *antiquo* (A), this negative answer properly meaning 'I confirm the old state of things'; in jurisdiction *libero* (L) and *dumno* or *condemno* (hence the abbreviated form C); in elections *dico* or *facio*. But now these were written on official tablets (*tabellae*) which were thrown into an urn (*cista*) at the exit of each *pons* under the surveillance of guardians (*custodes*), and then conveyed to the tellers (*diribitores*) for counting. When the counting was over, the result of the voting in each tribe or century was communicated to the presiding magistrate who then made an announcement of all the results (*renuntiatio*) either at random or, sometimes in the case of multiple elections, in an order determined by lot.

Group voting was universal in Roman assemblies.

Thus a majority of votes within a century determined the vote of that century, and a majority of centuries determined the will of the assembly. Furthermore, in elections designed to fill two or more places on a board or college, the counting of votes within a unit and the final *renuntiatio* of results came to a stop as soon as the required number of candidates had secured an absolute majority.

Voting was allowed only between sunrise and sunset, on days especially appointed in the Calendar. Throughout the Republic it was essential for a citizen to attend the assembly in Rome, if he was to vote at all, although Augustus did experiment with a postal vote in the last days of comitial activity.

Mommsen, *Röm. Staats. Ein.* 397 ff.; G. W. Botsford, *The Roman Assemblies* (1909), 446 ff.; Taylor, *Voting Districts*, id. *Roman Voting Assemblies* (1966); U. Hall, *Hist.* 1964, 267 ff. See also TABULA IUDICANA, P. T.; E. S. S.

VOTIVE OFFERINGS are gifts of a permanent character to supernatural beings (*ἀναθήματα*, later *ἀναθέματα*, as distinct from *δῶρα*, gifts to human beings), thus differing from sacrifices and taxes (tithes and first-fruits are here not included). They have their source in religious feeling and in the worship of divine powers to whom the dedicant ascribes the occasion (see under 2) of the gift. This dedication is a voluntary act, but it may have been recommended by religious tradition or sometimes ordered by an oracle (e.g. for unbelief, breach of religious custom, blood-guilt; cf. the two statues of the Spartan regent Pausanias dedicated in the Brazen House of Athena). For the gods they may mean an increase of their authority: the gift and its publicity 'magnify' the gods, at the same time intensifying the feeling of connexion and sympathy on both sides. For the man difference from a sacrifice is that the object dedicated is not destroyed; it remains as a perpetual glory to the dedicant, and more specifically to his community: conduct which was too self-complicit was severely censured, cf. the case of Pausanias (Thuc. 1. 132).

The motives generally are: thanksgiving (e.g. for deliverance from sickness, perils on the sea, and all sorts of calamity), intercession (sometimes accompanied by sacrifice, or taking its place, or reminding the deity of it), or propitiation (each Athenian archon swore to dedicate a golden statue, probably not a portrait of himself, if he broke his oath; cf. corresponding sacrifices from similar motives). The occasions are manifold. States (or monarchs) returned thanks for victory in war and thus commemorated other forms of divine aid (so tripods of gold were sent to Delphi after the battles of Plataea, Himera, Cumae, Diod. 11. 21). Statues of Victory were common as war-dedications (cf. the Athenian temple inventories, the most famous examples being the Nike of Paconius at Olympia, and the Nike of Samothrace now in the Louvre). The statue of Nemesis at Rhamnus was a memorial of the Persian War, the temple of Athena at Pergamum of the defeat of the Gauls. A crown of honour was dedicated to the Athenian people by 'the Euboeans saved and set free' (Dem. xxiv. 180). The people (alone, or with the *boule*) dedicated statues of officials in sacred precincts; later such compliments to the Roman Emperors became quite commonplace.

We must not forget the many feasts and ceremonials, often annually repeated, which served the State or private individuals as occasions for showing their loyalty or gratitude to the State divinities or national heroes. Many finds of innumerable standardized figures in the earliest strata of ancient shrines may have their origin in such festivals, e.g. miniature reproductions of the cult-image of the temple or other forms of the deity in question (as the votive offerings to (Artemis) Orthia at Sparta), objects of use, robes (cf. Hecuba's gift to Athena

in the *Iliad*), mirrors, weapons, etc., finally the ἀνδράματα and κούραι of all sizes and different materials (falling into disuse in the 5th c. B.C.). We may especially mention the *peplos* offered at the Panathenaea at Athens. Sacred missions (θεσπίαι, see ΤΙΜΟΡΟΙ) regularly brought with them offerings for dedication, thus supplementing their sacrifices.

Private people dedicated on similar principles, for help in disease (cf. the sanctuaries of Asclepius), in danger and every sort of calamity, for good luck and further aid, often accompanying the offering with a prayer and sacrifice for further success. Victories in games and contests of other kinds (cf. the legendary competition between Homer and Hesiod) were eagerly glorified, the offering of the prize becoming traditional and often compulsory (cf. the many statues of athletes, and the Charioteer at Delphi). We may add as appropriate occasions of offering: every great moment or crisis of human life, birth, puberty (e.g. the offering of one's hair), marriage, election to an office, acquittal in court, etc. Book 6 of the *Anthology* and the treasure-lists of Athens (the treasures of Athena, Artemis Brauronia, or Asclepius), Delos, Delphi give an impression of the endless varieties of motive; dedication of slaves, chiefly as a form of emancipation, is also to be noted. The holy precincts thus in course of time were filled with gifts; they became real museums. Treasure-houses were built, and in the inner chambers of the temples (the *opisthodomoi*) their always increasing treasures were kept, but still these overflowed. The clearing-up did not mean destroying, since the ex-votos were commonly tabu and accordingly such can still be found by archaeologists within the sacred enclosures.

As for the meaning of these ex-votos, and the objects dedicated, they might be of direct use to the god. In myth or history many temples are recorded as being due to the gratitude of heroes, monarchs, cities (Danaus, Heracles, Theseus; the temple of Apollo at Bassae commemorates deliverance from pestilence). We may add altars (often with inscriptions), colonnades, idols, garments for the idols, etc. The throne of Xerxes, the manger of Mardonius, and other trophies were offered to the gods; cf. also the many statues of the Apollo or Kouros type. But pious people dedicated also what had been useful to themselves, thanks to the benevolence of a god or the gods; artisans their tools, etc. (also specimens of their skill and their gains), a shipowner an image of his ship (cf. Catullus 4; Agamemnon dedicated his rudder to Hera at Samos), a courtesan her mirror—in general things well used or now useless, or but once used (so a cauldron used for the bride's bath before marriage) and for ever to be remembered. Acts, blessed by the gods (birth, victory, etc.) were also thus immortalized. An impulse was in this way given to art (e.g. sculpture) and even to poetry. The historians drew facts from the inscriptions employed, and the makers of legend a fresh start for their imagination (cf. the Landian temple-chronicle). The homage thus paid to the gods is also a reliable barometer as to the curve of religious feeling in antiquity (as today in the Catholic Church).

E. Reisch, *Griechische Weihgeschenke* (1890). The chief work is W. H. D. Rouse, *Greek Votive Offerings* (1902). The religious background: J. Rudhardt, *Notions fondamentales de la pensée religieuse* (1958), 214 ff. S. E.; J. H. C.

VOTUM. Greeks and Romans alike made promises to gods that, if this or that favour was granted, they would do this or that act in return, and felt under an obligation to do as they had promised. Nevertheless, the practical and juridical character of Roman religion, as distinct from Greek, is seen in the Roman public use of vows, *vota*, public or private, which oblige either of the two parties engaged in the act to keep the bargain if the god

(or gods) is willing, and even in the formulae of many private vows: *u(otum) s(olut) l(ibens) m(erito)* and in the phrases *uoti reus*, *uoti damnatus*. The reciprocity involves the State (or the private individual) taking the initiative. In the name of the State the magistrate undertakes to offer to the god or the gods sacrifices, games, the building of a temple, the dedication of an altar, a share of the booty, or some other thing if the god on his side will give his assistance in winning the war, averting the famine or pestilence, achieving some success, etc. The publicity of such vows was compulsory. The vows made by the State were in most cases extraordinary, but vows were also made regularly for a definite period, e.g. the annually renewed *vota* of the higher magistrates for the welfare of the State (on 3 Jan., before the first regular sitting of the Senate) and the *vota* at the termination of the *lustrum*. The periodicity of public *vota* may originate in the terms defined for the magistrates. Such vows found their direct continuation under the Empire in the *vota pro salute imperatoris* (for the Emperor and his family, since 30 B.C., the periodicity becoming regular *vota quinquennialia, decennialia*, etc.). Vows for the safe return of the Emperor (from expeditions or war), for his health, his reign, for the delivery of the empress, etc. were customary. The text of the *votum* was regularly fixed in the presence of the pontifices, and the document went into the archives. As modalities of the *votum* we have to consider the devotion of the enemy's army (see ΔΙΩΟΙΟ) and the evocation of the gods of a besieged city see ΕΥΟΧΑΙΟ). Good examples of private vows are Verg. *Aen.* 5. 235 ff. (Cloanthus vows a bull if he wins the boat-race) and Hor. *Carm.* 1. 5.

Wisowa, *RR* 380 ff. J. Toutain, art. 'Votum' in *Dar-Sag*, *Wied. Fowler*, *Rel. Exper.* 200 ff. Latte, *RR* 461. The periodical vows for the welfare of the Emperor were regularly commemorated by coin-issues, for which see Mattingly, *Proc. Brit. Acad.* 1950, 155 ff., *ibid.* 1951, 219 ff. S. E., R. M. O.

VULCI (Etr. *Velx-*), 13 miles north-west of Tarquinii, situated on a plateau overlooking the river Fiora and with a commanding view of Monte Argentario and Cosa (q.v.), was one of the twelve cities of Etruria. It was an important centre by the late eighth century, rich in painted pottery and bronze; its orientalizing period has much in common with that of Vetulonia (q.v.). From the late seventh century onwards, Vulci was the centre of a school of stone carving, and of the manufacture of bronze utensils that were widely exported. Attention has been mainly concentrated on the tombs, dating from the Villanovan period onwards, several thousands of which had been opened by the mid nineteenth century.

Anz.* 1967, 7 ff.; M. Torelli, *Enc. Arte Ant.* 1966, s.v. 'Vulci'. D. W. R. R.

VULGATE (*versio vulgata*), Latin version of the Bible. The ever-increasing divergences, the defective textual tradition, and the lack of literary elegance in the Old Latin versions of the Bible (i.e. those used in the Church before the Vulgate) led Pope Damasus to urge (c. A.D. 382) Hieronymus (see JEROME) to undertake a revision which might, so it was hoped, become the common biblical text of the Western Church. In the New Testament Jerome made, as he declares in his *Preface Novum opus*, comparison with ancient Greek MSS. and altered the Old Latin text only when it seemed absolutely necessary, retaining in all other cases what had become familiar phraseology. This procedure accounts for the presence of quite diverse renderings of identical expressions in Greek (e.g. 'high priest' is usually translated in Matthew and Luke by *princeps sacerdotum*, in Mark by *summus sacerdos*, and in John by *pontifex*).

In the Old Testament Jerome began with the Psalms, making two revisions, both based on the (Greek) Septuagint. The first, produced hastily (*cursim*), has been commonly identified with the 'Roman Psalter' (still used in St. Peter's Basilica in Rome); the second, known as the 'Gallican Psalter', was based on Origen's Hexaplaric text, and is the text which is used for the Psalms in the official Roman Catholic Bible (the Clementine text of 1592). A growing interest in Hebrew led Jerome in 387 to take up residence in Bethlehem, where, in the course of some fifteen years, he translated the Old Testament directly from the Hebrew (including a fresh translation of the Psalms).

Scribal corruption of Jerome's revision prompted several medieval scholars to purify the Vulgate text; notable among these were the successive efforts of Alcuin, Theodulf, Lanfranc, and Stephen Harding. Unfortunately, however, each of these attempts resulted eventually in still further textual corruption through mixture of the several types of Vulgate text that developed at various European centres of scholarship. As a result, the more than 8,000 Vulgate MSS. extant today exhibit the greatest amount of cross-contamination of textual types.

VULSO (1) **LONGUS**, **LUCIUS MANLIUS** (*PW* 101), as consul (256 B.C.) with Regulus (q.v. 1) won the naval battle of Ecnomus and led the expeditionary force to Africa. He returned to Rome to receive a triumph, leaving Regulus in sole command in Africa. As consul II (250) he blockaded Lilybaeum without success. H. H. S.

VULSO (2), **GNAPUS MANLIUS** (*PW* 91), curule aedile in 197 B.C., praetor in Sicily in 195, succeeded L. Scipio as consul in 189 in the East, concluding the peace with Antiochus and subduing the Galatians in defence of law and order in Asia Minor; the campaign was also profitable in booty. In 188 he settled Asia and returned through Thrace, suffering losses. His triumph in 187 was opposed by L. Furius Purpurio and Aemilius Paullus, probably as part of Scipionic criticism of his policy. Tradition made him introduce luxury to Rome, and certainly the effects of Eastern spoil became apparent with the close of the Syrian War.

WALL OF ANTONINUS, a Roman frontier-wall, 37 miles long, running from Bridgeness on the Forth to Old Kilpatrick on the Clyde, built for Antoninus Pius (S.H.A. *Pius* 5. 4) in A.D. 142 by Q. Lollius (q.v. 4) Urbicus. The wall was of turf, standing upon a cobbled foundation 14 feet wide and systematically built (*JRS* 1921, 1 f.) in long sectors by Legions II, VI, and XX, who marked their work by inscribed slabs (Collingwood and Wright, *RIB* 2139, 2173, 2184-6, 2193-4, 2196-2200, 2203-6, 2208). Twenty feet or more in front of the wall lay a ditch, approaching 40 feet wide and not less than 12 feet deep. Forts occur at Carriden, Kinneil, Inveravon, Mumrills (7.1 acres), Falkirk, Rough Castle (1.5 acres), Seabegs, *Castlecary* (3.9 acres), Westerwood (2.3 acres), Croy Hill (2.4 acres), Bar Hill (3.6 acres), Auchendavy, Kirkintilloch, Cadder (3.2 acres), *Balmuldy* (4.3 acres), New Kilpatrick, Castlhill (3.4 acres), Duntocher, Old Kilpatrick (4.7 acres), those italicized having stone walls. Minor structures are signalling-platforms, occurring in pairs at high points, and fortlets (0.2 acres), one of them at the passage of the northward road at Watling Lodge, near Falkirk. Thus, the Antonine Wall is structurally an advance upon Hadrian's Turf Wall (see **WALL OF HADRIAN**) in its economy of material and rubble foundation, allowing better drainage, while its garrison was distributed in small close-spaced forts instead of large forts and milecastles. Beyond the wall outpost-forts of the north road were held as far as Strathearn on the east, while on the west a road led towards Dumbarton, to a fortified port as yet unknown. Posts on the flanks are also known.

History. Excavation of the forts reveals two principal periods of occupation, a suspected third being probably no more than traces of levelling and tidying-up at evacua-

tion. Period I (c. 142-54) is thought to end with demolition when the troops were withdrawn to quell a rebellion of the Brigantes and Scotovae. The reoccupation of period II was begun before the death of Antoninus Pius, perhaps under Julius Verus c. 158, and ended in the first year of Commodus (180) when Dio (71. 16) records the overthrow of a frontier-wall and the dispatch of Ulpius Marcellus to Britain (for the date see *RIB* 1329). After inflicting heavy punishment on the Caledonians, Marcellus withdrew the frontier to Hadrian's Wall c. 184-5.

Sir G. Macdonald, *The Roman Wall in Scotland* (1914); A. S. Robertson, *The Antonine Wall* (1906); K. A. Steer, *Arch. Ael.* 1964, 1 f.; Frere, *Britannia*, ch. 8. Map 24 in (Ordnance Survey, 1969). I. A. R.; S. S. F.

WALL OF AURELIAN, the City Wall of Rome, constructed by Aurelian in A.D. 271-5 in anticipation of a sudden barbarian inroad (S.H.A. *Aurel.* 21. 9; 39. 2; *Aurel. Vict. Caes.* 35; Ioh. Malalas, *Chron.* xii, 299), was completed by Probus (Zosim. 1. 49). The original wall was some 20 feet high excluding the wide-set battlements. It extended for 12 miles, with 381 rectangular towers, at an interval of c. 100 feet, except on the long river-walls. The wall was usually solid but occasionally galleried and sometimes treated as a revetment-wall. It frequently embodied earlier structures, such as the retaining-wall of the Horti Aciliani (*muro torto*), the *castra praetoria*, private houses and tenements, the so-called *amphitheatrum castrense*, the *domus Lateranorum*, and the pyramid-tomb of Cestius. It surrounded the Fourteen Regions, enclosing, however, a relatively small part of *Transiberim*. The gates, mostly named from the principal roads, were *Portae Flaminia*, *Pinciana*, *Salaria*, *Nomentana*, 'Chiusa', *Tiburtina*, *Praenestina*-

Labicana, Asinaria, Metrobia, Latina, Appia, Ostiensis, Portuensis, Aurelia-Pancraziana, Septimiana, Aurelia-Sancti Petri. All were flanked by simple semicircular towers, those italicized having twin portals originally. There were also at least six postern gates. The wall was thus designed to repel a raid rather than stand siege. The wall was doubled in height by adding a gallery, while gates were remodelled and fitted with vantage-courts, by Maxentius (A.D. 306-12), who also began a ditch. Wall, and especially gates, were repaired by Stilicho in 401-3 (*CIL* vi. 1188-90; Claud. *VI cons. Hon.* 529). Later repairs occurred under Valentinian III, probably after the earthquake of 442, and under Theodoric in 507-11. Belisarius, in preparation for the siege of 536, refurbished the wall and dug a large ditch in front of it.

I. A. Richmond, *The City Wall of Imperial Rome* (1930); Nash, *Pict. Dict. Rome* ii. 86 ff. I. A. R.

WALL OF HADRIAN, a frontier-wall of Roman Britain, running for 80 Roman miles from Wallsend-on-Tyne to Bowness-on-Solway. Erected in A.D. 122-6, it was first designed to start at *Pons Aelius*, Newcastle-upon-Tyne, the eastern 45 miles being in stone (10 feet thick and some 15 feet high, excluding battlements), and the western 31 miles in turf (20 feet thick at the base and some 12 feet high). Twenty feet in front of the wall ran a V-shaped ditch (27 feet wide and 15 feet deep). Patrols lay in attached fortlets or milecastles, with towered gates to north, at every 1,620 yards, and in intermediate turrets (20 feet square) at every 540 yards. As work progressed, changes came. The Stone Wall was changed to 7½ feet in width, and extended 4 miles eastwards, to Wallsend, and 4 miles westward (replacing the Turf Wall) to Banks. Garrison forts were also built, at Wallsend, Newcastle, *Bemwell*, *Rudchester*, *Halton*, *Chesters*, *Houseteads*, *Carvoran*, *Birdoswald*, *Castlesteads*, *Stanwix*, *Burgh-by-Sands*, and *Bowness* (those italicized being of standard pattern for a *cohors milliaria* or an *ala quingenaria*). At Stanwix the milliary *ala Petriana* was posted; the rest probably held *cohortes quingenariae* and were soon augmented by *Carrawburgh*, *Drumburgh*, and *Greatchesters*. Forts and turrets continued down the Cumberland coast to *Moresby*; outpost-forts existed at *Birrens*, *Netherby*, and *Bewcastle*.

Behind the wall, enclosing all forts but *Carvoran* on the Stanegate (see below), ran a boundary-ditch (20 feet wide, 10 feet deep, and 8 feet across the flat bottom) with upcast disposed in two equidistant turf-kerbed mounds, 100 feet apart from crest to crest. A patrol-track ran along the south side of the ditch, reached by causeways at the milecastles. Public passages pierced both mounds at the forts and crossed the ditch on a causeway faced in stone and barred by a non-defensive gate. Lateral communication was first supplied by branches from the Stanegate, the pre-Hadrianic road (see *AGRICOLA*) from *Corbridge* to *Carlisle*. Later, the Military Way, between the boundary-ditch and wall, connected forts and milecastles.

History. Soon after the accession of Antoninus Pius the frontier was advanced to the Forth-Clyde line, and Hadrian's Wall was opened by slighting the boundary-ditch and removing the gates from milecastles. Apparently c. 158 (Collingwood and Wright, *RIB* 1389) and with the intention of separating the *Selgovae* and *Brigantes* under supervision, the wall was reoccupied simultaneously with the Antonine Wall in its second period, and remained the frontier when the latter was abandoned c. 180. The garrison was depleted by *Albinus* in 196-7, and on his defeat was savagely overthrown, to be restored by *Severus* in 205-7. In place of the Antonine Wall a forward zone was now held by outpost-forts

at *Risingham*, *High Rochester*, *Bewcastle*, and *Netherby*, a system which with its pacific supervision of the Lowland tribes kept the peace until the defeat of *Allectus* in 296 invited another Pictish inroad, followed by the restoration by *Constantius I.* Under *Constantius* in 343 and *Julian* in 360 the forward zone suffered, and was abandoned after attacks by *Picts*, *Scots*, and *Attacotti* in 367-8, which again overwhelmed the wall. The restoration by *Count Theodosius* in 369 introduced changes of garrison; thereafter occupation outlasted the expedition of *Magnus Maximus* (383) to come to an end finally c. 400, after which the frontier became the sole responsibility of the allied principalities in the Lowlands, which had been established by *Valentinian I.*

WALL OF SERVIUS, the city-wall of Republican Rome, traditionally assigned to *King Servius Tullius*, actually belongs to 378 B.C. It is of *Grotta Oscura* tufa, built in headers and stretchers, 4.50 m thick and at least 8.50 m high, retaining an earth bank or terrace, and is comparable with the contemporary wall of *Pompeii II* (see **FORTIFICATIONS**). The masons' marks, with Hellenistic affinities, suggest Greek contractors. The wall enclosed an irregular area dictated by contours, embracing the *Quirinal*, *Viminal*, *Oppian*, *Capian*, *Aventine*, and fortified *Capitoline* hills. There is, however, room for difference of opinion (cf. von *Gerkan, Röm. Mitt.* 1931, 153 ff.) as to the course between the last two points, while the time-space relation of the *Palatine* fortification to the wall is another crux. Gates are well known by name, hardly by structure. In the second century B.C. the wall was heightened to some 50 feet (cf. *Pompeii III*), and was also supplied with casemates for *ballistae*, covering approaches to the gates. During the first century B.C. neglect and encroachment made the course hard to find by the time of *Augustus*.

The original work of *Servius* is represented by the *agger*, which, revetted by the Republican Wall just described, crosses the neck of land between *Quirinal* and *Oppian* (cf. E. Gjerstad, *Acta Instit. Rom. Regn. Sueciae* xvii. 3, 1960, 32 ff.). It is a typical promontory defence, as at *Ardea*, and covered tombs of the sixth century B.C. in *Villa Spithoever*. It is later than such works as the *murus terreus Carinarum*, which, if defensive, would mark an independent *Oppian* circuit. The rest of the fortification, as at *Ardea*, would depend upon scarped cliffs, 'ex omni parte arduus praeruptisque montibus', as *Cicero* observed (*Rep.* 2. 6. 11).

WAR, ART OF (GREEK). Homer was commonly credited by ancient readers with having intended to provide instruction in the art of war. But the attempt to deduce some kind of theory from military practice does not seem properly to have begun till the latter half of the fifth century, when the *Sophists* applied their abstract methods to this subject among others. Of the textbooks derived from this movement there are preserved only the small treatise of *Xenophon* on the duties of a cavalry officer and an extract dealing with siege-warfare from a comprehensive textbook by *Aeneas Tacticus*. The other technical writers on the subject date from the Roman period. Of contemporary historians *Thucydides*, *Xenophon*, and *Polybius* in their

different ways show appreciation of the art of war as a factor in history.

The Homeric battles cannot be reduced to technical terms. Sometimes they consist of duels between chieftains, taking place in front of masses of imperfectly armed retainers; at others the Greeks and Trojans meet in ranks of infantry, called phalanxes, and ranged closely shoulder to shoulder. Chariots are normally used to convey chieftains into or out of the fighting-line.

In Tyrtæus the references to warfare are too full of Homeric echoes to give independent evidence on archaic warfare. The chief source of information before the Peloponnesian War is Herodotus. From him it appears that Greek warfare till his day was based on the hoplite (q.v.). Campaigning was mostly confined to the period of the year from March to October, the only season when (in the absence of military roads) it was easy to move bodies of heavy troops. Wars were usually limited to the border struggles of neighbouring States; the invader's objective was to destroy the corn and fruit-trees of the enemy and so compel them to offer battle or capitulate. There was no science of manoeuvring before or during action, the only tactical device being the ambush. When hoplites met on level ground the deciding factor was usually weight of numbers. The troops were massed in ranks reckoned as the depth of so many shields. The side which first broke under pressure was defeated. The victors set up a trophy: the vanquished asked for a truce to bury their dead. Light-armed troops were quite unorganized; cavalry also were few, and were not used with any special effect.

The Peloponnesian War revealed the absurdity of annual raids on the enemy's corn lands. The Athenians by retiring into their fortified area and importing their food supplies were able to ignore the Spartan invasions. Hence the Spartans were forced at last to adopt the method of creating a permanent fortified base at Decelea. Also the constant fighting in various kinds of terrain showed up the lack of adaptability of the hoplites and the advantages of the occasional use of light-armed troops. The development of the peltast (q.v.) in the early fourth century provided a more mobile unit, which did not cost so much to maintain all the year round.

The hoplite battle was first revolutionized by Epaminondas. It had been a convention to put the best troops on the right of the line. But Epaminondas placed a massed body on the left to crush the enemy's right in a slanting advance, and by this element of surprise he broke the Spartan front at Leuctra. This manoeuvre was only a more intelligent use of an old Boeotian device, but out of it Philip and Alexander, by means of the Macedonian phalanx (q.v.), developed the method of attacking with part of their front, while the rest held back. For the purpose of delivering the main thrust Alexander used the excellent cavalry which Thessaly and Macedon provided, and exploited the charge from the flank. The further step of holding part of one's forces in reserve to use at a later point in the action is not found before the battle of Arbela. The other special innovation in Alexander's warfare is the pressing of pursuit, by which the enemy was prevented from re-forming.

After Alexander there were no drastic changes. The main evolution consists in the further modification of the phalanx. Also a few special varieties of warfare added to the complexity of fighting: heavy-armed cavalry and elephants (q.v.) were first known from oriental sources, but were soon used throughout the Hellenistic world. Generally war became more and more an activity for professionals and was too complex for the ordinary citizen; but as it became more specialized, it also became more stereotyped. Alexander's attack in its fresh vigour was never twice the same, but the Hellenistic generals'

methods were quite fixed when the Romans met them on Greek soil.

WAR, ART OF (ROMAN). The earliest Roman battle-order was probably the phalanx (see preceding article). In the fourth century B.C. (after the Gallic invasions or during the Samnite Wars) this was replaced by the manipular system, a type of warfare of which an essential feature was open-order fighting. This innovation was accompanied by the adoption of *pilum* and *gladius* as the national weapons, the effective use of which required space for free movement. In this system the legion was drawn up in three lines of maniples with intervals equal to the frontage of each unit between the maniples, the units in the rear lines covering off the intervals in the lines in front of them. The plan of battle was at first schematic. After preliminary skirmishing by light-armed troops and cavalry stationed on the flanks of the legions, the front line (*hastati*) on coming into range hurled their *pila* and, if successful, advanced and decided the issue by hand-to-hand fighting with the *gladius*; if unsuccessful, they retired through the gaps in the second line, and their place was taken by the *principes*. Finally, a stand might be made with closed ranks at the third line (*triarii*), which at first retained the *hasta*. (See ARMS AND ARMOUR, ROMAN.)

During the Punic Wars much practical experience was acquired. Each line of maniples became more independent of the others, and experiments were made with a larger unit, the cohort, which after Marius permanently superseded the manipule. The fullest development was reached under Caesar. The *triplex acies* was no longer rigidly adhered to (e.g. *B.Gall.* 3. 24. 1), but dispositions varied with topographical conditions. The possibilities of flank attacks or of holding troops in reserve for the decisive onslaught were frequently exploited, while archers and slingers were increasingly employed in country unsuited to heavy infantry. Roman warfare was thus emancipated from stereotyped theories. Its success depended partly on the general's ability but mainly on the discipline of the soldiers. (See MANIPULUS, COHORTS.)

During the first two centuries A.D. tactics for the most part followed the Caesarian model. But with the increasing efficiency of the auxiliary cavalry and light infantry a greater variety of manoeuvres resulted. The legions still normally sustained the brunt of attack and defence, but the auxiliaries not infrequently played a decisive part (e.g. *Tac. Hist.* 2. 25; 2. 41; 5. 18; *Agr.* 35). Even during the anarchy of the third century the Roman army retained a high fighting spirit. Its defects were by then twofold, one the consequence of its very professionalism, which tended to separate the soldier in sentiment from the civilian population, the other a growth of regionalism, which divided the main army groups, of Britain, the Rhine, the Danube, and the East, from one another in spirit.

A marked feature of Roman warfare was the emphasis placed on camp construction. Even on short campaigns a camp with ditch and rampart was laid out as a base for attack and a safe retreat in the event of defeat (see CAMPS). During the Republic these camps were usually temporary, but in the scheme of frontier defence gradually perfected in the Principate permanent garrisons for legions and *auxilia* were established (see LIMES). The defensive attitude which this system inevitably incul-

cated finally proved to be a weakness, and it was necessary in the fourth century to divide the army permanently into a frontier force and a field army of higher status (see ARMIES, ROMAN).

Two methods of advance were commonly adopted. If attack was not expected, the army moved in one long column with a vanguard of scouts and cavalry, which also protected the flanks and rear (Joseph. *Bj* 3. 6. 2). If danger was anticipated, a formation easily convertible into an *acies* was adopted (*agmen quadratum*, Tac. *Ann.* 1. 51).

Despite the technical difficulties and the lack of maps more detailed than itineraries (q.v.), converging movements involving long marches and careful synchronization were increasingly attempted and sometimes succeeded. On the whole Roman strategy aimed at the destruction of the enemy in pitched battle rather than at a war of attrition.

WAR, RULES OF. These, like much other international law, depended on custom and showed a constant conflict between the higher standard of the best public opinion and harsher measures permitted by usage, while passion and expediency frequently caused the most fundamental rules to be violated. Thus, the temptation to profit from a surprise at times led to the opening of hostilities without a declaration of war. Probably the law most generally observed was that of the sanctity of heralds, for heralds were essential to communications between belligerents. Nor did Greeks frequently refuse a defeated army a truce for burying its dead, for the request of such a truce meant an admission of defeat and usually was followed by retreat. Beyond this there were few restraints except humanitarian considerations and the universal condemnation of excessive harshness. Plundering and the destruction of crops and property were legitimate, and were carried on both by regular armies and fleets, and by informal raiding-parties and privateers, and even the sanctity of temples was not always respected. Prisoners, if not protected by special terms of surrender, were at the mercy of their captors, who could execute them or sell them into slavery. The warfare of the Hellenistic Age was somewhat more humane, though with the actions of the Achaean general Aratus against 'tyrants' and still more with the wars of Rome and Philip V deterioration began once more. Roman warfare at its worst was extremely cruel and sometimes went to the length of killing all living things, even animals, in cities taken by storm, but it was often tempered by mercy. Though surrender (*deditio*) gave full power to the captors, it was unusual to use extreme measures against a city that surrendered and appealed to the *fides* of Rome. The protection of the rules of war was not extended to pirates and not always to barbarians.

The sources are ancient accounts of wars, especially those of Thucydides, Polybius, and Livy.

WATER had several functions in the ancient world. First, although hygienic standards were not comparable to ours, cleanliness was very highly valued. The Greeks inherited bathing practices from Minoan-Mycenaean civilization, and developed them, both in domestic life and in public

baths (esp. also in the *gymnasia*). The Romans transformed these into a regular social institution (see *NIPTIS*). Secondly, water was a primal element in cosmogonic thought. This applies equally to philosophy (see *THALES*) and to the early mythical cosmogonies (on which cf. Kirk-Raven, *Presocratic Philosophers*, ch. 1, esp. 41 ff. and for Oceanus as the source of all 11 ff.). Thirdly, it was (together with fire) very important in purificatory and other religious rites. The new-born child, the bride (cf. the use of *loutrophoroi*) and bridegroom, the bodies of the dead and the mourners, the initiates (see *MYSTERIES*), and the consultants of oracles were purified by water; the prophet received inspiration by drinking from the holy source. Sea water and water from natural springs were considered particularly efficacious. As regards spring water (see *SPRINGS*), this has two aspects, both connected with the nether world. First, it is, apart from its purificatory function, a giver of fertility to all nature. Second, it has the purely chthonic function of serving the dead, who are 'thirsty' (cf. the di-pi-si-po-i on Pylos tablets). Water, therefore, was a usual gift to the dead, together with other liquids. In the texts on gold plates, usually labelled 'Orphic', the soul is 'parched with thirst' and wants to drink the water of Memory. In the eschatological myths of Plato and Virgil, *Aeneid* 6. 714, 749, the souls drink the water of Oblivion.

WEAVING. The weaving of cloth for ordinary household use in Greece and Rome was usually done at home. The more elaborate forms of weaving were left to professional craftsmen, and the best specimens of their work, often imported from Persia, Egypt, and Phoenicia, seem by the descriptions in literature to have been equal to the finest modern tapestry. These were all made by hand on an upright loom (*ιστός*, *tela*) differing very little in principle from that used by Penelope in the *Odyssey*. Its operation was as follows.

The framework was simple: two upright posts joined at the top by a transverse beam (*ζυγόν*, *jugum*). To this beam were fastened the threads of the warp (*πρίον*, *stamina*) with weights attached at the bottom to make them hang straight. These threads were then divided into two groups by means of two horizontal rods (*καρῶνες*, *arundines*) so that the shuttle (*κεκρίς*, *radii*) might pass alternately over and under them. The warp was much stouter than the weft thread, which was placed on a bobbin (*πίρρη*, *panus*) revolving on a cane and delivering the thread through a hole in the front of the shuttle. After the shuttle had passed to and fro several times the weft was driven upwards by a comb (*κρέις*, *pecten*) the teeth of which were inserted between the warp threads. For weaving in its simplest form this was all that was necessary; when a pattern was required a system of leashes and heddles, such as we have now, was used and worked by hand. In early times the web began at the top and the weaver worked standing; but at some time in the last century B.C. the Egyptian fashion of sitting and starting at the bottom was introduced in Rome.

In the process of weaving, rich robes for women or for goddesses were often decorated with *θήρια* or *βαϊδάλα*—elaborate patterns of flowers, animals, or human figures. Vase-paintings, particularly of the geometric and archaic periods, show goddesses or other female beings wearing garments with deep bands of such figures. It is probable that the epithets in *-θρονος* (*ποικιλόθρονος*, *χρυσόθρονος*, *ἀργυρόθρονος*, *εὐθρονος*, etc.), applied in the epics and elsewhere in Greek literature to female beings, may show the root word *θήρια*, not *θρόνος*, and may denote 'wearing

garments with bright (or golden, or silver, or fair, etc.) figures'.

WEIGHING-INSTRUMENTS. The balance (*σθαβύος*, *libra*, *bilanx*) of two pans at equal distances from the point of suspension is an invention of primitive times; in Mycenaean tablets it is the symbol for the largest unit of weight, and Homer is familiar with its use, which persisted through antiquity. The steelyard, in which the rod is unequally divided, the object to be weighed being suspended from the short arm against a sliding weight on the longer, does not appear before Roman times (*statera*: originally *statera campana*, from an alleged Campanian origin); but from its greater convenience it became the most popular form of balance. Examples in museums show great variety; several scales and as many suspension-points may be combined; the pans may be replaced by hooks or by receptacles for liquids. *Trutina* is a pan-balance for large masses; *momentana* and *moneta* are for small objects, or coins.

F. N. P.; M. L.

WEIGHTS. Weights of the Greek Bronze Age are usually flattened cylinders of stone or metal, incised circles on the upper surface indicating the denomination. Other forms are the duck and bull's head, the slingstone of haematite, and from Cnossus comes a flattened stone pyramid, the weight of a light talent (29 kg) or of a standard copper ingot. Several standards appear to have been current, extant Minoan weights having been related to the Egyptian, Babylonian, and Phoenician systems.

Mycenaean texts from Cnossus, Pylus, and Mycenae present a system of weights in which the largest unit is equal to 30 of the next, which is made up of four smaller units, etc. The absolute value of the largest unit may be somewhat under 30 kg.

The typical weight of historic Greece is a square plaque of lead with a badge, and sometimes the denomination, the name of the issuing city, or other official guarantees on the top in relief. The principal types on the most widespread series of Attic weights are the astragalos (stater), dolphin (mina), amphora (one-third stater with half-amphora as one-sixth), tortoise (one-fourth stater with half-tortoise as one-eighth). There were many other forms, as caprice or local custom dictated. Roman weights show less variety, the common form being a spheroid of stone or metal, with flattened top and bottom; the denomination is generally expressed in punctured characters on the top.

Several weight standards were used in Greece; the principal ones were the Aeginetic, traditionally associated with Pheidon of Argos, and the Euboic, introduced by Solon into Attica. The Attic-Euboic in later times tended to oust the Aeginetic. The historical origin of these standards is disputed; the Greeks held that they were based on natural units, e.g. in the Attic-Euboic system on the barley-corn, of which twelve went to the obol. Extant weights often show considerable variations from the norm. A theoretical Greek table is:

	Attic-Euboic standard	Aeginetic standard
The obol, or metal spit	0.72 gm	1.05 gm
The drachma, bundle of six spits	4.31 "	6.30 "
The mina, 100 drachmae	431.00 "	630.00 "
The talent, 60 minae	25.86 kg	37.80 kg

The talent represented a man's load. The Attic-Euboic mina weighed almost a pound avoirdupois.

The Roman system was based upon the pound, *libra*, of 327.45 grammes = 0.721 of the pound avoirdupois, which was divided into 12 ounces, *unciae*. The names and symbols of the subdivisions are:

<i>libra</i> or <i>as</i>	1 pound	℔
<i>denum</i>	11 oz.	SS = =
<i>denarii</i>	10 "	S = =
<i>denarii</i>	9 "	S = =
<i>bes</i>	8 "	S = =
<i>septunx</i>	7 "	S =
<i>sems</i>	6 "	S =
<i>quincunx</i>	5 "	SS = =
<i>triens</i>	4 "	SS = =
<i>quadrans</i>	3 "	SS = =
<i>sextans</i>	2 "	SS = =
<i>uncia</i>	1 "	℥
<i>remuncia</i>	1 "	℥
<i>scuticus</i>	1 "	℥
<i>textula</i>	1 "	℥
<i>semisextula</i>	1 "	℥
<i>scriptulum</i>	1 "	℥

WIND-GODS were worshipped both by the Greeks and the Romans. Their ruler, Aeolus, might shut them up in a sack (Homer), but they were also regarded as well-defined personalities (so especially Boreas and Zephyrus). Originally they were represented as horses (the swift-footed horses of Achilles are the offspring of Zephyrus and one of the Harpies), later as anthropomorphic, often winged (under oriental influence). Homer speaks of four winds (later also the traditional number), Hesiod names three as children of Astraeus (the Starry Man) and Eos (the Dawn); the 'Tower of the Winds' at Athens has eight. The winds were regarded as fertilizing or impregnating, and astrologers assigned them to the planet Jupiter; they were also regarded as destructive, and their cult had a corresponding character (a black lamb is sacrificed to the 'typhos' according to Aristophanes, *Ran.* 847-8). The Athenians were especially interested in Boreas, for whom they organized a state-cult because he destroyed a large part of the Persian fleet. (Dedication to the winds at Pergamum, *Ath. Mitt.* 1910, 547.) Even magic practices were employed in order to conciliate the winds (cf. the 'windmills' at Corinth, Hesych, s.v.).

In Italy the name of the north wind (*aquilo*) still reminds us of the idea of the wind as a mighty bird. Here the west wind, Favonius (Zephyrus), was the favourite. The Romans had a temple of the *Tempestates* (near to the Porta Capena) from the third century B.C. In imperial times the winds were often represented on sarcophagi.

WINE (cf. VITICULTURE). Both in Greece and in Italy wine, which (except in ritual and as medicine) was almost always diluted with water, formed part of the staple diet, and even slaves were allowed their ration. In both countries the grapes were gathered, trodden, and then pressed in wedge, beam, or screw presses (all of them classical inventions). The juice that flowed before (*πρότρυπος*) or during treading was separated from that produced by pressing, which was always considered second rate. A third-rate wine (*στεμφυλίτης*), produced from a further pressing of the lees mixed with water, was drunk only by the very poor. Some of the juice (*γλεύκος*, *mustum*) was used at once; but the greater part was

stored in cellars in large pottery fermenting vats (*πίθοι, dolia*), often smeared with resin or pitch, in which it was left to ferment for about six months with frequent skimming during this period. In Rome, where by the first century B.C. Italian wines had largely replaced the earlier Greek imports, fermentation sometimes took place in the open air or, in jars (*amphorae*), in the upstairs storeroom (*apotheca*), which was normally reserved for wine that had been filtered after fermentation through cloth or metal sieves, transferred to jars, and sealed and labelled. (For trading purposes, however, large skins [*ἀσκόι, cullei*] and, in Roman times, wooden casks were also used.) During fermentation the Romans sometimes added inspissated must (*defrutum*) to increase the alcoholic content. The Greeks found it difficult to arrest fermentation completely, with the result that their wines normally had to be drunk within 3-4 years. The Romans took elaborate steps (including sometimes heat treatment in the *fumarum*) to stop fermentation; but they too normally drank their wines within 3-4 years, though some Italian wines took 10-15 years to ripen, and there are occasional references to much older vintages. Wines were classified either by colour (black, red, white, yellow) or by taste (dry, harsh, light, sweet), and artificial additions to improve lustre, bouquet, or taste were not unknown. Very many different varieties, usually based on locality, are enumerated by ancient authors (especially Pliny, *HN*, bk. 14, Athenaeus, bks. 1-10), with Chian, Thasian, Lemnian, and Coan among the Greek, and Setine, Caecuban, Falernian, and Alban among the Italian most highly thought of. In general, wine was so central a feature of Graeco-Roman life that the boundaries of wine-drinking largely coincided with those of classical civilization.

WOMEN, POSITION OF. GREECE.

(a) Upper-class women as pictured by Homer and the tragedians enjoyed a moderately free social life within their own circle. Similar conditions are discernible in Sparta among Spartan women, in Lesbos (Sappho's circle, q.v.) in tyrants' families, and in Athens before the radical democracy (Plut. *Cim.* 4). Except at Sparta, however, women did not certainly have the right to dispose of property, and all women, even of the highest class, spun, wove, and made clothes.

(b) Middle- and lower-middle-class women are known mainly from democratic Athens. Their lives were much more restricted, since they were married very early in life (too early in Xenophon's opinion (*Lac. Pol.* 1, 3-6) and in Plato's (*Resp.* 460 d-e)), and stayed almost entirely in their homes, being regarded as responsible for the three duties of raising children, producing clothes, with their maidservants' help, protecting the house (Xen. *Oec.* 7, 17-37). Some women received elementary education, knew something of civic affairs, and had a considerable influence on their husbands; all took part in the family's religious life, and shared in that of the State. They suffered from the middle-class snobbery which ordains that gentlemen should not work (Xen. *Mem.* 2, 7, 2-12). Women had no political rights and could not act in law except to divorce their husbands (by *ἀπολκείδω*) and give evidence under oath; they could not own property, but the State took elaborate precautions to protect them from being left destitute, and to secure the marriage of orphans and *ἐπίκληροι* (girls without brothers), and to ensure that the elderly were protected (Arist. *Ath. Pol.* 56, 6-7). The requirement (after 451 B.C.) that citizens must have both parents citizens, and formally married, ensured that almost all citizen-girls would marry; public opinion regarded failure to secure

marriages for womenfolk as discreditable. However, the above regulation also created a preoccupation with chastity, which caused young women to be excessively guarded. Older women, especially widows, had more freedom and independence.

(c) Poor women, especially widows, went out to work; known occupations include spinning for pay (Hom. *Il.* 12, 433-5), wet-nurse (Dem. 57, 31-35), selling ribbons (ibid.), festival garlands (a soldier's widow), bread, potherbs in the market, etc. (Ar. *Thesm.* 446-52, etc.). Foundlings, non-citizens, and slaves often became kept women, either concubines (a class recognized at law, Dem. 23, 53-6), or courtesans (*τραπαι*), who were often highly educated and talented, and acted as the female company at men's social gatherings. Hetaerae (q.v.) also included flute-girls and other musicians who entertained at rowdier parties. The lowest class were common prostitutes (*πόρναι*), who frequented the lodging-houses of Peiraeus. The trade of keeper of girls (*πορναφισκός*) was followed by retired hetaerae, hetaerae sometimes married young citizens, but such marriages did not usually last long (Isae. 3, 28-9); the marriage of Pericles and Aspasia (q.v.) was exceptional, as was their son's receipt of citizenship.

PHILOSOPHERS' VIEWS. Plato (in *Larev*) abandoned his attempt (in *Republic*) to oust the family from its central position in Greek society; Aristotle accepted it as basic (*Pol.* 1, 1, *Nic. Eth.* 8, 12). Both believed that men and women should have the same education and training; Plato approved of women as 'Guardians'. Both advocated controlling the size of their city's population, and regulating the family as the focus of man's acquisitive instincts. Cynics (e.g. Crates 2 q.v.) rejected family life; Stoics (e.g. Musonius q.v. Rulus) supported ideas of equality for women.

HELLENISTIC AGE. Royal women enjoyed great influence and took a large part in dynastic intrigues; many of the Ptolemies (qq.v.) married their sisters. Upper-class women in Alexandria enjoyed considerable freedom (Theoc. *Id.* 15), and papyri (private letters etc.) show widespread literacy among the Greeks of Egypt. The society of New Comedy (q.v.) has some social contacts between the sexes, but the situations portrayed do not suggest a socially mature society.

ROME. In early Rome *paterfamilias* (see *PATRIA POTESTAS*) was all-powerful; his wife (like his children) owned no property; she was *in manu*, and was protected financially only by her position *filiae loco* and by the difficulty of divorce, but marriage without *manus* (q.v.) antedated the XII Tables. Thereafter women had to have a guardian through whom alone they could conduct important business; until Augustus only Vestal Virgins (q.v.) were excepted; thereafter women with three children became independent, freedwomen with four.

Upper-class Roman women were influential; the republican senatorial class was very small and extensively intermarried; senators' houses were used for much public business and for administering *clientelae*. Many women were educated and witty (*sermone lepido*, *ILS* 8430, and Sulpicia's poems, q.v. 1); some craved power (Fulvia, q.v.); many remained domesticated (Cornelia—Prop. 4, 11, 'Turia' q.v.). Divorce and adultery were frequent (e.g. Clodia q.v.), and were attacked by Augustus' legislation (q.v.), although its success was limited (Juvenal 6 etc.).

Middle- and lower-class women are little known; peasant life probably changed little; women managed the clothing trade (evidence at Pompeii, q.v.); literature (Plautus, Horace, elegiac poets, satire, q.v.) mentions courtesans, etc.; after Augustus, prostitutes, procuresses, and actresses suffered from legal disabilities.

The breakdown of the patriarchal system liberated

women of the citizen class, but deprived them of their importance for marriage. Augustus allowed any non-senatorial Roman to marry a freedwoman, and the *de facto* marriages of soldiers were legalized and their children were enfranchised.

For older views see *Companion Gr. Stud.* 610 ff.; *Comp. Lat. Stud.* 185 ff.

WORSHIP, HOUSEHOLD. A Greek householder might have a particularly close association with some god or hero (as Ariston king of Sparta with Astriabacus, *Hdt.* 6. 69. 3; Pindar with Alceon, *Pyth.* 8. 56 ff., and with the Mother of the Gods, *Pyth.* 3. 77 ff.: for private *sacra* cf. Theopomp. ap. Porph. *Abst.* 2. 16), but this was exceptional, and no part of domestic cult proper. The centre of the latter seems to have been the hearth, respectful treatment of which is recommended as early as Hesiod, *Op.* 733-4. At the ordinary family meals it was customary to begin by offering a little of the food, probably to Hestia (q.v.); Theophrastus in Porph. *Abst.* 2. 20). Before drinking wine, which formed a regular part of the meal, a little was poured on the floor to the Good Daimon, i.e. the luck of the house, and a little drunk neat, thus establishing a communion with him (cf. W. W. Tarn, *JHS* 1928, 210 ff.; Athenaeus, 692 ff.; *Ar. Eq.* 85 (with schol.), 106). After a more formal dinner, when the tables were cleared and the drinking-bout (*symposium*) began, it was customary, at all events in Athens, to offer three libations, to Zeus, the heroes, and Zeus Soter (Aeschylus, fr. 55 Nauck; see further Cook, *Zeus* ii. 1123, note 7). Of these, Zeus Soter is not the

great Zeus, but rather a domestic deity, see H. Sjövall, *Zeus im altgr. Hauskult* (Diss. Lund, 1931), 85 ff.; see the whole dissertation for various domestic deities called Zeus, including Zeus Ktesios (53 ff.), who is hardly more than a deified store-jar in origin; cf. Cook, 1092 ff. Nilsson, *GGR* i². 402 ff. A householder also made private celebrations of recognized public festivals (Nock, *Harv. Theol. Rev.* 1936, 85, n. 105; cf. *SIG* 695, 86 ff.).

For Rome cf. CHILDREN, LARES, PENATES, VESTA. The cult was essentially the same as the Greek, though there were marked differences in detail; the objects of worship were the hearth (Vesta), the *minima* of the store-cupboard (Penates), and the Lar Familiaris; but there might be added to the *lararium*, or domestic chapel, at all events in classical times, almost any deity the householder fancied, as is shown by the figures represented in the Pompeian *lararia* (see Boyce in *Am. Ac. Rome* xiv, and add S.H.A. *Alex. Sev.* 29. 2). Cf. *Hor. Sat.* 2. 2. 123 ff. for a domestic cult of Ceres. See also RELIGION, MINOAN-MYCENAEAN; MEALS, SACRED; VESTA.

There is no treatise on the subject as a whole. The handbooks of private antiquities are inadequate here. Some useful works are cited above; add M. P. Nilsson in *Symb. Philol. Danielsson* (Uppsala, 1932), 218 ff.; id. *Opuscula Selecta* iii (1960), 271 ff.; H. J. Rose, 'The religion of the Greek household', *Euphrosyne* 1957, 95 ff. H. J. R.

WRESTLING. This was a popular exercise among the Greeks. They used a wide variety of holds and throws, many of which are illustrated in vase-paintings. The object was to throw an opponent to the ground, and generally three throws were required for victory. In the major festivals wrestling was the last of the events in the pentathlon (q.v.) and, though weight was in advantage in this event, general athletic ability was required in order to qualify for it. Wrestling was also practised extensively to acquire general physical fitness and was considered particularly valuable, together with boxing, as a part of military training.

R. L. H.

X

XANTHIPPIUS (1), husband of Cleisthenes' niece Agariste and father of Pericles. As a political ally of the Alcmaeonids (q.v.), he probably brought Miltiades (q.v.) to trial in 493 B.C., and he secured his condemnation in 490-489. He was ostracized in 484, but was recalled in the general amnesty before Xerxes' invasion. Elected general for 479 he commanded the Athenian contingent at Mycale and had a large share in this victory. In 478, after a winter siege, he captured Sestos and had the Persian governor and his children massacred.

J. Kirchner, *Prosopographia Attica* ii. 152 f., no. 11169; J. Carcopino, *L'Ostracisme athénien* (1935), 148 f., and *passim*, II. Willich, *Perikles* (1936), 62 ff. P. T.

XANTHIPPIUS (2), a Spartan mercenary captain, helped Carthage against Regulus (q.v.). He reorganized the Carthaginian army and annihilated the Roman expeditionary force, making brilliant use of the Carthaginian elephants and cavalry to outflank and mow down the Romans (255 B.C.). After this victory he left Carthage. The story that he was treacherously killed by the Carthaginians on his homeward journey may be rejected. That he is the same Xanthippus who later served Ptolemy Evergetes is conjectural.

H. H. S.

XANTHUS (1), poet of Magna Graecia or Sicily in

seventh century B.C., mentioned by Stesichorus (*Ath.* 12. 513 a), who is said to have drawn on his *Oresteia* for his own (*ibid.*). He said that Electra was originally called Laodice, but had her name changed by the Argives because she remained unmarried (*Ael. VH* 4. 26).

J. M. Edmonds, *Lyra Graeca* (Loeb repr. 1952), ii. 12-13. C. M. B.

XANTHUS (2) of Lydia, author of *Λυδικά* in four books, was a contemporary of Herodotus, coupled with Hellanicus and Damastes (qq.v.) as 'extending down to the time of Thucydides' (*Dion. Hal. De Thuc.* 5). Ephorus (*Ath.* 12. 515 d) says that Herodotus used him, but the evidence of the fragments is inconclusive. Surviving fragments illustrate his taste for romance and folktales (often of non-Greek origin) and speculation about geological changes in the countryside, in the Herodotean manner. Nicolaus (q.v.) of Damascus records many details of Lydian history and legend not mentioned by Herodotus; the language he uses in these passages retains Ionic forms and traces of a style reminiscent of Herodotus, and he is probably using Xanthus or a later adaptation of his *Lydiaca*. See also LOGOGRAPHERS.

FHG i. 36-44; iv. 628-9; *FGH* n. A. 90 (Nic. Dam.), iii C. 765. L. Pearson, *Early Ionian Historians* (1919), ch. 3; H. Diller in *Navicula Chilonensis, Stud. in hon. F. Jacoby* (1956), 66 ff. L. P.

XENAGORAS (fl. c. 90 B.C.), a Greek, wrote *Χρόνοι* (Chronologies) of Greek (and Italian?) towns, and *Περὶ νήσου*.

FGrH ii. 240.

XENARCHUS (1), Sicilian mime-writer (see *MIMUS*) of the late fifth century B.C., son of Sophron (q.v.).

Arist. Poet. 1417^b3; Kaibel, *CGF*, p. 182.

XENARCHUS (2), Middle Comedy poet, of considerable frankness and liveliness; 8 titles survive, mainly from daily life. Fr. 1, parody of tragic style: fr. 7, illegal watering of fish; fr. 14, happy cicadas, their wives have no voice.

FCG iii. 614 ff.; *CAF* ii. 467 ff.

XENOCLES (1), son of the Elder Carcinus (q.v. 1), is said (*Acl. VII* 2. 8) to have defeated Euripides in 415 B.C. with a group of plays consisting of *Oedipus*, *Lycaon*, *Bacchae*, and *Athamas* (satyr). His *Lycimnius* was parodied by Aristophanes (*Nub.* 1264–5), and there are contemptuous references to him in *Ar. Thesm.* 169, *Ran.* 86. Epithets applied to him (*μηχανοδόφης*, *δωδεκαμήχανος*) may refer to a fondness for strange mechanical devices (*TGF*, p. 770).

(2) Son of the Younger Carcinus (q.v. 2), wrote tragedies in the fourth century B.C. (schol. *Ar. Ran.* 86).

A. W. P.-C.

XENOCRATES (1) of Chalcidon, son of Agathenor, disciple of Plato and head of the Academy from 339 to 314 B.C. He is presented to us as a man of impressive personality, with a combination of austere dignity and kindness which exercised a great influence on all who came in contact with him. He was generally respected in Athens and was employed by the citizens as ambassador to Antipater in 322 B.C.

His philosophical contributions, so far as we can reconstruct them from the scanty evidence, were less impressive. He seems, in general, to have attempted to reproduce Plato's thought in a stereotyped and formalized system, though on one or two points he probably preserved the correct tradition of interpretation as against Aristotle. He also interested himself in giving a systematic account of the nature of the gods and daemons and their relations to the heavenly bodies, in a way which foreshadowed the fantasies of later Neoplatonism. From the titles of his works we may conjecture that his chief interest lay in moral questions, but rather in the direction of teaching a practical morality than of ethical analysis, a line which his immediate successors in the Academy appear to have followed. His only known excursion into mathematics issued in a defence of 'indivisible lines', which Aristotle thereupon proved indefensible.

R. Heinze, *Xenocrates* (1892); S. Pines, 'A New Fragment of Xenocrates', *TAPA* 1961.

G. C. F.

XENOCRATES (2) of Aphrodisias, physician of the time of Nero and the Flavians (54–96).

WORKS. *Περὶ τῆς ἀπὸ τοῦ ἀνθρώπου καὶ τῶν ζώων ὁφέλεις*, full of superstitious means of treatment, borrowed largely from previous works such as Ps.-Democritus' *Λιθογνώμων*, a lexicon of gems (frs. ed. M. Wellmann in *Quellen u. Studien zur Geschichte der Naturwissenschaften u. der Medizin*, 1935); *Περὶ τῆς τῶν ἐνδύρων τροφῆς*; *On the healing properties of plants*; *On the names of plants*; *On the meaning of the flight of birds*.

Fr. ed. J. L. Ideler in *Physici et Medici Graeci Minores* (1841), i. 121.

W. D. R.

XENOPHANES of Colophon left home at the age of 25 (probably on the Persian conquest of Ionia in 545

B.C.) and lived an exile's life for at least sixty-seven years (fr. 8 Diels), at some time in Zancle and Catania, and latterly perhaps at the court of Hieron of Syracuse. He is said to have written epic verses on the Foundation of Colophon and the Colonization of Elea, but extant fragments are either from his *Satires* (Σάλλαι) in hexameters and iambs (including those traditionally attributed to a philosophic poem) or from elegiac occasional pieces.

An accomplished and original writer in the tradition of Tyrtaeus and Solon, Xenophanes became the poet in Magna Graecia of the Ionian intellectual enlightenment. In ruthless criticism of Homer and Hesiod he denies that the gods resemble men in conduct, shape, or understanding; there is a single eternal self-sufficient Consciousness, which, without stirring, sways the universe (with which it is itself identical) through thought. His physical theories are based on keen observation but are clearly dependent on Milesian science, as his theology may be on ideas of Pythagoras. In his elegies he turns his criticism to society, denouncing the accepted canons of *ἀρετή* (athletic and military prowess) as of less social value than his own intellectual achievement. Throughout he claims for his views not truth but probability and propriety. Neither sceptic nor mystic, he is more a searching and constructive critic of convention than a systematic thinker. But he is named by Heraclitus in the same breath with Hesiod, Pythagoras, and Hecataeus, and Plato treats him, perhaps seriously, as a founder of the Eleatic school. As the first writer to consider the impact of natural theology on conduct he exercised a lasting influence on religious thought.

A. H. C.

XENOPHON (1). LIFE. Xenophon, the son of Gryllus of the Athenian deme Erchia, lived from c. 428/7 B.C. to c. 354 B.C. By his wife Phileasia Xenophon had two sons, Gryllus and Diodorus, of whom the former died in the battle of Mantinea in 362 B.C. Xenophon was born of a comparatively wealthy family, but his life was not easy and undisturbed, and his various experiences had a corresponding effect on the sympathies and interests which he reveals in his writings. Xenophon approached maturity at a time of oligarchic revolution at Athens and perhaps participated in the battle of Arginusae, which was the occasion of unhappy political events. As a young aristocrat, a member of the cavalry, and an associate of Socratic circles he probably found life politically difficult during the oligarchic revolution and even precarious after the democratic restoration, and left Athens in 401. In that year, at the invitation of Proxenus and in spite of Socrates' advice, he joined the army in Asia Minor which turned out to be in the service of Cyrus who aspired to the Persian throne. After the failure of the expedition, the Anabasis, Xenophon was elected a general and extricated the army which came to Trapezus in 400. After service with Seuthes of Thrace he offered the troops under his command to the Spartan general Thibron and campaigned in Asia Minor with him and his successor Dercylidas in 399/7. It was probably in 399, the year of Socrates' death and a time of difficulty for Socratic associates, that Xenophon was formally exiled. His sons were born in the following years. In 396/4 he served under the Spartan king Agesilaus, to whom he became strongly attached. When Agesilaus was recalled at the start of the Corinthian War, Xenophon accompanied him and was present at the battle of Coronea in 394, when Spartan forces were ranged against his native Athens. Unable to return home Xenophon was allowed to stay at first with his family in Sparta, and was then presented by the Spartans with an estate near Olympia,

at Scillus. It was while he was at Scillus that Xenophon was elected Spartan *proxenos* for the entertainment of Spartans visiting Olympia. In 371, in defiance of Sparta, Elis claimed Scillus and Xenophon was obliged to leave his estate there, whence he and his family went to Corinth and stayed in the region of the Isthmus. As relations between Athens and Sparta improved, the decree of exile was rescinded c. 368. In 366/5 when the Athenians were expelled from Corinth he returned to Athens, where he lived until c. 354, when he died, possibly on a visit to Corinth (D.L. 2. 56).

2. **WORKS.** (1) **Hellenica** (*Ἑλληνικά*). As it stands the work is a history of Greek affairs, in seven books, from 411 to 362. The work, however, was neither conceived as a unity, nor moulded into one. It consists of three major sections. Books 1–2, covering the years 411 to 403, are a continuation of Thucydides. He probably used Thucydides' notes to 2. 3, 10, and continued his annalistic method; as Xenophon was then in Athens, books 1–2 were centred on Athens. Books 3. 1 to 5. 3, covering the years 399–379, were written at Scillus c. 379/8. He left a gap for the years 402 and 401; and the part of the *Anabasis* which had already been written covered what he wanted to say for 401–399. Book 3 was very much based on Xenophon's experiences with Thibron, Dercylidas, and Agesilaus; for book 4, covering 395–389, Xenophon relied on his memory and to a great extent on Peloponnesian sources. He displays little knowledge of Athenian politics or sources and possibly wrote for a limited Spartan circle. When he wrote these books Xenophon was disillusioned by Sparta's conduct over the King's Peace and his attitude was more anti-Theban than pro-Spartan. The remainder of book 5, covering 379 to 375, was written at Corinth, c. 369. Books 6–7, which draw on a wider variety of sources, were written at Athens after 362, at which point he ended his narrative. It was then that the various sections were probably published together without revision and 2. 4, 43 was added as a link to cover the gap in Athenian history from 403 to 401. Significantly Xenophon did not mention the Common Peace (*κοινὴ εἰρήνη*) or the Second Athenian Confederacy.

(2) **Anabasis** (*Κύρου ἀνάβασις*), an account, now in seven books, of the expedition of the Greek mercenaries under Cyrus and of their return to safety (401–399). The first part to 5. 3, 6, dealing with the expedition proper, was written soon after 386 at Scillus when peace had been restored between Persia and Sparta. Since Xenophon had participated in the *Anabasis* and then supported Agesilaus' campaigns in Asia Minor he published the first part under the pseudonym of Themistogenes of Syracuse (Xen., *Hell.* 3. 1, 2). Whereas the first part is calm and amusing, that from 5. 3, 6, written about 377, is tense and aggressive and Xenophon casts aside the pseudonym and magnifies the importance of his role in order to answer his critics both among those who served and among official circles at Sparta.

(3) **Cyngeticus** (*Κυνηγετικός*), a treatise on hunting the hare especially, but also wild boar and deer, written early in Xenophon's literary career, perhaps at Scillus. Xenophon is concerned with the educational value of hunting in developing character and in training for war, and violently attacks the morally subversive effects of the sophists.

(4) **Spartan Constitution** (*Λακεδαιμονίων πολιτεία*), written c. 388 in a mood of gratitude to the Spartans who had settled him at Scillus. It is a laudatory and uncritical account of the Spartan system, which attracted the attention of the philosophers for its apparent stability. Ch. 14 is a partial palinode possibly written after 371, when Xenophon had become disillusioned with Spartan foreign policy and designed to excite notice at Athens.

(5) **Apology** (*Ἀπολογία Σωκράτους*). During his exile Xenophon probably kept in touch with philosophical developments through the schools at Elis and Phlius, and perhaps also through Callias and Hermogenes. Professing to record the words of the latter, Xenophon sets out to give a better interpretation of Socrates, some fifteen years after Socrates died, showing that Socrates was not incompetent and preferred to die.

(6) **Memorabilia** (*Ἀμνημονεύματα*), recollections of Socrates in four books, of which 1–2 were written c. 381, and 3–4 c. 355/4. Books 1–2 consist of a defence absolving Socrates from the charges of 399 and deal with matters of education and the dangers of youth, which were perhaps of interest to his youthful sons. Books 3–4 deal with problems of wealth and management of household and State, which probably never concerned Socrates but which were of interest to Xenophon and of current concern in Athens.

(7) **Oeconomicus** (*Οἰκονομικός*), dialogues on estate management between Socrates and Critobulus (1–5) and Socrates and Ischomachus (7–21), perhaps published c. 362/1, but the dialogue with Critobulus may be contemporary with *Memorabilia* 1–2 as it is concerned with the good family-life and moral codes upheld by the countryman—a matter of importance when Xenophon's sons were maturing on the estate at Scillus.

(8) **On Horsemanship** (*Περὶ ἵππικης*), the oldest extant complete work on the subject. It is an authoritative work written by an expert; possibly compiled c. 380 for the instruction of Xenophon's sons.

(9) **Symposium** (*Συμπόσιον*) consists of pleasant recollections of an imaginary party held at Callias' house c. 422 with Socrates as one of the guests. Xenophon possibly aimed to pay homage to Socrates after returning from exile, but the work may have been part of Xenophon's attempt to re-establish himself politically with Callias, who helped in the *rapprochement* of Athens and Sparta.

(10) **Cyropaedia** (*Κύρου παιδεία*). Plato and others wrote on the problem of finding and educating statesmen and leaders. This work, which is Xenophon's counterblast, is a historical novel, now in eight books, with Cyrus the Elder as the model hero. There is a lengthy treatment of Xenophon's notions on the maintenance of authority and empire, political and military organization, moral reform and the value of family-life. The impressions made by Cyrus the Younger on Xenophon diminished and in the 360s it was apparent that the Persian system was not conducive to efficiency or progress, and so 8. 8, showing the confusion resulting from the death of Cyrus, was written as a palinode. Xenophon's ideas on the family prompted Plato to reply in the 'Laws'.

(11) **Hieron** (*Ἱέρων*), a dialogue between the Elder Hieron of Syracuse and Simonides of Ceos, who visited Syracuse in 476. Xenophon took up the popular theme of the position of tyrants, perhaps as a postscript to the *Cyropaedia*, and discussed whether the position of a tyrant could be a happy one and how a tyrant could secure the goodwill of his subjects.

(12) **Hipparchicus** (*Ἱππάρχικος*), a work on the duties of a cavalry commander, dealing with problems of manoeuvre, organization, supply, and discipline in the State cavalry as matters of urgency. It was perhaps written with an eye to the position of Athens c. 357, when a final chapter on the armour of a horse and knight may have been added to (8) 'On Horsemanship'.

(13) **Agesilaus** (*Ἀγησίλαος*), written in praise of Agesilaus, who died in 360. It includes borrowings from *Hell.* 3–4, but they are given a twist and display Agesilaus as a hero in the Panhellenic cause.

(14) **Ways and Means** (*Περὶ πόρων*), offers a policy of

'peace through strength' for Athens consonant with that of Eubulus c. 355/4. It suggests many practical ways of increasing public resources by stimulating commercial and industrial enterprises.

The Constitution of Athens (*Ἀθηναίων Πολιτεία*), an oligarchic pamphlet written c. 431 by an unknown critic of the policy and system of the Athenian democracy, but conceding that, as democracies go, the Athenian system is efficient. Style and subject-matter preclude the possibility of Xenophon's authorship.

3. Xenophon was one of the most prolific writers of antiquity and the variety of his work surpasses that of most others. His language and style are simple and fluent, containing no highly individualistic or eccentric features, and he has traditionally been considered to represent classical Attic prose at its best. Xenophon also achieved a considerable originality of form; in the *Anabasis*, by relating at length events in which he had participated; in the *Memorabilia*, by relating versions of conversations and personal recollections of Socrates; in the *Cyropaedia*, by employing the form of an historical romance.

In antiquity, if we follow the biography of Xenophon written by Diogenes Laertius, Xenophon was regarded primarily as a philosopher (cf. Cic. *Tusc.* 2. 26) and in more recent times as an historian. But neither approach is sufficient for an appreciation of Xenophon, for neither the historian who turns from Thucydides nor the philosopher who turns from Plato will discover an identical approach in Xenophon. The attitude of Xenophon was less that of the dedicated and inspired scholar than that of the practical Athenian gentleman of cultural and social attainments, who drew upon his own experiences and environment to set down and record for others practical information according to his own interests and from his own point of view. To the extent that his interests were 'utilitarian' perhaps Xenophon could rightly look upon himself as a follower of Socrates. Physical and metaphysical speculations were matters which Xenophon was content to leave to others.

Xenophon's favourite personal interests seem to have lain in hunting and horsemanship, in both of which he displays a scientific and detailed knowledge. He regarded them, however, as pursuits likely to develop a sound physique and virtuous habits which were conducive to good leadership and efficiency, especially in war (*Cyn.* 1. 18; *Cyr.* 1. 1, 16). Xenophon placed great emphasis on the development of such qualities, for in the *Hippiarchus* he gives less prominence to advice on battle tactics than to the moral qualities of a leader, and in the *Oeconomicus* he lays less emphasis on scientific aspects of agricultural and estate management than on the need for efficient management of men, family, slaves, and workers.

In Xenophon's writings we find his attitude to the conventions of family life and religious observances. In the *Oeconomicus* he gives the conventional picture of a man of means and maturity obtaining a youthful wife, who is sufficiently young and malleable to be trained and instructed in her habits and duties according to her husband's notions on the maintenance of the household (3. 10 f.; 7. 32 f. cf., *Mem.* 1. 1, 8; 3. 14). Xenophon reveals his attitude to the treatment of slaves, who respond to kindness and favours, and whose instincts can be trained in the same manner as those of animals by the provident owner (*Oec.* 13. 9; 14. 8-10). Xenophon conformed to the orthodox religious observances of his age. He consulted the Delphic Oracle before joining Proxenus and the Ten Thousand, even if he did so frame his question as to receive the answer which he desired (*An.* 3. 1. 5-6). At the end of the march, although he had made frequent offerings to Zeus, he made a further sacrifice to Zeus the Gracious at the behest of a sooth-

sayer (id. 5. 6, 29). Then, when he was installed at Scillus, he dedicated gifts to Artemis (id. 5. 3. 7-8), for it was to her as well as to Apollo that the huntsman devoted a share of his captures (*Cyn.* 6. 13). Above all, the gods were to be respected, for they were present everywhere (*Mem.* 1. 1, 19), they had the power to grant or deny good fortune (*Oec.* 11. 8) and were inclined to help those who helped themselves (*Cyn.* 1. 6, 5).

Xenophon was an idealist, but one who was prepared to work within the limits of circumstances. At Scillus and Corinth, for example, he was content to record history in so far as he knew of events without searching far afield for news. In the *Ileron* he considered how efficient the rule of one man in a State could be, but instead of devising entire programmes of education based on idealistic and epistemological preconceptions he sought to explain how the ruler ought to present himself to the people and conclude their opinion. In the *De Vectigalibus* he did not speculate on the relevance and morality of material wealth, but set forward practical and inventive suggestions to increase the revenue of State by such means as investment in hotels and accommodations for rent to visitors and investment in slaves to lease to operators (3. 12; 4. 4; 23).

Xenophon was preoccupied with his interests in education, which he considered to be a most important matter (*Ap.* 21), and was of the opinion that a man ought to pursue education to the limits that his material resources permitted (*Cyn.* 2. 1), in order that he might be fitted for the noblest occupation, namely, governing and leading men (*Mem.* 3. 6, 2). It is in the *Cyropaedia* that Xenophon sets out most fully ideas on formal education (e.g. 1. 2, 2), but although discussions are introduced on ethics and concepts such as justice and there is recognition of the need for development of powers of oral communication and of reasoning, the formal programme has a distinct bias toward physical activities, such as patrol duties and hunting. A leader had to be ready to supply active leadership (*Hipp.* 1. 24; *Oec.* 12. 19-20) and not follow the opinion of the masses (cf. *Mem.* 3. 1, 4), who could be misled by demagogues and sophists (cf. *Mem.* 1. 7, 5; *Cyn.* 13. 11).

Just as Xenophon's historical work was affected by his material limitations and circumstances and just as his social ideals reflected his status as a man of means (cf. *Cyn.* 2. 1), so too were his political views affected by his experience. For he was brought up in the Peloponnesian War, in years of demoralizing political and military crisis for the Athenian democracy. In the post-war period he had little experience of normal political conditions until his return, late in life, to Athens. The men whose leadership he had directly experienced were Clearchus, Proxenus, and Menon on the March of the Ten Thousand, and subsequently Agesilaus the Spartan king and military leader. Xenophon consequently developed a sympathy for autocratic and tightly disciplined procedures, but eventually his earlier approval of the Spartan system of organization gave way to disapproval (*Lac.* 14) and he showed signs of recognizing the merits of the Athenian democratic system of the fourth century B.C.

Xenophon probably achieved his greatest popularity among the Romans for his sense of the practical, his support of the aristocratic ideals, and virtues in politics, war, and country life, and for his pursuit of the ideal of 'mens sana in corpore sano'.

XENOPHON (2) **EPHESIUS**, Greek romancer, author of a novel entitled the *Ephesiaca* or *Anthia and Habrocomes* (Τὰ κατὰ Ἀνθίαν καὶ Ἀβροκόμην Ἐφεσιακά). Practically nothing is known about him, and both parts of his name have been suspected by scholars of being spurious. The critics have assigned him to every century A.D. from the second to the fifth: his mention (2. 13. 3) of the Eirenarch of Cilicia, a magistrature which is not attested before Trajan, is an unquestionable *terminus post quem*, and the destruction of the Artemision (A.D. 263)—a temple whose description occurs in the *Ephesiaca*—is regarded as a probable *terminus ante quem*.

His work narrates how a couple of young lovers from Ephesus, soon after being married, became separated whilst on a voyage, and were subjected to all sorts of trials and tribulations (shipwrecks, attacks by pirates and robbers, enslavement, advances by powerful suitors, etc.) which they managed to overcome without ever forgetting, or being unfaithful to, each other, until they met again and returned to Ephesus, where they lived happily ever after.

The traditional plot-ingredients of the genre are all present: the plot itself is so disjointed and unclear that most critics believe the novel (which is in five books) to be the clumsy and lacunose abridgement of a longer original (the *Suda*, in fact, says that Xenophon's novel

was in ten books). Xenophon's characterization is extremely poor (his figures have been called 'bloße Marionetten' by Rohde), and his language, although he often draws from the vocabulary of the Attic Xenophon, is far removed from Atticistic purity and full of vulgarisms.

EDITIO PRINCIPES. A. Cocchia (London, 1726).

STANDARD EDITION. G. Dalmeyda (Paris, 1926, with French translation and excellent Introduction on the dating problem, language, and style, etc.).

COMMENTARY. A. E. Locella (Wien, 1796) (still useful).

CRITICISM. Rohde, *Gr. Roman*, 409 ff.; Christ-Schmid-Stählin ii. 2^a, 810 ff.; M. Schnepl: cf. ad HELIODORUS; E. Mann, *Über den Sprachgebrauch des Xen. Ephes.* (Programm Kaiseislauren, 1896); O. XERXES I O.P. *Khsayārshan*, son of Darius and Atossa, king of Persia 486-465 B.C. He inherited from his father the task of punishing the Greeks for their participation in the Ionian revolt. Securing the co-operation of Carthage, and promises of support from several Greek States, he prepared a great fleet and army, bridged the Hellespont, and dug a canal through the Athos peninsula. In the spring of 480 his forces set out. At first they met with success; the fleet was victorious at Artemisium, the army forced Thermopylae, Attica was laid waste, and the Greeks forced back to their last line of defence, the Isthmus of Corinth. But at Salamis Themistocles with the Greek fleet won a victory which decided the future of Greece. His supplies from Asia cut off, Xerxes was forced to retreat; Mardonius, whom he left in command, was defeated at Plataea, and a final Persian failure at Mycale encouraged the defection of the Greeks of Asia Minor.

Of Xerxes' subsequent career little is known. In his reign the circumnavigation of Africa was attempted. After his defeats in Greece, Xerxes retired to his harem. He built extensively at Persepolis, Ecbatana, etc. But the Empire, though still vast in extent and resources, was weakened by court intrigues, in one of which he was murdered.

Z

ZALEUCUS, the lawgiver of Italian Locri. As his laws are said to have been the first Greek codification, he probably lived c. 650 B.C. His legislation was notorious for its severity. The older tradition (4th c.) seems to have preserved some good material, e.g. his use of the *lex talionis* ('eye for eye') and prescription of exact penalties for each crime. Like other Greek lawgivers, he also issued sumptuary laws. Zaleucus was famous, too, as a conciliator of social factions; the constitution of Locri, however, remained extremely aristocratic. His laws were accepted by many cities of Italy and Sicily. The later tradition about him is mostly legendary (cf. *FGH* 566, F 130 with Jacoby's comment).

Arist. *Pol.* 1274^a, 1^b; Diod. 12, 19^b. F. E. Adcock, *CHJ* 1927; M. Mühl, *Klio*, Beiheft xxii (1929). V. E.

ZALMOXIS (**Salmoxis**) (Ζάλμοξις, Σάλμοξις), the deity of the Getae (Hdt. 4. 94-6). He seems to have been a god of the dead, for the Getae are said to 'make immortal' a man every four years, by throwing him upon spear-points, after charging him with messages for

the other world. Plato (*Chrm.* 156 d) speaks of certain 'physicians of Zalmoxis' and their doctrines; this seems his own invention. Other authors (see commentators ad *loc.*) add nothing but a conjecture of Mnaseas (in Photius, s.v. Ζάμολξις [sic] that he was the same as Kronos (q.v.).

Cf. A. D. Nock, *CR* 1926, 184 ff.

H. J. R.

ZAMA was the name of one or more towns in North Africa. The view that a Zama lay at Sidi Abd el Djedidi, 31 miles north-west of Kairouan, should probably be rejected (cf. L. Poinssot, *Rev. Africaine* 1928, 165 ff.). Further west lay Zama Minor and Zama Regia, unless these should be identified as one town. Modern Jama and Seba Biar are the most probable sites for one or both. Ksar Toual Zouameul or Zammel, 4½ miles east of Seba Biar, is now identified with Vicus Maracitanus, 'attributed' to Zama Regia, and not with Zama Regia itself (Déroche, *op. cit. infra*). The question must remain open until new epigraphic evidence is found. Zama Regia lay in the Numidian kingdom. It was besieged unsuccessfully

by Metellus during the Jugurthine War (109 B.C.); later it was Juba's capital, and after capture by T. Sextius (41 B.C.) it was temporarily destroyed. It may have become a *municipium* c. 29 B.C.; it was a colony under Hadrian (Col. Ael. Hadr. Augusta Zama Regia). Zama is best known as the traditional site of Hannibal's defeat by Scipio Africanus in 202, an identification which rests on no better authority than Nepos. The battle was almost certainly not fought there, although Hannibal camped at Zama before advancing still further west to the actual battlefield which Polybius calls Margaron (otherwise unknown) and Livy Naraggara (Sidi Youssef); it probably lay between Naraggara and western Zama in a plain Draa-el-Metnan, south-west of Sicca Veneria (El Kef).

H. H. S.

ZELA, an ancient temple State of Pontus with a large and fertile territory, and a considerable population of hierodules attached to the land and service of Anaitis and the 'Persian Deities'. Here Mithridates VI (q.v.) defeated Triarius in 67, and Caesar Pharnaces II (q.v.) in 47. Originally under priestly rule, it was one of Pompey's Pontic cities. Under Antony it became a temple State again, in the kingdom of Polemo I (q.v.), but when this was annexed in A.D. 64 it appears as a city again.

T. R. S. B.

ZENO (Ζήνων) (1) of Elea, pupil and friend of Parmenides (q.v.), was probably born c. 490 B.C. (Pl. *Prm.* 127 b). His most famous and perhaps only book was written in his youth and supported Parmenides' monism by drawing pairs of contradictory conclusions from the premisses of its opponents (Pl. *Prm.* 128 c), whence Aristotle (fr. 65) calls him the inventor of dialectic. Thus he argued that, if many things exist, they must each be (a) self-identical and one and therefore so small as to have no magnitude, yet nevertheless (b) infinitely large, since each, if it is not to be nothing, must have some magnitude and every magnitude is divisible into an infinite number of magnitudes (Simpl. in *Phys.* 139-41). Further arguments showed that any group of many things must be both limited and unlimited in number (fr. 3) and both like and unlike, one and many, at rest and in motion (Pl. *Phdr.* 261 d). To the last antinomy probably belong the four arguments for the impossibility of motion paraphrased by Aristotle, *Phys.* 6, 9 (the *Dichotomy*, the *Achilles*, the *Arrow*, and the *Stadium*).

Plato asserts that the 'many things' which Zeno's arguments aimed to prove unreal were physical objects (ὁρώμενα *Prm.* 130 a, 135 e). And in fact the exhaustiveness of the arguments shows that they were not designed to refute a special physical or metaphysical theory; they appear rather to be a systematic development of Parmenides' views about the foundations of the 'beliefs of mortals' and to seek to show that the units of which any plurality must consist cannot be so defined that they can be considered as genuine units.

Though polemical in intention, Zeno's arguments were influential in education (Pl. *Alc.* I, 119 a, *Plut. Per.* 4) and probably also in the development of mathematical and physical views connected with the notions of unity, continuity, and infinity.

Owen, 'Zeno and the Mathematicians', *Proc. Ar. Soc.* 1958, 199 ff.

A. H. C.

ZENO (2) (335-263 B.C.), son of Mnaseas of Citium (Cyprus), probably of Phoenician race, founder of the Stoic school. He came to Athens in 313 and attended the lectures of Polemon, head of the Academy, and of the Megarian philosopher Diodorus ὁ Κρόνος, but was converted to Cynicism by Crates of Thebes. His earlier writings, especially his *πολεμεία*, are said to have been entirely Cynic in outlook. Later he turned to Socratic philosophy through study of the works of Antisthenes, and finally developed his own system. He taught in the Stoa Poikile, a public hall in Athens, from which the name of his school is derived, and soon acquired a large audience, though he tried to keep out the general public and wanted to teach real philosophers only. He became a friend of King Antigonus Gonatas and was invited to stay with him at his court at Pella, but declined and sent his disciple Persaeus instead.

Unlike most of the Socratics he created a complete philosophical system, consisting of logic and theory of knowledge (λογικόν), physics (φυσικόν and θεολογικόν), and ethics (ἠθικόν). In physics he admittedly followed Heraclitus, but was also strongly influenced by Aristotelian philosophy. In logic and theory of knowledge he was influenced by Antisthenes and Diodorus, the Megarian. His ethical doctrine gave great comfort to many during the troubled times of the successors of Alexander. According to this doctrine the only real good is virtue, the only real evil moral weakness. Everything else, including poverty, death, pain, is indifferent. Since nobody can deprive the wise man of his virtue he is always in possession of the only real good and therefore happy.

A. C. Pearson, *Fragments of Zeno and Cleanthes* (1891); von Arnim, *StF* I, 3-72; Diog. Laert. 7, 1-100; M. Polakow, 'Zeno and Chrysippus', *Nachricht. Götting. Gesellsch., Fachgruppe I*, N.F. id. no. 9, id. *Die Stoa* (1948-55).

K. von F.

ZENO (3) of Tarsus, Stoic, successor of Chrysippus as head of the school in 204 B.C. He left behind him few books but many disciples.

Testimonia in von Arnim, *StF* no. 209. See Zeller, *Phil. d. Griechen* iii, 1^a, 45 f.

ZENO (4) of Rhodes (early 2nd c. B.C.), wrote a history of Rhodes from the beginnings to his own times, which Polybius used (with Antisthenes), although he criticized his patriotic exaggeration (Polyb. 16, 14); his tradition may also appear in Diodorus.

FGH II, 523.

ZENO (5) of Sidon (b. c. 150 B.C.), Epicurean, pupil of Apollodorus and probably head of the school between him and Phaedrus. Cicero heard him lecture in Athens in 79-78. Philodemus' *Ἐπὶ παρηγορίας* was a selection from Zeno, and his *Ἐπὶ σημείων* borrows lectures by him. He is probably the source of part of Cic. *Nat. D.* I.

Zeller, *Phil. d. Griechen* iii, 1^a, 384-6.

W. D. R.

ZENO (6) of Sidon, Stoic, pupil of Diodorus Cronus (Diog. Laert. 38, 16).

Zeller, *Phil. d. Griechen* iii, 1^a, 40.

ZENOBIA (Septimia), or in Aramaic *Bat Zabbai*, the second wife of Odaenathus (q.v.). She was perhaps responsible for the murder of her husband and his son by a previous marriage; at any rate she thereupon secured the power for herself in the name of her infant son Vaballathus (q.v.). Gallienus sent Heracianus against her, but he was defeated, and Zenobia, having secured Syria and devastated Bostra (q.v.), in A.D. 269 conquered Egypt, and next year overran Asia Minor except Bithynia. Aurelian at first acquiesced, granting to Vaballathus the same position as his father, but when in 271 Zenobia, not

content with this partial recognition, proclaimed her son Augustus, he marched against her. His general Probus was killed while attempting to conquer Egypt, but he himself reoccupied Asia Minor with little resistance, defeated Zabdas, Zenobia's general, at Antioch and again at Emesa, and finally captured Palmyra and the queen herself and her sons. Having been exhibited at Aurelian's triumph she was granted a pension and a villa at Tibur. Zenobia is highly praised for her beauty, intelligence, and virtue, but was evidently a ruthless woman. She sacrificed to her personal ambition the fortune of her native city, which Odaenathus had by his loyalty to the Empire preserved. See also AURELIANUS.

J. G. Févner, *Histoire de Palmyre* (1931), 103 ff. A. H. M. J.

ZENODORUS, author, between 200 B.C. and A.D. 90, of a treatise *Περὶ ἰσομετρῶν σχημάτων*. Several propositions from it are preserved in the commentary of Theon of Alexandria on book 1 of Ptolemy's *Syntaxis*. He was followed closely in his treatment of the subject by Pappus, whose treatment is, however, more complete. His style is not unlike that of Euclid and Archimedes. W. D. R.

ZENODOTUS of Ephesus (b. c. 325 B.C.), pupil of Philetas, became the first head of the Library at Alexandria (c. 284) and undertook the classification of the Greek epic and lyric poets, some of whom he edited.

WORKS

(1) Lexicography: *Homeric Glossary* (Γλῶσσαι), which often relied on guesswork to give the meaning of difficult words, but opened the way for the scholarly study of language; *Λέξεις ἑθνικάι*, a compilation of foreign expressions occurring in literary texts. (2) Editions (διορθώσεις). His recension of the *Iliad* and *Odyssey*, in which for the first time the poems were divided into twenty-four books, represented the first scientific attempt to get back to the original Homeric text by the collation of several MSS. He marked lines of the genuineness of which he felt doubt with an *obelus* (see SCHOLARSHIP, GREEK, § 3), and altered the text by the transposition or telescoping of verses, by the introduction of new readings, and sometimes even by the insertion of new lines. But the extremely subjective nature of his criteria—he laid great emphasis on *τὸ πρῶτον*—made him sometimes rash in emendation. He produced also recensions of Hesiod, *Theog.*, Anaëreon, Pindar (*POxy.* v. 841).

Monro, *Homers Odysee*, Appendix (1901); G. M. Bolling, *External Evidence for Interpolation in Homer* (1925); M. van der Valk, *Researches on the Text and Scholia of the Iliad* II (1964), 1 ff. J. F. L.; R. B.

ZEPHYRUS, god of the West Wind, sometimes said to be husband of Iris (rainy wind and rainbow), as Alcaeus, fr. 8 Dichtl; a subordinate figure in a few legends, as that of Hyacinthus (q.v.). His parents are Eos and Astraeus (Hes. *Theog.* 379). Cf. WIND-GODS.

ZEUGITAI (ζευγῖται), at Athens, before Solon a name for the citizens of moderate substance, roughly corresponding with the 'farmers' (see EUPATRIDAI) and Demourgoi (q.v.) and so called either from the yoke of oxen (ζεύγος) normally possessed by the former, or as serving in the army in close ranks (cf. Plut. *Pel.* 23), i.e. as hoplites (q.v.). Solon used the name for his third census-class, of men with an estimated annual income of between 300 and 200 *medimnoi* of corn, or the equivalent in other produce or money. In effect, the majority of the farmers and craftsmen of Attica fell into this class and it provided the bulk of the city's force of hoplites, each man furnishing his own arms. Under Solon's constitution the *zeugitai* enjoyed full citizen rights, except that

they were admitted to the minor magistracies only. From the time of Cleisthenes they could be elected as *strategoi* (q.v.), and from 457/6 were eligible for appointment as *archontes* (q.v.). A. W. G.; T. J. C.

ZEUGITANA. The name, of unknown origin, sometimes applied to the northern part of the province of Africa, centred on Carthage. It is used by Pliny (*HN* 5. 23), but then seems to have gone out of use, to reappear in the fourth century when it was occasionally used of Africa (Proconsularis), now much smaller in area after the division of the old province of Africa by Diocletian.

B. H. W.

ZEUGMA (modern *Bâlkis*, opposite *Birecik*), in Syria on the right bank of the Euphrates at its chief crossing, about 70 miles below Samosata. Twin colonies Seleuceia (right bank) and Apamea (left bank) were founded by Seleucus I at this point (Pliny, *HN* 5. 86), which came to be known by the generic name Zeugma ('junction'); it superseded an earlier Zeugma near Thapsacus. As a frontier post and a meeting-place of trade-routes from East and West across the Parthian Empire, it became extremely prosperous. Justinian fortified it against the Sassanids, but in 639 it fell to the Arabs.

M. S. D.; E. W. G.

ZEUS is the only Greek god whose Indo-European origin can be proved with certainty. He is found as 'Father', which attribute is very common in Greek too, among the Romans, Indians, and Illyrians (Jupiter, Dyaus pita, Deipatynos); the name of the German god Ziu (cf. Tuesday) is akin. The word signifies 'sky', and according to a general opinion the bright sky; yet this is of no importance to primitive man, and the cults prove that Zeus is the weather-god, i.e. the sky as the sphere of atmospheric phenomena, thunder, rain, etc. Mountain peaks give weather signs, and Zeus is enthroned on them; Olympus is a pre-Greek word signifying 'mountain'; and among other peoples also the thunder-god became the supreme god. The epithet 'Father' is generally understood according to the Homeric phrase 'Father of gods and men'. But Zeus created neither gods nor men and it is unbelievable that in Indo-European times a nobility traced its descent from Zeus—this is probably due to the heroic Mycenaean age; again, the divine children of Zeus, Athena, Artemis, Apollo, Ares, Dionysus, include pre-Greek and immigrant gods. Consequently 'Father' is to be taken in the sense of *pater familias*, protector and ruler of the family. This implies a moral notion, the maintenance of customary laws; and these, e.g. the respect for suppliants and guest-friends (Zeus Hikesios, Xenios), were always bound up with Zeus. This explains why Zeus was the god of the courtyard and the household (Zeus Herkeios, Ktesios). The Greek State being founded on the family, Zeus was, as Homer shows, the protector of the king and his rights. The Mycenaean age formed the supreme god and the State of the gods after the model of its mighty kings and knights. Zeus is surrounded by recalcitrant vassals who sometimes show him respect, sometimes mock him. He rules according to power rather than according to righteousness, and has innumerable loves and children.

Homer impressed this Zeus upon the Greek mind. In the historical age, although kingship was abolished, Zeus was not dethroned. Zeus became the highest civic god, often with the epithet *Policus* and together with Athena *Poliás*, the old Minoan-Mycenaean palace goddess and protectress of the king. As protector of political freedom he was called *Soter*, *Eleutherios*, and festivals were instituted in his honour. He had little to do with other concerns of the people—agriculture, war, crafts, etc. It was never

forgotten that Zeus was the protector of law and morals. Hesiod invokes him as such in his cry for justice and places Dike at his side. The loftiest conception of Zeus is found in Aeschylus, who enhances his righteousness and overwhelming power. In the Hellenistic age his name was very freely given to the chief deity of any non-Greek tribe or region (the most famous precursor in classical times being Zeus Ammon in Libya). Cosmological ideas were not in any large measure attached to Zeus; Stoic philosophy, however, identified him with its highest principle, fire, which at the same time is the reason which pervades and animates the universe. This idea is expressed very beautifully in the hymn by Cleanthes (q.v.).

Certain myths are important, among them the most peculiar Cretan myth of the birth of Zeus, according to which the child was hidden in a cave in order that Kronos might not swallow it up, and nourished by animals, and the Curetes danced around it. The Cretans told also that Zeus was dead and buried. This is certainly a Minoan conception, the spirit of vegetation, as born and dying annually. This Cretan deity, the *kourios*, who may be the consort of the great vegetation-goddess, was identified with the Greek supreme god. Zeus dethroned Kronos and together with the Olympian gods fought against the Titans and imprisoned them. The Titans are believed to be pre-Greek gods but the evidence is slight. The myth is perhaps modelled on the cosmological myth according to which Kronos dethroned his father Uranus. These myths are mixed up with the folktale motives.

Zeus in art is a kingly, bearded figure, in the archaic period robed, later sometimes naked. Pheidias' gold and ivory enthroned colossus at Olympia was perhaps the most celebrated of all statues in antiquity and set the type for future generations. Pausanias (1. 17. 1) saw in the Heraeum at Olympia an early image of Zeus standing, wearing a helmet; and it is likely that the numerous small bronzes of helmeted warriors from the eighth and seventh centuries found at Olympia represent the god (see E. Kunze, *Olympia Bericht* iv (1950), 123 ff.).

Cook, *Zeus*; M. P. Nilsson, *ARW* 1918, 156 ff.; *GGR* iv 383 ff. and 510 ff. (the Titans). M. P. N., J. L. C., C. M. R.

ZEUXIS, painter, of Heraclea in Lucania, pupil of Neseus of Thasos or Damophilus of Himera. Pliny dates him 307 B.C., and rejects 424. Quintilian dates both him and Parrhasius in the time of the Peloponnesian War. In Plato's *Protagoras* (dramatic date about 430) he is young and a newcomer in Athens. His rose-wreathed Eros is mentioned in Ar. *Ach.* 991-2 (425). He painted Alcmena for Acragas before 406, and Archelaus' palace between 413 and 399. He 'entered the door opened by Apollodorus and stole his art'; he added the use of highlights to shading, and Lucian praises in the Centaur family (an instance of the unusual subjects which Zeuxis preferred) the subtle gradation of colour from the human to the animal body of the female Centaur; his grapes (possibly on the scenery for satyr-plays) were said to have deceived the birds. His figures lacked the *ἥθος* of Polygnotus, although his Penelope was morality itself, and his Helen, for Croton, an ideal picture compiled from several models; *πάθος* rather than *ἥθος* distinguished the Autoboreas with Titan look and wild hair, and the Menelaus drenched in tears. He also painted monochromes on white, and *figlina opera* (clay plaques).

Overbeck, 1077, 1121, 1617 91; Mühlh, 739, O. Brendel, *JDAI* 1932, 191; Runpfl, *Malerei u. Zeichn.* 126. T. B. L. W.

ZOÏLOS (*Ζωῖλος*) of Amphipolis (4th c. B.C.), the cynic philosopher, pupil of Polycrates and teacher of Anaximenes of Lampsacus; is described by the *Suda* as *ῥήτωρ καὶ φιλόσοφος*, by Aelian, *VH* 11. 10, as *κῶων ῥητορικὸς καὶ φογερός*. He was notorious for the bitterness of his

attacks on Isocrates, Plato, and especially Homer. He probably visited Alexandria when the Library and Museum were being established.

WORKS

(1) *Against Isocrates*. (2) *Against Plato*, favourably mentioned by Dion. Hal. *Pomp.* 1. (3) *Against Homer* (*Καθ' Ὁμήρου* or *Κατὰ τῆς Ὁμήρου ποιήσεως* or perhaps *Ὁμηρομάρτυς*, which became the author's nickname). This work was chiefly devoted to severe, though often captious, criticism of the poet's invention, of the credibility of incidents (e.g. *Il.* 23. 100), and of the characters (e.g. *Il.* 1. 50). Aristotle's lost *Ἀπορήματα Ὁμηρικά* was a reply to Zoilus and his followers. (4) *Censure of Homer* (*Ψόγος Ὁμήρου*), probably a declamation. (5) *Panegyric on the People of Teudis*. (6) *On Figures*, a technical rhetorical treatise; his definition *σχήμα ἐστιν ἕτερον μὲν προσποιεῖσθαι ἕτερον δὲ λέγειν* is criticized by Quintilian (9. 1. 14). He was the first to use *σχήμα* in this technical sense. (7) *On Amphipolis*. (8) A history of Greece from the Theogony to the death of Philip of Macedon.

FGH n. A, 71. U. Friedländer, *De Zoilo aliusque Homeri obrectatoribus* (1895). J. F. L., R. B.

ZONARAS, JOHANNES, Byzantine historian and canonist of the twelfth century. A commander of the body-guard and imperial secretary, he retired to monastic life at Hagia Glykieria (isle of Naudro) where he devoted himself to writing. He composed an authoritative commentary to Byzantine Canon Law, commentaries on the poems of Gregory of Nazianzus and on the terminology of religious poetry—and probably the various other exegetic books and lives of saints which go under his name; he is also the author of at least one religious poem. As a historian he wrote an *epitome of histories* which in modern editions is divided into eighteen books: it is a universal history to A.D. 1118 and was composed before 1143 under John II Comnenus. Zonaras never claimed to be more than a compiler and complained gracefully about the lack of books in his little island. For Greek history he mainly used Herodotus, Xenophon, Plutarch, and Arrian. For Roman history to the destruction of Carthage he excerpted Plutarch and the first twenty-one books of Dio Cassius, for which he is our only important source. He was compelled to omit the history of the late Roman Republic because he did not have the relevant books of Dio (he only gives some excerpts from Plutarch's *Pompey* and *Caesar*), but was able to use Dio's books 44-68 and is, together with Xiphilinus our main source for the reconstruction of Dio's books 61-8. For the period after Domitian he followed Xiphilinus instead of the original Dio. He added information from other sources (e.g. Eusebius). Petrus Patricius was his chief source for the period between Severus Alexander and Constantine. The rest derives from various chronicles, not all of which have been identified. Zonaras is especially important as a source for the period A.D. 450-550. His excerpts are faithful in content, but stylistically independent. See DIO (2) CASSIUS.

His works collected in Migne, *PG* xxxviii, cxxxix-cxxxviii. CRITICAL EDITIONS OF THE HISTORIES. M. Pinder-Th. Büttner-Wobst (1841-97); L. Dindorf (1868-75). ON SOURCES. Th. Büttner-Wobst, *Commentationes Fleckesheimianae* (1890), 123 ff.; V. Ph. Bousset, *Hermes* 1891, 440 ff.; F. Millar, *A Study of Cassius Dio* (1964), 2 ff., 195 ff. IN GENERAL. K. Krumbacher, *Gesch. Byz. Lit.* (1897), 370 ff.; Ph. Meyer, *Reallex. Protest. Theol. Kirche* 21 (1908), 715; E. Amann, *Dict. Theol. Cath.* 15 (1950), 3705; G. Moravcsik, *Byzantinoturcica* i (1958), 344 ff. A. M.

ZONAS of Sardis (fl. 80 B.C.) was a distinguished orator, and left a few poetic epigrams in the Greek Anthology. The finest is a poignant epitaph asking Charon to help the little dead boy who cannot walk very

well in his first sandals (*Anth. Pal.* 7. 365); his pastoral pieces in the manner of Anyte (q.v.) are charming too, e.g. *Anth. Pal.* 9. 226 and 312. His family name was Diodorus, and some epigrams appearing in the *Anthology* under that name may be his. G. H.

ZOOLOGY. Excellent early vase-paintings of animals are scattered over the Greek world with special schools in Cyprus, Boeotia, Chalcis, etc. Marine creatures are particularly well rendered. The name for a painter, *zōgraphos*, suggests attention to animal forms. Much accurate observation is displayed on coins and mosaics, both Greek and Imperial, and on some of them the actual species of small marine invertebrates can be easily recognized.

2. With some effort a classificatory system may be read into the arrangements of animals by habit in *On diet* of the Hippocratic Collection. More scientific are various fragments of the Sicilian school on the structure of animals (see ANATOMY AND PHYSIOLOGY, §2). In the true scientific tradition is a work of the Hippocratic Collection (artificially divided under titles *On Generation*, *On the Nature of the Embryo*, and *On Diseases*, book 4) of about 380 B.C. It sets forth in some detail a doctrine of pangenesis astonishingly like that of Darwin (*Animals and Plants under Domestication*, 1868). To explain heredity it supposes that vessels reach the seed carrying samples from all parts of the body. It contains the first account of a controlled biological experiment. 'Take 20 eggs and let them be incubated by hens. Each day, from the second to that of hatching, remove an egg, break it, and examine it. You will find that the nature of the bird can be likened to that of man. The membranes proceed from the umbilical cord, and all that I have said on the subject of the infant you will find in the bird's egg, in which you will be surprised to find an umbilical cord.'

3. With almost the sole exception of this able work, ancient zoology begins and ends with Aristotle. Among his positive contributions are:

- (a) Records of the life, breeding, habits, and structure of about 540 species of animals.
- (b) Investigations of the developing chick, which has ever since been the classical embryological subject.
- (c) Accounts of the habits and development of octopuses and squids, in some cases surpassed only in quite modern times.
- (d) Anatomical accounts of the four-chambered stomach of ruminants, of the complex relations of the ducts, vessels, and organs in the mammalian generative system, and of the mammalian character of porpoises, dolphins, and whales, all unsurpassed until the seventeenth century.
- (e) Accounts of exceptional modes of development of fish, among them of a dog-fish (*Mustelus laevis*) the young of which is linked to the womb by a navel cord and placenta much as in a mammal. Nothing has contributed more to Aristotle's modern scientific reputation than the rediscovery of this phenomenon a century ago.
- (f) Observations on paternal care in fish, verified only in the last century by Louis Agassiz, who named the fish concerned *Parasilurus Aristotelis*; and on the hectocotylization of one of the tentacles in the octopus.
- (g) Stress on the heart and vascular system on embryological grounds. He is often quoted as calling the heart 'the first to live and last to die'. The idea is in his works but the phrase is not.
- (h) A permanent addition to the technique of scientific instruction was his introduction of diagrams to explain anatomical relations. Some of his diagrams can be restored from his descriptions.

4. Aristotle seems not to have been interested in taxonomy, and there is no attempt in his work to produce a taxonomic scheme. His main concern is to ascertain the causes of the observed differences between animals: the *Historia animalium* is a collection of materials for this purpose, and his own title for the treatise known as the *Parts of Animals* is 'the Causes of the Parts of Animals'. (It should be noted that although he attaches great importance to morphological differences, drawing attention to differences which are merely of degree—of 'the more and less'—and wider differences 'by analogy', these are not the only differences which he records, and his survey includes differences in methods of reproduction, of locomotion, diet, disposition, habitat, and manner of life generally.) He does, however, for practical purposes of exposition, make use of the general division into blooded (i.e. red-blooded) and bloodless animals; and under these two headings we find the following 'main groups': (1) under blooded animals, Viviparous quadrupeds, Oviparous quadrupeds, Cetacea, Birds, and Fishes; (2) under bloodless animals, the four groups Crustacea, Cephalopods, Insects, and Testacea. These groupings are, however, used for convenience of treatment, and the fundamental principle of degrees of heat (see §7 below) cuts across them. It is also obvious that some animals, such as man and the serpents, are not catered for by these groupings. Aristotle also draws attention to the continuous gradation of things in nature, from lifeless objects upwards: they can be arranged in a sort of ladder, the *scala naturae* discussed by naturalists until the mid nineteenth century. In the eighth book of the *Historia animalium* he writes as follows: 'Nature gradually advances from things that are without soul (life) to the animals (living things) in such a way that the continuity prevents us from seeing where the boundary comes and from determining to which side of it an intermediate example belongs. First after the lifeless things stands the tribe of plants; and of these one kind of plant differs from another in that it appears to possess a greater share of life—the whole tribe of plants, when compared with other objects, seems almost to be endued with soul (life), yet when compared with the tribe of animals it appears to be without soul (life). The advance from plants to animals is continuous, as I have said. Thus, in the sea there are creatures of which one would be at a loss to say whether they are animals or plants . . .' (*HA* 588^b4 ff.).

5. It is sometimes said that Aristotle's view of reproduction is that the material part of the embryo is contributed by the female parent, and the 'form' (which in a living creature is the 'soul', the principle of life) by the male parent. There are times when Aristotle does in fact express himself in these terms, but a more precise statement of his view is that the male contributes the *sentient faculty* of 'soul': the possession of this faculty is the distinctive feature of an animal as contrasted with a plant. The material contributed by the female is also endowed with 'soul', but only with the lower faculties of it. It is thus true to say that the male contributes no material part to the embryo; but some material must pass from the male to the female, and this material is the 'connate pneuma' (*συνεχόμενον πνεῦμα*) contained in the semen. The function of the connate pneuma is to act as the vehicle of the 'movements' proper to the species or 'form' concerned (in Greek *εἶδος* can mean both species and 'form'); and this function of transmitting the 'form' (by means of the appropriate 'movements') to the new embryo is really only an extension of its normal function of maintaining the 'form' in the already existing fully grown animal. Aristotle describes the connate pneuma as the chief of the 'instruments' used by Nature, comparing it with the instruments of the smith, which similarly

convey to the material on which he is working the 'movements' proper to the 'form' of the article into which he intends to fashion the material. In the body, the connate pneuma is carried in the blood, which is charged with it by the heart, the seat of 'soul' or the vital principle, and this pneumatization of the blood is effected by the heat resident in the heart. The semen, being blood which has undergone a further stage of 'concoction' by heat, is thus, like the blood, capable of acting as the vehicle of the 'movements' proper to 'soul', and of reproducing them in the embryonic material supplied by the female parent. The difference between semen and catamenia (which Aristotle identified with the embryonic material) is due to the fact that the female, being less 'hot' than the male, is unable to carry the concoction of this portion of the blood to the stage when it acquires the movements proper to sentient soul.

According to Aristotle, semen is one of the 'useful residues'; others include milk, catamenia, and marrow: Nature employs for useful purposes the blood which is surplus to the maintenance requirements of the body.

6. In view of what has been said it is not surprising that Aristotle explicitly rejected any theory of pangensis such as had been propounded by some of his predecessors. None of the parts of the body is present as such in the embryo when it is first constituted: they are fashioned by the 'movements' supplied by the male parent. (But see § 7 below.) These 'movements' are complex, and include those proper not only to 'animal' and to the species concerned, but also to the sex and to the individual, and even to grandparents and more remote ancestors. The final determination of the sex of the embryo and of its resemblance or lack of resemblance to parents or ancestors is the result of a contest between the 'movements' and the material upon which they are operating: if the movement of the male 'departs from type' it changes over to the female; if the immediate movements 'relapse' they fall back into those of grandparents or more remote ancestors. This principle Aristotle applies not only to general resemblance of the body as a whole, but also to resemblance of individual parts of it. When the 'movements' become unduly confused, no family resemblance can be traced in the offspring; when the 'movement' cannot master the embryonic material, the result is a monstrosity—merely 'an animal'.

These matters are discussed by Aristotle at considerable length and in great detail, his discussion on this subject is one of the most remarkable in the whole of his zoological works. With his notion of the *scala naturae* and his theory of the 'relapsing' of the 'movements,' it might perhaps have been expected that the stage was set for Aristotle to go on to propound a theory of evolution. He does not, however, go back to what has been stated above. Perhaps one reason which prevented him from doing so was his view of the place of animals in the whole scheme of the universe. The perpetual succession of generations was for him a process in which the sub-lunary or lower part of the cosmos approached as closely as was possible for it to the unchanging individual eternity of the things in the upper cosmos: in the lower cosmos it is the 'forms' (species) only, not the individuals, which are eternal, and it would no doubt have seemed a contradiction of the whole scheme of the universe to suggest that these 'forms' were liable to change.

7. The importance of heat (or, more precisely, hot substance) in Aristotle's theory of living things cannot be overestimated. Hot substance is in fact one of the four fundamental constituents of the physical universe recognized by him, and the connate pneuma itself, the essential intermediary between 'form' and 'matter', is a special kind of hot substance. If it were necessary to

say that there is any typically Aristotelian classification of animals, it would have to be that which he himself indicates, based on the principle of degrees of heat. For him, the 'most perfect' animals are those which are the hottest: they produce 'perfect' offspring because they are able to carry the 'concoction' of the embryo to the point when it is identical in form (though not of course in size) with the parent. Colder animals can produce only eggs; even colder ones only larvae. The coldest animals reproduce in a manner comparable to that of plants. It has already been noted that the difference between the sexes is accounted for by a difference of heat. Heat, however, is not merely an enabling or concomitant factor: it is an active one, and in this regard cold is associated with it. It is true that the 'movements' proper to 'form', which are conveyed to the embryonic material, are responsible for fashioning the embryo into an animal of the required species; but the lower stages of the work can be left to the 'movements' of the hot and the cold, which are able of themselves to fashion the uniform parts of the body, such as flesh, bone, hair, and sinew, though they cannot deal with the next stage, the formation of the non-uniform parts such as head, hand, and foot. The doctrine of spontaneous generation has a somewhat similar basis. Animals and plants are formed in earth and fluid because there is water in the earth, and there is pneuma in water, and there is 'soul-heat' (*θερμότης ψυχική*) in all pneuma; indeed, Aristotle can go so far as to say that in the case of spontaneous generation of natural things the matter can be set in movement by itself: it can supply itself with the same movement as that which the semen normally would supply.

The passive ingredients upon which the active ones, especially the hot, operate are the solid (dry) and the fluid (moist), particularly the latter, which is the best suited for supporting life (*ζωτικόν*). It is the relationship between these four factors, especially between the hot and the fluid, which determines much of the behaviour and the observable features of animals, and of which these are symptoms. In this connexion Aristotle pays special attention to the habitat, and the places of feeding and breeding of animals: e.g. some spend all their time in the water, others on land, while others are amphibious. Again, some animals are cooled by taking in air, others by taking in water, others are cooled sufficiently by their environment, and so forth. These phenomena, which exhibit many different combinations, are to be explained by the 'blend' (*μίξις*) of the animals' physical composition, and especially by the balance between the hot and the fluid. The notion of 'blend' is an important one in Greek thought, and it is in fact a special case of *συνμετρία*, right proportion, proper balance of ingredients of all kinds; a notion applied elsewhere by Aristotle and found also in other writers. Like one of the Hippocratic authors (in *Regimen*), Aristotle holds that an animal's physical 'blend' determines not only its physical health but also its disposition (whence our 'temperament') and its sensitivity and intelligence. The excellence of man's physical 'blend' is shown by the fact that he is the most intelligent of the animals. After Aristotle there is no scientific observation of a zoological character. (However, see ANATOMY AND PHYSIOLOGY, §§ 12, 18.)

8. The largest collections of animal stories are those of Pliny and Aelian. Much accurate nature-knowledge can be gleaned from general literature, especially Latin. Roman country gentlemen had their game preserves and aviaries, of which Varro gives details (*Rust.* 3. 49, 13). A mural in the Villa Livia shows a bird-sanctuary. Under the Empire many strange beasts were brought to Rome for the circus. Lions, tigers, elephants both African and Indian, rhinoceroses, bears, bisons, boars, leopards, panthers, hyenas, and crocodiles were in the imperial

menageries. These sometimes contained prodigious numbers; Trajan owned 11,000 beasts, Augustus 420 tigers, Nero 400 bears, and Gordian I 300 ostriches. Curiosity accounted for the presence of serpents, camels, hippopotamuses, antelopes, zebras, and giraffes. The first giraffe came to Europe for Commodus about 190, and Gordian I (237) is said to have had 100 of them.

The Hippocratic work *On Generation* is given in the edition of E. Littré, vol. ii (1851). Practically all the zoological work of Aristotle is in his three works *Historia animalium*, *De partibus animalium*, *De generatione animalium* (see ARISTOTLE). Discussion with bibliography in Charles Singer, *Studies in the History and Method of Science* ii (1921), and *Greek Biology and Greek Medicine* (1922). See also the introductions and appendices in the Loeb editions of *De gen. an.* and *Hist. an.*; and D. M. Balme, 'γένος and εἶδος in Aristotle's biology', *CQ* 1962, 81 ff., and id. 'Aristotle's Use of Differentiae in Zoology' in *Aristote et les problèmes de méthode* (Symposium Aristotelicum, 1962). O. Keller, *Die antike Tierwelt* (1909). ZOPYRUS, writer on physiognomy, known from his judgement on Socrates' appearance.

See Förster, *Scriptores Physiognomici* i, prol. vii ff.

ZOROASTER (Ζωροάστρης), the best-known form of the name of Zarathustra; for others see Bidez-Cumont i. 36 ff. The Greeks had heard of him as early as the fifth century B.C. (Xanthus of Lydia in Diog. Laert. proem, 2), and mentions of him are common in the Hellenistic period. Apart from an aberrant tradition, due perhaps to Ctesias (q.v.), which made him a king of Bactria conquered by Ninus and Semiramis (Bidez-Cumont ii. 41 ff.), a fairly correct idea of his teachings was current in philosophic circles from about the time of Plato, the intermediary being probably Eudoxus of Cnidos. Legendary details of all sorts accumulated about

him, some doubtless of oriental origin, and he was credited with the authorship of an immense number of works (2,000,000 lines or some 10,000,000 words, Hermippus in Pliny, *HN* 30. 4, were ascribed to him), dealing with theology, natural science, astrology, magic, etc., much of their contents being not only spurious but also quite foreign to his real interests and teachings.

J. Bidez and F. Cumont, *Les Mages hellénisés* (1938); J. Duchesne-Guillemin, *The Western Response to Zoroaster* (1958).

ZOSIMUS, a Greek historian. Little is known of his life except that he had been *advocatus fisci* and obtained the dignity of *comes*. His identification either with the sophist Zosimus of Ascalon or with the sophist Zosimus of Gaza is doubtful. He wrote a history (*Historia nova*) of the Roman Empire from Augustus to A.D. 410. He must have completed it after A.D. 498, as he mentions the abolition of the *auri lustralis collatio* (z. 38), but before the composition of the chronicle of Eustathius of Epiphania in which he is quoted (first decades of the 6th c.). Book 1 summarizes the history of the first three centuries of the Empire (the section on Diocletian is lost), in books 2-4 Zosimus gives a more precise account of the fourth century and particularly of the years 395-410, for which he is our most important source. He uses Eunapius and Olympiodorus (qq.v.) extensively and his excursus on secular games (z. 1-6) derives from Phlegon (q.v.). He imitates Polybius. His interpretation of events is determined by his paganism. He sees the decadence of the Empire as a consequence of the rejection of paganism. He is naturally hostile to Constantine and Theodosius I and favourable to Julian. His attitude towards Stilicho is ambivalent.

Best edition by L. Mendelssohn (1887) with important introd. on sources. Cf. Christ-Schmid-Stählin, ii 2. 1037; E. Stein, *Hist. Bas-Empire* ii (1949), 707 ff.; S. Mazzarino, *La fine del mondo antica* (1959), 61 ff.; G. Moravcsik, *Byzantinoturcica* i² (1958), 577 ff. A. M. Cameron, *Philologus*, 1969, 106 ff.
